- *20. Molino Inc. reported sales revenue of \$2 million for 2017. Accounts receivable decreased \$200,000 and accounts payable increased \$300,000. Compute cash receipts from customers, assuming that the receivable and payable transactions related to operations.
- *21. In the direct method, why is depreciation expense not reported in the cash flows from operating activities section?
- *22. Why is it advantageous to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?

BRIEF EXERCISES

BE13-1 Each of the items below must be considered in preparing a statement of cash flows for Baskerville Co. for the year ended December 31, 2017. For each item, state how it should be shown in the statement of cash flows for 2017 and the indirect method is used.

- (a) Issued bonds for \$200,000 cash.
- (b) Purchased equipment for \$150,000 cash.
- (c) Sold land costing \$20,000 for \$20,000 cash.
- (d) Declared and paid a \$50,000 cash dividend.

Indicate statement presentation of selected transactions.

(LO 1)

BE13-2 Classify each item as an operating, investing, or financing activity. Assume all items involve cash unless there is information to the contrary and the indirect method is used.

- | | |
|-------------------------------------|-------------------------------|
| (a) Purchase of equipment. | (d) Depreciation. |
| (b) Proceeds from sale of building. | (e) Payment of dividends. |
| (c) Redemption of bonds. | (f) Issuance of common stock. |

Classify items by activities.

(LO 1)

Identify financing activity transactions.

(LO 1)

BE13-3 The following T-account is a summary of the Cash account of Cuellar Company.

Cash (Summary Form)			
Balance, Jan. 1	8,000		
Receipts from customers	364,000	Payments for goods	200,000
Dividends on stock investments	6,000	Payments for operating expenses	140,000
Proceeds from sale of equipment	36,000	Interest paid	10,000
Proceeds from issuance of bonds payable	300,000	Taxes paid	8,000
		Dividends paid	50,000
Balance, Dec. 31	306,000		

What amount of net cash provided (used) by financing activities should be reported in the statement of cash flows?

Compute net cash provided by operating activities—indirect method.

(LO 2)

BE13-4 Telfer, Inc. reported net income of \$2.8 million in 2017. Depreciation for the year was \$160,000, accounts receivable decreased \$350,000, and accounts payable decreased \$280,000. Compute net cash provided by operating activities using the indirect method.

Compute net cash provided by operating activities—indirect method.

(LO 2)

BE13-5 The net income for Metz Co. for 2017 was \$280,000. For 2017, depreciation on plant assets was \$70,000, and the company incurred a loss on disposal of plant assets of \$12,000. Compute net cash provided by operating activities under the indirect method.

Compute net cash provided by operating activities—indirect method.

(LO 2)

BE13-6 The comparative balance sheets for Montalvo Company show these changes in noncash current asset accounts: accounts receivable decrease \$80,000, prepaid expenses increase \$28,000, and inventories increase \$30,000. Compute net cash provided by operating activities using the indirect method assuming that net income is \$300,000.

Determine cash received from sale of equipment.

(LO 2)

BE13-7 The T-accounts for Equipment and the related Accumulated Depreciation—Equipment for Luo Company at the end of 2017 are shown here.

Equipment			Accumulated Depreciation—Equipment		
Beg. bal.	80,000	Disposals	22,000	Disposals	5,500
Acquisitions	41,600			Beg. bal.	44,500
				Depr. exp.	12,000
End. bal.	99,600			End. bal.	51,000

In addition, Luo Company's income statement reported a loss on the disposal of equipment of \$6,500. What amount was reported on the statement of cash flows as "cash flow from sale of equipment"?

Calculate free cash flow.

(LO 3)

BE13-8 Assume that during 2017, **Cypress Semiconductor Corporation** reported net cash provided by operating activities of \$155,793,000, net cash used in investing activities of \$207,826,000 (including cash spent for plant assets of \$132,280,000), and net cash used in financing activities of \$33,372,000. Dividends of \$5,000,000 were paid. Calculate free cash flow.

Calculate free cash flow.

(LO 3)

BE13-9 Hinck Corporation reported net cash provided by operating activities of \$360,000, net cash used by investing activities of \$250,000 (including cash spent for capital assets of \$200,000), and net cash provided by financing activities of \$70,000. Dividends of \$140,000 were paid. Calculate free cash flow.

Calculate free cash flow.

(LO 3)

BE13-10 Suppose in a recent quarter, **Alliance Atlantis Communications Inc.** reported net cash provided by operating activities of \$45,600,000 and revenues of \$264,800,000. Cash spent on plant asset additions during the quarter was \$1,600,000. No dividends were paid. Calculate free cash flow.

BE13-11 The management of Morrow Inc. is trying to decide whether it can increase its dividend. During the current year, it reported net income of \$875,000. It had net cash provided by operating activities of \$734,000, paid cash dividends of \$70,000, and had capital expenditures of \$280,000. Compute the company's free cash flow, and discuss whether an increase in the dividend appears warranted. What other factors should be considered?

Calculate and analyze free cash flow.

(LO 3)

***BE13-12** Suppose **Columbia Sportswear Company** had accounts receivable of \$206,024,000 at the beginning of a recent year, and \$267,653,000 at year-end. Sales revenue was \$1,095,307,000 for the year. What is the amount of cash receipts from customers?

Compute receipts from customers—direct method.

(LO 4)

***BE13-13** Howell Corporation reported income tax expense of \$340,000,000 on its 2017 income statement and income taxes payable of \$297,000,000 at December 31, 2016, and \$522,000,000 at December 31, 2017. What amount of cash payments were made for income taxes during 2017?

Compute cash payments for income taxes—direct method.

(LO 4)

***BE13-14** Sisson Corporation reports operating expenses of \$80,000 excluding depreciation expense of \$15,000 for 2017. During the year, prepaid expenses decreased \$6,600 and accrued expenses payable increased \$4,400. Compute the cash payments for operating expenses in 2017.

Compute cash payments for operating expenses—direct method.

(LO 4)

***BE13-15** During the year, prepaid expenses decreased \$5,600, and accrued expenses increased \$2,400. Indicate how the changes in prepaid expenses and accrued expenses payable should be entered in the reconciling columns of a worksheet. Assume that beginning balances were prepaid expenses \$18,600 and accrued expenses payable \$8,200.

Indicate entries in worksheet.

(LO 5)

DO IT! Exercises

DO IT! 13-1 Ragsdell Corporation had the following transactions.

1. Issued \$200,000 of bonds payable.
2. Paid utilities expense.
3. Issued 500 shares of preferred stock for \$45,000.
4. Sold land and a building for \$250,000.
5. Lent \$30,000 to Tegtmeier Corporation, receiving Tegtmeier's 1-year, 12% note.

Classify each of these transactions by type of cash flow activity (operating, investing, or financing).

Classify transactions by type of cash flow activity.

(LO 1)

DO IT! 13-2 Wise Photography reported net income of \$130,000 for 2017. Included in the income statement were depreciation expense of \$6,000, amortization expense of \$2,000, and a gain on disposal of equipment of \$3,600. Wise's comparative balance sheets show the following balances.

Calculate net cash from operating activities.

(LO 2)

	12/31/16	12/31/17
Accounts receivable	\$27,000	\$21,000
Accounts payable	6,000	9,200

Calculate net cash provided by operating activities for Wise Photography.

DO IT! 13-3 Obermeyer Corporation issued the following statement of cash flows for 2017.

Compute and discuss free cash flow.

(LO 3)

OBERMEYER CORPORATION
Statement of Cash Flows—Indirect Method
For the Year Ended December 31, 2017

Cash flows from operating activities		
Net income		\$59,000
Adjustments to reconcile net income to net cash provided by operating activities:		
Depreciation expense	\$ 9,100	
Loss on disposal of equipment	9,500	
Increase in inventory	(5,000)	
Decrease in accounts receivable	3,300	
Decrease in accounts payable	(2,200)	
	14,700	
Net cash provided by operating activities		73,700
Cash flows from investing activities		
Sale of investments	3,100	
Purchase of equipment	(27,000)	
Net cash used by investing activities		(23,900)
Cash flows from financing activities		
Issuance of stock	20,000	
Payment on long-term note payable	(10,000)	
Payment for dividends	(15,000)	
Net cash used by financing activities		(5,000)
Net increase in cash		44,800
Cash at beginning of year		13,000
Cash at end of year		\$57,800

(a) Compute free cash flow for Obermeyer Corporation. (b) Explain why free cash flow often provides better information than “Net cash provided by operating activities.”

EXERCISES

Classify transactions by type of activity.

(LO 1)

E13-1 Tabares Corporation had these transactions during 2017.

- (a) Issued \$50,000 par value common stock for cash.
- (b) Purchased a machine for \$30,000, giving a long-term note in exchange.
- (c) Issued \$200,000 par value common stock upon conversion of bonds having a face value of \$200,000.
- (d) Declared and paid a cash dividend of \$18,000.
- (e) Sold a long-term investment with a cost of \$15,000 for \$15,000 cash.
- (f) Collected \$16,000 of accounts receivable.
- (g) Paid \$18,000 on accounts payable.

Instructions

Analyze the transactions and indicate whether each transaction resulted in a cash flow from operating activities, investing activities, financing activities, or noncash investing and financing activities.

Classify transactions by type of activity.

(LO 1)

E13-2 An analysis of comparative balance sheets, the current year’s income statement, and the general ledger accounts of Wellman Corp. uncovered the following items. Assume all items involve cash unless there is information to the contrary.

- | | |
|--|--|
| (a) Payment of interest on notes payable. | (h) Issuance of common stock. |
| (b) Exchange of land for patent. | (i) Amortization of patent. |
| (c) Sale of building at book value. | (j) Issuance of bonds for land. |
| (d) Payment of dividends. | (k) Purchase of land. |
| (e) Depreciation. | (l) Conversion of bonds into common stock. |
| (f) Receipt of dividends on investment in stock. | (m) Sale of land at a loss. |
| (g) Receipt of interest on notes receivable. | (n) Retirement of bonds. |

Instructions

Indicate how each item should be classified in the statement of cash flows using these four major classifications: operating activity (indirect method), investing activity, financing activity, and significant noncash investing and financing activity.

E13-3 Cushenberry Corporation had the following transactions.

1. Sold land (cost \$12,000) for \$15,000.
2. Issued common stock at par for \$20,000.
3. Recorded depreciation on buildings for \$17,000.
4. Paid salaries of \$9,000.
5. Issued 1,000 shares of \$1 par value common stock for equipment worth \$8,000.
6. Sold equipment (cost \$10,000, accumulated depreciation \$7,000) for \$1,200.

Prepare journal entry and determine effect on cash flows.

(LO 1)

Instructions

For each transaction above, (a) prepare the journal entry, and (b) indicate how it would affect the statement of cash flows using the indirect method.

E13-4 Gutierrez Company reported net income of \$225,000 for 2017. Gutierrez also reported depreciation expense of \$45,000 and a loss of \$5,000 on the disposal of equipment. The comparative balance sheet shows a decrease in accounts receivable of \$15,000 for the year, a \$17,000 increase in accounts payable, and a \$4,000 decrease in prepaid expenses.

Prepare the operating activities section—indirect method.

(LO 2)

Instructions

Prepare the operating activities section of the statement of cash flows for 2017. Use the indirect method.

E13-5 The current sections of Scoggin Inc.'s balance sheets at December 31, 2016 and 2017, are presented here. Scoggin's net income for 2017 was \$153,000. Depreciation expense was \$24,000.

Prepare the operating activities section—indirect method.

(LO 2)

	<u>2017</u>	<u>2016</u>
Current assets		
Cash	\$105,000	\$ 99,000
Accounts receivable	110,000	89,000
Inventory	158,000	172,000
Prepaid expenses	27,000	22,000
Total current assets	<u>\$400,000</u>	<u>\$382,000</u>
Current liabilities		
Accrued expenses payable	\$ 15,000	\$ 5,000
Accounts payable	85,000	92,000
Total current liabilities	<u>\$100,000</u>	<u>\$ 97,000</u>

Instructions

Prepare the net cash provided by operating activities section of the company's statement of cash flows for the year ended December 31, 2017, using the indirect method.

E13-6 The three accounts shown on page 644 appear in the general ledger of Herrick Corp. during 2017.

Prepare partial statement of cash flows—indirect method.

(LO 2)

Equipment				
<u>Date</u>		<u>Debit</u>	<u>Credit</u>	<u>Balance</u>
Jan. 1	Balance			160,000
July 31	Purchase of equipment	70,000		230,000
Sept. 2	Cost of equipment constructed	53,000		283,000
Nov. 10	Cost of equipment sold		49,000	234,000
Accumulated Depreciation—Equipment				
<u>Date</u>		<u>Debit</u>	<u>Credit</u>	<u>Balance</u>
Jan. 1	Balance			71,000
Nov. 10	Accumulated depreciation on equipment sold	30,000		41,000
Dec. 31	Depreciation for year		28,000	69,000
Retained Earnings				
<u>Date</u>		<u>Debit</u>	<u>Credit</u>	<u>Balance</u>
Jan. 1	Balance			105,000
Aug. 23	Dividends (cash)	14,000		91,000
Dec. 31	Net income		77,000	168,000

Instructions

From the postings in the accounts, indicate how the information is reported on a statement of cash flows using the indirect method. The loss on disposal of equipment was \$7,000. (*Hint:* Cost of equipment constructed is reported in the investing activities section as a decrease in cash of \$53,000.)

Prepare statement of cash flows and compute free cash flow.

(LO 2, 3)

E13-7 Rojas Corporation's comparative balance sheets are presented below.

ROJAS CORPORATION
Comparative Balance Sheets
December 31

	2017	2016
Cash	\$ 14,300	\$ 10,700
Accounts receivable	21,200	23,400
Land	20,000	26,000
Buildings	70,000	70,000
Accumulated depreciation—buildings	(15,000)	(10,000)
Total	<u>\$110,500</u>	<u>\$120,100</u>
Accounts payable	\$ 12,370	\$ 31,100
Common stock	75,000	69,000
Retained earnings	23,130	20,000
Total	<u>\$110,500</u>	<u>\$120,100</u>

Additional information:

1. Net income was \$22,630. Dividends declared and paid were \$19,500.
2. No noncash investing and financing activities occurred during 2017.
3. The land was sold for cash of \$4,900.

Instructions

- (a) Prepare a statement of cash flows for 2017 using the indirect method.
- (b) Compute free cash flow.

E13-8 Here are comparative balance sheets for Velo Company.

Prepare a statement of cash flows—indirect method.

(LO 2)

VELO COMPANY
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 63,000	\$ 22,000
Accounts receivable	85,000	76,000
Inventory	170,000	189,000
Land	75,000	100,000
Equipment	270,000	200,000
Accumulated depreciation—equipment	(66,000)	(32,000)
Total	<u>\$597,000</u>	<u>\$555,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 39,000	\$ 47,000
Bonds payable	150,000	200,000
Common stock (\$1 par)	216,000	174,000
Retained earnings	192,000	134,000
Total	<u>\$597,000</u>	<u>\$555,000</u>

Additional information:

1. Net income for 2017 was \$93,000.
2. Cash dividends of \$35,000 were declared and paid.
3. Bonds payable amounting to \$50,000 were redeemed for cash \$50,000.
4. Common stock was issued for \$42,000 cash.
5. No equipment was sold during 2017, but land was sold at cost.

Instructions

Prepare a statement of cash flows for 2017 using the indirect method.

E13-9 Rodriguez Corporation's comparative balance sheets are presented below.

Prepare statement of cash flows and compute free cash flow.

(LO 2, 3)

RODRIQUEZ CORPORATION
Comparative Balance Sheets
December 31

	<u>2017</u>	<u>2016</u>
Cash	\$ 15,200	\$ 17,700
Accounts receivable	25,200	22,300
Investments	20,000	16,000
Equipment	60,000	70,000
Accumulated depreciation—equipment	(14,000)	(10,000)
Total	<u>\$106,400</u>	<u>\$116,000</u>
Accounts payable	\$ 14,600	\$ 11,100
Bonds payable	10,000	30,000
Common stock	50,000	45,000
Retained earnings	31,800	29,900
Total	<u>\$106,400</u>	<u>\$116,000</u>

Additional information:

1. Net income was \$18,300. Dividends declared and paid were \$16,400.
2. Equipment which cost \$10,000 and had accumulated depreciation of \$1,200 was sold for \$3,300.
3. No noncash investing and financing activities occurred during 2017.

Instructions

- (a) Prepare a statement of cash flows for 2017 using the indirect method.
 (b) Compute free cash flow.

Compute net cash provided by operating activities—direct method.

(LO 4)

***E13-10** Macgregor Company completed its first year of operations on December 31, 2017. Its initial income statement showed that Macgregor had revenues of \$192,000 and operating expenses of \$78,000. Accounts receivable and accounts payable at year-end were \$60,000 and \$23,000, respectively. Assume that accounts payable related to operating expenses. Ignore income taxes.

Instructions

Compute net cash provided by operating activities using the direct method.

Compute cash payments—direct method.

(LO 4)

***E13-11** Suppose a recent income statement for **McDonald's Corporation** shows cost of goods sold \$4,852.7 million and operating expenses (including depreciation expense of \$1,201 million) \$10,671.5 million. The comparative balance sheet for the year shows that inventory increased \$18.1 million, prepaid expenses increased \$56.3 million, accounts payable (merchandise suppliers) increased \$136.9 million, and accrued expenses payable increased \$160.9 million.

Instructions

Using the direct method, compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

Compute cash flow from operating activities—direct method.

(LO 4)

***E13-12** The 2017 accounting records of Blocker Transport reveal these transactions and events.

Payment of interest	\$ 10,000	Collection of accounts receivable	\$182,000
Cash sales	48,000	Payment of salaries and wages	53,000
Receipt of dividend revenue	18,000	Depreciation expense	16,000
Payment of income taxes	12,000	Proceeds from sale of vehicles	12,000
Net income	38,000	Purchase of equipment for cash	22,000
Payment of accounts payable for merchandise	115,000	Loss on disposal of vehicles	3,000
Payment for land	74,000	Payment of dividends	14,000
		Payment of operating expenses	28,000

Instructions

Prepare the cash flows from operating activities section using the direct method. (Not all of the items will be used.)

Calculate cash flows—direct method.

(LO 4)

***E13-13** The following information is taken from the 2017 general ledger of Swisher Company.

Rent	Rent expense	\$ 48,000
	Prepaid rent, January 1	5,900
	Prepaid rent, December 31	9,000
Salaries	Salaries and wages expense	\$ 54,000
	Salaries and wages payable, January 1	10,000
	Salaries and wages payable, December 31	8,000
Sales	Sales revenue	\$175,000
	Accounts receivable, January 1	16,000
	Accounts receivable, December 31	7,000

Instructions

In each case, compute the amount that should be reported in the operating activities section of the statement of cash flows under the direct method.

Prepare a worksheet.

(LO 5)

***E13-14** Comparative balance sheets for International Company are presented as follows.

INTERNATIONAL COMPANY
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 73,000	\$ 22,000
Accounts receivable	85,000	76,000
Inventory	180,000	189,000
Land	75,000	100,000
Equipment	250,000	200,000
Accumulated depreciation—equipment	(66,000)	(42,000)
Total	\$597,000	\$545,000
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 34,000	\$ 47,000
Bonds payable	150,000	200,000
Common stock (\$1 par)	214,000	164,000
Retained earnings	199,000	134,000
Total	\$597,000	\$545,000

Additional information:

1. Net income for 2017 was \$135,000.
2. Cash dividends of \$70,000 were declared and paid.
3. Bonds payable amounting to \$50,000 were redeemed for cash \$50,000.
4. Common stock was issued for \$50,000 cash.
5. Depreciation expense was \$24,000.
6. Sales revenue for the year was \$978,000.
7. Land was sold at cost, and equipment was purchased for cash.

Instructions

Prepare a worksheet for a statement of cash flows for 2017 using the indirect method. Enter the reconciling items directly on the worksheet, using letters to cross-reference each entry.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

P13-1A You are provided with the following transactions that took place during a recent fiscal year.

Distinguish among operating, investing, and financing activities.

<u>Transaction</u>	<u>Statement of Cash Flows Activity Affected</u>	<u>Cash Inflow, Outflow, or No Effect?</u>	(LO 1)
(a) Recorded depreciation expense on the plant assets.			
(b) Recorded and paid interest expense.			
(c) Recorded cash proceeds from a disposal of plant assets.			
(d) Acquired land by issuing common stock.			
(e) Paid a cash dividend to preferred stockholders.			
(f) Paid a cash dividend to common stockholders.			
(g) Recorded cash sales.			
(h) Recorded sales on account.			
(i) Purchased inventory for cash.			
(j) Purchased inventory on account.			

Instructions

Complete the table indicating whether each item (1) affects operating (O) activities, investing (I) activities, financing (F) activities, or is a noncash (NC) transaction reported in a separate schedule, and (2) represents a cash inflow or cash outflow or has no cash flow effect. Assume use of the indirect approach.

Determine cash flow effects of changes in equity accounts.

(LO 2)

P13-2A The following account balances relate to the stockholders' equity accounts of Kerbs Corp. at year-end.

	<u>2017</u>	<u>2016</u>
Common stock, 10,500 and 10,000 shares, respectively, for 2017 and 2016	\$170,000	\$140,000
Preferred stock, 5,000 shares	125,000	125,000
Retained earnings	300,000	250,000

A small stock dividend was declared and issued in 2017. The market value of the shares was \$10,500. Cash dividends were \$15,000 in both 2017 and 2016. The common stock has no par or stated value.

Instructions

(a) Net income \$75,500

- What was the amount of net income reported by Kerbs Corp. in 2017?
- Determine the amounts of any cash inflows or outflows related to the common stock and dividend accounts in 2017.
- Indicate where each of the cash inflows or outflows identified in (b) would be classified on the statement of cash flows.

Prepare the operating activities section—indirect method.

(LO 2)

P13-3A The income statement of Whitlock Company is presented here.

WHITLOCK COMPANY
Income Statement
For the Year Ended November 30, 2017

Sales revenue		\$7,700,000
Cost of goods sold		
Beginning inventory	\$1,900,000	
Purchases	4,400,000	
Goods available for sale	<u>6,300,000</u>	
Ending inventory	<u>1,400,000</u>	
Total cost of goods sold		<u>4,900,000</u>
Gross profit		2,800,000
Operating expenses		<u>1,150,000</u>
Net income		<u><u>\$1,650,000</u></u>

Additional information:

- Accounts receivable increased \$200,000 during the year, and inventory decreased \$500,000.
- Prepaid expenses increased \$150,000 during the year.
- Accounts payable to suppliers of merchandise decreased \$340,000 during the year.
- Accrued expenses payable decreased \$100,000 during the year.
- Operating expenses include depreciation expense of \$70,000.

Instructions

Cash from operations
\$1,430,000

Prepare the operating activities section of the statement of cash flows for the year ended November 30, 2017, for Whitlock Company, using the indirect method.

Prepare the operating activities section—direct method.

***P13-4A** Data for Whitlock Company are presented in P13-3A.

(LO 4) Cash from operations
\$1,430,000

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

Prepare the operating activities section—indirect method.

P13-5A Zumbrunn Company's income statement contained the following condensed information.

(LO 2)

ZUMBRUNN COMPANY
Income Statement
For the Year Ended December 31, 2017

Service revenue		\$970,000
Operating expenses, excluding depreciation	\$624,000	
Depreciation expense	60,000	
Loss on disposal of equipment	16,000	700,000
		<u>270,000</u>
Income before income taxes		40,000
Income tax expense		<u>40,000</u>
Net income		<u>\$230,000</u>

Zumbrunn's balance sheet contained the comparative data at December 31, shown below.

	<u>2017</u>	<u>2016</u>
Accounts receivable	\$75,000	\$65,000
Accounts payable	46,000	28,000
Income taxes payable	11,000	7,000

Accounts payable pertain to operating expenses.

Instructions

Prepare the operating activities section of the statement of cash flows using the indirect method.

***P13-6A** Data for Zumbrunn Company are presented in P13-5A.

Instructions

Prepare the operating activities section of the statement of cash flows using the direct method.

P13-7A The following are the financial statements of Nosker Company.

NOSKER COMPANY
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 38,000	\$ 20,000
Accounts receivable	30,000	14,000
Inventory	27,000	20,000
Equipment	60,000	78,000
Accumulated depreciation—equipment	(29,000)	(24,000)
Total	<u>\$126,000</u>	<u>\$108,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 24,000	\$ 15,000
Income taxes payable	7,000	8,000
Bonds payable	27,000	33,000
Common stock	18,000	14,000
Retained earnings	50,000	38,000
Total	<u>\$126,000</u>	<u>\$108,000</u>

NOSKER COMPANY
Income Statement

For the Year Ended December 31, 2017

Sales revenue	\$242,000
Cost of goods sold	175,000
Gross profit	67,000
Operating expenses	24,000
Income from operations	43,000
Interest expense	3,000
Income before income taxes	40,000
Income tax expense	8,000
Net income	<u>\$ 32,000</u>

Cash from operations
\$318,000

Prepare the operating activities section—direct method.

(LO 4)

Cash from operations
\$318,000

Prepare a statement of cash flows—indirect method, and compute free cash flow.

(LO 2, 3)

Additional data:

1. Dividends declared and paid were \$20,000.
2. During the year equipment was sold for \$8,500 cash. This equipment cost \$18,000 originally and had a book value of \$8,500 at the time of sale.
3. All depreciation expense, \$14,500, is in the operating expenses.
4. All sales and purchases are on account.

Instructions

- (a) Cash from operations
\$31,500

- (a) Prepare a statement of cash flows using the indirect method.
(b) Compute free cash flow.

Prepare a statement of cash flows—direct method, and compute free cash flow.

(LO 3, 4)

- (a) Cash from operations
\$31,500

Prepare a statement of cash flows—indirect method.

(LO 2)

***P13-8A** Data for Nosker Company are presented in P13-7A. Further analysis reveals the following.

1. Accounts payable pertain to merchandise suppliers.
2. All operating expenses except for depreciation were paid in cash.

Instructions

- (a) Prepare a statement of cash flows for Nosker Company using the direct method.
(b) Compute free cash flow.

P13-9A Condensed financial data of Cheng Inc. follow.

CHENG INC.
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 80,800	\$ 48,400
Accounts receivable	92,800	33,000
Inventory	117,500	102,850
Prepaid expenses	28,400	26,000
Investments	143,000	114,000
Equipment	270,000	242,500
Accumulated depreciation—equipment	(50,000)	(52,000)
Total	<u>\$682,500</u>	<u>\$514,750</u>
 <u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$112,000	\$ 67,300
Accrued expenses payable	16,500	17,000
Bonds payable	110,000	150,000
Common stock	220,000	175,000
Retained earnings	224,000	105,450
Total	<u>\$682,500</u>	<u>\$514,750</u>

CHENG INC.
Income Statement
For the Year Ended December 31, 2017

Sales revenue		\$392,780
Less:		
Cost of goods sold	\$135,460	
Operating expenses, excluding depreciation	12,410	
Depreciation expense	46,500	
Income tax expense	27,280	
Interest expense	4,730	
Loss on disposal of plant assets	7,500	<u>233,880</u>
Net income		<u>\$158,900</u>

Additional information:

1. New equipment costing \$85,000 was purchased for cash during the year.
2. Old equipment having an original cost of \$57,500 was sold for \$1,500 cash.
3. Bonds matured and were paid off at face value for cash.
4. A cash dividend of \$40,350 was declared and paid during the year.

Instructions

Prepare a statement of cash flows using the indirect method.

Cash from operations
\$180,250

- *P13-10A** Data for Cheng Inc. are presented in P13-9A. Further analysis reveals that accounts payable pertain to merchandise creditors.

Instructions

Prepare a statement of cash flows for Cheng Inc. using the direct method.

Prepare a statement of cash flows—direct method.
(LO 4)

Cash from operations
\$180,250

- P13-11A** The comparative balance sheets for Rothlisberger Company as of December 31 are presented below.

Prepare a statement of cash flows—indirect method.
(LO 2)

ROTHLISBERGER COMPANY
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 81,000	\$ 45,000
Accounts receivable	41,000	62,000
Inventory	151,450	142,000
Prepaid expenses	15,280	21,000
Land	105,000	130,000
Buildings	200,000	200,000
Accumulated depreciation—buildings	(60,000)	(40,000)
Equipment	221,000	155,000
Accumulated depreciation—equipment	(45,000)	(35,000)
Total	<u>\$709,730</u>	<u>\$680,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 47,730	\$ 40,000
Bonds payable	260,000	300,000
Common stock, \$1 par	200,000	160,000
Retained earnings	202,000	180,000
Total	<u>\$709,730</u>	<u>\$680,000</u>

Additional information:

1. Operating expenses include depreciation expense of \$42,000 and charges from prepaid expenses of \$5,720.
2. Land was sold for cash at book value.
3. Cash dividends of \$20,000 were paid.
4. Net income for 2017 was \$42,000.
5. Equipment was purchased for \$88,000 cash. In addition, equipment costing \$22,000 with a book value of \$10,000 was sold for \$6,000 cash.
6. Bonds were converted at face value by issuing 40,000 shares of \$1 par value common stock.

Instructions

Prepare a statement of cash flows for the year ended December 31, 2017, using the indirect method.

Cash from operations
\$113,000

Prepare a worksheet—indirect method. *P13-12A Condensed financial data of Oakley Company appear below.

(LO 5)

OAKLEY COMPANY
Comparative Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 82,700	\$ 47,250
Accounts receivable	90,800	57,000
Inventory	126,900	102,650
Investments	84,500	87,000
Equipment	255,000	205,000
Accumulated depreciation—equipment	(49,500)	(40,000)
	<u>\$590,400</u>	<u>\$458,900</u>
<u>Liabilities and Stockholders' Equity</u>		
Accounts payable	\$ 57,700	\$ 48,280
Accrued expenses payable	12,100	18,830
Bonds payable	100,000	70,000
Common stock	250,000	200,000
Retained earnings	170,600	121,790
	<u>\$590,400</u>	<u>\$458,900</u>

OAKLEY COMPANY
Income Statement
For the Year Ended December 31, 2017

Sales revenue		\$297,500
Gain on disposal of equipment		8,750
		<u>306,250</u>
Less:		
Cost of goods sold	\$99,460	
Operating expenses (excluding depreciation expense)	14,670	
Depreciation expense	49,700	
Income tax expense	7,270	
Interest expense	2,940	174,040
Net income		<u>\$132,210</u>

Additional information:

1. Equipment costing \$97,000 was purchased for cash during the year.
2. Investments were sold at cost.
3. Equipment costing \$47,000 was sold for \$15,550, resulting in gain of \$8,750.
4. A cash dividend of \$83,400 was declared and paid during the year.

Instructions

Prepare a worksheet for the statement of cash flows using the indirect method. Enter the reconciling items directly in the worksheet columns, using letters to cross-reference each entry.

Reconciling items total
\$610,210

PROBLEMS: SET B AND SET C

BROADENING YOUR PERSPECTIVE

FINANCIAL REPORTING AND ANALYSIS

Financial Reporting Problem: Apple Inc.

BYP13-1 The financial statements of **Apple Inc.** are presented in Appendix A. Instructions for accessing and using the company's complete annual report, including the notes to the financial statements, are also provided in Appendix A.

Instructions

- What was the amount of net cash provided by operating activities for the year ended September 28, 2013? For the year ended September 29, 2012?
- What was the amount of increase or decrease in cash and cash equivalents for the year ended September 28, 2013? For the year ended September 29, 2012?
- Which method of computing net cash provided by operating activities does Apple use?
- From your analysis of the 2013 statement of cash flows, did the change in accounts and notes receivable require or provide cash? Did the change in inventories require or provide cash? Did the change in accounts payable and other current liabilities require or provide cash?
- What was the net outflow or inflow of cash from investing activities for the year ended September 28, 2013?
- What was the amount of income taxes paid in the year ended September 28, 2013?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP13-2 **PepsiCo's** financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. Instructions for accessing and using the complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are also provided in Appendices B and C, respectively.

Instructions

- Based on the information contained in these financial statements, compute free cash flow for each company.
- What conclusions concerning the management of cash can be drawn from these data?

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

BYP13-3 **Amazon.com, Inc.'s** financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. Instructions for accessing and using the complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are also provided in Appendices D and E, respectively.

Instructions

- Based on the information contained in these financial statements, compute free cash flow for each company.
- What conclusions concerning the management of cash can be drawn from these data?

Decision-Making Across the Organization

BYP13-4 Tom Epps and Mary Jones are examining the following statement of cash flows for Guthrie Company for the year ended January 31, 2017.

GUTHRIE COMPANY
Statement of Cash Flows
For the Year Ended January 31, 2017

Sources of cash	
From sales of merchandise	\$380,000
From sale of capital stock	420,000
From sale of investment (purchased below)	80,000
From depreciation	55,000
From issuance of note for truck	20,000
From interest on investments	6,000
Total sources of cash	961,000
Uses of cash	
For purchase of fixtures and equipment	330,000
For merchandise purchased for resale	258,000
For operating expenses (including depreciation)	160,000
For purchase of investment	75,000
For purchase of truck by issuance of note	20,000
For purchase of treasury stock	10,000
For interest on note payable	3,000
Total uses of cash	856,000
Net increase in cash	\$105,000

Tom claims that Guthrie's statement of cash flows is an excellent portrayal of a superb first year with cash increasing \$105,000. Mary replies that it was not a superb first year. Rather, she says, the year was an operating failure, that the statement is presented incorrectly, and that \$105,000 is not the actual increase in cash. The cash balance at the beginning of the year was \$140,000.

Instructions

With the class divided into groups, answer the following.

- (a) Using the data provided, prepare a statement of cash flows in proper form using the indirect method. The only noncash items in the income statement are depreciation and the gain from the sale of the investment.
- (b) With whom do you agree, Tom or Mary? Explain your position.

Real-World Focus

BYP13-5 Purpose: Learn about the SEC.

Address: www.sec.gov/index.html, or go to www.wiley.com/college/weygandt

From the SEC homepage, choose **About the SEC**.

Instructions

Answer the following questions.

- (a) How many enforcement actions does the SEC take each year against securities law violators? What are typical infractions?
- (b) After the Depression, Congress passed the Securities Acts of 1933 and 1934 to improve investor confidence in the markets. What two "common sense" notions are these laws based on?
- (c) Who was the President of the United States at the time of the creation of the SEC? Who was the first SEC Chairperson?

BYP13-6 Purpose: Use the Internet to view SEC filings.

Address: biz.yahoo.com/i, or go to www.wiley.com/college/weygandt

Steps:

1. Type in a company name.
2. Choose **Profile**.
3. Choose **SEC Filings**. (This will take you to Yahoo-Edgar Online.)

Instructions

Answer the following questions.

- (a) What company did you select?
- (b) Which filing is the most recent? What is the date?
- (c) What other recent SEC filings are available for your viewing?

CRITICAL THINKING

Communication Activity

BYP13-7 Will Hardin, the owner-president of Computer Services Company, is unfamiliar with the statement of cash flows that you, as his accountant, prepared. He asks for further explanation.

Instructions

Write him a brief memo explaining the form and content of the statement of cash flows as shown in Illustration 13-13 (page 611).

Ethics Case

BYP13-8 Wesley Corp. is a medium-sized wholesaler of automotive parts. It has 10 stockholders who have been paid a total of \$1 million in cash dividends for 8 consecutive years. The board's policy requires that, for this dividend to be declared, net cash provided by operating activities as reported in Wesley's current year's statement of cash flows must exceed \$1 million. President and CEO Samuel Gunkle's job is secure so long as he produces annual operating cash flows to support the usual dividend.

At the end of the current year, controller Gerald Rondelli presents president Samuel Gunkle with some disappointing news: The net cash provided by operating activities is calculated by the indirect method to be only \$970,000. The president says to Gerald, "We must get that amount above \$1 million. Isn't there some way to increase operating cash flow by another \$30,000?" Gerald answers, "These figures were prepared by my assistant. I'll go back to my office and see what I can do." The president replies, "I know you won't let me down, Gerald."

Upon close scrutiny of the statement of cash flows, Gerald concludes that he can get the operating cash flows above \$1 million by reclassifying a \$60,000, 2-year note payable listed in the financing activities section as "Proceeds from bank loan—\$60,000." He will report the note instead as "Increase in payables—\$60,000" and treat it as an adjustment of net income in the operating activities section. He returns to the president, saying, "You can tell the board to declare their usual dividend. Our net cash flow provided by operating activities is \$1,030,000." "Good man, Gerald! I knew I could count on you," exults the president.

Instructions

- Who are the stakeholders in this situation?
- Was there anything unethical about the president's actions? Was there anything unethical about the controller's actions?
- Are the board members or anyone else likely to discover the misclassification?

All About You

BYP13-9 In this chapter, you learned that companies prepare a statement of cash flows in order to keep track of their sources and uses of cash and to help them plan for their future cash needs. Planning for your own short- and long-term cash needs is every bit as important as it is for a company.

Instructions

Read the article ("Financial Uh-Oh? No Problem") provided at www.fool.com/personal-finance/saving/index.aspx, and answer the following questions. To access this article, it may be necessary to register at no cost.

- Describe the three factors that determine how much money you should set aside for short-term needs.
- How many months of living expenses does the article suggest to set aside?
- Estimate how much you should set aside based upon your current situation. Are you closer to Cliff's scenario or to Prudence's?

FASB Codification Activity

BYP13-10 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Use the Master Glossary to determine the proper definitions.

- What are cash equivalents?
- What are financing activities?
- What are investing activities?
- What are operating activities?
- What is the primary objective for the statement of cash flow? Is working capital the basis for meeting this objective?
- Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

A Look at IFRS

LEARNING
OBJECTIVE

7

Compare the procedures for the statement of cash flows under GAAP and IFRS.

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of an IFRS statement of cash flows is similar to the one used for GAAP. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7* (“Cash Flow Statements”) provides the overall IFRS requirements for cash flow information.

Relevant Facts

Following are the key similarities and differences between GAAP and IFRS as related to the statement of cash flows.

Similarities

- Companies preparing financial statements under IFRS must also prepare a statement of cash flows as an integral part of the financial statements.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing activities—along with changes in cash and cash equivalents.
- Similar to GAAP, the statement of cash flows can be prepared using either the indirect or direct method under IFRS. In both U.S. and international settings, companies choose for the most part to use the indirect method for reporting net cash flows from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP. A major difference is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities in the statement of cash flows and are reported as liabilities on the balance sheet.

Differences

- IFRS requires that noncash investing and financing activities be excluded from the statement of cash flows. Instead, these noncash activities should be reported elsewhere. This requirement is interpreted to mean that noncash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information on the face of the statement of cash flows.
- One area where there can be substantial differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

Item	IFRS	GAAP
Interest paid	Operating or financing	Operating
Interest received	Operating or investing	Operating
Dividends paid	Operating or financing	Financing
Dividends received	Operating or investing	Operating
Taxes paid	Operating—unless specific identification with financing or investing activity	Operating

- Under IFRS, some companies present the operating section in a single line item, with a full reconciliation provided in the notes to the financial statements. This presentation is not seen under GAAP.

Looking to the Future

Presently, the FASB and the IASB are involved in a joint project on the presentation and organization of information in the financial statements. One interesting approach, revealed in a published proposal from that project, is that in the future the income statement and balance sheet would adopt headings

similar to those of the statement of cash flows. That is, the income statement and balance sheet would be broken into operating, investing, and financing sections.

IFRS Practice

IFRS Self-Test Questions

- Under IFRS, interest paid can be reported as:
 - only a financing activity.
 - a financing activity or an investing activity.
 - a financing activity or an operating activity.
 - only an operating activity.
- IFRS requires that noncash items:
 - be reported in the section to which they relate, that is, a noncash investing activity would be reported in the investing section.
 - be disclosed in the notes to the financial statements.
 - do not need to be reported.
 - be treated in a fashion similar to cash equivalents.
- In the future, it appears likely that:
 - the income statement and balance sheet will have headings of operating, investing, and financing, much like the statement of cash flows.
 - cash and cash equivalents will be combined in a single line item.
 - the IASB will not allow companies to use the direct approach to the statement of cash flows.
 - None of the above.
- Under IFRS:
 - taxes are always treated as an operating activity.
 - the income statement uses the headings operating, investing, and financing.
 - dividends received can be either an operating or investing activity.
 - dividends paid can be either an operating or investing activity.
- Which of the following is **correct**?
 - Under IFRS, the statement of cash flows is optional.
 - IFRS requires use of the direct approach in preparing the statement of cash flows.
 - The majority of companies following GAAP and the majority following IFRS employ the indirect approach to the statement of cash flows.
 - Under IFRS, companies offset financing activities against investing activities.

IFRS Exercises

IFRS13-1 Discuss the differences that exist in the treatment of bank overdrafts under GAAP and IFRS.

IFRS13-2 Describe the treatment of each of the following items under IFRS versus GAAP.

- | | |
|------------------------|-------------------------|
| (a) Interest paid. | (c) Dividends paid. |
| (b) Interest received. | (d) Dividends received. |

International Financial Reporting Problem: Louis Vuitton

IFRS13-3 The financial statements of **Louis Vuitton** are presented in Appendix F. Instructions for accessing and using the company's complete annual report, including the notes to its financial statements, are also provided in Appendix F.

Instructions

Use the company's annual report to answer the following questions.

- In which section (operating, investing, or financing) does Louis Vuitton report interest paid (finance costs)?
- In which section (operating, investing, or financing) does Louis Vuitton report dividends received?
- If Louis Vuitton reported under GAAP rather than IFRS, how would its treatment of bank overdrafts differ?

Financial Statement Analysis

CHAPTER PREVIEW As the Feature Story below highlights, we can all learn an important lesson from Warren Buffett. Study companies carefully if you wish to invest. Do not get caught up in fads but instead find companies that are financially healthy. Using some of the decision tools presented in this textbook, you can perform a rudimentary analysis on any U.S. company and draw basic conclusions about its financial health. Although it would not be wise for you to bet your life savings on a company's stock relying solely on your current level of knowledge, we strongly encourage you to practice your new skills wherever possible. Only with practice will you improve your ability to interpret financial numbers.

Before unleashing you on the world of high finance, we present a few more important concepts and techniques, as well as provide you with one more comprehensive review of corporate financial statements. We use all of the decision tools presented in this textbook to analyze a single company—**Macy's, Inc.**—one of the country's oldest and largest retail store chains.

FEATURE STORY

It Pays to Be Patient

A recent issue of *Forbes* magazine listed Warren Buffett as the richest person in the world. His estimated wealth was \$62 billion, give or take a few million. How much is \$62 billion? If you invested \$62 billion in an investment earning just 4%, you could spend \$6.8 million per day—every day—forever.

So, how does Buffett spend his money? Basically, he doesn't! He still lives in the same house that he purchased in Omaha, Nebraska, in 1958 for \$31,500. He still drives his own car (a Cadillac DTS). And, in case you believe that his kids are riding the road to Easy Street, think again. Buffett has committed to donate virtually all of his money to charity before he dies.

How did Buffett amass this wealth? Through careful investing. He applies the basic techniques he learned in the 1950s from the great value investor Benjamin Graham. Buffett looks for companies that have good long-term potential but are currently underpriced. He invests in companies that have low exposure to debt and that reinvest their earnings for future growth. He does not get caught up in fads or the latest trends.

For example, Buffett sat out on the dot-com mania in the 1990s. When other investors put lots of money into fledgling high-tech firms, Buffett didn't bite because the dot-com

companies failed to meet his criteria. He didn't get to enjoy the stock price boom on the way up, but on the other hand, he didn't have to suffer the plummet back down to Earth. When the dot-com bubble burst, everyone else suffered from investment shock. Buffett swooped in and scooped up deals on companies that he had been following for years.

In 2012, when the stock market reached near record highs, Buffett's returns significantly lagged behind the market. Only 26% of his investments at that time were in stock, and he was sitting on \$38 billion in cash. One commentator noted that "if the past is any guide, just when Buffett seems to look most like a loser, the party is about to end."

If you think you want to follow Buffett's example and transform your humble nest egg into a mountain of cash, be warned. His techniques have been widely circulated and emulated, but never practiced with the same degree of success. You should probably start by honing your financial analysis skills. A good way for you to begin your career as a successful investor is to master the fundamentals of financial analysis discussed in this chapter.

Unusual Items

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

Analyzing financial statements involves evaluating three characteristics: a company's liquidity, profitability, and solvency. A **short-term creditor**, such as a bank, is primarily interested in liquidity—the ability of the borrower to pay obligations when they come due. The liquidity of the borrower is extremely important in evaluating the safety of a loan. A **long-term creditor**, such as a bondholder, looks to profitability and solvency measures that indicate the company's ability to survive over a long period of time. Long-term creditors consider such measures as the amount of debt in the company's capital structure and its ability to meet interest payments. Similarly, **stockholders** look at the profitability and solvency of the company. They want to assess the likelihood of dividends and the growth potential of the stock.

Need for Comparative Analysis

Every item reported in a financial statement has significance. When **Macy's, Inc.** reports cash and cash equivalents of \$2.3 billion on its balance sheet, we know the company had that amount of cash on the balance sheet date. But, we do not know whether the amount represents an increase over prior years, or whether it is adequate in relation to the company's need for cash. To obtain such information, we need to compare the amount of cash with other financial statement data.

Comparisons can be made on a number of different bases. Three are illustrated in this chapter.

1. Intracompany basis. Comparisons within a company are often useful to detect changes in financial relationships and significant trends. For example, a comparison of Macy's current year's cash amount with the prior year's cash amount shows either an increase or a decrease. Likewise, a comparison of Macy's year-end cash amount with the amount of its total assets at year-end shows the proportion of total assets in the form of cash.

2. Industry averages. Comparisons with industry averages provide information about a company's relative position within the industry. For example, financial statement readers can compare Macy's financial data with the averages for its industry compiled by financial rating organizations such as **Dun & Bradstreet**, **Moody's**, and **Standard & Poor's**, or with information provided on the Internet by organizations such as **Yahoo!** on its financial site.

3. Intercompany basis. Comparisons with other companies provide insight into a company's competitive position. For example, investors can compare Macy's total sales for the year with the total sales of its competitors in retail, such as **J.C. Penney**.

Tools of Analysis

We use various tools to evaluate the significance of financial statement data. Three commonly used tools are as follows.

- **Horizontal analysis** evaluates a series of financial statement data over a period of time.
- **Vertical analysis** evaluates financial statement data by expressing each item in a financial statement as a percentage of a base amount.
- **Ratio analysis** expresses the relationship among selected items of financial statement data.

Horizontal analysis is used primarily in intracompany comparisons. Two features in published financial statements and annual report information facilitate this

type of comparison. First, each of the basic financial statements presents comparative financial data for a minimum of two years. Second, a summary of selected financial data is presented for a series of five to 10 years or more. Vertical analysis is used in both intra- and intercompany comparisons. Ratio analysis is used in all three types of comparisons. In the following sections, we explain and illustrate each of the three types of analysis.

Horizontal Analysis

Horizontal analysis, also called **trend analysis**, is a technique for evaluating a series of financial statement data over a period of time. Its purpose is to determine the increase or decrease that has taken place. This change may be expressed as either an amount or a percentage. For example, Illustration 14-1 shows recent net sales figures of **Macy's, Inc.**

Real World	MACY'S, INC. Net Sales (in millions)		
	2013	2012	2011
	\$27,931	\$27,686	\$26,405

Illustration 14-1
Macy's, Inc.'s net sales

If we assume that 2011 is the base year, we can measure all percentage increases or decreases from this base period amount as follows.

$$\text{Change Since Base Period} = \frac{\text{Current Year Amount} - \text{Base Year Amount}}{\text{Base Year Amount}}$$

Illustration 14-2
Formula for horizontal analysis of changes since base period

For example, we can determine that net sales for Macy's increased from 2011 to 2012 approximately 4.9% [(\$27,686 - \$26,405) ÷ \$26,405]. Similarly, we can determine that net sales increased from 2011 to 2013 approximately 5.8% [(\$27,931 - \$26,405) ÷ \$26,405].

Alternatively, we can express current year sales as a percentage of the base period. We do this by dividing the current year amount by the base year amount, as shown below.

$$\text{Current Results in Relation to Base Period} = \frac{\text{Current Year Amount}}{\text{Base Year Amount}}$$

Illustration 14-3
Formula for horizontal analysis of current year in relation to base year

Illustration 14-4 presents this analysis for Macy's for a three-year period using 2011 as the base period.

Real World	MACY'S, INC. Net Sales (in millions) in relation to base period 2011		
	2013	2012	2011
	\$27,931 105.8%	\$27,686 104.9%	\$26,405 100%

Illustration 14-4
Horizontal analysis of Macy's, Inc.'s net sales in relation to base period

BALANCE SHEET

To further illustrate horizontal analysis, we will use the financial statements of Quality Department Store Inc., a fictional retailer. Illustration 14-5 presents a horizontal analysis of its two-year condensed balance sheets, showing dollar and percentage changes.

Illustration 14-5
Horizontal analysis of
balance sheets

QUALITY DEPARTMENT STORE INC.				
Condensed Balance Sheets				
December 31				
	<u>2013</u>	<u>2012</u>	<u>Increase or (Decrease) during 2013</u>	
			<u>Amount</u>	<u>Percent</u>
Assets				
Current assets	\$1,020,000	\$ 945,000	\$ 75,000	7.9%
Plant assets (net)	800,000	632,500	167,500	26.5%
Intangible assets	15,000	17,500	(2,500)	(14.3%)
Total assets	<u>\$1,835,000</u>	<u>\$1,595,000</u>	<u>\$240,000</u>	<u>15.0%</u>
Liabilities				
Current liabilities	\$ 344,500	\$ 303,000	\$ 41,500	13.7%
Long-term liabilities	487,500	497,000	(9,500)	(1.9%)
Total liabilities	<u>832,000</u>	<u>800,000</u>	<u>32,000</u>	<u>4.0%</u>
Stockholders' Equity				
Common stock, \$1 par	275,400	270,000	5,400	2.0%
Retained earnings	727,600	525,000	202,600	38.6%
Total stockholders' equity	<u>1,003,000</u>	<u>795,000</u>	<u>208,000</u>	<u>26.2%</u>
Total liabilities and stockholders' equity	<u>\$1,835,000</u>	<u>\$1,595,000</u>	<u>\$240,000</u>	<u>15.0%</u>

The comparative balance sheets in Illustration 14-5 show that a number of significant changes have occurred in Quality Department Store's financial structure from 2012 to 2013:

- In the assets section, plant assets (net) increased \$167,500, or 26.5%.
- In the liabilities section, current liabilities increased \$41,500, or 13.7%.
- In the stockholders' equity section, retained earnings increased \$202,600, or 38.6%.

These changes suggest that the company expanded its asset base during 2013 and **financed this expansion primarily by retaining income** rather than assuming additional long-term debt.

INCOME STATEMENT

Illustration 14-6 presents a horizontal analysis of the two-year condensed income statements of Quality Department Store Inc. for the years 2013 and 2012. Horizontal analysis of the income statements shows the following changes:

- Net sales increased \$260,000, or 14.2% ($\$260,000 \div \$1,837,000$).
- Cost of goods sold increased \$141,000, or 12.4% ($\$141,000 \div \$1,140,000$).
- Total operating expenses increased \$37,000, or 11.6% ($\$37,000 \div \$320,000$).

Overall, gross profit and net income were up substantially. Gross profit increased 17.1%, and net income, 26.5%. Quality's profit trend appears favorable.

QUALITY DEPARTMENT STORE INC.

Condensed Income Statements
For the Years Ended December 31

	2013	2012	Increase or (Decrease) during 2013	
			Amount	Percent
Sales revenue	\$2,195,000	\$1,960,000	\$235,000	12.0%
Sales returns and allowances	98,000	123,000	(25,000)	(20.3%)
Net sales	2,097,000	1,837,000	260,000	14.2%
Cost of goods sold	1,281,000	1,140,000	141,000	12.4%
Gross profit	816,000	697,000	119,000	17.1%
Selling expenses	253,000	211,500	41,500	19.6%
Administrative expenses	104,000	108,500	(4,500)	(4.1%)
Total operating expenses	357,000	320,000	37,000	11.6%

Income before income taxes	432,000	347,500	84,500	24.3%
Income tax expense	168,200	139,000	29,200	21.0%
Net income	\$ 263,800	\$ 208,500	\$ 55,300	26.5%

Illustration 14-6

Horizontal analysis of income statements

Helpful Hint

Note that though the amount column is additive (the total is \$55,300), the percentage column is not additive (26.5% is not the column total). A separate percentage has been calculated for each item.

RETAINED EARNINGS STATEMENT

Illustration 14-7 presents a horizontal analysis of Quality Department Store's comparative retained earnings statements. Analyzed horizontally, net income increased \$55,300, or 26.5%, whereas dividends on the common stock increased only \$1,200, or 2%. We saw in the horizontal analysis of the balance sheet that ending retained earnings increased 38.6%. As indicated earlier, the company retained a significant portion of net income to finance additional plant facilities.

QUALITY DEPARTMENT STORE INC.

Retained Earnings Statements
For the Years Ended December 31

	2013	2012	Increase or (Decrease) during 2013	
			Amount	Percent
Retained earnings, Jan. 1	\$525,000	\$376,500	\$148,500	39.4%
Add: Net income	263,800	208,500	55,300	26.5%
	788,800	585,000	203,800	
Deduct: Dividends	61,200	60,000	1,200	2.0%
Retained earnings, Dec. 31	\$727,600	\$525,000	\$202,600	38.6%

Illustration 14-7

Horizontal analysis of retained earnings statements

Horizontal analysis of changes from period to period is relatively straightforward and is quite useful. But, complications can occur in making the computations. If an item has no value in a base year or preceding year but does have a value in

the next year, we cannot compute a percentage change. Similarly, if a negative amount appears in the base or preceding period and a positive amount exists the following year (or vice versa), no percentage change can be computed.

Vertical Analysis

Vertical analysis, also called **common-size analysis**, is a technique that expresses each financial statement item as a percentage of a base amount. On a balance sheet, we might say that current assets are 22% of total assets—total assets being the base amount. Or on an income statement, we might say that selling expenses are 16% of net sales—net sales being the base amount.

BALANCE SHEET

Illustration 14-8 presents the vertical analysis of Quality Department Store Inc.'s comparative balance sheets. The base for the asset items is **total assets**. The base for the liability and stockholders' equity items is **total liabilities and stockholders' equity**.

Illustration 14-8
Vertical analysis of
balance sheets

QUALITY DEPARTMENT STORE INC.				
Condensed Balance Sheets				
December 31				
	2013		2012	
	Amount	Percent	Amount	Percent
Assets				
Current assets	\$1,020,000	55.6%	\$ 945,000	59.2%
Plant assets (net)	800,000	43.6%	632,500	39.7%
Intangible assets	15,000	0.8%	17,500	1.1%
Total assets	<u>\$1,835,000</u>	<u>100.0%</u>	<u>\$1,595,000</u>	<u>100.0%</u>
Liabilities				
Current liabilities	\$ 344,500	18.8%	\$ 303,000	19.0%
Long-term liabilities	487,500	26.5%	497,000	31.2%
Total liabilities	<u>832,000</u>	<u>45.3%</u>	<u>800,000</u>	<u>50.2%</u>
Stockholders' Equity				
Common stock, \$1 par	275,400	15.0%	270,000	16.9%
Retained earnings	727,600	39.7%	525,000	32.9%
Total stockholders' equity	<u>1,003,000</u>	<u>54.7%</u>	<u>795,000</u>	<u>49.8%</u>
Total liabilities and stockholders' equity	<u>\$1,835,000</u>	<u>100.0%</u>	<u>\$1,595,000</u>	<u>100.0%</u>

Helpful Hint
The formula for calculating these balance sheet percentages is:
$$\frac{\text{Each item on B/S}}{\text{Total assets}} = \%$$

Vertical analysis shows the relative size of each category in the balance sheet. It also can show the **percentage change** in the individual asset, liability, and stockholders' equity items. For example, we can see that current assets decreased from 59.2% of total assets in 2012 to 55.6% in 2013 (even though the absolute dollar amount increased \$75,000 in that time). Plant assets (net) have increased from 39.7% to 43.6% of total assets. Retained earnings have increased from 32.9% to 39.7% of total liabilities and stockholders' equity. These results reinforce the earlier observations that **Quality Department Store is choosing to finance its growth through retention of earnings rather than through issuing additional debt.**

INCOME STATEMENT

Illustration 14-9 shows vertical analysis of Quality Department Store's income statements. Cost of goods sold as a percentage of net sales declined 1% (62.1% vs. 61.1%), and total operating expenses declined 0.4% (17.4% vs. 17.0%). As a result,

QUALITY DEPARTMENT STORE INC.
Condensed Income Statements
For the Years Ended December 31

	2013		2012	
	Amount	Percent	Amount	Percent
Sales revenue	\$2,195,000	104.7%	\$1,960,000	106.7%
Sales returns and allowances	98,000	4.7%	123,000	6.7%
Net sales	2,097,000	100.0%	1,837,000	100.0%
Cost of goods sold	1,281,000	61.1%	1,140,000	62.1%
Gross profit	816,000	38.9%	697,000	37.9%
Selling expenses	253,000	12.0%	211,500	11.5%
Administrative expenses	104,000	5.0%	108,500	5.9%
Total operating expenses	357,000	17.0%	320,000	17.4%
Income from operations	459,000	21.9%	377,000	20.5%
Other revenues and gains				
Interest and dividends	9,000	0.4%	11,000	0.6%
Other expenses and losses				
Interest expense	36,000	1.7%	40,500	2.2%
Income before income taxes	432,000	20.6%	347,500	18.9%
Income tax expense	168,200	8.0%	139,000	7.5%
Net income	\$ 263,800	12.6%	\$ 208,500	11.4%

Illustration 14-9

Vertical analysis of income statements

Helpful Hint

The formula for calculating these income statement percentages is:

$$\frac{\text{Each item on I/S}}{\text{Net sales}} = \%$$

it is not surprising to see net income as a percentage of net sales increase from 11.4% to 12.6%. Quality Department Store appears to be a profitable business that is becoming even more successful.

An associated benefit of vertical analysis is that it enables you to compare companies of different sizes. For example, suppose Quality Department Store's main competitor is a Macy's store in a nearby town. Using vertical analysis, we can compare the condensed income statements of Quality Department Store Inc. (a small retail company) with **Macy's, Inc.**¹ (a giant international retailer), as shown in Illustration 14-10.

Condensed Income Statements
(in thousands)
For the Year Ended December 31, 2013

	Quality Department Store Inc.		Macy's, Inc.	
	Dollars	Percent	Dollars	Percent
Net sales	\$2,097	100.0%	\$27,931,000	100.0%
Cost of goods sold	1,281	61.1%	16,725,000	59.9%
Gross profit	816	38.9%	11,206,000	40.1%
Selling and administrative expenses	357	17.0%	8,440,000	30.2%
Income from operations	459	21.9%	2,766,000	9.9%
Other expenses and revenues (including income taxes)	195	9.3%	1,280,000	4.6%
Net income	\$ 264	12.6%	\$ 1,486,000	5.3%

Illustration 14-10

Intercompany income statement comparison

¹2013 Annual Report, Macy's, Inc. (Cincinnati, Ohio).

Macy's net sales are 13,320 times greater than the net sales of relatively tiny Quality Department Store. But vertical analysis eliminates this difference in size. The percentages show that Quality's and Macy's gross profit rates were comparable at 38.9% and 40.1%, respectively. However, the percentages related to income from operations were significantly different at 21.9% and 9.9%, respectively. This disparity can be attributed to Quality's selling and administrative expense percentage (17%) which is much lower than Macy's (30.2%). Although Macy's earned net income more than 5,629 times larger than Quality's, Macy's net income as a **percentage of each sales dollar** (5.3%) is only 42% of Quality's (12.6%).

DO IT!**1****Horizontal Analysis**

Summary financial information for Rosepatch Company is as follows.

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Current assets	\$234,000	\$180,000
Plant assets (net)	756,000	420,000
Total assets	<u>\$990,000</u>	<u>\$600,000</u>

Compute the amount and percentage changes in 2017 using horizontal analysis, assuming 2016 is the base year.

Solution**Action Plan**

- ✓ Find the percentage change by dividing the amount of the increase by the 2016 amount (base year).

	<u>Increase in 2017</u>	
	<u>Amount</u>	<u>Percent</u>
Current assets	\$ 54,000	30% [(\$234,000 – \$180,000) ÷ \$180,000]
Plant assets (net)	336,000	80% [(\$756,000 – \$420,000) ÷ \$420,000]
Total assets	<u>\$390,000</u>	65% [(\$990,000 – \$600,000) ÷ \$600,000]

LEARNING
OBJECTIVE**2****Analyze a company's performance using ratio analysis.**

Ratio analysis expresses the relationship among selected items of financial statement data. A **ratio** expresses the mathematical relationship between one quantity and another. The relationship is expressed in terms of either a percentage, a rate, or a simple proportion. To illustrate, in 2013 **Nike, Inc.** had current assets of \$13,626 million and current liabilities of \$3,926 million. We can find the relationship between these two measures by dividing current assets by current liabilities. The alternative means of expression are as follows.

- Percentage:** Current assets are 347% of current liabilities.
- Rate:** Current assets are 3.47 times current liabilities.
- Proportion:** The relationship of current assets to liabilities is 3.47:1.

To analyze the primary financial statements, we can use ratios to evaluate liquidity, profitability, and solvency. Illustration 14-11 describes these classifications.

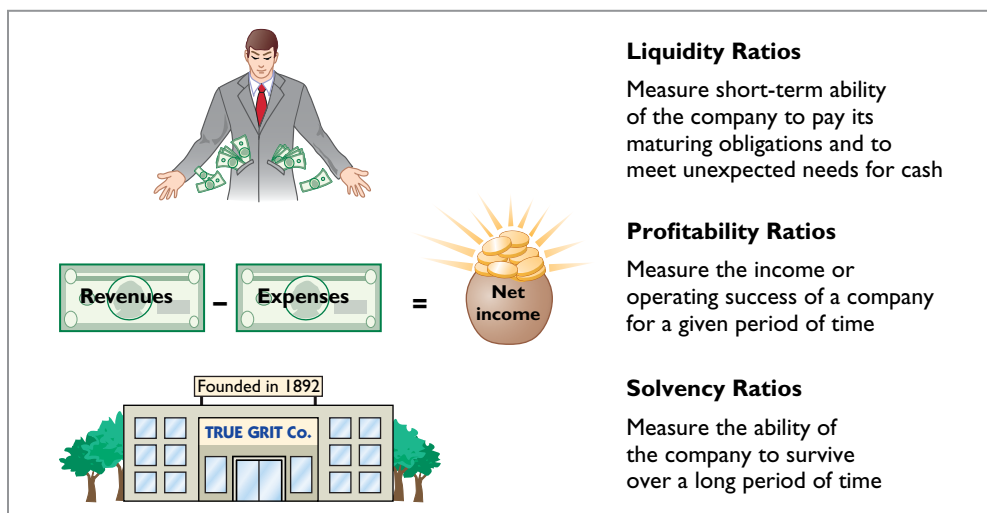

Illustration 14-11
Financial ratio classifications

Ratios can provide clues to underlying conditions that may not be apparent from individual financial statement components. However, a single ratio by itself is not very meaningful. Thus, in the discussion of ratios we will use the following types of comparisons.

1. **Intracompany comparisons** for two years for Quality Department Store.
2. **Industry average comparisons** based on median ratios for department stores.
3. **Intercompany comparisons** based on **Macy's, Inc.** as Quality Department Store's principal competitor.

Liquidity Ratios

Liquidity ratios measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity. The ratios we can use to determine the company's short-term debt-paying ability are the current ratio, the acid-test ratio, accounts receivable turnover, and inventory turnover.

1. CURRENT RATIO

The **current ratio** is a widely used measure for evaluating a company's liquidity and short-term debt-paying ability. The ratio is computed by dividing current assets by current liabilities. Illustration 14-12 shows the 2013 and 2012 current ratios for Quality Department Store and 2013 comparative data.

International Note

As more countries adopt international accounting standards, the ability of analysts to compare companies from different countries should improve. However, international standards are open to widely varying interpretations. In addition, some countries adopt international standards "with modifications." As a consequence, most cross-country comparisons are still not as transparent as within-country comparisons.

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

Quality Department Store		Macy's, Inc.	
2013		2012	
\$1,020,000	= 2.96:1	\$945,000	= 3.12:1
\$344,500		\$303,000	
Industry average		Macy's, Inc.	
1.70:1		1.52:1	

Illustration 14-12
Current ratio

Helpful Hint

Any company can operate successfully without working capital if it has very predictable cash flows and solid earnings. For example, **Whirlpool**, **American Standard**, and **Campbell's Soup** are pursuing this goal as less money tied up in working capital means more money to invest in the business.

What does the ratio actually mean? The 2013 ratio of 2.96:1 means that for every dollar of current liabilities, Quality has \$2.96 of current assets. Quality's current ratio has decreased in the current year. But, compared to the industry average of 1.70:1, Quality appears to be reasonably liquid. Macy's has a current ratio of 1.52:1, which indicates it has adequate current assets relative to its current liabilities.

The current ratio is sometimes referred to as the **working capital ratio**. **Working capital** is current assets minus current liabilities. The current ratio is a more dependable indicator of liquidity than working capital. Two companies with the same amount of working capital may have significantly different current ratios.

The current ratio is only one measure of liquidity. It does not take into account the **composition** of the current assets. For example, a satisfactory current ratio does not disclose the fact that a portion of the current assets may be tied up in slow-moving inventory. A dollar of cash would be more readily available to pay the bills than a dollar of slow-moving inventory.

Investor Insight

SuperStock

How to Manage the Current Ratio

The apparent simplicity of the current ratio can have real-world limitations because adding equal amounts to both the numerator and the denominator causes the ratio to decrease.

Assume, for example, that a company has \$2,000,000 of current assets and \$1,000,000 of current liabilities. Thus, its current ratio is 2:1. If the company

purchases \$1,000,000 of inventory on account, it will have \$3,000,000 of current assets and \$2,000,000 of current liabilities. Its current ratio therefore decreases to 1.5:1. If, instead, the company pays off \$500,000 of its current liabilities, it will have \$1,500,000 of current assets and \$500,000 of current liabilities. Its current ratio then increases to 3:1. Thus, any trend analysis should be done with care because the ratio is susceptible to quick changes and is easily influenced by management.

How might management influence a company's current ratio? (Go to **WileyPLUS** for this answer and additional questions.)

2. ACID-TEST RATIO

The **acid-test (quick) ratio** is a measure of a company's immediate short-term liquidity. We compute this ratio by dividing the sum of cash, short-term investments, and net accounts receivable by current liabilities. Thus, it is an important complement to the current ratio. For example, assume that the current assets of Quality Department Store for 2013 and 2012 consist of the items shown in Illustration 14-13.

Illustration 14-13

Current assets of Quality Department Store

QUALITY DEPARTMENT STORE INC.

Balance Sheet (partial)

	<u>2013</u>	<u>2012</u>
Current assets		
Cash	\$ 100,000	\$155,000
Short-term investments	20,000	70,000
Accounts receivable (net*)	230,000	180,000
Inventory	620,000	500,000
Prepaid expenses	50,000	40,000
Total current assets	<u>\$1,020,000</u>	<u>\$ 945,000</u>

*Allowance for doubtful accounts is \$10,000 at the end of each year.

Cash, short-term investments, and accounts receivable (net) are highly liquid compared to inventory and prepaid expenses. The inventory may not be readily saleable, and the prepaid expenses may not be transferable to others. Thus, the acid-test ratio measures **immediate** liquidity. The 2013 and 2012 acid-test ratios for Quality Department Store and 2013 comparative data are as follows.

Acid-Test Ratio = $\frac{\text{Cash} + \text{Short-Term Investments} + \text{Accounts Receivable (Net)}}{\text{Current Liabilities}}$	
Quality Department Store	
2013	2012
$\frac{\$100,000 + \$20,000 + \$230,000}{\$344,500} = 1.02:1$	$\frac{\$155,000 + \$70,000 + \$180,000}{\$303,000} = 1.34:1$
<u>Industry average</u>	<u>Macy's, Inc.</u>
0.70:1	0.47:1

Illustration 14-14

Acid-test ratio

The ratio has declined in 2013. Is an acid-test ratio of 1.02:1 adequate? This depends on the industry and the economy. When compared with the industry average of 0.70:1 and Macy's of 0.47:1, Quality's acid-test ratio seems adequate.

3. ACCOUNTS RECEIVABLE TURNOVER

We can measure liquidity by how quickly a company can convert certain assets to cash. How liquid, for example, are the accounts receivable? The ratio used to assess the liquidity of the receivables is the **accounts receivable turnover**. It measures the number of times, on average, the company collects receivables during the period. We compute accounts receivable turnover by dividing net credit sales (net sales less cash sales) by the average net accounts receivable. Unless seasonal factors are significant, average net accounts receivable can be computed from the beginning and ending balances of the net accounts receivable.²

Assume that all sales are credit sales. The balance of net accounts receivable at the beginning of 2012 is \$200,000. Illustration 14-15 shows the accounts receivable turnover for Quality Department Store and 2013 comparative data. Quality's accounts receivable turnover improved in 2013. However, the turnover of 10.2 times is substantially lower than Macy's 69.1 times and is also lower than the department store industry's average of 46.4 times.

Accounts Receivable Turnover = $\frac{\text{Net Credit Sales}}{\text{Average Net Accounts Receivable}}$	
Quality Department Store	
2013	2012
$\frac{\$2,097,000}{\left[\frac{\$180,000 + \$230,000}{2} \right]} = 10.2 \text{ times}$	$\frac{\$1,837,000}{\left[\frac{\$200,000 + \$180,000}{2} \right]} = 9.7 \text{ times}$
<u>Industry average</u>	<u>Macy's, Inc.</u>
46.4 times	69.1 times

Illustration 14-15

Accounts receivable turnover

²If seasonal factors are significant, the average accounts receivable balance might be determined by using monthly amounts.

AVERAGE COLLECTION PERIOD A popular variant of the accounts receivable turnover is to convert it to an **average collection period** in terms of days. To do so, we divide the accounts receivable turnover into 365 days. For example, the accounts receivable turnover of 10.2 times divided into 365 days gives an average collection period of approximately 36 days. This means that accounts receivable are collected on average every 36 days, or about every 5 weeks. Analysts frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the collection period should not greatly exceed the credit term period (the time allowed for payment).

4. INVENTORY TURNOVER

Inventory turnover measures the number of times, on average, the inventory is sold during the period. Its purpose is to measure the liquidity of the inventory. We compute the inventory turnover by dividing cost of goods sold by the average inventory. Unless seasonal factors are significant, we can use the beginning and ending inventory balances to compute average inventory.

Assuming that the inventory balance for Quality Department Store at the beginning of 2012 was \$450,000, its inventory turnover and 2013 comparative data are as shown in Illustration 14-16. Quality's inventory turnover declined slightly in 2013. The turnover of 2.3 times is low compared with the industry average of 4.3 and Macy's 3.1. Generally, the faster the inventory turnover, the less cash a company has tied up in inventory and the less chance a company has of inventory obsolescence.

Illustration 14-16
Inventory turnover

Inventory Turnover		=	Cost of Goods Sold		/		Average Inventory																																																																
<table style="width: 100%; border-collapse: collapse;"> <tr> <td colspan="9" style="text-align: center;">Quality Department Store</td> </tr> <tr> <td colspan="4" style="text-align: center;">2013</td> <td colspan="5" style="text-align: center;">2012</td> </tr> <tr> <td colspan="4" style="text-align: center;">\$1,281,000</td> <td colspan="5" style="text-align: center;">\$1,140,000</td> </tr> <tr> <td colspan="4" style="text-align: center;">= 2.3 times</td> <td colspan="5" style="text-align: center;">= 2.4 times</td> </tr> <tr> <td colspan="4" style="text-align: center;"> $\frac{\\$500,000 + \\$620,000}{2}$ </td> <td colspan="5" style="text-align: center;"> $\frac{\\$450,000 + \\$500,000}{2}$ </td> </tr> <tr> <td colspan="4" style="text-align: center;">Industry average</td> <td colspan="5" style="text-align: center;">Macy's, Inc.</td> </tr> <tr> <td colspan="4" style="text-align: center;">4.3 times</td> <td colspan="5" style="text-align: center;">3.1 times</td> </tr> </table>									Quality Department Store									2013				2012					\$1,281,000				\$1,140,000					= 2.3 times				= 2.4 times					$\frac{\$500,000 + \$620,000}{2}$				$\frac{\$450,000 + \$500,000}{2}$					Industry average				Macy's, Inc.					4.3 times				3.1 times				
Quality Department Store																																																																							
2013				2012																																																																			
\$1,281,000				\$1,140,000																																																																			
= 2.3 times				= 2.4 times																																																																			
$\frac{\$500,000 + \$620,000}{2}$				$\frac{\$450,000 + \$500,000}{2}$																																																																			
Industry average				Macy's, Inc.																																																																			
4.3 times				3.1 times																																																																			

DAYS IN INVENTORY A variant of inventory turnover is the **days in inventory**. We calculate it by dividing the inventory turnover into 365. For example, Quality's 2013 inventory turnover of 2.3 times divided into 365 is 158.7 days. An average selling time of 158.7 days is also high compared with the industry average of 84.9 days ($365 \div 4.3$) and Macy's 117.7 days ($365 \div 3.1$).

Inventory turnovers vary considerably among industries. For example, grocery store chains have a turnover of 17.1 times and an average selling period of 21 days. In contrast, jewelry stores have an average turnover of 0.80 times and an average selling period of 456 days.

Profitability Ratios

Profitability ratios measure the income or operating success of a company for a given period of time. Income, or the lack of it, affects the company's ability to obtain debt and equity financing. It also affects the company's liquidity position and the company's ability to grow. As a consequence, both creditors and investors are interested in evaluating earning power—profitability. Analysts frequently use profitability as the ultimate test of management's operating effectiveness.

5. PROFIT MARGIN

Profit margin is a measure of the percentage of each dollar of sales that results in net income. We can compute it by dividing net income by net sales. Illustration 14-17 shows Quality Department Store's profit margin and 2013 comparative data.

Alternative Terminology

Profit margin is also called the *rate of return on sales*.

Profit Margin = $\frac{\text{Net Income}}{\text{Net Sales}}$											
<table style="width: 100%; border-collapse: collapse;"> <tr> <td colspan="2" style="text-align: center;">Quality Department Store</td> </tr> <tr> <td style="text-align: center; width: 50%;">2013</td> <td style="text-align: center; width: 50%;">2012</td> </tr> <tr> <td style="text-align: center;">$\frac{\\$263,800}{\\$2,097,000} = 12.6\%$</td> <td style="text-align: center;">$\frac{\\$208,500}{\\$1,837,000} = 11.4\%$</td> </tr> <tr> <td style="text-align: center;"><u>Industry average</u></td> <td style="text-align: center;"><u>Macy's, Inc.</u></td> </tr> <tr> <td style="text-align: center;">8.0%</td> <td style="text-align: center;">5.3%</td> </tr> </table>		Quality Department Store		2013	2012	$\frac{\$263,800}{\$2,097,000} = 12.6\%$	$\frac{\$208,500}{\$1,837,000} = 11.4\%$	<u>Industry average</u>	<u>Macy's, Inc.</u>	8.0%	5.3%
Quality Department Store											
2013	2012										
$\frac{\$263,800}{\$2,097,000} = 12.6\%$	$\frac{\$208,500}{\$1,837,000} = 11.4\%$										
<u>Industry average</u>	<u>Macy's, Inc.</u>										
8.0%	5.3%										

Illustration 14-17

Profit margin

Quality experienced an increase in its profit margin from 2012 to 2013. Its profit margin is unusually high in comparison with the industry average of 8% and Macy's 5.3%.

High-volume (high inventory turnover) businesses, such as grocery stores (**Safeway** or **Kroger**) and discount stores (**Kmart** or **Wal-Mart**), generally experience low profit margins. In contrast, low-volume businesses, such as jewelry stores (**Tiffany & Co.**) or airplane manufacturers (**Boeing Co.**), have high profit margins.

6. ASSET TURNOVER

Asset turnover measures how efficiently a company uses its assets to generate sales. It is determined by dividing net sales by average total assets. The resulting number shows the dollars of sales produced by each dollar invested in assets. Unless seasonal factors are significant, we can use the beginning and ending balance of total assets to determine average total assets. Assuming that total assets at the beginning of 2012 were \$1,446,000, the 2013 and 2012 asset turnover for Quality Department Store and 2013 comparative data are shown in Illustration 14-18.

Asset Turnover = $\frac{\text{Net Sales}}{\text{Average Total Assets}}$											
<table style="width: 100%; border-collapse: collapse;"> <tr> <td colspan="2" style="text-align: center;">Quality Department Store</td> </tr> <tr> <td style="text-align: center; width: 50%;">2013</td> <td style="text-align: center; width: 50%;">2012</td> </tr> <tr> <td style="text-align: center;">$\frac{\\$2,097,000}{\frac{[\\$1,595,000 + \\$1,835,000]}{2}} = 1.2 \text{ times}$</td> <td style="text-align: center;">$\frac{\\$1,837,000}{\frac{[\\$1,446,000 + \\$1,595,000]}{2}} = 1.2 \text{ times}$</td> </tr> <tr> <td style="text-align: center;"><u>Industry average</u></td> <td style="text-align: center;"><u>Macy's, Inc.</u></td> </tr> <tr> <td style="text-align: center;">1.4 times</td> <td style="text-align: center;">1.3 times</td> </tr> </table>		Quality Department Store		2013	2012	$\frac{\$2,097,000}{\frac{[\$1,595,000 + \$1,835,000]}{2}} = 1.2 \text{ times}$	$\frac{\$1,837,000}{\frac{[\$1,446,000 + \$1,595,000]}{2}} = 1.2 \text{ times}$	<u>Industry average</u>	<u>Macy's, Inc.</u>	1.4 times	1.3 times
Quality Department Store											
2013	2012										
$\frac{\$2,097,000}{\frac{[\$1,595,000 + \$1,835,000]}{2}} = 1.2 \text{ times}$	$\frac{\$1,837,000}{\frac{[\$1,446,000 + \$1,595,000]}{2}} = 1.2 \text{ times}$										
<u>Industry average</u>	<u>Macy's, Inc.</u>										
1.4 times	1.3 times										

Illustration 14-18

Asset turnover

Asset turnover shows that in 2013 Quality generated sales of \$1.20 for each dollar it had invested in assets. The ratio changed very little from 2012 to 2013. Quality's asset turnover is below the industry average of 1.4 times and Macy's ratio of 1.3 times.

Asset turnovers vary considerably among industries. For example, a large utility company like **Consolidated Edison** (New York) has a ratio of 0.4 times, and the large grocery chain **Kroger Stores** has a ratio of 3.4 times.

7. RETURN ON ASSETS

An overall measure of profitability is **return on assets**. We compute this ratio by dividing net income by average total assets. The 2013 and 2012 return on assets for Quality Department Store and 2013 comparative data are shown below.

Illustration 14-19
Return on assets

Return on Assets		=	$\frac{\text{Net Income}}{\text{Average Total Assets}}$															
<table style="width: 100%; border: 1px solid black; border-collapse: collapse;"> <tr> <td colspan="2" style="text-align: center; padding: 5px;">Quality Department Store</td> </tr> <tr> <td style="text-align: center; padding: 5px;">2013</td> <td style="text-align: center; padding: 5px;">2012</td> </tr> <tr> <td style="text-align: center; padding: 5px;">\$263,800</td> <td style="text-align: center; padding: 5px;">\$208,500</td> </tr> <tr> <td style="text-align: center; padding: 5px;">$\frac{[\\$1,595,000 + \\$1,835,000]}{2}$</td> <td style="text-align: center; padding: 5px;">$\frac{[\\$1,446,000 + \\$1,595,000]}{2}$</td> </tr> <tr> <td style="text-align: center; padding: 5px;">= 15.4%</td> <td style="text-align: center; padding: 5px;">= 13.7%</td> </tr> <tr> <td style="text-align: center; padding: 5px;">Industry average</td> <td style="text-align: center; padding: 5px;">Macy's, Inc.</td> </tr> <tr> <td style="text-align: center; padding: 5px;">8.9%</td> <td style="text-align: center; padding: 5px;">7.0%</td> </tr> </table>					Quality Department Store		2013	2012	\$263,800	\$208,500	$\frac{[\$1,595,000 + \$1,835,000]}{2}$	$\frac{[\$1,446,000 + \$1,595,000]}{2}$	= 15.4%	= 13.7%	Industry average	Macy's, Inc.	8.9%	7.0%
Quality Department Store																		
2013	2012																	
\$263,800	\$208,500																	
$\frac{[\$1,595,000 + \$1,835,000]}{2}$	$\frac{[\$1,446,000 + \$1,595,000]}{2}$																	
= 15.4%	= 13.7%																	
Industry average	Macy's, Inc.																	
8.9%	7.0%																	

Quality's return on assets improved from 2012 to 2013. Its return of 15.4% is very high compared with the department store industry average of 8.9% and Macy's 7.0%.

8. RETURN ON COMMON STOCKHOLDERS' EQUITY

Another widely used profitability ratio is **return on common stockholders' equity**. It measures profitability from the common stockholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. We compute it by dividing net income by average common stockholders' equity. Assuming that common stockholders' equity at the beginning of 2012 was \$667,000, Illustration 14-20 shows the 2013 and 2012 ratios for Quality Department Store and 2013 comparative data.

Illustration 14-20
Return on common stockholders' equity

Return on Common Stockholders' Equity		=	$\frac{\text{Net Income}}{\text{Average Common Stockholders' Equity}}$															
<table style="width: 100%; border: 1px solid black; border-collapse: collapse;"> <tr> <td colspan="2" style="text-align: center; padding: 5px;">Quality Department Store</td> </tr> <tr> <td style="text-align: center; padding: 5px;">2013</td> <td style="text-align: center; padding: 5px;">2012</td> </tr> <tr> <td style="text-align: center; padding: 5px;">\$263,800</td> <td style="text-align: center; padding: 5px;">\$208,500</td> </tr> <tr> <td style="text-align: center; padding: 5px;">$\frac{[\\$795,000 + \\$1,003,000]}{2}$</td> <td style="text-align: center; padding: 5px;">$\frac{[\\$667,000 + \\$795,000]}{2}$</td> </tr> <tr> <td style="text-align: center; padding: 5px;">= 29.3%</td> <td style="text-align: center; padding: 5px;">= 28.5%</td> </tr> <tr> <td style="text-align: center; padding: 5px;">Industry average</td> <td style="text-align: center; padding: 5px;">Macy's, Inc.</td> </tr> <tr> <td style="text-align: center; padding: 5px;">18.3%</td> <td style="text-align: center; padding: 5px;">24.2%</td> </tr> </table>					Quality Department Store		2013	2012	\$263,800	\$208,500	$\frac{[\$795,000 + \$1,003,000]}{2}$	$\frac{[\$667,000 + \$795,000]}{2}$	= 29.3%	= 28.5%	Industry average	Macy's, Inc.	18.3%	24.2%
Quality Department Store																		
2013	2012																	
\$263,800	\$208,500																	
$\frac{[\$795,000 + \$1,003,000]}{2}$	$\frac{[\$667,000 + \$795,000]}{2}$																	
= 29.3%	= 28.5%																	
Industry average	Macy's, Inc.																	
18.3%	24.2%																	

Quality's rate of return on common stockholders' equity is high at 29.3%, considering an industry average of 18.3% and a rate of 24.2% for Macy's.

WITH PREFERRED STOCK When a company has preferred stock, we must deduct **preferred dividend** requirements from net income to compute income available to common stockholders. Similarly, we deduct the par value of preferred stock (or call price, if applicable) from total stockholders' equity to determine the amount of common stockholders' equity used in this ratio. The ratio then appears as follows.

Illustration 14-21
Return on common stockholders' equity with preferred stock

Return on Common Stockholders' Equity		=	$\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Average Common Stockholders' Equity}}$	
--	--	---	---	--

Note that Quality's rate of return on stockholders' equity (29.3%) is substantially higher than its rate of return on assets (15.4%). The reason is that Quality has made effective use of **leverage**. **Leveraging** or **trading on the equity** at a gain means that the company has borrowed money at a lower rate of interest than it is able to earn by using the borrowed money. Leverage enables Quality to use money supplied by nonowners to increase the return to the owners. A comparison of the rate of return on total assets with the rate of interest paid for borrowed money indicates the profitability of trading on the equity. Quality earns more on its borrowed funds than it has to pay in the form of interest. Thus, the return to stockholders exceeds the return on the assets, due to benefits from the positive leveraging.

9. EARNINGS PER SHARE (EPS)

Earnings per share (EPS) is a measure of the net income earned on each share of common stock. It is computed by dividing net income less preferred dividends by the number of weighted-average common shares outstanding during the year. A measure of net income earned on a per share basis provides a useful perspective for determining profitability. Assuming that there is no change in the number of outstanding shares during 2012 and that the 2013 increase occurred midyear, Illustration 14-22 shows the net income per share for Quality Department Store for 2013 and 2012, assuming no preferred dividends.

Earnings per Share	=	$\frac{\text{Net Income} - \text{Preferred Dividends}}{\text{Weighted-Average Common Shares Outstanding}}$								
<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td colspan="2" style="text-align: center; padding: 5px;">Quality Department Store</td> </tr> <tr> <td style="text-align: center; padding: 5px;"> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; padding: 5px;">2013</td> <td style="text-align: center; padding: 5px;">2012</td> </tr> <tr> <td style="text-align: center; padding: 5px;"> $\frac{\\$263,800}{\frac{270,000 + 275,400}{2}} = \\0.97 </td> <td style="text-align: center; padding: 5px;"> $\frac{\\$208,500}{270,000} = \\0.77 </td> </tr> </table> </td> <td></td> </tr> </table>			Quality Department Store		<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; padding: 5px;">2013</td> <td style="text-align: center; padding: 5px;">2012</td> </tr> <tr> <td style="text-align: center; padding: 5px;"> $\frac{\\$263,800}{\frac{270,000 + 275,400}{2}} = \\0.97 </td> <td style="text-align: center; padding: 5px;"> $\frac{\\$208,500}{270,000} = \\0.77 </td> </tr> </table>	2013	2012	$\frac{\$263,800}{\frac{270,000 + 275,400}{2}} = \0.97	$\frac{\$208,500}{270,000} = \0.77	
Quality Department Store										
<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; padding: 5px;">2013</td> <td style="text-align: center; padding: 5px;">2012</td> </tr> <tr> <td style="text-align: center; padding: 5px;"> $\frac{\\$263,800}{\frac{270,000 + 275,400}{2}} = \\0.97 </td> <td style="text-align: center; padding: 5px;"> $\frac{\\$208,500}{270,000} = \\0.77 </td> </tr> </table>	2013	2012	$\frac{\$263,800}{\frac{270,000 + 275,400}{2}} = \0.97	$\frac{\$208,500}{270,000} = \0.77						
2013	2012									
$\frac{\$263,800}{\frac{270,000 + 275,400}{2}} = \0.97	$\frac{\$208,500}{270,000} = \0.77									

Illustration 14-22
Earnings per share

Note that no industry or specific competitive data are presented. Such comparisons are not meaningful because of the wide variations in the number of shares of outstanding stock among companies. The only meaningful EPS comparison is an intracompany trend comparison. Here, Quality's earnings per share increased 20 cents per share in 2013. This represents a 26% increase over the 2012 earnings per share of 77 cents.

The terms "earnings per share" and "net income per share" refer to the amount of net income applicable to each share of **common stock**. Therefore, in computing EPS, if there are preferred dividends declared for the period, we must deduct them from net income to determine income available to the common stockholders.

10. PRICE-EARNINGS RATIO

The **price-earnings (P-E) ratio** is a widely used measure of the ratio of the market price of each share of common stock to the earnings per share. The price-earnings (P-E) ratio reflects investors' assessments of a company's future earnings. We compute it by dividing the market price per share of the stock by earnings per share. Assuming that the market price of Quality Department Store stock is \$8 in 2012 and \$12 in 2013, the price-earnings ratio computation is computed as shown in Illustration 14-23 (page 674).

Illustration 14-23
Price-earnings ratio

Price-Earnings Ratio = $\frac{\text{Market Price per Share}}{\text{Earnings per Share}}$			
Quality Department Store			
<u>2013</u>		<u>2012</u>	
$\frac{\$12.00}{\$0.97}$	= 12.4 times	$\frac{\$8.00}{\$0.77}$	= 10.4 times
<u>Industry average</u>		<u>Macy's, Inc.</u>	
21.3 times		13.5 times	

In 2013, each share of Quality's stock sold for 12.4 times the amount that the company earned on each share. Quality's price-earnings ratio is lower than the industry average of 21.3 times but much closer to the ratio of 13.5 times for Macy's. For overall comparison to the market, the average price-earnings ratio for the stocks that constitute the Standard and Poor's 500 Index (500 largest U.S. firms) in mid-2014 was approximately 19.6 times.

11. PAYOUT RATIO

The **payout ratio** measures the percentage of earnings distributed in the form of cash dividends. We compute it by dividing cash dividends declared on common stock by net income. Companies that have high growth rates generally have low payout ratios because they reinvest most of their net income into the business. The 2013 and 2012 payout ratios for Quality Department Store are computed as shown in Illustration 14-24.

Illustration 14-24
Payout ratio

Payout Ratio = $\frac{\text{Cash Dividends Declared on Common Stock}}{\text{Net Income}}$			
Quality Department Store			
<u>2013</u>		<u>2012</u>	
$\frac{\$61,200}{\$263,800}$	= 23.2%	$\frac{\$60,000}{\$208,500}$	= 28.8%
<u>Industry average</u>		<u>Macy's, Inc.</u>	
16.1%		24.2%	

Quality's payout ratio is higher than the industry average payout ratio of 16.1%.

Solvency Ratios

Solvency ratios measure the ability of a company to survive over a long period of time. Long-term creditors and stockholders are particularly interested in a company's ability to pay interest as it comes due and to repay the face value of debt at maturity. Debt to assets and times interest earned are two ratios that provide information about debt-paying ability.

12. DEBT TO ASSETS RATIO

The **debt to assets ratio** measures the percentage of the total assets that creditors provide. We compute it by dividing total liabilities (both current and long-term liabilities) by total assets. This ratio indicates the company's degree of leverage. It also provides some indication of the company's ability to withstand

losses without impairing the interests of creditors. The higher the percentage of total liabilities to total assets, the greater the risk that the company may be unable to meet its maturing obligations. The 2013 and 2012 ratios for Quality Department Store and 2013 comparative data are as follows.

Debt to Assets Ratio		=	$\frac{\text{Total Liabilities}}{\text{Total Assets}}$	
Quality Department Store				
2013			2012	
$\frac{\$832,000}{\$1,835,000}$	=	45.3%	$\frac{\$800,000}{\$1,595,000}$	= 50.2%
<u>Industry average</u>			<u>Macy's, Inc.</u>	
34.2%			71.1%	

Illustration 14-25
Debt to assets ratio

A ratio of 45.3% means that creditors have provided 45.3% of Quality Department Store's total assets. Quality's 45.3% is above the industry average of 34.2%. It is considerably below the high 71.1% ratio of Macy's. The lower the ratio, the more equity "buffer" there is available to the creditors. Thus, from the creditors' point of view, a low ratio of debt to assets is usually desirable.

The adequacy of this ratio is often judged in the light of the company's earnings. Generally, companies with relatively stable earnings (such as public utilities) have higher debt to assets ratios than cyclical companies with widely fluctuating earnings (such as many high-tech companies).

13. TIMES INTEREST EARNED

Times interest earned provides an indication of the company's ability to meet interest payments as they come due. We compute it by dividing the sum of net income, interest expense, and income tax expense by interest expense. Illustration 14-26 shows the 2013 and 2012 ratios for Quality Department Store and 2013 comparative data. Note that times interest earned uses net income before income tax expense and interest expense. This represents the amount available to cover interest. For Quality Department Store, the 2013 amount is computed by taking net income of \$263,800 and adding back the \$36,000 of interest expense and the \$168,200 of income tax expense.

Alternative Terminology
Times interest earned is also called *interest coverage*.

Times Interest Earned		=	$\frac{\text{Net Income} + \text{Interest Expense} + \text{Income Tax Expense}}{\text{Interest Expense}}$	
Quality Department Store				
2013			2012	
$\frac{\$263,800 + \$36,000 + \$168,200}{\$36,000}$	=	13 times	$\frac{\$208,500 + \$40,500 + \$139,000}{\$40,500}$	= 9.6 times
<u>Industry average</u>			<u>Macy's, Inc.</u>	
16.1 times			6.9 times	

Illustration 14-26
Times interest earned

Quality's interest expense is well covered at 13 times. It is less than the industry average of 16.1 times but significantly exceeds Macy's 6.9 times.

Summary of Ratios

Illustration 14-27 summarizes the ratios discussed in this chapter. The summary includes the formula and purpose or use of each ratio.

Ratio	Formula	Purpose or Use
Liquidity Ratios		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Measures short-term debt-paying ability.
2. Acid-test (quick) ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Measures immediate short-term liquidity.
3. Accounts receivable turnover	$\frac{\text{Net credit sales}}{\text{Average net accounts receivable}}$	Measures liquidity of accounts receivable.
4. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Measures liquidity of inventory.
Profitability Ratios		
5. Profit margin	$\frac{\text{Net income}}{\text{Net sales}}$	Measures net income generated by each dollar of sales.
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Measures how efficiently assets are used to generate sales.
7. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Measures overall profitability of assets.
8. Return on common stockholders' equity	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$	Measures profitability of owners' investment.
9. Earnings per share (EPS)	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$	Measures net income earned on each share of common stock.
10. Price-earnings (P-E) ratio	$\frac{\text{Market price per share}}{\text{Earnings per share}}$	Measures the ratio of the market price per share to earnings per share.
11. Payout ratio	$\frac{\text{Cash dividends declared on common stock}}{\text{Net income}}$	Measures percentage of earnings distributed in the form of cash dividends.
Solvency Ratios		
12. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Measures the percentage of total assets provided by creditors.
13. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Measures ability to meet interest payments as they come due.

Summary of liquidity, profitability, and solvency ratios

DO IT!**2****Ratio Analysis**

The condensed financial statements of John Cully Company, for the years ended June 30, 2017 and 2016, are presented below.

JOHN CULLY COMPANY

Balance Sheets

June 30

	(in thousands)	
<u>Assets</u>	<u>2017</u>	<u>2016</u>
Current assets		
Cash and cash equivalents	\$ 553.3	\$ 611.6
Accounts receivable (net)	776.6	664.9
Inventory	768.3	653.5
Prepaid expenses and other current assets	204.4	269.2
Total current assets	2,302.6	2,199.2
Investments	12.3	12.6
Property, plant, and equipment (net)	694.2	647.0
Intangibles and other assets	876.7	849.3
Total assets	<u>\$3,885.8</u>	<u>\$3,708.1</u>
 <u>Liabilities and Stockholders' Equity</u>		
Current liabilities	\$1,497.7	\$1,322.0
Long-term liabilities	679.5	637.1
Stockholders' equity—common	1,708.6	1,749.0
Total liabilities and stockholders' equity	<u>\$3,885.8</u>	<u>\$3,708.1</u>

JOHN CULLY COMPANY

Income Statements

For the Year Ended June 30

	(in thousands)	
	<u>2017</u>	<u>2016</u>
Sales revenue	\$6,336.3	\$5,790.4
Costs and expenses		
Cost of goods sold	1,617.4	1,476.3
Selling and administrative expenses	4,007.6	3,679.0
Interest expense	13.9	27.1
Total costs and expenses	5,638.9	5,182.4
Income before income taxes	697.4	608.0
Income tax expense	291.3	232.6
Net income	<u>\$ 406.1</u>	<u>\$ 375.4</u>

Compute the following ratios for 2017 and 2016.

- (a) Current ratio.
- (b) Inventory turnover. (Inventory on 6/30/15 was \$599.0.)
- (c) Profit margin.
- (d) Return on assets. (Assets on 6/30/15 were \$3,349.9.)
- (e) Return on common stockholders' equity. (Stockholders' equity on 6/30/15 was \$1,795.9.)
- (f) Debt to assets ratio.
- (g) Times interest earned.

Action Plan

- ✓ Remember that the current ratio includes all current assets. The acid-test ratio uses only cash, short-term investments, and net accounts receivable.
- ✓ Use average balances for turnover ratios like inventory, accounts receivable, and return on assets.

Solution

	<u>2017</u>	<u>2016</u>
(a) Current ratio:		
$\$2,302.6 \div \$1,497.7 =$	1.5:1	
$\$2,199.2 \div \$1,322.0 =$		1.7:1
(b) Inventory turnover:		
$\$1,617.4 \div [(\$768.3 + \$653.5) \div 2] =$	2.3 times	
$\$1,476.3 \div [(\$653.5 + \$599.0) \div 2] =$		2.4 times
(c) Profit margin:		
$\$406.1 \div \$6,336.3 =$	6.4%	
$\$375.4 \div \$5,790.4 =$		6.5%
(d) Return on assets:		
$\$406.1 \div [(\$3,885.8 + \$3,708.1) \div 2] =$	10.7%	
$\$375.4 \div [(\$3,708.1 + \$3,349.9) \div 2] =$		10.6%
(e) Return on common stockholders' equity:		
$(\$406.1 - \$0) \div [(\$1,708.6 + \$1,749.0) \div 2] =$	23.5%	
$(\$375.4 - \$0) \div [(\$1,749.0 + \$1,795.9) \div 2] =$		21.2%
(f) Debt to assets ratio:		
$(\$1,497.7 + \$679.5) \div \$3,885.8 =$	56.0%	
$(\$1,322.0 + \$637.1) \div \$3,708.1 =$		52.8%
(g) Times interest earned:		
$(\$406.1 + \$13.9 + \$291.3) \div \$13.9 =$	51.2 times	
$(\$375.4 + \$27.1 + \$232.6) \div \$27.1 =$		23.4 times

LEARNING
OBJECTIVE**3****Apply the concept of sustainable income.**

The value of a company like **Google** is a function of the amount, timing, and uncertainty of its future cash flows. Google's current and past income statements are particularly useful in helping analysts predict these future cash flows. In using this approach, analysts must make sure that Google's past income numbers reflect its **sustainable income**, that is, do not include unusual (out-of-the-ordinary) revenues, expenses, gains, and losses. **Sustainable income** is, therefore, the most likely level of income to be obtained by a company in the future. Sustainable income differs from actual net income by the amount of unusual revenues, expenses, gains, and losses included in the current year's income. Analysts are interested in sustainable income because it helps them derive an estimate of future earnings without the "noise" of unusual items.

Fortunately, an income statement provides information on sustainable income by separating operating transactions from nonoperating transactions. This statement also highlights intermediate components of income such as income from operations, income before income taxes, and income from continuing operations. In addition, information on unusual items such as gains or losses on discontinued items and components of other comprehensive income are disclosed.

Illustration 14-28 presents a statement of comprehensive income for Cruz Company for the year 2017. A statement of comprehensive income includes not only net income but a broader measure of income called comprehensive income. The two major unusual items in this statement are discontinued operations and other comprehensive income (highlighted in red). When estimating future cash flows, analysts must consider the implications of each of these components.

CRUZ COMPANY
Statement of Comprehensive Income
For the year ended 2017

Sales revenue	\$900,000
Cost of goods sold	650,000
Gross profit	250,000
Operating expenses	100,000
Income from operations	150,000
Other revenues (expenses) and gains (losses)	20,000
Income before income taxes	170,000
Income tax expense	24,000
Income from continuing operations	146,000
Discontinued operations (net of tax)	30,000
Net income	176,000
Other comprehensive income items (net of tax)	10,000
Comprehensive income	<u>\$186,000</u>

Illustration 14-28
Statement of comprehensive income

In looking at Illustration 14-28, note that Cruz Company's two major types of unusual items, discontinued operations and other comprehensive income, are reported net of tax. That is, Cruz first calculates income tax expense before income from continuing operations. Then, it calculates income tax expense related to the discontinued operations and other comprehensive income. The general concept is, "Let the tax follow the income or loss." We discuss discontinued operations and other comprehensive income in more detail next.

Discontinued Operations

Discontinued operations refers to the disposal of a **significant component** of a business, such as the elimination of a major class of customers, or an entire activity. For example, to downsize its operations, **General Dynamics Corp.** sold its missile business to **Hughes Aircraft Co.** for \$450 million. In its statement of comprehensive income, General Dynamics reported the sale in a separate section entitled "Discontinued operations."

Following the disposal of a significant component, the company should report on its statement both income from continuing operations and income (or loss) from discontinued operations. **The income (loss) from discontinued operations consists of two parts: the income (loss) from operations and the gain (loss) on disposal of the component.**

To illustrate, assume that during 2017 Acro Energy Inc. has income before income taxes of \$800,000. During 2017, Acro discontinued and sold its unprofitable chemical division. The loss in 2017 from chemical operations (net of \$60,000 taxes) was \$140,000. The loss on disposal of the chemical division (net of \$30,000 taxes) was \$70,000. Assuming a 30% tax rate on income, Illustration 14-29 (page 680) shows Acro's statement of comprehensive income presentation.

Note that the statement uses the caption "Income from continuing operations" and adds a new section "Discontinued operations." **The new section reports both the operating loss and the loss on disposal net of applicable income taxes.** This presentation clearly indicates the separate effects of continuing operations and discontinued operations on net income.

Other Comprehensive Income

Most revenues, expenses, gains, and losses are included in net income. However, certain gains and losses bypass net income. Instead, companies record these items as direct adjustments to stockholders' equity. The FASB requires companies to report not only net income but also other comprehensive income.

Illustration 14-29

Statement presentation of discontinued operations

Helpful Hint

Observe the dual disclosures: (1) the results of operation of the discontinued division must be eliminated from the results of continuing operations, and (2) the company must also report the disposal of the division.

ACRO ENERGY INC.		
Statement of Comprehensive Income (partial)		
For the Year Ended December 31, 2017		
Income before income taxes		\$ 800,000
Income tax expense		<u>240,000</u>
Income from continuing operations		560,000
Discontinued operations		
Loss from operation of chemical division, net of \$60,000 income tax savings	\$140,000	
Loss from disposal of chemical division, net of \$30,000 income tax savings	<u>70,000</u>	<u>210,000</u>
Net income		<u><u>\$ 350,000</u></u>

Other comprehensive income includes all changes in stockholders' equity during a period except those changes resulting from investments by stockholders and distributions to stockholders.

ILLUSTRATION OF OTHER COMPREHENSIVE INCOME

Accounting standards require that companies adjust most investments in stocks and bonds up or down to their market price at the end of each accounting period. For example, assume that during 2017 Stassi Company purchased IBM stock for \$10,000 as an investment. At the end of 2017, Stassi was still holding the investment, but the stock's market price was now \$8,000. In this case, Stassi is required to reduce the recorded value of its IBM investment by \$2,000. The \$2,000 difference is an unrealized loss.

Should Stassi include this \$2,000 unrealized loss in net income? It depends on whether Stassi classifies the IBM stock as a trading security or an available-for-sale security. A **trading security** is bought and held primarily for sale in the near term to generate income on short-term price differences. Companies report unrealized losses on trading securities in the "Other expenses and losses" section of the income statement. The rationale: It is likely that the company will realize the unrealized loss (or an unrealized gain), so the company should report the loss (gain) as part of net income.

If Stassi did not purchase the investment for trading purposes, it is classified as available-for-sale. **Available-for-sale securities** are held with the intent of selling them sometime in the future. Companies do not include unrealized gains or losses on available-for-sale securities in net income. Instead, they report them as part of "Other comprehensive income." Other comprehensive income is not included in net income. It bypasses net income and is recorded as a direct adjustment to stockholders' equity.

FORMAT

One format for reporting other comprehensive income is to report a statement of comprehensive income. For example, assuming that Stassi Company has a net income of \$300,000, the unrealized loss would be reported below net income as follows.

Illustration 14-30

Lower portion of statement of comprehensive income

STASSI CORPORATION	
Statement of Comprehensive Income (partial)	
For the Year Ended 2017	
Net income	\$ 300,000
Unrealized loss on available-for-sale securities (net of tax)	<u>2,000</u>
Comprehensive income	<u><u>\$298,000</u></u>

Companies also report the unrealized loss on available-for-sale securities as a separate component of stockholders' equity. To illustrate, assume Stassi Corporation has common stock of \$3,000,000, retained earnings of \$1,500,000, and an unrealized loss on available-for-sale securities of \$2,000. Illustration 14-31 shows the balance sheet presentation of the unrealized loss.

Balance Sheet (partial)	
Stockholders' equity	
Common stock	\$3,000,000
Retained earnings	1,500,000
Total paid-in capital and retained earnings	<u>4,500,000</u>
Less: Unrealized loss on available-for-sale securities	2,000
Total stockholders' equity	<u><u>\$4,498,000</u></u>

Illustration 14-31

Unrealized loss in stockholders' equity section

Note that the presentation of the loss is similar to the presentation of the cost of treasury stock in the stockholders' equity section. (An unrealized gain would be added in this section of the balance sheet.) Reporting the unrealized gain or loss in the stockholders' equity section serves two important purposes: (1) it reduces the volatility of net income due to fluctuations in fair value, and (2) it informs the financial statement user of the gain or loss that would occur if the company sold the securities at fair value.

COMPLETE STATEMENT OF COMPREHENSIVE INCOME

The statement of comprehensive income for Pace Corporation in Illustration 14-32 presents the types of items found on this statement, such as net sales, cost of goods sold, operating expenses, and income taxes. In addition, it shows how companies report discontinued operations and other comprehensive income (highlighted in red).

PACE CORPORATION		
Statement of Comprehensive Income		
For the Year Ended December 31, 2017		
Net sales		\$440,000
Cost of goods sold		<u>260,000</u>
Gross profit		180,000
Operating expenses		<u>110,000</u>
Income from operations		70,000
Other revenues and gains		5,600
Other expenses and losses		<u>9,600</u>
Income before income taxes		66,000
Income tax expense (\$66,000 × 30%)		<u>19,800</u>
Income from continuing operations		46,200
Discontinued operations		
Loss from operation of Plastics Division, net of		
income tax savings \$18,000 (\$60,000 × 30%)	\$42,000	
Gain on disposal of Plastics Division, net of		
\$15,000 income taxes (\$50,000 × 30%)	35,000	7,000
Net income		<u>39,200</u>
Unrealized gain on available-for-sale securities,		
net of income taxes (\$15,000 × 30%)		<u>10,500</u>
Comprehensive income		<u><u>\$ 49,700</u></u>

Another Measure of Sustainable Income?

Companies whose stock is publicly traded are required to present their income statement following GAAP. In recent years, many companies now report a second measure of income, called pro forma income. **Pro forma income** usually excludes items that the company thinks are unusual or nonrecurring. For example, in a recent year, **Cisco Systems** (a high-tech company) reported a quarterly net loss under GAAP of \$2.7 billion. Cisco reported pro forma income for the same quarter as a profit of \$230 million. This large difference in profits between GAAP income numbers and pro forma income is not unusual. For example, during one 9-month period, the 100 largest companies on the Nasdaq stock exchange reported a total pro forma income of \$19.1 billion but a total loss as measured by GAAP of \$82.3 billion—a difference of about \$100 billion!

To compute pro forma income, companies generally exclude any items they deem inappropriate for measuring

their performance. Many analysts and investors are critical of the practice of using pro forma income because these numbers often make companies look better than they really are. As the financial press noted, pro forma numbers might be called “earnings before bad stuff.” Companies, on the other hand, argue that pro forma numbers more clearly indicate sustainable income because they exclude unusual items. “Cisco’s technique gives readers of financial statements a clear picture of Cisco’s normal business activities,” the company said in a statement issued in response to questions about its pro forma income accounting.

Recently, the SEC provided some guidance on how companies should present pro forma information. Stay tuned: Everyone seems to agree that pro forma numbers can be useful if they provide insights into determining a company’s sustainable income. However, many companies have abused the flexibility that pro forma numbers allow and have used the measure as a way to put their companies in a more favorable light.

What incentive do companies have to report pro forma income? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!**3****Unusual Items**

In its proposed 2017 income statement, AIR Corporation reports income before income taxes \$400,000, unrealized gain on available-for-sale securities \$100,000, income taxes \$120,000 (not including unusual items), loss from operation of discontinued flower division \$50,000, and loss on disposal of discontinued flower division \$90,000. The income tax rate is 30%. Prepare a correct statement of comprehensive income, beginning with “Income before income taxes.”

Solution**Action Plan**

- ✓ Show discontinued operations and other comprehensive income net of tax.

AIR CORPORATION		
Statement of Comprehensive Income (partial)		
For the Year Ended December 31, 2017		
Income before income taxes		\$400,000
Income tax expense		<u>120,000</u>
Income from continuing operations		280,000
Discontinued operations		
Loss from operation of flower division, net of \$15,000 income tax savings	\$35,000	
Loss on disposal of flower division, net of \$27,000 income tax savings	<u>63,000</u>	<u>98,000</u>
Net income		182,000
Unrealized gain on available-for-sale securities, net of \$30,000 income taxes		<u>70,000</u>
Comprehensive income		<u>\$252,000</u>

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Apply horizontal and vertical analysis to financial statements.** There are three bases of comparison: (1) intracompany, which compares an item or financial relationship with other data within a company; (2) industry, which compares company data with industry averages; and (3) intercompany, which compares an item or financial relationship of a company with data of one or more competing companies.
Horizontal analysis is a technique for evaluating a series of data over a period of time to determine the increase or decrease that has taken place, expressed as either an amount or a percentage. Vertical analysis is a technique that expresses each item within a financial statement in terms of a percentage of a relevant total or a base amount.
- 2 **Analyze a company's performance using ratio analysis.** The formula and purpose of each ratio is presented in Illustration 14-27 (page 676).
- 3 **Apply the concept of sustainable income.** Sustainable income analysis is useful in evaluating a company's performance. Sustainable income is the most likely level of income to be obtained by the company in the future. Discontinued operations and other comprehensive income are presented on the statement of comprehensive income to highlight their unusual nature. Items below income from continuing operations must be presented net of tax.

GLOSSARY REVIEW

- Accounts receivable turnover** A measure of the liquidity of accounts receivable; computed by dividing net credit sales by average net accounts receivable. (p. 669).
- Acid-test (quick) ratio** A measure of a company's immediate short-term liquidity; computed by dividing the sum of cash, short-term investments, and net accounts receivable by current liabilities. (p. 668).
- Asset turnover** A measure of how efficiently a company uses its assets to generate sales; computed by dividing net sales by average total assets. (p. 671).
- Current ratio** A measure used to evaluate a company's liquidity and short-term debt-paying ability; computed by dividing current assets by current liabilities. (p. 667).
- Debt to assets ratio** Measures the percentage of assets provided by creditors; computed by dividing total liabilities by total assets. (p. 674).
- Discontinued operations** The disposal of a significant component of a business. (p. 679).
- Earnings per share (EPS)** The net income earned on each share of common stock; computed by dividing net income minus preferred dividends (if any) by the number of weighted-average common shares outstanding. (p. 673).
- Horizontal analysis** A technique for evaluating a series of financial statement data over a period of time, to determine the increase (decrease) that has taken place, expressed as either an amount or a percentage. (p. 661).
- Inventory turnover** A measure of the liquidity of inventory; computed by dividing cost of goods sold by average inventory. (p. 670).
- Leveraging** See *Trading on the equity*. (p. 673).
- Liquidity ratios** Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. (p. 667).
- Other comprehensive income** Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders. (p. 680).
- Payout ratio** Measures the percentage of earnings distributed in the form of cash dividends; computed by dividing cash dividends declared on common stock by net income. (p. 674).
- Price-earnings (P-E) ratio** Measures the ratio of the market price of each share of common stock to the earnings per share; computed by dividing the market price per share by earnings per share. (p. 673).
- Profit margin** Measures the percentage of each dollar of sales that results in net income; computed by dividing net income by net sales. (p. 671).
- Profitability ratios** Measures of the income or operating success of a company for a given period of time. (p. 670).
- Ratio** An expression of the mathematical relationship between one quantity and another. The relationship may be expressed either as a percentage, a rate, or a simple proportion. (p. 666).
- Ratio analysis** A technique for evaluating financial statements that expresses the relationship between selected financial statement data. (p. 666).
- Return on assets** An overall measure of profitability; computed by dividing net income by average total assets. (p. 672).

Return on common stockholders' equity Measures the dollars of net income earned for each dollar invested by the owners; computed by dividing net income minus preferred dividends (if any) by average common stockholders' equity. (p. 672).

Solvency ratios Measures of the ability of the company to survive over a long period of time. (p. 674).

Sustainable income The most likely level of income to be obtained by a company in the future. (p. 678).

Times interest earned Measures a company's ability to meet interest payments as they come due;

computed by dividing the sum of net income, interest expense, and income tax expense by interest expense. (p. 675).

Trading on the equity Borrowing money at a lower rate of interest than can be earned by using the borrowed money. (p. 673).

Vertical analysis A technique for evaluating financial statement data that expresses each item within a financial statement as a percentage of a base amount. (p. 664).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Comparisons of data within a company are an example of the following comparative basis:
 (a) Industry averages. (c) Intercompany.
 (b) Intracompany. (d) Both (b) and (c).
- (LO 1) 2. In horizontal analysis, each item is expressed as a percentage of the:
 (a) net income amount.
 (b) stockholders' equity amount.
 (c) total assets amount.
 (d) base year amount.
- (LO 1) 3. Sammy Corporation reported net sales of \$300,000, \$330,000, and \$360,000 in the years, 2015, 2016, and 2017, respectively. If 2015 is the base year, what is the trend percentage for 2017?
 (a) 77%. (c) 120%.
 (b) 108%. (d) 130%.
- (LO 1) 4. The following schedule is a display of what type of analysis?

	<u>Amount</u>	<u>Percent</u>
Current assets	\$200,000	25%
Property, plant, and equipment	600,000	75%
Total assets	<u>\$800,000</u>	

- (a) Horizontal analysis. (c) Vertical analysis.
 (b) Differential analysis. (d) Ratio analysis.
- (LO 1) 5. In vertical analysis, the base amount for depreciation expense is generally:
 (a) net sales.
 (b) depreciation expense in a previous year.
 (c) gross profit.
 (d) fixed assets.
- (LO 2) 6. Which of the following measures is an evaluation of a firm's ability to pay current liabilities?
 (a) Acid-test ratio. (c) Both (a) and (b).
 (b) Current ratio. (d) None of the above.
- (LO 2) 7. A measure useful in evaluating the efficiency in managing inventories is:
 (a) inventory turnover. (c) Both (a) and (b).
 (b) days in inventory. (d) None of the above.

Use the following financial statement information as of the end of each year to answer Questions 8-12.

	<u>2017</u>	<u>2016</u>
Inventory	\$ 54,000	\$ 48,000
Current assets	81,000	106,000
Total assets	382,000	326,000
Current liabilities	27,000	36,000
Total liabilities	102,000	88,000
Preferred stock	40,000	40,000
Common stockholders' equity	240,000	198,000
Net sales	784,000	697,000
Cost of goods sold	306,000	277,000
Net income	134,000	90,000
Income tax expense	22,000	18,000
Interest expense	12,000	12,000
Dividends paid to preferred stockholders	4,000	4,000
Dividends paid to common stockholders	15,000	10,000

8. Compute the days in inventory for 2017. (LO 2)
 (a) 64.4 days. (c) 6 days.
 (b) 60.8 days. (d) 24 days.
9. Compute the current ratio for 2017. (LO 2)
 (a) 1.26:1. (c) 0.80:1.
 (b) 3.0:1. (d) 3.75:1.
10. Compute the profit margin for 2017. (LO 2)
 (a) 17.1%. (c) 37.9%.
 (b) 18.1%. (d) 5.9%.
11. Compute the return on common stockholders' equity for 2017. (LO 2)
 (a) 47.9%. (c) 61.2%.
 (b) 51.7%. (d) 59.4%.
12. Compute the times interest earned for 2017. (LO 2)
 (a) 11.2 times. (c) 14.0 times.
 (b) 65.3 times. (d) 13.0 times.
13. In reporting discontinued operations, the statement of comprehensive income should show in a special section: (LO 3)
 (a) gains and losses on the disposal of the discontinued component.

- (b) other comprehensive income items.
 (c) Both (a) and (b).
 (d) None of these answer choices are correct.
- (LO 3) 14. Scout Corporation has income before taxes of \$400,000 and a loss on discontinued operations of \$100,000. If the income tax rate is 25% on all items, the statement of comprehensive income should show
- income from continuing operations and discontinued operations, respectively, of:
 (a) \$325,000 and \$100,000.
 (b) \$325,000 and \$75,000.
 (c) \$300,000 and \$100,000.
 (d) \$300,000 and \$75,000.

Solutions

1. (b) Comparisons of data within a company are called intracompany comparisons, not (a) industry averages, (c) intercompany comparisons, or (d) both intracompany and intercompany comparisons. Intercompany comparisons are among companies.
2. (d) Horizontal analysis converts each succeeding year's balance to a percentage of the base year amount, not (a) net income amount, (b) stockholders' equity amount, or (c) total assets amount.
3. (c) The trend percentage for 2017 is 120% ($\$360,000/\$300,000$), not (a) 77%, (b) 108%, or (d) 130%.
4. (c) The data in the schedule is a display of vertical analysis because the individual asset items are expressed as a percentage of total assets. The other choices are therefore incorrect. Horizontal analysis is a technique for evaluating a series of data over a period of time.
5. (a) In vertical analysis, net sales is used as the base amount for income statement items, not (b) depreciation expense in a previous year, (c) gross profit, or (d) fixed assets.
6. (c) Both the acid-test ratio and the current ratio measure a firm's ability to pay current liabilities. Choices (a) and (b) are correct but (c) is the better answer. Choice (d) is incorrect because there is a correct answer.
7. (c) Both inventory turnover and days in inventory measure a firm's efficiency in managing inventories. Choices (a) and (b) are correct but (c) is the better answer. Choice (d) is incorrect because there is a correct answer.
8. (b) Inventory turnover = Cost of goods sold/Average inventory [$\$306,000/(\$54,000 + \$48,000)/2$] = 6 times. Thus, days in inventory = 60.8 (365/6), not (a) 64.4, (c) 6, or (d) 24 days.
9. (b) Current ratio = Current assets/Current liabilities ($\$81,000/\$27,000$) = 3.0:1, not (a) 1.26:1, (c) 0.80:1, or (d) 3.75:1.
10. (a) Profit margin = Net income/Net sales ($\$134,000/\$784,000$) = 17.1%, not (b) 18.1%, (c) 37.9%, or (d) 5.9%.
11. (d) Return on common stockholders' equity = Net income (\$4,000) – Dividends to preferred stockholders (\$4,000)/Average common stockholders' equity [$(\$240,000 + \$198,000)/2$] = 59.4%, not (a) 47.9%, (b) 51.7%, or (c) 61.2%.
12. (c) Times interest earned = Net income + Interest expense + Income tax expense divided by Interest expense [$(\$134,000 + \$12,000 + \$22,000)/\$12,000$] = 14.0 times, not (a) 11.2, (b) 65.3, or (d) 13.0 times.
13. (c) Gains and losses on the disposal of the discontinued segment and gains and losses from operations of the discontinued component are shown in the special section titled discontinued operations. Other comprehensive income items are reported in a separate section after net income on the statement of comprehensive income. Choices (a) and (b) are therefore correct but (c) is the better answer. Choice (d) is incorrect as there is a correct answer.
14. (d) Income tax expense = 25% × \$400,000 = \$100,000; therefore, income from continuing operations = \$400,000 – \$100,000 = \$300,000. The loss on discontinued operations is shown net of tax, $\$100,000 \times 75\% = \$75,000$. The other choices are therefore incorrect.

PRACTICE EXERCISES

1. The comparative condensed balance sheets of Roadway Corporation are presented below. *Prepare horizontal and vertical analysis.*

(LO 1)

ROADWAY CORPORATION
Condensed Balance Sheets
December 31

	2017	2016
Assets		
Current assets	\$ 76,000	\$ 80,000
Property, plant, and equipment (net)	99,000	90,000
Intangibles	25,000	40,000
Total assets	\$200,000	\$210,000
Liabilities and stockholders' equity		
Current liabilities	\$ 40,800	\$ 48,000
Long-term liabilities	143,000	150,000
Stockholders' equity	16,200	12,000
Total liabilities and stockholders' equity	\$200,000	\$210,000

Instructions

- (a) Prepare a horizontal analysis of the balance sheet data for Roadway Corporation using 2016 as a base.
- (b) Prepare a vertical analysis of the balance sheet data for Roadway Corporation in columnar form for 2017.

Solution

ROADWAY CORPORATION				
Condensed Balance Sheets				
December 31				
	<u>2017</u>	<u>2016</u>	<u>Increase (Decrease)</u>	<u>Percent Change from 2016</u>
1. (a)				
Assets				
Current assets	\$ 76,000	\$ 80,000	\$ (4,000)	(5.0%)
Property, plant, and equipment (net)	99,000	90,000	9,000	10.0%
Intangibles	25,000	40,000	(15,000)	(37.5%)
Total assets	<u>\$200,000</u>	<u>\$210,000</u>	<u>\$(10,000)</u>	(4.8%)
Liabilities and stockholders' equity				
Current liabilities	\$ 40,800	\$ 48,000	\$ (7,200)	(15.0%)
Long-term liabilities	143,000	150,000	(7,000)	(4.7%)
Stockholders' equity	16,200	12,000	4,200	35.0%
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>\$210,000</u>	<u>\$(10,000)</u>	(4.8%)
(b)				
ROADWAY CORPORATION				
Condensed Balance Sheet				
December 31, 2017				
	<u>Amount</u>	<u>Percent</u>		
Assets				
Current assets	\$ 76,000	38.0%		
Property, plant, and equipment (net)	99,000	49.5%		
Intangibles	25,000	12.5%		
Total assets	<u>\$200,000</u>	<u>100.0%</u>		
Liabilities and stockholders' equity				
Current liabilities	\$ 40,800	20.4%		
Long-term liabilities	143,000	71.5%		
Stockholders' equity	16,200	8.1%		
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>100.0%</u>		

Compute ratios.

(LO 2)

2. Rondo Corporation's comparative balance sheets are presented below.

RONDO CORPORATION
Balance Sheets
December 31

	<u>2017</u>	<u>2016</u>
Cash	\$ 5,300	\$ 3,700
Accounts receivable	21,200	23,400
Inventory	9,000	7,000
Land	20,000	26,000
Buildings	70,000	70,000
Accumulated depreciation—buildings	(15,000)	(10,000)
Total	<u>\$110,500</u>	<u>\$120,100</u>

	<u>2017</u>	<u>2016</u>
Accounts payable	\$ 10,370	\$ 31,100
Common stock	75,000	69,000
Retained earnings	25,130	20,000
Total	<u>\$110,500</u>	<u>\$120,100</u>

Rondo's 2017 income statement included net sales of \$120,000, cost of goods sold of \$70,000, and net income of \$14,000.

Instructions

Compute the following ratios for 2017.

- | | |
|-----------------------------------|--|
| (a) Current ratio. | (f) Asset turnover. |
| (b) Acid-test ratio. | (g) Return on assets. |
| (c) Accounts receivable turnover. | (h) Return on common stockholders' equity. |
| (d) Inventory turnover. | (i) Debt to assets ratio. |
| (e) Profit margin. | |

Solution

2. (a) $(\$5,300 + \$21,200 + \$9,000)/\$10,370 = 3.42$
- (b) $(\$5,300 + \$21,200)/\$10,370 = 2.56$
- (c) $\$120,000/[(\$21,200 + \$23,400)/2] = 5.38$
- (d) $\$70,000/[(\$9,000 + \$7,000)/2] = 8.8$
- (e) $\$14,000/\$120,000 = 11.7\%$
- (f) $\$120,000/[(\$110,500 + \$120,100)/2] = 1.04$
- (g) $\$14,000/[(\$110,500 + \$120,100)/2] = 12.1\%$
- (h) $\$14,000/[(\$100,130 + \$89,000)/2] = 14.8\%$
- (i) $\$10,370/\$110,500 = 9.4\%$

PRACTICE PROBLEM

The events and transactions of Dever Corporation for the year ending December 31, 2017, resulted in the following data.

Cost of goods sold	\$2,600,000
Net sales	4,400,000
Other expenses and losses	9,600
Other revenues and gains	5,600
Selling and administrative expenses	1,100,000
Income from operations of plastics division	70,000
Gain from disposal of plastics division	500,000
Unrealized loss on available-for-sale securities	60,000

Prepare a statement of comprehensive income.

(LO 3)

Analysis reveals the following:

- All items are before the applicable income tax rate of 30%.
- The plastics division was sold on July 1.
- All operating data for the plastics division have been segregated.

Instructions

Prepare a statement of comprehensive income for the year.

Solution

DEVER CORPORATION
Statement of Comprehensive Income
For the Year Ended December 31, 2017

Net sales	\$4,400,000
Cost of goods sold	<u>2,600,000</u>
Gross profit	1,800,000
Selling and administrative expenses	<u>1,100,000</u>
Income from operations	700,000
Other revenues and gains	5,600
Other expenses and losses	<u>9,600</u>
Income before income taxes	696,000
Income tax expense (\$696,000 × 30%)	<u>208,800</u>
Income from continuing operations	487,200
Discontinued operations	
Income from operation of plastics division, net of \$21,000	
income taxes (\$70,000 × 30%)	49,000
Gain from disposal of plastics division, net of \$150,000	
income taxes (\$500,000 × 30%)	<u>350,000</u>
Net income	886,200
Unrealized loss on available-for-sale securities, net of \$18,000	
income tax savings (\$60,000 × 30%)	<u>42,000</u>
Comprehensive income	<u>\$ 844,200</u>

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

1. (a) Jose Ramirez believes that the analysis of financial statements is directed at two characteristics of a company: liquidity and profitability. Is Jose correct? Explain.
 (b) Are short-term creditors, long-term creditors, and stockholders interested primarily in the same characteristics of a company? Explain.
2. (a) Distinguish among the following bases of comparison: (1) intracompany, (2) industry averages, and (3) intercompany.
 (b) Give the principal value of using each of the three bases of comparison.
3. Two popular methods of financial statement analysis are horizontal analysis and vertical analysis. Explain the difference between these two methods.
4. (a) If Peoples Company had net income of \$390,000 in 2017 and it experienced a 24.5% increase in net income for 2018, what is its net income for 2018?
 (b) If six cents of every dollar of Peoples' revenue is net income in 2017, what is the dollar amount of 2017 revenue?
5. What is a ratio? What are the different ways of expressing the relationship of two amounts? What information does a ratio provide?
6. Name the major ratios useful in assessing (a) liquidity and (b) solvency.
7. Roberto Perez is puzzled. His company had a profit margin of 10% in 2017. He feels that this is an indication that the company is doing well. Julie Beck, his accountant, says that more information is needed to determine the firm's financial well-being. Who is correct? Why?
8. What do the following classes of ratios measure?
 (a) Liquidity ratios. (b) Profitability ratios. (c) Solvency ratios.
9. What is the difference between the current ratio and the acid-test ratio?
10. Hizar Company, a retail store, has an accounts receivable turnover of 4.5 times. The industry average is 12.5 times. Does Hizar have a collection problem with its accounts receivable?
11. Which ratios should be used to help answer the following questions?
 (a) How efficient is a company in using its assets to produce sales?
 (b) How near to sale is the inventory on hand?
 (c) How many dollars of net income were earned for each dollar invested by the owners?
 (d) How able is a company to meet interest charges as they fall due?

12. The price-earnings ratio of **General Motors** (automobile builder) was 8, and the price-earnings ratio of **Microsoft** (computer software) was 38. Which company did the stock market favor? Explain.
13. What is the formula for computing the payout ratio? Would you expect this ratio to be high or low for a growth company?
14. Holding all other factors constant, indicate whether each of the following changes generally signals good or bad news about a company.
 - (a) Increase in profit margin.
 - (b) Decrease in inventory turnover.
 - (c) Increase in the current ratio.
 - (d) Decrease in earnings per share.
 - (e) Increase in price-earnings ratio.
 - (f) Increase in debt to assets ratio.
 - (g) Decrease in times interest earned.
15. The return on assets for Zhang Corporation is 7.6%. During the same year, Zhang's return on common stockholders' equity is 12.8%. What is the explanation for the difference in the two rates?
16. Which two ratios do you think should be of greatest interest to:
 - (a) A pension fund considering the purchase of 20-year bonds?
 - (b) A bank contemplating a short-term loan?
 - (c) A common stockholder?
17. Why must preferred dividends be subtracted from net income in computing earnings per share?
18. (a) What is meant by trading on the equity?
(b) How would you determine the profitability of trading on the equity?
19. Lippert Inc. has net income of \$160,000, weighted-average shares of common stock outstanding of 50,000, and preferred dividends for the period of \$40,000. What is Lippert's earnings per share of common stock? Kate Lippert, the president of Lippert Inc., believes the computed EPS of the company is high. Comment.
20. Why is it important to report discontinued operations separately from income from continuing operations?
21. You are considering investing in Wingert Transportation. The company reports 2017 earnings per share of \$6.50 on income from continuing operations and \$4.75 on net income. Which EPS figure would you consider more relevant to your investment decision? Why?
22. RAF Inc. reported 2016 earnings per share of \$3.20 and had no discontinued operations items. In 2017, EPS on income from continuing operations was \$2.99, and EPS on net income was \$3.49. Is this a favorable trend?
23. Identify the specific sections in **Apple's** 2013 annual report where horizontal and vertical analyses of financial data are presented.

BRIEF EXERCISES

Follow the rounding procedures used in the chapter.

BE14-1 You recently received a letter from your Uncle Sammy. A portion of the letter is presented below.

You know that I have a significant amount of money I saved over the years. I am thinking about starting an investment program. I want to do the investing myself, based on my own research and analysis of financial statements. I know that you are studying accounting, so I have a couple of questions for you. I have heard that different users of financial statements are interested in different characteristics of companies. Is this true and, if so, why? Also, some of my friends who are already investing have told me that comparisons involving a company's financial data can be made on a number of different bases. Can you explain these bases to me?

Instructions

 Write a letter to your Uncle Sammy which answers his questions.

Discuss need for comparative analysis.

(LO 1)

BE14-2 Schellhammer Corporation reported the following amounts in 2016, 2017, and 2018.

	<u>2016</u>	<u>2017</u>	<u>2018</u>
Current assets	\$200,000	\$210,000	\$240,000
Current liabilities	150,000	168,000	184,000
Total assets	500,000	600,000	620,000

Identify and use tools of financial statement analysis.

(LO 1, 2)

Instructions

(a) Identify and describe the three tools of financial statement analysis. (b) Perform each of the three types of analysis on Schellhammer's current assets.

Prepare horizontal analysis.
(LO 1)

BE14-3 Using the following data from the comparative balance sheet of Goody Company, illustrate horizontal analysis.

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Accounts receivable	\$ 520,000	\$ 400,000
Inventory	840,000	600,000
Total assets	3,000,000	2,500,000

Prepare vertical analysis.
(LO 1)

BE14-4 Using the same data presented above in BE14-3 for Goody Company, illustrate vertical analysis.

Calculate percentage of change.
(LO 1)

BE14-5 Net income was \$500,000 in 2016, \$450,000 in 2017, and \$522,000 in 2018. What is the percentage of change from (a) 2016 to 2017 and (b) 2017 to 2018? Is the change an increase or a decrease?

Calculate net income.
(LO 1)

BE14-6 If Sappington Company had net income of \$585,000 in 2017 and it experienced a 20% increase in net income over 2016, what was its 2016 net income?

Calculate change in net income.
(LO 1)

BE14-7 Horizontal analysis (trend analysis) percentages for Dody Company's sales revenue, cost of goods sold, and expenses are shown below.

	<u>2018</u>	<u>2017</u>	<u>2016</u>
Sales revenue	96.2%	106.8%	100.0%
Cost of goods sold	102.0	97.0	100.0
Expenses	109.6	98.4	100.0

Did Dody's net income increase, decrease, or remain unchanged over the 3-year period?

Calculate change in net income.
(LO 1)

BE14-8 Vertical analysis (common size) percentages for Kochheim Company's sales revenue, cost of goods sold, and expenses are shown below.

	<u>2018</u>	<u>2017</u>	<u>2016</u>
Sales revenue	100.0%	100.0%	100.0%
Cost of goods sold	60.2	62.4	63.5
Expenses	25.0	25.6	27.5

Did Kochheim's net income as a percentage of sales increase, decrease, or remain unchanged over the 3-year period? Provide numerical support for your answer.

Calculate liquidity ratios.
(LO 2)

BE14-9 Selected condensed data taken from a recent balance sheet of Heidebrecht Inc. are as follows.

HEIDEBRECHT INC.
Balance Sheet (partial)

Cash	\$ 8,041,000
Short-term investments	4,947,000
Accounts receivable	12,545,000
Inventory	14,814,000
Other current assets	5,571,000
Total current assets	<u>\$45,918,000</u>
Total current liabilities	<u>\$40,644,000</u>

What are the (a) working capital, (b) current ratio, and (c) acid-test ratio?

Calculate profitability ratios.
(LO 2)

BE14-10 Linebarger Corporation has net income of \$11.44 million and net revenue of \$95 million in 2017. Its assets are \$14 million at the beginning of the year and \$18 million at the end of the year. What are Linebarger's (a) asset turnover and (b) profit margin?

BE14-11 The following data are taken from the financial statements of Rainsberger Company.

Evaluate collection of accounts receivable.

	<u>2018</u>	<u>2017</u>
Accounts receivable (net), end of year	\$ 550,000	\$ 520,000
Net sales on account	3,960,000	3,100,000

Terms for all sales are 1/10, n/60.

(LO 2)

- (a) Compute for each year (1) the accounts receivable turnover and (2) the average collection period. At the end of 2016, accounts receivable (net) was \$480,000.
- (b)  What conclusions about the management of accounts receivable can be drawn from these data?

BE14-12 The following data are from the income statements of Haskin Company.

Evaluate management of inventory.

	<u>2017</u>	<u>2016</u>
Sales revenue	\$6,420,000	\$6,240,000
Beginning inventory	940,000	860,000
Purchases	4,340,000	4,661,000
Ending inventory	1,020,000	940,000

(LO 2)

- (a) Compute for each year (1) the inventory turnover and (2) the days in inventory.
- (b)  What conclusions concerning the management of the inventory can be drawn from these data?

BE14-13 Guo Company has stockholders' equity of \$400,000 and net income of \$66,000. It has a payout ratio of 20% and a return on assets of 15%. How much did Guo pay in cash dividends, and what were its average assets?

Calculate amounts from profitability ratios.

(LO 2)

BE14-14 An inexperienced accountant for Silva Corporation showed the following in the income statement: income before income taxes \$450,000 and unrealized gain on available-for-sale securities (before taxes) \$70,000. The unrealized gain on available-for-sale securities and income before income taxes are both subject to a 25% tax rate. Prepare a correct statement of comprehensive income.

Prepare statement of comprehensive income including unusual items.

(LO 3)

BE14-15 On June 30, Holloway Corporation discontinued its operations in Europe. During the year, the operating loss was \$300,000 before taxes. On September 1, Holloway disposed of its European facilities at a pretax loss of \$120,000. The applicable tax rate is 20%. Show the discontinued operations section of the statement of comprehensive income.

Prepare discontinued operations section of statement of comprehensive income.

(LO 3)

DO IT! Exercises

DO IT! 14-1 Summary financial information for Wolford Company is as follows.

Prepare horizontal analysis.

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Current assets	\$ 199,000	\$ 220,000
Plant assets	821,000	780,000
Total assets	<u>\$1,020,000</u>	<u>\$1,000,000</u>

(LO 1)

Compute the amount and percentage changes in 2017 using horizontal analysis, assuming 2016 is the base year.

Compute ratios.
(LO 2)

DO IT! 14-2 The condensed financial statements of Murawski Company for the years 2016 and 2017 are presented below. (Amounts in thousands.)

MURAWSKI COMPANY		
Balance Sheets		
December 31		
	<u>2017</u>	<u>2016</u>
Current assets		
Cash and cash equivalents	\$ 330	\$ 360
Accounts receivable (net)	470	400
Inventory	460	390
Prepaid expenses	120	160
Total current assets	<u>1,380</u>	<u>1,310</u>
Investments	10	10
Property, plant, and equipment	420	380
Intangibles and other assets	530	510

Income tax expense	126	66
Net income	<u>\$ 294</u>	<u>\$ 154</u>

Compute the following ratios for 2017 and 2016.

- (a) Current ratio.
- (b) Inventory turnover. (Inventory on 12/31/15 was \$340.)
- (c) Profit margin.
- (d) Return on assets. (Assets on 12/31/15 were \$1,900.)
- (e) Return on common stockholders' equity. (Stockholders' equity on 12/31/15 was \$900.)
- (f) Debt to assets ratio.
- (g) Times interest earned.

Prepare statement of comprehensive income including unusual items.
(LO 3)

DO IT! 14-3 In its proposed 2017 income statement, Hrabik Corporation reports income before income taxes \$500,000, income taxes \$100,000 (not including unusual items), loss on operation of discontinued music division \$60,000, gain on disposal of discontinued music division \$40,000, and unrealized loss on available-for-sale securities \$150,000. The income tax rate is 20%. Prepare a correct statement of comprehensive income, beginning with income before income taxes.

EXERCISES

Follow the rounding procedures used in the chapter.

E14-1 Financial information for Kurzen Inc. is presented below.

Prepare horizontal analysis.

(LO 1)

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Current assets	\$125,000	\$100,000
Plant assets (net)	396,000	330,000
Current liabilities	91,000	70,000
Long-term liabilities	133,000	95,000
Common stock, \$1 par	161,000	115,000
Retained earnings	136,000	150,000

Instructions

Prepare a schedule showing a horizontal analysis for 2017 using 2016 as the base year.

E14-2 Operating data for Navarro Corporation are presented below.

Prepare vertical analysis.

(LO 1)

	<u>2017</u>	<u>2016</u>
Net sales	\$750,000	\$600,000
Cost of goods sold	465,000	390,000
Selling expenses	105,000	66,000
Administrative expenses	60,000	54,000
Income tax expense	36,000	27,000
Net income	84,000	63,000

Instructions

Prepare a schedule showing a vertical analysis for 2017 and 2016.

E14-3 The comparative condensed balance sheets of Gurley Corporation are presented below.

Prepare horizontal and vertical analyses.

(LO 1)

GURLEY CORPORATION Comparative Condensed Balance Sheets December 31

	<u>2017</u>	<u>2016</u>
Assets		
Current assets	\$ 74,000	\$ 80,000
Property, plant, and equipment (net)	99,000	90,000
Intangibles	27,000	40,000
Total assets	<u>\$200,000</u>	<u>\$210,000</u>
Liabilities and stockholders' equity		
Current liabilities	\$ 42,000	\$ 48,000
Long-term liabilities	143,000	150,000
Stockholders' equity	15,000	12,000
Total liabilities and stockholders' equity	<u>\$200,000</u>	<u>\$210,000</u>

Instructions

- Prepare a horizontal analysis of the balance sheet data for Gurley Corporation using 2016 as a base.
- Prepare a vertical analysis of the balance sheet data for Gurley Corporation in columnar form for 2017.

Prepare horizontal and vertical analyses.

(LO 1)

E14-4 The comparative condensed income statements of Emley Corporation are shown below.

EMLEY CORPORATION
Comparative Condensed Income Statements
For the Years Ended December 31

	2017	2016
Net sales	\$660,000	\$600,000
Cost of goods sold	483,000	420,000
Gross profit	177,000	180,000
Operating expenses	125,000	120,000
Net income	\$ 52,000	\$ 60,000

Instructions

- (a) Prepare a horizontal analysis of the income statement data for Emley Corporation using 2016 as a base. (Show the amounts of increase or decrease.)
- (b) Prepare a vertical analysis of the income statement data for Emley Corporation in columnar form for both years.

Compute liquidity ratios and compare results.

(LO 2)

E14-5 Suppose **Nordstrom, Inc.**, which operates department stores in numerous states, has the following selected financial statement data for a recent year.

NORDSTROM, INC.
Balance Sheet (partial)

(in millions)	End-of-Year	Beginning-of-Year
Cash and cash equivalents	\$ 795	\$ 72
Accounts receivable (net)	2,035	1,942
Inventory	898	900
Prepaid expenses	88	93
Other current assets	238	210
Total current assets	\$4,054	\$3,217
Total current liabilities	\$2,014	\$1,601

For the year, net sales were \$8,258 and cost of goods sold was \$5,328 (in millions).

Instructions

- (a) Compute the four liquidity ratios at the end of the year.
- (b) Using the data in the chapter, compare Nordstrom's liquidity with (1) that of **Macy's, Inc.**, and (2) the industry averages for department stores.

Perform current and acid-test ratio analysis.

(LO 2)

E14-6 Keener Incorporated had the following transactions occur involving current assets and current liabilities during February 2017.

- Feb. 3 Accounts receivable of \$15,000 are collected.
 7 Equipment is purchased for \$28,000 cash.
 11 Paid \$3,000 for a 3-year insurance policy.
 14 Accounts payable of \$12,000 are paid.
 18 Cash dividends of \$5,000 are declared.

Additional information:

1. As of February 1, 2017, current assets were \$110,000, and current liabilities were \$50,000.
2. As of February 1, 2017, current assets included \$15,000 of inventory and \$2,000 of pre-paid expenses.

Instructions

- (a) Compute the current ratio as of the beginning of the month and after each transaction.
- (b) Compute the acid-test ratio as of the beginning of the month and after each transaction.

E14-7 Frizell Company has the following comparative balance sheet data.

Compute selected ratios.

(LO 2)

FRIZELL COMPANY
Balance Sheets
December 31

	2017	2016
Cash	\$ 15,000	\$ 30,000
Accounts receivable (net)	70,000	60,000
Inventory	60,000	50,000
Plant assets (net)	200,000	180,000
	\$345,000	\$320,000
Accounts payable	\$ 50,000	\$ 60,000
Mortgage payable (6%)	100,000	100,000
Common stock, \$10 par	140,000	120,000
Retained earnings	55,000	40,000
	\$345,000	\$320,000

Additional information for 2017:

1. Net income was \$25,000.
2. Sales on account were \$410,000. Sales returns and allowances were \$20,000.
3. Cost of goods sold was \$198,000.

Instructions

Compute the following ratios at December 31, 2017.

- | | |
|----------------------|-----------------------------------|
| (a) Current ratio. | (c) Accounts receivable turnover. |
| (b) Acid-test ratio. | (d) Inventory turnover. |

E14-8 Selected comparative statement data for Queen Products Company are presented below. All balance sheet data are as of December 31.

Compute selected ratios.

(LO 2)

	2017	2016
Net sales	\$750,000	\$720,000
Cost of goods sold	480,000	440,000
Interest expense	7,000	5,000
Net income	45,000	42,000
Accounts receivable	120,000	100,000
Inventory	85,000	75,000
Total assets	580,000	500,000
Total common stockholders' equity	430,000	325,000

Instructions

Compute the following ratios for 2017.

- | | |
|---------------------|--|
| (a) Profit margin. | (c) Return on assets. |
| (b) Asset turnover. | (d) Return on common stockholders' equity. |

E14-9 The income statement for Sutherland, Inc., appears below.

Compute selected ratios.

(LO 2)

SUTHERLAND, INC.
Income Statement
For the Year Ended December 31, 2017

Net sales	\$400,000
Cost of goods sold	230,000
Gross profit	170,000
Expenses (including \$16,000 interest and \$24,000 income taxes)	105,000
Net income	\$ 65,000

Additional information:

1. The weighted-average common shares outstanding in 2017 were 30,000 shares.
2. The market price of Sutherland, Inc. stock was \$13 in 2017.
3. Cash dividends of \$26,000 were paid, \$5,000 of which were to preferred stockholders.

Instructions

Compute the following ratios for 2017.

- (a) Earnings per share. (c) Payout ratio.
 (b) Price-earnings ratio. (d) Times interest earned.

Compute amounts from ratios.

(LO 2)

E14-10 Lingenfelter Corporation experienced a fire on December 31, 2017, in which its financial records were partially destroyed. It has been able to salvage some of the records and has ascertained the following balances.

	<u>December 31, 2017</u>	<u>December 31, 2016</u>
Cash	\$ 30,000	\$ 10,000
Accounts receivable (net)	72,500	126,000
Inventory	200,000	180,000
Accounts payable	50,000	90,000
Notes payable	30,000	60,000
Common stock, \$100 par	400,000	400,000
Retained earnings	113,500	101,000

Additional information:

- The inventory turnover is 4.5 times.
- The return on common stockholders' equity is 16%. The company had no additional paid-in capital.
- The accounts receivable turnover is 8.8 times.
- The return on assets is 12.5%.
- Total assets at December 31, 2016, were \$655,000.

Instructions

Compute the following for Lingenfelter Corporation.

- (a) Cost of goods sold for 2017. (c) Net income for 2017.
 (b) Net sales (credit) for 2017. (d) Total assets at December 31, 2017.

Compute ratios.

(LO 2)

E14-11 Wiemers Corporation's comparative balance sheets are presented below.

WIEMERS CORPORATION
Balance Sheets
December 31

	<u>2017</u>	<u>2016</u>
Cash	\$ 4,300	\$ 3,700
Accounts receivable (net)	21,200	23,400
Inventory	10,000	7,000
Land	20,000	26,000
Buildings	70,000	70,000
Accumulated depreciation—buildings	(15,000)	(10,000)
Total	<u>\$110,500</u>	<u>\$120,100</u>
Accounts payable	\$ 12,370	\$ 31,100
Common stock	75,000	69,000
Retained earnings	23,130	20,000
Total	<u>\$110,500</u>	<u>\$120,100</u>

Wiemers's 2017 income statement included net sales of \$100,000, cost of goods sold of \$60,000, and net income of \$15,000.

Instructions

Compute the following ratios for 2017.

- (a) Current ratio. (f) Asset turnover.
 (b) Acid-test ratio. (g) Return on assets.
 (c) Accounts receivable turnover. (h) Return on common stockholders' equity.
 (d) Inventory turnover. (i) Debt to assets ratio.
 (e) Profit margin.

E14-12 For its fiscal year ending October 31, 2017, Haas Corporation reports the following partial data shown below.

Prepare a correct statement of comprehensive income.

(LO 3)

Income before income taxes	\$540,000
Income tax expense (20% × \$420,000)	84,000
Income from continuing operations	456,000
Loss on discontinued operations	120,000
Net income	<u>\$336,000</u>

The loss on discontinued operations was comprised of a \$50,000 loss from operations and a \$70,000 loss from disposal. The income tax rate is 20% on all items.

Instructions

- Prepare a correct statement of comprehensive income beginning with income before income taxes.
-  Explain in memo form why the income statement data are misleading.

E14-13 Trayer Corporation has income from continuing operations of \$290,000 for the year ended December 31, 2017. It also has the following items (before considering income taxes).

Prepare statement of comprehensive income.

(LO 3)

- An unrealized loss of \$80,000 on available-for-sale securities.
- A gain of \$30,000 on the discontinuance of a division (comprised of a \$10,000 loss from operations and a \$40,000 gain on disposal).
- A correction of an error in last year's financial statements that resulted in a \$20,000 understatement of 2016 net income.

Assume all items are subject to income taxes at a 20% tax rate.

Instructions

Prepare a statement of comprehensive income, beginning with income from continuing operations.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS

Follow the rounding procedures used in the chapter.

P14-1 Comparative statement data for Farris Company and Ratzlaff Company, two competitors, appear below. All balance sheet data are as of December 31, 2017, and December 31, 2016.

Prepare vertical analysis and comment on profitability.

(LO 1, 2)

	<u>Farris Company</u>		<u>Ratzlaff Company</u>	
	<u>2017</u>	<u>2016</u>	<u>2017</u>	<u>2016</u>
Net sales	\$1,549,035		\$339,038	
Cost of goods sold	1,080,490		241,000	
Operating expenses	302,275		79,000	
Interest expense	8,980		2,252	
Income tax expense	54,500		6,650	
Current assets	325,975	\$312,410	83,336	\$ 79,467
Plant assets (net)	521,310	500,000	139,728	125,812
Current liabilities	65,325	75,815	35,348	30,281
Long-term liabilities	108,500	90,000	29,620	25,000
Common stock, \$10 par	500,000	500,000	120,000	120,000
Retained earnings	173,460	146,595	38,096	29,998

Instructions

- (a) Prepare a vertical analysis of the 2017 income statement data for Farris Company and Ratzlaff Company in columnar form.
- (b)  Comment on the relative profitability of the companies by computing the return on assets and the return on common stockholders' equity for both companies.

Compute ratios from balance sheet and income statement.

(LO 2)

P14-2 The comparative statements of Painter Tool Company are presented below.

PAINTER TOOL COMPANY
Income Statement
For the Years Ended December 31

	<u>2017</u>	<u>2016</u>
Net sales	\$1,818,500	\$1,750,500
Cost of goods sold	<u>1,011,500</u>	<u>996,000</u>
Gross profit	807,000	754,500
Selling and administrative expenses	<u>499,000</u>	<u>479,000</u>
Income from operations	308,000	275,500
Other expenses and losses		
Interest expense	<u>18,000</u>	<u>14,000</u>
Income before income taxes	290,000	261,500
Income tax expense	<u>87,000</u>	<u>77,000</u>
Net income	<u>\$ 203,000</u>	<u>\$ 184,500</u>

PAINTER TOOL COMPANY
Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Current assets		
Cash	\$ 60,100	\$ 64,200
Short-term investments	69,000	50,000
Accounts receivable (net)	107,800	102,800
Inventory	<u>133,000</u>	<u>115,500</u>
Total current assets	<u>369,900</u>	<u>332,500</u>
Plant assets (net)	<u>600,300</u>	<u>520,300</u>
Total assets	<u>\$970,200</u>	<u>\$852,800</u>
Liabilities and Stockholders' Equity		
Current liabilities		
Accounts payable	\$160,000	\$145,400
Income taxes payable	<u>43,500</u>	<u>42,000</u>
Total current liabilities	<u>203,500</u>	<u>187,400</u>
Bonds payable	<u>200,000</u>	<u>200,000</u>
Total liabilities	<u>403,500</u>	<u>387,400</u>
Stockholders' equity		
Common stock (\$5 par)	280,000	300,000
Retained earnings	<u>286,700</u>	<u>165,400</u>
Total stockholders' equity	<u>566,700</u>	<u>465,400</u>
Total liabilities and stockholders' equity	<u>\$970,200</u>	<u>\$852,800</u>

All sales were on account.

Instructions

Compute the following ratios for 2017. (Weighted-average common shares in 2017 were 57,000.)

- | | |
|--|-----------------------------------|
| (a) Earnings per share. | (f) Accounts receivable turnover. |
| (b) Return on common stockholders' equity. | (g) Inventory turnover. |
| (c) Return on assets. | (h) Times interest earned. |
| (d) Current ratio. | (i) Asset turnover. |
| (e) Acid-test ratio. | (j) Debt to assets ratio. |

P14-3 Condensed balance sheet and income statement data for Landwehr Corporation appear below.

Perform ratio analysis, and evaluate financial position and operating results.

(LO 2)

LANDWEHR CORPORATION

**Balance Sheets
December 31**

	2018	2017	2016
Cash	\$ 25,000	\$ 20,000	\$ 18,000
Accounts receivable (net)	50,000	45,000	48,000
Other current assets	90,000	95,000	64,000
Investments	75,000	70,000	45,000
Plant and equipment (net)	400,000	370,000	358,000
	\$640,000	\$600,000	\$533,000
Current liabilities	\$ 75,000	\$ 80,000	\$ 70,000
Long-term debt	80,000	85,000	50,000
Common stock, \$10 par	340,000	310,000	300,000
Retained earnings	145,000	125,000	113,000
	\$640,000	\$600,000	\$533,000

LANDWEHR CORPORATION

**Income Statement
For the Years Ended December 31**

	2018	2017
Sales revenue	\$740,000	\$700,000
Less: Sales returns and allowances	40,000	50,000
Net sales	700,000	650,000
Cost of goods sold	420,000	400,000
Gross profit	280,000	250,000
Operating expenses (including income taxes)	235,000	220,000
Net income	\$ 45,000	\$ 30,000

Additional information:

1. The market price of Landwehr's common stock was \$4.00, \$5.00, and \$8.00 for 2016, 2017, and 2018, respectively.
2. All dividends were paid in cash.

Instructions

- (a) Compute the following ratios for 2017 and 2018.
 - (1) Profit margin.
 - (2) Asset turnover.
 - (3) Earnings per share. (Weighted-average common shares in 2018 were 32,000 and in 2017 were 31,000.)
 - (4) Price-earnings ratio.
 - (5) Payout ratio.
 - (6) Debt to assets ratio.
- (b) Based on the ratios calculated, discuss briefly the improvement or lack thereof in financial position and operating results from 2017 to 2018 of Landwehr Corporation.

Compute ratios, and comment on overall liquidity and profitability.

(LO 2)

P14-4 Financial information for Messersmith Company is presented below.

MESSERSMITH COMPANY
Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Cash	\$ 70,000	\$ 65,000
Short-term investments	52,000	40,000
Accounts receivable (net)	98,000	80,000
Inventory	125,000	135,000
Prepaid expenses	29,000	23,000
Land	130,000	130,000
Building and equipment (net)	180,000	175,000
	<u>\$684,000</u>	<u>\$648,000</u>
<u>Liabilities and Stockholders' Equity</u>		
Notes payable	\$100,000	\$100,000
Accounts payable	48,000	42,000
Accrued liabilities	50,000	40,000
Bonds payable, due 2020	150,000	150,000
Common stock, \$10 par	200,000	200,000
Retained earnings	136,000	116,000
	<u>\$684,000</u>	<u>\$648,000</u>

MESSERSMITH COMPANY
Income Statement
For the Years Ended December 31

	<u>2017</u>	<u>2016</u>
Net sales	\$850,000	\$790,000
Cost of goods sold	620,000	575,000
Gross profit	230,000	215,000
Operating expenses	187,000	173,000
Net income	<u>\$ 43,000</u>	<u>\$ 42,000</u>

Additional information:

1. Inventory at the beginning of 2016 was \$118,000.
2. Total assets at the beginning of 2016 were \$630,000.
3. No common stock transactions occurred during 2016 or 2017.
4. All sales were on account. Accounts receivable, net at the beginning of 2016, were \$88,000.
5. Notes payable are classified as current liabilities.

Instructions

- (a) Indicate, by using ratios, the change in liquidity and profitability of Messersmith Company from 2016 to 2017. (*Note:* Not all profitability ratios can be computed.)
- (b) Given below are three independent situations and a ratio that may be affected. For each situation, compute the affected ratio (1) as of December 31, 2017, and (2) as of December 31, 2018, after giving effect to the situation. Net income for 2018 was \$50,000. Total assets on December 31, 2018, were \$700,000.

<u>Situation</u>	<u>Ratio</u>
(1) 18,000 shares of common stock were sold at par on July 1, 2018.	Return on common stockholders' equity
(2) All of the notes payable were paid in 2018. The only change in liabilities was that the notes payable were paid.	Debt to assets ratio
(3) Market price of common stock was \$9 on December 31, 2017, and \$12.80 on December 31, 2018.	Price-earnings ratio

P14-5 Selected financial data of **Target Corporation** and **Wal-Mart Stores, Inc.** for a recent year are presented here (in millions).

Compute selected ratios, and compare liquidity, profitability, and solvency for two companies.

(LO 2)

	Target Corporation	Wal-Mart Stores, Inc.
Income Statement Data for Year		
Net sales	\$61,471	\$374,526
Cost of goods sold	41,895	286,515
Selling and administrative expenses	16,200	70,847
Interest expense	647	1,798
Other income (expense)	1,896	4,273
Income tax expense	1,776	6,908
Net income	<u>\$ 2,849</u>	<u>\$ 12,731</u>
Balance Sheet Data (End of Year)		
Current assets	\$18,906	\$ 47,585
Noncurrent assets	25,654	115,929
Total assets	<u>\$44,560</u>	<u>\$163,514</u>
Current liabilities	\$11,782	\$ 58,454
Long-term debt	17,471	40,452
Total stockholders' equity	15,307	64,608
Total liabilities and stockholders' equity	<u>\$44,560</u>	<u>\$163,514</u>
Beginning-of-Year Balances		
Total assets	\$37,349	\$151,587
Total stockholders' equity	15,633	61,573
Current liabilities	11,117	52,148
Total liabilities	21,716	90,014
Other Data		
Average net accounts receivable	\$ 7,124	\$ 3,247
Average inventory	6,517	34,433
Net cash provided by operating activities	4,125	20,354

Instructions

- (a) For each company, compute the following ratios.
- | | |
|-----------------------------------|--|
| (1) Current ratio. | (7) Asset turnover. |
| (2) Accounts receivable turnover. | (8) Return on assets. |
| (3) Average collection period. | (9) Return on common stockholders' equity. |
| (4) Inventory turnover. | (10) Debt to assets ratio. |
| (5) Days in inventory. | (11) Times interest earned. |
| (6) Profit margin. | |
- (b) Compare the liquidity, profitability, and solvency of the two companies.

P14-6 The comparative statements of Corbin Company are presented below and on page 702.

Compute numerous ratios.

(LO 2)

CORBIN COMPANY
Income Statement
For the Years Ended December 31

	2017	2016
Net sales (all on account)	<u>\$595,000</u>	<u>\$520,000</u>
Expenses		
Cost of goods sold	415,000	354,000
Selling and administrative	120,800	114,800
Interest expense	7,800	6,000
Income tax expense	15,000	14,000
Total expenses	<u>558,600</u>	<u>488,800</u>
Net income	<u>\$ 36,400</u>	<u>\$ 31,200</u>

CORBIN COMPANY
Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Current assets		
Cash	\$ 21,000	\$ 18,000
Short-term investments	18,000	15,000
Accounts receivable (net)	91,000	74,000
Inventory	85,000	70,000
Total current assets	<u>215,000</u>	<u>177,000</u>
Plant assets (net)	<u>423,000</u>	<u>383,000</u>
Total assets	<u><u>\$638,000</u></u>	<u><u>\$560,000</u></u>
<u>Liabilities and Stockholders' Equity</u>	<u>2017</u>	<u>2016</u>
Current liabilities		
Accounts payable	\$122,000	\$110,000
Income taxes payable	23,000	20,000
Total current liabilities	<u>145,000</u>	<u>130,000</u>
Long-term liabilities		
Bonds payable	120,000	80,000
Total liabilities	<u>265,000</u>	<u>210,000</u>
Stockholders' equity		
Common stock (\$5 par)	150,000	150,000
Retained earnings	223,000	200,000
Total stockholders' equity	<u>373,000</u>	<u>350,000</u>
Total liabilities and stockholders' equity	<u><u>\$638,000</u></u>	<u><u>\$560,000</u></u>

Additional data:

The common stock recently sold at \$19.50 per share.

Instructions

Compute the following ratios for 2017.

- | | |
|-----------------------------------|--|
| (a) Current ratio. | (h) Return on common stockholders' equity. |
| (b) Acid-test ratio. | (i) Earnings per share. |
| (c) Accounts receivable turnover. | (j) Price-earnings ratio. |
| (d) Inventory turnover. | (k) Payout ratio. |
| (e) Profit margin. | (l) Debt to assets ratio. |
| (f) Asset turnover. | (m) Times interest earned. |
| (g) Return on assets. | |

Compute missing information given a set of ratios.

(LO 2)

P14-7 An incomplete income statement and an incomplete comparative balance sheet of Deines Corporation are presented below and on page 703.

DEINES CORPORATION
Income Statement
For the Year Ended December 31, 2017

Net sales	\$11,000,000
Cost of goods sold	?
Gross profit	?
Operating expenses	<u>1,665,000</u>
Income from operations	?
Other expenses and losses	
Interest expense	?
Income before income taxes	?
Income tax expense	<u>560,000</u>
Net income	<u><u>\$?</u></u>

DEINES CORPORATION
Balance Sheets
December 31

<u>Assets</u>	<u>2017</u>	<u>2016</u>
Current assets		
Cash	\$ 450,000	\$ 375,000
Accounts receivable (net)	?	950,000
Inventory	?	1,720,000
Total current assets	<u>?</u>	<u>3,045,000</u>
Plant assets (net)	<u>4,620,000</u>	<u>3,955,000</u>
Total assets	<u>\$?</u>	<u>\$7,000,000</u>
<u>Liabilities and Stockholders' Equity</u>	<u>2017</u>	<u>2016</u>
Current liabilities	\$?	\$ 825,000
Long-term notes payable	?	2,800,000
Total liabilities	<u>?</u>	<u>3,625,000</u>
Common stock, \$1 par	3,000,000	3,000,000
Retained earnings	<u>400,000</u>	<u>375,000</u>
Total stockholders' equity	<u>3,400,000</u>	<u>3,375,000</u>
Total liabilities and stockholders' equity	<u>\$?</u>	<u>\$7,000,000</u>

Additional information:

1. The accounts receivable turnover for 2017 is 10 times.
2. All sales are on account.
3. The profit margin for 2017 is 14.5%.
4. Return on assets is 22% for 2017.
5. The current ratio on December 31, 2017, is 3.0.
6. The inventory turnover for 2017 is 4.8 times.

Instructions

Compute the missing information given the ratios above. Show computations. (*Note: Start with one ratio and derive as much information as possible from it before trying another ratio. List all missing amounts under the ratio used to find the information.*)

P14-8 Terwilliger Corporation owns a number of cruise ships and a chain of hotels. The hotels, which have not been profitable, were discontinued on September 1, 2017. The 2017 operating results for the company were as follows.

Operating revenues	\$12,850,000
Operating expenses	<u>8,700,000</u>
Operating income	<u>\$ 4,150,000</u>

Prepare a statement of comprehensive income.
(LO 3)

Analysis discloses that these data include the operating results of the hotel chain, which were operating revenues \$1,500,000 and operating expenses \$2,400,000. The hotels were sold at a gain of \$200,000 before taxes. This gain is not included in the operating results. During the year, Terwilliger had an unrealized loss on its available-for-sale securities of \$600,000 before taxes, which is not included in the operating results. In 2017, the company had other revenues and gains of \$100,000, which are not included in the operating results. The corporation is in the 30% income tax bracket.

Instructions

Prepare a statement of comprehensive income.

P14-9 The ledger of Jaime Corporation at December 31, 2017, contains the following summary data.

Net sales	\$1,700,000	Cost of goods sold	\$1,100,000
Selling expenses	120,000	Administrative expenses	150,000
Other revenues and gains	20,000	Other expenses and losses	28,000

Prepare a statement of comprehensive income.

(LO 3)

Your analysis reveals the following additional information that is not included in the above data.

1. The entire Puzzles Division was discontinued on August 31. The income from operation for this division before income taxes was \$20,000. The Puzzles Division was sold at a loss of \$90,000 before income taxes.
2. The company had an unrealized gain on available-for-sale securities of \$120,000 before income taxes for the year.
3. The income tax rate on all items is 25%.

Instructions

Prepare a statement of comprehensive income for the year ended December 31, 2017.

PROBLEMS: SET B

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B.

CONTINUING PROBLEM

© leungchopan/
Shutterstock

COOKIE CREATIONS

(Note: This is a continuation of the Cookie Creations problem from Chapters 1 through 13.)

CC14 Natalie and Curtis have the balance sheet and income statement for the first year of operations for Cookie & Coffee Creations Inc. They have been told that they can use these financial statements to prepare horizontal and vertical analyses, and to calculate financial ratios, to determine how their business is doing and to make some decisions they have been considering.

Go to the book's companion website, www.wiley.com/college/weygandt, to see the completion of this problem.

BROADENING YOUR PERSPECTIVE

FINANCIAL REPORTING AND ANALYSIS

Financial Reporting Problem: Apple Inc.

BYP14-1 Your parents are considering investing in **Apple Inc.** common stock. They ask you, as an accounting expert, to make an analysis of the company for them. Apple's financial statements are presented in Appendix A. Instructions for accessing and using the company's complete annual report, including the notes to the financial statements, are also provided in Appendix A.

Instructions

(Follow the approach in the chapter for rounding numbers.)

- (a) Make a 3-year trend analysis, using 2011 as the base year, of (1) net sales and (2) net income. Comment on the significance of the trend results.
- (b) Compute for 2013 and 2012 the (1) profit margin, (2) asset turnover, (3) return on assets, and (4) return on common stockholders' equity. How would you evaluate Apple's profitability? Total assets at September 24, 2011, were \$116,371 and total stockholders' equity at September 24, 2011, was \$76,615.
- (c) Compute for 2013 and 2012 the (1) debt to assets ratio and (2) times interest earned. How would you evaluate Apple's long-term solvency?
- (d) What information outside the annual report may also be useful to your parents in making a decision about Apple?

Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

BYP14-2 PepsiCo's financial statements are presented in Appendix B. Financial statements of **The Coca-Cola Company** are presented in Appendix C. Instructions for accessing and using the complete annual reports of PepsiCo and Coca-Cola, including the notes to the financial statements, are also provided in Appendices B and C, respectively.

Instructions

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
- (1) The percentage increase (decrease) in (i) net sales and (ii) net income from 2012 to 2013.
 - (2) The percentage increase in (i) total assets and (ii) total common stockholders' (shareholders') equity from 2012 to 2013.
 - (3) The basic earnings per share and price-earnings ratio for 2013. (For both PepsiCo and Coca-Cola, use the basic earnings per share.) Coca-Cola's common stock had a market price of \$41.31 at the end of fiscal-year 2013, and PepsiCo's common stock had a market price of \$82.71.
- (b) What conclusions concerning the two companies can be drawn from these data?

Comparative Analysis Problem: Amazon.com, Inc. vs. Wal-Mart Stores, Inc.

BYP14-3 Amazon.com, Inc.'s financial statements are presented in Appendix D. Financial statements of **Wal-Mart Stores, Inc.** are presented in Appendix E. Instructions for accessing and using the complete annual reports of Amazon and Wal-Mart, including the notes to the financial statements, are also provided in Appendices D and E, respectively.

Instructions

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
- (1) The percentage increase (decrease) in (i) net sales and (ii) net income from 2012 to 2013.
 - (2) The percentage increase in (i) total assets and (ii) total common stockholders' (shareholders') equity from 2012 to 2013.
 - (3) The basic earnings per share and price-earnings ratio for 2013. (For both Amazon and Wal-Mart, use the basic earnings per share.) Amazon's common stock had a market price of \$398.79 at the end of fiscal-year 2013, and Wal-Mart's common stock had a market price of \$74.68.
- (b) What conclusions concerning the two companies can be drawn from these data?

Decision-Making Across the Organization

BYP14-4 As the CPA for Gandara Manufacturing Inc., you have been asked to develop some key ratios from the comparative financial statements. This information is to be used to convince creditors that the company is solvent and will continue as a going concern. The data requested and the computations developed from the financial statements follow.

	<u>2017</u>	<u>2016</u>
Current ratio	3.1 times	2.1 times
Acid-test ratio	.8 times	1.4 times
Asset turnover	2.8 times	2.2 times
Net income	Up 32%	Down 8%
Earnings per share	\$3.30	\$2.50

Instructions

With the class divided into groups, complete the following.

Gandara Manufacturing Inc. asks you to prepare a list of brief comments stating how each of these items supports the solvency and going-concern potential of the business. The company wishes to use these comments to support its presentation of data to its creditors. You are to prepare the comments as requested, giving the implications and the limitations of each item separately. Then prepare a collective inference that may be drawn from the individual items about Gandara's solvency and going-concern potential.

Real-World Focus

BYP14-5 The Management Discussion and Analysis section of an annual report addresses corporate performance for the year and sometimes uses financial ratios to support its claims.

Address: www.ibm.com/investor/tools/index.phtml, or go to www.wiley.com/college/weygandt

Steps

1. Choose **How to read annual reports** (in the Guides section).
2. Choose **Anatomy**.

Instructions

Using the information from the above site, answer the following questions.

- (a) What are the optional elements that are often included in an annual report?
- (b) What are the elements of an annual report that are required by the SEC?
- (c) Describe the contents of the Management Discussion.
- (d) Describe the contents of the Auditors' Report.
- (e) Describe the contents of the Selected Financial Data.

CRITICAL THINKING

Communication Activity

BYP14-6 Abby Landis is the CEO of Pletcher's Electronics. Landis is an expert engineer but a novice in accounting. She asks you to explain the bases for comparison in analyzing Pletcher's financial statements.

Instructions

Write a letter to Abby Landis that explains the bases for comparison.

Ethics Case

BYP14-7 Dave Schonhardt, president of Schonhardt Industries, wishes to issue a press release to bolster his company's image and maybe even its stock price, which has been gradually falling. As controller, you have been asked to provide a list of 20 financial ratios along with some other operating statistics relative to Schonhardt Industries' first quarter financials and operations.

Two days after you provide the ratios and data requested, Steven Verlin, the public relations director of Schonhardt, asks you to prove the accuracy of the financial and operating data contained in the press release written by the president and edited by Steven. In the press release, the president highlights the sales increase of 25% over last year's first quarter and the positive change in the current ratio from 1.5:1 last year to 3:1 this year. He also emphasizes that production was up 50% over the prior year's first quarter.

You note that the press release contains only positive or improved ratios and none of the negative or deteriorated ratios. For instance, no mention is made that the debt to assets ratio has increased from 35% to 55%, that inventories are up 89%, and that while the current ratio improved, the acid-test ratio fell from 1:1 to 0.5:1. Nor is there any mention that the reported profit for the quarter would have been a loss had not the estimated lives of Schonhardt's plant and machinery been increased by 30%. Steven emphasizes, "The prez wants this release by early this afternoon."

Instructions

- (a) Who are the stakeholders in this situation?
- (b) Is there anything unethical in president Schonhardt's actions?
- (c) Should you as controller remain silent? Does Steven have any responsibility?

All About You

BYP14-8 In this chapter, you learned how to use many tools for performing a financial analysis of a company. When making personal investments, however, it is most likely that you won't be buying stocks and bonds in individual companies. Instead, when most people want to invest in stock, they buy mutual funds. By investing in a mutual fund, you reduce your risk because the fund diversifies by buying the stock of a variety of different companies, bonds, and other investments, depending on the stated goals of the fund.

Before you invest in a fund, you will need to decide what type of fund you want. For example, do you want a fund that has the potential of high growth (but also high risk), or are you looking for lower risk and a steady stream of income? Do you want a fund that invests only in U.S. companies, or do you want one that invests globally? Many resources are available to help you with these types of decisions.

Instructions

Go to <http://web.archive.org/web/20050210200843/http://www.cnbc1.com/invallocmdl.htm> and complete the investment allocation questionnaire. Add up your total points to determine the type of investment fund that would be appropriate for you.

FASB Codification Activity

BYP14-9 If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Use the Master Glossary for determining the proper definitions.

- (a) Discontinued operations.
- (b) Comprehensive income.

A Look at IFRS

LEARNING
OBJECTIVE

4

Compare financial statement analysis and income statement presentation under GAAP and IFRS.

The tools of financial statement analysis, covered in the first section of this chapter, are the same throughout the world. Techniques such as vertical and horizontal analysis, for example, are tools used by analysts regardless of whether GAAP- or IFRS-related financial statements are being evaluated. In addition, the ratios provided in the textbook are the same ones that are used internationally.

The latter part of this chapter relates to the income statement and irregular items. As in GAAP, the income statement is a required statement under IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1* (revised), "Presentation of Financial Statements," provides general guidelines for the reporting of income statement information. In general, the differences in the presentation of financial statement information are relatively minor.

Relevant Facts

Following are the key similarities between GAAP and IFRS as related to financial statement analysis and income statement presentation. There are no significant differences between the two standards.

- The tools of financial statement analysis covered in this chapter are universal and therefore no significant differences exist in the analysis methods used.

- The basic objectives of the income statement are the same under both GAAP and IFRS. As indicated in the textbook, a very important objective is to ensure that users of the income statement can evaluate the sustainable income of the company. Thus, both the IASB and the FASB are interested in distinguishing normal levels of income from unusual items in order to better predict a company's future profitability.
- The basic accounting for discontinued operations is the same under IFRS and GAAP.
- The accounting for changes in accounting principles and changes in accounting estimates are the same for both GAAP and IFRS.
- Both GAAP and IFRS follow the same approach in reporting comprehensive income.

Looking to the Future

The FASB and the IASB are working on a project that would rework the structure of financial statements. Recently, the IASB decided to require a statement of comprehensive income, similar to what was required under GAAP. In addition, another part of this project addresses the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run. In addition, the approach draws attention away from one number—net income.

IFRS Practice

IFRS Self-Test Questions

1. The basic tools of financial analysis are the same under both GAAP and IFRS **except** that:
 - (a) horizontal analysis cannot be done because the format of the statements is sometimes different.
 - (b) analysis is different because vertical analysis cannot be done under IFRS.
 - (c) the current ratio cannot be computed because current liabilities are often reported before current assets in IFRS statements of position.
 - (d) None of the above.
2. Presentation of comprehensive income must be reported under IFRS in:
 - (a) the statement of stockholders' equity.
 - (b) the income statement ending with net income.
 - (c) the notes to the financial statements.
 - (d) a statement of comprehensive income.
3. In preparing its income statement for 2017, Parmalane assembles the following information.

Sales revenue	\$500,000
Cost of goods sold	300,000
Operating expenses	40,000
Loss on discontinued operations	20,000

Ignoring income taxes, what is Parmalane's income from continuing operations for 2017 under IFRS?

- (a) \$260,000.
- (b) \$250,000.
- (c) \$240,000.
- (d) \$160,000.

International Financial Reporting Problem: Louis Vuitton

IFRS14-1 The financial statements of **Louis Vuitton** are presented in Appendix F. Instructions for accessing and using the company's complete annual report, including the notes to its financial statements, are also provided in Appendix F.

Instructions

Use the company's **2013 annual report** to answer the following questions.

- (a) What was the company's profit margin for 2013? Has it increased or decreased from 2011?
- (b) What was the company's operating profit for 2013?
- (c) The company reported comprehensive income of €4,255 billion in 2013. What are the other comprehensive gains and losses recorded in 2013?

Answers to IFRS Self-Test Questions

Managerial Accounting

CHAPTER PREVIEW This chapter focuses on issues illustrated in the Feature Story below about **Current Designs** and its parent company **Wenonah Canoe**. To succeed, the company needs to determine and control the costs of material, labor, and overhead, and understand the relationship between costs and profits. Managers often make decisions that determine their company's fate—and their own. Managers are evaluated on the results of their decisions. Managerial accounting provides tools to assist management in making decisions and to evaluate the effectiveness of those decisions.

FEATURE STORY

Just Add Water ... and Paddle

Mike Cichanowski grew up on the Mississippi River in Winona, Minnesota. At a young age, he learned to paddle a canoe so he could explore the river. Before long, Mike began crafting his own canoes from bent wood and fiberglass in his dad's garage. Then, when his canoe-making shop outgrew the garage, he moved it into an old warehouse. When that was going to be torn down, Mike came to a critical juncture in his life. He took out a bank loan and built his own small shop, giving birth to the company **Wenonah Canoe**.

Wenonah Canoe soon became known as a pioneer in developing techniques to get the most out of new materials such as plastics, composites, and carbon fibers—maximizing strength while minimizing weight.

In the 1990s, as kayaking became popular, Mike made another critical decision when he acquired **Current Designs**, a premier Canadian kayak manufacturer. This venture allowed Wenonah to branch out with new product lines while providing Current Designs with much-needed capacity expansion and manufacturing expertise. Mike moved Current Designs' headquarters to Minnesota and made a big (and

potentially risky) investment in a new production facility. Today, the company's 90 employees produce about 12,000 canoes and kayaks per year. These are sold across the country and around the world.

Mike will tell you that business success is “a three-legged stool.” The first leg is the knowledge and commitment to make a great product. Wenonah's canoes and Current Designs' kayaks are widely regarded as among the very best. The second leg is the ability to sell your product. Mike's company started off making great canoes, but it took a little longer to figure out how to sell them. The third leg is not something that most of you would immediately associate with entrepreneurial success. It is what goes on behind the scenes—accounting. Good accounting information is absolutely critical to the countless decisions, big and small, that ensure the survival and growth of the company.

Bottom line: No matter how good your product is, and no matter how many units you sell, if you don't have a firm grip on your numbers, you are up a creek without a paddle.

CHAPTER OUTLINE

Learning Objectives

1

Identify the features of managerial accounting and the functions of management.

- Comparing managerial and financial accounting
- Management functions
- Organizational structure

DO IT!

1

Managerial Accounting Overview

2

Describe the classes of manufacturing costs and the differences between product and period costs.

- Manufacturing costs
- Product vs. period costs
- Illustration of cost concepts

DO IT!

2

Managerial Cost Concepts

3

Demonstrate how to compute cost of goods manufactured and prepare financial statements for a manufacturer.

- Income statement
- Cost of goods manufactured schedule
- Balance sheet

DO IT!

3

Cost of Goods Manufactured

4

Discuss trends in managerial accounting.

- Service industries
- Value chain
- Balanced scorecard
- Business ethics
- Corporate social responsibility

4

Trends in Managerial Accounting

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

Identify the features of managerial accounting and the functions of management.

Managerial accounting provides economic and financial information for managers and other internal users. The skills that you learn in this course will be vital to your future success in business. You don't believe us? Let's look at some examples of some of the crucial activities of employees at **Current Designs** and where those activities are addressed in this textbook.

In order to know whether it is making a profit, Current Designs needs accurate information about the cost of each kayak (Chapters 16, 17, and 18). To be profitable, Current Designs adjusts the number of kayaks it produces in response to changes in economic conditions and consumer tastes. It needs to understand how changes in the number of kayaks it produces impact its production costs and profitability (Chapters 19 and 20). Further, Current Designs' managers often consider alternative courses of action. For example, should the company accept a special order from a customer, produce a particular kayak component internally or outsource it, or continue or discontinue a particular product line (Chapter 21)? Finally, one of the most important and most difficult decisions is what price to charge for the kayaks (Chapter 22).

In order to plan for the future, Current Designs prepares budgets (Chapter 23), and it then compares its budgeted numbers with its actual results to evaluate performance and identify areas that need to change (Chapters 24 and 25). Finally, it sometimes needs to make substantial investment decisions, such as the building of a new plant or the purchase of new equipment (Chapter 26).

Someday, you are going to face decisions just like these. You may end up in sales, marketing, management, production, or finance. You may work for a company that provides medical care, produces software, or serves up mouth-watering meals. No matter what your position is and no matter what your product, the skills you acquire in this class will increase your chances of business success. Put another way, in business you can either guess or you can make an informed decision. As a CEO of **Microsoft** once noted: "If you're supposed to be making money in business and supposed to be satisfying customers and building market share, there are numbers that characterize those things. And if somebody can't speak to me quantitatively about it, then I'm nervous." This course gives you the skills you need to quantify information so you can make informed business decisions.

Comparing Managerial and Financial Accounting

There are both similarities and differences between managerial and financial accounting. First, each field of accounting deals with the economic events of a business. For example, *determining* the unit cost of manufacturing a product is part of managerial accounting. *Reporting* the total cost of goods manufactured and sold is part of financial accounting. In addition, both managerial and financial accounting require that a company's economic events be quantified and communicated to interested parties. Illustration 15-1 summarizes the principal differences between financial accounting and managerial accounting.

Management Functions

Managers' activities and responsibilities can be classified into three broad functions:

1. Planning.
2. Directing.
3. Controlling.

Feature	Financial Accounting	Managerial Accounting
Primary Users of Reports	External users: stockholders, creditors, and regulators.	Internal users: officers and managers.
Types and Frequency of Reports	Financial statements. Quarterly and annually.	Internal reports. As frequently as needed.
Purpose of Reports	General-purpose.	Special-purpose for specific decisions.
Content of Reports	Pertains to business as a whole. Highly aggregated (condensed). Limited to double-entry accounting and cost data. Generally accepted accounting principles.	Pertains to subunits of the business. Very detailed. Extends beyond double-entry accounting to any relevant data. Standard is relevance to decisions.
Verification Process	Audited by CPA.	No independent audits.

Illustration 15-1
Differences between financial and managerial accounting

In performing these functions, managers make decisions that have a significant impact on the organization.

Planning requires managers to look ahead and to establish objectives. These objectives are often diverse: maximizing short-term profits and market share, maintaining a commitment to environmental protection, and contributing to social programs. For example, **Hewlett-Packard**, in an attempt to gain a stronger foothold in the computer industry, greatly reduced its prices to compete with **Dell**. A key objective of management is to **add value** to the business under its control. Value is usually measured by the price of the company's stock and by the potential selling price of the company.

Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. This function relates to implementing planned objectives and providing necessary incentives to motivate employees. For example, manufacturers such as **Campbell Soup Company**, **General Motors**, and **Dell** need to coordinate purchasing, manufacturing, warehousing, and selling. Service corporations such as **American Airlines**, **Federal Express**, and **AT&T** coordinate scheduling, sales, service, and acquisitions of equipment and supplies. Directing also involves selecting executives, appointing managers and supervisors, and hiring and training employees.

The third management function, **controlling**, is the process of keeping the company's activities on track. In controlling operations, managers determine whether planned goals are met. When there are deviations from targeted objectives, managers decide what changes are needed to get back on track. Scandals at companies like **Enron**, **Lucent**, and **Xerox** attest to the fact that companies need adequate controls to ensure that the company develops and distributes accurate information.

How do managers achieve control? A smart manager in a very small operation can make personal observations, ask good questions, and know how to evaluate the answers. But using this approach in a larger organization would result in chaos. Imagine the president of **Current Designs** attempting to determine whether the company is meeting its planned objectives without some record of what has happened and what is expected to occur. Thus, large businesses typically use a formal system of evaluation. These systems include such features as budgets, responsibility centers, and performance evaluation reports—all of which are features of managerial accounting.

Decision-making is not a separate management function. Rather, it is the outcome of the exercise of good judgment in planning, directing, and controlling.

Management Insight Louis Vuitton

Even the Best Have to Get Better

Luxury-goods manufacturers used to consider stockouts to be a good thing. But recently, **Louis Vuitton**, a French manufacturer of high-end handbags, wallets, and suitcases, changed its attitude. The company adopted “lean” processes used by car manufacturers and electronics companies to speed up production of “hot” products.

Work is done by flexible teams, with jobs organized based on how long a task takes. By reducing wasted time and eliminating bottlenecks, what used to take 20 to 30 workers eight days to do now takes only 6 to 12 workers one day.

Other efforts included organizing 10-person factory teams into U-shaped clusters. This arrangement freed up floor space, allowing Louis Vuitton to hire 300 additional employees. The company also selectively employs robots to

bring items to human workers, saving valuable time. In addition, computer programs are now used to identify flaws in leather skins, enabling the company to identify the best way to cut pieces from the leather to increase quality and minimize waste.

Finally, Louis Vuitton stores around the world feed sales information to the company’s headquarters in France. Production is then adjusted accordingly to ensure that would-be buyers aren’t left empty-handed. With these new production processes, Louis Vuitton is already seeing improved results—returns of some products are down by two-thirds.

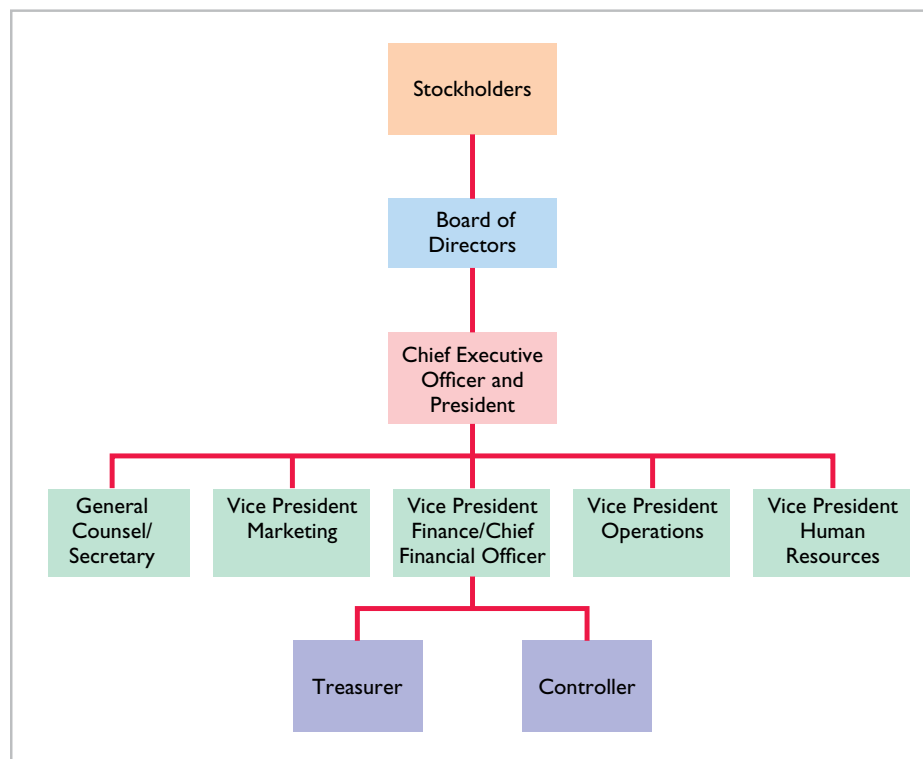

Sources: Christina Passariello, “Louis Vuitton Tries Modern Methods on Factory Lines,” *Wall Street Journal* (October 9, 2006); and Christina Passariello, “At Vuitton, Growth in Small Batches,” *Wall Street Journal* (June 27, 2011).

What are some of the steps that this company has taken in order to ensure that production meets demand? (Go to **WileyPLUS** for this answer and additional questions.)

Organizational Structure

Most companies prepare **organization charts** to show the interrelationships of activities and the delegation of authority and responsibility within the company. Illustration 15-2 shows a typical organization chart.

Illustration 15-2
A typical corporate organization chart

Stockholders own the corporation, but they manage it indirectly through a **board of directors** they elect. The board formulates the operating policies for the company or organization. The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions.

The **chief executive officer (CEO)** has overall responsibility for managing the business. As the organization chart in Illustration 15-2 shows, the CEO delegates responsibilities to other officers.

Responsibilities within the company are frequently classified as either line or staff positions. Employees with **line positions** are directly involved in the company's primary revenue-generating operating activities. Examples of line positions include the vice president of operations, vice president of marketing, plant managers, supervisors, and production personnel. Employees with **staff positions** are involved in activities that support the efforts of the line employees. In a company like **General Electric** or **Facebook**, employees in finance, legal, and human resources have staff positions. While activities of staff employees are vital to the company, these employees are nonetheless there to serve the line employees who engage in the company's primary operations.

The **chief financial officer (CFO)** is responsible for all of the accounting and finance issues the company faces. The CFO is supported by the **controller** and the **treasurer**. The controller's responsibilities include (1) maintaining the accounting records, (2) ensuring an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The treasurer has custody of the corporation's funds and is responsible for maintaining the company's cash position.

Also serving the CFO is the internal audit staff. The staff's responsibilities include reviewing the reliability and integrity of financial information provided by the controller and treasurer. Staff members also ensure that internal control systems are functioning properly to safeguard corporate assets. In addition, they investigate compliance with policies and regulations. In many companies, these staff members also determine whether resources are used in the most economical and efficient fashion.

The vice president of operations oversees employees with line positions. For example, the company might have multiple plant managers, each of whom reports to the vice president of operations. Each plant also has department managers, such as fabricating, painting, and shipping, each of whom reports to the plant manager.

DO IT!

1

Managerial Accounting Overview

Indicate whether the following statements are true or false. If false, explain why.

1. Managerial accountants have a single role within an organization: collecting and reporting costs to management.
2. Financial accounting reports are general-purpose and intended for external users.
3. Managerial accounting reports are special-purpose and issued as frequently as needed.
4. Managers' activities and responsibilities can be classified into three broad functions: cost accounting, budgeting, and internal control.
5. Managerial accounting reports must now comply with generally accepted accounting principles (GAAP).

Solution

1. False. Managerial accountants determine product costs. In addition, managerial accountants are now held responsible for evaluating how well the company employs its resources. As a result, when the company makes critical strategic decisions, managerial accountants serve as team members alongside personnel from production, marketing, and engineering.

Action Plan

- ✓ Understand that managerial accounting is a field of accounting that provides economic and financial information for managers and other internal users.
- ✓ Understand that financial accounting provides information for external users.
- ✓ Analyze which users require which different types of information.

2. True.
3. True.
4. False. Managers' activities are classified into three broad functions: planning, directing, and controlling. Planning requires managers to look ahead to establish objectives. Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. Controlling keeps the company's activities on track.
5. False. Managerial accounting reports are for internal use and thus do not have to comply with GAAP.

LEARNING
OBJECTIVE

2

Describe the classes of manufacturing costs and the differences between product and period costs.

In order for managers at a company like **Current Designs** to plan, direct, and control operations effectively, they need good information. One very important type of information relates to costs. Managers should ask questions such as the following.

1. What costs are involved in making a product or performing a service?
2. If we decrease production volume, will costs decrease?
3. What impact will automation have on total costs?
4. How can we best control costs?

To answer these questions, managers obtain and analyze reliable and relevant cost information. The first step is to understand the various cost categories that companies use.

Manufacturing Costs

Manufacturing consists of activities and processes that convert raw materials into finished goods. Contrast this type of operation with merchandising, which sells products in the form in which they are purchased. Manufacturing costs are classified as direct materials, direct labor, and manufacturing overhead.

DIRECT MATERIALS

To obtain the materials that will be converted into the finished product, the manufacturer purchases raw materials. **Raw materials** are the basic materials and parts used in the manufacturing process.

Raw materials that can be physically and directly associated with the finished product during the manufacturing process are **direct materials**. Examples include flour in the baking of bread, syrup in the bottling of soft drinks, and steel in the making of automobiles. A primary direct material of many Current Designs' kayaks is polyethylene powder. Some of its high-performance kayaks use Kevlar®.

Some raw materials cannot be easily associated with the finished product. These are called indirect materials. **Indirect materials** have one of two characteristics. (1) They do not physically become part of the finished product (such as polishing compounds used by Current Designs for the finishing touches on kayaks). Or, (2) they are impractical to trace to the finished product because their physical association with the finished product is too small in terms of cost (such as cotter pins and lock washers). Companies account for indirect materials as part of **manufacturing overhead**.

DIRECT LABOR

The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is **direct labor**. Bottlers at **Coca-Cola**, bakers at **Sara Lee**, and equipment operators at **Current Designs** are employees whose activities are usually classified as direct labor. **Indirect labor** refers to the work of employees that has no physical association with the finished product or for which it is impractical to trace costs to the goods produced. Examples include wages of factory maintenance people, factory time-keepers, and factory supervisors. Like indirect materials, companies classify indirect labor as **manufacturing overhead**.

MANUFACTURING OVERHEAD

Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product. Overhead costs also include manufacturing costs that cannot be classified as direct materials or direct labor. Manufacturing overhead includes indirect materials, indirect labor, depreciation on factory buildings and machines, and insurance, taxes, and maintenance on factory facilities.

One study of manufactured goods found the following magnitudes of the three different product costs as a percentage of the total product cost: direct materials 54%, direct labor 13%, and manufacturing overhead 33%. Note that the direct labor component is the smallest. This component of product cost is dropping substantially because of automation. Companies are working hard to increase productivity by decreasing labor. In some companies, direct labor has become as little as 5% of the total cost.

Allocating direct materials and direct labor costs to specific products is fairly straightforward. Good recordkeeping can tell a company how much plastic it used in making each type of gear, or how many hours of factory labor it took to assemble a part. But allocating overhead costs to specific products presents problems. How much of the purchasing agent's salary is attributable to the hundreds of different products made in the same plant? What about the grease that keeps the machines humming, or the computers that make sure paychecks come out on time? Boiled down to its simplest form, the question becomes: Which products cause the incurrence of which costs? In subsequent chapters, we show various methods of allocating overhead to products.

Alternative Terminology

Some companies use terms such as *factory overhead*, *indirect manufacturing costs*, and *burden* instead of manufacturing overhead.

Management Insight Whirlpool

bikeriderlondon/Shutterstock

Why Manufacturing Matters for U.S. Workers

Prior to 2010, U.S. manufacturing employment fell at an average rate of 0.1% per year for 60 years. At the same time, U.S. factory output increased by an average rate of 3.4%. As manufacturers relied more heavily on automation, the number of people they needed

declined. However, factory jobs are important because the average hourly wage of a factory worker is \$22, twice the average wage of employees in the service sector. Fortunately, manufacturing jobs in the United States increased

by 1.2% in 2010, and they were forecast to continue to increase through at least 2015. Why? Because companies like **Whirlpool**, **Caterpillar**, and **Dow** are building huge new plants in the United States to replace old, inefficient U.S. facilities. For many products that are ultimately sold in the United States, it makes more sense to produce them domestically and save on the shipping costs. In addition, these efficient new plants, combined with an experienced workforce, will make it possible to compete with manufacturers in other countries, thereby increasing export potential.

Sources: Bob Tita, "Whirlpool to Invest in Tennessee Plant," *Wall Street Journal Online* (September 1, 2010); and James R. Hagerty, "U.S. Factories Buck Decline," *Wall Street Journal Online* (January 19, 2011).

In what ways does the shift to automated factories change the amount and composition of product costs? (Go to **WileyPLUS** for this answer and additional questions.)

Alternative Terminology

Product costs are also called *inventoriable costs*.

Product Versus Period Costs

Each of the manufacturing cost components—direct materials, direct labor, and manufacturing overhead—are product costs. As the term suggests, **product costs** are costs that are a necessary and integral part of producing the finished product. Companies record product costs, when incurred, as inventory. These costs do not become expenses until the company sells the finished goods inventory. At that point, the company records the expense as cost of goods sold.

Period costs are costs that are matched with the revenue of a specific time period rather than included as part of the cost of a salable product. These are non-manufacturing costs. Period costs include selling and administrative expenses. In order to determine net income, companies deduct these costs from revenues in the period in which they are incurred.

Illustration 15-3 summarizes these relationships and cost terms. Our main concern in this chapter is with product costs.

Illustration 15-3

Product versus period costs

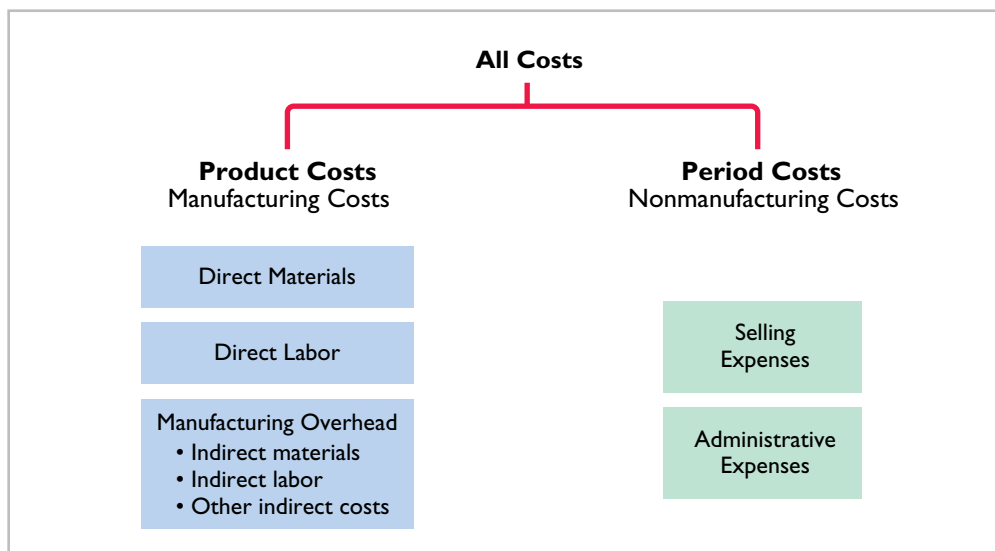

Illustration of Cost Concepts

To improve your understanding of cost concepts, we illustrate them here through an extended example. Suppose you started your own snowboard factory, Terrain Park Boards. Think that's impossible? **Burton Snowboards** was started by Jake Burton Carpenter, when he was only 23 years old. Jake initially experimented with 100 different prototype designs before settling on a final design. Then Jake, along with two relatives and a friend, started making 50 boards per day in Londonderry, Vermont. Unfortunately, while they made a lot of boards in their first year, they were only able to sell 300 of them. To get by during those early years, Jake taught tennis and tended bar to pay the bills.

Here are some of the costs that your snowboard factory would incur.

1. The materials cost of each snowboard (wood cores, fiberglass, resins, metal screw holes, metal edges, and ink) is \$30.
2. The labor costs (for example, to trim and shape each board using jig saws and band saws) are \$40.
3. Depreciation on the factory building and equipment (for example, presses, grinding machines, and lacquer machines) used to make the snowboards is \$25,000 per year.
4. Property taxes on the factory building (where the snowboards are made) are \$6,000 per year.

5. Advertising costs (mostly online and catalogue) are \$60,000 per year.
6. Sales commissions related to snowboard sales are \$20 per snowboard.
7. Salaries for factory maintenance employees are \$45,000 per year.
8. The salary of the plant manager is \$70,000.
9. The cost of shipping is \$8 per snowboard.

Illustration 15-4 shows how Terrain Park Boards would assign these manufacturing and selling costs to the various categories.

Terrain Park Boards		Product Costs			
Cost Item	Direct Materials	Direct Labor	Manufacturing Overhead	Period Costs	
1. Material cost (\$30 per board)	X				
2. Labor costs (\$40 per board)		X			
3. Depreciation on factory equipment (\$25,000 per year)			X		
4. Property taxes on factory building (\$6,000 per year)			X		
5. Advertising costs (\$60,000 per year)				X	
6. Sales commissions (\$20 per board)				X	
7. Maintenance salaries (factory facilities, \$45,000 per year)			X		
8. Salary of plant manager (\$70,000 per year)			X		
9. Cost of shipping boards (\$8 per board)				X	

Illustration 15-4
Assignment of costs to cost categories

Total manufacturing costs are the sum of the **product costs**—direct materials, direct labor, and manufacturing overhead—incurred in the current period. If Terrain Park Boards produces 10,000 snowboards the first year, the total manufacturing costs would be \$846,000, as shown in Illustration 15-5.

Cost Number and Item	Manufacturing Cost
1. Material cost (\$30 × 10,000)	\$300,000
2. Labor cost (\$40 × 10,000)	400,000
3. Depreciation on factory equipment	25,000
4. Property taxes on factory building	6,000
7. Maintenance salaries (factory facilities)	45,000
8. Salary of plant manager	70,000
Total manufacturing costs	<u>\$846,000</u>

Illustration 15-5
Computation of total manufacturing costs

Once it knows the total manufacturing costs, Terrain Park Boards can compute the manufacturing cost per unit. Assuming 10,000 units, the cost to produce one snowboard is \$84.60 ($\$846,000 \div 10,000$ units).

In subsequent chapters, we use extensively the cost concepts discussed in this chapter. So study Illustration 15-4 carefully. If you do not understand any of these classifications, go back and reread the appropriate section.

DO IT!**2****Managerial Cost Concepts****Action Plan**

- ✓ Classify as direct materials any raw materials physically and directly associated with the finished product.
- ✓ Classify as direct labor the work of factory employees physically and directly associated with the finished product.
- ✓ Classify as manufacturing overhead any costs indirectly associated with the finished product.

A bicycle company has these costs: tires, salaries of employees who put tires on the wheels, factory building depreciation, advertising expenditures, lubricants, spokes, salary of factory manager, salary of accountant, handlebars, and salaries of factory maintenance employees. Classify each cost as direct materials, direct labor, overhead, or a period cost.

Solution

Tires, spokes, and handlebars are direct materials. Salaries of employees who put tires on the wheels are direct labor. Factory building depreciation, lubricants, salary of factory manager, and salary of factory maintenance employees are manufacturing overhead. Advertising expenditures and salary of accountant are period costs.

LEARNING
OBJECTIVE**3****Demonstrate how to compute cost of goods manufactured and prepare financial statements for a manufacturer.**

The financial statements of a manufacturer are very similar to those of a merchandiser. For example, you will find many of the same sections and same accounts in the financial statements of **Procter & Gamble** that you find in the financial statements of **Dick's Sporting Goods**. The principal differences between their financial statements occur in two places: the cost of goods sold section in the income statement and the current assets section in the balance sheet.

Income Statement

Under a periodic inventory system, the income statements of a merchandiser and a manufacturer differ in the cost of goods sold section. Merchandisers compute cost of goods sold by adding the beginning inventory to the **cost of goods purchased** and subtracting the ending inventory. Manufacturers compute cost of goods sold by adding the beginning finished goods inventory to the **cost of goods manufactured** and subtracting the ending finished goods inventory. Illustration 15-6 shows these different methods.

A number of accounts are involved in determining the cost of goods manufactured. To eliminate excessive detail, income statements typically show only the total cost of goods manufactured. A separate statement, called a Cost of Goods Manufactured Schedule, presents the details. (See the discussion on page 722 and Illustration 15-9.)

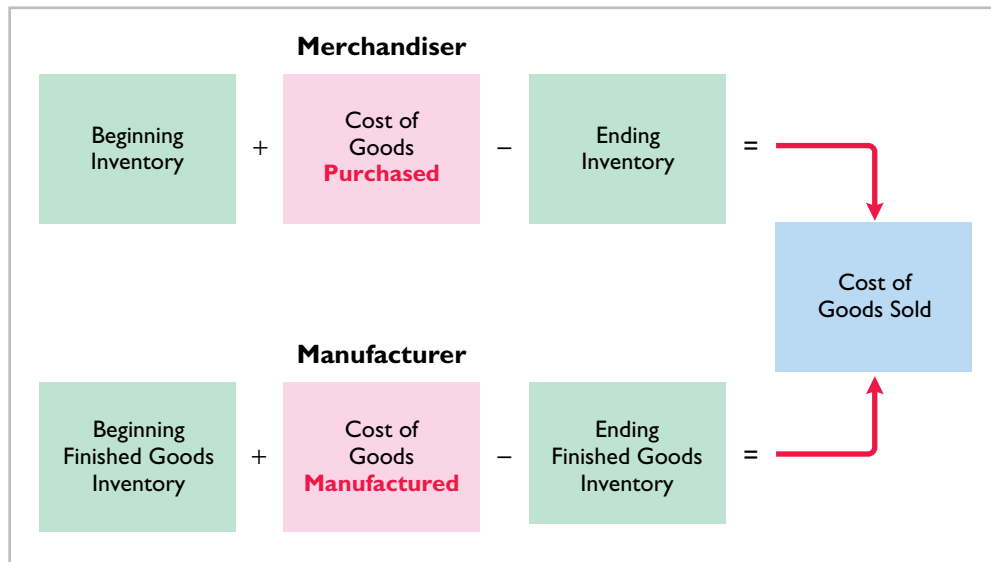

Illustration 15-6
Cost of goods sold components

Helpful Hint
We assume a periodic inventory system in this illustration.

Illustration 15-7 shows the different presentations of the cost of goods sold sections for merchandising and manufacturing companies. The other sections of an income statement are similar for merchandisers and manufacturers.

MERCHANTISING COMPANY Income Statement (partial) For the Year Ended December 31, 2017	MANUFACTURING COMPANY Income Statement (partial) For the Year Ended December 31, 2017
Cost of goods sold	Cost of goods sold
Inventory, Jan. 1 \$ 70,000	Finished goods inventory, Jan. 1 \$ 90,000
Cost of goods purchased 650,000	Cost of goods manufactured 370,000 (see Illustration 15-9)
720,000	460,000
Less: Inventory, Dec. 31 400,000	Less: Finished goods inventory, Dec. 31 80,000
<u>Cost of goods sold</u> \$ 320,000	<u>Cost of goods sold</u> \$ 380,000

Illustration 15-7
Cost of goods sold sections of merchandising and manufacturing income statements

Cost of Goods Manufactured

An example may help show how companies determine the cost of goods manufactured. Assume that on January 1, **Current Designs** has a number of kayaks in various stages of production. In total, these partially completed units are called **beginning work in process inventory**. The costs the company assigns to beginning work in process inventory are based on the **manufacturing costs incurred in the prior period**.

Current Designs first incurs manufacturing costs in the current year to complete the work that was in process on January 1. It then incurs manufacturing costs for production of new orders. The sum of the direct materials costs, direct labor costs, and manufacturing overhead incurred in the current year is the **total manufacturing costs** for the current period.

We now have two cost amounts: (1) the cost of the beginning work in process and (2) the total manufacturing costs for the current period. The sum of these costs is the **total cost of work in process** for the year.

At the end of the year, Current Designs may have some kayaks that are only partially completed. The costs of these units become the cost of the **ending work in process inventory**. To find the **cost of goods manufactured**, we subtract this cost from the total cost of work in process. Illustration 15-8 (page 722) shows the formula for determining the cost of goods manufactured.

Illustration 15-8

Cost of goods manufactured formula

Beginning Work in Process Inventory	+	Total Manufacturing Costs	=	Total Cost of Work in Process
Total Cost of Work in Process	-	Ending Work in Process Inventory	=	Cost of Goods Manufactured

Cost of Goods Manufactured Schedule

The **cost of goods manufactured schedule** reports cost elements used in calculating cost of goods manufactured. Illustration 15-9 shows the schedule for Current Designs (using assumed data). The schedule presents detailed data for direct materials and for manufacturing overhead.

Illustration 15-9

Cost of goods manufactured schedule

CURRENT DESIGNS			
Cost of Goods Manufactured Schedule For the Year Ended December 31, 2017			
Work in process, January 1			\$ 18,400
Direct materials			
Raw materials inventory, January 1	\$ 16,700		
Raw materials purchases	<u>152,500</u>		
Total raw materials available for use	169,200		
Less: Raw materials inventory, December 31	<u>22,800</u>		
Direct materials used		\$146,400	
Direct labor		175,600	
Manufacturing overhead			
Indirect labor	14,300		
Factory repairs	12,600		
Factory utilities	10,100		
Factory depreciation	9,440		
Factory insurance	<u>8,360</u>		
Total manufacturing overhead		<u>54,800</u>	
Total manufacturing costs			376,800
Total cost of work in process			<u>395,200</u>
Less: Work in process, December 31			25,200
Cost of goods manufactured			<u>\$370,000</u>

Review Illustration 15-8 and then examine the cost of goods manufactured schedule in Illustration 15-9. You should be able to distinguish between “Total manufacturing costs” and “Cost of goods manufactured.” The difference is the effect of the change in work in process during the period.

Balance Sheet

The balance sheet for a merchandising company shows just one category of inventory. In contrast, the balance sheet for a manufacturer may have three inventory accounts, as shown in Illustration 15-10 for Current Designs’ kayak inventory.

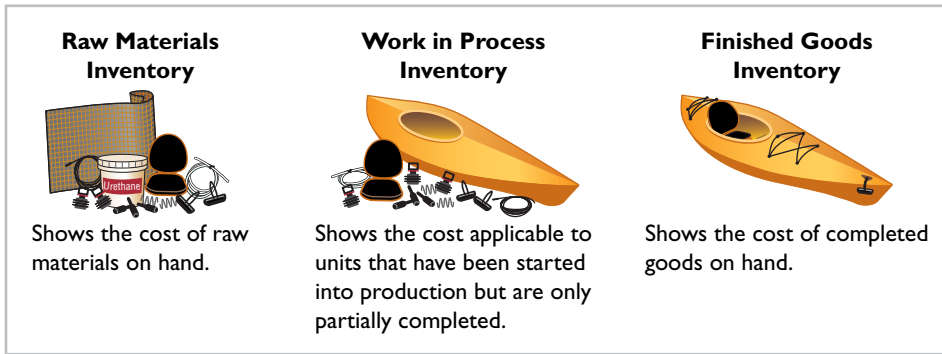

Illustration 15-10
Inventory accounts for a manufacturer

Finished Goods Inventory is to a manufacturer what Inventory is to a merchandiser. Each of these classifications represents the goods that the company has available for sale. The current assets sections presented in Illustration 15-11 contrast the presentations of inventories for merchandising and manufacturing companies. The remainder of the balance sheet is similar for the two types of companies.

Illustration 15-11
Current assets sections of merchandising and manufacturing balance sheets

MERCHANDISING COMPANY Balance Sheet December 31, 2017		MANUFACTURING COMPANY Balance Sheet December 31, 2017	
Current assets		Current assets	
Cash	\$100,000	Cash	\$180,000
Accounts receivable (net)	210,000	Accounts receivable (net)	210,000
Inventory	400,000	Inventory	
Prepaid expenses	22,000	Finished goods	\$80,000
Total current assets	<u>\$732,000</u>	Work in process	25,200
		Raw materials	22,800
		Prepaid expenses	18,000
		Total current assets	<u>\$536,000</u>

Each step in the accounting cycle for a merchandiser applies to a manufacturer. For example, prior to preparing financial statements, manufacturers make adjusting entries. The adjusting entries are essentially the same as those of a merchandiser. The closing entries are also similar for manufacturers and merchandisers.

DO IT!

3

Cost of Goods Manufactured

The following information is available for Keystone Company.

	March 1	March 31
Raw materials inventory	\$12,000	\$10,000
Work in process inventory	2,500	4,000
Materials purchased in March	\$ 90,000	
Direct labor in March	75,000	
Manufacturing overhead in March	220,000	

Prepare the cost of goods manufactured schedule for the month of March 2017.

Solution

Action Plan

- ✓ Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- ✓ Sum direct materials used, direct labor, and manufacturing overhead to determine total manufacturing costs.
- ✓ Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- ✓ Cost of goods manufactured is the total cost of work in process less ending work in process.

KEYSTONE COMPANY		
Cost of Goods Manufactured Schedule		
For the Month Ended March 31, 2017		
Work in process, March 1		\$ 2,500
Direct materials		
Raw materials, March 1	\$ 12,000	
Raw material purchases	90,000	
Total raw materials available for use	102,000	
Less: Raw materials, March 31	10,000	
Direct materials used		\$ 92,000
Direct labor		75,000
Manufacturing overhead		220,000
Total manufacturing costs		<u>387,000</u>
Total cost of work in process		389,500
Less: Work in process, March 31		4,000
Cost of goods manufactured		<u><u>\$385,500</u></u>

LEARNING
OBJECTIVE

4

Discuss trends in managerial accounting.

The business environment never stands still. Regulations are always changing, global competition continues to intensify, and technology is a source of constant upheaval. In this rapidly changing world, managerial accounting needs to continue to innovate in order to provide managers with the information they need.

Service Industries

Much of the U.S. economy has shifted toward an emphasis on services. Today, more than 50% of U.S. workers are employed by service companies. Airlines, marketing agencies, cable companies, and governmental agencies are just a few examples of service companies. How do service companies differ from manufacturing companies? One difference is that services are consumed immediately. For example, when a restaurant produces a meal, that meal is not put in inventory but is instead consumed immediately. An airline uses special equipment to provide its product, but again, the output of that equipment is consumed immediately by the customer in the form of a flight. And a marketing agency performs services for its clients that are immediately consumed by the customer in the form of a marketing plan. For a manufacturing company, like **Boeing**, it often has a long lead time before its airplane is used or consumed by the customer.

This chapter's examples featured manufacturing companies because accounting for the manufacturing environment requires the use of the broadest range of accounts. That is, the accounts used by service companies represent a subset of those used by manufacturers because service companies are not producing inventory. Neither the restaurant, the airline, or the marketing agency discussed above produces an inventoriable product. However, just like a manufacturer, each needs to keep track of the costs of its services in order to know whether it is generating a profit. A successful restaurateur needs to know the cost of each offering on the menu, an airline needs to know the cost of flight service to each destination, and a marketing agency needs to

ETHICS NOTE

Do telecommunications companies have an obligation to provide service to remote or low-user areas for a fee that may be less than the cost of the service?

know the cost to develop a marketing plan. Thus, the techniques shown in this chapter, to accumulate manufacturing costs to determine manufacturing inventory, are equally useful for determining the costs of performing services.

For example, let's consider the costs that **Hewlett-Packard (HP)** might incur on a consulting engagement. A significant portion of its costs would be salaries of consulting personnel. It might also incur travel costs, materials, software costs, and depreciation charges on equipment. In the same way that it needs to keep track of the cost of manufacturing its computers and printers, HP needs to know what its costs are on each consulting job. It could prepare a cost of services performed schedule similar to the cost of goods manufactured schedule in Illustration 15-9 (page 722). The structure would be essentially the same as the cost of goods manufactured schedule, but section headings would be reflective of the costs of the particular service organization.

Many of the examples we present in subsequent chapters will be based on service companies. To highlight the relevance of the techniques used in this course for service companies, we have placed a service company icon (see margin) next to those items in the text and end-of-chapter materials that relate to non-manufacturing companies.

Service Company Insight Allegiant Airlines

© Stephen Strathdee/iStockphoto

Low Fares but Decent Profits

When other airlines were cutting flight service due to recession, **Allegiant Airlines** increased capacity by 21%. Sounds crazy, doesn't it? But it must know something because while the other airlines were losing money, it was generating profits. In fact, it often has the

industry's highest profit margins. Consider also that its average one-way fare is only \$83. So how does it make money? As a low-budget airline, it focuses on controlling costs.

Allegiant purchases used planes for \$3 million each rather than new planes for \$40 million. It flies out of small towns, so wages are low and competition is nonexistent. It minimizes hotel costs by having its flight crews finish their day in their home cities. The company also only flies a route if its 150-passenger planes are nearly full (it averages about 90% of capacity). The bottom line is that Allegiant knows its costs to the penny. Knowing what your costs are might not be glamorous, but it sure beats losing money.

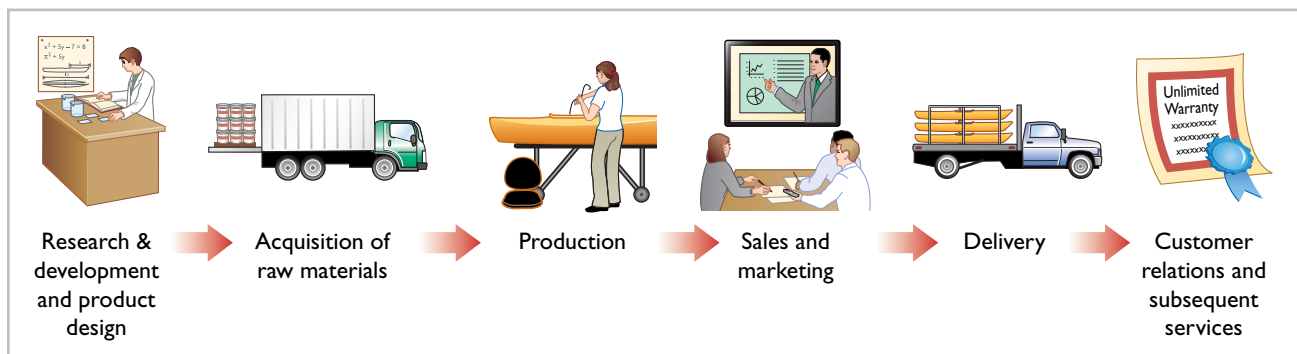

Sources: Susan Carey, "For Allegiant, Getaways Mean Profits," *Wall Street Journal Online* (February 18, 2009); and Scott Mayerowitz, "Tiny Allegiant Air Thrives on Low Costs, High Fees," <http://bigstory.ap.org> (June 28, 2013).

What are some of the line items that would appear in the cost of services performed schedule of an airline? (Go to **WileyPLUS** for this answer and additional questions.)

Focus on the Value Chain

The **value chain** refers to all business processes associated with providing a product or performing a service. Illustration 15-12 depicts the value chain for a manufacturer. Many of the most significant business innovations in recent years

Illustration 15-12
A manufacturer's value chain

have resulted either directly, or indirectly, from a focus on the value chain. For example, so-called **lean manufacturing**, originally pioneered by Japanese automobile manufacturer **Toyota** but now widely practiced, reviews all business processes in an effort to increase productivity and eliminate waste, all while continually trying to improve quality.

Just-in-time (JIT) inventory methods, which have significantly lowered inventory levels and costs for many companies, are one innovation that resulted from the focus on the value chain. Under the JIT inventory method, goods are manufactured or purchased just in time for sale. For example, **Dell** can produce and deliver a custom computer within 48 hours of a customer's order. However, JIT also necessitates increased emphasis on product quality. Because JIT companies do not have excess inventory on hand, they cannot afford to stop production because of defects or machine breakdowns. If they stop production, deliveries will be delayed and customers will be unhappy. For example, a design flaw in an **Intel** computer chip was estimated to cost the company \$1 billion in repairs and reduced revenue. As a consequence, many companies now focus on **total quality management (TQM)** to reduce defects in finished products, with the goal of zero defects. The TQM philosophy has been employed by some of the most successful businesses to improve all aspects of the value chain.

Another innovation, the **theory of constraints**, involves identification of “bottlenecks”—constraints within the value chain that limit a company's profitability. Once a major constraint has been identified and eliminated, the company moves on to fix the next most significant constraint. **General Motors** found that by eliminating bottlenecks, it improved its use of overtime labor while meeting customer demand. An application of the theory of constraints is presented in Chapter 20.

Technology has played a big role in the focus on the value chain and the implementation of lean manufacturing. For example, **enterprise resource planning (ERP) systems**, such as those provided by **SAP**, provide a comprehensive, centralized, integrated source of information to manage all major business processes—from purchasing, to manufacturing, to sales, to human resources. ERP systems have, in some large companies, replaced as many as 200 individual software packages. In addition, the focus on improving efficiency in the value chain has also resulted in adoption of automated manufacturing processes. Many companies now use computer-integrated manufacturing. These systems often reduce the reliance on manual labor by using robotic equipment. This increases overhead costs as a percentage of total product costs.

As overhead costs increased because of factory automation, the accuracy of overhead cost allocation to specific products became more important. Managerial accounting devised an approach, called **activity-based costing (ABC)**, which allocates overhead based on each product's use of particular activities in making the product. In addition to providing more accurate product costing, ABC also can contribute to increased efficiency in the value chain. For example, suppose one of a company's overhead pools is allocated based on the number of setups that each product requires. If a particular product's cost is high because it is allocated a lot of overhead due to a high number of setups, management will be motivated to try to reduce the number of setups and thus reduce its overhead allocation. ABC is discussed further in Chapter 18.

Balanced Scorecard

As companies implement various business practice innovations, managers sometimes focus too enthusiastically on the latest innovation, to the detriment of other areas of the business. For example, by focusing on total quality management, companies sometimes lose sight of cost/benefit considerations. Similarly, in focusing on reducing inventory levels through just-in-time inventory methods, companies sometimes lose sales due to inventory shortages. The **balanced scorecard** corrects for this limited perspective: This approach uses both financial and nonfinancial measures to evaluate all aspects of a company's operations in an integrated fashion. The performance measures are linked in a cause-and-effect

fashion to ensure that they all tie to the company's overall objectives. For example, to increase return on assets, the company could try to increase sales. To increase sales, the company could try to increase customer satisfaction. To increase customer satisfaction, the company could try to reduce product defects. Finally, to reduce product defects, the company could increase employee training. The balanced scorecard, which is discussed further in Chapter 25, is now used by many companies, including **Hilton Hotels**, **Wal-Mart Stores, Inc.**, and **HP**.

Business Ethics

All employees within an organization are expected to act ethically in their business activities. Given the importance of ethical behavior to corporations and their owners (stockholders), an increasing number of organizations provide codes of business ethics for their employees.

CREATING PROPER INCENTIVES

Companies like **Amazon.com**, **IBM**, and **Nike** use complex systems to monitor, control, and evaluate the actions of managers. Unfortunately, these systems and controls sometimes unwittingly create incentives for managers to take unethical actions. For example, because budgets are also used as an evaluation tool, some managers try to “game” the budgeting process by underestimating their division's predicted performance so that it will be easier to meet their performance targets. On the other hand, if budgets are set at unattainable levels, managers sometimes take unethical actions to meet the targets in order to receive higher compensation or, in some cases, to keep their jobs.

For example, at one time, airline manufacturer **Boeing** was plagued by a series of scandals including charges of over-billing, corporate espionage, and illegal conflicts of interest. Some long-time employees of Boeing blamed the decline in ethics on a change in the corporate culture that took place after Boeing merged with **McDonnell Douglas**. They suggested that evaluation systems implemented after the merger to evaluate employee performance gave employees the impression that they needed to succeed no matter what actions were required to do so.

As another example, manufacturing companies need to establish production goals for their processes. Again, if controls are not effective and realistic, problems develop. To illustrate, **Schering-Plough**, a pharmaceutical manufacturer, found that employees were so concerned with meeting production quantity standards that they failed to monitor the quality of the product, and as a result the dosages were often wrong.

CODE OF ETHICAL STANDARDS

In response to corporate scandals, the U.S. Congress enacted the **Sarbanes-Oxley Act (SOX)** to help prevent lapses in internal control. One result of SOX was to clarify top management's responsibility for the company's financial statements. CEOs and CFOs are now required to certify that financial statements give a fair presentation of the company's operating results and its financial condition. In addition, top managers must certify that the company maintains an adequate system of internal controls to safeguard the company's assets and ensure accurate financial reports.

Another result of SOX is that companies now pay more attention to the composition of the board of directors. In particular, the audit committee of the board of directors must be comprised entirely of independent members (that is, non-employees) and must contain at least one financial expert. Finally, the law substantially increases the penalties for misconduct.

To provide guidance for managerial accountants, the Institute of Management Accountants (IMA) has developed a code of ethical standards, entitled *IMA Statement of Ethical Professional Practice*. Management accountants should not commit acts in violation of these standards. Nor should they condone such acts by others within their organizations. We include the IMA code of ethical standards in Appendix K. Throughout the textbook, we will address various ethical issues managers face.

Corporate Social Responsibility

The balanced scorecard attempts to take a broader, more inclusive view of corporate profitability measures. Many companies, however, have begun to evaluate not just corporate profitability but also **corporate social responsibility**. In addition to profitability, corporate social responsibility considers a company's efforts to employ sustainable business practices with regard to its employees, society, and the environment. This is sometimes referred to as the **triple bottom line** because it evaluates a company's performance with regard to **people, planet, and profit**. Recent reports indicate that over 50% of the 500 largest U.S. companies provide sustainability reports. Make no mistake, these companies are still striving to maximize profits—in a competitive world, they won't survive long if they don't. In fact, you might recognize a few of the names on a recent Forbes.com list of the 100 most sustainable companies in the world. Are you surprised that **General Electric, adidas, Toyota, Coca-Cola, or Starbucks** made the list? These companies have learned that with a long-term, sustainable approach, they can maximize profits while also acting in the best interest of their employees, their communities, and the environment. At various points within this textbook, we will discuss situations where real companies use the very skills that you are learning to evaluate decisions from a sustainable perspective, such as in the following Insight box.

People, Planet, and Profit Insight Phantom Tac

Geanina Bechea/Shutterstock

People Matter

Many clothing factories in developing countries are known for unsafe buildings, poor working conditions, and wage and labor violations. One of the owners of **Phantom Tac**, a clothing manufacturer in Bangladesh, did make efforts to develop sustainable business practices. This owner, David Mayor, provided funding for a training program for female workers. He also developed a website to educate customers about the workers' conditions. But Phantom Tac also had to make a profit. Things got tight when one of its customers canceled orders because Phantom Tac failed a social compliance audit. The company had to quit funding the training program and the website.

Recently, Bangladesh's textile industry has seen some significant improvements in working conditions and safety standards. As Brad Adams, Asia director of **Human Rights Watch**, notes, "The (Dhaka) government has belatedly begun to register unions, which is an important first step, but it now needs to ensure that factory owners stop persecuting their leaders and actually allow them to function."

Sources: Jim Yardley, "Clothing Brands Sidestep Blame for Safety Lapses," *The New York Times Online* (December 30, 2013); and Palash Ghosh, "Despite Low Pay, Poor Work Conditions, Garment Factories Empowering Millions of Bangladeshi Women," *International Business Times* (March 25, 2014).

What are some of the common problems for many clothing factories in developing countries? (Go to **WileyPLUS** for this answer and additional questions.)

Sustainable business practices present numerous issues for management and managerial accountants. First, companies need to decide what items need to be measured, generally those that are of utmost importance to its stakeholders. For example, a particular company might be most concerned with minimizing water pollution or maximizing employee safety. Then, for each item identified, the company determines measurable attributes that provide relevant information regarding the company's performance with regard to that item, such as the amount of waste released into public waterways or the number of accidents per 1,000 hours worked. Finally, the company needs to consider the materiality of the item, the cost of measuring these attributes, and the reliability of the measurements. If the company uses this information to make decisions, then accuracy is critical. Of particular concern is whether the measurements can be verified by an outside third party.

Unlike financial reporting, which is overseen by the Financial Accounting Standards Board, the reporting of sustainable business practices currently has no agreed-upon standard-setter. A number of organizations have, however, published

guidelines. The guidelines published by the **Global Reporting Initiative** are among the most widely recognized and followed. Illustration 15-13 provides a list of major categories provided by the Global Reporting Initiative for sustainability reporting and a sample of aspects that companies might consider within each category.

Illustration 15-13
Sample categories in Global Reporting Initiative guidelines

Economic	Environmental	Social			Product Responsibility
		Labor Practices and Decent Work	Human Rights	Society	
Economic performance	Energy	Occupational health and safety	Non-discrimination	Anti-corruption	Customer health and safety
Market presence	Biodiversity	Training and education	Child labor	Anti-competitive behavior	Product and service labeling
Indirect economic impacts	Effluents and waste	Diversity and equal opportunity	Indigenous rights	Supplier assessment for impacts on society	Marketing communications
Procurement practices	Compliance	Labor practices grievance mechanisms	Supplier human rights assessment	Grievance mechanisms for impacts on society	Customer privacy

DO IT! 4 Trends in Managerial Accounting

Match the descriptions that follow with the corresponding terms.

Descriptions:

- _____ All activities associated with providing a product or performing a service.
- _____ A method of allocating overhead based on each product's use of activities in making the product.
- _____ Systems implemented to reduce defects in finished products with the goal of achieving zero defects.
- _____ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.
- _____ Inventory system in which goods are manufactured or purchased just as they are needed for use.
- _____ A company's efforts to employ sustainable business practices with regards to its employees, society, and the environment.
- _____ A code of ethical standards developed by the Institute of Management Accountants.

Terms:

- Activity-based costing
- Balanced scorecard
- Corporate social responsibility
- Just-in-time (JIT) inventory
- Total quality management (TQM)
- Statement of Ethical Professional Practice
- Value chain

Solution

1. g 2. a 3. e 4. b 5. d 6. c 7. f

Action Plan

- ✓ Develop a forward-looking view, in order to advise and provide information to various members of the organization.
- ✓ Understand current business trends and issues.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Identify the features of managerial accounting and the functions of management.** The *primary users* of managerial accounting reports, issued as frequently as needed, are internal users, who are officers, department heads, managers, and supervisors in the company. The purpose of these reports is to provide special-purpose information for a particular user for a specific decision. The content of managerial accounting reports pertains to subunits of the business. It may be very detailed, and may extend beyond the double-entry accounting system. The reporting standard is relevance to the decision being made. No independent audits are required in managerial accounting.

The functions of management are planning, directing, and controlling. Planning requires management to look ahead and to establish objectives. Directing involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. Controlling is the process of keeping the activities on track.

- 2 **Describe the classes of manufacturing costs and the differences between product and period costs.** Manufacturing costs are typically classified as either (1) direct materials, (2) direct labor, or (3) manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product.

Product costs are costs that are a necessary and integral part of producing the finished product. Product costs are also called inventoriable costs. These costs do not become expenses until the company sells

the finished goods inventory. Period costs are costs that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.

- 3 **Demonstrate how to compute cost of goods manufactured and prepare financial statements for a manufacturer.** Companies add the cost of the beginning work in process to the total manufacturing costs for the current year to arrive at the total cost of work in process for the year. They then subtract the ending work in process from the total cost of work in process to arrive at the cost of goods manufactured.

The difference between a merchandising and a manufacturing income statement is in the cost of goods sold section. A manufacturing cost of goods sold section shows beginning and ending finished goods inventories and the cost of goods manufactured.

The difference between a merchandising and a manufacturing balance sheet is in the current assets section. The current assets section of a manufacturing company's balance sheet presents three inventory accounts: finished goods inventory, work in process inventory, and raw materials inventory.

- 4 **Discuss trends in managerial accounting.** Managerial accounting has experienced many changes in recent years, including a shift toward service companies as well as an emphasis on ethical behavior. Improved practices include a focus on managing the value chain through techniques such as just-in-time inventory, total quality management, activity-based costing, and theory of constraints. The balanced scorecard is now used by many companies in order to attain a more comprehensive view of the company's operations. Finally, companies are now evaluating their performance with regard to their corporate social responsibility.

GLOSSARY REVIEW

Activity-based costing (ABC) A method of allocating overhead based on each product's use of activities in making the product. (p. 726).

Balanced scorecard A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion. (p. 726).

Board of directors The group of officials elected by the stockholders of a corporation to formulate operating policies and select officers who will manage the company. (p. 715).

Chief executive officer (CEO) Corporate officer who has overall responsibility for managing the business and delegates responsibilities to other corporate officers. (p. 715).

Chief financial officer (CFO) Corporate officer who is responsible for all of the accounting and finance issues of the company. (p. 715).

Controller Financial officer responsible for a company's accounting records, system of internal control, and preparation of financial statements, tax returns, and internal reports. (p. 715).

Corporate social responsibility The efforts of a company to employ sustainable business practices with regard to its employees, society, and the environment. (p. 728).

Cost of goods manufactured Total cost of work in process less the cost of the ending work in process inventory. (p. 721).

Direct labor The work of factory employees that can be physically and directly associated with converting raw materials into finished goods. (p. 717).

Direct materials Raw materials that can be physically and directly associated with manufacturing the finished product. (p. 716).

Enterprise resource planning (ERP) system Software that provides a comprehensive, centralized, integrated source of information used to manage all major business processes. (p. 726).

Indirect labor Work of factory employees that has no physical association with the finished product or for which it is impractical to trace the costs to the goods produced. (p. 717).

Indirect materials Raw materials that do not physically become part of the finished product or for which it is impractical to trace to the finished product because their physical association with the finished product is too small. (p. 716).

Just-in-time (JIT) inventory Inventory system in which goods are manufactured or purchased just in time for sale. (p. 726).

Line positions Jobs that are directly involved in a company's primary revenue-generating operating activities. (p. 715).

Managerial accounting A field of accounting that provides economic and financial information for managers and other internal users. (p. 712).

Manufacturing overhead Manufacturing costs that are indirectly associated with the manufacture of the finished product. (p. 717).

Period costs Costs that are matched with the revenue of a specific time period and charged to expense as incurred. (p. 718).

Product costs Costs that are a necessary and integral part of producing the finished product. (p. 718).

Sarbanes-Oxley Act (SOX) Law passed by Congress intended to reduce unethical corporate behavior. (p. 727).

Staff positions Jobs that support the efforts of line employees. (p. 715).

Theory of constraints A specific approach used to identify and manage constraints in order to achieve the company's goals. (p. 726).

Total cost of work in process Cost of the beginning work in process plus total manufacturing costs for the current period. (p. 721).

Total manufacturing costs The sum of direct materials, direct labor, and manufacturing overhead incurred in the current period. (p. 719).

Total quality management (TQM) Systems implemented to reduce defects in finished products with the goal of achieving zero defects. (p. 726).

Treasurer Financial officer responsible for custody of a company's funds and for maintaining its cash position. (p. 715).

Triple bottom line The evaluation of a company's social responsibility performance with regard to people, planet, and profit. (p. 728).

Value chain All business processes associated with providing a product or performing a service. (p. 725).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Managerial accounting:
- is governed by generally accepted accounting principles.
 - places emphasis on special-purpose information.
 - pertains to the entity as a whole and is highly aggregated.
 - is limited to cost data.
- (LO 1) 2. The management of an organization performs several broad functions. They are:
- planning, directing, and selling.
 - planning, directing, and controlling.
 - planning, manufacturing, and controlling.
 - directing, manufacturing, and controlling.
- (LO 2) 3. Direct materials are a:
- | | Product Cost | Manufacturing Overhead Cost | Period Cost |
|-----|--------------|-----------------------------|-------------|
| (a) | Yes | Yes | No |
| (b) | Yes | No | No |
| (c) | Yes | Yes | Yes |
| (d) | No | No | No |
4. Which of the following costs would a computer manufacturer include in manufacturing overhead? (LO 2)
- The cost of the disk drives.
 - The wages earned by computer assemblers.
 - The cost of the memory chips.
 - Depreciation on testing equipment.
5. Which of the following is **not** an element of manufacturing overhead? (LO 2)
- Sales manager's salary.
 - Plant manager's salary.
 - Factory repairman's wages.
 - Product inspector's salary.
6. Indirect labor is a: (LO 2)
- nonmanufacturing cost.
 - raw material cost.
 - product cost.
 - period cost.
7. Which of the following costs are classified as a period cost? (LO 2)
- Wages paid to a factory custodian.
 - Wages paid to a production department supervisor.

- (c) Wages paid to a cost accounting department supervisor.
 (d) Wages paid to an assembly worker.
- (LO 3) 8. For the year, Redder Company has cost of goods manufactured of \$600,000, beginning finished goods inventory of \$200,000, and ending finished goods inventory of \$250,000. The cost of goods sold is:
 (a) \$450,000. (b) \$500,000.
 (c) \$550,000. (d) \$600,000.
- (LO 3) 9. Cost of goods available for sale is a step in the calculation of cost of goods sold of:
 (a) a merchandising company but not a manufacturing company.
 (b) a manufacturing company but not a merchandising company.
 (c) a merchandising company and a manufacturing company.
 (d) neither a manufacturing company nor a merchandising company.
- (LO 3) 10. A cost of goods manufactured schedule shows beginning and ending inventories for:
 (a) raw materials and work in process only.
 (b) work in process only.
 (c) raw materials only.
 (d) raw materials, work in process, and finished goods.
- (LO 3) 11. The formula to determine the cost of goods manufactured is:
 (a) Beginning raw materials inventory + Total manufacturing costs – Ending work in process inventory.
 (b) Beginning work in process inventory + Total manufacturing costs – Ending finished goods inventory.
 (c) Beginning finished good inventory + Total manufacturing costs – Ending finished goods inventory.
 (d) Beginning work in process inventory + Total manufacturing costs – Ending work in process inventory.
12. After passage of the Sarbanes-Oxley Act: (LO 4)
 (a) reports prepared by managerial accountants must be audited by CPAs.
 (b) CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results.
 (c) the audit committee, rather than top management, is responsible for the company's financial statements.
 (d) reports prepared by managerial accountants must comply with generally accepted accounting principles (GAAP).
13. Which of the following managerial accounting techniques attempts to allocate manufacturing overhead in a more meaningful fashion? (LO 4)
 (a) Just-in-time inventory.
 (b) Total quality management.
 (c) Balanced scorecard.
 (d) Activity-based costing.
14. Corporate social responsibility refers to: (LO 4)
 (a) the practice by management of reviewing all business processes in an effort to increase productivity and eliminate waste.
 (b) an approach used to allocate overhead based on each product's use of activities.
 (c) the attempt by management to identify and eliminate constraints within the value chain.
 (d) efforts by companies to employ sustainable business practices with regard to employees and the environment.

Solutions

1. (b) Managerial accounting emphasizes special-purpose information. The other choices are incorrect because (a) financial accounting is governed by generally accepted accounting principles, (c) financial accounting pertains to the entity as a whole and is highly aggregated, and (d) cost accounting and cost data are a subset of management accounting.
2. (b) Planning, directing, and controlling are the broad functions performed by the management of an organization. The other choices are incorrect because (a) selling is performed by the sales group in the organization, not by management; (c) manufacturing is performed by the manufacturing group in the organization, not by management; and (d) manufacturing is performed by the manufacturing group in the organization, not by management.
3. (b) Direct materials are a product cost only. Therefore, choices (a), (c), and (d) are incorrect as direct materials are not manufacturing overhead or a period cost.
4. (d) Depreciation on testing equipment would be included in manufacturing overhead because it is indirectly associated with the finished product. The other choices are incorrect because (a) disk drives would be direct materials, (b) computer assembler wages would be direct labor, and (c) memory chips would be direct materials.
5. (a) The sales manager's salary is not directly or indirectly associated with the manufacture of the finished product. The other choices are incorrect because (b) the plant manager's salary, (c) the factory repairman's wages, and (d) the product inspector's salary are all elements of manufacturing overhead.
6. (c) Indirect labor is a product cost because it is part of the effort required to produce a product. The other choices are incorrect because (a) indirect labor is a manufacturing cost because it is part of the effort required to produce a product, (b) indirect labor is not a raw material cost because raw material costs only include direct materials and indirect materials, and (d) indirect labor is not a period cost because it is part of the effort required to produce a product.
7. (c) Wages paid to a cost accounting department supervisor would be included in administrative expenses and classified as a period cost. The other choices are incorrect because (a) factory custodian wages are indirect labor which is manufacturing overhead and a product cost, (b) production department supervisor wages are indirect labor which is manufacturing overhead and a product cost, and (d) assembly worker wages is direct labor and is a product cost.
8. (c) Cost of goods sold is computed as Beginning finished goods inventory (\$200,000) + Cost of goods manufactured (\$600,000) – Ending finished goods inventory (\$250,000), or $200,000 + 600,000 - 250,000 = 550,000$. Therefore, choices (a) \$450,000, (b) \$500,000, and (d) \$600,000 are incorrect.

9. (c) Both a merchandising company and a manufacturing company use cost of goods available for sale to calculate cost of goods sold. Therefore, choices (a) only a merchandising company, (b) only a manufacturing company, and (d) neither a manufacturing company or a merchandising company are incorrect.

10. (a) A cost of goods manufactured schedule shows beginning and ending inventories for raw materials and work in process only. Therefore, choices (b) work in process only and (c) raw materials only are incorrect. Choice (d) is incorrect because it does not include finished goods.

11. (d) The formula to determine the cost of goods manufactured is Beginning work in process inventory + Total manufacturing costs – Ending work in process inventory. The other choices are incorrect because (a) raw material inventory, (b) ending finished goods inventory, and (c) beginning finished goods inventory and ending finished goods inventory are not part of the computation.

12. (b) CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results. The other choices are incorrect because (a) reports prepared by financial (not managerial) accountants must be audited by CPAs; (c) SOX clarifies that top management, not the audit committee, is responsible for the company's financial statements; and (d) reports by financial (not managerial) accountants must comply with GAAP.

13. (d) Activity-based costing attempts to allocate manufacturing overhead in a more meaningful fashion. Therefore, choices (a) just-in-time inventory, (b) total quality management, and (c) balanced scorecard are incorrect.

14. (d) Corporate social responsibility refers to efforts by companies to employ sustainable business practices with regard to employees and the environment. The other choices are incorrect because (a) defines lean manufacturing, (b) refers to activity-based costing, and (c) describes the theory of constraints.

PRACTICE EXERCISES

1. Fredricks Company reports the following costs and expenses in May.

Factory utilities	\$ 15,600	Direct labor	\$89,100
Depreciation on factory equipment	12,650	Sales salaries	46,400
Depreciation on delivery trucks	8,800	Property taxes on factory building	2,500
Indirect factory labor	48,900	Repairs to office equipment	2,300
Indirect materials	80,800	Factory repairs	2,000
Direct materials used	137,600	Advertising	18,000
Factory manager's salary	13,000	Office supplies used	5,640

Determine the total amount of various types of costs.

(LO 2)

Instructions

From the information, determine the total amount of:

- Manufacturing overhead.
- Product costs.
- Period costs.

Solution

1. (a) Factory utilities	\$ 15,600
Depreciation on factory equipment	12,650
Indirect factory labor	48,900
Indirect materials	80,800
Factory manager's salary	13,000
Property taxes on factory building	2,500
Factory repairs	2,000
Manufacturing overhead	<u>\$175,450</u>
(b) Direct materials	\$137,600
Direct labor	89,100
Manufacturing overhead	175,450
Product costs	<u>\$402,150</u>
(c) Depreciation on delivery trucks	\$ 8,800
Sales salaries	46,400
Repairs to office equipment	2,300
Advertising	18,000
Office supplies used	5,640
Period costs	<u>\$ 81,140</u>

Compute cost of goods manufactured and sold.

(LO 3)

2. Tommi Corporation incurred the following costs while manufacturing its product.

Materials used in product	\$120,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	19,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	25,000	Salaries paid to sales clerks	50,000

Work-in-process inventory was \$10,000 at January 1 and \$14,000 at December 31. Finished goods inventory was \$60,500 at January 1 and \$50,600 at December 31.

Instructions

- Compute cost of goods manufactured.
- Compute cost of goods sold.

Solution

2. (a) Work-in-process, 1/1		\$ 10,000
Direct materials used	\$120,000	
Direct labor	110,000	
Manufacturing overhead		
Depreciation on plant	\$60,000	
Factory supplies used	25,000	
Property taxes on plant	19,000	
Total manufacturing overhead	104,000	
Total manufacturing costs		334,000
Total cost of work-in-process		344,000
Less: Ending work-in-process		14,000
Cost of goods manufactured		\$330,000
(b) Finished goods, 1/1		\$ 60,500
Cost of goods manufactured		330,000
Cost of goods available for sale		390,500
Less: Finished goods, 12/31		50,600
Cost of goods sold		\$339,900

PRACTICE PROBLEM

Prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet.

(LO 3)

Superior Company has the following cost and expense data for the year ending December 31, 2017.

Raw materials, 1/1/17	\$ 30,000	Insurance, factory	\$ 14,000
Raw materials, 12/31/17	20,000	Property taxes, factory building	6,000
Raw materials purchases	205,000	Sales revenue	1,500,000
Indirect materials	15,000	Delivery expenses	100,000
Work in process, 1/1/17	80,000	Sales commissions	150,000
Work in process, 12/31/17	50,000	Indirect labor	90,000
Finished goods, 1/1/17	110,000	Factory machinery rent	40,000
Finished goods, 12/31/17	120,000	Factory utilities	65,000
Direct labor	350,000	Depreciation, factory building	24,000
Factory manager's salary	35,000	Administrative expenses	300,000

Instructions

- Prepare a cost of goods manufactured schedule for Superior Company for 2017.
- Prepare an income statement for Superior Company for 2017.
- Assume that Superior Company's accounting records show the balances of the following current asset accounts: Cash \$17,000, Accounts Receivable (net) \$120,000, Prepaid Expenses \$13,000, and Short-Term Investments \$26,000. Prepare the current assets section of the balance sheet for Superior Company as of December 31, 2017.

Solution

(a)

SUPERIOR COMPANY		
Cost of Goods Manufactured Schedule		
For the Year Ended December 31, 2017		
Work in process, 1/1		\$ 80,000
Direct materials		
Raw materials inventory, 1/1	\$ 30,000	
Raw materials purchases	<u>205,000</u>	
Total raw materials available for use	235,000	
Less: Raw materials inventory, 12/31	<u>20,000</u>	
Direct materials used		\$215,000
Direct labor		350,000
Manufacturing overhead		
Indirect labor	90,000	
Factory utilities	65,000	
Factory machinery rent	40,000	
Factory manager's salary	35,000	
Depreciation, factory building	24,000	
Indirect materials	15,000	
Insurance, factory	14,000	
Property taxes, factory building	<u>6,000</u>	
Total manufacturing overhead		<u>289,000</u>
Total manufacturing costs		<u>854,000</u>
Total cost of work in process		934,000
Less: Work in process, 12/31		<u>50,000</u>
Cost of goods manufactured		<u><u>\$ 884,000</u></u>

(b)

SUPERIOR COMPANY		
Income Statement		
For the Year Ended December 31, 2017		
Sales revenue		\$1,500,000
Cost of goods sold		
Finished goods inventory, January 1	\$110,000	
Cost of goods manufactured	<u>884,000</u>	
Cost of goods available for sale	994,000	
Less: Finished goods inventory, December 31	<u>120,000</u>	
Cost of goods sold		<u>874,000</u>
Gross profit		626,000
Operating expenses		
Administrative expenses	300,000	
Sales commissions	150,000	
Delivery expenses	<u>100,000</u>	
Total operating expenses		<u>550,000</u>
Net income		<u><u>\$ 76,000</u></u>

(c)

SUPERIOR COMPANY		
Balance Sheet (partial)		
December 31, 2017		
Current assets		
Cash		\$ 17,000
Short-term investments		26,000
Accounts receivable (net)		120,000
Inventory		
Finished goods	\$120,000	
Work in process	50,000	
Raw materials	<u>20,000</u>	190,000
Prepaid expenses		<u>13,000</u>
Total current assets		<u><u>\$366,000</u></u>

QUESTIONS

- (a) "Managerial accounting is a field of accounting that provides economic information for all interested parties." Do you agree? Explain.
(b) Joe Delong believes that managerial accounting serves only manufacturing firms. Is Joe correct? Explain.
- Distinguish between managerial and financial accounting as to (a) primary users of reports, (b) types and frequency of reports, and (c) purpose of reports.
- How do the content of reports and the verification of reports differ between managerial and financial accounting?
- Linda Olsen is studying for the next accounting mid-term examination. Summarize for Linda what she should know about management functions.
- "Decision-making is management's most important function." Do you agree? Why or why not?
- Explain the primary difference between line positions and staff positions, and give examples of each.
- Tony Andres is studying for his next accounting examination. Explain to Tony what he should know about the differences between the income statements for a manufacturing and for a merchandising company.
- Jerry Lang is unclear as to the difference between the balance sheets of a merchandising company and a manufacturing company. Explain the difference to Jerry.
- How are manufacturing costs classified?
- Mel Finney claims that the distinction between direct and indirect materials is based entirely on physical association with the product. Is Mel correct? Why?
- Tina Burke is confused about the differences between a product cost and a period cost. Explain the differences to Tina.
- Identify the differences in the cost of goods sold section of an income statement between a merchandising company and a manufacturing company.
- The determination of the cost of goods manufactured involves the following factors: (A) beginning work in process inventory, (B) total manufacturing costs, and (C) ending work in process inventory. Identify the meaning of x in the following formulas:
(a) $A + B = x$
(b) $A + B - C = x$
- Sealy Company has beginning raw materials inventory \$12,000, ending raw materials inventory \$15,000, and raw materials purchases \$170,000. What is the cost of direct materials used?
- Tate Inc. has beginning work in process \$26,000, direct materials used \$240,000, direct labor \$220,000, total manufacturing overhead \$180,000, and ending work in process \$32,000. What are the total manufacturing costs?
- Using the data in Question 15, what are (a) the total cost of work in process and (b) the cost of goods manufactured?
- In what order should manufacturing inventories be listed in a balance sheet?
- How does the output of manufacturing operations differ from that of service operations?
- Discuss whether the product costing techniques discussed in this chapter apply equally well to manufacturers and service companies.
- What is the value chain? Describe, in sequence, the main components of a manufacturer's value chain.
- What is an enterprise resource planning (ERP) system? What are its primary benefits?
- Why is product quality important for companies that implement a just-in-time inventory system?
- Explain what is meant by "balanced" in the balanced scorecard approach.
- In what ways can the budgeting process create incentives for unethical behavior?
- What new rules were enacted under the Sarbanes-Oxley Act to address unethical accounting practices?
- What is activity-based costing, and what are its potential benefits?

BRIEF EXERCISES

Distinguish between managerial and financial accounting.

(LO 1)

BE15-1 Complete the following comparison table between managerial and financial accounting.

Primary users of reports
Types of reports
Frequency of reports
Purpose of reports
Content of reports
Verification process

Financial Accounting

Managerial Accounting

Determine missing amounts in computing total manufacturing costs.

(LO 3)

BE15-9 Presented below are incomplete manufacturing cost data. Determine the missing amounts for three different situations.

	Direct Materials Used	Direct Labor Used	Factory Overhead	Total Manufacturing Costs
(1)	\$40,000	\$61,000	\$ 50,000	?
(2)	?	\$75,000	\$140,000	\$296,000
(3)	\$55,000	?	\$111,000	\$310,000

Determine missing amounts in computing cost of goods manufactured.

(LO 3)

BE15-10 Use the same data from BE15-9 above and the data below. Determine the missing amounts.

	Total Manufacturing Costs	Work in Process (1/1)	Work in Process (12/31)	Cost of Goods Manufactured
(1)	?	\$120,000	\$82,000	?
(2)	\$296,000	?	\$98,000	\$331,000
(3)	\$310,000	\$463,000	?	\$715,000

Identify important regulatory changes.

(LO 4)

BE15-11 The Sarbanes-Oxley Act (SOX) has important implications for the financial community. Explain two implications of SOX.

DO IT! Exercises

Identify managerial accounting concepts.

(LO 1)

DO IT! 15-1 Indicate whether the following statements are true or false.

1. Managerial accounting reports focus on manufacturing and nonmanufacturing costs, but are also used in the budget process.
2. Financial accounting reports pertain to subunits of the business and are very detailed.
3. Managerial accounting reports must follow GAAP and are audited by CPAs.
4. Managers' activities and responsibilities can be classified into three broad functions: planning, directing, and controlling.

Identify managerial cost classifications.

(LO 2)

DO IT! 15-2 A music company has these costs:

Advertising	Paper inserts for CD cases
Blank CDs	CD plastic cases
Depreciation of CD image burner	Salaries of sales representatives
Salary of factory manager	Salaries of factory maintenance employees
Factory supplies used	Salaries of employees who burn music onto CDs

Classify each cost as a period or a product cost. Within the product cost category, indicate if the cost is part of direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

Prepare cost of goods manufactured schedule.

(LO 3)

DO IT! 15-3 The following information is available for Tomlin Company.

	<u>April 1</u>	<u>April 30</u>
Raw materials inventory	\$10,000	\$14,000
Work in process inventory	5,000	3,500
Materials purchased in April	\$ 98,000	
Direct labor in April	80,000	
Manufacturing overhead in April	160,000	

Prepare the cost of goods manufactured schedule for the month of April.

DO IT! 15-4 Match the descriptions that follow with the corresponding terms.

Descriptions:

1. _____ Inventory system in which goods are manufactured or purchased just as they are needed for sale.
2. _____ A method of allocating overhead based on each product's use of activities in making the product.
3. _____ Systems that are especially important to firms adopting just-in-time inventory methods.
4. _____ Provides guidelines for companies to describe their sustainable business practices to external parties.
5. _____ Part of the value chain for a manufacturing company.
6. _____ The U.S. economy is trending toward this.
7. _____ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.
8. _____ Requires that top managers certify that the company maintains an adequate system of internal controls.

Terms:

- | | |
|--|----------------------------------|
| (a) Activity-based costing | (e) Service industries |
| (b) Balanced scorecard | (f) Just-in-time (JIT) inventory |
| (c) Total quality management (TQM) | (g) Sarbanes-Oxley Act (SOX) |
| (d) Research and development, and product design | (h) Global Reporting Initiative |

Identify trends in managerial accounting.

(LO 4)

EXERCISES

E15-1 Justin Bleeber has prepared the following list of statements about managerial accounting, financial accounting, and the functions of management.

1. Financial accounting focuses on providing information to internal users.
2. Staff positions are directly involved in the company's primary revenue-generating activities.
3. Preparation of budgets is part of financial accounting.
4. Managerial accounting applies only to merchandising and manufacturing companies.
5. Both managerial accounting and financial accounting deal with many of the same economic events.
6. Managerial accounting reports are prepared only quarterly and annually.
7. Financial accounting reports are general-purpose reports.
8. Managerial accounting reports pertain to subunits of the business.
9. Managerial accounting reports must comply with generally accepted accounting principles.
10. The company treasurer reports directly to the vice president of operations.

Identify distinguishing features of managerial accounting.

(LO 1)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E15-2 Presented below is a list of costs and expenses usually incurred by Barnum Corporation, a manufacturer of furniture, in its factory.

1. Salaries for assembly line inspectors.
2. Insurance on factory machines.
3. Property taxes on the factory building.
4. Factory repairs.
5. Upholstery used in manufacturing furniture.
6. Wages paid to assembly line workers.
7. Factory machinery depreciation.
8. Glue, nails, paint, and other small parts used in production.
9. Factory supervisors' salaries.
10. Wood used in manufacturing furniture.

Classify costs into three classes of manufacturing costs.

(LO 2)

Instructions

Classify the above items into the following categories: (a) direct materials, (b) direct labor, and (c) manufacturing overhead.

Identify types of cost and explain their accounting.

(LO 2)

E15-3 Trak Corporation incurred the following costs while manufacturing its bicycles.

Bicycle components	\$100,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	13,000	Salaries paid to sales clerks	50,000

Instructions

- Identify each of the above costs as direct materials, direct labor, manufacturing overhead, or period costs.
- Explain the basic difference in accounting for product costs and period costs.

Determine the total amount of various types of costs.

(LO 2)

E15-4 Knight Company reports the following costs and expenses in May.

Factory utilities	\$ 15,500	Direct labor	\$69,100
Depreciation on factory equipment	12,650	Sales salaries	46,400
Depreciation on delivery trucks	3,800	Property taxes on factory building	2,500
Indirect factory labor	48,900	Repairs to office equipment	1,300
Indirect materials	80,800	Factory repairs	2,000
Direct materials used	137,600	Advertising	15,000
Factory manager's salary	8,000	Office supplies used	2,640

Instructions

From the information, determine the total amount of:

- Manufacturing overhead.
- Product costs.
- Period costs.

Classify various costs into different cost categories.

(LO 2)

E15-5 Gala Company is a manufacturer of laptop computers. Various costs and expenses associated with its operations are as follows.

- Property taxes on the factory building.
- Production superintendents' salaries.
- Memory boards and chips used in assembling computers.
- Depreciation on the factory equipment.
- Salaries for assembly-line quality control inspectors.
- Sales commissions paid to sell laptop computers.
- Electrical components used in assembling computers.
- Wages of workers assembling laptop computers.
- Soldering materials used on factory assembly lines.
- Salaries for the night security guards for the factory building.

The company intends to classify these costs and expenses into the following categories:

- direct materials, (b) direct labor, (c) manufacturing overhead, and (d) period costs.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which it belongs.

Classify various costs into different cost categories.

(LO 2)

E15-6 The administrators of Crawford County's Memorial Hospital are interested in identifying the various costs and expenses that are incurred in producing a patient's X-ray. A list of such costs and expenses is presented below.

- Salaries for the X-ray machine technicians.
- Wages for the hospital janitorial personnel.
- Film costs for the X-ray machines.
- Property taxes on the hospital building.
- Salary of the X-ray technicians' supervisor.
- Electricity costs for the X-ray department.
- Maintenance and repairs on the X-ray machines.
- X-ray department supplies.
- Depreciation on the X-ray department equipment.
- Depreciation on the hospital building.

The administrators want these costs and expenses classified as (a) direct materials, (b) direct labor, or (c) service overhead.

Instructions

List the items (1) through (10). For each item, indicate the cost category to which the item belongs.

E15-7 National Express reports the following costs and expenses in June 2017 for its delivery service.

Indirect materials	\$ 6,400	Drivers' salaries	\$16,000
Depreciation on delivery equipment	11,200	Advertising	4,600
Dispatcher's salary	5,000	Delivery equipment repairs	300
Property taxes on office building	870	Office supplies	650
CEO's salary	12,000	Office utilities	990
Gas and oil for delivery trucks	2,200	Repairs on office equipment	180

Classify various costs into different cost categories.

(LO 2)

Instructions

Determine the total amount of (a) delivery service (product) costs and (b) period costs.

E15-8 Lopez Corporation incurred the following costs while manufacturing its product.

Materials used in product	\$120,000	Advertising expense	\$45,000
Depreciation on plant	60,000	Property taxes on plant	14,000
Property taxes on store	7,500	Delivery expense	21,000
Labor costs of assembly-line workers	110,000	Sales commissions	35,000
Factory supplies used	23,000	Salaries paid to sales clerks	50,000

Compute cost of goods manufactured and sold.

(LO 3)

Work in process inventory was \$12,000 at January 1 and \$15,500 at December 31. Finished goods inventory was \$60,000 at January 1 and \$45,600 at December 31.

Instructions

- Compute cost of goods manufactured.
- Compute cost of goods sold.

E15-9 An incomplete cost of goods manufactured schedule is presented below.

Determine missing amounts in cost of goods manufactured schedule.

(LO 3)

HOBBIT COMPANY
Cost of Goods Manufactured Schedule
For the Year Ended December 31, 2017

Work in process (1/1)		\$210,000
Direct materials		
Raw materials inventory (1/1)	\$?	
Add: Raw materials purchases	158,000	
Total raw materials available for use	?	
Less: Raw materials inventory (12/31)	22,500	
Direct materials used		\$180,000
Direct labor		?
Manufacturing overhead		
Indirect labor	18,000	
Factory depreciation	36,000	
Factory utilities	68,000	
Total overhead		122,000
Total manufacturing costs		?
Total cost of work in process		?
Less: Work in process (12/31)		81,000
Cost of goods manufactured		\$540,000

Instructions

Complete the cost of goods manufactured schedule for Hobbit Company.

Determine the missing amount of different cost items.

(LO 3)

E15-10 Manufacturing cost data for Copa Company are presented below.

	<u>Case A</u>	<u>Case B</u>	<u>Case C</u>
Direct materials used	\$ (a)	\$68,400	\$130,000
Direct labor	57,000	86,000	(g)
Manufacturing overhead	46,500	81,600	102,000
Total manufacturing costs	195,650	(d)	253,700
Work in process 1/1/17	(b)	16,500	(h)
Total cost of work in process	221,500	(e)	337,000
Work in process 12/31/17	(c)	11,000	70,000
Cost of goods manufactured	185,275	(f)	(i)

Instructions

Indicate the missing amount for each letter (a) through (i).

Determine the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule.

(LO 3)

E15-11 Incomplete manufacturing cost data for Horizon Company for 2017 are presented as follows for four different situations.

	<u>Direct Materials Used</u>	<u>Direct Labor Used</u>	<u>Manufacturing Overhead</u>	<u>Total Manufacturing Costs</u>	<u>Work in Process 1/1</u>	<u>Work in Process 12/31</u>	<u>Cost of Goods Manufactured</u>
(1)	\$117,000	\$140,000	\$ 87,000	\$ (a)	\$33,000	\$ (b)	\$360,000
(2)	(c)	200,000	132,000	450,000	(d)	40,000	470,000
(3)	80,000	100,000	(e)	265,000	60,000	80,000	(f)
(4)	70,000	(g)	75,000	288,000	45,000	(h)	270,000

Instructions

- Indicate the missing amount for each letter.
- Prepare a condensed cost of goods manufactured schedule for situation (1) for the year ended December 31, 2017.

Prepare a cost of goods manufactured schedule and a partial income statement.

(LO 3)

E15-12 Cepeda Corporation has the following cost records for June 2017.

Indirect factory labor	\$ 4,500	Factory utilities	\$ 400
Direct materials used	20,000	Depreciation, factory equipment	1,400
Work in process, 6/1/17	3,000	Direct labor	40,000
Work in process, 6/30/17	3,800	Maintenance, factory equipment	1,800
Finished goods, 6/1/17	5,000	Indirect materials	2,200
Finished goods, 6/30/17	7,500	Factory manager's salary	3,000

Instructions

- Prepare a cost of goods manufactured schedule for June 2017.
- Prepare an income statement through gross profit for June 2017 assuming sales revenue is \$92,100.

Classify various costs into different categories and prepare cost of services performed schedule.

(LO 2, 3)

E15-13 Keisha Tombert, the bookkeeper for Washington Consulting, a political consulting firm, has recently completed a managerial accounting course at her local college. One of the topics covered in the course was the cost of goods manufactured schedule. Keisha wondered if such a schedule could be prepared for her firm. She realized that, as a service-oriented company, it would have no work in process inventory to consider.

Listed below are the costs her firm incurred for the month ended August 31, 2017.

Supplies used on consulting contracts	\$ 1,700
Supplies used in the administrative offices	1,500
Depreciation on equipment used for contract work	900
Depreciation used on administrative office equipment	1,050
Salaries of professionals working on contracts	15,600
Salaries of administrative office personnel	7,700
Janitorial services for professional offices	700
Janitorial services for administrative offices	500
Insurance on contract operations	800
Insurance on administrative operations	900
Utilities for contract operations	1,400
Utilities for administrative offices	1,300

Instructions

- (a) Prepare a schedule of cost of contract services performed (similar to a cost of goods manufactured schedule) for the month.
- (b) For those costs not included in (a), explain how they would be classified and reported in the financial statements.

E15-14 The following information is available for Aikman Company.

	<u>January 1, 2017</u>	<u>2017</u>	<u>December 31, 2017</u>
Raw materials inventory	\$21,000		\$30,000
Work in process inventory	13,500		17,200
Finished goods inventory	27,000		21,000
Materials purchased		\$150,000	
Direct labor		220,000	
Manufacturing overhead		180,000	
Sales revenue		910,000	

Prepare a cost of goods manufactured schedule and a partial income statement.

(LO 3)

Instructions

- (a) Compute cost of goods manufactured.
- (b) Prepare an income statement through gross profit.
- (c) Show the presentation of the ending inventories on the December 31, 2017, balance sheet.
- (d) How would the income statement and balance sheet of a merchandising company be different from Aikman's financial statements?

E15-15 University Company produces collegiate apparel. From its accounting records, it prepares the following schedule and financial statements on a yearly basis.

- (a) Cost of goods manufactured schedule.
- (b) Income statement.
- (c) Balance sheet.

Indicate in which schedule or financial statement(s) different cost items will appear.

(LO 3)

The following items are found in its ledger and accompanying data.

- Direct labor
- Raw materials inventory, 1/1
- Work in process inventory, 12/31
- Finished goods inventory, 1/1
- Indirect labor
- Depreciation on factory machinery
- Work in process, 1/1
- Finished goods inventory, 12/31
- Factory maintenance salaries
- Cost of goods manufactured
- Depreciation on delivery equipment
- Cost of goods available for sale
- Direct materials used
- Heat and electricity for factory
- Repairs to roof of factory building
- Cost of raw materials purchases

Instructions

List the items (1)–(16). For each item, indicate by using the appropriate letter or letters, the schedule and/or financial statement(s) in which the item will appear.

E15-16 An analysis of the accounts of Roberts Company reveals the following manufacturing cost data for the month ended June 30, 2017.

<u>Inventory</u>	<u>Beginning</u>	<u>Ending</u>
Raw materials	\$9,000	\$13,100
Work in process	5,000	7,000
Finished goods	9,000	8,000

Costs incurred: raw materials purchases \$54,000, direct labor \$47,000, manufacturing overhead \$19,900. The specific overhead costs were: indirect labor \$5,500, factory insurance \$4,000, machinery depreciation \$4,000, machinery repairs \$1,800, factory utilities \$3,100, and miscellaneous factory costs \$1,500. Assume that all raw materials used were direct materials.

Prepare a cost of goods manufactured schedule, and present the ending inventories on the balance sheet.

(LO 3)

**Instructions**

- (a) Prepare the cost of goods manufactured schedule for the month ended June 30, 2017.
- (b) Show the presentation of the ending inventories on the June 30, 2017, balance sheet.

Determine the amount of cost to appear in various accounts, and indicate in which financial statements these accounts would appear.

(LO 3)

E15-17 McQueen Motor Company manufactures automobiles. During September 2017, the company purchased 5,000 head lamps at a cost of \$15 per lamp. McQueen withdrew 4,650 lamps from the warehouse during the month. Fifty of these lamps were used to replace the head lamps in autos used by traveling sales staff. The remaining 4,600 lamps were put in autos manufactured during the month.

Of the autos put into production during September 2017, 90% were completed and transferred to the company's storage lot. Of the cars completed during the month, 70% were sold by September 30.

Instructions

- Determine the cost of head lamps that would appear in each of the following accounts at September 30, 2017: Raw Materials, Work in Process, Finished Goods, Cost of Goods Sold, and Selling Expenses.
- Write a short memo to the chief accountant, indicating whether and where each of the accounts in (a) would appear on the income statement or on the balance sheet at September 30, 2017.

Identify various managerial accounting practices.

(LO 4)

E15-18 The following is a list of terms related to managerial accounting practices.

- Activity-based costing.
- Just-in-time inventory.
- Balanced scorecard.
- Value chain.

Instructions

Match each of the terms with the statement below that best describes the term.

- _____ A performance-measurement technique that attempts to consider and evaluate all aspects of performance using financial and nonfinancial measures in an integrated fashion.
- _____ The group of activities associated with providing a product or performing a service.
- _____ An approach used to reduce the cost associated with handling and holding inventory by reducing the amount of inventory on hand.
- _____ A method used to allocate overhead to products based on each product's use of the activities that cause the incurrence of the overhead cost.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Classify manufacturing costs into different categories and compute the unit cost.

(LO 2)

P15-1A Ohno Company specializes in manufacturing a unique model of bicycle helmet. The model is well accepted by consumers, and the company has enough orders to keep the factory production at 10,000 helmets per month (80% of its full capacity). Ohno's monthly manufacturing cost and other expense data are as follows.

Rent on factory equipment	\$11,000
Insurance on factory building	1,500
Raw materials (plastics, polystyrene, etc.)	75,000
Utility costs for factory	900
Supplies for general office	300
Wages for assembly line workers	58,000
Depreciation on office equipment	800
Miscellaneous materials (glue, thread, etc.)	1,100
Factory manager's salary	5,700
Property taxes on factory building	400
Advertising for helmets	14,000
Sales commissions	10,000
Depreciation on factory building	1,500

Instructions

- (a) Prepare an answer sheet with the following column headings.

Cost Item	Product Costs			Period Costs
	Direct Materials	Direct Labor	Manufacturing Overhead	

(a) DM \$75,000
DL \$58,000
MO \$22,100
PC \$25,100

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.

- (b) Compute the cost to produce one helmet.

P15-2A Bell Company, a manufacturer of audio systems, started its production in October 2017. For the preceding 3 years, Bell had been a retailer of audio systems. After a thorough survey of audio system markets, Bell decided to turn its retail store into an audio equipment factory.

Raw materials cost for an audio system will total \$74 per unit. Workers on the production lines are on average paid \$12 per hour. An audio system usually takes 5 hours to complete. In addition, the rent on the equipment used to assemble audio systems amounts to \$4,900 per month. Indirect materials cost \$5 per system. A supervisor was hired to oversee production; her monthly salary is \$3,000.

Factory janitorial costs are \$1,300 monthly. Advertising costs for the audio system will be \$9,500 per month. The factory building depreciation expense is \$7,800 per year. Property taxes on the factory building will be \$9,000 per year.

Classify manufacturing costs into different categories and compute the unit cost.

(LO 2)

Instructions

- (a) Prepare an answer sheet with the following column headings.

Cost Item	Product Costs			Period Costs
	Direct Materials	Direct Labor	Manufacturing Overhead	

(a) DM \$111,000
DL \$ 90,000
MO \$ 18,100
PC \$ 9,500

Assuming that Bell manufactures, on average, 1,500 audio systems per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

- (b) Compute the cost to produce one audio system.

P15-3A Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

	Case	
	1	2
Direct materials used	\$ 9,600	\$ (g)
Direct labor	5,000	8,000
Manufacturing overhead	8,000	4,000
Total manufacturing costs	(a)	16,000
Beginning work in process inventory	1,000	(h)
Ending work in process inventory	(b)	3,000
Sales revenue	24,500	(i)
Sales discounts	2,500	1,400
Cost of goods manufactured	17,000	24,000
Beginning finished goods inventory	(c)	3,300
Goods available for sale	22,000	(j)
Cost of goods sold	(d)	(k)
Ending finished goods inventory	3,400	2,500
Gross profit	(e)	7,000
Operating expenses	2,500	(l)
Net income	(f)	5,000

Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.

(LO 3)

Instructions

- (a) Indicate the missing amount for each letter.
 (b) Prepare a condensed cost of goods manufactured schedule for Case 1.
 (c) Prepare an income statement and the current assets section of the balance sheet for Case 1. Assume that in Case 1 the other items in the current assets section are as follows: Cash \$3,000, Receivables (net) \$15,000, Raw Materials \$600, and Prepaid Expenses \$400.

(b) Ending WIP \$ 6,600
(c) Current assets \$29,000

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.

(LO 3)

P15-4A The following data were taken from the records of Clarkson Company for the fiscal year ended June 30, 2017.

Raw Materials		Factory Insurance	\$ 4,600
Inventory 7/1/16	\$ 48,000	Factory Machinery	
Raw Materials		Depreciation	16,000
Inventory 6/30/17	39,600	Factory Utilities	27,600
Finished Goods		Office Utilities Expense	8,650
Inventory 7/1/16	96,000	Sales Revenue	534,000
Finished Goods		Sales Discounts	4,200
Inventory 6/30/17	75,900	Plant Manager's Salary	58,000
Work in Process		Factory Property Taxes	9,600
Inventory 7/1/16	19,800	Factory Repairs	1,400
Work in Process		Raw Materials Purchases	96,400
Inventory 6/30/17	18,600	Cash	32,000
Direct Labor	139,250		
Indirect Labor	24,460		
Accounts Receivable	27,000		

Instructions

- (a) CGM \$386,910
- (b) Gross profit \$122,790
- (c) Current assets \$193,100
- (a) Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)
- (b) Prepare an income statement through gross profit.
- (c) Prepare the current assets section of the balance sheet at June 30, 2017.

Prepare a cost of goods manufactured schedule and a correct income statement.

(LO 3)

P15-5A Empire Company is a manufacturer of smart phones. Its controller resigned in October 2017. An inexperienced assistant accountant has prepared the following income statement for the month of October 2017.

EMPIRE COMPANY Income Statement For the Month Ended October 31, 2017

Sales revenue		\$780,000
Less: Operating expenses		
Raw materials purchases	\$264,000	
Direct labor cost	190,000	
Advertising expense	90,000	
Selling and administrative salaries	75,000	
Rent on factory facilities	60,000	
Depreciation on sales equipment	45,000	
Depreciation on factory equipment	31,000	
Indirect labor cost	28,000	
Utilities expense	12,000	
Insurance expense	8,000	<u>803,000</u>
Net loss		<u>\$ (23,000)</u>

Prior to October 2017, the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

1. Inventory balances at the beginning and end of October were:

	<u>October 1</u>	<u>October 31</u>
Raw materials	\$18,000	\$29,000
Work in process	20,000	14,000
Finished goods	30,000	50,000

2. Only 75% of the utilities expense and 60% of the insurance expense apply to factory operations. The remaining amounts should be charged to selling and administrative activities.

Instructions

- (a) Prepare a schedule of cost of goods manufactured for October 2017.
 (b) Prepare a correct income statement for October 2017.

(a) CGM \$581,800
 (b) NI \$ 2,000

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

(Note: Chapters 15–26 include a hypothetical exercise featuring **Current Designs**, the company described at the beginning of this chapter. Students can also work through this exercise following an **Excel tutorial** available in **WileyPLUS** and the book's companion website. Each chapter's tutorial focuses on a different Excel function or feature.)

CURRENT DESIGNS

CD15 Mike Cichanowski founded **Wenonah Canoe** and later purchased **Current Designs**, a company that designs and manufactures kayaks. The kayak-manufacturing facility is located just a few minutes from the canoe company's headquarters in Winona, Minnesota.

Current Designs makes kayaks using two different processes. (See www.cdskayak.com/craftsmanship/index.php for the details of each method.) The rotational molding process uses high temperature to melt polyethylene powder in a closed rotating metal mold to produce a complete kayak hull and deck in a single piece. These kayaks are less labor-intensive and less expensive for the company to produce and sell.

Its other kayaks use the vacuum-bagged composite lamination process (which we will refer to as the composite process). Layers of fiberglass or Kevlar® are carefully placed by hand in a mold and are bonded with resin. Then, a high-pressure vacuum is used to eliminate any excess resin that would otherwise add weight and reduce strength of the finished kayak. These kayaks require a great deal of skilled labor as each boat is individually finished. The exquisite finish of the vacuum-bagged composite kayaks gave rise to Current Designs' tag line, "A work of art, made for life."

Current Designs has the following managers:

Mike Cichanowski, CEO
 Diane Buswell, Controller
 Deb Welch, Purchasing Manager
 Bill Johnson, Sales Manager
 Dave Thill, Kayak Plant Manager
 Rick Thrune, Production Manager for Composite Kayaks

Instructions

- (a) What are the primary information needs of each manager?
 (b) Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.
 (c) When Diane Buswell, controller for Current Designs, reviewed the accounting records for a recent period, she noted the following items. Classify each item as a product cost or a period cost. If an item is a product cost, note if it is a direct materials, direct labor, or manufacturing overhead item.

**EXCEL
 TUTORIAL**

	A	B	C			D
	Payee	Purpose	Direct Materials	Direct Labor	Manufacturing Overhead	Period Costs
1						
2						
3						
4	Winona Agency	Property insurance for the manufacturing plant				
5	Bill Johnson (sales manager)	Payroll check—payment to sales manager				
6	Xcel Energy	Electricity for manufacturing plant				
7	Winona Printing	Price lists for salespeople				
8	Jim Kaiser (sales representative)	Sales commissions				
9	Dave Thill (plant manager)	Payroll check—payment to plant manager				
10	Dana Schultz (kayak assembler)	Payroll check—payment to kayak assembler				
11	Composite One	Bagging film used when kayaks are assembled; it is discarded after use				
12	Fastenal	Shop supplies—brooms, paper towels, etc.				
13	Ravago	Polyethylene powder which is the main ingredient for the rotational molded kayaks				
14	Winona County	Property taxes on manufacturing plant				
15	North American Composites	Kevlar® fabric for composite kayaks				
16	Waste Management	Trash disposal for the company office building				
17	None	Journal entry to record depreciation of manufacturing equipment				

WATERWAYS

(Note: The **Waterways problem** starts in this chapter and continues in the remaining chapters. You will find the complete problem for each chapter at the book's companion website.)

WP15 Waterways Corporation is a private corporation formed for the purpose of providing the products and the services needed to irrigate farms, parks, commercial projects, and private lawns. It has a centrally located factory in a U.S. city that manufactures the products it markets to retail outlets across the nation. It also maintains a division that performs installation and warranty servicing in six metropolitan areas.

The mission of Waterways is to manufacture quality parts that can be used for effective irrigation projects that also conserve water. By that effort, the company hopes to satisfy its customers, perform rapid and responsible service, and serve the community and the employees who represent them in each community.

The company has been growing rapidly, so management is considering new ideas to help the company continue its growth and maintain the high quality of its products.

Waterways was founded by Will Winkman, who is the company president and chief executive officer (CEO). Working with him from the company's inception is Will's brother, Ben, whose sprinkler designs and ideas about the installation of proper systems have been a major basis of the company's success. Ben is the vice president who oversees all aspects of design and production in the company.

The factory itself is managed by Todd Senter who hires his line managers to supervise the factory employees. The factory makes all of the parts for the irrigation systems. The purchasing department is managed by Helen Hines.

The installation and training division is overseen by vice president Henry Writer, who supervises the managers of the six local installation operations. Each of these local managers hires his or her own local service people. These service employees are trained by the home office under Henry Writer's direction because of the uniqueness of the company's products.

There is a small human resources department under the direction of Sally Fenton, a vice president who handles the employee paperwork, though hiring is actually performed by the

separate departments. Teresa Totter is the vice president who heads the sales and marketing area; she oversees 10 well-trained salespeople.

The accounting and finance division of the company is run by Ann Headman, who is the chief financial officer (CFO) and a company vice president. She is a member of the Institute of Management Accountants and holds a certificate in management accounting. She has a small staff of accountants, including a controller and a treasurer, and a staff of accounting input operators who maintain the financial records.

A partial list of Waterways' accounts and their balances for the month of November follows.

Accounts Receivable	\$ 275,000
Advertising Expenses	54,000
Cash	260,000
Depreciation—Factory Equipment	16,800
Depreciation—Office Equipment	2,400
Direct Labor	42,000
Factory Supplies Used	16,800
Factory Utilities	10,200
Finished Goods Inventory, November 30	68,800
Finished Goods Inventory, October 31	72,550
Indirect Labor	48,000
Office Supplies Expense	1,600
Other Administrative Expenses	72,000
Prepaid Expenses	41,250
Raw Materials Inventory, November 30	52,700
Raw Materials Inventory, October 31	38,000
Raw Materials Purchases	184,500
Rent—Factory Equipment	47,000
Repairs—Factory Equipment	4,500
Salaries	325,000
Sales Revenue	1,350,000
Sales Commissions	40,500
Work in Process Inventory, October 31	52,700
Work in Process Inventory, November 30	42,000

Instructions

- Based on the information given, construct an organizational chart of Waterways Corporation.
- A list of accounts and their values are given above. From this information, prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet for Waterways Corporation for the month of November.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP15-1 Wendall Company specializes in producing fashion outfits. On July 31, 2017, a tornado touched down at its factory and general office. The inventories in the warehouse and the factory were completely destroyed as was the general office nearby. Next morning, through a careful search of the disaster site, however, Bill Francis, the company's controller, and Elizabeth Walton, the cost accountant, were able to recover a small part of manufacturing cost data for the current month.

"What a horrible experience," sighed Bill "And the worst part is that we may not have enough records to use in filing an insurance claim."

"It was terrible," replied Elizabeth. "However, I managed to recover some of the manufacturing cost data that I was working on yesterday afternoon. The data indicate that our direct labor cost in July totaled \$250,000 and that we had purchased \$365,000 of raw materials. Also, I recall that the amount of raw materials used for July was \$350,000. But I'm not sure this information will help. The rest of our records are blown away."

"Well, not exactly," said Bill. "I was working on the year-to-date income statement when the tornado warning was announced. My recollection is that our sales in July were \$1,240,000 and our gross profit ratio has been 40% of sales. Also, I can remember that our cost of goods available for sale was \$770,000 for July."

“Maybe we can work something out from this information!” exclaimed Elizabeth. “My experience tells me that our manufacturing overhead is usually 60% of direct labor.”

“Hey, look what I just found,” cried Elizabeth. “It’s a copy of this June’s balance sheet, and it shows that our inventories as of June 30 are Finished goods \$38,000, Work in process \$25,000, and Raw materials \$19,000.”

“Super,” yelled Bill. “Let’s go work something out.”

In order to file an insurance claim, Wendall Company needs to determine the amount of its inventories as of July 31, 2017, the date of the tornado touchdown.

Instructions

With the class divided into groups, determine the amount of cost in the Raw Materials, Work in Process, and Finished Goods inventory accounts as of the date of the tornado touchdown.

Managerial Analysis

BYP15-2 Tenrack is a fairly large manufacturing company located in the southern United States. The company manufactures tennis rackets, tennis balls, tennis clothing, and tennis shoes, all bearing the company’s distinctive logo, a large green question mark on a white flocked tennis ball. The company’s sales have been increasing over the past 10 years.

The tennis racket division has recently implemented several advanced manufacturing techniques. Robot arms hold the tennis rackets in place while glue dries, and machine vision systems check for defects. The engineering and design team uses computerized drafting and testing of new products. The following managers work in the tennis racket division:

Jason Dennis, Sales Manager (supervises all sales representatives)

Peggy Groneman, Technical Specialist (supervises computer programmers)

Dave Marley, Cost Accounting Manager (supervises cost accountants)

Kevin Carson, Production Supervisor (supervises all manufacturing employees)

Sally Renner, Engineer (supervises all new-product design teams)

Instructions

- What are the primary information needs of each manager?
- Which, if any, financial accounting report(s) is each likely to use?
- Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.

Real-World Focus

BYP15-3 **The Institute of Management Accountants** (IMA) is an organization dedicated to excellence in the practice of management accounting and financial management.

Address: www.imanet.org, or go to www.wiley.com/college/weygandt

Instructions

At the IMA’s home page, locate the answers to the following questions.

- How many members does the IMA have, and what are their job titles?
- What are some of the benefits of joining the IMA as a student?
- Use the chapter locator function to locate the IMA chapter nearest you, and find the name of the chapter president.

CRITICAL THINKING

Communication Activity

BYP15-4 Refer to P15-5A and add the following requirement.

Prepare a letter to the president of the company, Shelly Phillips, describing the changes you made. Explain clearly why net income is different after the changes. Keep the following points in mind as you compose your letter.

- This is a letter to the president of a company, who is your friend. The style should be generally formal, but you may relax some requirements. For example, you may call the president by her first name.

2. Executives are very busy. Your letter should tell the president your main results first (for example, the amount of net income).
3. You should include brief explanations so that the president can understand the changes you made in the calculations.

Ethics Case

BYP15-5 Steve Morgan, controller for Newton Industries, was reviewing production cost reports for the year. One amount in these reports continued to bother him—advertising. During the year, the company had instituted an expensive advertising campaign to sell some of its slower-moving products. It was still too early to tell whether the advertising campaign was successful.

There had been much internal debate as how to report advertising cost. The vice president of finance argued that advertising costs should be reported as a cost of production, just like direct materials and direct labor. He therefore recommended that this cost be identified as manufacturing overhead and reported as part of inventory costs until sold. Others disagreed. Morgan believed that this cost should be reported as an expense of the current period, so as not to overstate net income. Others argued that it should be reported as prepaid advertising and reported as a current asset.

The president finally had to decide the issue. He argued that these costs should be reported as inventory. His arguments were practical ones. He noted that the company was experiencing financial difficulty and expensing this amount in the current period might jeopardize a planned bond offering. Also, by reporting the advertising costs as inventory rather than as prepaid advertising, less attention would be directed to it by the financial community.

Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues involved in this situation?
- (c) What would you do if you were Steve Morgan?

All About You

BYP15-6 The primary purpose of managerial accounting is to provide information useful for management decisions. Many of the managerial accounting techniques that you learn in this course will be useful for decisions you make in your everyday life.

Instructions

For each of the following managerial accounting techniques, read the definition provided and then provide an example of a personal situation that would benefit from use of this technique.

- (a) Break-even point (page 895).
- (b) Budget (page 1058).
- (c) Balanced scorecard (page 1176).
- (d) Capital budgeting (page 1204).

Considering Your Costs and Benefits

BYP15-7 As noted in this chapter, because of global competition, companies have become increasingly focused on reducing costs. To reduce costs and remain competitive, many companies are turning to outsourcing. Outsourcing means hiring an outside supplier to provide elements of a product or service rather than producing them internally.

Suppose you are the managing partner in a CPA firm with 30 full-time staff. Larger firms in your community have begun to outsource basic tax-return preparation work to India. Should you outsource your basic tax-return work to India as well? You estimate that you would have to lay off six staff members if you outsource the work. The basic arguments for and against are as follows.

YES: The wages paid to Indian accountants are very low relative to U.S. wages. You will not be able to compete unless you outsource.

NO: Tax-return data is highly sensitive. Many customers will be upset to learn that their data is being emailed around the world.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

16

Job Order Costing

CHAPTER PREVIEW The Feature Story below about **Disney** describes how important accurate costing is to movie studios. In order to submit accurate bids on new film projects and to know whether it profited from past films, the company needs a good costing system. This chapter illustrates how costs are assigned to specific jobs, such as the production of *The Avengers 2*. We begin the discussion in this chapter with an overview of the flow of costs in a job order cost accounting system. We then use a case study to explain and illustrate the documents, entries, and accounts in this type of cost accounting system.

FEATURE STORY

Profiting from the Silver Screen

Have you ever had the chance to tour a movie studio? There's a lot going on! Lots of equipment and lots of people with a variety of talents. Running a film studio, whether as an independent company or part of a major corporation, is a complex and risky business. Consider **Disney**, which has produced such classics as *Snow White and the Seven Dwarfs* and such colossal successes as *Frozen*. The movie studio has, however, also seen its share of losses. Disney's *Lone Ranger* movie brought in revenues of \$260 million, but its production and marketing costs were a combined \$375 million—a loss of \$115 million.

Every time Disney or another movie studio makes a new movie, it is creating a unique product. Ideally, each new movie should be able to stand on its own, that is, the film should generate revenues that exceed its costs. And in order to know whether a particular movie is profitable, the studio must keep track of all of the costs incurred to make and market the film. These costs include such items as salaries of the writers, actors, director, producer, and production team (e.g., film crew); licensing costs; depreciation on equipment; music; studio rental; and marketing and distribution costs. If you've ever watched the credits at the end of a movie, you know the list goes on and on.

The movie studio isn't the only one with an interest in knowing a particular project's profitability. Many of the people involved in making the movie, such as the screenwriters, actors, and producers, have at least part of their compensation tied to its profitability. As such, complaints about inaccurate accounting are common in the movie industry.

In particular, a few well-known and widely attended movies reported low profits, or even losses, once the accountants got done with them. How can this be? The issue is that a large portion of a movie's costs are overhead costs that can't be directly traced to a film, such as depreciation of film equipment and sets, facility maintenance costs, and executives' salaries. Actors and others often suggest that these overhead costs are overallocated to their movie and therefore negatively affect their compensation.

To reduce the risk of financial flops, many of the big studios now focus on making sequels of previous hits. This might explain why, shortly after losing money on the *Lone Ranger*, Disney announced plans to make *The Avengers 2*—a much safer bet.

 **Watch the *Making a Hollywood Movie* video in WileyPLUS to learn more about job order costing in the real world.**

CHAPTER OUTLINE

Learning Objectives

1

Describe cost systems and the flow of costs in a job order system.

- Process cost system
- Job order cost system
- Job order cost flow
- Accumulating costs

DO IT!

1

Accumulating Manufacturing Costs

2

Use a job cost sheet to assign costs to work in process.

- Raw materials costs
- Factory labor costs

DO IT!

2

Work in Process

3

Demonstrate how to determine and use the predetermined overhead rate.

DO IT!

3

Predetermined Overhead Rate

4

Prepare entries for manufacturing and service jobs completed and sold.

- Finished goods
- Cost of goods sold
- Summary
- Job order for service companies
- Pros and cons of job order costing

DO IT!

4

Completion and Sale of Jobs

5

Distinguish between under- and overapplied manufacturing overhead.

- Under- or overapplied manufacturing overhead

DO IT!

5

Applied Manufacturing Overhead

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

Cost accounting involves measuring, recording, and reporting product costs. Companies determine both the total cost and the unit cost of each product. The accuracy of the product cost information is critical to the success of the company. Companies use this information to determine which products to produce, what prices to charge, and how many units to produce. Accurate product cost information is also vital for effective evaluation of employee performance.

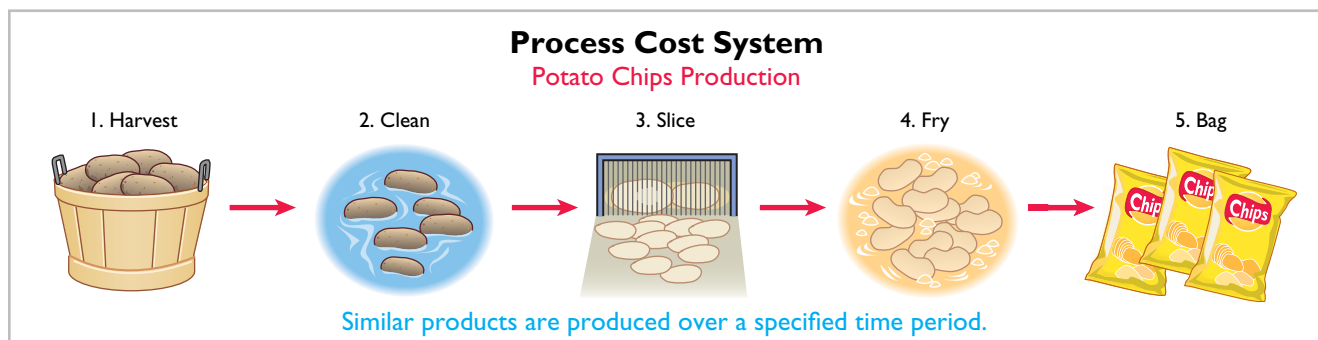

A **cost accounting system** consists of accounts for the various manufacturing costs. These accounts are fully integrated into the general ledger of a company. An important feature of a cost accounting system is the use of a **perpetual inventory system**. Such a system **provides immediate, up-to-date information on the cost of a product**.

There are two basic types of cost accounting systems: (1) a process cost system and (2) a job order cost system. Although cost accounting systems differ widely from company to company, most involve one of these two traditional product costing systems.

Process Cost System

A company uses a **process cost system** when it manufactures a large volume of similar products. Production is continuous. Examples of a process cost system are the manufacture of cereal by **Kellogg**, the refining of petroleum by **ExxonMobil**, and the production of ice cream by **Ben & Jerry's**. Process costing accumulates product-related costs **for a period of time** (such as a week or a month) instead of assigning costs to specific products or job orders. In process costing, companies assign the costs to departments or processes for the specified period of time. Illustration 16-1 shows examples of the use of a process cost system. We will discuss the process cost system further in Chapter 17.

Illustration 16-1
Process cost system

Job Order Cost System

Under a **job order cost system**, the company assigns costs to each **job** or to each **batch** of goods. An example of a job is the manufacture of a jet by **Boeing**, the production of a movie by **Disney**, or the making of a fire truck by **American LaFrance**. An example of a batch is the printing of 225 wedding invitations by a local print shop, or the printing of a weekly issue of *Fortune* magazine by a high-tech printer such as **Quad Graphics**.

An important feature of job order costing is that each job or batch has its own distinguishing characteristics. For example, each house is custom built, each consulting engagement by a CPA firm is unique, and each printing job is different. **The objective is to compute the cost per job.** At each point in manufacturing a product or performing a service, the company can identify the job and its

associated costs. A job order cost system measures costs for each completed job, rather than for set time periods. Illustration 16-2 shows the recording of costs in a job order cost system for Disney as it produced two different films at the same time: an animated film and an action thriller.

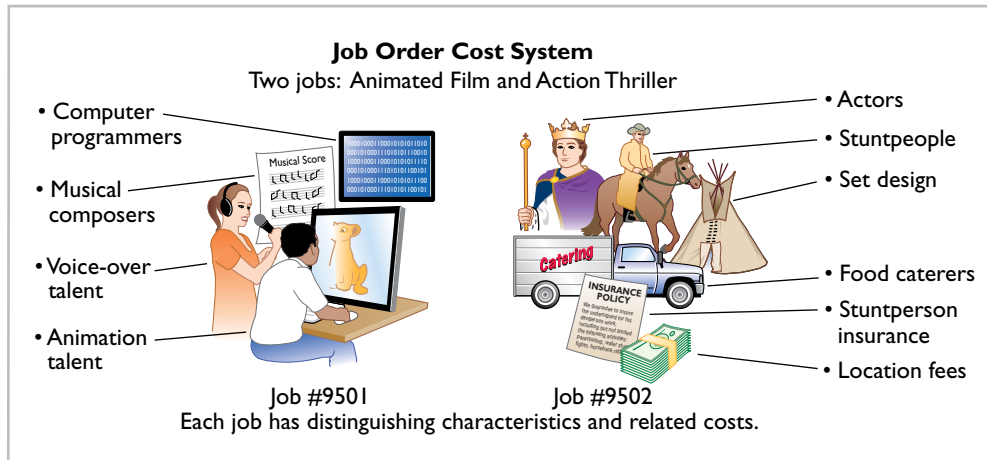

Illustration 16-2
Job order cost system for Disney

Can a company use both types of cost systems? Yes. For example, **General Motors** uses process cost accounting for its standard model cars, such as Malibus and Corvettes, and job order cost accounting for a custom-made limousine for the President of the United States.

The objective of both cost accounting systems is to provide unit cost information for product pricing, cost control, inventory valuation, and financial statement presentation.

Management Insight

© Tony Tremblay/iStockphoto

Jobs Won, Money Lost

Many companies suffer from poor cost accounting. As a result, they sometimes make products they should not be selling at all, or they buy product components that they could more profitably make themselves. Also, inaccurate cost data leads companies to misallocate capital and frustrates efforts by plant managers to improve efficiency.

For example, consider the case of a diversified company in the business of rebuilding diesel locomotives. The managers thought they were making money, but a consulting firm found that the company had seriously underestimated costs. The company bailed out of the business and not a moment too soon. Says the consultant who advised the company, "The more contracts it won, the more money it lost." Given that situation, a company cannot stay in business very long!

What type of costs do you think the company had been underestimating? (Go to **WileyPLUS** for this answer and additional questions.)

Job Order Cost Flow

The flow of costs (direct materials, direct labor, and manufacturing overhead) in job order cost accounting parallels the physical flow of the materials as they are converted into finished goods. As shown in Illustration 16-3 (page 756), companies first **accumulate** manufacturing costs in the form of raw materials, factory labor, or manufacturing overhead. They then **assign** manufacturing costs to the Work in Process Inventory account. When a job is completed, the company transfers the cost of the job to Finished Goods Inventory. Later when the goods are sold, the company transfers their cost to Cost of Goods Sold.

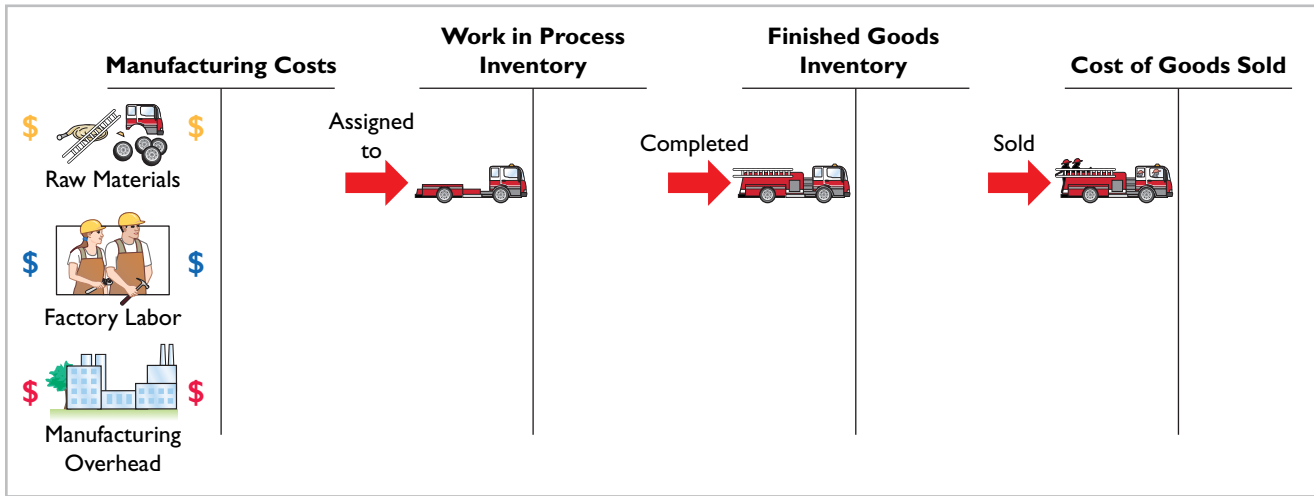

Illustration 16-3
Flow of costs in job order costing

Illustration 16-3 provides a basic overview of the flow of costs in a manufacturing setting for production of a fire truck. A more detailed presentation of the flow of costs is summarized near the end of this chapter in Illustration 16-15. There are two major steps in the flow of costs: (1) *accumulating* the manufacturing costs incurred, and (2) *assigning* the accumulated costs to the work done. The following discussion shows that the company accumulates manufacturing costs incurred by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. When the company incurs these costs, it does not attempt to associate the costs with specific jobs. The company makes additional entries to assign manufacturing costs incurred to specific jobs. In the remainder of this chapter, we will use a case study to explain how a job order cost system operates.

Accumulating Manufacturing Costs

To illustrate a job order cost system, we will use the January transactions of Wallace Company, which makes custom electronic sensors for corporate safety applications (such as fire and carbon monoxide) and security applications (such as theft and corporate espionage).

RAW MATERIALS COSTS

When Wallace receives the raw materials it has purchased, **it debits the cost of the materials to Raw Materials Inventory**. The company debits this account for the invoice cost of the raw materials and freight costs chargeable to the purchaser. It credits the account for purchase discounts taken and purchase returns and allowances. Wallace makes **no effort at this point to associate the cost of materials with specific jobs or orders**.

To illustrate, assume that Wallace purchases 2,000 lithium batteries (Stock No. AA2746) at \$5 per unit (\$10,000) and 800 electronic modules (Stock No. AA2850) at \$40 per unit (\$32,000) for a total cost of \$42,000 (\$10,000 + \$32,000). The entry to record this purchase on January 4 is:

Raw Materials Inventory	(1) ¹		
42,000	Jan. 4	Raw Materials Inventory	42,000
		Accounts Payable	42,000
		(Purchase of raw materials on account)	

¹The numbers placed above the entries for Wallace Company are used for reference purposes in the summary provided in Illustration 16-15.

At this point, Raw Materials Inventory has a balance of \$42,000, as shown in the T-account in the margin. As we will explain later in the chapter, the company subsequently assigns direct raw materials inventory to work in process and indirect raw materials inventory to manufacturing overhead.

FACTORY LABOR COSTS

Some of a company's employees are involved in the manufacturing process, while others are not. As discussed in Chapter 15, wages and salaries of nonmanufacturing employees are expensed as period costs (e.g., Salaries and Wages Expense). Costs related to manufacturing employees are accumulated in Factory Labor to ensure their treatment as product costs. Factory labor consists of three costs: (1) gross earnings of factory workers, (2) employer payroll taxes on these earnings, and (3) fringe benefits (such as sick pay, pensions, and vacation pay) incurred by the employer. **Companies debit labor costs to Factory Labor as they incur those costs.**

To illustrate, assume that Wallace incurs \$32,000 of factory labor costs. Of that amount, \$27,000 relates to wages payable and \$5,000 relates to payroll taxes payable in February. The entry to record factory labor for the month is:

		(2)				
Jan. 31	Factory Labor		32,000			32,000
	Factory Wages Payable				27,000	
	Employer Payroll Taxes Payable				5,000	
	(To record factory labor costs)					

At this point, Factory Labor has a balance of \$32,000, as shown in the T-account in the margin. The company subsequently assigns direct factory labor to work in process and indirect factory labor to manufacturing overhead.

MANUFACTURING OVERHEAD COSTS

A company has many types of overhead costs. If these overhead costs, such as property taxes, depreciation, insurance, and repairs, relate to overhead costs of a nonmanufacturing facility, such as an office building, then these costs are expensed as period costs (e.g., Property Tax Expense, Depreciation Expense, Insurance Expense, and Maintenance and Repairs Expense). If the costs relate to the manufacturing process, then they are accumulated in Manufacturing Overhead to ensure their treatment as product costs.

Using assumed data, the summary entry for manufacturing overhead in Wallace Company is:

		(3)				
Jan. 31	Manufacturing Overhead		13,800			13,800
	Utilities Payable				4,800	
	Prepaid Insurance				2,000	
	Accounts Payable (for repairs)				2,600	
	Accumulated Depreciation				3,000	
	Property Taxes Payable				1,400	
	(To record overhead costs)					

At this point, Manufacturing Overhead has a balance of \$13,800, as shown in the T-account in the margin. The company subsequently assigns manufacturing overhead to work in process.

DO IT!

1

Accumulating Manufacturing Costs

During the current month, Ringling Company incurs the following manufacturing costs:

- (a) Raw material purchases of \$4,200 on account.
- (b) Factory labor of \$18,000. Of that amount, \$15,000 relates to wages payable and \$3,000 relates to payroll taxes payable.
- (c) Factory utilities of \$2,200 are payable, prepaid factory insurance of \$1,800 has expired, and depreciation on the factory building is \$3,500.

Prepare journal entries for each type of manufacturing cost.

Solution

(a) Raw Materials Inventory	4,200	
Accounts Payable		4,200
(Purchases of raw materials on account)		
(b) Factory Labor	18,000	
Factory Wages Payable		15,000
Employer Payroll Taxes Payable		3,000
(To record factory labor costs)		
(c) Manufacturing Overhead	7,500	
Utilities Payable		2,200
Prepaid Insurance		1,800
Accumulated Depreciation		3,500
(To record overhead costs)		

Related exercise material: **BE16-1, BE16-2, E16-1, E16-7, E16-8, E16-11, and DO IT! 16-1.**

Action Plan

- ✓ In accumulating manufacturing costs, debit at least one of three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.
- ✓ Manufacturing overhead costs may be recognized daily. Or, manufacturing overhead may be recorded periodically through a summary entry.

LEARNING OBJECTIVE

2

Use a job cost sheet to assign costs to work in process.

Assigning manufacturing costs to work in process results in the following entries.

1. **Debits** made to Work in Process Inventory.
2. **Credits** made to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

An essential accounting record in assigning costs to jobs is a **job cost sheet**, as shown in Illustration 16-4. A **job cost sheet** is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.

Companies keep a separate job cost sheet for each job. The job cost sheets constitute the subsidiary ledger for the Work in Process Inventory account. A **subsidiary ledger** consists of individual records for each individual item—in this case, each job. The Work in Process account is referred to as a **control account** because it summarizes the detailed data regarding specific jobs contained in the job cost sheets. **Each entry to Work in Process Inventory must be accompanied by a corresponding posting to one or more job cost sheets.**

Job Cost Sheet			
Job No. _____		Quantity _____	
Item _____		Date Requested _____	
For _____		Date Completed _____	
Date	Direct Materials	Direct Labor	Manufacturing Overhead
Cost of completed job			
Direct materials		\$ _____	
Direct labor		_____	
Manufacturing overhead		_____	
Total cost		\$ _____	
Unit cost (total dollars ÷ quantity)		\$ _____	

Illustration 16-4

Job cost sheet

Helpful Hint

Companies typically maintain job cost sheets as computer files.

Raw Materials Costs

Companies assign raw materials costs to jobs when their materials storeroom issues the materials in response to requests. Requests for issuing raw materials are made on a prenumbered **materials requisition slip**. The materials issued may be used directly on a job, or they may be considered indirect materials. As Illustration 16-5 shows, the requisition should indicate the quantity and type of materials withdrawn and the account to be charged. The company will charge direct materials to Work in Process Inventory, and indirect materials to Manufacturing Overhead.

ETHICS NOTE

Approvals are an important internal control feature of a requisition slip because they establish individual accountability over inventory.

Wallace Company Materials Requisition Slip				
Deliver to: <u>Assembly Department</u>		Req. No. <u>R247</u>		
Charge to: <u>Work in Process—Job No. 101</u>		Date: <u>1/6/17</u>		
Quantity	Description	Stock No.	Cost per Unit	Total
200	Lithium batteries	AA2746	\$5.00	\$1,000
Requested by <u>Bruce Howard</u>		Received by <u>Herb Crowley</u>		
Approved by <u>Kap Shin</u>		Costed by <u>Heather Remmers</u>		

Illustration 16-5

Materials requisition slip

Helpful Hint

Note the specific job (in this case, Job No. 101) to be charged.

ETHICS NOTE

The internal control principle of documentation includes prenumbering to enhance accountability.

The company may use any of the inventory costing methods (FIFO, LIFO, or average-cost) in costing the requisitions **to the individual job cost sheets**.

Periodically, the company journalizes the requisitions. For example, if Wallace uses \$24,000 of direct materials and \$6,000 of indirect materials in January, the entry is:

	(4)			
Jan. 31	Work in Process Inventory Manufacturing Overhead Raw Materials Inventory (To assign materials to jobs and overhead)	24,000 6,000 30,000		

This entry reduces Raw Materials Inventory by \$30,000, increases Work in Process Inventory by \$24,000, and increases Manufacturing Overhead by \$6,000, as shown below.

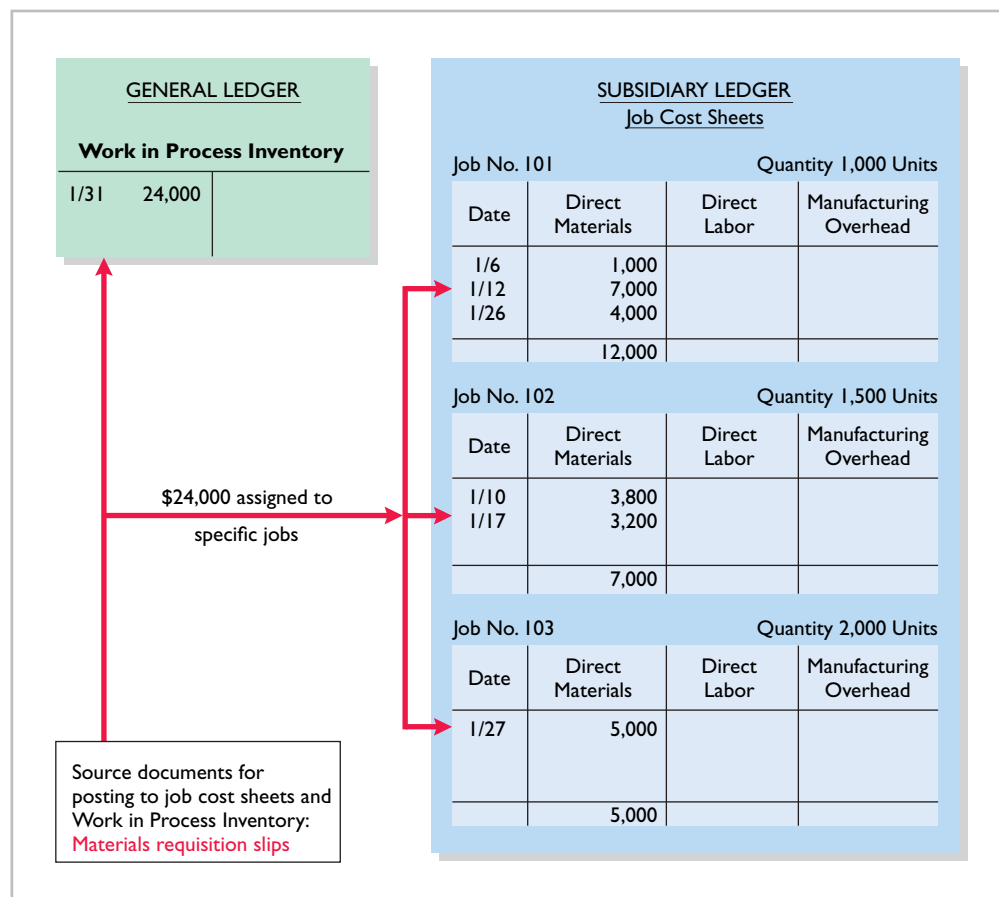

Illustration 16-6 shows the posting of requisition slip R247 to Job No. 101 and other assumed postings to the job cost sheets for materials. The requisition slips provide the basis for total direct materials costs of \$12,000 for Job No. 101, \$7,000 for Job No. 102, and \$5,000 for Job No. 103. After the company has completed all postings, the sum of the direct materials columns of the job cost sheets (the

Illustration 16-6
Job cost sheets—posting of direct materials

Helpful Hint
Companies post to control accounts monthly, and post to job cost sheets daily.

Helpful Hint
Prove the \$24,000 direct materials charge to Work in Process Inventory by totaling the charges by jobs:

101	\$12,000
102	7,000
103	5,000
	\$24,000

Source documents for posting to job cost sheets and Work in Process Inventory:
Materials requisition slips

subsidiary account amounts of \$12,000, \$7,000, and \$5,000) should equal the direct materials debited to Work in Process Inventory (the control account amount of \$24,000).

Management Insight

iSuppli

The Cost of an iPhone? Just Tear One Apart

All companies need to know what it costs to make their own products—but a lot of companies would also like to know the cost of their competitors' products as well. That's where **iSuppli** steps in. For a price, iSuppli will tear apart sophisticated electronic devices to

tell you what it would cost to replicate. In the case of smartphones, which often have more than 1,000 tiny components, that is no small feat. As shown in the chart to the right, the components of a recent iPhone model cost about \$170. Assembly adds only about another \$6.50. However, the difference between what you pay (about double the

total component cost) and the "cost" is not all profit. You also have to consider the additional nonproduction costs of research, design, marketing, patent fees, and selling costs.

Components	Apple iPhone ^a
Integrated circuits	\$ 91.38
Display/touchscreen	34.65
Mechanical ^b	17.80
Camera	9.35
Battery	5.07
Other	11.82
Total	\$170.07

^aLatest data available. ^bIncludes electromechanical. Source: iSuppli.

Source: "The Business of Dissecting Electronics: The Lowdown on Teardowns," *The Economist.com* (January 21, 2010).

What type of costs are marketing and selling costs, and how are they treated for accounting purposes? (Go to **WileyPLUS** for this answer and additional questions.)

Factory Labor Costs

Companies assign factory labor costs to jobs on the basis of time tickets prepared when the work is performed. The **time ticket** indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. Many companies accumulate these data through the use of bar coding and scanning devices. When they start and end work, employees scan bar codes on their identification badges and bar codes associated with each job they work on. When direct labor is involved, the time ticket must indicate the job number, as shown in Illustration 16-7. The employee's supervisor should approve all time tickets.

Illustration 16-7
Time ticket

**Wallace Company
Time Ticket**

Employee John Nash Date: 1/6/17
 Charge to: Work in Process Employee No. 124
 Job No. 101

Time			Hourly Rate	Total Cost
Start	Stop	Total Hours		
0800	1200	4	10.00	40.00

Approved by Bob Kadler Costed by M. Chen

The time tickets are later sent to the payroll department, which applies the employee’s hourly wage rate and computes the total labor cost. Finally, the company journalizes the time tickets. It debits the account Work in Process Inventory for direct labor and debits Manufacturing Overhead for indirect labor. For example, if the \$32,000 total factory labor cost consists of \$28,000 of direct labor and \$4,000 of indirect labor, the entry is:

(5)

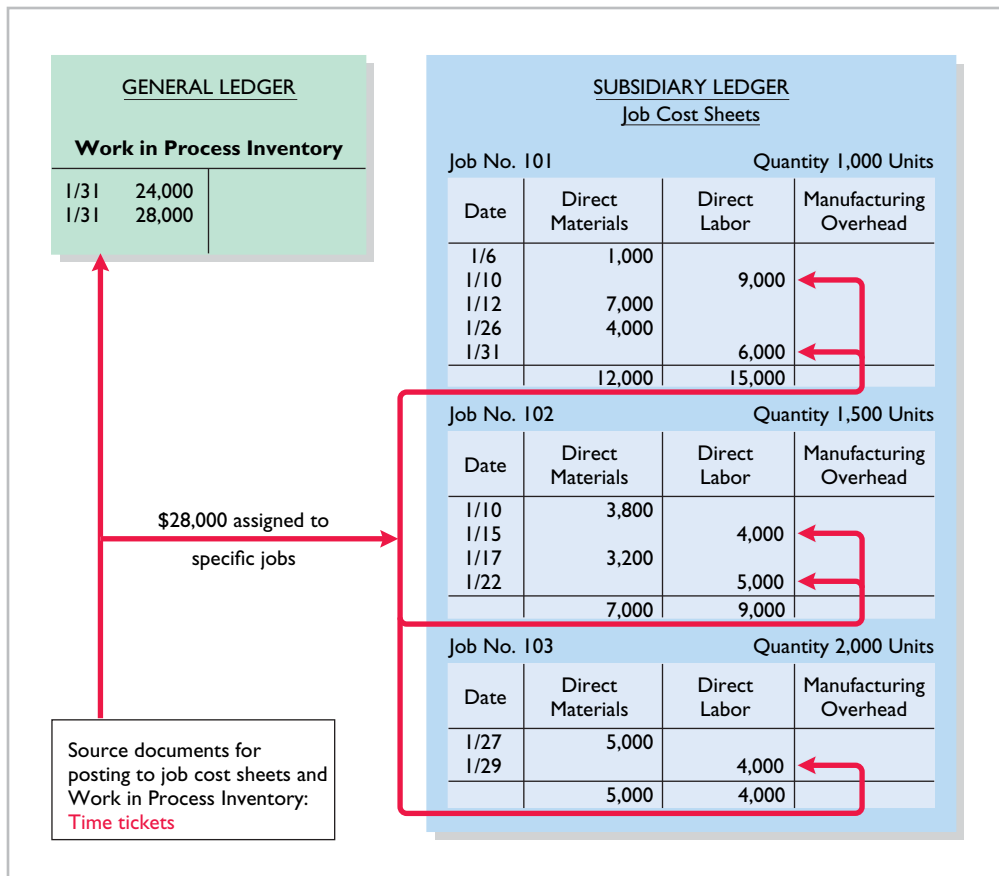

Jan. 31	Work in Process Inventory Manufacturing Overhead Factory Labor (To assign labor to jobs and overhead)	28,000 4,000 32,000	}
---------	--	---------------------------	---

As a result of this entry, Factory Labor is reduced by \$32,000 so it has a zero balance, and labor costs are assigned to the appropriate manufacturing accounts. The entry increases Work in Process Inventory by \$28,000 and increases Manufacturing Overhead by \$4,000, as shown below.

Let’s assume that the labor costs chargeable to Wallace’s three jobs are \$15,000, \$9,000, and \$4,000. Illustration 16-8 shows the Work in Process Inventory

Illustration 16-8
Job cost sheets—direct labor

Helpful Hint
Prove the \$28,000 direct labor charge to Work in Process Inventory by totaling the charges by jobs:

101	\$15,000	
102	9,000	
103	4,000	
	<u>\$28,000</u>	

Source documents for posting to job cost sheets and Work in Process Inventory:
Time tickets

and job cost sheets after posting. As in the case of direct materials, the postings to the direct labor columns of the job cost sheets should equal the posting of direct labor to Work in Process Inventory.

DO IT! 2 **Work in Process**

Danielle Company is working on two job orders. The job cost sheets show the following:

- Direct materials—Job 120 \$6,000; Job 121 \$3,600
- Direct labor—Job 120 \$4,000; Job 121 \$2,000
- Manufacturing overhead—Job 120 \$5,000; Job 121 \$2,500

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

Solution

The three summary entries are:

Work in Process Inventory (\$6,000 + \$3,600)	9,600	
Raw Materials Inventory (To assign materials to jobs)		9,600
Work in Process Inventory (\$4,000 + \$2,000)	6,000	
Factory Labor (To assign labor to jobs)		6,000
Work in Process Inventory (\$5,000 + \$2,500)	7,500	
Manufacturing Overhead (To assign overhead to jobs)		7,500

Related exercise material: **BE16-3, BE16-4, BE16-5, E16-2, E16-7, E16-8, and DO IT! 16-2.**

Action Plan

- ✓ Recognize that Work in Process Inventory is the control account for all unfinished job cost sheets.
- ✓ Debit Work in Process Inventory for the materials, labor, and overhead charged to the job cost sheets.
- ✓ Credit the accounts that were debited when the manufacturing costs were accumulated.

LEARNING OBJECTIVE

3 Demonstrate how to determine and use the predetermined overhead rate.

Companies charge the actual costs of direct materials and direct labor to specific jobs. In contrast, manufacturing **overhead** relates to production operations **as a whole**. As a result, overhead costs cannot be assigned to specific jobs on the basis of actual costs incurred. Instead, companies assign manufacturing overhead to work in process and to specific jobs **on an estimated basis through the use of a predetermined overhead rate**.

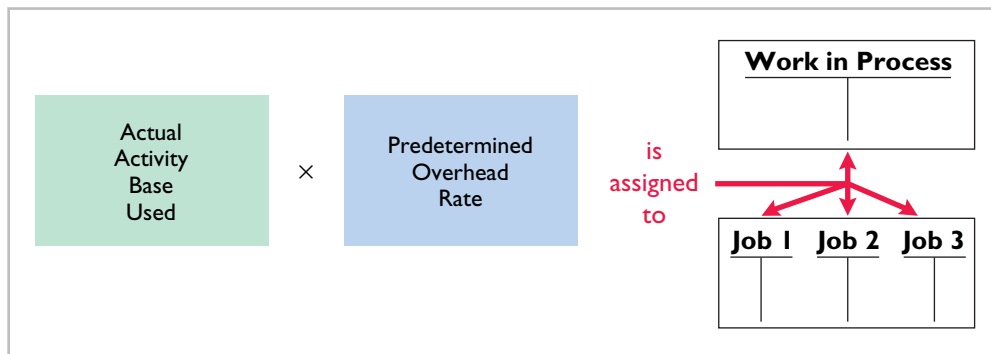

The **predetermined overhead rate** is based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common **activity base**. The company may state the activity in terms of direct labor costs, direct labor hours, machine hours, or any other measure that will provide an equitable basis for applying overhead costs to jobs. Companies establish the predetermined overhead rate at the beginning of the year. Small companies often use a single, company-wide predetermined overhead rate. Large companies often use rates that vary from department to department. The formula for a predetermined overhead rate is as follows.

Estimated Annual Overhead Costs	÷	Expected Annual Operating Activity	=	Predetermined Overhead Rate
------------------------------------	---	---------------------------------------	---	--------------------------------

Illustration 16-9
Formula for predetermined overhead rate

Overhead relates to production operations as a whole. To know what “the whole” is, the logical thing is to wait until the end of the year’s operations. At that time, the company knows all of its costs for the period. As a practical matter, though, managers cannot wait until the end of the year. To price products effectively as they are completed, managers need information about product costs of specific jobs completed during the year. Using a predetermined overhead rate enables a cost to be determined for the job immediately. Illustration 16-10 indicates how manufacturing overhead is assigned to work in process.

Illustration 16-10
Using predetermined overhead rates

Wallace Company uses direct labor cost as the activity base. Assuming that the company expects annual overhead costs to be \$280,000 and direct labor costs for the year to be \$350,000, the overhead rate is 80%, computed as follows.

Illustration 16-11
Calculation of predetermined overhead rate

Estimated Annual Overhead Costs	÷	Expected Direct Labor Cost	=	Predetermined Overhead Rate
\$280,000	÷	\$350,000	=	80%

This means that for every dollar of direct labor, Wallace will assign 80 cents of manufacturing overhead to a job. The use of a predetermined overhead rate enables the company to determine the approximate total cost of each job **when it completes the job**.

Historically, companies used direct labor costs or direct labor hours as the activity base. The reason was the relatively high correlation between direct labor and manufacturing overhead. Today, more companies are using **machine hours as the activity base, due to increased reliance on automation in manufacturing operations**. Or, as mentioned in Chapter 15 (and discussed more fully in Chapter 18), many companies now use activity-based costing to more accurately allocate overhead costs based on the activities that give rise to the costs.

A company may use more than one activity base. For example, if a job is manufactured in more than one factory department, each department may have its own overhead rate. In the Feature Story, **Disney** might use two bases in assigning overhead to film jobs: direct materials dollars for indirect materials, and direct labor hours for such costs as insurance and supervisor salaries.

Wallace Company applies manufacturing overhead to work in process when it assigns direct labor costs. It also applies manufacturing overhead to specific jobs at the same time. For January, Wallace applied overhead of \$22,400 in response to its assignment of \$28,000 of direct labor costs (direct labor cost of \$28,000 × 80%). The following entry records this application.

(6)			
Jan. 31	Work in Process Inventory	22,400	
	Manufacturing Overhead		22,400
	(To assign overhead to jobs)		

This entry reduces the balance in Manufacturing Overhead and increases Work in Process Inventory by \$22,400, as shown below.

Manufacturing Overhead		Work in Process Inventory	
13,800	22,400	24,000	
6,000		28,000	
4,000		22,400	

The overhead that Wallace applies to each job will be 80% of the direct labor cost of the job for the month. Illustration 16-12 shows the Work in Process Inventory account and the job cost sheets after posting. Note that the debit of \$22,400 to Work in Process Inventory equals the sum of the overhead applied to jobs: Job No. 101 \$12,000 + Job No. 102 \$7,200 + Job No. 103 \$3,200.

Illustration 16-12
Job cost sheets—manufacturing overhead applied

At the end of each month, the **balance in Work in Process Inventory should equal the sum of the costs shown on the job cost sheets of unfinished jobs.** Illustration 16-13 presents proof of the agreement of the control and subsidiary accounts in Wallace. (It assumes that all jobs are still in process.)

Work in Process Inventory		Job Cost Sheets	
Jan. 31	24,000	No. 101	\$ 39,000
31	28,000	102	23,200
31	22,400	103	12,200
	74,400		\$74,400

Illustration 16-13
Proof of job cost sheets to work in process inventory

DO IT!**3****Predetermined Overhead Rate****Action Plan**

- ✓ Predetermined overhead rate is estimated annual overhead cost divided by expected annual operating activity.
- ✓ Assignment of overhead to jobs is determined by multiplying the actual activity base used by the predetermined overhead rate.
- ✓ The entry to record the assignment of overhead transfers an amount out of Manufacturing Overhead into Work in Process Inventory.

Stanley Company produces specialized safety devices. For the year, manufacturing overhead costs are expected to be \$160,000. Expected machine usage is 40,000 hours. The company assigns overhead based on machine hours. Job No. 302 used 2,000 machine hours.

Compute the predetermined overhead rate, determine the amount of overhead to allocate to Job No. 302, and prepare the entry to assign overhead to Job No. 302 on March 31.

Solution

Predetermined overhead rate = $\$160,000 \div 40,000 \text{ hours} = \$4.00 \text{ per machine hour}$

Amount of overhead assigned to Job No. 302 = $2,000 \text{ hours} \times \$4.00 = \$8,000$

The entry to record the assignment of overhead to Job No. 302 on March 31 is:

Work in Process Inventory	8,000	
Manufacturing Overhead		8,000
(To assign overhead to jobs)		

Related exercise material: **BE16-6, BE16-7, E16-5, E16-6, and DO IT! 16-3.**

LEARNING OBJECTIVE**4****Prepare entries for manufacturing and service jobs completed and sold.****Assigning Costs to Finished Goods**

When a job is completed, Wallace Company summarizes the costs and completes the lower portion of the applicable job cost sheet. For example, if we assume that Wallace completes Job No. 101, a batch of electronic sensors, on January 31, the job cost sheet appears as shown in Illustration 16-14.

Illustration 16-14
Completed job cost sheet

Job Cost Sheet			
Job No.	101	Quantity	1,000
Item	Electronic Sensors	Date Requested	January 5
For	Tanner Company	Date Completed	January 31
Date	Direct Materials	Direct Labor	Manufacturing Overhead
1/6	\$ 1,000		
1/10		\$ 9,000	\$ 7,200
1/12	7,000		
1/26	4,000		
1/31		6,000	4,800
	\$12,000	\$15,000	\$12,000
Cost of completed job			
Direct materials		\$ 12,000	
Direct labor		15,000	
Manufacturing overhead		12,000	
Total cost		\$ 39,000	
Unit cost ($\$39,000 \div 1,000$)		\$ 39.00	

When a job is finished, Wallace makes an entry to transfer its total cost to finished goods inventory. The entry is as follows.

(7)			
Jan. 31	Finished Goods Inventory Work in Process Inventory (To record completion of Job No. 101)	39,000 	

This entry increases Finished Goods Inventory and reduces Work in Process Inventory by \$39,000, as shown in the T-accounts below.

<u>Work in Process Inventory</u>		<u>Finished Goods Inventory</u>
24,000 28,000 22,400	39,000	→ 39,000

Finished Goods Inventory is a control account. It controls individual finished goods records in a finished goods subsidiary ledger.

Assigning Costs to Cost of Goods Sold

Companies recognize cost of goods sold when each sale occurs. To illustrate the entries a company makes when it sells a completed job, assume that on January 31 Wallace Company sells on account Job No. 101. The job cost \$39,000, and it sold for \$50,000. The entries to record the sale and recognize cost of goods sold are:

(8)			
Jan. 31	Accounts Receivable Sales Revenue (To record sale of Job No. 101)	50,000 	
31	Cost of Goods Sold Finished Goods Inventory (To record cost of Job No. 101)	39,000 	

This entry increases Cost of Goods Sold and reduces Finished Goods Inventory by \$39,000, as shown in the T-accounts below.

<u>Finished Goods Inventory</u>		<u>Cost of Goods Sold</u>
39,000	39,000	→ 39,000

Summary of Job Order Cost Flows

Illustration 16-15 shows a completed flowchart for a job order cost accounting system. All postings are keyed to entries 1–8 in the example presented in the previous pages for Wallace Company.

The cost flows in the diagram can be categorized as one of four types:

- **Accumulation.** The company first accumulates costs by (1) purchasing raw materials, (2) incurring labor costs, and (3) incurring manufacturing overhead costs.
- **Assignment to jobs.** Once the company has incurred manufacturing costs, it must assign them to specific jobs. For example, as it uses raw materials on specific jobs (4), the company assigns them to work in process or treats them as manufacturing overhead if the raw materials cannot be associated with a specific job. Similarly, the company either assigns factory labor (5) to work in process or treats it as manufacturing overhead if the factory labor cannot be associated with a specific job. Finally the company

assigns manufacturing overhead (6) to work in process using a *predetermined overhead rate*. This deserves emphasis: **Do not assign overhead using actual overhead costs but instead use a predetermined rate.**

- **Completed jobs.** As jobs are completed (7), the company transfers the cost of the completed job out of work in process inventory into finished goods inventory.
- **When goods are sold.** As specific items are sold (8), the company transfers their cost out of finished goods inventory into cost of goods sold.

Illustration 16-15
Flow of costs in a job order cost system

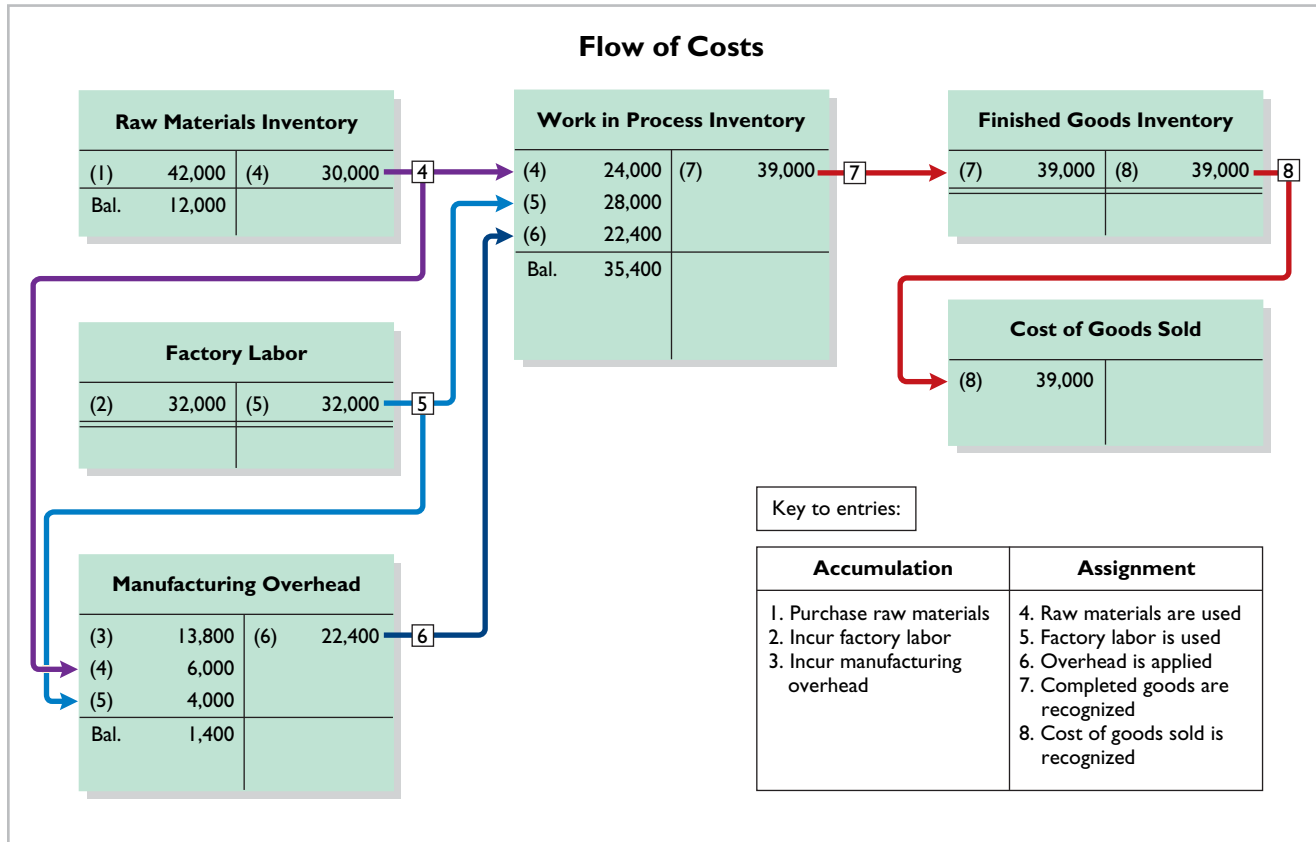

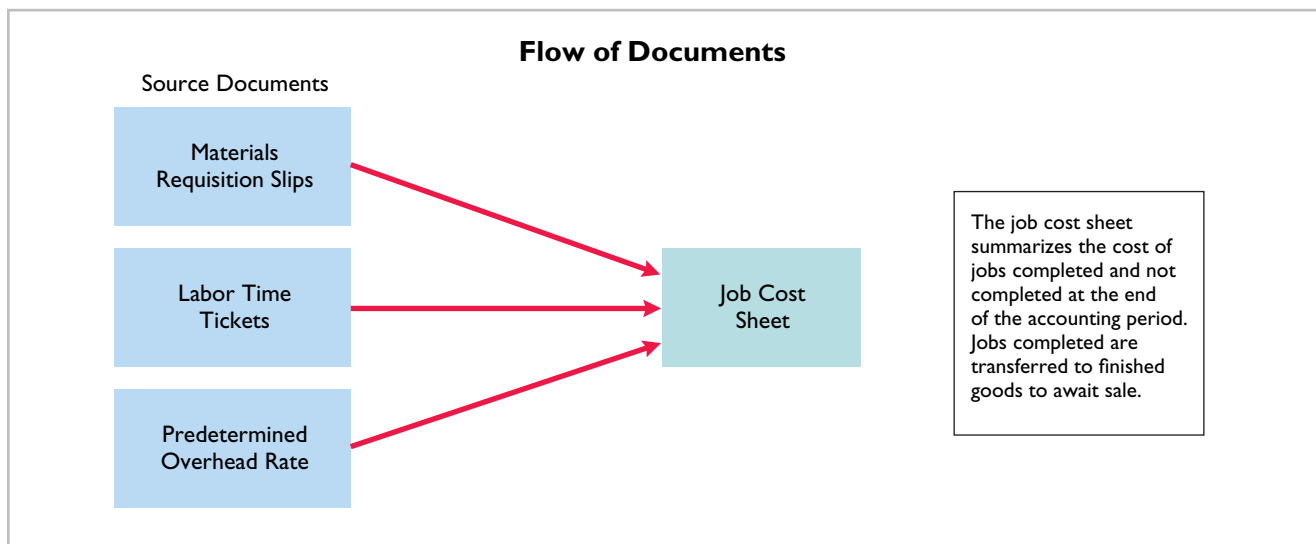

Illustration 16-16
Flow of documents in a job order cost system

Illustration 16-16 summarizes the flow of documents in a job order cost system.

Job Order Costing for Service Companies

Our extended job order costing example focuses on a manufacturer so that you see the flow of costs through the inventory accounts. It is important to understand, however, that job order costing is also commonly used by service companies. While service companies do not have inventory, the techniques of job order costing are still quite useful in many service-industry environments. Consider, for example, the **Mayo Clinic** (healthcare), **PriceWaterhouseCoopers** (accounting), and **Goldman Sachs** (investment banking). These companies need to keep track of the cost of jobs performed for specific customers to evaluate the profitability of medical treatments, audits, or investment banking engagements.

Many service organizations bill their customers using cost-plus contracts (discussed more fully in Chapter 22). Cost-plus contracts mean that the customer's bill is the sum of the costs incurred on the job, plus a profit amount that is calculated as a percentage of the costs incurred. In order to minimize conflict with customers and reduce potential contract disputes, service companies that use cost-plus contracts must maintain accurate and up-to-date costing records. Up-to-date cost records enable a service company to immediately notify a customer of cost overruns due to customer requests for changes to the original plan or unexpected complications. Timely recordkeeping allows the contractor and customer to consider alternatives before it is too late.

A service company that uses a job order cost system does not have inventory accounts. It does, however, use an account similar to Work in Process Inventory, referred to here as Service Contracts in Process, to record job costs prior to completion. To illustrate the journal entries for a service company under a job order cost system, consider the following transactions for Dorm Decor, an interior design company. The entry to record the assignment of \$9,000 of supplies to projects (\$7,000 direct and \$2,000 indirect) is:

Service Contracts in Process	7,000	
Operating Overhead	2,000	
Supplies		9,000
(To assign supplies to projects)		

The entry to record the assignment of service salaries and wages of \$100,000 (\$84,000 direct and \$16,000 indirect) is:

Service Contracts in Process	84,000	
Operating Overhead	16,000	
Service Salaries and Wages		100,000
(To assign personnel costs to projects)		

Dorm Decor applies operating overhead at a rate of 50% of direct labor costs. The entry to record the application of overhead ($\$84,000 \times 50\%$) based on the direct labor costs is:

Service Contracts in Process	42,000	
Operating Overhead		42,000
(To assign operating overhead to projects)		

Upon completion of a design project (for State University) the job cost sheet shows a total cost of \$34,000. The entry to record completion of this project is:

Cost of Completed Service Contracts	34,000	
Service Contracts in Process		34,000
(To record completion of State University project)		

Job cost sheets for a service company keep track of materials, labor, and overhead used on a particular job similar to a manufacturer. Several exercises at the end of this chapter apply job order costing to service companies.

Service Company Insight **General Electric**

© Christian Lagareek/iStockphoto

Sales Are Nice, but Service Revenue Pays the Bills

Jet engines are one of the many products made by the industrial operations division of **General Electric (GE)**. At prices as high as \$30 million per engine, you can bet that GE does its best to keep track of costs. It might surprise you that GE doesn't make much profit on the sale of each engine.

So why does it bother making them? For the service revenue. During one recent year, about 75% of the division's revenues came from servicing its own products. One estimate is that the \$13 billion in aircraft engines sold

during a recent three-year period will generate about \$90 billion in service revenue over the 30-year life of the engines. Because of the high product costs, both the engines themselves and the subsequent service are most likely accounted for using job order costing. Accurate service cost records are important because GE needs to generate high profit margins on its service jobs to make up for the low margins on the original sale. It also needs good cost records for its service jobs in order to control its costs. Otherwise, a competitor, such as **Pratt and Whitney**, might submit lower bids for service contracts and take lucrative service jobs away from GE.

Source: Paul Glader, "GE's Focus on Services Faces Test," *Wall Street Journal Online* (March 3, 2009).

Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. (Go to **WileyPLUS** for this answer and additional questions.)

Advantages and Disadvantages of Job Order Costing

Job order costing is more precise in the assignment of costs to projects than process costing. For example, assume that a construction company, Juan Company, builds 10 custom homes a year at a total cost of \$2,000,000. One way to determine the cost of the homes is to divide the total construction cost incurred during the year by the number of homes produced during the year. For Juan Company, an average cost of \$200,000 ($\$2,000,000 \div 10$) is computed. If the homes are nearly identical, then this approach is adequate for purposes of determining profit per home. But if the homes vary in terms of size, style, and material types, using the average cost of \$200,000 to determine profit per home is inappropriate. Instead, Juan Company should use a job order cost system to determine the specific cost incurred to build each home and the amount of profit made on each. Thus, job order costing provides more useful information for determining the profitability of particular projects and for estimating costs when preparing bids on future jobs.

However, job order costing requires a significant amount of data entry. For Juan Company, it is much easier to simply keep track of total costs incurred during the year than it is to keep track of the costs incurred on each job (home built). Recording this information is time-consuming, and if the data is not entered accurately, then the product costs are incorrect. In recent years, technological advances, such as bar-coding devices for both labor costs and materials, have increased the accuracy and reduced the effort needed to record costs on specific jobs. These innovations expand the opportunities to apply job order costing in a

wider variety of business settings, thus improving management's ability to control costs and make better informed decisions.

A common problem of all costing systems is how to allocate overhead to the finished product. Overhead often represents more than 50% of a product's cost, and this cost is often difficult to allocate meaningfully to the product. How, for example, is the salary of a project manager at Juan Company allocated to the various homes, which may differ in size, style, and cost of materials used? The accuracy of the job order cost system is largely dependent on the accuracy of the overhead allocation process. Even if the company does a good job of keeping track of the specific amounts of materials and labor used on each job, if the overhead costs are not allocated to individual jobs in a meaningful way, the product costing information is not useful. We address this issue in more detail in Chapter 18.

DO IT!**4****Completion and Sale of Jobs**

During the current month, Onyx Corporation completed Job 109 and Job 112. Job 109 cost \$19,000 and Job 112 cost \$27,000. Job 112 was sold on account for \$42,000. Journalize the entries for the completion of the two jobs and the sale of Job 112.

Solution

Finished Goods Inventory	46,000	
Work in Process Inventory		46,000
(To record completion of Job 109, costing \$19,000 and Job 112, costing \$27,000)		
Accounts Receivable	42,000	
Sales Revenue		42,000
(To record sale of Job 112)		
Cost of Goods Sold	27,000	
Finished Goods Inventory		27,000
(To record cost of goods sold for Job 112)		

Action Plan

- ✓ Debit Finished Goods Inventory for the cost of completed jobs.
- ✓ Debit Cost of Goods Sold for the cost of jobs sold.

Related exercise material: **BE16-9, BE16-10, E16-2, E16-3, E16-6, E16-7, E16-10, and DO IT! 16-4.**

LEARNING OBJECTIVE**5****Distinguish between under- and overapplied manufacturing overhead.**

At the end of a period, companies prepare financial statements that present aggregate data on all jobs manufactured and sold. The cost of goods manufactured schedule in job order costing is the same as in Chapter 15 with one exception: **The schedule shows manufacturing overhead applied, rather than actual overhead costs. The company adds this amount to direct materials and direct labor to determine total manufacturing costs.**

Companies prepare the cost of goods manufactured schedule directly from the Work in Process Inventory account. Illustration 16-17 (page 772) shows a condensed schedule for Wallace Company for January.

Helpful Hint

Companies usually prepare monthly financial statements for management use only.

Illustration 16-17

Cost of goods manufactured schedule

WALLACE COMPANY		
Cost of Goods Manufactured Schedule For the Month Ending January 31, 2017		
Work in process, January 1		\$ -0-
Direct materials used	\$ 24,000	
Direct labor	28,000	
Manufacturing overhead applied	<u>22,400</u>	
Total manufacturing costs		<u>74,400</u>
Total cost of work in process		74,400
Less: Work in process, January 31		<u>35,400</u>
Cost of goods manufactured		<u><u>\$39,000</u></u>

Note that the cost of goods manufactured (\$39,000) agrees with the amount transferred from Work in Process Inventory to Finished Goods Inventory in journal entry No. 7 in Illustration 16-15 (page 768).

The income statement and balance sheet are the same as those illustrated in Chapter 15. For example, Illustration 16-18 shows the partial income statement for Wallace for the month of January.

Illustration 16-18

Partial income statement

WALLACE COMPANY		
Income Statement (partial) For the Month Ending January 31, 2017		
Sales revenue		\$50,000
Cost of goods sold		
Finished goods inventory, January 1	\$ -0-	
Cost of goods manufactured (see Illustration 16-17)	<u>39,000</u>	
Cost of goods available for sale		<u>39,000</u>
Less: Finished goods inventory, January 31		<u>-0-</u>
Cost of goods sold		<u>39,000</u>
Gross profit		<u><u>\$11,000</u></u>

Under- or Overapplied Manufacturing Overhead

Recall that overhead is applied based on an estimate of total annual overhead costs. This estimate will rarely be exactly equal to actual overhead incurred. Therefore, at the end of the year, after overhead has been applied to specific jobs, the Manufacturing Overhead account will likely have a remaining balance.

When Manufacturing Overhead has a **debit balance**, overhead is said to be underapplied. **Underapplied overhead** means that the overhead assigned to work in process is less than the overhead incurred. Conversely, when manufacturing overhead has a **credit balance**, overhead is overapplied. **Overapplied overhead** means that the overhead assigned to work in process is greater than the overhead incurred. Illustration 16-19 shows these concepts.

Illustration 16-19

Under- and overapplied overhead

YEAR-END BALANCE

At the end of the year, all manufacturing overhead transactions are complete. There is no further opportunity for offsetting events to occur. At this point, Wallace Company eliminates any balance in Manufacturing Overhead by an adjusting entry. It considers under- or overapplied overhead to be an **adjustment to cost of goods sold**. Thus, Wallace **debits underapplied overhead to Cost of Goods Sold**. It **credits overapplied overhead to Cost of Goods Sold**.

To illustrate, assume that Wallace has a \$2,500 credit balance in Manufacturing Overhead at December 31. The adjusting entry for the overapplied overhead is:

Dec. 31	Manufacturing Overhead Cost of Goods Sold (To transfer overapplied overhead to cost of goods sold)	2,500 	2,500
---------	---	-------------------	-------

After Wallace posts this entry, Manufacturing Overhead has a zero balance. In preparing an income statement for the year, Wallace reports cost of goods sold **after adjusting it** for either under- or overapplied overhead.

Conceptually, some argue that under- or overapplied overhead at the end of the year should be allocated among ending work in process, finished goods, and cost of goods sold. The discussion of this possible allocation approach is left to more advanced courses.

DO IT!

5

Applied Manufacturing Overhead

For Karr Company, the predetermined overhead rate is 140% of direct labor cost. During the month, Karr incurred \$90,000 of factory labor costs, of which \$80,000 is direct labor and \$10,000 is indirect labor. Actual overhead incurred was \$119,000.

Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Solution

$$\begin{aligned} \text{Manufacturing overhead applied} &= (140\% \times \$80,000) = \$112,000 \\ \text{Underapplied manufacturing overhead} &= (\$119,000 - \$112,000) = \$7,000 \end{aligned}$$

Related exercise material: **BE16-10, E16-4, E16-5, E16-12, E16-13, and DO IT! 16-5.**

Action Plan

- ✓ Calculate the amount of overhead applied by multiplying the predetermined overhead rate by actual activity.
- ✓ If actual manufacturing overhead is greater than applied, manufacturing overhead is underapplied.
- ✓ If actual manufacturing overhead is less than applied, manufacturing overhead is overapplied.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Describe cost systems and the flow of costs in a job order system.** Cost accounting involves the procedures for measuring, recording, and reporting product costs. From the data accumulated, companies determine the total cost and the unit cost of each product. The two basic types of cost accounting systems are process cost and job order cost.

In job order costing, companies first accumulate manufacturing costs in three accounts: Raw Materials

Inventory, Factory Labor, and Manufacturing Overhead. They then assign the accumulated costs to Work in Process Inventory and eventually to Finished Goods Inventory and Cost of Goods Sold.

- 2 **Use a job cost sheet to assign costs to work in process.** A job cost sheet is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. Job cost sheets

constitute the subsidiary ledger for the Work in Process Inventory control account.

- 3 **Demonstrate how to determine and use the predetermined overhead rate.** The predetermined overhead rate is based on the relationship between estimated annual overhead costs and expected annual operating activity. This is expressed in terms of a common activity base, such as direct labor cost. Companies use this rate to assign overhead costs to work in process and to specific jobs.
- 4 **Prepare entries for manufacturing and service jobs completed and sold.** When jobs are completed, companies

debit the cost to Finished Goods Inventory and credit it to Work in Process Inventory. When a job is sold, the entries are (a) debit Cash or Accounts Receivable and credit Sales Revenue for the selling price, and (b) debit Cost of Goods Sold and credit Finished Goods Inventory for the cost of the goods.

- 5 **Distinguish between under- and overapplied manufacturing overhead.** Underapplied manufacturing overhead indicates that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead indicates that the overhead assigned to work in process is greater than the overhead incurred.

GLOSSARY REVIEW

Cost accounting An area of accounting that involves measuring, recording, and reporting product costs. (p. 754).

Cost accounting system Manufacturing-cost accounts that are fully integrated into the general ledger of a company. (p. 754).

Job cost sheet A form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. (p. 758).

Job order cost system A cost accounting system in which costs are assigned to each job or batch. (p. 754).

Materials requisition slip A document authorizing the issuance of raw materials from the storeroom to production. (p. 759).

Overapplied overhead A situation in which overhead assigned to work in process is greater than the overhead incurred. (p. 772).

Predetermined overhead rate A rate based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common activity base. (p. 763).

Process cost system A cost accounting system used when a company manufactures a large volume of similar products. (p. 754).

Time ticket A document that indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. (p. 761).

Underapplied overhead A situation in which overhead assigned to work in process is less than the overhead incurred. (p. 772).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Cost accounting involves the measuring, recording, and reporting of:
 - (a) product costs.
 - (b) future costs.
 - (c) manufacturing processes.
 - (d) managerial accounting decisions.
- (LO 1) 2. A company is more likely to use a job order cost system if:
 - (a) it manufactures a large volume of similar products.
 - (b) its production is continuous.
 - (c) it manufactures products with unique characteristics.
 - (d) it uses a periodic inventory system.
- (LO 1) 3. In accumulating raw materials costs, companies debit the cost of raw materials purchased in a perpetual system to:
 - (a) Raw Materials Purchases.
 - (b) Raw Materials Inventory.
 - (c) Purchases.
 - (d) Work in Process.
- (LO 1) 4. When incurred, factory labor costs are debited to:
 - (a) Work in Process.
 - (b) Factory Wages Expense.
 - (c) Factory Labor.
 - (d) Factory Wages Payable.
5. The flow of costs in job order costing: (LO 1)
 - (a) begins with work in process inventory and ends with finished goods inventory.
 - (b) begins as soon as a sale occurs.
 - (c) parallels the physical flow of materials as they are converted into finished goods.
 - (d) is necessary to prepare the cost of goods manufactured schedule.
6. Raw materials are assigned to a job when: (LO 2)
 - (a) the job is sold.
 - (b) the materials are purchased.
 - (c) the materials are received from the vendor.
 - (d) the materials are issued by the materials storeroom.
7. The source of information for assigning costs to job cost sheets are: (LO 2)
 - (a) invoices, time tickets, and the predetermined overhead rate.
 - (b) materials requisition slips, time tickets, and the actual overhead costs.

- (c) materials requisition slips, payroll register, and the predetermined overhead rate.
 (d) materials requisition slips, time tickets, and the predetermined overhead rate.
- (LO 2) 8. In recording the issuance of raw materials in a job order cost system, it would be **incorrect** to:
 (a) debit Work in Process Inventory.
 (b) debit Finished Goods Inventory.
 (c) debit Manufacturing Overhead.
 (d) credit Raw Materials Inventory.
- (LO 2) 9. The entry when direct factory labor is assigned to jobs is a debit to:
 (a) Work in Process Inventory and a credit to Factory Labor.
 (b) Manufacturing Overhead and a credit to Factory Labor.
 (c) Factory Labor and a credit to Manufacturing Overhead.
 (d) Factory Labor and a credit to Work in Process Inventory.
- (LO 3) 10. The formula for computing the predetermined manufacturing overhead rate is estimated annual overhead costs divided by an expected annual operating activity, expressed as:
 (a) direct labor cost. (c) machine hours.
 (b) direct labor hours. (d) Any of the above.
- (LO 3) 11. In Crawford Company, the predetermined overhead rate is 80% of direct labor cost. During the month, Crawford incurs \$210,000 of factory labor costs, of which \$180,000 is direct labor and \$30,000 is indirect labor. Actual overhead incurred was \$200,000. The amount of overhead debited to Work in Process Inventory should be:
 (a) \$200,000. (c) \$168,000.
 (b) \$144,000. (d) \$160,000.
- (LO 4) 12. Mynex Company completes Job No. 26 at a cost of \$4,500 and later sells it for \$7,000 cash. A **correct** entry is:
 (a) debit Finished Goods Inventory \$7,000 and credit Work in Process Inventory \$7,000.
 (b) debit Cost of Goods Sold \$7,000 and credit Finished Goods Inventory \$7,000.
 (c) debit Finished Goods Inventory \$4,500 and credit Work in Process Inventory \$4,500.
 (d) debit Accounts Receivable \$7,000 and credit Sales Revenue \$7,000.
13. At the end of an accounting period, a company using a job order cost system calculates the cost of goods manufactured:
 (a) from the job cost sheet.
 (b) from the Work in Process Inventory account.
 (c) by adding direct materials used, direct labor incurred, and manufacturing overhead incurred.
 (d) from the Cost of Goods Sold account.
14. Which of the following statements is **true**?
 (a) Job order costing requires less data entry than process costing.
 (b) Allocation of overhead is easier under job order costing than process costing.
 (c) Job order costing provides more precise costing for custom jobs than process costing.
 (d) The use of job order costing has declined because more companies have adopted automated accounting systems.
15. At end of the year, a company has a \$1,200 debit balance in Manufacturing Overhead. The company:
 (a) makes an adjusting entry by debiting Manufacturing Overhead Applied for \$1,200 and crediting Manufacturing Overhead for \$1,200.
 (b) makes an adjusting entry by debiting Manufacturing Overhead Expense for \$1,200 and crediting Manufacturing Overhead for \$1,200.
 (c) makes an adjusting entry by debiting Cost of Goods Sold for \$1,200 and crediting Manufacturing Overhead for \$1,200.
 (d) makes no adjusting entry because differences between actual overhead and the amount applied are a normal part of job order costing and will average out over the next year.
16. Manufacturing overhead is underapplied if:
 (a) actual overhead is less than applied.
 (b) actual overhead is greater than applied.
 (c) the predetermined rate equals the actual rate.
 (d) actual overhead equals applied overhead.

Solutions

1. (a) Cost accounting involves the measuring, recording, and reporting of product costs, not (b) future costs, (c) manufacturing processes, or (d) managerial accounting decisions.
2. (c) A job costing system is more likely for products with unique characteristics. The other choices are incorrect because a process cost system is more likely for (a) large volumes of similar products or (b) if production is continuous. (d) is incorrect because the choice of a costing system is not dependent on whether a periodic or perpetual inventory system is used.
3. (b) In a perpetual system, purchases of raw materials are debited to Raw Materials Inventory, not (a) Raw Materials Purchases, (c) Purchases, or (d) Work in Process.
4. (c) When factory labor costs are incurred, they are debited to Factory Labor, not (a) Work in Process, (b) Factory Wages Expense, or (d) credited to Factory Labor (they are debited to Factory Labor and credited to Factory Wages Payable).
5. (c) Job order costing parallels the physical flow of materials as they are converted into finished goods. The other choices are incorrect because job order costing begins (a) with raw materials, not work in process, and ends with finished goods; and (b) as soon as raw materials are purchased, not when the sale occurs. (d) is incorrect because the cost of goods manufactured schedule is prepared from the Work in Process account and is only a portion of the costs in a job order system.
6. (d) Raw materials are assigned to a job when the materials are issued by the materials storeroom, not when (a) the job is sold, (b) the materials are purchased, or (c) the materials are received from the vendor.

7. (d) Materials requisition slips are used to assign direct materials, time tickets are used to assign direct labor, and the predetermined overhead rate is used to assign manufacturing overhead to job cost sheets. The other choices are incorrect because (a) materials requisition slips, not invoices, are used to assign direct materials; (b) the predetermined overhead rate, not the actual overhead costs, is used to assign manufacturing overhead; and (c) time tickets, not the payroll register, are used to assign direct labor.

8. (b) Finished Goods Inventory is debited when goods are transferred from work in process to finished goods, not when raw materials are issued for a job. Choices (a), (c), and (d) are true statements.

9. (a) When direct factory labor is assigned to jobs, the entry is a debit to Work in Process Inventory and a credit to Factory Labor. The other choices are incorrect because (b) Work in Process Inventory, not Manufacturing Overhead, is debited; (c) Work in Process Inventory, not Factory Labor, is debited and Factory Labor, not Manufacturing Overhead, is credited; and (d) Work in Process Inventory, not Factory Labor, is debited and Factory Labor, not Work in Process Inventory, is credited.

10. (d) Any of the activity measures mentioned can be used in computing the predetermined manufacturing overhead rate. Choices (a) direct labor cost, (b) direct labor hours, and (c) machine hours can all be used in computing the predetermined manufacturing overhead rate, but (d) is a better answer.

11. (b) Work in Process Inventory should be debited for \$144,000 ($\$180,000 \times 80\%$), the amount of manufacturing overhead applied, not (a) \$200,000, (c) \$168,000, or (d) \$160,000.

12. (c) When a job costing \$4,500 is completed, Finished Goods Inventory is debited and Work in Process Inventory is credited for \$4,500. Choices (a) and (b) are incorrect because the amounts should be for the cost of the job (\$4,500), not the sale amount (\$7,000). Choice (d) is incorrect because the debit should be to Cash, not Accounts Receivable.

13. (b) At the end of an accounting period, a company using a job costing system prepares the cost of goods manufactured from the Work in Process Inventory account, not (a) the job cost sheet; (c) by adding direct materials used, direct labor incurred, and manufacturing overhead incurred; or (d) from the Cost of Goods Sold Account.

14. (c) Job order costing provides more precise costing for custom jobs than process costing. The other choices are incorrect because (a) job order costing often requires significant data entry, (b) overhead allocation is a problem for all costing systems, and (d) the use of job order costing has increased due to automated accounting systems.

15. (c) The company would make an adjusting entry for the underapplied overhead by debiting Cost of Goods Sold for \$1,200 and crediting Manufacturing Overhead for \$1,200, not by debiting (a) Manufacturing Overhead Applied for \$1,200 or (b) Manufacturing Overhead Expense for \$1,200. Choice (d) is incorrect because at the end of the year, a company makes an entry to eliminate any balance in Manufacturing Overhead.

16. (b) Manufacturing overhead is underapplied if actual overhead is greater than applied overhead. The other choices are incorrect because (a) if actual overhead is less than applied, then manufacturing overhead is overapplied; (c) if the predetermined rate equals the actual rate, the actual overhead costs incurred equal the overhead costs applied, neither over- nor underapplied; and (d) if the actual overhead equals the applied overhead, neither over- nor underapplied occurs.

PRACTICE EXERCISES

Analyze a job cost sheet and prepare entries for manufacturing costs.

(LO 1, 2, 3, 4)

1. A job order cost sheet for Michaels Company is shown below.

Job No. 92		For 2,000 Units	
Date	Direct Materials	Direct Labor	Manufacturing Overhead
Beg. bal. Jan. 1	3,925	6,000	4,200
8	6,000		
12		8,500	6,375
25	2,000		
27		4,000	3,000
	11,925	18,500	13,575
Cost of completed job:			
	Direct materials		\$11,925
	Direct labor		18,500
	Manufacturing overhead		13,575
	Total cost		<u>\$44,000</u>
	Unit cost ($\$44,000 \div 2,000$)		<u>\$ 22.00</u>

Instructions

- (a) Answer the following questions.
- (1) What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
 - (2) If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
- (b) Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

Solution

1. (a) 1.	\$14,125, or (\$3,925 + \$6,000 + \$4,200).		
2.	Last year 70%, or (\$4,200 ÷ \$6,000); this year 75% (either \$6,375 ÷ \$8,500 or \$3,000 ÷ \$4,000).		
(b) Jan. 31	Work in Process Inventory	8,000	
	Raw Materials Inventory		8,000
	(\$6,000 + \$2,000)		
31	Work in Process Inventory	12,500	
	Factory Labor		12,500
	(\$8,500 + \$4,000)		
31	Work in Process Inventory	9,375	
	Manufacturing Overhead		9,375
	(\$6,375 + \$3,000)		
31	Finished Goods Inventory	44,000	
	Work in Process Inventory		44,000

2. Kwik Kopy Company applies operating overhead to photocopying jobs on the basis of machine hours used. Overhead costs are expected to total \$290,000 for the year, and machine usage is estimated at 125,000 hours.

For the year, \$295,000 of overhead costs are incurred and 130,000 hours are used.

Compute the overhead rate and under- or overapplied overhead.

(LO 3, 5)

Instructions

- (a) Compute the service overhead rate for the year.
- (b) What is the amount of under- or overapplied overhead at December 31?
- (c) Assuming the under- or overapplied overhead for the year is not allocated to inventory accounts, prepare the adjusting entry to assign the amount to cost of jobs finished.

Solution

2. (a)	\$2.32 per machine hour (\$290,000 ÷ 125,000).		
(b)	(\$295,000) – (\$2.32 × 130,000 machine hours)		
	\$295,000 – \$301,600 = \$6,600 overapplied		
(c)	Operating Overhead	6,600	
	Cost of Goods Sold		6,600

PRACTICE PROBLEM

Cardella Company applies overhead on the basis of direct labor costs. The company estimates annual overhead costs will be \$760,000 and annual direct labor costs will be \$950,000. During February, Cardella works on two jobs: A16 and B17. Summary data concerning these jobs are as follows.

Compute predetermined overhead rate, apply overhead, and calculate under- or overapplied overhead.

(LO 3, 5)

Manufacturing Costs Incurred

Purchased \$54,000 of raw materials on account.

Factory labor \$76,000, plus \$4,000 employer payroll taxes.

Manufacturing overhead exclusive of indirect materials and indirect labor \$59,800.

Assignment of Costs

Direct materials: Job A16 \$27,000, Job B17 \$21,000

Indirect materials: \$3,000

Direct labor: Job A16 \$52,000, Job B17 \$26,000

Indirect labor: \$2,000

The company completed Job A16 and sold it on account for \$150,000. Job B17 was only partially completed.

Instructions

- Compute the predetermined overhead rate.
- Journalize the February transactions in the sequence followed in the chapter.
- What was the amount of under- or overapplied manufacturing overhead?

Solution

(a)	Estimated annual overhead costs	÷	Expected annual operating activity	=	Predetermined overhead rate
	\$760,000	÷	\$950,000	=	80%
(b)					
Feb. 28	Raw Materials Inventory		54,000		54,000
	Accounts Payable				
	(Purchase of raw materials on account)				
		(1)			
28	Factory Labor		80,000		76,000
	Factory Wages Payable				4,000
	Employer Payroll Taxes Payable				
	(To record factory labor costs)				
		(2)			
28	Manufacturing Overhead		59,800		59,800
	Accounts Payable, Accumulated Depreciation, and Prepaid Insurance				
	(To record overhead costs)				
		(3)			
28	Work in Process Inventory		48,000		51,000
	Manufacturing Overhead		3,000		
	Raw Materials Inventory				
	(To assign raw materials to production)				
		(4)			
28	Work in Process Inventory		78,000		80,000
	Manufacturing Overhead		2,000		
	Factory Labor				
	(To assign factory labor to production)				
		(5)			
28	Work in Process Inventory		62,400		62,400
	Manufacturing Overhead				
	(To assign overhead to jobs— 80% × \$78,000)				
		(6)			
28	Finished Goods Inventory		120,600		120,600
	Work in Process Inventory				
	(To record completion of Job A16: direct materials \$27,000, direct labor \$52,000, and manufacturing overhead \$41,600)				
		(7)			

		(8)		
28	Accounts Receivable Sales Revenue (To record sale of Job A16)	150,000		150,000
28	Cost of Goods Sold Finished Goods Inventory (To record cost of sale for Job A16)	120,600		120,600

(c) Manufacturing Overhead has a debit balance of \$2,400 as shown below.

Manufacturing Overhead			
(3)	59,800	(6)	62,400
(4)	3,000		
(5)	2,000		
Bal.	2,400		

Thus, manufacturing overhead is underapplied for the month.

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

1. (a) Mary Barrett is not sure about the difference between cost accounting and a cost accounting system. Explain the difference to Mary.
(b) What is an important feature of a cost accounting system?
2. (a) Distinguish between the two types of cost accounting systems.
(b) Can a company use both types of cost accounting systems?
3. What type of industry is likely to use a job order cost system? Give some examples.
4. What type of industry is likely to use a process cost system? Give some examples.
5. Your roommate asks your help in understanding the major steps in the flow of costs in a job order cost system. Identify the steps for your roommate.
6. There are three inventory control accounts in a job order system. Identify the control accounts and their subsidiary ledgers.
7. What source documents are used in accumulating direct labor costs?
8. "Entries to Manufacturing Overhead normally are only made daily." Do you agree? Explain.
9. Stan Kaiser is confused about the source documents used in assigning materials and labor costs. Identify the documents and give the entry for each document.
10. What is the purpose of a job cost sheet?
11. Indicate the source documents that are used in charging costs to specific jobs.
12. Explain the purpose and use of a "materials requisition slip" as used in a job order cost system.
13. Sam Bowden believes actual manufacturing overhead should be charged to jobs. Do you agree? Why or why not?
14. What elements are involved in computing a predetermined overhead rate?
15. How can the agreement of Work in Process Inventory and job cost sheets be verified?
16. Jane Neff believes that the cost of goods manufactured schedule in job order cost accounting is the same as shown in Chapter 15. Is Jane correct? Explain.
17. Matt Litkee is confused about under- and overapplied manufacturing overhead. Define the terms for Matt, and indicate the balance in the manufacturing overhead account applicable to each term.
18. "At the end of the year, under- or overapplied overhead is closed to Income Summary." Is this correct? If not, indicate the customary treatment of this amount.

BRIEF EXERCISES

BE16-1 Dieker Company begins operations on January 1. Because all work is done to customer specifications, the company decides to use a job order cost system. Prepare a flowchart of a typical job order system with arrows showing the flow of costs. Identify the eight transactions.

Prepare a flowchart of a job order cost accounting system and identify transactions.

(LO 1)

Prepare entries in accumulating manufacturing costs.

(LO 1)

BE16-2 During January, its first month of operations, Dieker Company accumulated the following manufacturing costs: raw materials \$4,000 on account, factory labor \$6,000 of which \$5,200 relates to factory wages payable and \$800 relates to payroll taxes payable, and utilities payable \$2,000. Prepare separate journal entries for each type of manufacturing cost.

Prepare entry for the assignment of raw materials costs.

(LO 2)

BE16-3 In January, Dieker Company requisitions raw materials for production as follows: Job 1 \$900, Job 2 \$1,200, Job 3 \$700, and general factory use \$600. Prepare a summary journal entry to record raw materials used.

Prepare entry for the assignment of factory labor costs.

(LO 2)

BE16-4 Factory labor data for Dieker Company is given in BE16-2. During January, time tickets show that the factory labor of \$6,000 was used as follows: Job 1 \$2,200, Job 2 \$1,600, Job 3 \$1,400, and general factory use \$800. Prepare a summary journal entry to record factory labor used.

Prepare job cost sheets.

(LO 2)

BE16-5 Data pertaining to job cost sheets for Dieker Company are given in BE16-3 and BE16-4. Prepare the job cost sheets for each of the three jobs. (*Note:* You may omit the column for Manufacturing Overhead.)

Compute predetermined overhead rates.

(LO 3)

BE16-6 Marquis Company estimates that annual manufacturing overhead costs will be \$900,000. Estimated annual operating activity bases are direct labor cost \$500,000, direct labor hours 50,000, and machine hours 100,000. Compute the predetermined overhead rate for each activity base.

Assign manufacturing overhead to production.

(LO 3)

BE16-7 During the first quarter, Francum Company incurs the following direct labor costs: January \$40,000, February \$30,000, and March \$50,000. For each month, prepare the entry to assign overhead to production using a predetermined rate of 70% of direct labor cost.

Prepare entries for completion and sale of completed jobs.

(LO 4)

BE16-8 In March, Stinson Company completes Jobs 10 and 11. Job 10 cost \$20,000 and Job 11 \$30,000. On March 31, Job 10 is sold to the customer for \$35,000 in cash. Journalize the entries for the completion of the two jobs and the sale of Job 10.

Prepare entries for service salaries and wages and operating overhead.

(LO 4)

BE16-9 Ruiz Engineering Contractors incurred service salaries and wages of \$36,000 (\$28,000 direct and \$8,000 indirect) on an engineering project. The company applies overhead at a rate of 25% of direct labor. Record the entries to assign service salaries and wages and to apply overhead.

Prepare adjusting entries for under- and overapplied overhead.

(LO 5)

BE16-10 At December 31, balances in Manufacturing Overhead are Shimeca Company—debit \$1,200, Garcia Company—credit \$900. Prepare the adjusting entry for each company at December 31, assuming the adjustment is made to cost of goods sold.

DO IT! Exercises

Prepare journal entries for manufacturing costs.

(LO 1)

DO IT! 16-1 During the current month, Wacholz Company incurs the following manufacturing costs.

- Purchased raw materials of \$18,000 on account.
- Incurred factory labor of \$40,000. Of that amount, \$31,000 relates to wages payable and \$9,000 relates to payroll taxes payable.
- Factory utilities of \$3,100 are payable, prepaid factory property taxes of \$2,700 have expired, and depreciation on the factory building is \$9,500.

Prepare journal entries for each type of manufacturing cost. (Use a summary entry to record manufacturing overhead.)

DO IT! 16-2 Milner Company is working on two job orders. The job cost sheets show the following.

	<u>Job 201</u>	<u>Job 202</u>
Direct materials	\$7,200	\$9,000
Direct labor	4,000	8,000
Manufacturing overhead	5,200	9,800

Assign costs to work in process.

(LO 2)

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

DO IT! 16-3 Washburn Company produces earbuds. During the year, manufacturing overhead costs are expected to be \$200,000. Expected machine usage is 2,500 hours. The company assigns overhead based on machine hours. Job No. 551 used 90 machine hours. Compute the predetermined overhead rate, determine the amount of overhead to allocate to Job No. 551, and prepare the entry to assign overhead to Job No. 551 on January 15.

Compute and apply the predetermined overhead rate.

(LO 3)

DO IT! 16-4 During the current month, Standard Corporation completed Job 310 and Job 312. Job 310 cost \$70,000 and Job 312 cost \$50,000. Job 312 was sold on account for \$90,000. Journalize the entries for the completion of the two jobs and the sale of Job 312.

Prepare entries for completion and sale of jobs.

(LO 4)

DO IT! 16-5 For Eckstein Company, the predetermined overhead rate is 130% of direct labor cost. During the month, Eckstein incurred \$100,000 of factory labor costs, of which \$85,000 is direct labor and \$15,000 is indirect labor. Actual overhead incurred was \$115,000. Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

Apply manufacturing overhead and determine under- or overapplication.

(LO 5)

EXERCISES

E16-1 The gross earnings of the factory workers for Larkin Company during the month of January are \$76,000. The employer's payroll taxes for the factory payroll are \$8,000. The fringe benefits to be paid by the employer on this payroll are \$6,000. Of the total accumulated cost of factory labor, 85% is related to direct labor and 15% is attributable to indirect labor.

Prepare entries for factory labor.

(LO 1, 2)

Instructions

- Prepare the entry to record the factory labor costs for the month of January.
- Prepare the entry to assign factory labor to production.

E16-2 Stine Company uses a job order cost system. On May 1, the company has a balance in Work in Process Inventory of \$3,500 and two jobs in process: Job No. 429 \$2,000, and Job No. 430 \$1,500. During May, a summary of source documents reveals the following.

Prepare journal entries for manufacturing costs.

(LO 1, 2, 3, 4)

<u>Job Number</u>	<u>Materials</u>		<u>Labor</u>	
	<u>Requisition Slips</u>		<u>Time Tickets</u>	
429	\$2,500		\$1,900	
430	3,500		3,000	
431	4,400	\$10,400	7,600	\$12,500
General use		800		1,200
		<u>\$11,200</u>		<u>\$13,700</u>

Stine Company applies manufacturing overhead to jobs at an overhead rate of 60% of direct labor cost. Job No. 429 is completed during the month.

Instructions

- Prepare summary journal entries to record (1) the requisition slips, (2) the time tickets, (3) the assignment of manufacturing overhead to jobs, and (4) the completion of Job No. 429.
- Post the entries to Work in Process Inventory, and prove the agreement of the control account with the job cost sheets. (Use a T-account.)

Analyze a job cost sheet and prepare entries for manufacturing costs.

(LO 1, 2, 3, 4)

E16-3 A job order cost sheet for Ryan Company is shown below.

Job No. 92		For 2,000 Units		
Date	Direct Materials	Direct Labor	Manufacturing Overhead	
Beg. bal. Jan. 1	5,000	6,000	4,200	
8	6,000			
12		8,000	6,400	
25	2,000			
27		4,000	3,200	
	13,000	18,000	13,800	
Cost of completed job:				
	Direct materials		\$13,000	
	Direct labor		18,000	
	Manufacturing overhead		<u>13,800</u>	
	Total cost		<u>\$44,800</u>	
	Unit cost (\$44,800 ÷ 2,000)		<u>\$22.40</u>	

Instructions

- (a) On the basis of the foregoing data, answer the following questions.
- (1) What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
 - (2) If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
- (b) Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

Analyze costs of manufacturing and determine missing amounts.

(LO 1, 5)

E16-4 Manufacturing cost data for Orlando Company, which uses a job order cost system, are presented below.

	Case A	Case B	Case C
Direct materials used	\$ (a)	\$ 83,000	\$ 63,150
Direct labor	50,000	140,000	(h)
Manufacturing overhead applied	42,500	(d)	(i)
Total manufacturing costs	145,650	(e)	213,000
Work in process 1/1/17	(b)	15,500	18,000
Total cost of work in process	201,500	(f)	(j)
Work in process 12/31/17	(c)	11,800	(k)
Cost of goods manufactured	192,300	(g)	222,000

Instructions

Indicate the missing amount for each letter. Assume that in all cases manufacturing overhead is applied on the basis of direct labor cost and the rate is the same.

Compute the manufacturing overhead rate and under- or overapplied overhead.

(LO 3, 5)

E16-5 Ikerd Company applies manufacturing overhead to jobs on the basis of machine hours used. Overhead costs are expected to total \$300,000 for the year, and machine usage is estimated at 125,000 hours.

For the year, \$322,000 of overhead costs are incurred and 130,000 hours are used.

Instructions

- Compute the manufacturing overhead rate for the year.
- What is the amount of under- or overapplied overhead at December 31?
- Prepare the adjusting entry to assign the under- or overapplied overhead for the year to cost of goods sold.

E16-6 A job cost sheet of Sandoval Company is given below.

Analyze job cost sheet and prepare entry for completed job.

(LO 1, 2, 3, 4)

Job Cost Sheet			
JOB NO. <u>469</u>		Quantity <u>2,500</u>	
ITEM <u>White Lion Cages</u>		Date Requested <u>7/2</u>	
FOR <u>Todd Company</u>		Date Completed <u>7/31</u>	
Date	Direct Materials	Direct Labor	Manufacturing Overhead
7/10	700		
12	900		
15		440	550
22		380	475
24	1,600		
27	1,500		
31		540	675
Cost of completed job:			
Direct materials			_____
Direct labor			_____
Manufacturing overhead			_____
Total cost			=====
Unit cost			=====

Instructions

- (a) Answer the following questions.
- What are the source documents for direct materials, direct labor, and manufacturing overhead costs assigned to this job?
 - What is the predetermined manufacturing overhead rate?
 - What are the total cost and the unit cost of the completed job? (Round unit cost to nearest cent.)
- (b) Prepare the entry to record the completion of the job.

E16-7 Crawford Corporation incurred the following transactions.

- Purchased raw materials on account \$46,300.
- Raw materials of \$36,000 were requisitioned to the factory. An analysis of the materials requisition slips indicated that \$6,800 was classified as indirect materials.
- Factory labor costs incurred were \$59,900, of which \$51,000 pertained to factory wages payable and \$8,900 pertained to employer payroll taxes payable.
- Time tickets indicated that \$54,000 was direct labor and \$5,900 was indirect labor.
- Manufacturing overhead costs incurred on account were \$80,500.
- Depreciation on the company's office building was \$8,100.
- Manufacturing overhead was applied at the rate of 150% of direct labor cost.
- Goods costing \$88,000 were completed and transferred to finished goods.
- Finished goods costing \$75,000 to manufacture were sold on account for \$103,000.

Prepare entries for manufacturing and nonmanufacturing costs.

(LO 1, 2, 3, 4)

Instructions

Journalize the transactions. (Omit explanations.)

E16-8 Enos Printing Corp. uses a job order cost system. The following data summarize the operations related to the first quarter's production.

- Materials purchased on account \$192,000, and factory wages incurred \$87,300.

Prepare entries for manufacturing and nonmanufacturing costs.

(LO 1, 2, 3, 4)

2. Materials requisitioned and factory labor used by job:

<u>Job Number</u>	<u>Materials</u>	<u>Factory Labor</u>
A20	\$ 35,240	\$18,000
A21	42,920	22,000
A22	36,100	15,000
A23	39,270	25,000
General factory use	4,470	7,300
	<u>\$158,000</u>	<u>\$87,300</u>

3. Manufacturing overhead costs incurred on account \$49,500.
4. Depreciation on factory equipment \$14,550.
5. Depreciation on the company's office building was \$14,300.
6. Manufacturing overhead rate is 90% of direct labor cost.
7. Jobs completed during the quarter: A20, A21, and A23.

Instructions

Prepare entries to record the operations summarized above. (Prepare a schedule showing the individual cost elements and total cost for each job in item 7.)

Prepare a cost of goods manufactured schedule and partial financial statements.

(LO 1, 5)

E16-9 At May 31, 2017, the accounts of Lopez Company show the following.

1. May 1 inventories—finished goods \$12,600, work in process \$14,700, and raw materials \$8,200.
2. May 31 inventories—finished goods \$9,500, work in process \$15,900, and raw materials \$7,100.
3. Debit postings to work in process were direct materials \$62,400, direct labor \$50,000, and manufacturing overhead applied \$40,000.
4. Sales revenue totaled \$215,000.

Instructions

- (a) Prepare a condensed cost of goods manufactured schedule.
- (b) Prepare an income statement for May through gross profit.
- (c) Indicate the balance sheet presentation of the manufacturing inventories at May 31, 2017.

Compute work in process and finished goods from job cost sheets.

(LO 2, 4)

E16-10 Tierney Company begins operations on April 1. Information from job cost sheets shows the following.

<u>Job Number</u>	<u>Manufacturing Costs Assigned</u>			<u>Month Completed</u>
	<u>April</u>	<u>May</u>	<u>June</u>	
10	\$5,200	\$4,400		May
11	4,100	3,900	\$2,000	June
12	1,200			April
13		4,700	4,500	June
14		5,900	3,600	Not complete

Job 12 was completed in April. Job 10 was completed in May. Jobs 11 and 13 were completed in June. Each job was sold for 25% above its cost in the month following completion.

Instructions

- (a) What is the balance in Work in Process Inventory at the end of each month?
- (b) What is the balance in Finished Goods Inventory at the end of each month?
- (c) What is the gross profit for May, June, and July?

E16-11 The following are the job cost related accounts for the law firm of Colaw Associates and their manufacturing equivalents:

<u>Law Firm Accounts</u>	<u>Manufacturing Firm Accounts</u>
Supplies	Raw Materials
Salaries and Wages Payable	Factory Wages Payable
Operating Overhead	Manufacturing Overhead
Service Contracts in Process	Work in Process
Cost of Completed Service Contracts	Cost of Goods Sold

Prepare entries for costs of services provided.

(LO 1, 3, 4)

Cost data for the month of March follow.

1. Purchased supplies on account \$1,800.
2. Issued supplies \$1,200 (60% direct and 40% indirect).
3. Assigned labor costs based on time cards for the month which indicated labor costs of \$70,000 (80% direct and 20% indirect).
4. Operating overhead costs incurred for cash totaled \$40,000.
5. Operating overhead is applied at a rate of 90% of direct labor cost.
6. Work completed totaled \$75,000.

Instructions

- (a) Journalize the transactions for March. (Omit explanations.)
- (b) Determine the balance of the Service Contracts in Process account. (Use a T-account.)

E16-12 Don Lieberman and Associates, a CPA firm, uses job order costing to capture the costs of its audit jobs. There were no audit jobs in process at the beginning of November. Listed below are data concerning the three audit jobs conducted during November.

	<u>Lynn</u>	<u>Brian</u>	<u>Mike</u>
Direct materials	\$600	\$400	\$200
Auditor labor costs	\$5,400	\$6,600	\$3,375
Auditor hours	72	88	45

Determine cost of jobs and ending balance in work in process and overhead accounts.

(LO 2, 3, 4)

Overhead costs are applied to jobs on the basis of auditor hours, and the predetermined overhead rate is \$50 per auditor hour. The Lynn job is the only incomplete job at the end of November. Actual overhead for the month was \$11,000.

Instructions

- (a) Determine the cost of each job.
- (b) Indicate the balance of the Service Contracts in Process account at the end of November.
- (c) Calculate the ending balance of the Operating Overhead account for November.

E16-13 Tombert Decorating uses a job order cost system to collect the costs of its interior decorating business. Each client's consultation is treated as a separate job. Overhead is applied to each job based on the number of decorator hours incurred. Listed below are data for the current year.

Estimated overhead	\$960,000
Actual overhead	\$982,800
Estimated decorator hours	40,000
Actual decorator hours	40,500

Determine predetermined overhead rate, apply overhead, and determine whether balance under- or overapplied.

(LO 3, 5)

The company uses Operating Overhead in place of Manufacturing Overhead.

Instructions

- (a) Compute the predetermined overhead rate.
- (b) Prepare the entry to apply the overhead for the year.
- (c) Determine whether the overhead was under- or overapplied and by how much.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare entries in a job order cost system and job cost sheets.

(LO 1, 2, 3, 4, 5)

P16-1A Lott Company uses a job order cost system and applies overhead to production on the basis of direct labor costs. On January 1, 2017, Job 50 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials \$20,000, direct labor \$12,000, and manufacturing overhead \$16,000. As of January 1, Job 49 had been completed at a cost of \$90,000 and was part of finished goods inventory. There was a \$15,000 balance in the Raw Materials Inventory account.

During the month of January, Lott Company began production on Jobs 51 and 52, and completed Jobs 50 and 51. Jobs 49 and 50 were also sold on account during the month for \$122,000 and \$158,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of \$90,000 on account.
2. Incurred factory labor costs of \$70,000. Of this amount \$16,000 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials \$17,000, indirect labor \$20,000, depreciation expense on equipment \$12,000, and various other manufacturing overhead costs on account \$16,000.
4. Assigned direct materials and direct labor to jobs as follows.

Job No.	Direct Materials	Direct Labor
50	\$10,000	\$ 5,000
51	39,000	25,000
52	30,000	20,000

Instructions

- (a) Calculate the predetermined overhead rate for 2017, assuming Lott Company estimates total manufacturing overhead costs of \$840,000, direct labor costs of \$700,000, and direct labor hours of 20,000 for the year.
- (b) Open job cost sheets for Jobs 50, 51, and 52. Enter the January 1 balances on the job cost sheet for Job 50.
- (c) Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.
- (d) Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.
- (e) Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.
- (f) Prepare the journal entry (or entries) to record the sale of any job(s) during the month.
- (g) What is the balance in the Finished Goods Inventory account at the end of the month? What does this balance consist of?
- (h) What is the amount of over- or underapplied overhead?

(e) Job 50, \$69,000
Job 51, \$94,000

P16-2A For the year ended December 31, 2017, the job cost sheets of Cinta Company contained the following data.

Prepare entries in a job order cost system and partial income statement.

(LO 1, 2, 3, 4, 5)

Job Number	Explanation	Direct Materials	Direct Labor	Manufacturing Overhead	Total Costs
7640	Balance 1/1	\$25,000	\$24,000	\$28,800	\$ 77,800
	Current year's costs	30,000	36,000	43,200	109,200
7641	Balance 1/1	11,000	18,000	21,600	50,600
	Current year's costs	43,000	48,000	57,600	148,600
7642	Current year's costs	58,000	55,000	66,000	179,000

Other data:

- Raw materials inventory totaled \$15,000 on January 1. During the year, \$140,000 of raw materials were purchased on account.
- Finished goods on January 1 consisted of Job No. 7638 for \$87,000 and Job No. 7639 for \$92,000.
- Job No. 7640 and Job No. 7641 were completed during the year.
- Job Nos. 7638, 7639, and 7641 were sold on account for \$530,000.
- Manufacturing overhead incurred on account totaled \$120,000.
- Other manufacturing overhead consisted of indirect materials \$14,000, indirect labor \$18,000, and depreciation on factory machinery \$8,000.

Instructions

- Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint*: Use a single T-account for Work in Process Inventory.) Calculate each of the following, then post each to the T-account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.
- Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to Cost of Goods Sold.
- Determine the gross profit to be reported for 2017.

(a) \$179,000; Job 7642: \$179,000

(b) Amount = \$6,800

(c) \$158,600

P16-3A Case Inc. is a construction company specializing in custom patios. The patios are constructed of concrete, brick, fiberglass, and lumber, depending upon customer preference. On June 1, 2017, the general ledger for Case Inc. contains the following data.

Prepare entries in a job order cost system and cost of goods manufactured schedule.

Raw Materials Inventory	\$4,200	Manufacturing Overhead Applied	\$32,640
Work in Process Inventory	\$5,540	Manufacturing Overhead Incurred	\$31,650

(LO 1, 2, 3, 4, 5)

Subsidiary data for Work in Process Inventory on June 1 are as follows.

Cost Element	Job Cost Sheets		
	Customer Job		
	Rodgers	Stevens	Linton
Direct materials	\$ 600	\$ 800	\$ 900
Direct labor	320	540	580
Manufacturing overhead	400	675	725
	<u>\$1,320</u>	<u>\$2,015</u>	<u>\$2,205</u>

During June, raw materials purchased on account were \$4,900, and all wages were paid. Additional overhead costs consisted of depreciation on equipment \$900 and miscellaneous costs of \$400 incurred on account.

A summary of materials requisition slips and time tickets for June shows the following.

Customer Job	Materials Requisition Slips	Time Tickets
Rodgers	\$ 800	\$ 850
Koss	2,000	800
Stevens	500	360
Linton	1,300	1,200
Rodgers	300	390
	<u>4,900</u>	<u>3,600</u>
General use	1,500	1,200
	<u>\$6,400</u>	<u>\$4,800</u>

Overhead was charged to jobs at the same rate of \$1.25 per dollar of direct labor cost. The patios for customers Rodgers, Stevens, and Linton were completed during June and sold for a total of \$18,900. Each customer paid in full.

Instructions

- Journalize the June transactions: (1) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (2) assignment of direct materials, labor, and overhead to production; and (3) completion of jobs and sale of goods.
- Post the entries to Work in Process Inventory.
- Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
- Prepare a cost of goods manufactured schedule for June.

(d) Cost of goods manufactured \$14,740

Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.

(LO 3, 5)

P16-4A Agassi Company uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department D, direct labor hours in Department E, and machine hours in Department K.

In establishing the predetermined overhead rates for 2017, the following estimates were made for the year.

	Department		
	D	E	K
Manufacturing overhead	\$1,200,000	\$1,500,000	\$900,000
Direct labor costs	\$1,500,000	\$1,250,000	\$450,000
Direct labor hours	100,000	125,000	40,000
Machine hours	400,000	500,000	120,000

During January, the job cost sheets showed the following costs and production data.

	Department		
	D	E	K
Direct materials used	\$140,000	\$126,000	\$78,000
Direct labor costs	\$120,000	\$110,000	\$37,500
Manufacturing overhead incurred	\$ 99,000	\$124,000	\$79,000
Direct labor hours	8,000	11,000	3,500
Machine hours	34,000	45,000	10,400

Instructions

- 80%, \$12, \$7.50
 - \$356,000, \$368,000, \$193,500
 - \$3,000, \$(8,000), \$1,000
- Compute the predetermined overhead rate for each department.
 - Compute the total manufacturing costs assigned to jobs in January in each department.
 - Compute the under- or overapplied overhead for each department at January 31.

P16-5A Phillips Corporation's fiscal year ends on November 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year:

Analyze manufacturing accounts and determine missing amounts.

(LO 1, 2, 3, 4, 5)

Raw Materials Inventory					
Dec. 1	Beginning balance	(a)	Dec. 31	Requisitions	16,850
31	Purchases	17,225			
Dec. 31	Ending balance	7,975			
Work in Process Inventory					
Dec. 1	Beginning balance	(b)	Dec. 31	Jobs completed	(f)
31	Direct materials	(c)			
31	Direct labor	8,400			
31	Overhead	(d)			
Dec. 31	Ending balance	(e)			
Finished Goods Inventory					
Dec. 1	Beginning balance	(g)	Dec. 31	Cost of goods sold	(i)
31	Completed jobs	(h)			
Dec. 31	Ending balance	(j)			
Factory Labor					
Dec. 31	Factory wages	12,025	Dec. 31	Wages assigned	(k)
Manufacturing Overhead					
Dec. 31	Indirect materials	2,900	Dec. 31	Overhead applied	(m)
31	Indirect labor	(l)			
31	Other overhead	1,245			

Other data:

- On December 1, two jobs were in process: Job No. 154 and Job No. 155. These jobs had combined direct materials costs of \$9,750 and direct labor costs of \$15,000. Overhead was applied at a rate that was 75% of direct labor cost.
- During December, Job Nos. 156, 157, and 158 were started. On December 31, Job No. 158 was unfinished. This job had charges for direct materials \$3,800 and direct labor \$4,800, plus manufacturing overhead. All jobs, except for Job No. 158, were completed in December.
- On December 1, Job No. 153 was in the finished goods warehouse. It had a total cost of \$5,000. On December 31, Job No. 157 was the only job finished that was not sold. It had a cost of \$4,000.
- Manufacturing overhead was \$1,470 underapplied in December.

(c) \$13,950

(f) \$52,450

(i) \$53,450

Instructions

List the letters (a) through (m) and indicate the amount pertaining to each letter.

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

EXCEL TUTORIAL

CURRENT DESIGNS

CD16 Huegel Hollow Resort has ordered 20 rotomolded kayaks from **Current Designs**. Each kayak will be formed in the rotomolded oven, cooled, and then the excess plastic trimmed away. Then, the hatches, seat, ropes, and bungees will be attached to the kayak.

Dave Thill, the kayak plant manager, knows that manufacturing each kayak requires 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Each kayak will use two kinds of labor: 2 hours of more-skilled type I labor from people who run the oven and trim the plastic, and 3 hours of less-skilled type II labor from people who attach the hatches and seat and other hardware. The type I employees are paid \$15 per hour, and the type II employees are paid \$12 per hour. For purposes of this problem, assume that overhead is allocated to all jobs at a rate of 150% of direct labor costs.

Instructions

Determine the total cost of the Huegel Hollow order and the cost of each individual kayak in the order. Identify costs as direct materials, direct labor, or manufacturing overhead.

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapter 15.)

WP16 Waterways has two major public-park projects to provide with comprehensive irrigation in one of its service locations this month. Job J57 and Job K52 involve 15 acres of landscaped terrain which will require special-order sprinkler heads to meet the specifications of the project. This problem asks you to help Waterways use a job order cost system to account for production of these parts.

Go to the book's companion website, at www.wiley.com/college/weygandt, to find the completion of this problem.

COMPREHENSIVE CASE

Greetings Inc., a nationally recognized retailer of greeting cards and small gift items, decides to employ Internet technology to expand its sales opportunities. For this case, you will employ traditional job order costing techniques and then evaluate the resulting product costs.

Go to the book's companion website, at www.wiley.com/college/weygandt, for complete case details and instructions.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP16-1 Khan Products Company uses a job order cost system. For a number of months, there has been an ongoing rift between the sales department and the production department concerning a special-order product, TC-1. TC-1 is a seasonal product that is manufactured in batches of 1,000 units. TC-1 is sold at cost plus a markup of 40% of cost.

The sales department is unhappy because fluctuating unit production costs significantly affect selling prices. Sales personnel complain that this has caused excessive customer complaints and the loss of considerable orders for TC-1.

The production department maintains that each job order must be fully costed on the basis of the costs incurred during the period in which the goods are produced. Production personnel maintain that the only real solution is for the sales department to increase sales in the slack periods.

Andrea Parley, president of the company, asks you as the company accountant to collect quarterly data for the past year on TC-1. From the cost accounting system, you accumulate the following production quantity and cost data.

Costs	Quarter			
	1	2	3	4
Direct materials	\$100,000	\$220,000	\$ 80,000	\$200,000
Direct labor	60,000	132,000	48,000	120,000
Manufacturing overhead	105,000	153,000	97,000	125,000
Total	<u>\$265,000</u>	<u>\$505,000</u>	<u>\$225,000</u>	<u>\$445,000</u>
Production in batches	5	11	4	10
Unit cost (per batch)	<u>\$ 53,000</u>	<u>\$ 45,909</u>	<u>\$ 56,250</u>	<u>\$ 44,500</u>

Instructions

With the class divided into groups, answer the following questions.

- What manufacturing cost element is responsible for the fluctuating unit costs? Why?
- What is your recommended solution to the problem of fluctuating unit cost?
- Restate the quarterly data on the basis of your recommended solution.

Managerial Analysis

BYP16-2 In the course of routine checking of all journal entries prior to preparing year-end reports, Betty Eller discovered several strange entries. She recalled that the president's son Joe had come in to help out during an especially busy time and that he had recorded some journal entries. She was relieved that there were only a few of his entries, and even more relieved that he had included rather lengthy explanations. The entries Joe made were:

(1)

Work in Process Inventory		25,000	
Cash			25,000

(This is for materials put into process. I don't find the record that we paid for these, so I'm crediting Cash because I know we'll have to pay for them sooner or later.)

(2)

Manufacturing Overhead		12,000	
Cash			12,000

(This is for bonuses paid to salespeople. I know they're part of overhead, and I can't find an account called "Non-Factory Overhead" or "Other Overhead" so I'm putting it in Manufacturing Overhead. I have the check stubs, so I know we paid these.)

(3)

Wages Expense		120,000	
Cash			120,000

(This is for the factory workers' wages. I have a note that employer payroll taxes are \$18,000. I still think that's part of wages expense and that we'll have to pay it all in cash sooner or later, so I credited Cash for the wages and the taxes.)

(4)

Work in Process Inventory		3,000	
Raw Materials Inventory			3,000

(This is for the glue used in the factory. I know we used this to make the products, even though we didn't use very much on any one of the products. I got it out of inventory, so I credited an inventory account.)

Instructions

- (a) How should Joe have recorded each of the four events?
- (b) If an entry was not corrected, which financial statements (income statement or balance sheet) would be affected? What balances would be overstated or understated?

Real-World Focus

BYP16-3 The Institute of Management Accountants sponsors a certification for management accountants, allowing them to obtain the title of Certified Management Accountant.

Address: www.imanet.org, or go to www.wiley.com/college/wegandt

Steps

1. Go to the site shown above.
2. Choose **CMA Certification**, then **Become a CMA**, and then **How to Get Started**. Answer part (a) below.
3. Choose **CMA Resource Center** and then **Continuing Education for CMAs**. Answer part (b) below.

Instructions

- (a) What is the experience qualification requirement?
- (b) How many hours of continuing education are required, and what types of courses qualify?

CRITICAL THINKING**Communication Activity**

BYP16-4 You are the management accountant for Williams Company. Your company does custom carpentry work and uses a job order cost system. Williams sends detailed job cost sheets to its customers, along with an invoice. The job cost sheets show the date materials were used, the dollar cost of materials, and the hours and cost of labor. A predetermined overhead application rate is used, and the total overhead applied is also listed.

Nancy Kopay is a customer who recently had custom cabinets installed. Along with her check in payment for the work done, she included a letter. She thanked the company for including the detailed cost information but questioned why overhead was estimated. She stated that she would be interested in knowing exactly what costs were included in overhead, and she thought that other customers would, too.

Instructions

Prepare a letter to Ms. Kopay (address: 123 Cedar Lane, Altoona, KS 66651) and tell her why you did not send her information on exact costs of overhead included in her job. Respond to her suggestion that you provide this information.

Ethics Case

BYP16-5 LRF Printing provides printing services to many different corporate clients. Although LRF bids most jobs, some jobs, particularly new ones, are negotiated on a “cost-plus” basis. Cost-plus means that the buyer is willing to pay the actual cost plus a return (profit) on these costs to LRF.

Alice Reiley, controller for LRF, has recently returned from a meeting where LRF’s president stated that he wanted her to find a way to charge more costs to any project that was on a cost-plus basis. The president noted that the company needed more profits to meet its stated goals this period. By charging more costs to the cost-plus projects and therefore fewer costs to the jobs that were bid, the company should be able to increase its profit for the current year.

Alice knew why the president wanted to take this action. Rumors were that he was looking for a new position and if the company reported strong profits, the president’s opportunities would be enhanced. Alice also recognized that she could probably increase the cost of certain jobs by changing the basis used to allocate manufacturing overhead.

Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues in this situation?
- (c) What would you do if you were Alice Reiley?

All About You

BYP16-6 Many of you will work for a small business. Some of you will even own your own business. In order to operate a small business, you will need a good understanding of managerial accounting, as well as many other skills. Much information is available to assist people who are interested in starting a new business. A great place to start is the website provided by the Small Business Administration, which is an agency of the federal government whose purpose is to support small businesses.

Instructions

Go to www.sba.gov/smallbusinessplanner/index.html and in the Small Business Planner, Plan Your Business link, review the material under “Get Ready.” Answer the following questions.

- (a) What are some of the characteristics required of a small business owner?
- (b) What are the top 10 reasons given for business failure?

Considering Your Costs and Benefits

BYP16-7 After graduating, you might decide to start a small business. As discussed in this chapter, owners of any business need to know how to calculate the cost of their products. In fact, many small businesses fail because they don’t accurately calculate their product costs, so they don’t know if they are making a profit or losing money—until it’s too late.

Suppose that you decide to start a landscape business. You use an old pickup truck that you’ve fully paid for. You store the truck and other equipment in your parents’ barn, and you store trees and shrubs on their land. Your parents will not charge you for the use of these facilities for the first two years, but beginning in the third year they will charge a reasonable rent. Your mother helps you by answering phone calls and providing customers with information. She doesn’t charge you for this service, but she plans on doing it for only your first two years in business. In pricing your services, should you include charges for the truck, the barn, the land, and your mother’s services when calculating your product cost? The basic arguments for and against are as follows.

YES: If you don’t include charges for these costs, your costs are understated and your profitability is overstated.

NO: At this point, you are not actually incurring costs related to these activities; therefore, you shouldn’t record charges.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

17

Process Costing

CHAPTER PREVIEW As the Feature Story below describes, the cost accounting system used by companies such as **Jones Soda** is **process cost accounting**. In contrast to job order cost accounting, which focuses on the individual job, process cost accounting focuses on the *processes* involved in mass-producing products that are identical or very similar in nature. The primary objective of this chapter is to explain and illustrate process costing.

FEATURE STORY

The Little Guy Who Could

It isn't easy for a small company to get a foothold in the bottled beverage business. The giants, **The Coca-Cola Company** and **PepsiCo Inc.**, vigilantly defend their turf, constantly watching for new trends and opportunities. It is nearly impossible to get shelf space in stores, and consumer tastes can change faster than a bottle of soda can lose its fizz. But **Jones Soda Co.**, headquartered in Seattle, has overcome these and other obstacles to make a name for itself. Its corporate motto is, "Run with the little guy . . . create some change."

The company started as a Canadian distributor of other companies' beverages. Soon, it decided to make its own products under the corporate name Urban Juice and Soda Company. Eventually, its name changed to Jones Soda—the name of its most popular product. From the very start, Jones Soda was different. It sold soda from machines placed in tattoo parlors and piercing shops, and it sponsored a punk rock band as well as surfers and snowboarders. At one time, the company's product was the official drink at the **Seattle Seahawks'** stadium and was served on **Alaskan Airlines**.

Today, Jones Soda makes a wide variety of products: soda-flavored candy, energy drinks, and product-promoting gear

that includes t-shirts, sweatshirts, caps, shorts, and calendars. Its most profitable product is still its multi-flavored, pure cane soda with its creative labeling. If you've seen Jones Soda on a store shelf, then you know that it appears to have an infinite variety of labels. The bottle labels are actually created by customers and submitted on the company's website. (To see some of the best labels from the past, see the Gallery at www.jonessoda.com.) If you would like some soda with a custom label of your own, you can design and submit a label and order a 12-pack.

Because Jones Soda has a dizzying array of product variations, keeping track of costs is of vital importance. Recently, management developed a reorganization plan that involved cost-cutting from top to bottom and eliminating unprofitable products. No matter how good your products are, if you don't keep your costs under control, you are likely to fail. Jones Soda's managers need accurate cost information regarding each primary product and each variation to ensure profitability. So while its marketing approach differs dramatically from the giants, Jones Soda needs the same kind of cost information as the big guys.

 Watch the *Jones Soda* video in WileyPLUS to learn more about process costing in the real world.

CHAPTER OUTLINE

Learning Objectives

1

Discuss the uses of a process cost system and how it compares to a job order system.

- Uses of process cost systems
- Process costing for service companies
- Comparing job order and process cost systems

DO IT!

1

Compare Job Order and Process Cost Systems

2

Explain the flow of costs in a process cost system and the journal entries to assign manufacturing costs.

- Process cost flow
- Assigning manufacturing costs

DO IT!

2

Manufacturing Costs in Process Costing

3

Compute equivalent units.

- Weighted-average method
- Refinements on the weighted-average method

DO IT!

3

Equivalent Units

4

Complete the four steps to prepare a production cost report.

- Physical unit flow
- Equivalent units of production
- Unit production costs
- Cost reconciliation schedule
- Production cost report

DO IT!

4

Cost Reconciliation Schedule

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

LEARNING OBJECTIVE

1

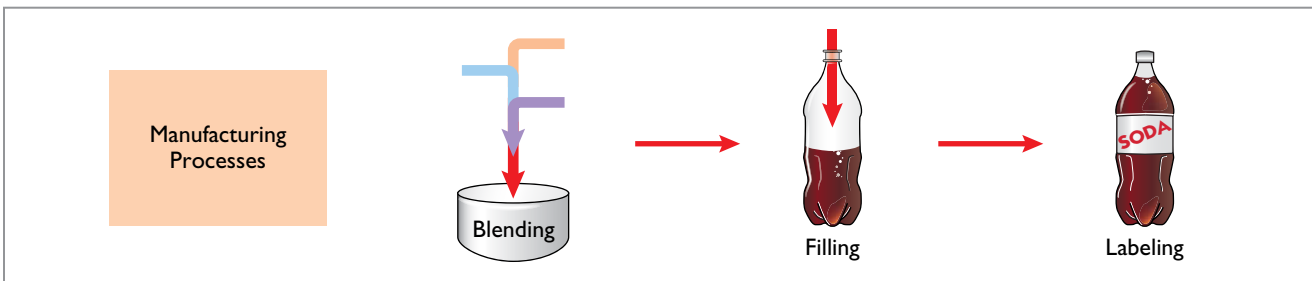

Discuss the uses of a process cost system and how it compares to a job order system.

Uses of Process Cost Systems

Companies use **process cost systems** to apply costs to similar products that are mass-produced in a continuous fashion. **Jones Soda Co.** uses a process cost system: Production of the soda, once it begins, continues until the soda emerges. The processing is the same for the entire run—with precisely the same amount of materials, labor, and overhead. Each finished bottle of soda is indistinguishable from another.

A company such as **USX** uses process costing in the manufacturing of steel. **Kellogg** and **General Mills** use process costing for cereal production; **ExxonMobil** uses process costing for its oil refining. **Sherwin Williams** uses process costing for its paint products. At a bottling company like Jones Soda, the manufacturing process begins with the blending of ingredients. Next, automated machinery moves the bottles into position and fills them. The production process then caps, packages, and forwards the bottles to the finished goods warehouse. Illustration 17-1 shows this process.

Illustration 17-1
Manufacturing processes

For Jones Soda, as well as the other companies just mentioned, once production begins, it continues until the finished product emerges. Each unit of finished product is like every other unit.

In comparison, a job order cost system assigns costs to a *specific job*. Examples are the construction of a customized home, the making of a movie, or the manufacturing of a specialized machine. Illustration 17-2 provides examples of companies that primarily use either a process cost system or a job order cost system.

Illustration 17-2
Process cost and job order cost companies and products

Process Cost System		Job Order Cost System	
Company	Product	Company	Product
Jones Soda, PepsiCo	Soft drinks 	Young & Rubicam, J. Walter Thompson	Advertising 
ExxonMobil, Royal Dutch Shell	Oil 	Disney, Warner Brothers	Movies 
Intel, Advanced Micro Devices	Computer chips 	Center Ice Consultants, Ice Pro	Ice rinks 
Dow Chemical, DuPont	Chemicals 	Kaiser, Mayo Clinic	Patient health care 

Process Costing for Service Companies

When considering service companies, you might initially think of specific, non-routine tasks, such as rebuilding an automobile engine, consulting on a business acquisition, or defending a major lawsuit. However, many service companies perform repetitive, routine work. For example, **Jiffy Lube** regularly performs oil changes. **H&R Block** focuses on the routine aspects of basic tax practice. Service companies that perform individualized, nonroutine services will probably benefit from using a job order cost system. Those that perform routine, repetitive services will probably be better off with a process cost system.

Similarities and Differences Between Job Order Cost and Process Cost Systems

In a job order cost system, companies assign costs to each job. In a process cost system, companies track costs through a series of connected manufacturing processes or departments, rather than by individual jobs. Thus, companies use process cost systems when they produce a large volume of uniform or relatively homogeneous products. Illustration 17-3 shows the basic flow of costs in these two systems.

Illustration 17-3
Job order cost and process cost flow

The following analysis highlights the basic similarities and differences between these two systems.

SIMILARITIES

Job order cost and process cost systems are similar in three ways:

- 1. The manufacturing cost elements.** Both costing systems track three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
- 2. The accumulation of the costs of materials, labor, and overhead.** Both costing systems debit raw materials to Raw Materials Inventory, factory labor to Factory Labor, and manufacturing overhead costs to Manufacturing Overhead.

- 3. The flow of costs.** As noted above, both systems accumulate all manufacturing costs by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. Both systems then assign these costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. **The methods of assigning costs, however, differ significantly.** These differences are explained and illustrated later in the chapter.

DIFFERENCES

The differences between a job order cost and a process cost system are as follows.

- 1. The number of work in process accounts used.** A job order cost system uses only one work in process account. A process cost system uses multiple work in process accounts.
- 2. Documents used to track costs.** A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. A process cost system summarizes costs in a production cost report for each department.
- 3. The point at which costs are totaled.** A job order cost system totals costs when the job is completed. A process cost system totals costs at the end of a period of time.
- 4. Unit cost computations.** In a job order cost system, the unit cost is the total cost per job divided by the units produced. In a process cost system, the unit cost is total manufacturing costs for the period divided by the equivalent units produced during the period.

Illustration 17-4 summarizes the major differences between a job order cost and a process cost system.

Illustration 17-4

Job order versus process cost systems

Feature	Job Order Cost System	Process Cost System
Work in process accounts	One work in process account	Multiple work in process accounts
Documents used	Job cost sheets	Production cost reports
Determination of total manufacturing costs	Each job	Each period
Unit-cost computations	Cost of each job ÷ Units produced for the job	Total manufacturing costs ÷ Equivalent units produced during the period

DO IT!

1

Compare Job Order and Process Cost Systems

Indicate whether each of the following statements is true or false.

1. A law firm is likely to use process costing for major lawsuits.
2. A manufacturer of paintballs is likely to use process costing.
3. Both job order and process costing determine product costs at the end of a period of time, rather than when a product is completed.
4. Process costing does not keep track of manufacturing overhead.

Solution

1. False. 2. True. 3. False. 4. False.

Related exercise material: **E17-1** and **DO IT! 17-1**.

Action Plan

- ✓ Use job order costing in situations where unit costs are high, unit volume is low, and products are unique.
- ✓ Use process costing when there is a large volume of relatively homogeneous products.

LEARNING
OBJECTIVE

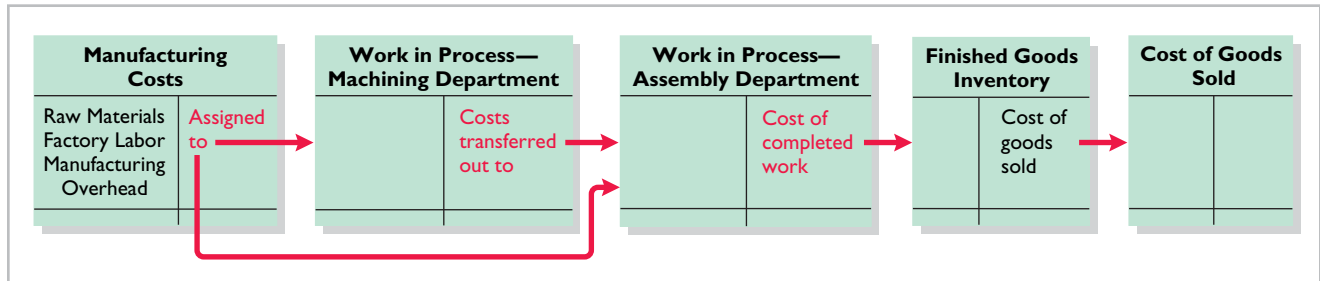

2

Explain the flow of costs in a process cost system and the journal entries to assign manufacturing costs.

Process Cost Flow

Illustration 17-5 shows the flow of costs in the process cost system for Tyler Company. Tyler manufactures roller blade and skateboard wheels that it sells to manufacturers and retail outlets. Manufacturing consists of two processes: machining and assembly. The Machining Department shapes, hones, and drills the raw materials. The Assembly Department assembles and packages the parts.

Illustration 17-5
Flow of costs in process cost system

As the flow of costs indicates, the company can add materials, labor, and manufacturing overhead in both the Machining and Assembly Departments. When it finishes its work, the Machining Department transfers the partially completed units to the Assembly Department. The Assembly Department finishes the goods and then transfers them to the finished goods inventory. Upon sale, Tyler removes the goods from the finished goods inventory. Within each department, a similar set of activities is performed on each unit processed.

Assigning Manufacturing Costs—Journal Entries

As indicated, the accumulation of the costs of materials, labor, and manufacturing overhead is the same in a process cost system as in a job order cost system. That is, both systems follow these procedures:

- Companies debit all raw materials to Raw Materials Inventory at the time of purchase.
- They debit all factory labor to Factory Labor as the labor costs are incurred.
- They debit overhead costs to Manufacturing Overhead as these costs are incurred.

However, the assignment of the three manufacturing cost elements to Work in Process in a process cost system is different from a job order cost system. Here we'll look at how companies assign these manufacturing cost elements in a process cost system.

MATERIALS COSTS

All raw materials issued for production are a materials cost to the producing department. A process cost system may use materials requisition slips, but **it generally requires fewer requisitions than in a job order cost system. The materials are used for processes rather than for specific jobs** and therefore typically are for larger quantities.

At the beginning of the first process, a company usually adds most of the materials needed for production. However, other materials may be added at various points. For example, in the manufacture of **Hershey** candy bars, the chocolate and other ingredients are added at the beginning of the first process, and the wrappers

and cartons are added at the end of the packaging process. Tyler Company adds materials at the beginning of each process. Tyler makes the following entry to record the materials used.

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Raw Materials Inventory		XXXX
(To record materials used)		

Ice cream maker **Ben & Jerry's** adds materials in three departments: milk and flavoring in the mixing department, extras such as cherries and dark chocolate in the prepping department, and cardboard containers in the pinting (packaging) department.

FACTORY LABOR COSTS

In a process cost system, as in a job order cost system, companies may use time tickets to determine the cost of labor assignable to production departments. Since they assign labor costs to a process rather than a job, they can obtain, from the payroll register or departmental payroll summaries, the labor cost chargeable to a process.

Labor costs for the Machining Department include the wages of employees who shape, hone, and drill the raw materials. The entry to assign labor costs to machining and assembly for Tyler Company is:

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Factory Labor		XXXX
(To assign factory labor to production)		

MANUFACTURING OVERHEAD COSTS

The objective in assigning overhead in a process cost system is to allocate the overhead costs to the production departments on an objective and equitable basis. That basis is the activity that “drives” or causes the costs. A primary driver of overhead costs in continuous manufacturing operations is **machine time used**, not direct labor. Thus, companies **widely use machine hours** in allocating manufacturing overhead costs using predetermined overhead rates. Tyler Company's entry to allocate overhead to the two processes is:

Work in Process—Machining	XXXX	
Work in Process—Assembly	XXXX	
Manufacturing Overhead		XXXX
(To assign overhead to production)		

Management Insight Caterpillar

© SweetMommy/iStockphoto

Choosing a Cost Driver

In one of its automated cost centers, **Caterpillar** feeds work into the cost center, where robotic machines process it and transfer the finished job

to the next cost center without human intervention. One person tends all of the machines and spends more time maintaining machines than operating them. In such cases, overhead rates based on direct labor hours may be misleading. Surprisingly, some companies continue to assign manufacturing overhead on the basis of direct labor despite the fact that there is no cause-and-effect relationship between labor and overhead.

What is the result if a company uses the wrong “cost driver” to assign manufacturing overhead? (Go to WileyPLUS for this answer and additional questions.)

TRANSFER TO NEXT DEPARTMENT

At the end of the month, Tyler Company needs an entry to record the cost of the goods transferred out of the Machining Department. In this case, the transfer is to the Assembly Department, and Tyler makes the following entry.

Work in Process—Assembly	XXXXX	
Work in Process—Machining		XXXXX
(To record transfer of units to the Assembly Department)		

TRANSFER TO FINISHED GOODS

When the Assembly Department completes the units, it transfers them to the finished goods warehouse. The entry for this transfer is as follows.

Finished Goods Inventory	XXXXX	
Work in Process—Assembly		XXXXX
(To record transfer of units to finished goods)		

TRANSFER TO COST OF GOODS SOLD

When Tyler Company sells the finished goods, it records the cost of goods sold as follows.

Cost of Goods Sold	XXXXX	
Finished Goods Inventory		XXXXX
(To record cost of units sold)		

DO IT!**2****Manufacturing Costs in Process Costing**

Ruth Company manufactures ZEBO through two processes: blending and bottling. In June, raw materials used were Blending \$18,000 and Bottling \$4,000. Factory labor costs were Blending \$12,000 and Bottling \$5,000. Manufacturing overhead costs were Blending \$6,000 and Bottling \$2,500. The company transfers units completed at a cost of \$19,000 in the Blending Department to the Bottling Department. The Bottling Department transfers units completed at a cost of \$11,000 to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

Solution

The entries are:

Work in Process—Blending	18,000	
Work in Process—Bottling	4,000	
Raw Materials Inventory		22,000
(To record materials used)		
Work in Process—Blending	12,000	
Work in Process—Bottling	5,000	
Factory Labor		17,000
(To assign factory labor to production)		
Work in Process—Blending	6,000	
Work in Process—Bottling	2,500	
Manufacturing Overhead		8,500
(To assign overhead to production)		
Work in Process—Bottling	19,000	
Work in Process—Blending		19,000
(To record transfer of units to the Bottling Department)		
Finished Goods Inventory	11,000	
Work in Process—Bottling		11,000
(To record transfer of units to finished goods)		

Action Plan

- ✓ In process cost accounting, keep separate work in process accounts for each process.
- ✓ When the costs are assigned to production, debit the separate work in process accounts.
- ✓ Transfer cost of completed units to the next process or to Finished Goods.

LEARNING
OBJECTIVE

3

Compute equivalent units.

Suppose you have a work-study job in the office of your college's president, and she asks you to compute the cost of instruction per full-time equivalent student at your college. The college's vice president for finance provides the following information.

Illustration 17-6

Information for full-time student example

Costs:	
Total cost of instruction	<u>\$9,000,000</u>
Student population:	
Full-time students	900
Part-time students	1,000

Part-time students take 60% of the classes of a full-time student during the year. To compute the number of full-time equivalent students per year, you would make the following computation.

Illustration 17-7

Full-time equivalent unit computation

Full-Time Students	+	Equivalent Units of Part-Time Students	=	Full-Time Equivalent Students
900	+	(1,000 × 60%)	=	1,500

The cost of instruction per full-time equivalent student is therefore the total cost of instruction (\$9,000,000) divided by the number of full-time equivalent students (1,500), which is \$6,000 ($\$9,000,000 \div 1,500$).

A process cost system uses the same idea, called equivalent units of production. **Equivalent units of production** measure the work done during the period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product.

Weighted-Average Method

The formula to compute equivalent units of production is as follows.

Illustration 17-8

Equivalent units of production formula

Units Completed and Transferred out	+	Equivalent Units of Ending Work in Process	=	Equivalent Units of Production
--	---	--	---	-----------------------------------

To better understand this concept of equivalent units, consider the following two separate examples.

Example 1. In a specific period, the entire output of Sullivan Company's Blending Department consists of ending work in process of 4,000 units which are 60% complete as to materials, labor, and overhead. The equivalent units of production for the Blending Department are therefore 2,400 units ($4,000 \times 60\%$).

Example 2. The output of Kori Company's Packaging Department during the period consists of 10,000 units completed and transferred out, and 5,000 units in ending work in process which are 70% completed. The equivalent units of production are therefore 13,500 [$10,000 + (5,000 \times 70\%)$].

This method of computing equivalent units is referred to as the **weighted-average method**. It considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process.

Refinements on the Weighted-Average Method

Kellogg Company has produced Eggo® Waffles since 1970. Three departments produce these waffles: Mixing, Baking, and Freezing/Packaging. The Mixing Department combines dry ingredients, including flour, salt, and baking powder, with liquid ingredients, including eggs and vegetable oil, to make waffle batter. Illustration 17-9 provides information related to the Mixing Department at the end of June.

MIXING DEPARTMENT			
	Physical Units	Percentage Complete	
		Materials	Conversion Costs
Work in process, June 1	100,000	100%	70%
Started into production	800,000		
Total units	<u>900,000</u>		
Units transferred out	700,000		
Work in process, June 30	200,000	100%	60%
Total units	<u>900,000</u>		

Illustration 17-9
Information for Mixing Department

Helpful Hint

Separate unit cost computations are needed for materials and conversion costs whenever the two types of costs do not occur in the process at the same time.

Illustration 17-9 indicates that the beginning work in process is 100% complete as to materials cost and 70% complete as to conversion costs. **Conversion costs are the sum of labor costs and overhead costs.** In other words, Kellogg adds both the dry and liquid ingredients (materials) at the beginning of the waffle-making process, and the conversion costs (labor and overhead) related to the mixing of these ingredients are incurred uniformly and are 70% complete. The ending work in process is 100% complete as to materials cost and 60% complete as to conversion costs.

We then use the Mixing Department information to determine equivalent units. **In computing equivalent units, the beginning work in process is not part of the equivalent-units-of-production formula.** The units transferred out to the Baking Department are fully complete as to both materials and conversion costs. The ending work in process is fully complete as to materials, but only 60% complete as to conversion costs. We therefore need to make **two equivalent unit computations**: one for materials, and the other for conversion costs. Illustration 17-10 shows these computations.

ETHICS NOTE

An unethical manager might use incorrect completion percentages when determining equivalent units. This results in either raising or lowering costs. Since completion percentages are somewhat subjective, this form of income manipulation can be difficult to detect.

MIXING DEPARTMENT		
	Equivalent Units	
	Materials	Conversion Costs
Units transferred out	700,000	700,000
Work in process, June 30		
200,000 × 100%	200,000	
200,000 × 60%		<u>120,000</u>
Total equivalent units	<u>900,000</u>	<u>820,000</u>

Illustration 17-10
Computation of equivalent units—Mixing Department

We can refine the earlier formula used to compute equivalent units of production (Illustration 17-8, page 802) to show the computations for materials and for conversion costs, as follows.

Illustration 17-11

Refined equivalent units of production formula

Units Completed and Transferred Out—Materials	+	Equivalent Units of Ending Work in Process—Materials	=	Equivalent Units of Production—Materials
Units Completed and Transferred Out—Conversion Costs	+	Equivalent Units of Ending Work in Process—Conversion Costs	=	Equivalent Units of Production—Conversion Costs

People, Planet, and Profit Insight General Electric

© Nicole Hofmann/iStockphoto

Haven't I Seen That Before?

For a variety of reasons, many companies, including **General Electric**, are making a big push to remanufacture goods that have been thrown away. Items getting a

second chance include cell phones, computers, home appliances, car parts, vacuum cleaners, and medical equipment. Businesses have figured out that profit margins on remanufactured goods are significantly higher than on new goods. As commodity prices such as copper and steel increase, reusing parts makes more sense. Also, as more local governments initiate laws requiring that electronics

and appliances be recycled rather than thrown away, the cost of remanufacturing declines because the gathering of used goods becomes far more efficient. Besides benefiting the manufacturer, remanufacturing provides goods at a much lower price to consumers, reduces waste going to landfills, saves energy, reuses scarce resources, and reduces emissions. For example, it was estimated that a remanufactured car starter results in about 50% less carbon dioxide emissions than making a new one.

Source: James R. Hagerty and Paul Glader, "From Trash Heap to Store Shelf," *Wall Street Journal Online* (January 24, 2011).

In what ways might the relative composition (materials, labor, and overhead) of a remanufactured product's cost differ from that of a newly made product? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!

3

Equivalent Units

The Fabricating Department for Outdoor Essentials has the following production and cost data for the current month.

Beginning Work in Process	Units Transferred Out	Ending Work in Process
–0–	15,000	10,000

Materials are entered at the beginning of the process. The ending work in process units are 30% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

Action Plan

- ✓ To measure the work done during the period, expressed in fully completed units, compute equivalent units of production.
- ✓ Use the appropriate formula: **Units completed and transferred out + Equivalent units of ending work in process = Equivalent units of production.**

Solution

- (a) Since materials are entered at the beginning of the process, the equivalent units of ending work in process are 10,000. Thus, 15,000 units + 10,000 units = 25,000 equivalent units of production for materials.
- (b) Since ending work in process is only 30% complete as to conversion costs, the equivalent units of ending work in process are 3,000 (10,000 units × 30%). Thus, 15,000 units + 3,000 units = 18,000 equivalent units of production for conversion costs.

LEARNING OBJECTIVE

4

Complete the four steps to prepare a production cost report.

As mentioned earlier, companies prepare a production cost report for each department. A **production cost report** is the key document that management uses to understand the activities in a department; it shows the production quantity and cost data related to that department. For example, in producing Eggo® Waffles, **Kellogg Company** uses three production cost reports: Mixing, Baking, and Freezing/Packaging. Illustration 17-12 shows the flow of costs to make an Eggo® Waffle and the related production cost reports for each department.

Illustration 17-12
Flow of costs in making Eggo® Waffles

In order to complete a production cost report, the company must perform four steps, which as a whole make up the process cost system.

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 17-13 shows assumed data for the Mixing Department at **Kellogg Company** for the month of June. We will use this information to complete a production cost report for the Mixing Department.

MIXING DEPARTMENT	
Units	
Work in process, June 1	100,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Units started into production during June	800,000
Units completed and transferred out to Baking Department	700,000
Work in process, June 30	200,000
Direct materials: 100% complete	
Conversion costs: 60% complete	

Illustration 17-13
Unit and cost data—Mixing Department

Illustration 17-13
(cont'd.)**Costs**

Work in process, June 1	
Direct materials: 100% complete	\$ 50,000
Conversion costs: 70% complete	35,000
Cost of work in process, June 1	<u>\$ 85,000</u>
Costs incurred during production in June	
Direct materials	\$400,000
Conversion costs	170,000
Costs incurred in June	<u><u>\$570,000</u></u>

Compute the Physical Unit Flow (Step 1)

Physical units are the actual units to be accounted for during a period, irrespective of any work performed. To keep track of these units, add the units started (or transferred) into production during the period to the units in process at the beginning of the period. This amount is referred to as the **total units to be accounted for**.

The total units then are accounted for by the output of the period. The output consists of units transferred out during the period and any units in process at the end of the period. This amount is referred to as the **total units accounted for**. Illustration 17-14 shows the flow of physical units for Kellogg's Mixing Department for the month of June.

Illustration 17-14
Physical unit flow—Mixing
Department

MIXING DEPARTMENT	
	<u>Physical Units</u>
Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	<u>900,000</u>
Units accounted for	
Completed and transferred out	700,000
Work in process, June 30	200,000
Total units	<u><u>900,000</u></u>

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

Compute the Equivalent Units of Production (Step 2)**Helpful Hint**

Materials are not always added at the beginning of the process. For example, materials are sometimes added uniformly during the process.

Once the physical flow of the units is established, Kellogg must measure the Mixing Department's productivity in terms of equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process. Thus, we need two computations of equivalent units: one for materials and one for conversion costs. The equivalent unit computation is as follows.

	Equivalent Units	
	Materials	Conversion Costs
Units transferred out	700,000	700,000
Work in process, June 30		
200,000 × 100%	200,000	
200,000 × 60%		120,000
Total equivalent units	<u>900,000</u>	<u>820,000</u>

Illustration 17-15

Computation of equivalent units—Mixing Department

Helpful Hint

Remember that we ignore the beginning work in process in this computation.

Compute Unit Production Costs (Step 3)

Armed with the knowledge of the equivalent units of production, we can now compute the unit production costs. **Unit production costs** are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, we compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

The computation of total materials cost related to Eggo® Waffles is as follows.

Work in process, June 1	
Direct materials cost	\$ 50,000
Costs added to production during June	
Direct materials cost	400,000
Total materials cost	<u>\$450,000</u>

Illustration 17-16

Total materials cost computation

The computation of unit materials cost is as follows.

Total Materials Cost	÷	Equivalent Units of Materials	=	Unit Materials Cost
\$450,000	÷	900,000	=	\$0.50

Illustration 17-17

Unit materials cost computation

Illustration 17-18 shows the computation of total conversion costs.

Work in process, June 1	
Conversion costs	\$ 35,000
Costs added to production during June	
Conversion costs	170,000
Total conversion costs	<u>\$205,000</u>

Illustration 17-18

Total conversion costs computation

The computation of unit conversion cost is as follows.

Total Conversion Costs	÷	Equivalent Units of Conversion Costs	=	Unit Conversion Cost
\$205,000	÷	820,000	=	\$0.25

Illustration 17-19

Unit conversion cost computation

Total manufacturing cost per unit is therefore computed as shown in Illustration 17-20 (page 808).

Illustration 17-20

Total manufacturing cost per unit

Unit Materials Cost	+	Unit Conversion Cost	=	Total Manufacturing Cost per Unit
\$0.50	+	\$0.25	=	\$0.75

Prepare a Cost Reconciliation Schedule (Step 4)

We are now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. Kellogg charged total costs of \$655,000 to the Mixing Department in June, calculated as follows.

Illustration 17-21

Costs charged to Mixing Department

Costs to be accounted for	
Work in process, June 1	\$ 85,000
Started into production	570,000
Total costs	<u><u>\$655,000</u></u>

The company then prepares a cost reconciliation schedule to assign these costs to (a) units transferred out to the Baking Department and (b) ending work in process.

Illustration 17-22

Cost reconciliation schedule—Mixing Department

MIXING DEPARTMENT Cost Reconciliation Schedule			
Costs accounted for			
Transferred out (700,000 × \$0.75)			\$ 525,000
Work in process, June 30			
Materials (200,000 × \$0.50)	\$100,000		
Conversion costs (120,000 × \$0.25)	30,000		130,000
Total costs			<u><u>\$655,000</u></u>

Kellogg uses the total manufacturing cost per unit, \$0.75, in costing the **units completed** and transferred to the Baking Department. In contrast, the unit cost of materials and the unit cost of conversion are needed in costing **units in process**. The **cost reconciliation schedule** shows that the **total costs accounted for** (Illustration 17-22) equal the **total costs to be accounted for** (Illustration 17-21).

Preparing the Production Cost Report

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. As indicated earlier, this report is an internal document for management that shows production quantity and cost data for a production department. Illustration 17-23 shows the completed production cost report for the Mixing Department and identifies the four steps used in preparing it.

Production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

MIXING DEPARTMENT Production Cost Report For the Month Ended June 30, 2017				
	Equivalent Units			
	Physical Units	Materials	Conversion Costs	
Quantities				
Units to be accounted for	Step 1	Step 2		
Work in process, June 1	100,000			
Started into production	800,000			
Total units	900,000			
Units accounted for				
Transferred out	700,000	700,000	700,000	
Work in process, June 30	200,000	200,000	120,000	(200,000 × 60%)
Total units	900,000	900,000	820,000	
Costs				
Unit costs Step 3		Materials	Conversion Costs	Total
Total cost	(a)	\$450,000	\$205,000	\$655,000
Equivalent units	(b)	900,000	820,000	
Unit costs [(a) ÷ (b)]		\$0.50	\$0.25	\$0.75
Costs to be accounted for				
Work in process, June 1				\$ 85,000
Started into production				570,000
Total costs				\$655,000
Cost Reconciliation Schedule Step 4				
Costs accounted for				
Transferred out (700,000 × \$0.75)				\$525,000
Work in process, June 30				
Materials (200,000 × \$0.50)			\$100,000	
Conversion costs (120,000 × \$0.25)			30,000	130,000
Total costs				\$655,000

Illustration 17-23
Production cost report

Helpful Hint

The four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Costing Systems—Final Comments

Companies often use a combination of a process cost and a job order cost system. Called **operations costing**, this hybrid system is similar to process costing in its assumption that standardized methods are used to manufacture the product. At the same time, the product may have some customized, individual features that require the use of a job order cost system.

Consider, for example, **Ford Motor Company**. Each vehicle at a given plant goes through the same assembly line, but Ford uses different materials (such as seat coverings, paint, and tinted glass) for different vehicles. Similarly, **Kellogg's Pop-Tarts**® toaster pastries go through numerous standardized processes—mixing, filling, baking, frosting, and packaging. The pastry dough, though, comes in different flavors—plain, chocolate, and graham—and fillings include Smucker's® real fruit, chocolate fudge, vanilla creme, brown sugar cinnamon, and s'mores.

A cost-benefit trade-off occurs as a company decides which costing system to use. A job order cost system, for example, provides detailed information related to the cost of the product. Because each job has its own distinguishing characteristics, the system can provide an accurate cost per job. This information is useful in controlling costs and pricing products. However, the cost of implementing a job order cost system is often expensive because of the accounting costs involved.

On the other hand, for a company like **Intel**, is there a benefit in knowing whether the cost of the one-hundredth computer chip produced is different from the one-thousandth chip produced? Probably not. An average cost of the product will suffice for control and pricing purposes.

In summary, when deciding to use one of these systems or a combination system, a company must weigh the costs of implementing the system against the benefits from the additional information provided.

DO IT!**4****Cost Reconciliation Schedule**

In March, Rodayo Manufacturing had the following unit production costs: materials \$6 and conversion costs \$9. On March 1, it had no work in process. During March, Rodayo transferred out 12,000 units. As of March 31, 800 units that were 25% complete as to conversion costs and 100% complete as to materials were in ending work in process. Assign the costs to the units transferred out and in process.

Solution

The assignment of costs is as follows.

Costs accounted for		
Transferred out (12,000 × \$15)		\$180,000
Work in process, March 31		
Materials (800 × \$6)	\$4,800	
Conversion costs (200* × \$9)	1,800	6,600
		<u> </u>
Total costs		<u>\$186,600</u>
*800 × 25%		

Related exercise material: **BE17-6, BE17-7, BE17-8, BE17-9, E17-3, E17-5, E17-6, E17-7, E17-8, E17-9, E17-10, E17-11, E17-13, E17-14, E17-15, and DO IT! 17-4.**

Action Plan

- ✓ Assign the total manufacturing cost of \$15 per unit to the 12,000 units transferred out.
- ✓ Assign the materials cost and conversion costs based on equivalent units of production to units in ending work in process.

LEARNING OBJECTIVE

5**APPENDIX 17A: Compute equivalent units using the FIFO method.**

In this chapter, we demonstrated the weighted-average method of computing equivalent units. Some companies use a different method, referred to as the **first-in, first-out (FIFO) method**, to compute equivalent units. The purpose of this appendix is to illustrate how companies use the FIFO method to prepare a production cost report.

Equivalent Units Under FIFO

Under the FIFO method, companies compute equivalent units on a first-in, first-out basis. Some companies favor the FIFO method because the FIFO cost assumption usually corresponds to the actual physical flow of the goods. Under the FIFO method, companies therefore assume that the beginning work in process is completed before new work is started.

Using the FIFO method, equivalent units are the sum of the work performed to:

1. Finish the units of beginning work in process inventory.
2. Complete the units started into production during the period (referred to as the **units started and completed**).
3. Start, but only partially complete, the units in ending work in process inventory.

Normally, in a process cost system, some units will always be in process at both the beginning and end of the period.

ILLUSTRATION

Illustration 17A-1 shows the physical flow of units for the Assembly Department of Shutters Inc. In addition, it indicates the degree of completion of the work in process accounts in regard to conversion costs.

ASSEMBLY DEPARTMENT	
	<u>Physical Units</u>
Units to be accounted for	
Work in process, June 1 (40% complete)	500
Started (transferred) into production	8,000
Total units	<u>8,500</u>
Units accounted for	
Completed and transferred out	8,100
Work in process, June 30 (75% complete)	400
Total units	<u>8,500</u>

Illustration 17A-1
Physical unit flow—Assembly Department

In Illustration 17A-1, the units completed and transferred out (8,100) plus the units in ending work in process (400) equal the total units to be accounted for (8,500). Using FIFO, we then compute equivalent units as follows.

1. The 500 units of beginning work in process were 40% complete. Thus, 300 equivalent units ($500 \text{ units} \times 60\%$) were required to complete the beginning inventory.
2. The units started and completed during the current month are **the units transferred out minus the units in beginning work in process**. For the Assembly Department, units started and completed are 7,600 ($8,100 - 500$).
3. The 400 units of ending work in process were 75% complete. Thus, equivalent units were 300 ($400 \times 75\%$).

Equivalent units for the Assembly Department are 8,200, computed as follows.

ASSEMBLY DEPARTMENT			
<u>Production Data</u>	<u>Work Added Physical Units</u>	<u>Equivalent This Period</u>	<u>Units</u>
Work in process, June 1	500	60%	300
Started and completed	7,600	100%	7,600
Work in process, June 30	400	75%	300
Total	<u>8,500</u>		<u>8,200</u>

Illustration 17A-2
Computation of equivalent units—FIFO method

Comprehensive Example

To provide a complete illustration of the FIFO method, we will use the data for the Mixing Department at **Kellogg Company** for the month of June, as shown in Illustration 17A-3 (page 812).

Illustration 17A-3

Unit and cost data—Mixing Department

MIXING DEPARTMENT	
Units	
Work in process, June 1	100,000
Direct materials: 100% complete	
Conversion costs: 70% complete	
Units started into production during June	800,000
Units completed and transferred out to Baking Department	700,000
Work in process, June 30	200,000
Direct materials: 100% complete	
Conversion costs: 60% complete	
Costs	
Work in process, June 1	
Direct materials: 100% complete	\$ 50,000
Conversion costs: 70% complete	35,000
Cost of work in process, June 1	<u>\$ 85,000</u>
Costs incurred during production in June	
Direct materials	\$400,000
Conversion costs	170,000
Costs incurred in June	<u><u>\$570,000</u></u>

COMPUTE THE PHYSICAL UNIT FLOW (STEP 1)

Illustration 17A-4 shows the physical flow of units for Kellogg's Mixing Department for the month of June.

Illustration 17A-4

Physical unit flow—Mixing Department

MIXING DEPARTMENT	
	<u>Physical Units</u>
Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	<u>900,000</u>
Units accounted for	
Completed and transferred out	700,000
Work in process, June 30	200,000
Total units	<u>900,000</u>

Under the FIFO method, companies often expand the physical units schedule, as shown in Illustration 17A-5, to explain the transferred-out section. As a result, this section reports the beginning work in process and the units started and completed. These two items further explain the completed and transferred-out section.

Illustration 17A-5

Physical unit flow (FIFO)—Mixing Department

MIXING DEPARTMENT	
	<u>Physical Units</u>
Units to be accounted for	
Work in process, June 1	100,000
Started (transferred) into production	800,000
Total units	<u>900,000</u>
Units accounted for	
Completed and transferred out	
Work in process, June 1	100,000
Started and completed	600,000
	<u>700,000</u>
Work in process, June 30	200,000
Total units	<u><u>900,000</u></u>

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

COMPUTE EQUIVALENT UNITS OF PRODUCTION (STEP 2)

As with the method presented in the chapter, once they determine the physical flow of the units, companies need to determine equivalent units of production. The Mixing Department adds materials at the beginning of the process, and it incurs conversion costs uniformly during the process. Thus, Kellogg must make two computations of equivalent units: one for materials and one for conversion costs.

EQUIVALENT UNITS FOR MATERIALS Since Kellogg adds materials at the beginning of the process, no additional materials costs are required to complete the beginning work in process. In addition, 100% of the materials costs has been incurred on the ending work in process. Thus, the computation of equivalent units for materials is as follows.

Helpful Hint

As noted earlier, materials are not always added at the beginning of the process. For example, companies sometimes add materials uniformly during the process.

MIXING DEPARTMENT—MATERIALS			
Production Data	Physical Units	Materials Added This Period	Equivalent Units
Work in process, June 1	100,000	—0—	—0—
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	100%	200,000
Total	<u>900,000</u>		<u>800,000</u>

Illustration 17A-6

Computation of equivalent units—materials

EQUIVALENT UNITS FOR CONVERSION COSTS The 100,000 units of beginning work in process were 70% complete in terms of conversion costs. Thus, the Mixing Department required 30,000 equivalent units (100,000 units \times 30%) of conversion costs to complete the beginning inventory. In addition, the 200,000 units of ending work in process were 60% complete in terms of conversion costs. Thus, the equivalent units for conversion costs is 750,000, computed as follows.

MIXING DEPARTMENT—CONVERSION COSTS			
Production Data	Physical Units	Work Added This Period	Equivalent Units
Work in process, June 1	100,000	30%	30,000
Started and finished	600,000	100%	600,000
Work in process, June 30	200,000	60%	120,000
Total	<u>900,000</u>		<u>750,000</u>

Illustration 17A-7

Computation of equivalent units—conversion costs

COMPUTE UNIT PRODUCTION COSTS (STEP 3)

Armed with the knowledge of the equivalent units of production, Kellogg can now compute the unit production costs. Unit production costs are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, companies compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

Under the FIFO method, the unit costs of production are based entirely on the production costs incurred during the month. Thus, the costs in the beginning work in process are not relevant, because they were incurred on work done in the preceding month. As Illustration 17A-3 (page 812) indicated, the costs incurred during production in June were as follows.

Illustration 17A-8

Costs incurred during production in June

Direct materials	\$400,000
Conversion costs	<u>170,000</u>
Total costs	<u>\$570,000</u>

Illustration 17A-9 shows the computation of unit materials cost, unit conversion costs, and total unit cost related to Eggo® Waffles.

Illustration 17A-9

Unit cost formulas and computations—Mixing Department

(1)	Total Materials Cost	÷	Equivalent Units of Materials	=	Unit Materials Cost
	\$400,000	÷	800,000	=	\$0.50
(2)	Total Conversion Costs	÷	Equivalent Units of Conversion Costs	=	Unit Conversion Cost
	\$170,000	÷	750,000	=	\$0.227 (rounded)*
(3)	Unit Materials Cost	+	Unit Conversion Cost	=	Total Manufacturing Cost per Unit
	\$0.50	+	\$0.227	=	\$0.727
<i>*For homework problems, round unit costs to three decimal places.</i>					

As shown, the unit costs are \$0.50 for materials, \$0.227 for conversion costs, and \$0.727 for total manufacturing costs.

PREPARE A COST RECONCILIATION SCHEDULE (STEP 4)

Kellogg is now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. The total costs charged to the Mixing Department in June are \$655,000, calculated as follows.

Illustration 17A-10

Costs charged to Mixing Department

Costs to be accounted for	
Work in process, June 1	\$ 85,000
Started into production	<u>570,000</u>
Total costs	<u>\$655,000</u>

Kellogg next prepares a cost reconciliation to assign these costs to (1) units transferred out to the Baking Department and (2) ending work in process. Under the FIFO method, the first goods to be completed during the period are the units in beginning work in process. Thus, the cost of the beginning work in process is always assigned to the goods transferred to the next department (or finished goods, if processing is complete). Under the FIFO method, ending work in process also will be assigned only the production costs incurred in the current period. Illustration 17A-11 shows a cost reconciliation schedule for the Mixing Department.

MIXING DEPARTMENT
Cost Reconciliation Schedule

Illustration 17A-11
Cost reconciliation report

Costs accounted for			
Transferred out			
Work in process, June 1		\$	85,000
Costs to complete beginning work in process			
Conversion costs (30,000 × \$0.227)			6,810
Total costs			91,810
Units started and completed (600,000 × \$0.727)			435,950*
Total costs transferred out			527,760
Work in process, June 30			
Materials (200,000 × \$0.50)	\$100,000		
Conversion costs (120,000 × \$0.227)	27,240		127,240
Total costs			\$655,000

*Any rounding errors should be adjusted in the “Units started and completed” calculation.

As you can see, the total costs accounted for (\$655,000 from Illustration 17A-11) equal the total costs to be accounted for (\$655,000 from Illustration 17A-10).

PREPARING THE PRODUCTION COST REPORT

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. This report is an internal document for management that shows production quantity and cost data for a production department.

As discussed on page 805, there are four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

Illustration 17A-12 (page 816) shows the production cost report for the Mixing Department, with the four steps identified in the report.

As indicated in the chapter, production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

Helpful Hint

The two self-checks in the report are (1) total physical units accounted for must equal the total units to be accounted for, and (2) total costs accounted for must equal the total costs to be accounted for.

FIFO and Weighted-Average

The weighted-average method of computing equivalent units has **one major advantage**: It is simple to understand and apply. In cases where prices do not fluctuate significantly from period to period, the weighted-average method will be very similar to the FIFO method. In addition, companies that have been using just-in-time procedures effectively for inventory control purposes will have minimal inventory balances. Therefore, differences between the weighted-average and the FIFO methods will not be material.

Conceptually, the FIFO method is superior to the weighted-average method because it measures **current performance** using only costs incurred in the current period. Managers are, therefore, not held responsible for costs from prior periods over which they may not have had control. In addition, the FIFO method

provides current cost information, which the company can use to establish **more accurate pricing strategies** for goods manufactured and sold in the current period.

Helpful Hint

The four steps in preparing a production cost report:

1. Compute the physical unit flow.
2. Compute the equivalent units of production.
3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

MIXING DEPARTMENT Production Cost Report For the Month Ended June 30, 2017				
<u>Equivalent Units</u>				
	Physical Units	Materials	Conversion Costs	
Quantities				
Units to be accounted for	Step 1	Step 2		
Work in process (WIP), June 1	100,000			
Started into production	800,000			
Total units	<u>900,000</u>			
Units accounted for				
Completed and transferred out				
Work in process, June 1	100,000	0	30,000	
Started and completed	600,000	600,000	600,000	
Work in process, June 30	200,000	200,000	120,000	
Total units	<u>900,000</u>	<u>800,000</u>	<u>750,000</u>	
Costs				
Unit costs Step 3		Materials	Conversion Costs	Total
Costs in June (excluding beginning WIP)	(a)	\$400,000	\$170,000	\$570,000
Equivalent units	(b)	800,000	750,000	
Unit costs [(a) ÷ (b)]		<u>\$0.50</u>	<u>\$0.227</u>	<u>\$0.727</u>
Costs to be accounted for				
Work in process, June 1				\$ 85,000
Started into production				570,000
Total costs				<u>\$655,000</u>
Cost Reconciliation Schedule Step 4				
Costs accounted for				
Transferred out				
Work in process, June 1			\$ 85,000	
Costs to complete beginning work in process				
Conversion costs (30,000 × \$0.227)			6,810	\$ 91,810
Units started and completed (600,000 × \$0.727)*				435,950
Total costs transferred out				527,760
Work in process, June 30				
Materials (200,000 × \$0.50)			100,000	
Conversion costs (120,000 × \$0.227)			27,240	127,240
Total costs				<u>\$655,000</u>
*Any rounding errors should be adjusted in the "Units started and completed"				

Illustration 17A-12

Production cost report—FIFO method

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Discuss the uses of a process cost system and how it compares to a job order system.** Companies that mass-produce similar products in a continuous fashion use process cost systems. Once production begins, it continues until the finished product emerges. Each unit of finished product is indistinguishable from every other unit.

Job order cost systems are similar to process cost systems in three ways. (1) Both systems track the same cost elements—direct materials, direct labor, and manufacturing overhead. (2) Both accumulate costs in the same accounts—Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. (3) Both assign accumulated costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. However, the method of assigning costs differs significantly.

There are four main differences between the two cost systems. (1) A process cost system uses separate accounts for each department or manufacturing process, rather than only one work in process account used in a job order cost system. (2) A process cost system summarizes costs in a production cost report for each department. A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. (3) Costs are totaled at the end of a time period in a process cost system but at the completion of a job in a job order cost system. (4) A process cost system calculates unit cost as Total manufacturing costs for the period \div Units produced during the period. A job order cost system calculates unit cost as Total cost per job \div Units produced.

- 2 Explain the flow of costs in a process cost system and the journal entries to assign manufacturing costs.** A process cost system assigns manufacturing costs for raw materials, labor, and overhead to work in process accounts for various departments or manufacturing processes. It transfers the costs of partially completed units from one department to another as those units move through the manufacturing process. The system transfers the costs of completed work to Finished Goods Inventory. Finally, when inventory is sold, the system transfers the costs to Cost of Goods Sold.

Entries to assign the costs of raw materials, labor, and overhead consist of a credit to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead, and a debit to Work in Process for each department. Entries to record the cost of goods transferred to another department are a credit to Work in Process for the department whose work is finished and a debit to the department to which the goods are transferred. The entry to record units completed and transferred to the warehouse is a credit to Work in Process for the department whose work is finished and a debit to Finished Goods Inventory. The entry to record the sale of goods is a credit to Finished Goods Inventory and a debit to Cost of Goods Sold.

- 3 Compute equivalent units.** Equivalent units of production measure work done during a period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product. Equivalent units are the sum of units completed and transferred out plus equivalent units of ending work in process.
- 4 Complete the four steps to prepare a production cost report.** The four steps to complete a production cost report are as follows. (1) Compute the physical unit flow—that is, the total units to be accounted for. (2) Compute the equivalent units of production. (3) Compute the unit production costs, expressed in terms of equivalent units of production. (4) Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.
- The production cost report contains both quantity and cost data for a production department. There are four sections in the report: (1) number of physical units, (2) equivalent units determination, (3) unit costs, and (4) cost reconciliation schedule.
- *5 Compute equivalent units using the FIFO method.** Equivalent units under the FIFO method are the sum of the work performed to (1) finish the units of beginning work in process inventory, if any; (2) complete the units started into production during the period; and (3) start, but only partially complete, the units in ending work in process inventory.

GLOSSARY REVIEW

- Conversion costs** The sum of labor costs and overhead costs. (p. 803).
- Cost reconciliation schedule** A schedule that shows that the total costs accounted for equal the total costs to be accounted for. (p. 808).
- Equivalent units of production** A measure of the work done during the period, expressed in fully completed units. (p. 802).
- Operations costing** A combination of a process cost and a job order cost system in which products are

manufactured primarily by standardized methods, with some customization. (p. 809).

Physical units Actual units to be accounted for during a period, irrespective of any work performed. (p. 806).

Process cost system An accounting system used to apply costs to similar products that are mass-produced in a continuous fashion. (p. 796).

Production cost report An internal report for management that shows both production quantity and cost data for a production department. (p. 805).

Total units (costs) accounted for The sum of the units (costs) transferred out during the period plus the units (costs) in process at the end of the period. (p. 806).

Total units (costs) to be accounted for The sum of the units (costs) started (or transferred) into production during the period plus the units (costs) in process at the beginning of the period. (p. 806).

Unit production costs Costs expressed in terms of equivalent units of production. (p. 807).

Weighted-average method Method of computing equivalent units of production which considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process. (p. 803).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Which of the following items is **not** characteristic of a process cost system?
- Once production begins, it continues until the finished product emerges.
 - The products produced are heterogeneous in nature.
 - The focus is on continually producing homogeneous products.
 - When the finished product emerges, all units have precisely the same amount of materials, labor, and overhead.
- (LO 1) 2. Indicate which of the following statements is **not** correct.
- Both a job order and a process cost system track the same three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
 - A job order cost system uses only one work in process account, whereas a process cost system uses multiple work in process accounts.
 - Manufacturing costs are accumulated the same way in a job order and in a process cost system.
 - Manufacturing costs are assigned the same way in a job order and in a process cost system.
- (LO 2) 3. In a process cost system, the flow of costs is:
- work in process, cost of goods sold, finished goods.
 - finished goods, work in process, cost of goods sold.
 - finished goods, cost of goods sold, work in process.
 - work in process, finished goods, cost of goods sold.
- (LO 2) 4. In making journal entries to assign raw materials costs, a company using process costing:
- debits Finished Goods Inventory.
 - often debits two or more work in process accounts.
 - generally credits two or more work in process accounts.
 - credits Finished Goods Inventory.
- (LO 2) 5. In a process cost system, manufacturing overhead:
- is assigned to finished goods at the end of each accounting period.
 - is assigned to a work in process account for each job as the job is completed.
 - is assigned to a work in process account for each production department on the basis of a predetermined overhead rate.
 - is assigned to a work in process account for each production department as overhead costs are incurred.
6. Conversion costs are the sum of: (LO 3)
- fixed and variable overhead costs.
 - labor costs and overhead costs.
 - direct material costs and overhead costs.
 - direct labor and indirect labor costs.
7. The Mixing Department's output during the period consists of 20,000 units completed and transferred out, and 5,000 units in ending work in process 60% complete as to materials and conversion costs. Beginning inventory is 1,000 units, 40% complete as to materials and conversion costs. The equivalent units of production are: (LO 3)
- 22,600.
 - 23,000.
 - 24,000.
 - 25,000.
8. In RYZ Company, there are zero units in beginning work in process, 7,000 units started into production, and 500 units in ending work in process 20% completed. The physical units to be accounted for are: (LO 4)
- 7,000.
 - 7,360.
 - 7,500.
 - 7,340.
9. Mora Company has 2,000 units in beginning work in process, 20% complete as to conversion costs, 23,000 units transferred out to finished goods, and 3,000 units in ending work in process 33 $\frac{1}{3}$ % complete as to conversion costs. (LO 4)
- The beginning and ending inventory is fully complete as to materials costs. Equivalent units for materials and conversion costs are, respectively:
- 22,000, 24,000.
 - 24,000, 26,000.
 - 26,000, 24,000.
 - 26,000, 26,000.
10. Fortner Company has no beginning work in process; 9,000 units are transferred out and 3,000 units in ending work in process are one-third finished as to conversion costs and fully complete as to materials cost. If total materials cost is \$60,000, the unit materials cost is: (LO 4)
- \$5.00.
 - \$5.45 rounded.
 - \$6.00.
 - No correct answer is given.
11. Largo Company has unit costs of \$10 for materials and \$30 for conversion costs. If there are 2,500 units in ending work in process, 40% complete as to (LO 4)

conversion costs, and fully complete as to materials cost, the total cost assignable to the ending work in process inventory is:

- (a) \$45,000. (c) \$75,000.
(b) \$55,000. (d) \$100,000.

(LO 4) 12. A production cost report:

- (a) is an external report.
(b) shows both the production quantity and cost data related to a department.
(c) shows equivalent units of production but not physical units.
(d) contains six sections.

(LO 4) 13. In a production cost report, units to be accounted for are calculated as:

- (a) Units started into production + Units in ending work in process.
(b) Units started into production – Units in beginning work in process.
(c) Units transferred out + Units in beginning work in process.
(d) Units started into production + Units in beginning work in process.

(LO 5) *14. Hollins Company uses the FIFO method to compute equivalent units. It has 2,000 units in beginning work in process, 20% complete as to conversion costs, 25,000 units started and completed, and 3,000 units in ending work in process, 30% complete as to

conversion costs. All units are 100% complete as to materials. Equivalent units for materials and conversion costs are, respectively:

- (a) 28,000 and 26,600.
(b) 28,000 and 27,500.
(c) 27,000 and 26,200.
(d) 27,000 and 29,600.

*15. KLM Company uses the FIFO method to compute (LO 5)

equivalent units. It has no beginning work in process; 9,000 units are started and completed and 3,000 units in ending work in process are one-third completed. All material is added at the beginning of the process. If total materials cost is \$60,000, the unit materials cost is:

- (a) \$5.00.
(b) \$6.00.
(c) \$6.67 (rounded).
(d) No correct answer is given.

*16. Toney Company uses the FIFO method to compute (LO 5)

equivalent units. It has unit costs of \$10 for materials and \$30 for conversion costs. If there are 2,500 units in ending work in process, 100% complete as to materials and 40% complete as to conversion costs, the total cost assignable to the ending work in process inventory is:

- (a) \$45,000. (c) \$75,000.
(b) \$55,000. (d) \$100,000.

Solutions

- (b) The products produced are homogeneous, not heterogeneous, in nature. Choices (a), (c), and (d) are incorrect because they all represent characteristics of a process cost system.
- (d) Manufacturing costs are not assigned the same way in a job order and in a process cost system. Choices (a), (b), and (c) are true statements.
- (d) In a process cost system, the flow of costs is work in process, finished goods, cost of goods sold. Therefore, choices (a), (b), and (c) are incorrect.
- (b) The debit is often to two or more work in process accounts, not (a) a debit to Finished Goods Inventory, (c) credits to two or more work in process accounts, or (d) a credit to Finished Goods Inventory.
- (c) In a process cost system, manufacturing overhead is assigned to a work in process account for each production department on the basis of a predetermined overhead rate, not (a) a finished goods account, (b) as the job is completed, or (d) as overhead costs are incurred.
- (b) Conversion costs are the sum of labor costs and overhead costs, not (a) the sum of fixed and variable overhead costs, (c) direct material costs and overhead costs, or (d) direct labor and indirect labor costs.
- (b) The equivalent units of production is the sum of units completed and transferred out (20,000) and the equivalent units of ending work in process inventory (5,000 units \times 60%), or 20,000 + 3,000 = 23,000 units, not (a) 22,600 units, (c) 24,000 units, or (d) 25,000 units.
- (a) There are 7,000 physical units to be accounted for (0 units in beginning inventory + 7,000 units started), not (b) 7,360, (c) 7,500, or (d) 7,340.
- (c) The equivalent units for materials are 26,000 (23,000 units transferred out plus 3,000 in ending work in process inventory). The equivalent units for conversion costs are 24,000 (23,000 transferred out plus 33 $\frac{1}{3}$ % of the ending work in process inventory or 1,000). Therefore, choices (a) 22,000, 24,000; (b) 24,000, 26,000; and (d) 26,000, 26,000 are incorrect.
- (a) $\$60,000 \div (9,000 + 3,000 \text{ units}) = \5.00 per unit, not (b) \$5.45 (rounded), (c) \$6.00, or (d) no correct answer is given.
- (b) $[(2,500 \text{ units} \times 100\% \text{ complete}) \times \$10] + [(2,500 \text{ units} \times 40\% \text{ complete}) \times \$30]$ or $\$25,000 + \$30,000 = \$55,000$, not (a) \$45,000, (c) \$75,000, or (d) \$100,000.
- (b) A production cost report shows costs charged to a department and costs accounted for. The other choices are incorrect because a production cost report (a) is an internal, not external, report; (c) does show physical units; and (d) is prepared in four steps and does not contain six sections.

13. (d) In a production cost report, units to be accounted for are calculated as Units started in production + Units in beginning work in process, not (a) Units in ending work in process, (b) minus Units in beginning work in process, or (c) Units transferred out.

***14. (b)** The equivalent units for materials are 28,000 [25,000 started and completed + (3,000 × 100%)]. The equivalent units for conversion costs are 27,500 [(2,000 × 80%) + 25,000 + (3,000 × 30%)]. Therefore, choices (a) 28,000, 26,600; (c) 27,000, 26,200; and (d) 27,000, 29,600 are incorrect.

***15. (a)** Unit materials cost is \$5.00 [\$60,000 ÷ (9,000 + 3,000)]. Therefore, choices (b) \$6.00, (c) \$6.67 (rounded), and (d) no correct answer are incorrect.

***16. (b)** The total cost assignable to the ending work in process is \$55,000 [(\$10 × 2,500) + (\$30 × 2,500 × 40%)]. Therefore, choices (a) \$45,000, (c) \$75,000, and (d) \$100,000 are incorrect.

PRACTICE EXERCISES

Journalize transactions.

(LO 2)

1. Armando Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

	<u>Cooking</u>	<u>Canning</u>
Beginning work in process	\$ -0-	\$ 4,000
Materials	25,000	8,000
Labor	8,500	7,500
Overhead	29,000	25,800
Costs transferred in		55,000

Instructions

Journalize the April transactions.

Solution

1. (a) April 30	Work in Process—Cooking	25,000	
	Work in Process—Canning	8,000	
	Raw Materials Inventory		33,000
30	Work in Process—Cooking	8,500	
	Work in Process—Canning	7,500	
	Factory Labor		16,000
30	Work in Process—Cooking	29,000	
	Work in Process—Canning	25,800	
	Manufacturing Overhead		54,800
30	Work in Process—Canning	55,000	
	Work in Process—Cooking		55,000

Prepare a production cost report.

(LO 3, 4)

2. The Sanding Department of Jo Furniture Company has the following production and manufacturing cost data for March 2017, the first month of operation.

Production: 11,000 units finished and transferred out; 4,000 units started that are 100% complete as to materials and 25% complete as to conversion costs.

Manufacturing costs: Materials \$48,000; labor \$42,000; and overhead \$36,000.

Instructions

Prepare a production cost report.

Solution

JO FURNITURE COMPANY				
Sanding Department

Equivalent units		<u>15,000</u>	<u>12,000</u>	
Unit costs [(a) + (b)]		<u>\$3.20</u>	<u>\$6.50</u>	<u>\$9.70</u>
Costs to be accounted for				
Work in process, March 1				\$ 0
Started into production				<u>126,000</u>
Total costs				<u>\$126,000</u>
Cost Reconciliation Schedule				
Costs accounted for				
Transferred out (11,000 × \$9.70)				\$106,700
Work in process, March 31				
Materials (4,000 × \$3.20)			\$12,800	
Conversion costs (1,000 × \$6.50)			<u>6,500</u>	<u>19,300</u>
Total costs				<u>\$126,000</u>
* $\$42,000 + \$36,000$				

PRACTICE PROBLEM

Karlene Industries produces plastic ice cube trays in two processes: heating and stamping. All materials are added at the beginning of the Heating Department process. Karlene uses the weighted-average method to compute equivalent units.

On November 1, the Heating Department had in process 1,000 trays that were 70% complete. During November, it started into production 12,000 trays. On November 30, 2017, 2,000 trays that were 60% complete were in process.

The following cost information for the Heating Department was also available.

Work in process, November 1:		Costs incurred in November:	
Materials	\$ 640	Material	\$3,000
Conversion costs	<u>360</u>	Labor	2,300
Cost of work in process, Nov. 1	<u>\$1,000</u>	Overhead	4,050

Prepare a production cost report and journalize.

(LO 3, 4)

Instructions

- Prepare a production cost report for the Heating Department for the month of November 2017, using the weighted-average method.
- Journalize the transfer of costs to the Stamping Department.

Solution

(a) KARLENE INDUSTRIES			
Heating Department			
Production Cost Report			
For the Month Ended November 30, 2017			
Quantities	Physical	Equivalent Units	
	Units	Materials	Conversion
	<u>Step 1</u>	<u>Step 2</u>	
Units to be accounted for			
Work in process, November 1	1,000		
Started into production	12,000		
Total units	<u>13,000</u>		
Units accounted for			
Transferred out	11,000	11,000	11,000
Work in process, November 30	2,000	2,000	1,200
Total units	<u>13,000</u>	<u>13,000</u>	<u>12,200</u>
Costs			
Unit costs <u>Step 3</u>		Materials	Conversion
			Costs
Total cost	(a)	\$ 3,640*	\$ 6,710**
Equivalent units	(b)	13,000	12,200
Unit costs [(a) ÷ (b)]		<u>\$0.28</u>	<u>\$0.55</u>
Costs to be accounted for			
Work in process, November 1			\$ 1,000
Started into production			9,350
Total costs			<u>\$10,350</u>
*\$640 + \$3,000			
**\$360 + \$2,300 + \$4,050			
Cost Reconciliation Schedule <u>Step 4</u>			
Costs accounted for			
Transferred out (11,000 × \$0.83)			\$ 9,130
Work in process, November 30			
Materials (2,000 × \$0.28)		\$560	
Conversion costs (1,200 × \$0.55)		660	1,220
Total costs			<u>\$10,350</u>
(b) Work in Process—Stamping		9,130	
Work in Process—Heating			9,130
(To record transfer of units to the Stamping Department)

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

- Identify which costing system—job order or process cost—the following companies would primarily use: (a) **Quaker Oats**, (b) **Jif Peanut Butter**, (c) **Gulf Craft** (luxury yachts), and (d) **Warner Bros. Motion Pictures**.
- Contrast the primary focus of job order cost accounting and of process cost accounting.
- What are the similarities between a job order and a process cost system?

4. Your roommate is confused about the features of process cost accounting. Identify and explain the distinctive features for your roommate.
5. Sam Bowyer believes there are no significant differences in the flow of costs between job order cost accounting and process cost accounting. Is Bowyer correct? Explain.
6. (a) What source documents are used in assigning (1) materials and (2) labor to production in a process cost system?
(b) What criterion and basis are commonly used in allocating overhead to processes?
7. At Ely Company, overhead is assigned to production departments at the rate of \$5 per machine hour. In July, machine hours were 3,000 in the Machining Department and 2,400 in the Assembly Department. Prepare the entry to assign overhead to production.
8. Mark Haley is uncertain about the steps used to prepare a production cost report. State the procedures that are required in the sequence in which they are performed.
9. John Harbeck is confused about computing physical units. Explain to John how physical units to be accounted for and physical units accounted for are determined.
10. What is meant by the term “equivalent units of production”?
11. How are equivalent units of production computed?
12. Coats Company had zero units of beginning work in process. During the period, 9,000 units were completed, and there were 600 units of ending work in process. What were the units started into production?
13. Sanchez Co. has zero units of beginning work in process. During the period, 12,000 units were completed, and there were 500 units of ending work in process one-fifth complete as to conversion cost and 100% complete as to materials cost. What were the equivalent units of production for (a) materials and (b) conversion costs?
14. Hindi Co. started 3,000 units during the period. Its beginning inventory is 500 units one-fourth complete as to conversion costs and 100% complete as to materials costs. Its ending inventory is 300 units one-fifth complete as to conversion costs and 100% complete as to materials costs. How many units were transferred out this period?
15. Clauss Company transfers out 14,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Assuming unit materials costs of \$3 and unit conversion costs of \$5, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?
16. (a) Ann Quinn believes the production cost report is an external report for stockholders. Is Ann correct? Explain.
(b) Identify the sections in a production cost report.
17. What purposes are served by a production cost report?
18. At Trent Company, there are 800 units of ending work in process that are 100% complete as to materials and 40% complete as to conversion costs. If the unit cost of materials is \$3 and the total costs assigned to the 800 units is \$6,000, what is the per unit conversion cost?
19. What is the difference between operations costing and a process cost system?
20. How does a company decide whether to use a job order or a process cost system?
- *21. Soria Co. started and completed 2,000 units for the period. Its beginning inventory is 800 units 25% complete and its ending inventory is 400 units 20% complete. Soria uses the FIFO method to compute equivalent units. How many units were transferred out this period?
- *22. Reyes Company transfers out 12,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Reyes uses the FIFO method to compute equivalent units. Assuming unit materials costs of \$3 and unit conversion costs of \$7, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?

BRIEF EXERCISES

BE17-1 Warner Company purchases \$50,000 of raw materials on account, and it incurs \$60,000 of factory labor costs. Journalize the two transactions on March 31, assuming the labor costs are not paid until April.

Journalize entries for accumulating costs.

(LO 2)

BE17-2 Data for Warner Company are given in BE17-1. Supporting records show that (a) the Assembly Department used \$24,000 of raw materials and \$35,000 of the factory labor, and (b) the Finishing Department used the remainder. Journalize the assignment of the costs to the processing departments on March 31.

Journalize the assignment of materials and labor costs.

(LO 2)

BE17-3 Factory labor data for Warner Company are given in BE17-2. Manufacturing overhead is assigned to departments on the basis of 160% of labor costs. Journalize the assignment of overhead to the Assembly and Finishing Departments.

Journalize the assignment of overhead costs.

(LO 2)

Compute equivalent units of production.

(LO 3)

BE17-4 Goode Company has the following production data for selected months.

Month	Beginning Work in Process	Units Transferred Out	Ending Work in Process	
			Units	% Complete as to Conversion Cost
January	–0–	35,000	10,000	40%
March	–0–	40,000	8,000	75
July	–0–	45,000	16,000	25

Compute equivalent units of production for materials and conversion costs, assuming materials are entered at the beginning of the process.

Compute equivalent units of production.

(LO 3)

BE17-5 The Smelting Department of Kiner Company has the following production data for November.

Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units transferred out 9,000 units; and ending work in process 7,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Compute the equivalent units of production for (a) materials and (b) conversion costs for the month of November.

Compute unit costs of production.

(LO 4)

BE17-6 In Mordica Company, total materials costs are \$33,000, and total conversion costs are \$54,000. Equivalent units of production are materials 10,000 and conversion costs 12,000. Compute the unit costs for materials, conversion costs, and total manufacturing costs.

Assign costs to units transferred out and in process.

(LO 4)

BE17-7 Trek Company has the following production data for April: units transferred out 40,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. If unit materials cost is \$4 and unit conversion cost is \$7, determine the costs to be assigned to the units transferred out and the units in ending work in process.

Compute unit costs.

(LO 4)

BE17-8 Production costs chargeable to the Finishing Department in June in Hollins Company are materials \$12,000, labor \$29,500, and overhead \$18,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Compute the unit costs for materials and conversion costs.

Prepare cost reconciliation schedule.

(LO 4)

BE17-9 Data for Hollins Company are given in BE17-8. Production records indicate that 18,000 units were transferred out, and 2,000 units in ending work in process were 50% complete as to conversion costs and 100% complete as to materials. Prepare a cost reconciliation schedule.

Assign costs to units transferred out and in process.

(LO 5)

***BE17-10** Pix Company has the following production data for March: no beginning work in process, units started and completed 30,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. Pix uses the FIFO method to compute equivalent units. If unit materials cost is \$6 and unit conversion cost is \$10, determine the costs to be assigned to the units transferred out and the units in ending work in process. The total costs to be assigned are \$530,000.

Prepare a partial production cost report.

(LO 5)

***BE17-11** Using the data in BE17-10, prepare the cost section of the production cost report for Pix Company.

Compute unit costs.

(LO 5)

***BE17-12** Production costs chargeable to the Finishing Department in May at Kim Company are materials \$8,000, labor \$20,000, overhead \$18,000, and transferred-in costs \$67,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Kim uses the FIFO method to compute equivalent units. Compute the unit costs for materials and conversion costs. Transferred-in costs are considered materials costs.

DO IT! Exercises

DO IT! 17-1 Indicate whether each of the following statements is true or false.

1. Many hospitals use job order costing for small, routine medical procedures.
2. A manufacturer of computer flash drives would use a job order cost system.
3. A process cost system uses multiple work in process accounts.
4. A process cost system keeps track of costs on job cost sheets.

Compare job order and process cost systems.

(LO 1)

DO IT! 17-2 Kopa Company manufactures CH-21 through two processes: mixing and packaging. In July, the following costs were incurred.

	<u>Mixing</u>	<u>Packaging</u>
Raw materials used	\$10,000	\$28,000
Factory labor costs	8,000	36,000
Manufacturing overhead costs	12,000	54,000

Assign and journalize manufacturing costs.

(LO 2)

Units completed at a cost of \$21,000 in the Mixing Department are transferred to the Packaging Department. Units completed at a cost of \$106,000 in the Packaging Department are transferred to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

DO IT! 17-3 The Assembly Department for Right pens has the following production data for the current month.

Compute equivalent units.

(LO 3)

<u>Beginning Work in Process</u>	<u>Units Transferred Out</u>	<u>Ending Work in Process</u>
–0–	20,000	10,000

Materials are entered at the beginning of the process. The ending work in process units are 70% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

DO IT! 17-4 In March, Kelly Company had the following unit production costs: materials \$10 and conversion costs \$8. On March 1, it had no work in process. During March, Kelly transferred out 22,000 units. As of March 31, 4,000 units that were 40% complete as to conversion costs and 100% complete as to materials were in ending work in process.

Prepare cost reconciliation schedule.

(LO 4)

- (a) Compute the total units to be accounted for.
- (b) Compute the equivalent units of production.
- (c) Prepare a cost reconciliation schedule, including the costs of materials transferred out and the costs of materials in process.

EXERCISES

E17-1 Robert Wilkins has prepared the following list of statements about process cost accounting.

Understand process cost accounting.

(LO 1)

1. Process cost systems are used to apply costs to similar products that are mass-produced in a continuous fashion.
2. A process cost system is used when each finished unit is indistinguishable from another.
3. Companies that produce soft drinks, movies, and computer chips would all use process cost accounting.
4. In a process cost system, costs are tracked by individual jobs.
5. Job order costing and process costing track different manufacturing cost elements.
6. Both job order costing and process costing account for direct materials, direct labor, and manufacturing overhead.
7. Costs flow through the accounts in the same basic way for both job order costing and process costing.
8. In a process cost system, only one work in process account is used.
9. In a process cost system, costs are summarized in a job cost sheet.
10. In a process cost system, the unit cost is total manufacturing costs for the period divided by the equivalent units produced during the period.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Journalize transactions.

(LO 2)

E17-2 Harrelson Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

	<u>Cooking</u>	<u>Canning</u>
Beginning work in process	\$ -0-	\$ 4,000
Materials	21,000	9,000
Labor	8,500	7,000
Overhead	31,500	25,800
Costs transferred in		53,000

Instructions

Journalize the April transactions.

Answer questions on costs and production.

(LO 2, 3, 4)

E17-3 The ledger of American Company has the following work in process account.

Work in Process—Painting					
5/1	Balance	3,590	5/31	Transferred out	?
5/31	Materials	5,160			
5/31	Labor	2,530			
5/31	Overhead	1,380			
5/31	Balance	?			

Production records show that there were 400 units in the beginning inventory, 30% complete, 1,600 units started, and 1,700 units transferred out. The beginning work in process had materials cost of \$2,040 and conversion costs of \$1,550. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process.

Instructions

- How many units are in process at May 31?
- What is the unit materials cost for May?
- What is the unit conversion cost for May?
- What is the total cost of units transferred out in May?
- What is the cost of the May 31 inventory?

Journalize transactions for two processes.

(LO 2)

E17-4 Schrage Company has two production departments: Cutting and Assembly. July 1 inventories are Raw Materials \$4,200, Work in Process—Cutting \$2,900, Work in Process—Assembly \$10,600, and Finished Goods \$31,000. During July, the following transactions occurred.

- Purchased \$62,500 of raw materials on account.
- Incurred \$60,000 of factory labor. (Credit Wages Payable.)
- Incurred \$70,000 of manufacturing overhead; \$40,000 was paid and the remainder is unpaid.
- Requisitioned materials for Cutting \$15,700 and Assembly \$8,900.
- Used factory labor for Cutting \$33,000 and Assembly \$27,000.
- Applied overhead at the rate of \$18 per machine hour. Machine hours were Cutting 1,680 and Assembly 1,720.
- Transferred goods costing \$67,600 from the Cutting Department to the Assembly Department.
- Transferred goods costing \$134,900 from Assembly to Finished Goods.
- Sold goods costing \$150,000 for \$200,000 on account.

Instructions

Journalize the transactions. (Omit explanations.)

E17-5 In Shady Company, materials are entered at the beginning of each process. Work in process inventories, with the percentage of work done on conversion costs, and production data for its Sterilizing Department in selected months during 2017 are as follows.

Compute physical units and equivalent units of production.

(LO 3, 4)

Month	Beginning Work in Process		Units Transferred Out	Ending Work in Process	
	Units	Conversion Cost%		Units	Conversion Cost%
January	–0–	—	11,000	2,000	60
March	–0–	—	12,000	3,000	30
May	–0–	—	14,000	7,000	80
July	–0–	—	10,000	1,500	40

Instructions

- Compute the physical units for January and May.
- Compute the equivalent units of production for (1) materials and (2) conversion costs for each month.

E17-6 The Cutting Department of Cassel Company has the following production and cost data for July.

Determine equivalent units, unit costs, and assignment of costs.

(LO 3, 4)

Production	Costs
1. Transferred out 12,000 units.	Beginning work in process \$ –0–
2. Started 3,000 units that are 60% complete as to conversion costs and 100% complete as to materials at July 31.	Materials 45,000
	Labor 16,200
	Manufacturing overhead 18,300

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions

- Determine the equivalent units of production for (1) materials and (2) conversion costs.
- Compute unit costs and prepare a cost reconciliation schedule.

E17-7 The Sanding Department of Quik Furniture Company has the following production and manufacturing cost data for March 2017, the first month of operation.

Prepare a production cost report.

(LO 3, 4)

Production: 7,000 units finished and transferred out; 3,000 units started that are 100% complete as to materials and 20% complete as to conversion costs.

Manufacturing costs: Materials \$33,000; labor \$21,000; and overhead \$36,000.

Instructions

Prepare a production cost report.

E17-8 The Blending Department of Luongo Company has the following cost and production data for the month of April.

Determine equivalent units, unit costs, and assignment of costs.

(LO 3, 4)

Costs:	
Work in process, April 1	
Direct materials: 100% complete	\$100,000
Conversion costs: 20% complete	70,000
Cost of work in process, April 1	<u>\$170,000</u>
Costs incurred during production in April	
Direct materials	\$ 800,000
Conversion costs	365,000
Costs incurred in April	<u>\$1,165,000</u>

Units transferred out totaled 17,000. Ending work in process was 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Instructions

- Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of April.
- Compute the unit costs for the month.
- Determine the costs to be assigned to the units transferred out and in ending work in process.

Determine equivalent units, unit costs, and assignment of costs.

(LO 3, 4)

E17-9 Baden Company has gathered the following information.

Units in beginning work in process	-0-
Units started into production	36,000
Units in ending work in process	6,000
Percent complete in ending work in process:	
Conversion costs	40%
Materials	100%
Costs incurred:	
Direct materials	\$72,000
Direct labor	\$61,000
Overhead	\$101,000

Instructions

- Compute equivalent units of production for materials and for conversion costs.
- Determine the unit costs of production.
- Show the assignment of costs to units transferred out and in process.

Determine equivalent units, unit costs, and assignment of costs.

(LO 3, 4)

E17-10 Overton Company has gathered the following information.

Units in beginning work in process	20,000
Units started into production	164,000
Units in ending work in process	24,000
Percent complete in ending work in process:	
Conversion costs	60%
Materials	100%
Costs incurred:	
Direct materials	\$101,200
Direct labor	\$164,800
Overhead	\$184,000

Instructions

- Compute equivalent units of production for materials and for conversion costs.
- Determine the unit costs of production.
- Show the assignment of costs to units transferred out and in process.

Compute equivalent units, unit costs, and costs assigned.

(LO 3, 4)

E17-11 The Polishing Department of Major Company has the following production and manufacturing cost data for September. Materials are entered at the beginning of the process.

Production: Beginning inventory 1,600 units that are 100% complete as to materials and 30% complete as to conversion costs; units started during the period are 42,900; ending inventory of 5,000 units 10% complete as to conversion costs.

Manufacturing costs: Beginning inventory costs, comprised of \$20,000 of materials and \$43,180 of conversion costs; materials costs added in Polishing during the month, \$175,800; labor and overhead applied in Polishing during the month, \$125,680 and \$257,140, respectively.

Instructions

- Compute the equivalent units of production for materials and conversion costs for the month of September.
- Compute the unit costs for materials and conversion costs for the month.
- Determine the costs to be assigned to the units transferred out and in process.

E17-12 David Skaros has recently been promoted to production manager. He has just started to receive various managerial reports, including the production cost report that you prepared. It showed that his department had 2,000 equivalent units in ending inventory. His department has had a history of not keeping enough inventory on hand to meet demand. He has come to you, very angry, and wants to know why you credited him with only 2,000 units when he knows he had at least twice that many on hand.

Explain the production cost report.

(LO 4)

Instructions

 Explain to him why his production cost report showed only 2,000 equivalent units in ending inventory. Write an informal memo. Be kind and explain very clearly why he is mistaken.

E17-13 The Welding Department of Healthy Company has the following production and manufacturing cost data for February 2017. All materials are added at the beginning of the process.

Prepare a production cost report.

(LO 3, 4)

Manufacturing Costs			Production Data	
Beginning work in process			Beginning work in process	15,000 units
Materials	\$18,000			1/10 complete
Conversion costs	14,175	\$ 32,175	Units transferred out	55,000
Materials		180,000	Units started	51,000
Labor		67,380	Ending work in process	11,000 units
Overhead		61,445		1/5 complete

Instructions

Prepare a production cost report for the Welding Department for the month of February.

E17-14 Remington Inc. is contemplating the use of process costing to track the costs of its operations. The operation consists of three segments (departments): Receiving, Shipping, and Delivery. Containers are received at Remington's docks and sorted according to the ship they will be carried on. The containers are loaded onto a ship, which carries them to the appropriate port of destination. The containers are then off-loaded and delivered to the Receiving Department.

Compute physical units and equivalent units of production.

(LO 3, 4)

Remington wants to begin using process costing in the Shipping Department. Direct materials represent the fuel costs to run the ship, and "Containers in transit" represents work in process. Listed below is information about the Shipping Department's first month's activity.

Containers in transit, April 1	0
Containers loaded	1,200
Containers in transit, April 30	350, 40% of direct materials and 20% of conversion costs

Instructions

- Determine the physical flow of containers for the month.
- Calculate the equivalent units for direct materials and conversion costs.

E17-15 Santana Mortgage Company uses a process cost system to accumulate costs in its Application Department. When an application is completed, it is forwarded to the Loan Department for final processing. The following processing and cost data pertain to September.

Determine equivalent units, unit costs, and assignment of costs.

(LO 3, 4)

1. Applications in process on September 1: 100.	Beginning WIP:	
2. Applications started in September: 1,000.	Direct materials	\$ 1,000
3. Completed applications during September: 800.	Conversion costs	3,960
4. Applications still in process at September 30: 100% complete as to materials (forms) and 60% complete as to conversion costs.	September costs:	
	Direct materials	\$ 4,500
	Direct labor	12,000
	Overhead	9,520

Materials are the forms used in the application process, and these costs are incurred at the beginning of the process. Conversion costs are incurred uniformly during the process.

Instructions

- Determine the equivalent units of service (production) for materials and conversion costs.
- Compute the unit costs and prepare a cost reconciliation schedule.

Compute equivalent units, unit costs, and costs assigned.

(LO 5)

***E17-16** Using the data in E17-15, assume Santana Mortgage Company uses the FIFO method. Also, assume that the applications in process on September 1 were 100% complete as to materials (forms) and 40% complete as to conversion costs. Assume overhead costs were \$9,620 instead of \$9,520.

Instructions

- Determine the equivalent units of service (production) for materials and conversion costs.
- Compute the unit costs and prepare a cost reconciliation schedule.

Determine equivalent units, unit costs, and assignment of costs.

(LO 5)

***E17-17** The Cutting Department of Lasso Company has the following production and cost data for August.

Production	Costs	
1. Started and completed 10,000 units.	Beginning work in process	\$ -0-
2. Started 2,000 units that are 40% completed at August 31.	Materials	45,000
	Labor	13,600
	Manufacturing overhead	16,100

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process. Lasso Company uses the FIFO method to compute equivalent units.

Instructions

- Determine the equivalent units of production for (1) materials and (2) conversion costs.
- Compute unit costs and show the assignment of manufacturing costs to units transferred out and in work in process.

Compute equivalent units, unit costs, and costs assigned.

(LO 5)

***E17-18** The Smelting Department of Polzin Company has the following production and cost data for September:

Production: Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units started and finished 9,000 units; and ending work in process 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Manufacturing costs: Work in process, September 1, \$15,200; materials added \$60,000; labor and overhead \$132,000.

Polzin uses the FIFO method to compute equivalent units.

Instructions

- Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of September.
- Compute the unit costs for the month.
- Determine the costs to be assigned to the units transferred out and in process.

Answer questions on costs and production.

(LO 5)

***E17-19** The ledger of Hasgrove Company has the following work in process account.

Work in Process—Painting					
3/1	Balance	3,680	3/31	Transferred out	?
3/31	Materials	6,600			
3/31	Labor	2,400			
3/31	Overhead	1,150			
3/31	Balance	?			

Production records show that there were 800 units in the beginning inventory, 30% complete, 1,100 units started, and 1,500 units transferred out. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process. Hasgrove uses the FIFO method to compute equivalent units.

Instructions

Answer the following questions.

- How many units are in process at March 31?
- What is the unit materials cost for March?
- What is the unit conversion cost for March?
- What is the total cost of units started in February and completed in March?
- What is the total cost of units started and finished in March?
- What is the cost of the March 31 inventory?

***E17-20** The Welding Department of Majestic Company has the following production and manufacturing cost data for February 2017. All materials are added at the beginning of the process. Majestic uses the FIFO method to compute equivalent units.

Prepare a production cost report for a second process.

(LO 5)

Manufacturing Costs		Production Data	
Beginning work in process	\$ 32,175	Beginning work in process	15,000 units,
Costs transferred in	135,000		10% complete
Materials	57,000	Units transferred out	54,000
Labor	35,100	Units transferred in	64,000
Overhead	68,400	Ending work in process	25,000 units
			20% complete

Instructions

Prepare a production cost report for the Welding Department for the month of February. Transferred-in costs are considered materials costs.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

P17-1A Fire Out Company manufactures its product, Vitadrink, through two manufacturing processes: Mixing and Packaging. All materials are entered at the beginning of each process. On October 1, 2017, inventories consisted of Raw Materials \$26,000, Work in Process—Mixing \$0, Work in Process—Packaging \$250,000, and Finished Goods \$289,000. The beginning inventory for Packaging consisted of 10,000 units that were 50% complete as to conversion costs and fully complete as to materials. During October, 50,000 units were started into production in the Mixing Department and the following transactions were completed.

Journalize transactions.

(LO 2)

- Purchased \$300,000 of raw materials on account.
- Issued raw materials for production: Mixing \$210,000 and Packaging \$45,000.
- Incurred labor costs of \$278,900.
- Used factory labor: Mixing \$182,500 and Packaging \$96,400.
- Incurred \$810,000 of manufacturing overhead on account.
- Applied manufacturing overhead on the basis of \$23 per machine hour. Machine hours were 28,000 in Mixing and 6,000 in Packaging.
- Transferred 45,000 units from Mixing to Packaging at a cost of \$979,000.
- Transferred 53,000 units from Packaging to Finished Goods at a cost of \$1,315,000.
- Sold goods costing \$1,604,000 for \$2,500,000 on account.

Instructions

Journalize the October transactions.

Complete four steps necessary to prepare a production cost report.

(LO 3, 4)

P17-2A Rosenthal Company manufactures bowling balls through two processes: Molding and Packaging. In the Molding Department, the urethane, rubber, plastics, and other materials are molded into bowling balls. In the Packaging Department, the balls are placed in cartons and sent to the finished goods warehouse. All materials are entered at the beginning of each process. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department during June 2017 are presented below.

<u>Production Data</u>	<u>June</u>
Beginning work in process units	–0–
Units started into production	22,000
Ending work in process units	2,000
Percent complete—ending inventory	40%

<u>Cost Data</u>	
Materials	\$198,000
Labor	53,600
Overhead	112,800
Total	<u>\$364,400</u>

Instructions

(c) Materials	\$9.00
CC	\$8.00
(d) Transferred out	\$340,000
WIP	\$ 24,400

- Prepare a schedule showing physical units of production.
- Determine the equivalent units of production for materials and conversion costs.
- Compute the unit costs of production.
- Determine the costs to be assigned to the units transferred out and in process for June.
- Prepare a production cost report for the Molding Department for the month of June.

Complete four steps necessary to prepare a production cost report.

(LO 3, 4)

P17-3A Thakin Industries Inc. manufactures dorm furniture in separate processes. In each process, materials are entered at the beginning, and conversion costs are incurred uniformly. Production and cost data for the first process in making two products in two different manufacturing plants are as follows.

	<u>Cutting Department</u>	
	<u>Plant 1</u>	<u>Plant 2</u>
<u>Production Data—July</u>	<u>T12-Tables</u>	<u>C10-Chairs</u>
Work in process units, July 1	–0–	–0–
Units started into production	20,000	18,000
Work in process units, July 31	3,000	500
Work in process percent complete	60	80

<u>Cost Data—July</u>		
Work in process, July 1	\$ –0–	\$ –0–
Materials	380,000	288,000
Labor	234,400	110,000
Overhead	104,000	104,800
Total	<u>\$718,400</u>	<u>\$502,800</u>

(a) (3) T12:	
Materials	\$19
CC	\$18
(4) T12:	
Transferred out	\$629,000
WIP	\$ 89,400

Instructions

- For each plant:
 - Compute the physical units of production.
 - Compute equivalent units of production for materials and for conversion costs.
 - Determine the unit costs of production.
 - Show the assignment of costs to units transferred out and in process.
- Prepare the production cost report for Plant 1 for July 2017.

P17-4A Rivera Company has several processing departments. Costs charged to the Assembly Department for November 2017 totaled \$2,280,000 as follows.

Assign costs and prepare production cost report.

(LO 3, 4)

Work in process, November 1		
Materials	\$79,000	
Conversion costs	<u>48,150</u>	\$ 127,150
Materials added		1,589,000
Labor		225,920
Overhead		337,930

Production records show that 35,000 units were in beginning work in process 30% complete as to conversion costs, 660,000 units were started into production, and 25,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

Instructions

- (a) Determine the equivalent units of production and the unit production costs for the Assembly Department.
- (b) Determine the assignment of costs to goods transferred out and in process.
- (c) Prepare a production cost report for the Assembly Department.

(b) Transferred

out	\$2,211,000
WIP	\$ 69,000

P17-5A Polk Company manufactures basketballs. Materials are added at the beginning of the production process and conversion costs are incurred uniformly. Production and cost data for the month of July 2017 are as follows.

Determine equivalent units and unit costs and assign costs.

(LO 3, 4)

<u>Production Data—Basketballs</u>	<u>Units</u>	<u>Percentage Complete</u>
Work in process units, July 1	500	60%
Units started into production	1,000	
Work in process units, July 31	600	40%

<u>Cost Data—Basketballs</u>		
Work in process, July 1		
Materials	\$750	
Conversion costs	<u>600</u>	\$1,350
Direct materials		2,400
Direct labor		1,580
Manufacturing overhead		1,240

Instructions

- (a) Calculate the following.
 - (1) The equivalent units of production for materials and conversion costs.
 - (2) The unit costs of production for materials and conversion costs.
 - (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
- (b) Prepare a production cost report for the month of July for the basketballs.

(a) (2) Materials	\$2.10
(3) Transferred	
out	\$4,590
WIP	\$1,980

P17-6A Hamilton Processing Company uses a weighted-average process cost system and manufactures a single product—an industrial carpet shampoo and cleaner used by many universities. The manufacturing activity for the month of October has just been completed. A partially completed production cost report for the month of October for the Mixing and Cooking Department is shown on page 834.

Compute equivalent units and complete production cost report.

(LO 3, 4)

Instructions

- (a) Prepare a schedule that shows how the equivalent units were computed so that you can complete the “Quantities: Units accounted for” equivalent units section shown in the production cost report, and compute October unit costs.
- (b) Complete the “Cost Reconciliation Schedule” part of the production cost report.

(a) Materials	\$1.60
(b) Transferred	
out	\$282,000
WIP	\$ 63,000

HAMILTON PROCESSING COMPANY
Mixing and Cooking Department
Production Cost Report
For the Month Ended October 31

<u>Quantities</u>	<u>Physical Units</u>	<u>Equivalent Units</u>		
		<u>Materials</u>	<u>Conversion Costs</u>	
Units to be accounted for				
Work in process, October 1 (all materials, 70% conversion costs)	20,000			
Started into production	150,000			
Total units	170,000			
Units accounted for				
Transferred out	120,000	?	?	
Work in process, October 31 (60% materials, 40% conversion costs)	50,000	?	?	
Total units accounted for	170,000	?	?	
 <u>Costs</u>

Costs accounted for				
Transferred out				\$?
Work in process, October 31				
Materials			\$?	
Conversion costs			?	?
Total costs				\$?

Determine equivalent units and unit costs and assign costs for processes; prepare production cost report.

(LO 5)

***P17-7A** Owen Company manufactures bicycles and tricycles. For both products, materials are added at the beginning of the production process, and conversion costs are incurred uniformly. Owen Company uses the FIFO method to compute equivalent units. Production and cost data for the month of March are as follows.

<u>Production Data—Bicycles</u>	<u>Units</u>	<u>Percentage Complete</u>
Work in process units, March 1	200	80%
Units started into production	1,000	
Work in process units, March 31	300	40%
 <u>Cost Data—Bicycles</u>		
Work in process, March 1	\$19,280	
Direct materials	50,000	
Direct labor	25,900	
Manufacturing overhead	30,000	

<u>Production Data—Tricycles</u>	<u>Units</u>	<u>Percentage Complete</u>
Work in process units, March 1	100	75%
Units started into production	1,000	
Work in process units, March 31	60	25%
<u>Cost Data—Tricycles</u>		
Work in process, March 1	\$ 6,125	
Direct materials	30,000	
Direct labor	14,300	
Manufacturing overhead	20,000	

Instructions

- (a) Calculate the following for both the bicycles and the tricycles.
- (1) The equivalent units of production for materials and conversion costs.
 - (2) The unit costs of production for materials and conversion costs.
 - (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
- (b) Prepare a production cost report for the month of March for the bicycles only.

(a) Bicycles:

(1) Materials	1,000
(2) Materials	\$50
(3) Transferred out	\$102,380
WIP	\$ 22,800

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS**CURRENT DESIGNS**

CD17 Building a kayak using the composite method is a very labor-intensive process. In the Fabrication Department, the kayaks go through several steps as employees carefully place layers of Kevlar® in a mold and then use resin to fuse together the layers. The excess resin is removed with a vacuum process, and the upper shell and lower shell are removed from the molds and assembled. The seat, hatch, and other components are added in the Finishing Department.

At the beginning of April, **Current Designs** had 30 kayaks in process in the Fabrication Department. Rick Thrune, the production manager, estimated that about 80% of the materials costs had been added to these boats, which were about 50% complete with respect to the conversion costs. The cost of this inventory had been calculated to be \$8,400 in materials and \$9,000 in conversion costs.

During April, 72 boats were started. At the end of the month, the 35 kayaks in the ending inventory had 20% of the materials and 40% of the conversion costs already added to them.

A review of the accounting records for April showed that materials with a cost of \$17,500 had been requisitioned by the Fabrication Department and that the conversion costs for the month were \$39,600.

Instructions

Complete a production cost report for April 2017 for the Fabrication Department using the weighted-average method.

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–16.)

WP17 Because most of the parts for its irrigation systems are standard, Waterways handles the majority of its manufacturing as a process cost system. There are multiple process departments. Three of these departments are the Molding, Cutting, and Welding Departments. All items eventually end up in the Packaging Department, which prepares items for sale in kits or individually. This problem asks you to help Waterways calculate equivalent units and prepare a production cost report.

Go to the book's companion website, at www.wiley.com/college/weygandt, to see the completion of this problem.

**EXCEL
TUTORIAL**

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP17-1 Florida Beach Company manufactures sunscreen, called NoTan, in 11-ounce plastic bottles. NoTan is sold in a competitive market. As a result, management is very cost-conscious. NoTan is manufactured through two processes: mixing and filling. Materials are entered at the beginning of each process, and labor and manufacturing overhead occur uniformly throughout each process. Unit costs are based on the cost per gallon of NoTan using the weighted-average costing approach.

On June 30, 2017, Mary Ritzman, the chief accountant for the past 20 years, opted to take early retirement. Her replacement, Joe Benili, had extensive accounting experience with motels in the area but only limited contact with manufacturing accounting. During July, Joe correctly accumulated the following production quantity and cost data for the Mixing Department.

Production quantities: Work in process, July 1, 8,000 gallons 75% complete; started into production 100,000 gallons; work in process, July 31, 5,000 gallons 20% complete. Materials are added at the beginning of the process.

Production costs: Beginning work in process \$88,000, comprised of \$21,000 of materials costs and \$67,000 of conversion costs; incurred in July: materials \$573,000, conversion costs \$765,000.

Joe then prepared a production cost report on the basis of physical units started into production. His report showed a production cost of \$14.26 per gallon of NoTan. The management of Florida Beach was surprised at the high unit cost. The president comes to you, as Mary's top assistant, to review Joe's report and prepare a correct report if necessary.

Instructions

With the class divided into groups, answer the following questions.

- Show how Joe arrived at the unit cost of \$14.26 per gallon of NoTan.
- What error(s) did Joe make in preparing his production cost report?
- Prepare a correct production cost report for July.

Managerial Analysis

BYP17-2 Harris Furniture Company manufactures living room furniture through two departments: Framing and Upholstering. Materials are entered at the beginning of each process. For May, the following cost data are obtained from the two work in process accounts.

	<u>Framing</u>	<u>Upholstering</u>
Work in process, May 1	\$ -0-	\$?
Materials	450,000	?
Conversion costs	261,000	330,000
Costs transferred in	-0-	600,000
Costs transferred out	600,000	?
Work in process, May 31	111,000	?

Instructions

Answer the following questions.

- If 3,000 sofas were started into production on May 1 and 2,500 sofas were transferred to Upholstering, what was the unit cost of materials for May in the Framing Department?
- Using the data in (a) above, what was the per unit conversion cost of the sofas transferred to Upholstering?
- Continuing the assumptions in (a) above, what is the percentage of completion of the units in process at May 31 in the Framing Department?

Real-World Focus

BYP17-3 Paintball is now played around the world. The process of making paintballs is actually quite similar to the process used to make certain medical pills. In fact, paintballs were previously often made at the same factories that made pharmaceuticals.

Address: Go to www.youtube.com/watch?v=2hKrv60PJKE#t=129 to access the video.

Instructions

View that video at the site listed above and then answer the following questions.

- Describe in sequence the primary steps used to manufacture paintballs.
- Explain the costs incurred by the company that would fall into each of the following categories: materials, labor, and overhead. Of these categories, which do you think would be the greatest cost in making paintballs?
- Discuss whether a paintball manufacturer would use job order costing or process costing.

CRITICAL THINKING**Communication Activity**

BYP17-4 Diane Barone was a good friend of yours in high school and is from your home town. While you chose to major in accounting when you both went away to college, she majored in marketing and management. You are now the accounting manager for the Snack Foods Division of Melton Enterprises. Your friend Diane was promoted to regional sales manager for the same division of Melton. Diane recently telephoned you. She explained that she was familiar with job cost sheets, which had been used by the Special Projects Division where she had formerly worked. She was, however, very uncomfortable with the production cost reports prepared by your division. She emailed you a list of her particular questions:

- Since Melton occasionally prepares snack foods for special orders in the Snack Foods Division, why don't we track costs of the orders separately?
- What is an equivalent unit?
- Why am I getting four production cost reports? Isn't there one work in process account?

Instructions

Prepare a memo to Diane. Answer her questions and include any additional information you think would be helpful. You may write informally but do use proper grammar and punctuation.

Ethics Case

BYP17-5 R. B. Dillman Company manufactures a high-tech component used in Bluetooth speakers that passes through two production processing departments, Molding and Assembly. Department managers are partially compensated on the basis of units of products completed and transferred out relative to units of product put into production. This was intended as encouragement to be efficient and to minimize waste.

Jan Wooten is the department head in the Molding Department, and Tony Ferneti is her quality control inspector. During the month of June, Jan had three new employees who were not yet technically skilled. As a result, many of the units produced in June had minor molding defects. In order to maintain the department's normal high rate of completion, Jan told Tony to pass through inspection and on to the Assembly Department all units that had defects nondetectable to the human eye. "Company and industry tolerances on this product are too high anyway," says Jan. "Less than 2% of the units we produce are subjected in the market to the stress tolerance we've designed into them. The odds of those 2% being any of this month's units are even less. Anyway, we're saving the company money."

Instructions

- Who are the potential stakeholders involved in this situation?
- What alternatives does Tony have in this situation? What might the company do to prevent this situation from occurring?

Considering People, Planet, and Profit

BYP17-6 In a recent year, an oil refinery in Texas City, Texas, on the Houston Ship Channel exploded. The explosion killed 14 people and sent a plume of smoke hundreds of feet into the air. The blast started as a fire in the section of the plant that increased the octane of the gasoline that was produced at the refinery. The Houston Ship Channel is the main waterway that allows commerce to flow from the Gulf of Mexico into Houston.

The Texas Commission on Environmental Quality expressed concern about the release of nitrogen oxides, benzene, and other known carcinogens as a result of the blast. Neighbors of the plant complained that the plant had been emitting carcinogens for years and that the regulators had ignored their complaints about emissions and unsafe working conditions.

Instructions

Answer the following questions.

- Outline the costs that the company now faces as a result of the accident.
- How could the company have reduced the costs associated with the accident?

18

Activity-Based Costing

CHAPTER PREVIEW As indicated in the Feature Story below about **Precor**, the traditional costing systems described in earlier chapters are not the best answer for every company. Precor suspected that the traditional system was masking significant differences in its real cost structure, so it sought a new method of assigning costs. Similar searches by other companies for ways to improve operations and gather more accurate data for decision-making have resulted in the development of powerful new management tools, including **activity-based costing (ABC)**. The primary objective of this chapter is to explain and illustrate this concept.

FEATURE STORY

Precor Is on Your Side

Do you feel like the whole world is conspiring against your efforts to get in shape? Is it humanly possible to resist the constant barrage of advertisements and fast-food servers who pleasantly encourage us to “supersize” it? Lest we think that we have no allies in our battle against the bulge, consider **Precor**.

Ever since it made the first ergonomically sound rowing machine in 1980, Precor’s sole mission has been to provide exercise equipment. It makes elliptical trainers, exercise bikes, rowing machines, treadmills, multi-station strength systems, and many other forms of equipment designed to erase the cumulative effects of a fast-food nation. Its equipment is widely used in **Hilton** hotels, **Gold’s Gym** franchises, and even in Madonna’s **Hard Candy** fitness center in Moscow.

Building high-quality fitness equipment requires sizable investments by Precor in buildings and machinery. For example, Precor recently moved its facilities from Valencia, California, to Greensboro, North Carolina. In order to reduce costs and minimize environmental impact, the company installed low-flow water fixtures, high-efficiency heating and cooling systems, and state-of-the-art lighting in its \$26 million, 230,000-square-foot facility. As a result of these efforts, Precor’s new facility received a Leadership in Energy and Efficient Design (LEED) CI Gold Certification.

Because of its huge investments in property, plant, and equipment, overhead costs represent a large percentage of the cost of Precor’s exercise equipment. The combination of high overhead costs and a wide variety of products means that it is important that Precor allocates its overhead accurately to its various products. Without accurate cost information, Precor would not know whether its elliptical trainers and recumbent bicycles are making money, whether its AMT 100i adaptive motion trainer is priced high enough to cover its costs, or if its 240i Stretchtrainer is losing money.

To increase the accuracy of its costs, Precor uses a method of overhead allocation that focuses on identifying the types of activities that cause the company to incur costs. It then assigns more overhead to those products that rely most heavily on cost-incurring activities. By doing this, the allocation of overhead is less arbitrary than traditional overhead allocation methods. In short, before it can help us burn off the pounds, Precor needs to understand what drives its overhead costs.

CHAPTER OUTLINE

Learning Objectives

1

Discuss the difference between traditional costing and activity-based costing.

- Traditional costing systems
- Illustration of a traditional system
- Need for a new approach
- Activity-based costing

DO IT!

1

Costing Systems

2

Apply activity-based costing to a manufacturer.

- Identify and classify activities and assign overhead
- Identify cost drivers
- Compute activity-based overhead rates
- Allocate overhead costs
- Comparing unit costs

DO IT!

2

Apply ABC to Manufacturer

3

Explain the benefits and limitations of activity-based costing.

- Advantage of multiple cost pools
- Advantage of enhanced cost control
- Advantage of better management decisions
- Limitations of ABC

DO IT!

3

Classify Activity Levels

4

Apply activity-based costing to service industries.

- Traditional costing example
- ABC example

DO IT!

4

Apply ABC to Service Company

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

LEARNING
OBJECTIVE

1

Discuss the difference between traditional costing and activity-based costing.

Traditional Costing Systems

It is probably impossible to determine the *exact* cost of a product or service. However, in order to achieve improved management decisions, companies strive to provide decision-makers with the most accurate cost estimates they can. The most accurate estimate of product cost occurs when the costs are traceable directly to the actual product or service. Direct materials and direct labor costs are the easiest to trace directly to the product through the use of material requisition forms and payroll time sheets. Overhead costs, on the other hand, are an indirect or common cost that generally cannot be easily or directly traced to individual products or services. Instead, companies use estimates to assign overhead costs to products and services.

Often, the most difficult part of computing accurate unit costs is determining the proper amount of **overhead cost** to assign to each product, service, or job. In our coverage of job order costing in Chapter 16 and of process costing in Chapter 17, we used a single or plantwide overhead rate throughout the year for the entire factory operation. That rate was called the **predetermined overhead rate**. For job order costing, we assumed that **direct labor cost** was the relevant activity base for assigning all overhead costs to jobs. For process costing, we assumed that **machine hours** was the relevant activity base for assigning all overhead to the process or department. Illustration 18-1 displays a simplified (one-stage) traditional costing system relying on direct labor to assign overhead.

Illustration 18-1
Traditional one-stage costing system

Illustration of a Traditional Costing System

To illustrate a traditional costing system, assume that Atlas Company produces two abdominal fitness products—the Ab Bench and the Ab Coaster. Each year, the company produces 25,000 Ab Benches but only 5,000 Ab Coasters. Each unit produced requires one hour of direct labor, for a total of 30,000 labor hours (25,000 + 5,000). The direct labor cost is \$12 per unit for each product.

The direct materials cost per unit is \$40 for the Ab Bench and \$30 for the Ab Coaster. Therefore, the total manufacturing costs (excluding overhead) is \$52 for the Ab Bench and \$42 for the Ab Coaster, as shown in Illustration 18-2.

Illustration 18-2
Direct costs per unit—
traditional costing

Atlas Company.xls			
Home Insert Page Layout Formulas Data Review View			
P18 fx			
	A	B	C
1	ATLAS COMPANY		
2	Manufacturing Costs	Ab Bench	Ab Coaster
3	Direct materials	\$40	\$30
4	Direct labor	12	12
5	Total direct cost per unit	\$52	\$42
6			

Atlas also expects to incur annual manufacturing overhead costs of \$900,000. Atlas allocates overhead using a single predetermined overhead rate based on the 30,000 direct labor hours it expects to use. Thus, the predetermined overhead rate is \$30 per direct labor hour (\$900,000/30,000 direct labor hours).

Since both products require one direct labor hour per unit, both products are allocated overhead costs of \$30 per unit under traditional costing. Illustration 18-3 shows the total unit costs for the Ab Bench and the Ab Coaster.

ATLAS COMPANY			
Manufacturing Costs	Ab Bench	Ab Coaster	
Direct materials	\$40	\$30	
Direct labor	12	12	
Overhead	30	30	
Total direct cost per unit	\$82	\$72	

Illustration 18-3
Total unit costs—traditional costing

The Need for a New Approach

As shown in Illustration 18-3, Atlas allocates the same amount of overhead costs per unit to both the Ab Bench and the Ab Coaster because these two products use the same amount of direct labor hours per unit. However, using a single rate based on direct labor hours may not be the best approach for Atlas to allocate its overhead.

Historically, the use of direct labor as the activity base made sense as direct labor made up a large portion of total manufacturing cost. Therefore, there was a high correlation between direct labor and the incurrence of overhead cost. Direct labor thus became the most popular basis for allocating overhead.

In recent years, however, manufacturers and service providers have experienced tremendous changes. Advances in computerized systems, technological innovations, global competition, and automation have altered the manufacturing environment drastically. As a result, the amount of direct labor used in many industries has greatly decreased, and total overhead costs resulting from depreciation on expensive equipment and machinery, utilities, repairs, and maintenance have significantly increased. When there is less (or no) correlation between direct labor and overhead costs incurred, plantwide predetermined overhead rates based on direct labor are misleading. Companies that use overhead rates based on direct labor when this correlation does not exist experience significant product cost distortions.

To minimize such distortions, many companies began to use machine hours instead of labor hours as the basis to allocate overhead in an automated manufacturing environment. But, even machine hours may not serve as a good basis for plantwide allocation of overhead costs. For example, product design and engineering costs are not correlated with machine hours but instead with the number of different items a company produces. Companies that have complex processes need to use multiple allocation bases to compute accurate product costs. An overhead cost allocation method that uses multiple bases is **activity-based costing**.

Activity-Based Costing

Activity-based costing (ABC) is an approach for allocating overhead costs. Specifically, ABC allocates overhead to multiple activity cost pools and then assigns the activity cost pools to products and services by means of cost drivers. In using ABC, you need to understand the following concepts.

KEY CONCEPTS

ACTIVITY. Any event, action, transaction, or work sequence that incurs costs when producing a product or performing a service.

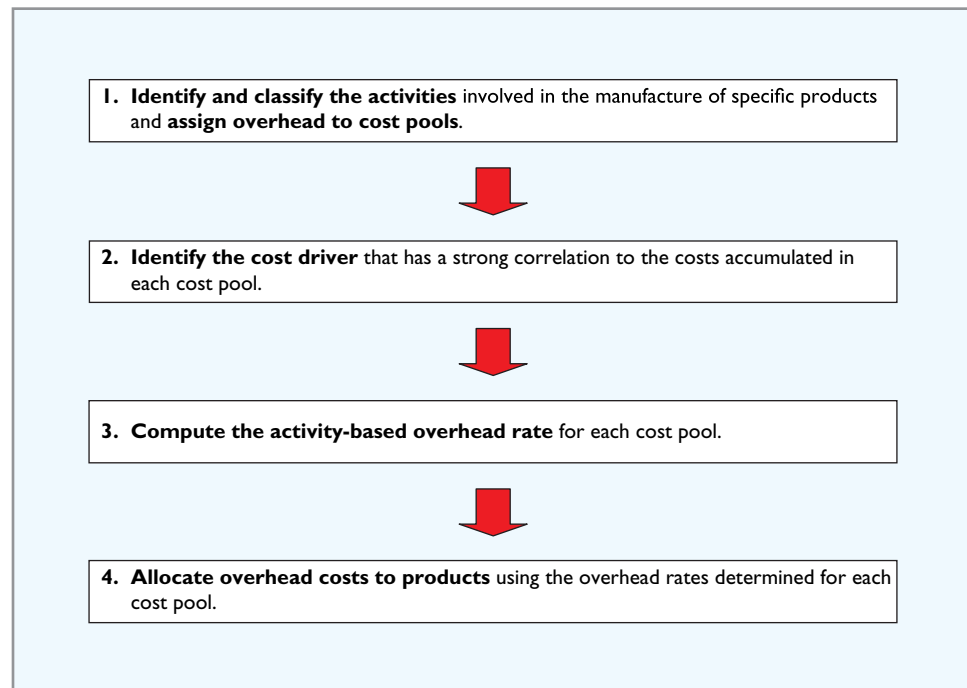

ACTIVITY COST POOL. The overhead cost attributed to a distinct activity (e.g., ordering materials or setting up machines).

COST DRIVER. Any factor or activity that has a direct cause-effect relationship with the resources consumed.

Activity-based costing involves the following four steps, as shown in Illustration 18-4.

Illustration 18-4

The four steps of activity-based costing

ABC allocates overhead in a two-stage process. The first stage (Step 1) assigns overhead costs to activity cost pools. (Traditional costing systems, in contrast, allocate these costs to departments or to jobs.) Examples of overhead cost pools are ordering materials, setting up machines, assembling products, and inspecting products.

The second stage (Steps 2–4) allocates the overhead in the activity cost pools to products, using cost drivers. The cost drivers measure the number of individual activities undertaken to produce goods or perform services. Examples are number of purchase orders, number of setups, labor hours, and number of inspections. Illustration 18-5 shows examples of activities, and possible cost drivers to measure them, for a company that manufactures two types of abdominal exercise equipment—Ab Benches and Ab Coasters.

In the first step (as shown at the top of Illustration 18-5), the company assigns overhead costs to activity cost pools. In this simplified example, the company has identified four activity cost pools: purchasing, storing, machining, and supervising. After the costs are assigned to the activity cost pools, the company uses cost drivers to determine the costs to allocate to the individual products based on each product's use of each activity. For example, if Ab Benches require more activity by the purchasing department, as measured by the number of required purchase orders, then more of the overhead costs from the purchasing pool are allocated to the Ab Benches.

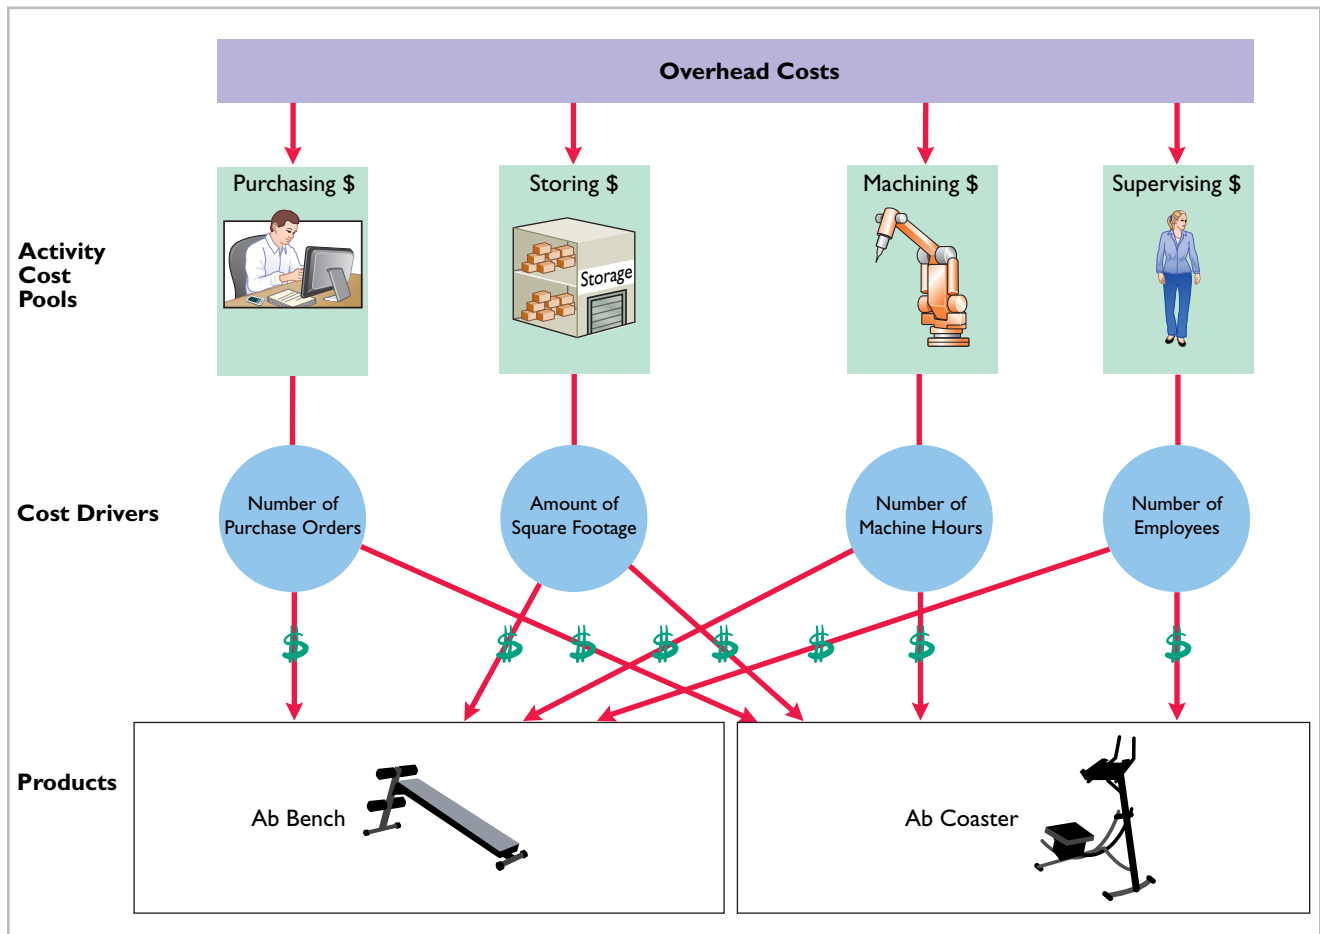

Illustration 18-5
Activities and related cost drivers

The more complex a product's manufacturing operation, the more activities and cost drivers it is likely to have. If there is little or no correlation between changes in the cost driver and consumption of the overhead cost, inaccurate product costs are inevitable.

DO IT!

1

Costing Systems

Indicate whether the following statements are true or false.

1. A traditional costing system allocates overhead by means of multiple overhead rates.
2. Activity-based costing allocates overhead costs in a two-stage process.
3. Direct materials and direct labor costs are easier to trace to products than overhead.
4. As manufacturing processes have become more automated, more companies have chosen to allocate overhead on the basis of direct labor costs.
5. In activity-based costing, an activity is any event, action, transaction, or work sequence that incurs cost when producing goods or performing services.

Solution

1. False. 2. True. 3. True. 4. False. 5. True.

Related exercise material: **BE18-1, BE18-2, E18-1, E18-2, and DO IT! 18-1.**

Action Plan

- ✓ Understand that a traditional costing system allocates overhead on the basis of a single predetermined overhead rate.
- ✓ Understand that an ABC system assigns overhead to identified activity cost pools and then allocates costs to products using related cost drivers that measure the resources consumed.

Apply activity-based costing to a manufacturer.

In this section, we present a simple case example that compares activity-based costing with traditional costing. It illustrates how ABC eliminates the distortion that can occur in traditional overhead cost allocation. As you study this example, you should understand that ABC does not *replace* an existing job order or process cost system. What ABC does is to segregate overhead into various cost pools in an effort to provide more accurate cost information. As a result, ABC supplements—rather than replaces—these cost systems.

Let's return to our Atlas Company example. Using the information from Illustration 18-3 (page 841), we can calculate unit costs under ABC. As shown earlier in Illustration 18-4 (page 842), activity-based costing involves the following four steps.

- 1. Identify and classify the activities** involved in the manufacture of specific products and **assign overhead to cost pools**.
- 2. Identify the cost driver** that has a strong correlation to the costs accumulated in each cost pool.
- 3. Compute the activity-based overhead rate** for each cost pool.
- 4. Allocate overhead costs to products** using the overhead rates determined for each cost pool.

Identify and Classify Activities and Assign Overhead to Cost Pools (Step 1)

Activity-based costing starts with an analysis of the activities needed to manufacture a product or perform a service. This analysis should identify all resource-consuming activities. It requires documenting every activity undertaken to accomplish a task. Atlas Company identifies five activity cost pools: manufacturing, setups, purchase ordering, product development, and property and plant.

Next, the company assigns overhead costs directly to the appropriate activity cost pool. For example, Atlas assigns all overhead costs directly associated with machine setups (such as salaries, supplies, and depreciation) to the setup cost pool. Illustration 18-6 shows the five cost pools, along with the estimated overhead assigned to each cost pool.

Illustration 18-6
Activity cost pools and
estimated overhead

Atlas Company.xls

P18 fx			
	A	B	C
1	ATLAS COMPANY		
2	Activity Cost Pools	Estimated Overhead	
3	Manufacturing		\$500,000
4	Setups		100,000
5	Purchase ordering		50,000
6	Product development		200,000
7	Property and plant		50,000
8	Total		\$900,000
9			

Identify Cost Drivers (Step 2)

After costs are assigned to the activity cost pools, the company must identify the cost drivers for each cost pool. The cost driver must accurately measure the actual consumption of the activity by the various products. To achieve accurate

costing, a **high degree of correlation** must exist between the cost driver and the actual consumption of the overhead costs in the cost pool.

Illustration 18-7 shows the cost drivers that Atlas Company identifies and their total expected use per activity cost pool.

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity
Manufacturing	Machine hours	50,000 machine hours
Setups	Number of setups	2,000 setups
Purchase ordering	Number of purchase orders	2,500 purchase orders
Product development	Products developed	2 products developed
Property and plant	Square footage	25,000 square feet

Illustration 18-7
Cost drivers and their expected use

Availability and ease of obtaining data relating to the cost driver is an important factor that must be considered in its selection.

Compute Activity-Based Overhead Rates (Step 3)

Next, the company computes an **activity-based overhead rate** per cost driver by dividing the estimated overhead per activity by the number of cost drivers expected to be used per activity. Illustration 18-8 shows the formula for this computation.

$$\frac{\text{Estimated Overhead per Activity}}{\text{Expected Use of Cost Drivers per Activity}} = \text{Activity-Based Overhead Rate}$$

Illustration 18-8
Formula for computing activity-based overhead rate

Atlas Company computes its activity-based overhead rates by using the estimated overhead per activity cost pool, shown in Illustration 18-6, and the expected use of cost drivers per activity, shown in Illustration 18-7. These computations are presented in Illustration 18-9.

Atlas Company.xls						
Home Insert Page Layout Formulas Data Review View						
P18 fx						
	A	B	C	D	E	F
1	ATLAS COMPANY					
2	Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rates
3	Manufacturing	\$500,000		50,000 machine hours		\$10 per machine hour
4	Setups	100,000		2,000 setups		\$50 per setup
5	Purchase ordering	50,000		2,500 purchase orders		\$20 per order
6	Product development	200,000		2 products developed		\$100,000 per product
7	Plant and property	50,000		25,000 square feet		\$2 per square foot
8	Total	\$900,000				
9						

Illustration 18-9
Computation of activity-based overhead rates

Allocate Overhead Costs to Products (Step 4)

In allocating overhead costs, the company must know the expected use of cost drivers **for each product**. Because of its low volume and higher number of components, the Ab Coaster requires more setups and purchase orders than the

Ab Bench. Illustration 18-10 shows the expected use of cost drivers per product for each of Atlas Company's products.

Illustration 18-10

Expected use of cost drivers per product

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers per Activity	Expected Use of Cost Drivers per Product	
			Ab Bench	Ab Coaster
Manufacturing	Machine hours	50,000 machine hours	30,000	20,000
Setups	Number of setups	2,000 setups	500	1,500
Purchase ordering	Number of purchase orders	2,500 purchase orders	750	1,750
Product development	Products developed	2 products developed	1	1
Property and plant	Square feet	25,000 square feet	10,000	15,000

To allocate overhead costs to each product, Atlas multiplies the activity-based overhead rates per cost driver (Illustration 18-9) by the number of cost drivers expected to be used per product (Illustration 18-10). Illustration 18-11 shows the overhead cost allocated to each product.

Illustration 18-11

Allocation of activity cost pools to products

ATLAS COMPANY							
Activity Cost Pools	Ab Bench			Ab Coaster			
	Expected Use of Cost Drivers per Product	Activity-Based Overhead Rates	Cost Allocated	Expected Use of Cost Drivers per Product	Activity-Based Overhead Rates	Cost Allocated	
Manufacturing	30,000	\$10	\$300,000	20,000	\$10	\$200,000	
Setups	500	\$50	25,000	1,500	\$50	75,000	
Purchase ordering	750	\$20	15,000	1,750	\$20	35,000	
Product development	1	\$100,000	100,000	1	\$100,000	100,000	
Property and plant	10,000	\$2.00	20,000	15,000	\$2.00	30,000	
Total costs allocated (a)			\$460,000			\$440,000	
Units produced (b)			25,000			5,000	
Overhead cost per unit [(a) ÷ (b)], rounded			\$18.40			\$88.00	

Under ABC, the overhead cost per unit is \$18.40 for the Ab Bench and \$88.00 for the Ab Coaster. We see next how this per unit amount substantially differs from that computed under a traditional costing system.

Comparing Unit Costs

Illustration 18-12 compares the unit costs for Atlas Company's Ab Bench and Ab Coaster under traditional costing and ABC.

The comparison shows that unit costs under traditional costing are different and often misleading. Traditional costing overstates the cost of producing the Ab Bench by \$11.60 per unit and understates the cost of producing the Ab Coaster

Manufacturing Costs	Ab Bench		Ab Coaster	
	Traditional Costing	ABC	Traditional Costing	ABC
Direct materials	\$40.00	\$40.00	\$30.00	\$ 30.00
Direct labor	12.00	12.00	12.00	12.00
Overhead	30.00	18.40	30.00	88.00
Total direct cost per unit	\$82.00	\$70.40	\$72.00	\$130.00
	Overstated \$11.60		Understated \$58.00	

Illustration 18-12
Comparison of unit product costs

by \$58 per unit. These differences are attributable to how Atlas allocates manufacturing overhead across the two systems. Using a traditional costing system, each product was allocated the same amount of overhead (\$30) because both products use the same amount of the cost driver (direct labor hours). In contrast, ABC allocates overhead to products based on multiple cost drivers. For example, under ABC, Atlas allocates 75% of the costs of equipment setups to Ab Coasters because Ab Coasters were responsible for 75% ($1,500 \div 2,000$) of the total number of setups.

Note that activity-based costing does not change the amount of overhead costs. Under both traditional costing and ABC, Atlas spends the same amount of overhead—\$900,000. However, ABC allocates overhead costs in a more accurate manner. Thus, ABC helps Atlas avoid some negative consequences of a traditional costing system, such as overpricing its Ab Benches and thereby possibly losing market share to competitors. Atlas has also been sacrificing profitability by underpricing the Ab Coaster.

Companies that move from traditional costing to ABC often have similar experiences as ABC shifts costs from high-volume products to low-volume products. This shift occurs because low-volume products are often more customized and require more special handling. Thus, low-volume products are frequently responsible for more overhead costs. In addition, ABC recognizes products' use of resources, which also increases the accuracy of product costs.

Management Insight

ABC Evaluated

Surveys of companies often show ABC usage of approximately 50%. Yet, in recent years, articles about ABC have expressed mixed opinions regarding its usefulness. To evaluate ABC practices and user satisfaction with ABC, a survey was conducted of 348 companies worldwide. Some of the interesting findings included the following: ABC methods are widely used across the entire value chain, rather than being primarily used to allocate production-specific costs; only 25% of non-ABC companies think they are accurately

tracing the costs of activities, while 70% of ABC companies think their company does this well; and respondents felt that ABC provides greater support for financial, operational, and strategic decisions. More than 87% of respondents said that their ideal costing system would include some form of ABC. Since this significantly exceeds the 50% of the respondents actually using it, ABC usage may well increase in the future.

Source: William Stratton, Denis Desroches, Raef Lawson, and Toby Hatch, "Activity-Based Costing: Is It Still Relevant?" *Management Accounting Quarterly* (Spring, 2009), pp. 31–39.

What might explain why so many companies say that ideally they would use ABC, but they haven't adopted it yet? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!

2

Apply ABC to Manufacturer

Casey Company has five activity cost pools and two products. It expects to produce 200,000 units of its automobile scissors jack and 80,000 units of its truck hydraulic jack. Having identified its activity cost pools and the cost drivers for each cost pool, Casey Company accumulated the following data relative to those activity cost pools and cost drivers.

Annual Overhead Data			Expected Use of Cost Drivers per Product		
Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers per Activity	Scissors Jacks	Hydraulic Jacks
Ordering and receiving	Purchase orders	\$ 200,000	2,500 orders	1,000	1,500
Machine setup	Setups	600,000	1,200 setups	500	700
Machining	Machine hours	2,000,000	800,000 hours	300,000	500,000
Assembling	Parts	1,800,000	3,000,000 parts	1,800,000	1,200,000
Inspecting and testing	Tests	700,000	35,000 tests	20,000	15,000
		<u>\$5,300,000</u>			

Using the above data, do the following.

- Prepare a schedule showing the computations of the activity-based overhead rates per cost driver.
- Prepare a schedule assigning each activity's overhead cost to the two products.
- Compute the overhead cost per unit for each product.
- Comment on the comparative overhead cost per unit.

Action Plan

- ✓ Determine the activity-based overhead rate by dividing the estimated overhead per activity by the expected use of cost drivers per activity.

Solution

(a) Computations of activity-based overhead rates per cost driver:

Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rates
Ordering and receiving	\$ 200,000		2,500 purchase orders		\$80 per order
Machine setup	600,000		1,200 setups		\$500 per setup
Machining	2,000,000		800,000 machine hours		\$2.50 per machine hour
Assembling	1,800,000		3,000,000 parts		\$0.60 per part
Inspecting and testing	700,000		35,000 tests		\$20 per test
	<u>\$5,300,000</u>				

(b) Assignment of each activity's overhead cost to products using ABC:

Activity Cost Pools	Scissors Jacks			Hydraulic Jacks						
	Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Assigned	Expected Use of Cost Drivers per Product	×	Activity-Based Overhead Rates	=	Cost Assigned
Ordering and receiving	1,000		\$80		\$ 80,000	1,500		\$80		\$ 120,000
Machine setup	500		\$500		250,000	700		\$500		350,000
Machining	300,000		\$2.50		750,000	500,000		\$2.50		1,250,000
Assembling	1,800,000		\$0.60		1,080,000	1,200,000		\$0.60		720,000
Inspecting and testing	20,000		\$20		400,000	15,000		\$20		300,000
Total assigned costs					<u>\$2,560,000</u>					<u>\$2,740,000</u>

(c) Computation of overhead cost per unit:

	<u>Scissors Jack</u>	<u>Hydraulic Jack</u>
Total costs assigned	<u>\$2,560,000</u>	<u>\$2,740,000</u>
Total units produced	<u>200,000</u>	<u>80,000</u>
Overhead cost per unit	<u>\$12.80</u>	<u>\$34.25</u>

(d) These data show that the total overhead assigned to 80,000 hydraulic jacks exceeds the overhead assigned to 200,000 scissors jacks. The overhead cost per hydraulic jack is \$34.25, but it is only \$12.80 per scissors jack.

Action Plan (cont.)

- ✓ Assign the overhead of each activity cost pool to the individual products by multiplying the expected use of cost driver per product times the activity-based overhead rate.
- ✓ Determine overhead cost per unit by dividing the overhead assigned to each product by the number of units of that product.

LEARNING OBJECTIVE

3

Explain the benefits and limitations of activity-based costing.

ABC has three primary benefits:

1. ABC leads to more cost pools and therefore more accurate product costing.
2. ABC leads to enhanced control over overhead costs.
3. ABC leads to better management decisions.

The Advantage of Multiple Cost Pools

The main mechanism by which ABC increases product cost accuracy is the use of multiple cost pools. Instead of one plantwide pool (or even several departmental pools) and a single cost driver, companies use numerous activity cost pools with more relevant cost drivers. Thus, costs are allocated more directly on the basis of the cost drivers used to produce each product.

Note that in the Atlas Company example, the *manufacturing* cost pool reflected multiple manufacturing activities, including machining, assembling, and painting. These activities were included in a single pool for simplicity. In many companies, the number of activities—and thus the number of pools—can be substantial. For example, **Clark-Hurth** (a division of **Clark Equipment Company**), a manufacturer of axles and transmissions, identified over 170 activities. **Compumotor** (a division of **Parker Hannifin**) identified over 80 activities in just the procurement function of its Material Control Department. Illustration 18-13 (page 850) shows a more likely “split” of the activities that were included in Atlas’s manufacturing cost pool, reflecting separate pools and drivers for each of those activities.

CLASSIFICATION OF ACTIVITY LEVELS

To gain the full advantage of having multiple cost pools, the costs within the pool must be correlated with the driver. To achieve this, a company’s managers often characterize activities as belonging to one of the following four activity-level groups when designing an ABC system.

1. **Unit-level activities** are performed for each unit of production. For example, the assembly of cell phones is a unit-level activity because the amount of assembly the company performs increases with each additional cell phone assembled.

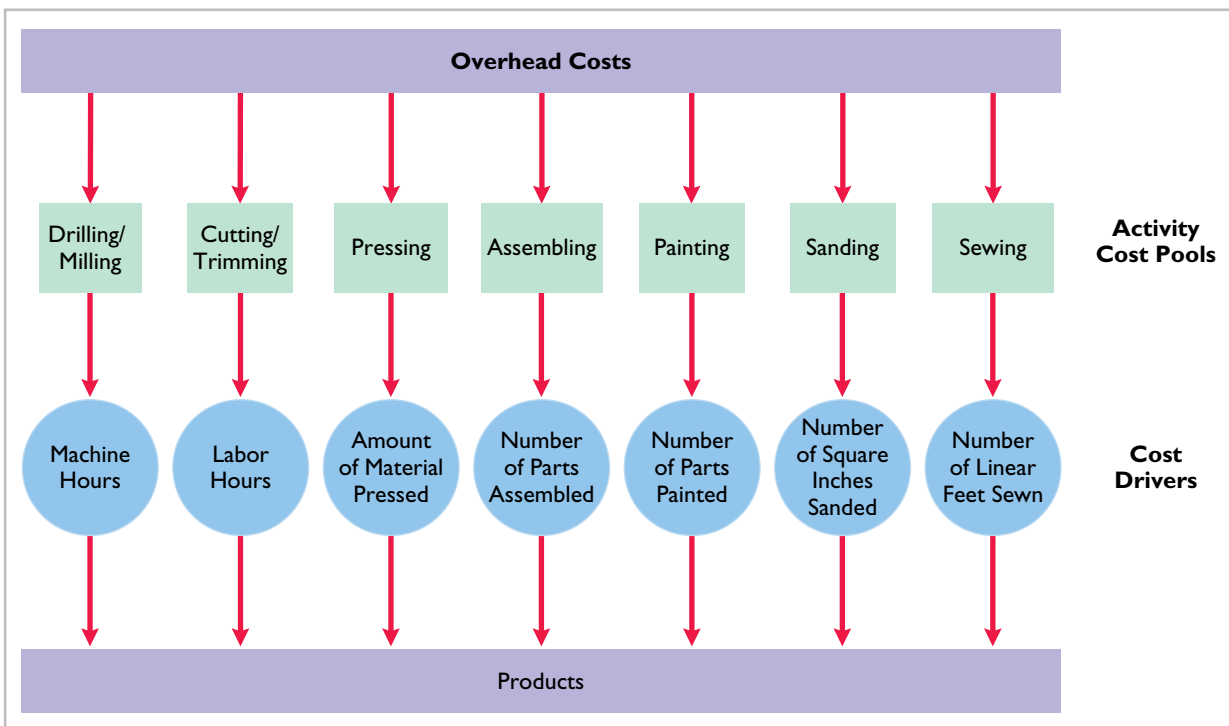

Illustration 18-13
A more detailed view of Atlas's machining activities

2. **Batch-level activities** are performed every time a company produces another batch of a product. For example, suppose that to start processing a new batch of ice cream, an ice cream producer needs to set up its machines. The amount of time spent setting up machines increases with the number of batches produced, not with the number of units produced.
3. **Product-level activities** are performed every time a company produces a new type of product. For example, before a pharmaceutical company can produce and sell a new type of medicine, it must undergo very substantial product tests to ensure the product is effective and safe. The amount of time spent on testing activities increases with the number of products the company produces.
4. **Facility-level activities** are required to support or sustain an entire production process. Consider, for example, a hospital. The hospital building must be insured and heated, and the property taxes must be paid, no matter how many patients the hospital treats. These costs do not vary as a function of the number of units, batches, or products.

Companies may achieve greater accuracy in overhead cost allocation by recognizing these four different levels of activities and, from them, developing specific activity cost pools and their related cost drivers. Illustration 18-14 graphically displays this four-level activity hierarchy, along with the types of activities and examples of cost drivers for those activities at each level.

The Advantage of Enhanced Cost Control

ABC leads to enhanced control over overhead costs. Under ABC, companies can trace many overhead costs directly to activities—allowing some costs previously considered to be indirect costs to be identified as direct costs. In developing an ABC system, managers increase their awareness of the activities performed by the company in its production and supporting processes. This awareness helps managers classify activities as value-added or non-valued-added.

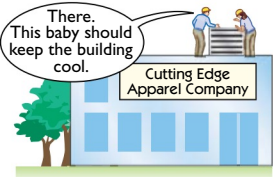

Four Levels	Types of Activities	Examples of Cost Drivers
Unit-Level Activities 	<u>Machine-related</u> Drilling, cutting, milling, trimming, pressing <u>Labor-related</u> Assembling, painting, sanding, sewing	Machine hours Direct labor hours or cost
Batch-Level Activities 	Equipment setups Purchase ordering Inspection Materials handling	Number of setups or setup time Number of purchase orders Number of inspections or inspection time Number of material moves
Product-Level Activities 	Product design Engineering changes	Number of product designs Number of changes
Facility-Level Activities 	Plant management salaries Plant depreciation Property taxes Utilities	Number of employees managed Square footage Square footage Square footage

Illustration 18-14
Hierarchy of activity levels

Value-added activities are those activities of a **company's operations** that increase the perceived value of a product or service to customers. Examples for the manufacture of **Precor** exercise equipment include engineering design, machining, assembly, and painting. Examples of value-added activities in a service company include performing surgery at a hospital, performing legal research at a law firm, or delivering packages by a freight company.

Non-value-added activities are those activities that, if eliminated, would not reduce the perceived value of a company's product or service. These activities simply **add cost to, or increase the time spent on, a product or service without increasing its perceived value**. One example is inventory storage. If a company **eliminated the need** to store inventory, it would not reduce the value of its product, but it would decrease its product costs. Other examples include moving materials, work in process, or finished goods from one location to another in the plant during the production process; waiting for manufacturing equipment to become available; inspecting goods; and fixing defective goods under warranty.

Companies often use **activity flowcharts** to help identify the ABC activities, such as the one shown in Illustration 18-15 (page 852). The top part of this flowchart identifies activities as value-added (highlighted in red) or non-value-added. Two rows in the lower part of the flowchart show the number of days spent on each activity. The first row shows the number of days spent on each activity under the current manufacturing process. The second row shows the number of days expected to be spent on each activity under management's proposed reengineered manufacturing process.

VA = Value-added NVA = Non-value-added												

Illustration 18-15

Analyzing non-value-added activities to improve operations

The proposed changes would reduce time spent on non-value-added activities by 17 days. This 17-day improvement is due entirely to moving inventory more quickly through the non-value-added processes—that is, by reducing inventory time in moving, storage, and waiting. Appendix 18A discusses a just-in-time inventory system, which some companies use to eliminate non-value-added activities related to inventory.

Not all activities labeled non-value-added are totally wasteful, nor can they be totally eliminated. For example, although inspection time is a non-value added activity from a customer's perspective, few companies would eliminate their quality control functions. Similarly, moving and waiting time is non-value added, but it would be impossible to completely eliminate. Nevertheless, when managers recognize the non-value-added characteristic of these activities, they are motivated to minimize them as much as possible. Attention to such matters is part of the growing practice of activity-based management, which helps managers concentrate on **continuous improvement** of operations and activities.

Management Insight General Mills

What Does NASCAR Have to Do with Breakfast Cereal?

Often the best way to improve a process is to learn from observing a different process. Production-line technicians from food producer **General Mills** were flown to North Carolina to observe firsthand how race-car pit crews operate. In a NASCAR race, the value-

added activity is driving toward the finish line; any time spent in the pit is non-value-added. Every split second saved in the pit increases the chances of winning. From what the General Mills' technicians learned at the car race, as well as other efforts, they were able to reduce setup time from 5 hours to just 20 minutes.

What are the benefits of reducing setup time? (Go to **WileyPLUS** for this answer and additional questions.)

The Advantage of Better Management Decisions

Some companies experiencing the benefits of activity-based costing have applied it to a broader range of management activities. **Activity-based management (ABM)**

extends the use of ABC from product costing to a comprehensive management tool that focuses on reducing costs and improving processes and decision-making.

Managers extend the use of ABC via ABM for both strategic and operational decisions or perspectives. For example, returning to Atlas Company, its managers might use ABC information about its Ab Benches and Ab Coasters to improve the efficiency of its operations. For example, after realizing that both products require a high volume of setup hours—as well as the costs of these hours—they might want to reduce the hours required to set up production runs. Such information may lead managers to increase the number of units produced with each setup or to optimize production schedules for the two products.

ABC also helps managers evaluate employees, departments, and business units. Atlas, for example, might use ABC information about salespeople's activities related to customer visits, number of orders, and post-sales customer service. Such information informs managers about how much effort salespeople are exerting, as well as how efficient they are in dealing with customers. Similarly, Atlas might use ABC information about each department's use of shared resources, like inventory space. Such information lets managers know which departments are the most efficient, which in turn leads to sharing best-practices information within the company. ABC information also helps Atlas to establish **performance standards** within the company, as well as **benchmark** its performance against other companies.

The implications of ABC are not limited to operational decisions. The differences in profitability between the Ab Benches and Ab Coasters may suggest a need to change the company's product mix. Such considerations, in turn, have implications for Atlas's marketing strategy. ABM may guide managers in considering different target customer markets for the two products. Or, managers might consider bundling the two products into a "home gym" set. As another, more extreme, example, managers might consider outsourcing production for one of the products or dropping one of the product lines altogether.

It is often the case that ABM for one perspective has implications for another perspective. For instance, the strategic decision to drop a product line is usually followed by operational decisions regarding what to do with employees' time or the machinery and equipment originally used to manufacture the dropped product. Similarly, increases in employees' efficiency following from operational decisions often lead to changes in employee hiring and compensation strategy. The interrelated nature of the strategic and operational perspectives often means that a decision is not made until the cascading implications of that decision are also identified and considered.

Some Limitations and Knowing When to Use ABC

ABC can be very beneficial, but it is not without its limitations. **ABC can be expensive to use.** The increased cost of identifying multiple activities and applying numerous cost drivers discourages many companies from using ABC. ABC systems are also more complex than traditional systems. So companies must ask, is the cost of implementation greater than the benefit of greater accuracy? For some companies, there may be no need to consider ABC at all because their existing system is sufficient.

Further, ABC does not offer complete accuracy as **some arbitrary allocations remain.** Even though more overhead costs can be assigned directly to products through ABC, some overhead costs still need to be allocated by arbitrary cost drivers. For example, Atlas Company assigned \$50,000 of overhead pertaining to insurance and property taxes to the property and plant cost pool. Atlas allocated this \$50,000 using square footage used by each product (10,000 square feet for Ab Benches and 15,000 square feet for Ab Coasters). A more accurate driver of insurance costs might be replacement costs of production equipment for each product type. However, such information may not be readily available, and Atlas must make due with square footage.

In light of these limitations, how does a company know when to use ABC? The presence of one or more of the following factors would point to possible use:

1. Product lines differ greatly in volume and manufacturing complexity.
2. Product lines are numerous and diverse, requiring various degrees of support services.
3. Overhead costs constitute a significant portion of total costs.
4. The manufacturing process or the number of products has changed significantly, for example, from labor-intensive to capital-intensive due to automation.
5. Production or marketing managers are ignoring data provided by the existing system and are instead using “bootleg” costing data or other alternative data when pricing or making other product decisions.

Ultimately, it is important to realize that the redesign and installation of a product costing system is a significant decision that requires considerable costs and a major effort to accomplish. Therefore, financial managers need to be cautious and deliberate when initiating changes in costing systems. A key factor in implementing a successful ABC system is the support of top management, especially given that the benefits of ABC are not completely visible until *after* it has been implemented.

DO IT!**3****Classify Activity Levels****Action Plan**

- ✓ You should use **unit-level** activities for each unit of product, **batch-level** activities for each batch of product, **product-level** activities for an entire product line, and **facility-level** activities for across the entire range of products.

Morgan Toy Company manufactures six primary product lines of toys in its Morganville plant. As a result of an activity analysis, the accounting department has identified eight activity cost pools. Each of the toy products is produced in large batches, with the whole plant devoted to one product at a time. Classify each of the following activities as either unit-level, batch-level, product-level, or facility-level: (a) engineering design, (b) machine setup, (c) toy design, (d) interviews of prospective employees, (e) inspections after each setup, (f) polishing parts, (g) assembling parts, and (h) health and safety.

Solution

(a) Product-level. (b) Batch-level. (c) Product-level. (d) Facility-level. (e) Batch-level. (f) Unit-level. (g) Unit-level. (h) Facility-level.

LEARNING OBJECTIVE**4****Apply activity-based costing to service industries.**

Although initially developed and implemented by manufacturers, activity-based costing has been widely adopted in service industries as well. ABC is used by airlines, railroads, hotels, hospitals, banks, insurance companies, telephone companies, and financial services firms. The overall objective of ABC in service firms is no different than it is in a manufacturing company. That objective is to identify the key activities that generate costs and to keep track of how many of those activities are completed for each service performed (by job, service, contract, or customer).

The general approach to identifying activities, activity cost pools, and cost drivers is the same for service companies and for manufacturers. Also, the labeling of activities as value-added and non-value-added, and the attempt to reduce or eliminate non-value-added activities as much as possible, is just as valid in service

industries as in manufacturing operations. What sometimes makes implementation of activity-based costing difficult in service industries is that, compared to manufacturers, **a larger proportion of overhead costs are company-wide costs** that cannot be directly traced to specific services performed by the company.

To illustrate the application of activity-based costing to a service company contrasted to traditional costing, we use a public accounting firm. This illustration is applicable to any service firm that performs numerous services for a client as part of a job, such as a law firm, consulting firm, or architect.

Traditional Costing Example

Assume that the public accounting firm of Check and Doublecheck prepares the condensed annual budget shown in Illustration 18-16. The firm engages in a number of services, including audit, tax, and computer consulting.

CHECK AND DOUBLECHECK, CPAS Annual Budget		
Revenue		\$4,000,000
Direct labor	\$1,200,000	
Overhead (expected)	<u>600,000</u>	
Total costs		<u>1,800,000</u>
Operating income		<u>\$2,200,000</u>
$\frac{\text{Estimated overhead}}{\text{Direct labor cost}} = \text{Predetermined overhead rate}$		
	$\frac{\$600,000}{\$1,200,000} = 50\%$	

Illustration 18-16

Condensed annual budget of a service firm under traditional costing

Direct labor is often the professional service performed. Under traditional costing, direct labor is the basis for overhead application to each job. As shown in Illustration 18-16, the predetermined overhead rate of 50% is calculated by dividing the total estimated overhead cost by the total direct labor cost. To determine the operating income earned on any job, Check and Doublecheck applies overhead at the rate of 50% of actual direct professional labor costs incurred. For example, assume that Check and Doublecheck records \$140,000 of actual direct professional labor cost during its audit of Plano Molding Company, which was billed an audit fee of \$260,000. Under traditional costing, using 50% as the rate for applying overhead to the job, Check and Doublecheck would compute applied overhead and operating income related to the Plano Molding Company audit as shown in Illustration 18-17.

CHECK AND DOUBLECHECK, CPAS Plano Molding Company Audit		
Revenue		\$260,000
Less: Direct professional labor	\$140,000	
Applied overhead (50% × \$140,000)	<u>70,000</u>	<u>210,000</u>
Operating income		<u>\$ 50,000</u>

Illustration 18-17

Overhead applied under traditional costing system

This example, under traditional costing, uses only one cost driver (direct labor cost) to determine the overhead application rate.

Activity-Based Costing Example

Under **activity-based costing**, Check and Doublecheck distributes its estimated annual overhead costs of \$600,000 to three activity cost pools. The firm computes activity-based overhead rates per cost driver by dividing each activity overhead cost pool by the expected number of cost drivers used per activity. Illustration 18-18 shows an annual overhead budget using an ABC system.

Illustration 18-18

Condensed annual budget of a service firm under activity-based costing

CHECK AND DOUBLECHECK, CPAS Annual Overhead Budget						
Activity Cost Pools	Cost Drivers	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rates
Administration	Number of partner-hours	\$335,000		3,350		\$100 per partner-hour
Customer development	Revenue billed	160,000		\$4,000,000		\$0.04 per \$1 of revenue
Recruiting and training	Direct professional hours	105,000		30,000		\$3.50 per hour
		<u>\$600,000</u>				

The assignment of the individual overhead activity rates to the actual number of activities used in the performance of the Plano Molding Company audit results in total overhead assigned of \$57,200, as shown in Illustration 18-19.

Illustration 18-19

Assigning overhead in a service company

Check and Doublecheck CPA.xls					
Home Insert Page Layout Formulas Data Review View					
P18 fx					
	A	B	C	D	E
1	CHECK AND DOUBLECHECK, CPAS				
2	Plano Molding Company Audit				
3					
4			Actual	Activity-	
5	Activity Cost Pools	Cost Drivers	Use of	Based	Cost
			Drivers	Overhead	Assigned
6	Administration	Number of partner-hours	335	\$100.00	\$33,500
7	Customer development	Revenue billed	\$260,000	\$0.04	10,400
8	Recruiting and training	Direct professional hours	3,800	\$3.50	13,300
9					<u>\$57,200</u>
10					

Under activity-based costing, Check and Doublecheck assigns overhead costs of \$57,200 to the Plano Molding Company audit, as compared to \$70,000 under traditional costing. Illustration 18-20 compares total costs and operating margins under the two costing systems.

Illustration 18-20

Comparison of traditional costing with ABC in a service company

CHECK AND DOUBLECHECK, CPAS Plano Molding Company Audit			
	Traditional Costing		ABC
Revenue		\$260,000	\$260,000
Expenses			
Direct professional labor	\$140,000		\$140,000
Applied overhead	<u>70,000</u>		<u>57,200</u>
Total expenses		<u>210,000</u>	<u>197,200</u>
Operating income		\$ 50,000	\$ 62,800
Profit margin		19.2%	24.2%

Illustration 18-20 shows that the assignment of overhead costs under traditional costing and ABC is different. The total cost assigned to performing the audit of Plano Molding Company is greater under traditional costing by \$12,800 (\$62,800 – \$50,000), and the profit margin is significantly lower. Traditional costing understates the profitability of the audit.

Service Company Insight American Airlines

Oleksiy MaksymenkoPhotography/Alamy

Traveling Light

Have you flown on **American Airlines** since baggage fees have been implemented? Did the fee make you so mad that you swore that the next time you flew, you would pack fewer clothes so you could use a carry-on bag instead? That is exactly how American Airlines (and the other airlines that charge baggage fees) hoped that you would react. Baggage handling is extremely labor-intensive. All that tagging, sorting, loading on carts, loading in planes, unloading, and sorting again add up to about \$9 per bag. Baggage handling also involves equipment costs: sorters, carts, conveyors, tractors, and storage facilities.

That’s about another \$4 of equipment-related overhead per bag. Finally, there is additional fuel cost of a 40-pound item—about \$2 in fuel for a 3-hour flight. These costs add up to \$15 (\$9 + \$4 + \$2).

Since airlines have implemented their baggage fees, fewer customers are checking bags. Not only does this save the airlines money, it also increases the amount of space available for hauling cargo. An airline can charge at least \$80 for hauling a small parcel for same-day delivery service.

Source: Scott McCartney, “What It Costs an Airline to Fly Your Luggage,” *Wall Street Journal Online* (November 25, 2008).

Why do airlines charge even higher rates for heavier bags, bags that are odd shapes (e.g., ski bags), and bags with hazardous materials in them? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT! 4 **Apply ABC to Service Company**

We Carry It, Inc. is a trucking company. It provides local, short-haul, and long-haul services. The company has developed the following three cost pools.

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers per Activity
Loading and unloading	Number of pieces	\$ 70,000	100,000 pieces
Travel	Miles driven	250,000	500,000 miles
Logistics	Hours	60,000	2,000 hours

- (a) Compute the activity-based overhead rate for each pool.
- (b) Determine the overhead allocated to Job A1027 which has 150 pieces, requires 200 miles of driving, and 0.75 hours of logistics.

Solution

(a) The activity based overhead rates are as follows.

Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers per Activity	=	Activity-Based Overhead Rate
Loading and unloading	\$ 70,000		100,000 pieces		\$0.70 per piece
Travel	250,000		500,000 miles		\$0.50 per mile
Logistics	60,000		2,000 hours		\$30 per hour

(b) The overhead applied to job A1027 is $(150 \times \$0.70) + (200 \times \$0.50) + (0.75 \times \$30) = \227.50

Action Plan

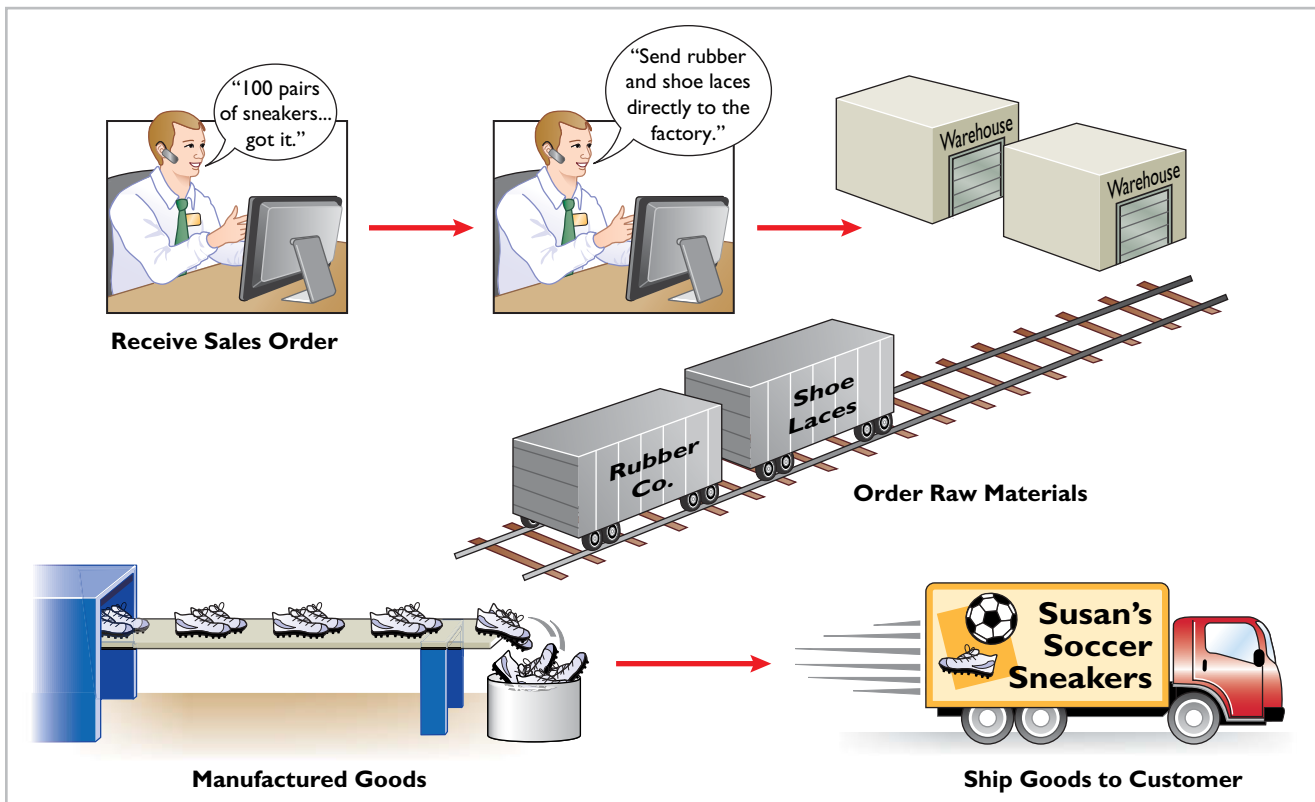

- ✓ Divide the estimated overhead by the expected use of cost driver per activity to determine activity-based overhead rate.
- ✓ Apply the activity-based overhead rate to jobs based on actual use of drivers.

APPENDIX 18A: Explain just-in-time (JIT) processing.

Traditionally, continuous process manufacturing has been based on a **just-in-case** philosophy: Inventories of raw materials are maintained *just in case* some items are of poor quality or a key supplier is shut down by a strike. Similarly, subassembly parts are manufactured and stored *just in case* they are needed later in the manufacturing process. Finished goods are completed and stored *just in case* unexpected and rush customer orders are received. This philosophy often results in a “**push approach**,” in which raw materials and subassembly parts are pushed through each process. Traditional processing often results in the buildup of extensive manufacturing inventories.

Primarily in response to foreign competition, many U.S. firms have switched to **just-in-time (JIT) processing**. JIT manufacturing is dedicated to having the right amount of materials, parts, or products just as they are needed. JIT first hit the United States in the early 1980s when automobile companies adopted it to compete with foreign automakers. Many companies, including **Dell**, **Caterpillar**, and **Harley-Davidson**, now successfully use JIT. Under JIT processing, companies receive raw materials **just in time** for use in production, they complete subassembly parts **just in time** for use in finished goods, and they complete finished goods **just in time** to be sold. Illustration 18A-1 shows the sequence of activities in just-in-time processing.

Illustration 18A-1
Just-in-time processing

Objective of JIT Processing

A primary objective of JIT is to eliminate all manufacturing inventories. Inventories have an adverse effect on net income because they tie up funds and storage space that could be put to more productive uses. JIT strives to eliminate inventories by using a “**pull approach**” in manufacturing. This approach begins with the customer placing an order with the company, which starts the process of pulling the product through the manufacturing process. A computer at the final workstation sends a signal to the preceding workstation. This signal indicates the exact materials (parts and subassemblies) needed to complete the production of a specified product for a specified time period, such as an eight-hour shift. The next-preceding process, in turn, sends its signal to other processes back up the line. The goal is a smooth continuous flow in the manufacturing process, with no buildup of inventories at any point.

Elements of JIT Processing

There are three important elements in JIT processing:

- 1. Dependable suppliers.** Suppliers must be willing to deliver on short notice exact quantities of raw materials according to precise quality specifications (even including multiple deliveries within the same day). Suppliers must also be willing to deliver the raw materials at specified workstations rather than at a central receiving department. This type of purchasing requires constant and direct communication. Such communication is facilitated by an online computer linkage between the company and its suppliers.
- 2. A multiskilled work force.** Under JIT, machines are often strategically grouped into work cells or workstations. Much of the work is automated. As a result, one worker may operate and maintain several different types of machines.
- 3. A total quality control system.** The company must establish total quality control throughout the manufacturing operations. Total quality control means **no defects**. Since the pull approach signals only required quantities, any defects at any workstation will shut down operations at subsequent workstations. Total quality control requires continuous monitoring by both line employees and supervisors at each workstation.

Helpful Hint

Buyer leverage is important in finding dependable suppliers. Companies like **GM** and **GE** have more success than smaller companies.

Helpful Hint

Without its emphasis on quality control, JIT would be impractical or even impossible. In JIT, quality is engineered into the production process.

Benefits of JIT Processing

The major benefits of implementing JIT processing are as follows.

- 1.** Significant reduction or elimination of manufacturing inventories.
- 2.** Enhanced product quality.
- 3.** Reduction or elimination of rework costs and inventory storage costs.
- 4.** Production cost savings from the improved flow of goods through the processes.

The effects in many cases have been dramatic. For example, after using JIT for two years, a major division of **Hewlett-Packard** found that work in process inventories (in dollars) were down 82%, scrap/rework costs were down 30%, space utilization improved by 40%, and labor efficiency improved 50%. As indicated, JIT not only reduces inventory but also enables a company to manufacture a better product faster and with less waste.

One of the major accounting benefits of JIT is the elimination of separate raw materials and work in process inventory accounts. These accounts are replaced by **one account**, Raw and In-Process Inventory. All materials and conversion costs are charged to this account. The reduction (or elimination) of in-process inventories results in a simpler computation of equivalent units of production.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Discuss the difference between traditional costing and activity-based costing.** A traditional costing system allocates overhead to products on the basis of predetermined plantwide or departmentwide rates such as direct labor or machine hours. An ABC system allocates overhead to identified activity cost pools and then assigns costs to products using related cost drivers that measure the activities (resources) consumed.

The development of an activity-based costing system involves the following four steps. (1) Identify and classify the major activities involved in the manufacture of specific products and assign overhead to cost pools. (2) Identify the cost driver that has a strong correlation to the costs accumulated in each cost pool. (3) Compute the activity-based overhead rate for each cost pool. (4) Allocate overhead costs to products using the overhead rates determined for each cost pool.

- 2 Apply activity-based costing to a manufacturer.** To identify activity cost pools, a company must perform an analysis of each operation or process, documenting and timing every task, action, or transaction. Cost drivers identified for assigning activity cost pools must (a) accurately measure the actual consumption of the activity by the various products and (b) have related data easily available. The overhead assigned to each activity cost pool is divided by the expected use of cost drivers to determine the activity-based overhead rate for each pool. Overhead is allocated to products by multiplying a particular product's expected use of a cost driver by the activity-based overhead

rate. This is done for each activity cost pool and then summed.

- 3 Explain the benefits and limitations of activity-based costing.** Features of ABC that make it a more accurate product costing system include (1) the increased number of cost pools used to assign overhead (including use of the activity-level hierarchy), (2) the enhanced control over overhead costs (including identification of non-value-added activities), and (3) the better management decisions it makes possible. The limitations of ABC are (1) the higher analysis and measurement costs that accompany multiple activity centers and cost drivers, and (2) the necessity still to allocate some costs arbitrarily.

- 4 Apply activity-based costing to service industries.** The overall objective of using ABC in service industries is no different than for manufacturing industries—that is, improved costing of services performed (by job, service, contract, or customer). The general approach to costing is the same: analyze operations, identify activities, accumulate overhead costs by activity cost pools, and identify and use cost drivers to assign the cost pools to the services.

- *5 Explain just-in-time (JIT) processing.** JIT is a processing system dedicated to having on hand the right materials and products just at the time they are needed, thereby reducing the amount of inventory and the time inventory is held. One of the principal accounting effects is that one account, Raw and In-Process Inventory, replaces both the raw materials and work in process inventory accounts.

GLOSSARY REVIEW

Activity Any event, action, transaction, or work sequence that incurs costs when producing a product or performing a service. (p. 842).

Activity-based costing (ABC) A costing system that allocates overhead to multiple activity cost pools and assigns the activity cost pools to products or services by means of cost drivers. (p. 841).

Activity-based management (ABM) Extends ABC from product costing to a comprehensive management tool that focuses on reducing costs and improving processes and decision-making. (p. 852).

Activity cost pool The overhead cost attributed to a distinct type of activity or related activities. (p. 842).

Batch-level activities Activities performed for each batch of products rather than for each unit. (p. 850).

Cost driver Any factor or activity that has a direct cause-effect relationship with the resources consumed. In ABC, cost drivers are used to assign activity cost pools to products or services. (p. 842).

Facility-level activities Activities required to support or sustain an entire production process. (p. 850).

***Just-in-time (JIT) processing** A processing system dedicated to having the right amount of materials, parts, or products arrive as they are needed, thereby reducing the amount of inventory. (p. 858).

Non-value-added activity An activity that, if eliminated, would not reduce the perceived value of a company's product or service. (p. 851).

Product-level activities Activities performed in support of an entire product line but not always performed every time a new unit or batch of products is produced. (p. 850).

Unit-level activities Activities performed for each unit of production. (p. 849).

Value-added activity An activity that increases the perceived value of a product or service to a customer. (p. 851).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Activity-based costing (ABC):
 (a) can be used only in a process cost system.
 (b) focuses on units of production.
 (c) focuses on activities needed to produce a good or perform a service.
 (d) uses only a single basis of allocation.
- (LO 1) 2. Activity-based costing:
 (a) is the initial phase of converting to a just-in-time operating environment.
 (b) can be used only in a job order costing system.
 (c) is a two-stage overhead cost allocation system that identifies activity cost pools and cost drivers.
 (d) uses direct labor as its primary cost driver.
- (LO 1, 2) 3. Any activity that causes resources to be consumed is called a:
 (a) just-in-time activity.
 (b) facility-level activity.
 (c) cost driver.
 (d) non-value-added activity.
- (LO 2) 4. Which of the following would be the **best** cost driver for the assembling cost pool?
 (a) Number of product lines.
 (b) Number of parts.
 (c) Number of orders.
 (d) Amount of square footage.
- (LO 2) 5. The overhead rate for machine setups is \$100 per setup. Products A and B have 80 and 60 setups, respectively. The overhead assigned to each product is:
 (a) Product A \$8,000, Product B \$8,000.
 (b) Product A \$8,000, Product B \$6,000.
 (c) Product A \$6,000, Product B \$6,000.
 (d) Product A \$6,000, Product B \$8,000.
- (LO 2) 6. Donna Crawford Co. has identified an activity cost pool to which it has allocated estimated overhead of \$1,920,000. It has determined the expected use of cost drivers for that activity to be 160,000 inspections. Widgets require 40,000 inspections, gadgets 30,000 inspections, and targets 90,000 inspections. The overhead assigned to each product is:
 (a) Widgets \$40,000, gadgets \$30,000, targets \$90,000.
 (b) Widgets \$640,000, gadgets \$640,000, targets \$640,000.
 (c) Widgets \$360,000, gadgets \$480,000, targets \$1,080,000.
 (d) Widgets \$480,000, gadgets \$360,000, targets \$1,080,000.
- (LO 3) 7. A frequently cited limitation of activity-based costing is:
 (a) ABC results in more cost pools being used to assign overhead costs to products.
 (b) certain overhead costs remain to be allocated by means of some arbitrary volume-based cost driver such as labor or machine hours.
 (c) ABC leads to poorer management decisions.
 (d) ABC results in less control over overhead costs.
8. A company should consider using ABC if: (LO 3)
 (a) overhead costs constitute a small portion of total product costs.
 (b) it has only a few product lines that require similar degrees of support services.
 (c) direct labor constitutes a significant part of the total product cost and a high correlation exists between direct labor and changes in overhead costs.
 (d) its product lines differ greatly in volume and manufacturing complexity.
9. An activity that adds costs to the product but does not increase its perceived value is a: (LO 3)
 (a) value-added activity.
 (b) cost driver.
 (c) cost/benefit activity.
 (d) non-value-added activity.
10. The following activity is value-added: (LO 3)
 (a) Storage of raw materials.
 (b) Moving parts from machine to machine.
 (c) Shaping a piece of metal on a lathe.
 (d) All the answer choices are correct.
11. A relevant facility-level cost driver for heating costs is: (LO 3)
 (a) machine hours. (c) square footage.
 (b) direct materials. (d) direct labor cost.
12. The first step in the development of an activity-based costing system for a service company is: (LO 4)
 (a) identify and classify activities and allocate overhead to cost pools.
 (b) assign overhead costs to products.
 (c) identify cost drivers.
 (d) compute overhead rates.
- *13. Under just-in-time processing: (LO 5)
 (a) raw materials are received just in time for use in production.
 (b) subassembly parts are completed just in time for use in assembling finished goods.
 (c) finished goods are completed just in time to be sold.
 (d) All the answer choices are correct.
- *14. The primary objective of just-in-time processing is to: (LO 5)
 (a) accumulate overhead in activity cost pools.
 (b) eliminate or reduce all manufacturing inventories.
 (c) identify relevant activity cost drivers.
 (d) identify value-added activities.

Solutions

- 1. (c)** Focusing on activities needed to produce a good or perform a service is an accurate statement about activity-based costing. The other choices are incorrect because ABC (a) can be used in either a process cost or a job order cost system; (b) focuses on activities performed to produce a product, not on units of production; and (d) uses multiple bases of allocation, not just a single basis of allocation.
- 2. (c)** ABC is a two-stage overhead cost allocation system that identifies activity cost pools and cost drivers. The other choices are incorrect because ABC (a) is not necessarily part of the conversion to a just-in-time operating environment, (b) can be used in either a process cost or a job order cost system, and (d) uses other activities in addition to direct labor as cost drivers.
- 3. (c)** Activities that cause resources to be consumed are called cost drivers, not (a) just-in-time activities, (b) facility-level activities, or (d) non-value-added activities.
- 4. (b)** The number of parts would be the best cost driver for the assembling cost pool as it has a higher degree of correlation with the actual consumption of the overhead costs, that is, the assembling of parts, than (a) number of product lines, (c) number of orders, or (d) amount of square footage.
- 5. (b)** The overhead assigned to Product A is \$8,000 ($\100×80) and to Product B is \$6,000 ($\100×60), not (a) \$8,000, \$8,000; (c) \$6,000, \$6,000; or (d) \$6,000, \$8,000.
- 6. (d)** The overhead assigned to widgets is \$480,000 [$(\$1,920,000 \div 160,000) \times 40,000$], to gadgets is \$360,000 [$(\$1,920,000 \div 160,000) \times 30,000$], and to targets is \$1,080,000 [$(\$1,920,000 \div 160,000) \times 90,000$]. Therefore, choices (a) \$40,000, \$30,000, and \$90,000; (b) \$640,000, \$640,000, and \$640,000; and (c) \$360,000, \$480,000, and \$1,080,000 are incorrect.
- 7. (b)** A limitation of ABC is that certain overhead costs remain to be allocated by means of some arbitrary volume-based cost driver. The other choices are incorrect because (a) more cost pools is an advantage of ABC, (c) ABC can lead to better management decisions, and (d) ABC results in more control over overhead costs.
- 8. (d)** A company should consider using ABC if its product lines differ greatly in volume and manufacturing complexity. For choices (a), (b), and (c), a traditional costing system should be sufficient and less expensive to implement.
- 9. (d)** Non-value-added activities add costs to a product but do not increase its perceived value, not (a) value-added activities, (b) cost drivers, or (c) cost/benefit activities.
- 10. (c)** Shaping a piece of metal on a lathe is a value-added activity as it is an integral part of manufacturing a product. Choices (a) and (b) are non-value-added activities, so therefore choice (d) is incorrect as well.
- 11. (c)** Square footage is a relevant facility-level cost driver for heating costs. The other choices are incorrect because (a) machine hours, (b) direct materials, and (d) direct labor cost are all unit-level cost drivers.
- 12. (a)** The first step in developing an ABC system is to identify and classify activities and allocate overhead to cost pools. The other choices are incorrect because (b) is Step 4, (c) is Step 2, and (d) is Step 3.
- *13. (d)** All of the choices are accurate statements about just-in-time processing.
- *14. (b)** Eliminating or reducing all manufacturing inventories is the primary objective of just-in-time processing. The other choices are incorrect because choices (a), (b), and (c) are part of the process of implementing an ABC system.

PRACTICE EXERCISES

Assign overhead using traditional costing and ABC.

(LO 1, 2)

1. Domestic Fabrics has budgeted overhead costs of \$955,000. It has allocated overhead on a plantwide basis to its two products (wool and cotton) using direct labor hours which are estimated to be 477,500 for the current year. The company has decided to experiment with activity-based costing and has created two activity cost pools and related activity cost drivers. These two cost pools are Cutting (cost driver is machine hours) and Design (cost driver is number of setups). Overhead allocated to the Cutting cost pool is \$400,000, and \$555,000 is allocated to the Design cost pool. Additional information related to these pools is as follows.

	<u>Wool</u>	<u>Cotton</u>	<u>Total</u>
Machine hours	100,000	100,000	200,000
Number of setups	1,000	500	1,500

Instructions

- (a) Determine the amount of overhead allocated to the wool product line and the cotton product line using activity-based costing.
- (b) What is the difference between the allocation of overhead to the wool and cotton product lines using activity-based costing versus the traditional approach, assuming direct labor hours were incurred evenly between the wool and cotton?

Solution

1. (a) Activity Cost Pools	Cost Drivers	Estimated Overhead
Cutting	Machine hours	\$400,000
Design	Number of setups	555,000
Activity-based overhead rates:		
<u>Cutting</u>		<u>Design</u>
$\frac{\$400,000}{200,000} = \2 per machine hour		$\frac{\$555,000}{1,500} = \370 per setup
<u>Wool</u>		<u>Cotton</u>
Activity-based costing		
Cutting		
100,000 × \$2	\$200,000	
100,000 × \$2		\$200,000
Design		
1,000 × \$370	370,000	
500 × \$370		185,000
Total cost allocated	<u>\$570,000</u>	<u>\$385,000</u>
(b) $\frac{\text{Estimated overhead}}{\text{Direct labor hours}} = \frac{\$955,000}{477,500} = \$2$ per direct labor hour		
<u>Wool</u>		<u>Cotton</u>
Traditional costing		
238,750* × \$2	<u>\$477,500</u>	
238,750 × \$2		<u>\$477,500</u>
*477,500 ÷ 2		
The wool product line is allocated \$92,500 (\$570,000 – \$477,500) more overhead cost when an activity-based costing system is used. As a result, the cotton product line is allocated \$92,500 (\$477,500 – \$385,000) less.		

2. Organic Products, Inc., uses a traditional product costing system to assign overhead costs uniformly to all products. To meet Food and Drug Administration (FDA) requirements and to assure its customers of safe, sanitary, and nutritious food, Organic engages in a high level of quality control. Organic assigns its quality-control overhead costs to all products at a rate of 20% of direct labor costs. Its direct labor cost for the month of June for its low-calorie dessert line is \$55,000. In response to repeated requests from its financial vice president, Organic management agrees to adopt activity-based costing. Data relating to the low-calorie dessert line for the month of June are as follows.

Assign overhead using traditional costing and ABC; classify activities as value- or non-value-added.

(LO 1, 2, 3)

Activity Cost Pools	Cost Drivers	Overhead Rate	Number of Cost Drivers Used per Activity
Inspections of material received	Number of pounds	\$ 0.70 per pound	6,000 pounds
In-process inspections	Number of servings	\$ 0.35 per serving	10,000 servings
FDA certification	Customer orders	\$13.00 per order	450 orders

Instructions

- Compute the quality-control overhead cost to be assigned to the low-calorie dessert product line for the month of June using (1) the traditional product costing system (direct labor cost is the cost driver), and (2) activity-based costing.
- By what amount does the traditional product costing system undercost or overcost the low-calorie dessert line?
- Classify each of the activities as value-added or non-value-added.

Solution

2. (a) (1) Traditional product costing system:

$\$55,000 \times .20 = \$11,000$. Quality-control overhead costs assigned in June to the low-calorie dessert line are \$11,000.

(2) Activity-based costing system:

<u>Activity Cost Pools</u>	<u>Cost Drivers Used</u>	×	<u>Activity-Based Overhead Rate</u>	=	<u>Overhead Cost Assigned</u>
Inspections of material received	6,000		\$ 0.70		\$ 4,200
In-process inspections	10,000		0.35		3,500
FDA certification	450		13.00		5,850
Total assigned cost for June					<u>\$13,550</u>

(b) As compared to ABC, the traditional costing system undercosts the quality-control overhead cost assigned to the low-calorie dessert product line by \$2,550 (\$13,550 – \$11,000) in the month of June. That is a 23.2% ($\$2,550 \div \$11,000$) understatement.

(c) All three activities, as quality-control related activities, are non-value-added activities.

PRACTICE PROBLEM

Assign overhead and compute unit costs.

(LO 2)

Spreadwell Paint Company manufactures two high-quality base paints: an *oil-based* paint and a *latex* paint. Both are housepaints and are manufactured only in a neutral white color. Spreadwell sells the white base paints to franchised retail paint and decorating stores where pigments are added to tint (color) the paint as the customer desires. The oil-based paint is made with organic solvents (petroleum products) such as mineral spirits or turpentine. The latex paint is made with water; synthetic resin particles are suspended in the water, and dry and harden when exposed to air.

Spreadwell uses the same processing equipment to produce both paints in different production runs. Between batches, the vats and other processing equipment must be washed and cleaned.

After analyzing the company's entire operations, Spreadwell's accountants and production managers have identified activity cost pools and accumulated annual budgeted overhead costs by pool as follows.

<u>Activity Cost Pools</u>	<u>Estimated Overhead</u>
Purchasing	\$ 240,000
Processing (weighing and mixing, grinding, thinning and drying, straining)	1,400,000
Packaging (quarts, gallons, and 5-gallons)	580,000
Testing	240,000
Storage and inventory control	180,000
Washing and cleaning equipment	560,000
Total annual budgeted overhead	<u>\$3,200,000</u>

Following further analysis, activity cost drivers were identified and their expected use by product and activity were scheduled as follows.

<u>Activity Cost Pools</u>	<u>Cost Drivers</u>	<u>Expected Cost Drivers per Activity</u>	<u>Expected Use of Drivers per Product</u>	
			<u>Oil-Based</u>	<u>Latex</u>
Purchasing	Purchase orders	1,500 orders	800	700
Processing	Gallons processed	1,000,000 gallons	400,000	600,000
Packaging	Containers filled	400,000 containers	180,000	220,000
Testing	Number of tests	4,000 tests	2,100	1,900
Storing	Avg. gals. on hand	18,000 gallons	10,400	7,600
Washing	Number of batches	800 batches	350	450

Spreadwell has budgeted 400,000 gallons of oil-based paint and 600,000 gallons of latex paint for processing during the year.

Instructions

- Prepare a schedule showing the computations of the activity-based overhead rates.
- Prepare a schedule assigning each activity's overhead cost pool to each product.
- Compute the overhead cost per unit for each product.

Solution

(a) Computations of activity-based overhead rates:

Activity Cost Pools	Estimated Overhead	÷	Expected Use of Cost Drivers	=	Activity-Based Overhead Rates
Purchasing	\$ 240,000		1,500 orders		\$160 per order
Processing	1,400,000		1,000,000 gallons		\$1.40 per gallon
Packaging	580,000		400,000 containers		\$1.45 per container
Testing	240,000		4,000 tests		\$60 per test
Storing	180,000		18,000 gallons		\$10 per gallon
Washing	560,000		800 batches		\$700 per batch
	<u>\$3,200,000</u>				

(b) Assignment of activity cost pools to products:

Activity Cost Pools	Oil-Based Paint			Latex Paint		
	Expected Use of Drivers	Overhead Rates	Cost Assigned	Expected Use of Drivers	Overhead Rates	Cost Assigned
Purchasing	800	\$160	\$ 128,000	700	\$160	\$ 112,000
Processing	400,000	\$1.40	560,000	600,000	\$1.40	840,000
Packaging	180,000	\$1.45	261,000	220,000	\$1.45	319,000
Testing	2,100	\$60	126,000	1,900	\$60	114,000
Storing	10,400	\$10	104,000	7,600	\$10	76,000
Washing	350	\$700	245,000	450	\$700	315,000
Total overhead assigned			<u>\$1,424,000</u>			<u>\$1,776,000</u>

(c) Computation of overhead cost assigned per unit:

	Oil-Based Paint	Latex Paint
Total overhead cost assigned	<u>\$1,424,000</u>	<u>\$1,776,000</u>
Total gallons produced	<u>400,000</u>	<u>600,000</u>
Overhead cost per gallon	<u>\$3.56</u>	<u>\$2.96</u>

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

- Under what conditions is direct labor a valid basis for allocating overhead?
- What has happened in recent industrial history to reduce the usefulness of direct labor as the primary basis for allocating overhead to products?
- In an automated manufacturing environment, what basis of overhead allocation is frequently more relevant than direct labor hours?
- What is generally true about overhead allocation to high-volume products versus low-volume products under a traditional costing system?
- What are the principal differences between activity-based costing (ABC) and traditional product costing?
- What is the formula for computing activity-based overhead rates?

7. What steps are involved in developing an activity-based costing system?
8. Explain the preparation and use of a value-added/non-value-added activity flowchart in an ABC system.
9. What is an activity cost pool?
10. What is a cost driver?
11. What makes a cost driver accurate and appropriate?
12. What is the formula for assigning activity cost pools to products?
13. What are the benefits of activity-based costing?
14. What are the limitations of activity-based costing?
15. Under what conditions is ABC generally the superior overhead costing system?
16. What refinement has been made to enhance the efficiency and effectiveness of ABC for use in managing costs?
17. Of what benefit is classifying activities as value-added and non-value-added?
18. In what ways is the application of ABC to service industries the same as its application to manufacturing companies?
19. What is the relevance of the classification of levels of activity to ABC?
- *20. (a) Describe the philosophy and approach of just-in-time processing.
(b) Identify the major elements of JIT processing.

BRIEF EXERCISES

Identify differences between costing systems.

(LO 1)

BE18-1 Digger Inc. sells a high-speed retrieval system for mining information. It provides the following information for the year.

	<u>Budgeted</u>	<u>Actual</u>
Overhead cost	\$975,000	\$950,000
Machine hours	50,000	45,000
Direct labor hours	100,000	92,000

Overhead is applied on the basis of direct labor hours. (a) Compute the predetermined overhead rate. (b) Determine the amount of overhead applied for the year. (c) Explain how an activity-based costing system might differ in terms of computing a predetermined overhead rate.

Identify differences between costing systems.

(LO 1)

BE18-2 Finney Inc. has conducted an analysis of overhead costs related to one of its product lines using a traditional costing system (volume-based) and an activity-based costing system. Here are its results.

	<u>Traditional Costing</u>	<u>ABC</u>
Sales revenue	\$600,000	\$600,000
Overhead costs:		
Product RX3	\$ 34,000	\$ 50,000
Product Y12	36,000	20,000
	<u>\$ 70,000</u>	<u>\$ 70,000</u>

Explain how a difference in the overhead costs between the two systems may have occurred.

Identify cost drivers.

(LO 2)

BE18-3 Splash Co. identifies the following activities that pertain to manufacturing overhead for its production of water polo balls: materials handling, machine setups, factory machine maintenance, factory supervision, and quality control. For each activity, identify an appropriate cost driver.

Identify cost drivers.

(LO 2)

BE18-4 Mason Company manufactures four products in a single production facility. The company uses activity-based costing. The following activities have been identified through the company's activity analysis: (a) inventory control, (b) machine setups, (c) employee training, (d) quality inspections, (e) materials orderings, (f) drilling operations, and (g) building maintenance.

For each activity, name a cost driver that might be used to assign overhead costs to products.

Compute activity-based overhead rates.

(LO 2)

BE18-5 Morgana Company identifies three activities in its manufacturing process: machine setups, machining, and inspections. Estimated annual overhead cost for each activity is \$150,000, \$375,000, and \$87,500, respectively. The cost driver for each activity

and the expected annual usage are number of setups 2,500, machine hours 25,000, and number of inspections 1,750. Compute the overhead rate for each activity.

BE18-6 Weisman, Inc. uses activity-based costing as the basis for information to set prices for its six lines of seasonal coats. Compute the activity-based overhead rates using the following budgeted data for each of the activity cost pools.

Compute activity-based overhead rates.

(LO 2)

<u>Activity Cost Pools</u>	<u>Estimated Overhead</u>	<u>Expected Use of Cost Drivers per Activity</u>
Designing	\$ 450,000	10,000 designer hours
Sizing and cutting	4,000,000	160,000 machine hours
Stitching and trimming	1,440,000	80,000 labor hours
Wrapping and packing	336,000	32,000 finished units

BE18-7 Spud, Inc. a manufacturer of gourmet potato chips, employs activity-based costing. The budgeted data for each of the activity cost pools is provided below for the year 2017.

Compute activity-based overhead rates.

(LO 2)

<u>Activity Cost Pools</u>	<u>Estimated Overhead</u>	<u>Expected Use of Cost Drivers per Activity</u>
Ordering and receiving	\$ 84,000	12,000 orders
Food processing	480,000	60,000 machine hours
Packaging	1,760,000	440,000 labor hours

For 2017, the company had 11,000 orders and used 50,000 machine hours, and labor hours totaled 500,000. What is the total overhead applied?

BE18-8 Rich Novelty Company identified the following activities in its production and support operations. Classify each of these activities as either value-added or non-value-added.

Classify activities as value- or non-value-added.

(LO 3)

- | | |
|-------------------------|-----------------------------|
| (a) Machine setup. | (d) Moving work in process. |
| (b) Design engineering. | (e) Inspecting and testing. |
| (c) Storing inventory. | (f) Painting and packing. |

BE18-9 Pine and Danner is an architectural firm that is contemplating the installation of activity-based costing. The following activities are performed daily by staff architects. Classify these activities as value-added or non-value-added: (a) designing and drafting, 3 hours; (b) staff meetings, 1 hour; (c) on-site supervision, 2 hours; (d) lunch, 1 hour; (e) consultation with client on specifications, 1.5 hours; and (f) entertaining a prospective client for dinner, 2 hours.

Classify service company activities as value- or non-value-added.

(LO 3, 4)

BE18-10 Kwik Pix is a large digital processing center that serves 130 outlets in grocery stores, service stations, camera and photo shops, and drug stores in 16 nearby towns. Kwik Pix operates 24 hours a day, 6 days a week. Classify each of the following activity costs of Kwik Pix as either unit-level, batch-level, product-level, or facility-level.

Classify activities according to level.

(LO 3)

- | | |
|--------------------------------|----------------------------------|
| (a) Color printing materials. | (f) Ordering materials. |
| (b) Photocopy paper. | (g) Pickup and delivery. |
| (c) Depreciation of machinery. | (h) Commission to dealers. |
| (d) Setups for enlargements. | (i) Insurance on building. |
| (e) Supervisor's salary. | (j) Loading developing machines. |

BE18-11 FixIt, Inc. operates 20 injection molding machines in the production of tool boxes of four different sizes, named the Apprentice, the Handyman, the Journeyman, and the Professional. Classify each of the following costs as unit-level, batch-level, product-level, or facility-level.

Classify activities according to level.

(LO 3)

- First-shift supervisor's salary.
- Powdered raw plastic.
- Dies for casting plastic components.
- Depreciation on injection molding machines.
- Changing dies on machines.
- Moving components to assembly department.
- Engineering design.
- Employee health and medical insurance coverage.

Compute rates and activity levels.

(LO 3, 4)

BE18-12 Spin Cycle Architecture uses three activity pools to apply overhead to its projects. Each activity has a cost driver used to allocate the overhead costs to the projects. The activities and related overhead costs are as follows: initial concept formation \$40,000, design \$300,000, and construction oversight \$100,000. The cost drivers and expected use are as follows.

Activities	Cost Drivers	Expected Use of Cost Drivers per Activity
Initial concept formation	Number of project changes	20
Design	Square feet	150,000
Construction oversight	Number of months	100

(a) Compute the predetermined overhead rate for each activity. (b) Classify each of these activities as unit-level, batch-level, product-level, or facility-level.

DO IT! Exercises

Identify characteristics of traditional and ABC systems.

(LO 1)

DO IT! 18-1 Indicate whether the following statements are true or false.

- The reasoning behind ABC cost allocation is that products consume activities and activities consume resources.
- Activity-based costing is an approach for allocating direct labor to products.
- In today's increasingly automated environment, direct labor is never an appropriate basis for allocating costs to products.
- A cost driver is any factor or activity that has a direct cause-effect relationship with resources consumed.
- Activity-based costing segregates overhead into various cost pools in an effort to provide more accurate cost information.

Compute activity-based overhead rates and assign overhead using ABC.

(LO 2)

DO IT! 18-2 Flynn Industries has three activity cost pools and two products. It expects to produce 3,000 units of Product BC113 and 1,500 of Product AD908. Having identified its activity cost pools and the cost drivers for each pool, Flynn accumulated the following data relative to those activity cost pools and cost drivers.

Annual Overhead Data			Expected Use of Cost Drivers per Product		
Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers per Activity	Product BC113	Product AD908
Machine setup	Setups	\$ 16,000	40	25	15
Machining	Machine hours	110,000	5,000	1,000	4,000
Packing	Orders	30,000	500	150	350

Using the above data, do the following:

- Prepare a schedule showing the computations of the activity-based overhead rates per cost driver.
- Prepare a schedule assigning each activity's overhead cost to the two products.
- Compute the overhead cost per unit for each product. (Round to nearest cent.)
- Comment on the comparative overhead cost per product.

Classify activities according to level.

(LO 3)

DO IT! 18-3 Adamson Company manufactures four lines of garden tools. As a result of an activity analysis, the accounting department has identified eight activity cost pools. Each of the product lines is produced in large batches, with the whole plant devoted to one product at a time. Classify each of the following activities or costs as either unit-level, batch level, product-level, or facility-level.

- Machining parts.
- Product design.
- Plant maintenance.
- Machine setup.
- Assembling parts.
- Purchasing raw materials.
- Property taxes.
- Painting.

DO IT! 18-4 Ready Ride is a trucking company. It provides local, short-haul, and long-haul services. It has developed the following three cost pools.

Apply ABC to service company.

(LO 4)

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Driver per Activity
Loading and unloading	Number of pieces	\$ 90,000	90,000
Travel	Miles driven	450,000	600,000
Logistics	Hours	75,000	3,000

- Compute the activity-based overhead rates for each pool.
- Determine the overhead allocated to Job XZ3275 which has 150 pieces, requires 200 miles of driving, and 0.75 hours of logistics.

EXERCISES

E18-1 Saddle Inc. has two types of handbags: standard and custom. The controller has decided to use a plantwide overhead rate based on direct labor costs. The president has heard of activity-based costing and wants to see how the results would differ if this system were used. Two activity cost pools were developed: machining and machine setup. Presented below is information related to the company's operations.

Assign overhead using traditional costing and ABC.

(LO 1, 2)

	Standard	Custom
Direct labor costs	\$50,000	\$100,000
Machine hours	1,000	1,000
Setup hours	100	400

Total estimated overhead costs are \$240,000. Overhead cost allocated to the machining activity cost pool is \$140,000, and \$100,000 is allocated to the machine setup activity cost pool.

Instructions

- Compute the overhead rate using the traditional (plantwide) approach.
- Compute the overhead rates using the activity-based costing approach.
- Determine the difference in allocation between the two approaches.

E18-2 Ayala Inc. has conducted the following analysis related to its product lines, using a traditional costing system (volume-based) and an activity-based costing system. Both the traditional and the activity-based costing systems include direct materials and direct labor costs.

Explain difference between traditional and activity-based costing.

(LO 1)

Products	Sales Revenue	Total Costs	
		Traditional	ABC
Product 540X	\$180,000	\$55,000	\$50,000
Product 137Y	160,000	50,000	35,000
Product 249S	70,000	15,000	35,000

Instructions

- For each product line, compute operating income using the traditional costing system.
- For each product line, compute operating income using the activity-based costing system.
- Using the following formula, compute the percentage difference in operating income for each of the product lines of Ayala: $[\text{Operating Income (ABC)} - \text{Operating Income (traditional cost)}] \div \text{Operating Income (traditional cost)}$. (Round to two decimals.)
- Provide a rationale as to why the costs for Product 540X are approximately the same using either the traditional or activity-based costing system.

Assign overhead using traditional costing and ABC.

(LO 1, 2)

E18-3 EcoFabrics has budgeted overhead costs of \$945,000. It has allocated overhead on a plantwide basis to its two products (wool and cotton) using direct labor hours which are estimated to be 450,000 for the current year. The company has decided to experiment with activity-based costing and has created two activity cost pools and related activity cost drivers. These two cost pools are cutting (cost driver is machine hours) and design (cost driver is number of setups). Overhead allocated to the cutting cost pool is \$360,000, and \$585,000 is allocated to the design cost pool. Additional information related to these pools is as follows.

	<u>Wool</u>	<u>Cotton</u>	<u>Total</u>
Machine hours	100,000	100,000	200,000
Number of setups	1,000	500	1,500

Instructions

- Determine the amount of overhead allocated to the wool product line and the cotton product line using activity-based costing.
- What amount of overhead would be allocated to the wool and cotton product lines using the traditional approach, assuming direct labor hours were incurred evenly between the wool and cotton? How does this compare with the amount allocated using ABC in part (a)?

Assign overhead using traditional costing and ABC.

(LO 1, 2)

E18-4 Altex Inc. manufactures two products: car wheels and truck wheels. To determine the amount of overhead to assign to each product line, the controller, Robert Hermann, has developed the following information.

	<u>Car</u>	<u>Truck</u>
Estimated wheels produced	40,000	10,000
Direct labor hours per wheel	1	3

Total estimated overhead costs for the two product lines are \$770,000.

Instructions

- Compute the overhead cost assigned to the car wheels and truck wheels, assuming that direct labor hours is used to allocate overhead costs.
- Hermann is not satisfied with the traditional method of allocating overhead because he believes that most of the overhead costs relate to the truck wheels product line because of its complexity. He therefore develops the following three activity cost pools and related cost drivers to better understand these costs.

<u>Activity Cost Pools</u>	<u>Expected Use of Cost Drivers</u>	<u>Estimated Overhead Costs</u>
Setting up machines	1,000 setups	\$220,000
Assembling	70,000 labor hours	280,000
Inspection	1,200 inspections	270,000

Compute the activity-based overhead rates for these three cost pools.

- Compute the cost that is assigned to the car wheels and truck wheels product lines using an activity-based costing system, given the following information.

<u>Expected Use of Cost Drivers per Product</u>		
	<u>Car</u>	<u>Truck</u>
Number of setups	200	800
Direct labor hours	40,000	30,000
Number of inspections	100	1,100

- What do you believe Hermann should do?

Assign overhead using traditional costing and ABC.

(LO 1, 2)

E18-5 Perdon Corporation manufactures safes—large mobile safes, and large walk-in stationary bank safes. As part of its annual budgeting process, Perdon is analyzing the profitability of its two products. Part of this analysis involves estimating the amount of overhead to be allocated to each product line. The following information relates to overhead.

	Mobile Safes	Walk-In Safes
Units planned for production	200	50
Material moves per product line	300	200
Purchase orders per product line	450	350
Direct labor hours per product line	800	1,700

Instructions

- (a) The total estimated manufacturing overhead was \$260,000. Under traditional costing (which assigns overhead on the basis of direct labor hours), what amount of manufacturing overhead costs are assigned to:
- (1) One mobile safe?
 - (2) One walk-in safe?
- (b) The total estimated manufacturing overhead of \$260,000 was comprised of \$160,000 for materials handling costs and \$100,000 for purchasing activity costs. Under activity-based costing (ABC):
- (1) What amount of materials handling costs are assigned to:
 - (a) One mobile safe?
 - (b) One walk-in safe?
 - (2) What amount of purchasing activity costs are assigned to:
 - (a) One mobile safe?
 - (b) One walk-in safe?
- (c) Compare the amount of overhead allocated to one mobile safe and to one walk-in safe under the traditional costing approach versus under ABC.

E18-6 Santana Corporation manufactures snowmobiles in its Blue Mountain, Wisconsin, plant. The following costs are budgeted for the first quarter's operations.

Identify activity cost pools and cost drivers.

(LO 2)

Machine setup, indirect materials	\$ 4,000
Inspections	16,000
Tests	4,000
Insurance, plant	110,000
Engineering design	140,000
Depreciation, machinery	520,000
Machine setup, indirect labor	20,000
Property taxes	29,000
Oil, heating	19,000
Electricity, plant lighting	21,000
Engineering prototypes	60,000
Depreciation, plant	210,000
Electricity, machinery	36,000
Machine maintenance wages	19,000

Instructions

Classify the above costs of Santana Corporation into activity cost pools using the following: engineering, machinery, machine setup, quality control, factory utilities, maintenance. Next, identify a cost driver that may be used to assign each cost pool to each line of snowmobiles.

E18-7 Rojas Vineyards in Oakville, California, produces three varieties of non-alcoholic wine: merlot, viognier, and pinot noir. The winemaker, Russel Hansen, has identified the following activities as cost pools for accumulating overhead and assigning it to products.

Identify activity cost drivers.

(LO 2)

1. Culling and replanting. Dead or overcrowded vines are culled, and new vines are planted or relocated. (Separate vineyards by variety.)
2. Tying. The posts and wires are reset, and vines are tied to the wires for the dormant season.
3. Trimming. At the end of the harvest, the vines are cut and trimmed back in preparation for the next season.
4. Spraying. The vines are sprayed with organic pesticides for protection against insects and fungi.
5. Harvesting. The grapes are hand-picked, placed in carts, and transported to the crushers.

6. Stemming and crushing. Cartfuls of bunches of grapes of each variety are separately loaded into machines that remove stems and gently crush the grapes.
7. Pressing and filtering. The crushed grapes are transferred to presses that mechanically remove the juices and filter out bulk and impurities.
8. Fermentation. The grape juice, by variety, is fermented in either stainless-steel tanks or oak barrels.
9. Aging. The wines are aged in either stainless-steel tanks or oak barrels for one to three years depending on variety.
10. Bottling and corking. Bottles are machine-filled and corked.
11. Labeling and boxing. Each bottle is labeled, as is each nine-bottle case, with the name of the vintner, vintage, and variety.
12. Storing. Packaged and boxed bottles are stored awaiting shipment.
13. Shipping. The wine is shipped to distributors and private retailers.
14. Heating and air-conditioning of plant and offices.
15. Maintenance of buildings and equipment. Printing, repairs, replacements, and general maintenance are performed in the off-season.

Instructions

For each of Rojas Vineyards' 15 activity cost pools, identify a probable cost driver that might be used to assign overhead costs to its three wine varieties.

Identify activity cost drivers.
(LO 2)

E18-8 Wilmington, Inc. manufactures five models of kitchen appliances. The company is installing activity-based costing and has identified the following activities performed at its Mesa plant.

1. Designing new models.
2. Purchasing raw materials and parts.
3. Storing and managing inventory.
4. Receiving and inspecting raw materials and parts.
5. Interviewing and hiring new personnel.
6. Machine forming sheet steel into appliance parts.
7. Manually assembling parts into appliances.
8. Training all employees of the company.
9. Insuring all tangible fixed assets.
10. Supervising production.
11. Maintaining and repairing machinery and equipment.
12. Painting and packaging finished appliances.

Having analyzed its Mesa plant operations for purposes of installing activity-based costing, Wilmington, Inc. identified its activity cost centers. It now needs to identify relevant activity cost drivers in order to assign overhead costs to its products.

Instructions

Using the activities listed above, identify for each activity one or more cost drivers that might be used to assign overhead to Wilmington's five products.

Compute overhead rates and assign overhead using ABC.
(LO 2, 3)

E18-9 Air United, Inc. manufactures two products: missile range instruments and space pressure gauges. During April, 50 range instruments and 300 pressure gauges were produced, and overhead costs of \$94,500 were estimated. An analysis of estimated overhead costs reveals the following activities.

Activities	Cost Drivers	Total Cost
1. Materials handling	Number of requisitions	\$40,000
2. Machine setups	Number of setups	21,500
3. Quality inspections	Number of inspections	33,000
		\$94,500

The cost driver volume for each product was as follows.

Cost Drivers	Instruments	Gauges	Total
Number of requisitions	400	600	1,000
Number of setups	200	300	500
Number of inspections	200	400	600

Instructions

- Determine the overhead rate for each activity.
- Assign the manufacturing overhead costs for April to the two products using activity-based costing.
-  Write a memorandum to the president of Air United explaining the benefits of activity-based costing.

E18-10 Kragan Clothing Company manufactures its own designed and labeled athletic wear and sells its products through catalog sales and retail outlets. While Kragan has for years used activity-based costing in its manufacturing activities, it has always used traditional costing in assigning its selling costs to its product lines. Selling costs have traditionally been assigned to Kragan's product lines at a rate of 70% of direct materials costs. Its direct materials costs for the month of March for Kragan's "high-intensity" line of athletic wear are \$400,000. The company has decided to extend activity-based costing to its selling costs. Data relating to the "high-intensity" line of products for the month of March are as follows.

Assign overhead using traditional costing and ABC.

(LO 1, 2, 3)

Activity Cost Pools	Cost Drivers	Overhead Rate	Number of Cost Drivers Used per Activity
Sales commissions	Dollar sales	\$0.05 per dollar sales	\$900,000
Advertising—TV	Minutes	\$300 per minute	250
Advertising—Internet	Column inches	\$10 per column inch	2,000
Catalogs	Catalogs mailed	\$2.50 per catalog	60,000
Cost of catalog sales	Catalog orders	\$1 per catalog order	9,000
Credit and collection	Dollar sales	\$0.03 per dollar sales	900,000

Instructions

- Compute the selling costs to be assigned to the "high-intensity" line of athletic wear for the month of March (1) using the traditional product costing system (direct materials cost is the cost driver), and (2) using activity-based costing.
- By what amount does the traditional product costing system undercost or overcost the "high-intensity" product line?

E18-11 Health 'R Us, Inc., uses a traditional product costing system to assign overhead costs uniformly to all its packaged multigrain products. To meet Food and Drug Administration requirements and to assure its customers of safe, sanitary, and nutritious food, Health 'R Us engages in a high level of quality control. Health 'R Us assigns its quality-control overhead costs to all products at a rate of 17% of direct labor costs. Its direct labor cost for the month of June for its low-calorie breakfast line is \$70,000. In response to repeated requests from its financial vice president, Health 'R Us's management agrees to adopt activity-based costing. Data relating to the low-calorie breakfast line for the month of June are as follows.

Assign overhead using traditional costing and ABC; classify activities as value- or non-value-added.

(LO 1, 2, 3)

Activity Cost Pools	Cost Drivers	Overhead Rate	Number of Cost Drivers Used per Activity
Inspections of material received	Number of pounds	\$0.90 per pound	6,000 pounds
In-process inspections	Number of servings	\$0.33 per serving	10,000 servings
FDA certification	Customer orders	\$12.00 per order	420 orders

Instructions

- Compute the quality-control overhead cost to be assigned to the low-calorie breakfast product line for the month of June (1) using the traditional product costing system (direct labor cost is the cost driver), and (2) using activity-based costing.
- By what amount does the traditional product costing system undercost or overcost the low-calorie breakfast line?
- Classify each of the activities as value-added or non-value-added.

E18-12 Having itemized its costs for the first quarter of next year's budget, Santana Corporation desires to install an activity-based costing system. First, it identified the activity cost pools in which to accumulate factory overhead. Second, it identified the relevant cost drivers. (This was done in E18-6.)

Classify activities by level.

(LO 3)

Instructions

Using the activity cost pools identified in E18-6, classify each of those cost pools as either unit-level, batch-level, product-level, or facility-level.

Classify activities by level.

(LO 3)

E18-13 William Mendel & Sons, Inc. is a small manufacturing company in La Jolla that uses activity-based costing. Mendel & Sons accumulates overhead in the following activity cost pools.

1. Hiring personnel.
2. Managing parts inventory.
3. Purchasing.
4. Testing prototypes.
5. Designing products.
6. Setting up equipment.
7. Training employees.
8. Inspecting machined parts.
9. Machining.
10. Assembling.

Instructions

For each activity cost pool, indicate whether the activity cost pool would be unit-level, batch-level, product-level, or facility-level.

Assign overhead using traditional costing and ABC.

(LO 4)

E18-14 Venus Creations sells window treatments (shades, blinds, and awnings) to both commercial and residential customers. The following information relates to its budgeted operations for the current year.

	<u>Commercial</u>	<u>Residential</u>
Revenues	\$300,000	\$480,000
Direct materials costs	\$ 30,000	\$ 50,000
Direct labor costs	100,000	300,000
Overhead costs	85,000	150,000
Operating income (loss)	<u>\$ 85,000</u>	<u>(\$ 20,000)</u>

The controller, Peggy Kingman, is concerned about the residential product line. She cannot understand why this line is not more profitable given that the installations of window coverings are less complex for residential customers. In addition, the residential client base resides in close proximity to the company office, so travel costs are not as expensive on a per client visit for residential customers. As a result, she has decided to take a closer look at the overhead costs assigned to the two product lines to determine whether a more accurate product costing model can be developed. Here are the three activity cost pools and related information she developed:

<u>Activity Cost Pools</u>	<u>Estimated Overhead</u>	<u>Cost Drivers</u>
Scheduling and travel	\$85,000	Hours of travel
Setup time	90,000	Number of setups
Supervision	60,000	Direct labor cost

Expected Use of Cost Drivers per Product

	<u>Commercial</u>	<u>Residential</u>
Scheduling and travel	750	500
Setup time	350	250

Instructions

- (a) Compute the activity-based overhead rates for each of the three cost pools, and determine the overhead cost assigned to each product line.
- (b) Compute the operating income for each product line, using the activity-based overhead rates.
- (c) What do you believe Peggy Kingman should do?

Identify activity cost pools.

(LO 4)

E18-15 Snap Prints Company is a small printing and copying firm with three high-speed offset printing presses, five copiers (two color and three black-and-white), one collator, one cutting and folding machine, and one fax machine. To improve its pricing practices, owner-manager Terry Morton is installing activity-based costing. Additionally, Terry employs five employees: two printers/designers, one receptionist/bookkeeper, one salesperson/copy-machine operator, and one janitor/delivery clerk. Terry can operate

any of the machines and, in addition to managing the entire operation, he performs the training, designing, selling, and marketing functions.

Instructions

As Snap Prints' independent accountant who prepares tax forms and quarterly financial statements, you have been asked to identify the activities that would be used to accumulate overhead costs for assignment to jobs and customers. Using your knowledge of a small printing and copying firm (and some imagination), identify at least 12 activity cost pools as the start of an activity-based costing system for Snap Prints Company.

E18-16 Lasso and Markowitz is a law firm that is initiating an activity-based costing system. Sam Lasso, the senior partner and strong supporter of ABC, has prepared the following list of activities performed by a typical attorney in a day at the firm.

Classify service company activities as value-added or non-value-added.

(LO 3)

Activities	Hours
Writing contracts and letters	1.5
Attending staff meetings	0.5
Taking depositions	1.0
Doing research	1.0
Traveling to/from court	1.0
Contemplating legal strategy	1.0
Eating lunch	1.0
Litigating a case in court	2.5
Entertaining a prospective client	1.5

Instructions

Classify each of the activities listed by Sam Lasso as value-added or non-value-added, and defend your classification. How much was value-added time and how much was non-value-added?

E18-17 Manzeck Company operates a snow-removal service. The company owns five trucks, each of which has a snow plow in the front to plow driveways and a snowthrower in the back to clear sidewalks. Because plowing snow is very tough on trucks, the company incurs significant maintenance costs. Truck depreciation and maintenance represents a significant portion of the company's overhead. The company removes snow at residential locations, in which case the drivers spend the bulk of their time walking behind the snowthrower machine to clear sidewalks. On commercial jobs, the drivers spend most of their time plowing. Manzeck allocates overhead based on labor hours. Total overhead costs for the year are \$42,000. Total labor hours are 1,500 hours. The average residential property requires 0.5 hours of labor, while the average commercial property requires 2.5 hours of labor. The following additional information is available.

Apply ABC to service company.

(LO 4)

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers per Activity
Plowing	Square yards of surface plowed	\$38,000	200,000
Snowthrowing	Linear feet of sidewalk cleared	\$ 4,000	50,000

Instructions

- Determine the predetermined overhead rate under traditional costing.
- Determine the amount of overhead allocated to the average residential job using traditional costing based on labor hours.
- Determine the activity-based overhead rates for each cost pool.
- Determine the amount of overhead allocated to the average residential job using activity-based costing. Assume that the average residential job has 20 square yards of plowing and 60 linear feet of snowthrowing.
- Discuss your findings from parts (b) and (d).

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Assign overhead using traditional costing and ABC; compute unit costs; classify activities as value- or non-value-added.

(LO 1, 2, 3)

P18-1A Combat Fire, Inc. manufactures steel cylinders and nozzles for two models of fire extinguishers: (1) a home fire extinguisher and (2) a commercial fire extinguisher. The *home model* is a high-volume (54,000 units), half-gallon cylinder that holds 2 1/2 pounds of multi-purpose dry chemical at 480 PSI. The *commercial model* is a low-volume (10,200 units), two-gallon cylinder that holds 10 pounds of multi-purpose dry chemical at 390 PSI. Both products require 1.5 hours of direct labor for completion. Therefore, total annual direct labor hours are 96,300 or $[1.5 \text{ hours} \times (54,000 + 10,200)]$. Expected annual manufacturing overhead is \$1,584,280. Thus, the predetermined overhead rate is \$16.45 or $(\$1,584,280 \div 96,300)$ per direct labor hour. The direct materials cost per unit is \$18.50 for the home model and \$26.50 for the commercial model. The direct labor cost is \$19 per unit for both the home and the commercial models.

The company's managers identified six activity cost pools and related cost drivers and accumulated overhead by cost pool as follows.

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Drivers by Product	
				Home	Commercial
Receiving	Pounds	\$ 80,400	335,000	215,000	120,000
Forming	Machine hours	150,500	35,000	27,000	8,000
Assembling	Number of parts	412,300	217,000	165,000	52,000
Testing	Number of tests	51,000	25,500	15,500	10,000
Painting	Gallons	52,580	5,258	3,680	1,578
Packing and shipping	Pounds	837,500	335,000	215,000	120,000
		<u>\$1,584,280</u>			

Instructions

- (a) Unit cost—H.M. \$62.18
- (a) Under traditional product costing, compute the total unit cost of each product. Prepare a simple comparative schedule of the individual costs by product (similar to Illustration 18-3 on page 841).
- (b) Under ABC, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver).
- (c) Cost assigned—H.M. \$1,086,500
- (c) Prepare a schedule assigning each activity's overhead cost pool to each product based on the use of cost drivers. (Include a computation of overhead cost per unit, rounding to the nearest cent.)
- (d) Cost/unit—H.M. \$57.62
- (d) Compute the total cost per unit for each product under ABC.
- (e) Classify each of the activities as a value-added activity or a non-value-added activity.
- (f) Comment on (1) the comparative overhead cost per unit for the two products under ABC, and (2) the comparative total costs per unit under traditional costing and ABC.

Assign overhead to products using ABC and evaluate decision.

(LO 2)

P18-2A Schultz Electronics manufactures two ultra high-definition television models: the Royale which sells for \$1,600, and a new model, the Majestic, which sells for \$1,300. The production cost computed per unit under traditional costing for each model in 2017 was as follows.

Traditional Costing	Royale	Majestic
Direct materials	\$ 700	\$420
Direct labor (\$20 per hour)	120	100
Manufacturing overhead (\$38 per DLH)	228	190
Total per unit cost	<u>\$1,048</u>	<u>\$710</u>

In 2017, Schultz manufactured 25,000 units of the Royale and 10,000 units of the Majestic. The overhead rate of \$38 per direct labor hour was determined by dividing total expected manufacturing overhead of \$7,600,000 by the total direct labor hours (200,000) for the two models.

Under traditional costing, the gross profit on the models was Royale \$552 ($\$1,600 - \$1,048$) and Majestic \$590 ($\$1,300 - \710). Because of this difference, management is considering phasing out the Royale model and increasing the production of the Majestic model.

Before finalizing its decision, management asks Schultz's controller to prepare an analysis using activity-based costing (ABC). The controller accumulates the following information about overhead for the year ended December 31, 2017.

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Activity-Based Overhead Rate
Purchasing	Number of orders	\$1,200,000	40,000	\$30/order
Machine setups	Number of setups	900,000	18,000	\$50/setup
Machining	Machine hours	4,800,000	120,000	\$40/hour
Quality control	Number of inspections	700,000	28,000	\$25/inspection

The cost drivers used for each product were:

Cost Drivers	Royale	Majestic	Total
Purchase orders	17,000	23,000	40,000
Machine setups	5,000	13,000	18,000
Machine hours	75,000	45,000	120,000
Inspections	11,000	17,000	28,000

Instructions

- (a) Assign the total 2017 manufacturing overhead costs to the two products using activity-based costing (ABC) and determine the overhead cost per unit.
- (b) What was the cost per unit and gross profit of each model using ABC?
- (c)  Are management's future plans for the two models sound? Explain.

(a) Royale \$4,035,000

(b) Cost/unit—Royale \$981.40

P18-3A Shaker Stairs Co. designs and builds factory-made premium wooden stairways for homes. The manufactured stairway components (spindles, risers, hangers, hand rails) permit installation of stairways of varying lengths and widths. All are of white oak wood. Budgeted manufacturing overhead costs for the year 2017 are as follows.

Assign overhead costs using traditional costing and ABC; compare results.

(LO 1, 2)

Overhead Cost Pools	Amount
Purchasing	\$ 75,000
Handling materials	82,000
Production (cutting, milling, finishing)	210,000
Setting up machines	105,000
Inspecting	90,000
Inventory control (raw materials and finished goods)	126,000
Utilities	180,000
Total budgeted overhead costs	<u>\$868,000</u>

For the last 4 years, Shaker Stairs Co. has been charging overhead to products on the basis of machine hours. For the year 2017, 100,000 machine hours are budgeted.

Jeremy Nolan, owner-manager of Shaker Stairs Co., recently directed his accountant, Bill Seagren, to implement the activity-based costing system that he has repeatedly proposed. At Jeremy Nolan's request, Bill and the production foreman identify the following cost drivers and their usage for the previously budgeted overhead cost pools.

Activity Cost Pools	Cost Drivers	Expected Use of Cost Drivers
Purchasing	Number of orders	600
Handling materials	Number of moves	8,000
Production (cutting, milling, finishing)	Direct labor hours	100,000
Setting up machines	Number of setups	1,250
Inspecting	Number of inspections	6,000
Inventory control (raw materials and finished goods)	Number of components	168,000
Utilities	Square feet occupied	90,000

Steve Hannon, sales manager, has received an order for 250 stairways from Community Builders, Inc., a large housing development contractor. At Steve's request, Bill prepares cost estimates for producing components for 250 stairways so Steve can submit a contract price per stairway to Community Builders. He accumulates the following data for the production of 250 stairways.

Direct materials	\$103,600
Direct labor	\$112,000
Machine hours	14,500
Direct labor hours	5,000
Number of purchase orders	60
Number of material moves	800
Number of machine setups	100
Number of inspections	450
Number of components	16,000
Number of square feet occupied	8,000

Instructions

- (a) Compute the predetermined overhead rate using traditional costing with machine hours as the basis.
- (b) **Cost/stairway \$1,365.84** What is the manufacturing cost per stairway under traditional costing? (Round to the nearest cent.)
- (c) **Cost/stairway \$1,139.80** What is the manufacturing cost per stairway under the proposed activity-based costing? (Round to the nearest cent. Prepare all of the necessary schedules.)
- (d)  Which of the two costing systems is preferable in pricing decisions and why?

Assign overhead costs using traditional costing and ABC; compare results.

(LO 1, 2)

P18-4A Benton Corporation produces two grades of non-alcoholic wine from grapes that it buys from California growers. It produces and sells roughly 3,000,000 liters per year of a low-cost, high-volume product called CoolDay. It sells this in 600,000 5-liter jugs. Benton also produces and sells roughly 300,000 liters per year of a low-volume, high-cost product called LiteMist. LiteMist is sold in 1-liter bottles. Based on recent data, the CoolDay product has not been as profitable as LiteMist. Management is considering dropping the inexpensive CoolDay line so it can focus more attention on the LiteMist product. The LiteMist product already demands considerably more attention than the CoolDay line.

Jack Eller, president and founder of Benton, is skeptical about this idea. He points out that for many decades the company produced only the CoolDay line and that it was always quite profitable. It wasn't until the company started producing the more complicated LiteMist wine that the profitability of CoolDay declined. Prior to the introduction of LiteMist, the company had basic equipment, simple growing and production procedures, and virtually no need for quality control. Because LiteMist is bottled in 1-liter bottles, it requires considerably more time and effort, both to bottle and to label and box than does CoolDay. The company must bottle and handle 5 times as many bottles of LiteMist to sell the same quantity as CoolDay. CoolDay requires 1 month of aging; LiteMist requires 1 year. CoolDay requires cleaning and inspection of equipment every 10,000 liters; LiteMist requires such maintenance every 600 liters.

Jack has asked the accounting department to prepare an analysis of the cost per liter using the traditional costing approach and using activity-based costing. The following information was collected.

	CoolDay	LiteMist
Direct materials per liter	\$0.40	\$1.20
Direct labor cost per liter	\$0.50	\$0.90
Direct labor hours per liter	0.05	0.09
Total direct labor hours	150,000	27,000

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Product	
				CoolDay	LiteMist
Grape processing	Cart of grapes	\$ 145,860	6,600	6,000	600
Aging	Total months	396,000	6,600,000	3,000,000	3,600,000
Bottling and corking	Number of bottles	270,000	900,000	600,000	300,000
Labeling and boxing	Number of bottles	189,000	900,000	600,000	300,000
Maintain and inspect equipment	Number of inspections	240,800	800	350	450
		<u>\$1,241,660</u>			

Instructions

Answer each of the following questions. (Round all calculations to three decimal places.)

- (a) Under traditional product costing using direct labor hours, compute the total manufacturing cost per **liter** of both products. (a) Cost/liter—C.D. \$1.251
- (b) Under ABC, prepare a schedule showing the computation of the activity-based overhead rates (per cost driver).
- (c) Prepare a schedule assigning each activity's overhead cost pool to each product, based on the use of cost drivers. Include a computation of overhead cost per liter. (c) Cost/liter—C.D. \$.241
- (d) Compute the total manufacturing cost per liter for both products under ABC.
- (e)  Write a memo to Jack Eller discussing the implications of your analysis for the company's plans. In this memo, provide a brief description of ABC as well as an explanation of how the traditional approach can result in distortions.

P18-5A Lewis and Stark is a public accounting firm that offers two primary services, auditing and tax-return preparation. A controversy has developed between the partners of the two service lines as to who is contributing the greater amount to the bottom line. The area of contention is the assignment of overhead. The tax partners argue for assigning overhead on the basis of 40% of direct labor dollars, while the audit partners argue for implementing activity-based costing. The partners agree to use next year's budgeted data for purposes of analysis and comparison. The following overhead data are collected to develop the comparison.

Assign overhead costs to services using traditional costing and ABC; compute overhead rates and unit costs; compare results.

(LO 1, 2, 3, 4)

Activity Cost Pools	Cost Drivers	Estimated Overhead	Expected Use of Cost Drivers	Expected Use of Cost Drivers per Service	
				Audit	Tax
Employee training	Direct labor dollars	\$216,000	\$1,800,000	\$1,100,000	\$700,000
Typing and secretarial	Number of reports/forms	76,200	2,500	800	1,700
Computing	Number of minutes	204,000	60,000	27,000	33,000
Facility rental	Number of employees	142,500	40	22	18
Travel	Per expense reports	81,300	Direct	56,000	25,300
		<u>\$720,000</u>			

Instructions

- (a) Using traditional product costing as proposed by the tax partners, compute the total overhead cost assigned to both services (audit and tax) of Lewis and Stark.
- (b) (1) Using activity-based costing, prepare a schedule showing the computations of the activity-based overhead rates (per cost driver). (b) (2) Cost assigned—Tax \$337,441
- (2) Prepare a schedule assigning each activity's overhead cost pool to each service based on the use of the cost drivers.
- (c)  Comment on the comparative overhead cost for the two services under both traditional costing and ABC. (c) Difference—Audit \$57,441

CONTINUING PROBLEMS

EXCEL
TUTORIAL

CURRENT DESIGNS

CD18 As you learned in the previous chapters, Current Designs has two main product lines—composite kayaks, which are handmade and very labor-intensive, and rotomolded kayaks, which require less labor but employ more expensive equipment. Current Designs' controller, Diane Buswell, is now evaluating several different methods of assigning overhead to these products. It is important to ensure that costs are appropriately assigned to the company's products. At the same time, the system that is used must not be so complex that its costs are greater than its benefits.

Diane has decided to use the following activities and costs to evaluate the methods of assigning overhead.

	A	B
1		
2	Activities	Cost
3	Designing new models	\$121,100
4	Creating and testing prototypes	152,000
5	Creating molds for kayaks	188,500
6	Operating oven for the rotomolded kayaks	40,000
7	Operating the vacuum line for the composite kayaks	28,000
8	Supervising production employees	180,000
9	Curing time (the time that is needed for the chemical processes to finish before the next step in the production process; many of these costs are related to the space required in the building)	190,400
10	Total	\$900,000

As Diane examines the data, she decides that the cost of operating the oven for the rotomolded kayaks and the cost of operating the vacuum line for the composite kayaks can be directly assigned to each of these product lines and do not need to be allocated with the other costs.

Instructions

For purposes of this analysis, assume that Current Designs uses \$234,000 in direct labor costs to produce 1,000 composite kayaks and \$286,000 in direct labor costs to produce 4,000 rotomolded kayaks each year.

- One method of allocating overhead would allocate the common costs to each product line by using an allocation basis such as the number of employees working on each type of kayak or the amount of factory space used for the production of each type of kayak. Diane knows that about 50% of the area of the plant and 50% of the employees work on the composite kayaks, and the remaining space and other employees work on the rotomolded kayaks. Using this information and remembering that the cost of operating the oven and vacuum line have been directly assigned, determine the total amount to be assigned to the composite kayak line and the rotomolded kayak line, and the amount to be assigned to each of the units in each line.
- Another method of allocating overhead is to use direct labor dollars as an allocation basis. Remembering that the costs of the oven and the vacuum line have been assigned directly to the product lines, allocate the remaining costs using direct labor dollars as the allocation basis. Then, determine the amount of overhead that should be assigned to each unit of each product line using this method.
- Activity-based costing requires a cost driver for each cost pool. Use the following information to assign the costs to the product lines using the activity-based costing approach.

	A	B	C	D
1				
2	Activity Cost Pools	Cost Drivers	Driver Amount for Composite Kayaks	Driver Amount for Rotomolded Kayaks
3	Designing new models	Number of models	3	1
4	Creating and testing prototypes	Number of prototypes	6	2
5	Creating molds for kayaks	Number of molds	12	1
6	Supervising production employees	Number of employees	12	12
7	Curing time	Number of days of curing time	15,000	2,000
8				

- What amount of overhead should be assigned to each composite kayak using this method? What amount of overhead should be assigned to each rotomolded kayak using this method?
- (d) Which of the three methods do you think Current Designs should use? Why?

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–17.)

WP18 Waterways looked into ABC as a method of costing because of the variety of items it produces and the many different activities in which it is involved. This problem asks you to help Waterways use an activity-based costing system to account for its production activities.

Go to the book's companion website, at www.wiley.com/college/weygandt, to find the completion of this problem.

COMPREHENSIVE CASE

In Chapter 16, you used job order costing techniques to help Greetings Inc., a retailer of greeting cards and small gift items, expand its operations. Your next task is to help the new unit, Wall Décor, become profitable through the use of activity-based costing. In this case, you will have the opportunity to discuss the cost/benefit trade-offs between simple ABC systems versus refined systems, and the potential benefit of using capacity rather than expected sales when allocating fixed overhead costs.

Go to the book's companion website, at www.wiley.com/college/weygandt, for complete case details and instructions.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP18-1 East Valley Hospital is a primary medical care facility and trauma center that serves 11 small, rural midwestern communities within a 40-mile radius. The hospital offers all the medical/surgical services of a typical small hospital. It has a staff of 18 full-time doctors and 20 part-time visiting specialists. East Valley has a payroll of 150 employees consisting of technicians, nurses, therapists, managers, directors, administrators, dieticians, secretaries, data processors, and janitors.

Instructions

With the class divided into groups, discuss and answer the following.

- Using your (limited, moderate, or in-depth) knowledge of a hospital's operations, identify as many **activities** as you can that would serve as the basis for implementing an activity-based costing system.
- For each of the activities listed in (a), identify a **cost driver** that would serve as a valid measure of the resources consumed by the activity.

Managerial Analysis

BYP18-2 Ideal Manufacturing Company has supported a research and development (R&D) department that has for many years been the sole contributor to the company's new farm machinery products. The R&D activity is an overhead cost center that performs services only to in-house manufacturing departments (four different product lines), all of which produce agricultural/farm/ranch-related machinery products.

The department has never sold its services to outside companies. But, because of its long history of success, larger manufacturers of agricultural products have approached Ideal to hire its R&D department for special projects. Because the costs of operating the R&D department have been spiraling uncontrollably, Ideal's management is considering entertaining these outside approaches to absorb the increasing costs. However, (1) management doesn't have any cost basis for charging R&D services to outsiders, and (2) it needs to gain control of its R&D costs. Management decides to implement an activity-based costing system in order to determine the charges for both outsiders and the in-house users of the department's services.

R&D activities fall into four pools with the following annual costs.

Market analysis	\$1,050,000
Product design	2,350,000
Product development	3,600,000
Prototype testing	1,400,000

Activity analysis determines that the appropriate cost drivers and their usage for the four activities are:

<u>Activities</u>	<u>Cost Drivers</u>	<u>Total Estimated Drivers</u>
Market analysis	Hours of analysis	15,000 hours
Product design	Number of designs	2,500 designs
Product development	Number of products	90 products
Prototype testing	Number of tests	500 tests

Instructions

- Compute the activity-based overhead rate for each activity cost pool.
- How much cost would be charged to an in-house manufacturing department that consumed 1,800 hours of market analysis time, was provided 280 designs relating to 10 products, and requested 92 engineering tests?
- How much cost would serve as the basis for pricing an R&D bid with an outside company on a contract that would consume 800 hours of analysis time, require 178 designs relating to 3 products, and result in 70 engineering tests?
- What is the benefit to Ideal Manufacturing of applying activity-based costing to its R&D activity for both in-house and outside charging purposes?

Real-World Focus

BYP18-3 An article in *Cost Management*, by Kocakulah, Bartlett, and Albin entitled "ABC for Calculating Mortgage Loan Servicing Expenses" (July/August 2009, p. 36), discusses a use of ABC in the financial services industry.

Instructions

Read the article and answer the following questions.

- What are some of the benefits of ABC that relate to the financial services industry?
- What are three things that the company's original costing method did not take into account?
- What were some of the cost drivers used by the company in the ABC approach?

CRITICAL THINKING

Ethics Case

BYP18-4 Curtis Rich, the cost accountant for Hi-Power Mower Company, recently installed activity-based costing at Hi-Power's St. Louis lawn tractor (riding mower) plant where three models—the 8-horsepower Bladerunner, the 12-horsepower Quickcut, and the 18-horsepower Supercut—are manufactured. Curtis's new product costs for these three models show that the company's traditional costing system had been significantly undercosting the 18-horsepower Supercut. This was due primarily to the lower sales volume of the Supercut compared to the Bladerunner and the Quickcut.

Before completing his analysis and reporting these results to management, Curtis is approached by his friend Ed Gray, who is the production manager for the 18-horsepower Supercut model. Ed has heard from one of Curtis's staff about the new product costs and is upset and worried for his job because the new costs show the Supercut to be losing, rather than making, money.

At first, Ed condemns the new cost system, where upon Curtis explains the practice of activity-based costing and why it is more accurate than the company's present system. Even more worried now, Ed begs Curtis, "Massage the figures just enough to save the line from being discontinued. You don't want me to lose my job, do you? Anyway, nobody will know."

Curtis holds firm but agrees to recompute all his calculations for accuracy before submitting his costs to management.

Instructions

- Who are the stakeholders in this situation?
- What, if any, are the ethical considerations in this situation?
- What are Curtis's ethical obligations to the company? To his friend?

All About You

BYP18-5 There are many resources available on the Internet to assist people in time management. Some of these resources are designed specifically for college students.

Instructions

Do an Internet search of Dartmouth's time-management video. Watch the video and then answer the following questions.

- What are the main tools of time management for students, and what is each used for?
- At what time of day are students most inclined to waste time? What time of day is the best for studying complex topics?
- How can employing time-management practices be a "liberating" experience?
- Why is goal-setting important? What are the characteristics of good goals, and what steps should you take to help you develop your goals?

Considering Your Costs and Benefits

BYP18-6 As discussed in the chapter, the principles underlying activity-based costing have evolved into the broader approach known as *activity-based management*. One of the common practices of activity-based management is to identify all business activities, classify each activity as either a value-added or a non-value-added activity, and then try to reduce or eliminate the time spent on non-value-added activities. Consider the implications of applying this same approach to your everyday life, at work and at school. How do you spend your time each day? How much of your day is spent on activities that help you accomplish your objectives, and how much of your day is spent on activities that do not add value?

Many "self-help" books and websites offer suggestions on how to improve your time management. Should you minimize the "non-value-added" hours in your life by adopting the methods suggested by these sources? The basic arguments for and against are as follows.

YES: There are a limited number of hours in a day. You should try to maximize your chances of achieving your goals by eliminating the time that you waste.

NO: Life is about more than working yourself to death. Being an efficiency expert doesn't guarantee that you will be happy. Schedules and daily planners are too constraining.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

19

Cost-Volume-Profit

CHAPTER PREVIEW As the Feature Story below indicates, to manage any size business you must understand how costs respond to changes in sales volume and the effect of costs and revenues on profits. A prerequisite to understanding cost-volume-profit (CVP) relationships is knowledge of how costs behave. In this chapter, we first explain the considerations involved in cost behavior analysis. Then, we discuss and illustrate CVP analysis.

FEATURE STORY

Don't Worry—Just Get Big

It wasn't that Jeff Bezos didn't have a good job. He was a vice president at a Wall Street firm. But, he quit his job, moved to Seattle, and started an online retailer, which he named Amazon.com. Like any good entrepreneur, Jeff strove to keep his initial investment small. Operations were run out of his garage. And, to avoid the need for a warehouse, he took orders for books and had them shipped from other distributors' warehouses.

By its fourth month, Amazon was selling 100 books a day. In its first full year, it had \$15.7 million in sales. The next year, sales increased eightfold. Two years later, sales were \$1.6 billion.

Although its sales growth was impressive, Amazon's ability to lose money was equally amazing. One analyst nicknamed it *Amazon.bomb*, while another, predicting its demise, called it *Amazon.toast*. Why was it losing money? The company used every available dollar to reinvest in itself. It built massive warehouses and bought increasingly sophisticated (and expensive) computers and equipment to improve its distribution system. This desire to grow as fast as possible was captured in a T-shirt slogan at its company picnic, which read "Eat another hot dog, get big fast." This buying binge was increasing the

company's fixed costs at a rate that exceeded its sales growth. Skeptics predicted that Amazon would soon run out of cash. It didn't.

In the fourth quarter of 2010 (only 15 years after its world headquarters was located in a garage), Amazon reported quarterly revenues of \$12.95 billion and quarterly income of \$416 million. But, even as it announced record profits, its share price fell by 9%. Why? Because although the company was predicting that its sales revenue in the next quarter would increase by at least 28%, it predicted that its operating profit would fall by at least 2% and perhaps by as much as 34%.

The company made no apologies. It explained that it was in the process of expanding from 39 distribution centers to 52. As Amazon's finance chief noted, "You're not as productive on those assets for some time. I'm very pleased with the investments we're making and we've shown over our history that we've been able to make great returns on the capital we invest in." In other words, eat another hot dog.

LEARNING
OBJECTIVE

1

Explain variable, fixed, and mixed costs and the relevant range.

Cost behavior analysis is the study of how specific costs respond to changes in the level of business activity. As you might expect, some costs change, and others remain the same. For example, for an airline company such as **Southwest** or **United**, the longer the flight, the higher the fuel costs. On the other hand, **Massachusetts General Hospital's** costs to staff the emergency room on any given night are relatively constant regardless of the number of patients treated. A knowledge of cost behavior helps management plan operations and decide between alternative courses of action. Cost behavior analysis applies to all types of entities.

The starting point in cost behavior analysis is measuring the key business activities. Activity levels may be expressed in terms of sales dollars (in a retail company), miles driven (in a trucking company), room occupancy (in a hotel), or dance classes taught (by a dance studio). Many companies use more than one measurement base. A manufacturer, for example, may use direct labor hours or units of output for manufacturing costs, and sales revenue or units sold for selling expenses.

For an activity level to be useful in cost behavior analysis, changes in the level or volume of activity should be correlated with changes in costs. The activity level selected is referred to as the activity (or volume) index. The **activity index** identifies the activity that causes changes in the behavior of costs. With an appropriate activity index, companies can classify the behavior of costs in response to changes in activity levels into three categories: variable, fixed, or mixed.

Variable Costs

Variable costs are costs that vary **in total** directly and proportionately with changes in the activity level. If the level increases 10%, total variable costs will increase 10%. If the level of activity decreases by 25%, variable costs will decrease 25%. Examples of variable costs include direct materials and direct labor for a manufacturer; cost of goods sold, sales commissions, and freight-out for a merchandiser; and gasoline in airline and trucking companies. A variable cost may also be defined as a cost that **remains the same per unit at every level of activity**.

To illustrate the behavior of a variable cost, assume that Damon Company manufactures tablet computers that contain \$10 cameras. The activity index is the number of tablet computers produced. As Damon manufactures each tablet, the total cost of cameras used increases by \$10. As part (a) of Illustration 19-1

Illustration 19-1
Behavior of total and unit
variable costs

Helpful Hint

Variable costs per unit
remain constant at
all levels of activity.

shows, total cost of the cameras will be \$20,000 if Damon produces 2,000 tablets, and \$100,000 when it produces 10,000 tablets. We also can see that a variable cost remains the same per unit as the level of activity changes. As part (b) of Illustration 19-1 shows, the unit cost of \$10 for the cameras is the same whether Damon produces 2,000 or 10,000 tablets.

Companies that rely heavily on labor to manufacture a product, such as **Nike** or **Reebok**, or to perform a service, such as **Hilton** or **Marriott**, are likely to have many variable costs. In contrast, companies that use a high proportion of machinery and equipment in producing revenue, such as **AT&T** or **Duke Energy Co.**, may have few variable costs.

Fixed Costs

Fixed costs are costs that **remain the same in total** regardless of changes in the activity level. Examples include property taxes, insurance, rent, supervisory salaries, and depreciation on buildings and equipment. Because total fixed costs remain constant as activity changes, it follows that **fixed costs per unit vary inversely with activity: As volume increases, unit cost declines, and vice versa.**

To illustrate the behavior of fixed costs, assume that Damon Company leases its productive facilities at a cost of \$10,000 per month. Total fixed costs of the facilities will remain constant at every level of activity, as part (a) of Illustration 19-2 shows. But, **on a per unit basis, the cost of rent will decline as activity increases**, as part (b) of Illustration 19-2 shows. At 2,000 units, the unit cost per tablet computer is \$5 ($\$10,000 \div 2,000$). When Damon produces 10,000 tablets, the unit cost of the rent is only \$1 per tablet ($\$10,000 \div 10,000$).

Illustration 19-2
Behavior of total and unit fixed costs

The trend for many manufacturers is to have more fixed costs and fewer variable costs. This trend is the result of increased use of automation and less use of employee labor. As a result, depreciation and lease charges (fixed costs) increase, whereas direct labor costs (variable costs) decrease.

People, Planet, and Profit Insight **BrightFarms**

© Jani Bryson/iStockphoto

Gardens in the Sky

Because of population increases, the United Nations' Food and Agriculture Organization estimates that food production will need to increase by 70% by 2050. Also, by 2050, roughly 70% of people will live in cities, which means more food needs to be hauled further to get it

to the consumer. To address the lack of farmable land and reduce the cost of transporting produce, some companies, such as New York-based **BrightFarms**, are building urban greenhouses.

This sounds great, but do the numbers work? Some variable costs would be reduced. For example, the use of pesticides, herbicides, fuel costs for shipping, and water would all drop. Soil erosion would be a non-issue since

plants would be grown hydroponically (in a solution of water and minerals), and land requirements would be reduced because of vertical structures. But, other costs would be higher. First, there is the cost of the building. Also, any multistory building would require artificial lighting for plants on lower floors.

Until these cost challenges can be overcome, it appears that these urban greenhouses may not break even. On the other hand, rooftop greenhouses on existing city structures already appear financially viable. For example, a 15,000 square-foot rooftop greenhouse in Brooklyn already produces roughly 30 tons of vegetables per year for local residents.

Sources: "Vertical Farming: Does It Really Stack Up?" *The Economist* (December 9, 2010); and Jane Black, "BrightFarms Idea: Greenhouses That Cut Short the Path from Plant to Grocery Shelf," *The Washington Post* (May 7, 2013).

What are some of the variable and fixed costs that are impacted by hydroponic farming? (Go to **WileyPLUS** for this answer and additional questions.)

Relevant Range

In Illustration 19-1 part (a) (page 886), a straight line is drawn throughout the entire range of the activity index for total variable costs. In essence, the assumption is that the costs are **linear**. If a relationship is linear (that is, straight-line), then changes in the activity index will result in a direct, proportional change in the variable cost. For example, if the activity level doubles, the cost doubles.

It is now necessary to ask: Is the straight-line relationship realistic? In most business situations, a straight-line relationship **does not exist** for variable costs throughout the entire range of possible activity. At abnormally low levels of activity, it may be impossible to be cost-efficient. Small-scale operations may not allow the company to obtain quantity discounts for raw materials or to use specialized labor. In contrast, at abnormally high levels of activity, labor costs may increase sharply because of overtime pay. Also, at high activity levels, materials costs may jump significantly because of excess spoilage caused by worker fatigue.

As a result, in the real world, the relationship between the behavior of a variable cost and changes in the activity level is often **curvilinear**, as shown in part (a) of Illustration 19-3. In the curved sections of the line, a change in the activity index will not result in a direct, proportional change in the variable cost. That is, a doubling of the activity index will not result in an exact doubling of the variable cost. The variable cost may more than double, or it may be less than double.

Total fixed costs also do not have a straight-line relationship over the entire range of activity. Some fixed costs will not change. But it is possible for management to change other fixed costs. For example, in some instances, salaried employees (fixed) are replaced with freelance workers (variable). Illustration 19-3, part (b), shows an example of the behavior of total fixed costs through all potential levels of activity.

For most companies, operating at almost zero or at 100% capacity is the exception rather than the rule. Instead, companies often operate over a somewhat

Helpful Hint

Fixed costs that may be changeable include research, such as new product development, and management training programs.

Illustration 19-3
Nonlinear behavior of variable and fixed costs

narrower range, such as 40–80% of capacity. The range over which a company expects to operate during a year is called the **relevant range** of the activity index. Within the relevant range, as both diagrams in Illustration 19-4 show, a straight-line relationship generally exists for both variable and fixed costs.

Alternative Terminology
The relevant range is also called the *normal* or *practical range*.

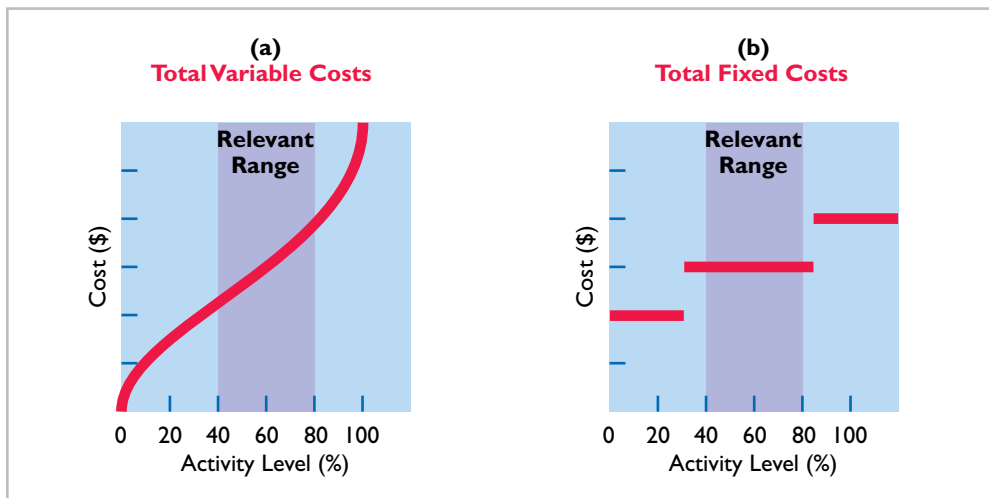

Illustration 19-4
Linear behavior within relevant range

As you can see, although the linear (straight-line) relationship may not be completely realistic, **the linear assumption produces useful data for CVP analysis as long as the level of activity remains within the relevant range.**

Mixed Costs

Mixed costs are costs that contain both a variable- and a fixed-cost element. **Mixed costs, therefore, change in total but not proportionately with changes in the activity level.**

The rental of a **U-Haul** truck is a good example of a mixed cost. Assume that local rental terms for a 17-foot truck, including insurance, are \$50 per day plus 50 cents per mile. When determining the cost of a one-day rental, the per day charge is a fixed cost (with respect to miles driven), whereas the mileage charge is a variable cost. The graphic presentation of the rental cost for a one-day rental is shown in Illustration 19-5 (page 890).

Illustration 19-5

Behavior of a mixed cost

In this case, the fixed-cost element is the cost of having the service available. The variable-cost element is the cost of actually using the service. Utility costs such as for electricity are another example of a mixed cost. Each month the electric bill includes a flat service fee plus a usage charge.

DO IT!**1****Types of Costs**

Helena Company reports the following total costs at two levels of production.

	<u>10,000 Units</u>	<u>20,000 Units</u>
Direct materials	\$20,000	\$40,000
Maintenance	8,000	10,000
Direct labor	17,000	34,000
Indirect materials	1,000	2,000
Depreciation	4,000	4,000
Utilities	3,000	5,000
Rent	6,000	6,000

Action Plan

- ✓ Recall that a variable cost varies in total directly and proportionately with each change in activity level.
- ✓ Recall that a fixed cost remains the same in total with each change in activity level.
- ✓ Recall that a mixed cost changes in total but not proportionately with each change in activity level.

Classify each cost as variable, fixed, or mixed.

Solution

Direct materials, direct labor, and indirect materials are variable costs.
 Depreciation and rent are fixed costs.
 Maintenance and utilities are mixed costs.

Related exercise material: **BE19-1, BE19-2, E19-1, E19-2, E19-4, E19-6, and DO IT! 19-1.**

LEARNING OBJECTIVE**2****Apply the high-low method to determine the components of mixed costs.**

For purposes of cost-volume-profit analysis, **mixed costs must be classified into their fixed and variable elements.** How does management make the classification? One possibility is to determine the variable and fixed components each time a mixed cost is incurred. But because of time and cost constraints, this approach is rarely followed. Instead, the usual approach is to

collect data on the behavior of the mixed costs at various levels of activity. Analysts then identify the fixed- and variable-cost components. Companies use various types of analysis. One type of analysis, called the **high-low method**, is discussed next.

High-Low Method

The **high-low method** uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. The difference in costs between the high and low levels represents variable costs, since only the variable-cost element can change as activity levels change.

The steps in computing fixed and variable costs under this method are as follows.

1. Determine variable cost per unit from the following formula.

Change in Total Costs	÷	High minus Low Activity Level	=	Variable Cost per Unit
--------------------------	---	----------------------------------	---	---------------------------

Illustration 19-6

Formula for variable cost per unit using high-low method

To illustrate, assume that Metro Transit Company has the following maintenance costs and mileage data for its fleet of buses over a 6-month period.

Month	Miles Driven	Total Cost	Month	Miles Driven	Total Cost
January	20,000	\$30,000	April	50,000	\$63,000
February	40,000	48,000	May	30,000	42,000
March	35,000	49,000	June	43,000	61,000

Illustration 19-7

Assumed maintenance costs and mileage data

The high and low levels of activity are 50,000 miles in April and 20,000 miles in January. The maintenance costs at these two levels are \$63,000 and \$30,000, respectively. The difference in maintenance costs is \$33,000 (\$63,000 – \$30,000), and the difference in miles is 30,000 (50,000 – 20,000). Therefore, for Metro Transit, variable cost per unit is \$1.10, computed as follows.

$$\$33,000 \div 30,000 = \$1.10$$

2. Determine the fixed costs by subtracting the total variable costs at either the high or the low activity level from the total cost at that activity level.

For Metro Transit, the computations are shown in Illustration 19-8.

Metro Transit.xls				
Home Insert Page Layout Formulas Data Review View				
P18 fx				
	A	B	C	D
1	METRO TRANSIT			
2	Activity Level			
3			High	Low
4	Total cost		\$63,000	\$30,000
5	Less:	Variable costs		
6		50,000 × \$1.10	55,000	
7		20,000 × \$1.10		22,000
8	Total fixed costs		\$ 8,000	\$ 8,000
9				
10				

Illustration 19-8

High-low method computation of fixed costs

Maintenance costs are therefore \$8,000 per month of fixed costs plus \$1.10 per mile of variable costs. This is represented by the following formula:

$$\text{Maintenance costs} = \$8,000 + (\$1.10 \times \text{Miles driven})$$

For example, at 45,000 miles, estimated maintenance costs would be \$8,000 fixed and \$49,500 variable ($\$1.10 \times 45,000$) for a total of \$57,500.

The graph in Illustration 19-9 plots the 6-month data for Metro Transit Company. The red line drawn in the graph connects the high and low data points, and therefore represents the equation that we just solved using the high-low method. The red, “high-low” line intersects the y-axis at \$8,000 (the fixed-cost level), and it rises by \$1.10 per unit (the variable cost per unit). Note that a completely different line would result if we chose any two of the other data points. That is, by choosing any two other data points, we would end up with a different estimate of fixed costs and a different variable cost per unit. Thus, from this scatter plot, we can see that while the high-low method is simple, the result is rather arbitrary. A better approach, which uses information from all the data points to estimate fixed and variable costs, is called *regression analysis*. A discussion of regression analysis is provided in a supplement on the book’s companion website.

Illustration 19-9

Management Insight Tempur Sealy International

Bloomberg/Getty Images

Skilled Labor Is Truly Essential

The recent recession had devastating implications for employment. But one surprise was that for some manufacturers, the number of jobs lost was actually

lower than in previous recessions. One of the main explanations for this was that in the years preceding the recession, many companies, such as **Tempur Sealy International**, adopted lean manufacturing practices. This meant that production relied less on large numbers of low-skilled workers and more on machines and a few highly skilled workers. As a result of this approach, a single employee

supports far more dollars in sales. Thus, it requires a larger decline in sales before an employee would need to be laid-off in order for the company to continue to break even. Also, because the employees are highly skilled, employers are reluctant to lose them. Instead of lay-offs, many manufacturers now resort to cutting employees’ hours when necessary.

Source: Timothy Aepfel and Justin Lahart, “Lean Factories Find It Hard to Cut Jobs Even in a Slump,” *Wall Street Journal Online* (March 9, 2009).

Would you characterize labor costs as being a fixed cost, a variable cost, or something else in this situation? (Go to **WileyPLUS** for this answer and additional questions.)

Importance of Identifying Variable and Fixed Costs

Why is it important to segregate mixed costs into variable and fixed elements? The answer may become apparent if we look at the following four business decisions.

1. If **American Airlines** is to make a profit when it reduces all domestic fares by 30%, what reduction in costs or increase in passengers will be required?
Answer: To make a profit when it cuts domestic fares by 30%, American Airlines will have to increase the number of passengers or cut its variable costs for those flights. Its fixed costs will not change.
2. If **Ford Motor Company** meets workers' demands for higher wages, what increase in sales revenue will be needed to maintain current profit levels?
Answer: Higher wages at Ford Motor Company will increase the variable costs of manufacturing automobiles. To maintain present profit levels, Ford will have to cut other variable costs or increase the price of its automobiles.
3. If **United States Steel Corp.**'s program to modernize plant facilities through significant equipment purchases reduces the work force by 50%, what will be the effect on the cost of producing one ton of steel?
Answer: The modernizing of plant facilities at United States Steel Corp. changes the proportion of fixed and variable costs of producing one ton of steel. Fixed costs increase because of higher depreciation charges, whereas variable costs decrease due to the reduction in the number of steelworkers.
4. What happens if **Kellogg's** increases its advertising expenses but cannot increase prices because of competitive pressure?
Answer: Sales volume must be increased to cover the increase in fixed advertising costs.

DO IT!

2

High-Low Method

Byrnes Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

	<u>Units Produced</u>	<u>Total Cost</u>
March	9,800	\$14,740
April	8,500	13,250
May	7,000	11,100
June	7,600	12,000
July	8,100	12,460

- (a) Compute the variable-cost and fixed-cost elements using the high-low method.
- (b) Estimate the total cost if the company produces 8,000 units.

Solution

$$\begin{aligned} \text{(a) Variable cost: } & (\$14,740 - \$11,100) \div (9,800 - 7,000) = \$1.30 \text{ per unit} \\ \text{Fixed cost: } & \$14,740 - \$12,740^* = \$2,000 \\ & \text{or } \$11,100 - \$9,100^{**} = \$2,000 \end{aligned}$$

$$*\$1.30 \times 9,800 \text{ units}$$

$$**\$1.30 \times 7,000 \text{ units}$$

$$\text{(b) Total cost to produce 8,000 units: } \$2,000 + \$10,400 (\$1.30 \times 8,000 \text{ units}) = \$12,400$$

Action Plan

- ✓ Determine the highest and lowest levels of activity.
- ✓ Compute variable cost per unit as $\text{Change in total costs} \div (\text{High} - \text{low activity level}) = \text{Variable cost per unit}$.
- ✓ Compute fixed cost as $\text{Total cost} - (\text{Variable cost per unit} \times \text{Units produced}) = \text{Fixed cost}$.

LEARNING
OBJECTIVE

3

Prepare a CVP income statement to determine contribution margin.

Cost-volume-profit (CVP) analysis is the study of the effects of changes in costs and volume on a company's profits. CVP analysis is important in profit planning. It also is a critical factor in such management decisions as setting selling prices, determining product mix, and maximizing use of production facilities.

Basic Components

CVP analysis considers the interrelationships among the components shown in Illustration 19-10.

Illustration 19-10
Components of CVP analysis

The following assumptions underlie each CVP analysis.

1. The behavior of both costs and revenues is linear throughout the relevant range of the activity index.
2. Costs can be classified accurately as either variable or fixed.
3. Changes in activity are the only factors that affect costs.
4. All units produced are sold.
5. When more than one type of product is sold, the sales mix will remain constant. That is, the percentage that each product represents of total sales will stay the same. Sales mix complicates CVP analysis because different products will have different cost relationships. In this chapter, we assume a single product. In Chapter 20, however, we examine the sales mix more closely.

When these assumptions are not valid, the CVP analysis may be inaccurate.

CVP Income Statement

Because CVP is so important for decision-making, management often wants this information reported in a **cost-volume-profit (CVP) income statement** format for internal use. The CVP income statement classifies costs as variable or fixed and computes a contribution margin. **Contribution margin (CM)** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

We will use Vargo Video Company to illustrate a CVP income statement. Vargo Video produces a high-definition digital camcorder with 15× optical zoom and a wide-screen, high-resolution LCD monitor. Relevant data for the camcorders sold by this company in June 2017 are as follows.

Illustration 19-11
Assumed selling and cost data
for Vargo Video

Unit selling price of camcorder	\$500
Unit variable costs	\$300
Total monthly fixed costs	\$200,000
Units sold	1,600

The CVP income statement for Vargo therefore would be reported as follows.

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2017

	Total
Sales (1,600 camcorders)	\$ 800,000
Variable costs	480,000
Contribution margin	320,000
Fixed costs	200,000
Net income	<u>\$120,000</u>

Illustration 19-12

CVP income statement, with net income

A traditional income statement and a CVP income statement both report the same net income of \$120,000. However, a traditional income statement does not classify costs as variable or fixed, and therefore it does not report a contribution margin. In addition, sometimes per unit amounts and percentage of sales amounts are shown in separate columns on a CVP income statement to facilitate CVP analysis. *Homework assignments specify which columns to present.*

In the applications of CVP analysis that follow, we assume that the term “cost” includes all costs and expenses related to production and sale of the product. That is, cost includes manufacturing costs plus selling and administrative expenses.

UNIT CONTRIBUTION MARGIN

The formula for **unit contribution margin** and the computation for Vargo Video are as follows.

Unit Selling Price	–	Unit Variable Costs	=	Unit Contribution Margin
\$500	–	\$300	=	\$200

Illustration 19-13

Formula for unit contribution margin

Unit contribution margin indicates that for every camcorder sold, the selling price exceeds the variable costs by \$200. Vargo generates \$200 per unit sold to cover fixed costs and contribute to net income. Because Vargo has fixed costs of \$200,000, it must sell 1,000 camcorders ($\$200,000 \div \200) to cover its fixed costs.

At the point where total contribution margin exactly equals fixed costs, Vargo will report net income of zero. At this point, referred to as the **break-even point**, total costs (variable plus fixed) exactly equal total revenue. Illustration 19-14 shows Vargo’s CVP income statement at the point where net income equals zero. It shows a contribution margin of \$200,000, and a unit contribution margin of \$200 ($\$500 - \300).

VARGO VIDEO COMPANY
CVP Income Statement
For the Month Ended June 30, 2017

	Total	Per Unit
Sales (1,000 camcorders)	\$ 500,000	\$ 500
Variable costs	300,000	300
Contribution margin	200,000	<u>\$200</u>
Fixed costs	200,000	
Net income	<u>\$ -0-</u>	

Illustration 19-14

CVP income statement, with zero net income

It follows that for every camcorder sold above the break-even point of 1,000 units, **net income increases by the amount of the unit contribution margin, \$200**. For example, assume that Vargo sold one more camcorder, for a total of 1,001 camcorders sold. In this case, Vargo reports net income of \$200, as shown in Illustration 19-15.

Illustration 19-15

CVP income statement, with net income and per unit data

VARGO VIDEO COMPANY		
CVP Income Statement		
For the Month Ended June 30, 2017		
	<u>Total</u>	<u>Per Unit</u>
Sales (1,001 camcorders)	\$500,500	\$ 500
Variable costs	300,300	300
Contribution margin	200,200	<u>\$200</u>
Fixed costs	200,000	
Net income	<u>\$ 200</u>	

CONTRIBUTION MARGIN RATIO

Some managers prefer to use a contribution margin ratio in CVP analysis. The contribution margin ratio is the contribution margin expressed as a percentage of sales, as shown in Illustration 19-16.

Illustration 19-16

CVP income statement, with net income and percent of sales data

VARGO VIDEO COMPANY		
CVP Income Statement		
For the Month Ended June 30, 2017		
	<u>Total</u>	<u>Percent of Sales</u>
Sales (1,001 camcorders)	\$500,500	100%
Variable costs	300,300	60
Contribution margin	200,200	<u>40%</u>
Fixed costs	200,000	
Net income	<u>\$ 200</u>	

Alternatively, the **contribution margin ratio** can be determined by dividing the unit contribution margin by the unit selling price. For Vargo Video, the ratio is as follows.

Illustration 19-17

Formula for contribution margin ratio

Unit Contribution Margin	÷	Unit Selling Price	=	Contribution Margin Ratio
\$200	÷	\$500	=	40%

The contribution margin ratio of 40% means that Vargo generates 40 cents of contribution margin with each dollar of sales. That is, \$0.40 of each sales dollar (40% × \$1) is available to apply to fixed costs and to contribute to net income.

This expression of contribution margin is very helpful in determining the effect of changes in sales on net income. For example, if Vargo's sales increase \$100,000, net income will increase \$40,000 (40% × \$100,000). Thus, by using the contribution margin ratio, managers can quickly determine increases in net income from any change in sales.

We can also see this effect through a CVP income statement. Assume that Vargo's current sales are \$500,000 and it wants to know the effect of a \$100,000 (200-unit) increase in sales. Vargo prepares a comparative CVP income statement analysis as follows.

Illustration 19-18
Comparative CVP income statements

VARGO VIDEO COMPANY						
CVP Income Statements						
For the Month Ended June 30, 2017						
	No Change			With Change		
	Total	Per Unit	Percent of Sales	Total	Per Unit	Percent of Sales
Sales	\$500,000	\$ 500	100%	\$600,000	\$ 500	100%
Variable costs	300,000	300	60	360,000	300	60
Contribution margin	200,000	\$200	40%	240,000	\$200	40%
Fixed costs	200,000			200,000		
Net income	\$ -0-			\$ 40,000		

The \$40,000 increase in net income can be calculated on either a unit contribution margin basis (200 units \times \$200 per unit) or using the contribution margin ratio times the increase in sales dollars (40% \times \$100,000). Note that the unit contribution margin and contribution margin as a percentage of sales remain unchanged by the increase in sales.

Study these CVP income statements carefully. The concepts presented in these statements are used extensively in this and later chapters.

DO IT!

3

CVP Income Statement

Ampco Industries produces and sells a cell phone-operated thermostat. Information regarding the costs and sales of thermostats during September 2017 are provided below.

Unit selling price of thermostat	\$85
Unit variable costs	\$32
Total monthly fixed costs	\$190,000
Units sold	4,000

Prepare a CVP income statement for Ampco Industries for the month of September. Provide per unit values and total values.

Solution

AMPCO INDUSTRIES		
CVP Income Statement		
For the Month Ended September 30, 2017		
	Total	Per Unit
Sales	\$340,000	\$85
Variable costs	128,000	32
Contribution margin	212,000	\$53
Fixed costs	190,000	
Net income	\$ 22,000	

Action Plan

- ✓ Provide a heading with the name of the company, name of statement, and period covered.
- ✓ Subtract variable costs from sales to determine contribution margin. Subtract fixed costs from contribution margin to determine net income.
- ✓ Express sales, variable costs and contribution margin on a per unit basis.

Related exercise material: **BE19-6, BE19-7, E19-7, and DO IT! 19-3.**

Compute the break-even point using three approaches.

A key relationship in CVP analysis is the level of activity at which total revenues equal total costs (both fixed and variable)—the **break-even point**. At this volume of sales, the company will realize no income but will suffer no loss. The process of finding the break-even point is called **break-even analysis**. Knowledge of the break-even point is useful to management when it considers decisions such as whether to introduce new product lines, change sales prices on established products, or enter new market areas.

The break-even point can be:

1. Computed from a mathematical equation.
2. Computed by using contribution margin.
3. Derived from a cost-volume-profit (CVP) graph.

The break-even point can be expressed either in **sales units** or **sales dollars**.

Mathematical Equation

The first line of Illustration 19-19 shows a common equation used for CVP analysis. When net income is set to zero, this equation can be used to calculate the break-even point.

Illustration 19-19
Basic CVP equation

Required Sales	–	Variable Costs	–	Fixed Costs	=	Net Income
\$500Q	–	\$300Q	–	\$200,000	=	\$0

As shown in Illustration 19-14 (page 895), net income equals zero when the contribution margin (sales minus variable costs) is equal to fixed costs.

To reflect this, Illustration 19-20 rewrites the equation with contribution margin (sales minus variable costs) on the left side, and fixed costs and net income on the right. We can compute the break-even point **in units** by **using unit selling prices** and **unit variable costs**. The computation for Vargo Video is as follows.

Illustration 19-20
Computation of break-even
point in units

Required Sales	–	Variable Costs	–	Fixed Costs	=	Net Income
\$500Q	–	\$300Q	–	\$200,000	=	\$0
\$500Q	–	\$300Q	=	\$200,000	+	\$0
\$200Q	= \$200,000					
Q	= $\frac{\$200,000}{\$200}$		= $\frac{\text{Fixed Costs}}{\text{Unit Contribution Margin}}$			
Q	= 1,000 units					
where						
Q	= sales volume in units					
\$500	= selling price					
\$300	= variable costs per unit					
\$200,000	= total fixed costs					

Thus, Vargo must sell 1,000 units to break even.

To find the amount of **sales dollars** required to break even, we multiply the units sold at the break-even point times the selling price per unit, as shown below.

$$1,000 \times \$500 = \$500,000 \text{ (break-even sales dollars)}$$

Contribution Margin Technique

Many managers employ the contribution margin to compute the break-even point.

CONTRIBUTION MARGIN IN UNITS

The final step in Illustration 19-20 divides fixed costs by the unit contribution margin (highlighted in red). Thus, rather than walk through all of the steps of the equation approach, we can simply employ this formula shown in Illustration 19-21.

Fixed Costs	÷	Unit Contribution Margin	=	Break-Even Point in Units
\$200,000	÷	\$200	=	1,000 units

Illustration 19-21

Formula for break-even point in units using unit contribution margin

Why does this formula work? The unit contribution margin is the net amount by which each sale exceeds the variable costs per unit. Every sale generates this much money to pay off fixed costs. Consequently, if we divide fixed costs by the unit contribution margin, we know how many units we need to sell to break even.

CONTRIBUTION MARGIN RATIO

As we will see in the next chapter, when a company has numerous products, it is not practical to determine the unit contribution margin for each product. In this case, using the contribution margin ratio is very useful for determining the break-even point in total dollars (rather than units). Recall that the contribution margin ratio is the percentage of each dollar of sales that is available to cover fixed costs and generate net income. Therefore, **to determine the sales dollars needed to cover fixed costs**, we divide fixed costs by the contribution margin ratio, as shown in Illustration 19-22.

Fixed Costs	÷	Contribution Margin Ratio	=	Break-Even Point in Dollars
\$200,000	÷	40%	=	\$500,000

Illustration 19-22

Formula for break-even point in dollars using contribution margin ratio

To apply this formula to Vargo Video, consider that its 40% contribution margin ratio means that for every dollar sold, it generates 40 cents of contribution margin. The question is, how many dollars of sales does Vargo need in order to generate total contribution margin of \$200,000 to pay off fixed costs? We divide the fixed costs of \$200,000 by the 40 cents of contribution margin generated by each dollar of sales to arrive at \$500,000 ($\$200,000 \div 40\%$). To prove this result, if we generate 40 cents of contribution margin for each dollar of sales, then the total contribution margin generated by \$500,000 in sales is \$200,000 ($\$500,000 \times 40\%$).

Service Company Insight **Flightserve**

Digital Vision/Getty Images

Charter Flights Offer a Good Deal

The Internet is wringing inefficiencies out of nearly every industry. While commercial aircraft spend roughly 4,000 hours a year in the air, chartered aircraft are flown only 500 hours annually. That means that they are sitting on the ground—not making any money—about 90%

of the time. One company, **Flightserve**, saw a business opportunity in that fact. For about the same cost as a first-class ticket, Flightserve matches up executives with charter flights in small “private jets.” The executive gets a more comfortable ride and avoids the hassle of big airports. Flightserve noted that the average charter jet has eight seats. When all eight seats are full, the company has an 80% profit margin. It breaks even at an average of 3.3 full seats per flight.

Source: “Jet Set Go,” *The Economist* (March 18, 2000), p. 68.

How did Flightserve determine that it would break even with 3.3 seats full per flight? (Go to **WileyPLUS** for this answer and additional questions.)

Graphic Presentation

An effective way to find the break-even point is to prepare a break-even graph. Because this graph also shows costs, volume, and profits, it is referred to as a **cost-volume-profit (CVP) graph**.

As the CVP graph in Illustration 19-23 shows, sales volume is recorded along the horizontal axis. This axis should extend to the maximum level of expected sales. Both total revenues (sales) and total costs (fixed plus variable) are recorded on the vertical axis.

Illustration 19-23
CVP graph

The construction of the graph, using the data for Vargo Video, is as follows.

1. Plot the sales line, starting at the zero activity level. For every camcorder sold, total revenue increases by \$500. For example, at 200 units, sales are \$100,000. At the upper level of activity (1,800 units), sales are \$900,000. The revenue line is assumed to be linear through the full range of activity.
2. Plot the total fixed costs using a horizontal line. For the camcorders, this line is plotted at \$200,000. The fixed costs are the same at every level of activity.
3. Plot the total-cost line. This starts at the fixed-cost line at zero activity. It increases by the variable costs at each level of activity. For each camcorder, variable costs are \$300. Thus, at 200 units, total variable costs are \$60,000 ($\300×200) and the total cost is \$260,000 ($\$60,000 + \$200,000$). At 1,800 units, total variable costs are \$540,000 ($\$300 \times 1,800$) and total cost is \$740,000 ($\$540,000 + \$200,000$). On the graph, the amount of the variable costs can be derived from the difference between the total-cost and fixed-cost lines at each level of activity.
4. Determine the break-even point from the intersection of the total-cost line and the sales line. The break-even point in dollars is found by drawing a horizontal line from the break-even point to the vertical axis. The break-even point in

units is found by drawing a vertical line from the break-even point to the horizontal axis. For the camcorders, the break-even point is \$500,000 of sales, or 1,000 units. At this sales level, Vargo will cover costs but make no profit.

The CVP graph also shows both the net income and net loss areas. Thus, the amount of income or loss at each level of sales can be derived from the sales and total-cost lines.

A CVP graph is useful because the effects of a change in any element in the CVP analysis can be quickly seen. For example, a 10% increase in selling price will change the location of the sales line. Likewise, the effects on total costs of wage increases can be quickly observed.

DO IT!**4****Break-Even Analysis**

Lombardi Company has a unit selling price of \$400, variable costs per unit of \$240, and fixed costs of \$180,000. Compute the break-even point in units using (a) a mathematical equation and (b) unit contribution margin.

Solution

(a) The equation is $\$400Q - \$240Q - \$180,000 = \0 ; $(\$400Q - \$240Q) = \$180,000$. The break-even point in units is 1,125. (b) The unit contribution margin is \$160 ($\$400 - \240). The formula therefore is $\$180,000 \div \160 , and the break-even point in units is 1,125.

Related exercise material: **BE19-8, BE19-9, E19-8, E19-9, E19-10, E19-11, E19-12, E19-13, E19-16, and DO IT! 19-4.**

Action Plan

- ✓ Apply the formula:
Sales – Variable costs – Fixed costs = Net income.
- ✓ Apply the formula:
Fixed costs ÷ Unit contribution margin = Break-even point in units.

LEARNING OBJECTIVE**5****Determine the sales required to earn target net income and determine margin of safety.****Target Net Income**

Rather than simply “breaking even,” management usually sets an income objective often called **target net income**. It then determines the sales necessary to achieve this specified level of income. Companies determine the sales necessary to achieve target net income by using one of the three approaches discussed earlier.

MATHEMATICAL EQUATION

We know that at the break-even point no profit or loss results for the company. By adding an amount for target net income to the same basic equation, we obtain the following formula for determining required sales.

Required Sales	–	Variable Costs	–	Fixed Costs	=	Target Net Income
----------------	---	----------------	---	-------------	---	-------------------

Illustration 19-24

Formula for required sales to meet target net income

Recall that once the break-even point has been reached so that fixed costs are covered, each additional unit sold increases net income by the amount of the unit contribution margin. We can rewrite the equation with contribution margin (required sales minus variable costs) on the left-hand side, and fixed costs and target net income on the right. Assuming that target net income is \$120,000 for Vargo Video, the computation of required sales in units is as shown in Illustration 19-25 (page 902).

Illustration 19-25

Computation of required sales

Required Sales	−	Variable Costs	−	Fixed Costs	=	Target Net Income
\$500Q	−	\$300Q	−	\$200,000	=	\$120,000
\$500Q	−	\$300Q	=	\$200,000	+	\$120,000
$\$200Q = \$200,000 + \$120,000$						
$Q = \frac{\$200,000 + \$120,000}{\$200} = \frac{\text{Fixed Costs} + \text{Target Net Income}}{\text{Unit Contribution Margin}}$						
$Q = 1,600$						
where						
Q = sales volume						
\$500 = selling price						
\$300 = variable costs per unit						
\$200,000 = total fixed costs						
\$120,000 = target net income						

Vargo must sell 1,600 units to achieve target net income of \$120,000. The sales dollars required to achieve the target net income is found by multiplying the units sold by the unit selling price [(1,600 × \$500) = \$800,000].

CONTRIBUTION MARGIN TECHNIQUE

As in the case of break-even sales, we can compute in either units or dollars the sales required to meet target net income. The formula to compute required sales in units for Vargo Video using the unit contribution margin can be seen in the final step of the equation approach in Illustration 19-25 (shown in red). We simply divide the sum of fixed costs and target net income by the unit contribution margin. Illustration 19-26 shows this for Vargo.

Illustration 19-26

Formula for required sales in units using unit contribution margin

$\left(\begin{array}{c} \text{Fixed Costs} + \\ \text{Target Net Income} \end{array} \right)$	÷	Unit Contribution Margin	=	Required Sales in Units
$(\$200,000 + \$120,000)$	÷	\$200	=	1,600 units

To achieve its desired target net income of \$120,000, Vargo must sell 1,600 camcorders.

The formula to compute the required sales in dollars for Vargo using the contribution margin ratio is shown below.

Illustration 19-27

Formula for required sales in dollars using contribution margin ratio

$\left(\begin{array}{c} \text{Fixed Costs} + \\ \text{Target Net Income} \end{array} \right)$	÷	Contribution Margin Ratio	=	Required Sales in Dollars
$(\$200,000 + \$120,000)$	÷	40%	=	\$800,000

To achieve its desired target net income of \$120,000, Vargo must generate sales of \$800,000.

GRAPHIC PRESENTATION

We also can use the CVP graph in Illustration 19-23 (on page 900) to find the sales required to meet target net income. In the profit area of the graph, the distance between the sales line and the total-cost line at any point equals net income. We can find required sales by analyzing the differences between the two lines until the desired net income is found.

For example, suppose Vargo Video sells 1,400 camcorders. Illustration 19-23 shows that a vertical line drawn at 1,400 units intersects the sales line at \$700,000 and the total-cost line at \$620,000. The difference between the two amounts represents the net income (profit) of \$80,000.

Margin of Safety

Margin of safety is the difference between actual or expected sales and sales at the break-even point. It measures the “cushion” that a particular level of sales provides. It tells us how far sales could fall before the company begins operating at a loss. The margin of safety is expressed in dollars or as a ratio.

The formula for stating the **margin of safety in dollars** is actual (or expected) sales minus break-even sales. Assuming that actual (expected) sales for Vargo Video are \$750,000, the computation is as follows.

Actual (Expected) Sales	–	Break-Even Sales	=	Margin of Safety in Dollars
\$750,000	–	\$500,000	=	\$250,000

Illustration 19-28
Formula for margin of safety in dollars

Vargo’s margin of safety is \$250,000. Its sales could fall \$250,000 before it operates at a loss.

The **margin of safety ratio** is the margin of safety in dollars divided by actual (or expected) sales. Illustration 19-29 shows the formula and computation for determining the margin of safety ratio.

Margin of Safety in Dollars	÷	Actual (Expected) Sales	=	Margin of Safety Ratio
\$250,000	÷	\$750,000	=	33%

Illustration 19-29
Formula for margin of safety ratio

This means that the company’s sales could fall by 33% before it operates at a loss.

The higher the dollars or the percentage, the greater the margin of safety. Management continuously evaluates the adequacy of the margin of safety in terms of such factors as the vulnerability of the product to competitive pressures and to downturns in the economy.

Service Company Insight Rolling Stones

Yael/Retna

How a Rolling Stones’ Tour Makes Money

Computations of break-even and margin of safety are important for service companies. Consider how the promoter for the **Rolling Stones’** tour used the break-even point and margin of safety. For example, say one outdoor show should bring 70,000 individuals for a gross of \$2.45 million. The promoter guarantees \$1.2 million to

the Rolling Stones. In addition, 20% of gross goes to the stadium in which the performance is staged. Add another \$400,000 for other expenses such as ticket takers, parking attendants, advertising, and so on. The promoter also shares in sales of T-shirts and memorabilia for which the promoter will net over \$7 million during the tour. From a successful Rolling Stones’ tour, the promoter could make \$35 million!

[What amount of sales dollars are required for the promoter to break even? \(Go to WileyPLUS for this answer and additional questions.\)](#)

DO IT!

5

Break-Even, Margin of Safety, and Target Net Income

Zootsuit Inc. makes travel bags that sell for \$56 each. For the coming year, management expects fixed costs to total \$320,000 and variable costs to be \$42 per unit. Compute the following: (a) break-even point in dollars using the contribution margin (CM) ratio; (b) the margin of safety and margin of safety ratio assuming actual sales are \$1,382,400; and (c) the sales dollars required to earn net income of \$410,000.

Action Plan

- ✓ Apply the formula for the break-even point in dollars.
- ✓ Apply the formulas for the margin of safety in dollars and the margin of safety ratio.
- ✓ Apply the formula for the required sales in dollars.

Solution

- (a) Contribution margin ratio = $[(\$56 - \$42) \div \$56] = 25\%$
 Break-even sales in dollars = $\$320,000 \div 25\% = \$1,280,000$
- (b) Margin of safety = $\$1,382,400 - \$1,280,000 = \$102,400$
 Margin of safety ratio = $\$102,400 \div \$1,382,400 = 7.4\%$
- (c) Required sales in dollars = $(\$320,000 + \$410,000) \div 25\% = \$2,920,000$

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Explain variable, fixed, and mixed costs and the relevant range.** Variable costs are costs that vary in total directly and proportionately with changes in the activity index. Fixed costs are costs that remain the same in total regardless of changes in the activity index.

The relevant range is the range of activity in which a company expects to operate during a year. It is important in CVP analysis because the behavior of costs is assumed to be linear throughout the relevant range.

Mixed costs change in total but not proportionately with changes in the activity level. For purposes of CVP analysis, mixed costs must be classified into their fixed and variable elements.

- 2 Apply the high-low method to determine the components of mixed costs.** Determine the variable costs per unit by dividing the change in total costs at the highest and lowest levels of activity by the difference in activity at those levels. Then, determine fixed costs by subtracting total variable costs from the amount of total costs at either the highest or lowest level of activity.
- 3 Prepare a CVP income statement to determine contribution margin.** The five components of CVP analysis are (1) volume or level of activity, (2) unit selling prices, (3) variable costs per unit, (4) total fixed

costs, and (5) sales mix. Contribution margin is the amount of revenue remaining after deducting variable costs. It is identified in a CVP income statement, which classifies costs as variable or fixed. It can be expressed as a total amount, as a per unit amount, or as a ratio.

- 4 Compute the break-even point using three approaches.** The break-even point can be (a) computed from a mathematical equation, (b) computed by using a contribution margin technique, and (c) derived from a CVP graph.
- 5 Determine the sales required to earn target net income and determine margin of safety.** The general formula for required sales is $\text{Required sales} - \text{Variable costs} - \text{Fixed costs} = \text{Target net income}$. Two other formulas are (1) $\text{Required sales in units} = (\text{Fixed costs} + \text{Target net income}) \div \text{Unit contribution margin}$, and (2) $\text{Required sales in dollars} = (\text{Fixed costs} + \text{Target net income}) \div \text{Contribution margin ratio}$.

Margin of safety is the difference between actual or expected sales and sales at the break-even point. The formulas for margin of safety are (1) $\text{Actual (expected) sales} - \text{Break-even sales} = \text{Margin of safety in dollars}$, and (2) $\text{Margin of safety in dollars} \div \text{Actual (expected) sales} = \text{Margin of safety ratio}$.

GLOSSARY REVIEW

- Activity index** The activity that causes changes in the behavior of costs. (p. 886).
- Break-even point** The level of activity at which total revenue equals total costs. (p. 895).
- Contribution margin (CM)** The amount of revenue remaining after deducting variable costs. (p. 894).
- Contribution margin ratio** The percentage of each dollar of sales that is available to apply to fixed costs and contribute to net income; calculated as unit contribution margin divided by unit selling price. (p. 896).
- Cost behavior analysis** The study of how specific costs respond to changes in the level of business activity. (p. 886).
- Cost-volume-profit (CVP) analysis** The study of the effects of changes in costs and volume on a company's profits. (p. 894).
- Cost-volume-profit (CVP) graph** A graph showing the relationship between costs, volume, and profits. (p. 900).
- Cost-volume-profit (CVP) income statement** A statement for internal use that classifies costs as fixed or variable and reports contribution margin in the body of the statement. (p. 894).
- Fixed costs** Costs that remain the same in total regardless of changes in the activity level. (p. 887).
- High-low method** A mathematical method that uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. (p. 891).
- Margin of safety** The difference between actual or expected sales and sales at the break-even point. (p. 903).
- Mixed costs** Costs that contain both a variable- and a fixed-cost element and change in total but not proportionately with changes in the activity level. (p. 889).
- Relevant range** The range of the activity index over which the company expects to operate during the year. (p. 889).
- Target net income** The income objective set by management. (p. 901).
- Unit contribution margin** The amount of revenue remaining per unit after deducting variable costs; calculated as unit selling price minus unit variable costs. (p. 895).
- Variable costs** Costs that vary in total directly and proportionately with changes in the activity level. (p. 886).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Variable costs are costs that:
- vary in total directly and proportionately with changes in the activity level.
 - remain the same per unit at every activity level.
 - Neither of the above.
 - Both (a) and (b) above.
- (LO 1) 2. The relevant range is:
- the range of activity in which variable costs will be curvilinear.
 - the range of activity in which fixed costs will be curvilinear.
 - the range over which the company expects to operate during a year.
 - usually from zero to 100% of operating capacity.
- (LO 2) 3. Mixed costs consist of a:
- variable-cost element and a fixed-cost element.
 - fixed-cost element and a controllable-cost element.
 - relevant-cost element and a controllable-cost element.
 - variable-cost element and a relevant-cost element.
- (LO 2) 4. Your cell phone service provider offers a plan that is classified as a mixed cost. The cost per month for 1,000 minutes is \$50. If you use 2,000 minutes this month, your cost will be:
- \$50.
 - \$100.
 - more than \$100.
 - between \$50 and \$100.
- (LO 2) 5. Kendra Corporation's total utility costs during the past year were \$1,200 during its highest month and \$600 during its lowest month. These costs corresponded with 10,000 units of production during the high month and 2,000 units during the low month. What are the fixed and variable components of its utility costs using the high-low method?
- \$0.075 variable and \$450 fixed.
 - \$0.120 variable and \$0 fixed.
 - \$0.300 variable and \$0 fixed.
 - \$0.060 variable and \$600 fixed.
6. Which of the following is **not** involved in CVP analysis? (LO 3)
- Sales mix.
 - Unit selling prices.
 - Fixed costs per unit.
 - Volume or level of activity.
7. When comparing a traditional income statement to a CVP income statement: (LO 3)
- net income will always be greater on the traditional statement.
 - net income will always be less on the traditional statement.
 - net income will always be identical on both.
 - net income will be greater or less depending on the sales volume.
8. Contribution margin: (LO 3)
- is revenue remaining after deducting variable costs.
 - may be expressed as unit contribution margin.
 - is selling price less cost of goods sold.
 - Both (a) and (b) above.
9. Cournot Company sells 100,000 wrenches for \$12 a unit. Fixed costs are \$300,000, and net income is \$200,000. What should be reported as variable expenses in the CVP income statement? (LO 3)
- \$700,000.
 - \$900,000.
 - \$500,000.
 - \$1,000,000.

- (LO 4) 10. Gossen Company is planning to sell 200,000 pliers for \$4 per unit. The contribution margin ratio is 25%. If Gossen will break even at this level of sales, what are the fixed costs?
 (a) \$100,000. (c) \$200,000.
 (b) \$160,000. (d) \$300,000.
- (LO 4) 11. Brownstone Company's contribution margin ratio is 30%. If Brownstone's sales revenue is \$100 greater than its break-even sales in dollars, its net income:
 (a) will be \$100.
 (b) will be \$70.
 (c) will be \$30.
 (d) cannot be determined without knowing fixed costs.
- (LO 5) 12. The mathematical equation for computing required sales to obtain target net income is Required sales =
 (a) Variable costs + Target net income.
 (b) Variable costs + Fixed costs + Target net income.
 (c) Fixed costs + Target net income.
 (d) No correct answer is given.
13. Margin of safety is computed as: (LO 5)
 (a) Actual sales – Break-even sales.
 (b) Contribution margin – Fixed costs.
 (c) Break-even sales – Variable costs.
 (d) Actual sales – Contribution margin.
14. Marshall Company had actual sales of \$600,000 when break-even sales were \$420,000. What is the margin of safety ratio? (LO 5)
 (a) 25%. (c) 33⅓%.
 (b) 30%. (d) 45%.

Solutions

1. (d) Variable costs vary in total directly and proportionately with changes in the activity level and remain the same per unit at every activity level. Choices (a) and (b) are correct, but (d) is the better and more complete answer. Since (a) and (b) are both true statements, choice (c) is incorrect.
2. (c) The relevant range is the range over which the company expects to operate during a year. The other choices are incorrect because the relevant range is the range over which (a) variable costs are expected to be linear, not curvilinear, and (b) the company expects fixed costs to remain the same. Choice (d) is incorrect because this answer does not specifically define relevant range.
3. (a) Mixed costs consist of a variable-cost element and a fixed-cost element, not (b) a controllable-cost element, (c) a relevant-cost element or a controllable-cost element, or (d) a relevant-cost element.
4. (d) Your cost will include the fixed-cost component (flat service fee) which does not increase plus the variable cost (usage charge) for the additional 1,000 minutes which will increase your cost to between \$50 and \$100. Therefore, choices (a) \$50, (b) \$100, and (c) more than \$100 are incorrect.
5. (a) Variable is $\$0.075 [(\$1,200 - \$600) \div (10,000 - 2,000)]$ and fixed is $\$450 [(\$1,200 - (\$0.075 \times 10,000))]$. Therefore, choices (b) \$0.120 variable and \$0 fixed, (c) \$0.300 variable and \$0 fixed, and (d) \$0.060 variable and \$600 fixed are incorrect.
6. (c) Total fixed costs, not fixed costs per unit, are involved in CVP analysis. Choices (a) sales mix, (b) unit selling prices, and (d) volume or level of activity are all involved in CVP analysis.
7. (c) Net income will always be identical on both a traditional income statement and a CVP income statement. Therefore, choices (a), (b), and (d) are incorrect statements.
8. (d) Contribution margin is revenue remaining after deducting variable costs and it may be expressed on a per unit basis. Choices (a) and (b) are accurate, but (d) is a better answer. Choice (c) is incorrect because it defines gross margin, not contribution margin.
9. (a) Contribution margin is equal to fixed costs plus net income ($\$300,000 + \$200,000 = \$500,000$). Since variable expenses are the difference between total sales ($\$1,200,000$) and contribution margin ($\$500,000$), $\$700,000$ must be the amount of variable expenses in the CVP income statement. Therefore, choices (b) \$900,000, (c) \$500,000, and (d) \$1,000,000 are incorrect.
10. (c) Unit contribution margin is \$1 ($\$4 \times 25\%$). Fixed costs \div Unit contribution margin = Break-even point in units. Solving for fixed costs, $200,000 \text{ units} \times \$1 \text{ per unit} = \$200,000$, not (a) \$100,000, (b) \$160,000, or (d) \$300,000.
11. (c) If Brownstone's sales revenue is \$100 greater than its break-even sales in dollars, its net income will be \$30 or ($\$100 \times 30\%$), not (a) \$100 or (b) \$70. Choice (d) is incorrect because net income can be determined without knowing fixed costs.
12. (b) The correct equation is Required sales = Variable costs + Fixed costs + Target net income. The other choices are incorrect because (a) needs fixed costs added, (b) needs variable costs added, and (d) there is a correct answer given (b).
13. (a) Margin of safety is computed as Actual sales – Break-even sales. Therefore, choices (b) Contribution margin – Fixed costs, (c) Break-even sales – Variable costs, and (d) Actual sales – Contribution margin are incorrect.
14. (b) The margin of safety ratio is computed by dividing the margin of safety in dollars of \$180,000 ($\$600,000 - \$420,000$) by actual sales of \$600,000. The result is 30% ($\$180,000 \div \$600,000$), not (a) 25%, (c) 33⅓%, or (d) 45%.

PRACTICE EXERCISES

1. The controller of Teton Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Determine fixed and variable costs using the high-low method and prepare graph.

(LO 1, 2)

<u>Month</u>	<u>Total Maintenance Costs</u>	<u>Total Machine Hours</u>
January	\$2,900	300
February	3,000	400
March	3,600	600
April	4,300	790
May	3,200	500
June	4,500	800

Instructions

- Determine the fixed-cost and variable-cost components using the high-low method.
- Prepare a graph showing the behavior of maintenance costs, and identify the fixed-cost and variable-cost elements. Use 200 unit increments and \$1,000 cost increments.

Solution

1. (a) **Maintenance Costs:**

$$\frac{\$4,500 - \$2,900}{800 - 300} = \frac{\$1,600}{500} = \$3.20 \text{ variable cost per machine hour}$$

	<u>800 Machine Hours</u>	<u>300 Machine Hours</u>
Total costs	\$4,500	\$2,900
Less: Variable costs		
800 × \$3.20	2,560	
300 × \$3.20		960
Total fixed costs	<u>\$1,940</u>	<u>\$1,940</u>

Thus, maintenance costs are \$1,940 per month plus \$3.20 per machine hour.

Determine contribution margin ratio, break-even point in dollars, and margin of safety.

(LO 3, 4, 5)

2. Zion Seating Co., a manufacturer of chairs, had the following data for 2017:

Sales	2,400 units
Sales price	\$40 per unit
Variable costs	\$15 per unit
Fixed costs	\$19,500

Instructions

- What is the contribution margin ratio?
- What is the break-even point in dollars?
- What is the margin of safety in units and dollars?
- If the company wishes to increase its total dollar contribution margin by 40% in 2018, by how much will it need to increase its sales if all other factors remain constant?
(CGA adapted)

Solution

- Contribution margin ratio = Unit contribution margin \div Unit selling price
 $(\$40 - \$15) \div \$40 = 62.5\%$
 - Break-even in dollars: $\$19,500 \div 62.5\% = \$31,200$
 - Margin of safety = $(2,400 \times \$40) - \$31,200 = \$64,800$
 $\$64,800 \div \$40 = 1,620$ in units
 - Current contribution margin is $\$40 - \$15 = \$25$
 Total contribution margin is $\$25 \times 2,400 = \$60,000$
 40% increase in contribution margin is $\$60,000 \times 40\% = \$24,000$
 Total increase in sales required is $\$24,000 \div 62.5\% = \$38,400$

PRACTICE PROBLEM

Compute break-even point, contribution margin ratio, margin of safety, and sales for target net income.

(LO 4, 5)

Mabo Company makes calculators that sell for \$20 each. For the coming year, management expects fixed costs to total \$220,000 and variable costs to be \$9 per unit.

Instructions

- Compute break-even point in units using the mathematical equation.
- Compute break-even point in dollars using the contribution margin (CM) ratio.
- Compute the margin of safety percentage assuming actual sales are \$500,000.
- Compute the sales required in dollars to earn net income of \$165,000.

Solution

- Required sales – Variable costs – Fixed costs = Net income
 $\$20Q - \$9Q - \$220,000 = \0
 $\$11Q = \$220,000$
 $Q = 20,000$ units
- Unit contribution margin = Unit selling price – Unit variable costs
 $\$11 = \$20 - \$9$
 Contribution margin ratio = Unit contribution margin \div Unit selling price
 $55\% = \$11 \div \20
 Break-even point in dollars = Fixed costs \div Contribution margin ratio
 $= \$220,000 \div 55\%$
 $= \$400,000$
- Margin of safety = $\frac{\text{Actual sales} - \text{Break-even sales}}{\text{Actual sales}}$
 $= \frac{\$500,000 - \$400,000}{\$500,000}$
 $= 20\%$
- Required sales – Variable costs – Fixed costs = Net income
 $\$20Q - \$9Q - \$220,000 = \$165,000$
 $\$11Q = \$385,000$
 $Q = 35,000$ units
 $35,000 \text{ units} \times \$20 = \$700,000$ required sales

QUESTIONS

- (a) What is cost behavior analysis?
(b) Why is cost behavior analysis important to management?
- (a) Scott Winter asks your help in understanding the term “activity index.” Explain the meaning and importance of this term for Scott.
(b) State the two ways that variable costs may be defined.
- Contrast the effects of changes in the activity level on total fixed costs and on unit fixed costs.
- J. P. Alexander claims that the relevant range concept is important only for variable costs.
(a) Explain the relevant range concept.
(b) Do you agree with J. P.’s claim? Explain.
- “The relevant range is indispensable in cost behavior analysis.” Is this true? Why or why not?
- Adam Antal is confused. He does not understand why rent on his apartment is a fixed cost and rent on a Hertz rental truck is a mixed cost. Explain the difference to Adam.
- How should mixed costs be classified in CVP analysis? What approach is used to effect the appropriate classification?
- At the high and low levels of activity during the month, direct labor hours are 90,000 and 40,000, respectively. The related costs are \$165,000 and \$100,000. What are the fixed and variable costs at any level of activity?
- “Cost-volume-profit (CVP) analysis is based entirely on unit costs.” Do you agree? Explain.
- Faye Dunn defines contribution margin as the amount of profit available to cover operating expenses. Is there any truth in this definition? Discuss.
- Marshall Company’s GWhiz calculator sells for \$40. Variable costs per unit are estimated to be \$26. What are the unit contribution margin and the contribution margin ratio?
- “Break-even analysis is of limited use to management because a company cannot survive by just breaking even.” Do you agree? Explain.
- Total fixed costs are \$26,000 for Daz Inc. It has a unit contribution margin of \$15, and a contribution margin ratio of 25%. Compute the break-even sales in dollars.
- Peggy Turnbull asks your help in constructing a CVP graph. Explain to Peggy (a) how the break-even point is plotted, and (b) how the level of activity and dollar sales at the break-even point are determined.
- Define the term “margin of safety.” If Revere Company expects to sell 1,250 units of its product at \$12 per unit, and break-even sales for the product are \$13,200, what is the margin of safety ratio?
- Huang Company’s break-even sales are \$500,000. Assuming fixed costs are \$180,000, what sales volume is needed to achieve a target net income of \$90,000?
- The traditional income statement for Pace Company shows sales \$900,000, cost of goods sold \$600,000, and operating expenses \$200,000. Assuming all costs and expenses are 70% variable and 30% fixed, prepare a CVP income statement through contribution margin.

BRIEF EXERCISES

BE19-1 Monthly production costs in Dilts Company for two levels of production are as follows.

Cost	2,000 Units	4,000 Units
Indirect labor	\$10,000	\$20,000
Supervisory salaries	5,000	5,000
Maintenance	4,000	6,000

Classify costs as variable, fixed, or mixed.

(LO 1)

Indicate which costs are variable, fixed, and mixed, and give the reason for each answer.

BE19-2 For Lodes Company, the relevant range of production is 40–80% of capacity. At 40% of capacity, a variable cost is \$4,000 and a fixed cost is \$6,000. Diagram the behavior of each cost within the relevant range assuming the behavior is linear.

Diagram the behavior of costs within the relevant range.

(LO 1)

BE19-3 For Wesland Company, a mixed cost is \$15,000 plus \$18 per direct labor hour. Diagram the behavior of the cost using increments of 500 hours up to 2,500 hours on the horizontal axis and increments of \$15,000 up to \$60,000 on the vertical axis.

Diagram the behavior of a mixed cost.

(LO 1)

Determine variable- and fixed-cost elements using the high-low method.

(LO 2)

BE19-4 Bruno Company accumulates the following data concerning a mixed cost, using miles as the activity level.

	<u>Miles Driven</u>	<u>Total Cost</u>		<u>Miles Driven</u>	<u>Total Cost</u>
January	8,000	\$14,150	March	8,500	\$15,000
February	7,500	13,500	April	8,200	14,490

Compute the variable- and fixed-cost elements using the high-low method.

Determine variable- and fixed-cost elements using the high-low method.

(LO 2)

BE19-5 Markowis Corp. has collected the following data concerning its maintenance costs for the past 6 months.

	<u>Units Produced</u>	<u>Total Cost</u>
July	18,000	\$36,000
August	32,000	48,000
September	36,000	55,000
October	22,000	38,000
November	40,000	74,500
December	38,000	62,000

Compute the variable- and fixed-cost elements using the high-low method.

Determine missing amounts for contribution margin.

(LO 3)

BE19-6 Determine the missing amounts.

	<u>Unit Selling Price</u>	<u>Unit Variable Costs</u>	<u>Unit Contribution Margin</u>	<u>Contribution Margin Ratio</u>
1.	\$640	\$352	(a)	(b)
2.	\$300	(c)	\$93	(d)
3.	(e)	(f)	\$325	25%

Prepare CVP income statement.

(LO 3)

BE19-7 Russell Inc. had sales of \$2,200,000 for the first quarter of 2017. In making the sales, the company incurred the following costs and expenses.

	<u>Variable</u>	<u>Fixed</u>
Cost of goods sold	\$920,000	\$440,000
Selling expenses	70,000	45,000
Administrative expenses	86,000	98,000

Prepare a CVP income statement for the quarter ended March 31, 2017.

Compute the break-even point.

(LO 4)

BE19-8 Rice Company has a unit selling price of \$520, variable costs per unit of \$286, and fixed costs of \$163,800. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

Compute the break-even point.

(LO 4)

BE19-9 Presto Corp. had total variable costs of \$180,000, total fixed costs of \$110,000, and total revenues of \$300,000. Compute the required sales in dollars to break even.

Compute sales for target net income.

(LO 5)

BE19-10 For Flynn Company, variable costs are 70% of sales, and fixed costs are \$195,000. Management's net income goal is \$75,000. Compute the required sales in dollars needed to achieve management's target net income of \$75,000. (Use the contribution margin approach.)

Compute the margin of safety and the margin of safety ratio.

(LO 5)

BE19-11 For Astoria Company, actual sales are \$1,000,000, and break-even sales are \$800,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

BE19-12 Deines Corporation has fixed costs of \$480,000. It has a unit selling price of \$6, unit variable costs of \$4.40, and a target net income of \$1,500,000. Compute the required sales in units to achieve its target net income.

Compute the required sales in units for target net income.

(LO 5)

DO IT! Exercises

DO IT! 19-1 Amanda Company reports the following total costs at two levels of production.

Classify types of costs.

(LO 1)

	<u>5,000 Units</u>	<u>10,000 Units</u>
Indirect labor	\$ 3,000	\$ 6,000
Property taxes	7,000	7,000
Direct labor	28,000	56,000
Direct materials	22,000	44,000
Depreciation	4,000	4,000
Utilities	5,000	8,000
Maintenance	9,000	11,000

Classify each cost as variable, fixed, or mixed.

DO IT! 19-2 Westerville Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

Compute costs using high-low method and estimate total cost.

(LO 2)

	<u>Units Produced</u>	<u>Total Cost</u>
March	10,000	\$18,000
April	9,000	16,650
May	10,500	18,580
June	8,800	16,200
July	9,500	17,100

- (a) Compute the variable- and fixed-cost elements using the high-low method.
 (b) Estimate the total cost if the company produces 9,200 units.

DO IT! 19-3 Cedar Grove Industries produces and sells a cell phone-operated home security control. Information regarding the costs and sales of security controls during May 2017 are provided below.

Prepare CVP income statement.

(LO 3)

Unit selling price of security control	\$45
Unit variable costs	\$22
Total monthly fixed costs	\$120,000
Units sold	8,000

Prepare a CVP income statement for Cedar Grove Industries for the month of May. Provide per unit values and total values.

DO IT! 19-4 Snow Cap Company has a unit selling price of \$250, variable costs per unit of \$170, and fixed costs of \$160,000. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

Compute break-even point in units.

(LO 4)

DO IT! 19-5 Presto Company makes radios that sell for \$30 each. For the coming year, management expects fixed costs to total \$220,000 and variable costs to be \$18 per unit.

Compute break-even point, margin of safety ratio, and sales for target net income.

(LO 4, 5)

- (a) Compute the break-even point in dollars using the contribution margin (CM) ratio.
 (b) Compute the margin of safety ratio assuming actual sales are \$800,000.
 (c) Compute the sales dollars required to earn net income of \$140,000.

EXERCISES

Define and classify variable, fixed, and mixed costs.

(LO 1)

E19-1 Bonita Company manufactures a single product. Annual production costs incurred in the manufacturing process are shown below for two levels of production.

Production in Units	Costs Incurred			
	5,000		10,000	
	Total Cost	Cost/Unit	Total Cost	Cost/Unit
Production Costs				
Direct materials	\$8,000	\$1.60	\$16,000	\$1.60
Direct labor	9,500	1.90	19,000	1.90
Utilities	2,000	0.40	3,300	0.33
Rent	4,000	0.80	4,000	0.40
Maintenance	800	0.16	1,400	0.14
Supervisory salaries	1,000	0.20	1,000	0.10

Instructions

- Define the terms variable costs, fixed costs, and mixed costs.
- Classify each cost above as either variable, fixed, or mixed.

Diagram cost behavior, determine relevant range, and classify costs.

(LO 1)

E19-2 Shingle Enterprises is considering manufacturing a new product. It projects the cost of direct materials and rent for a range of output as shown below.

Output in Units	Rent Expense	Direct Materials
1,000	\$ 5,000	\$ 4,000
2,000	5,000	7,200
3,000	8,000	9,000
4,000	8,000	12,000
5,000	8,000	15,000
6,000	8,000	18,000
7,000	8,000	21,000
8,000	8,000	24,000
9,000	10,000	29,300
10,000	10,000	35,000
11,000	10,000	44,000

Instructions

- Diagram the behavior of each cost for output ranging from 1,000 to 11,000 units.
- Determine the relevant range of activity for this product.
- Calculate the variable costs per unit within the relevant range.
- Indicate the fixed cost within the relevant range.

Determine fixed and variable costs using the high-low method and prepare graph.

(LO 1, 2)

E19-3 The controller of Norton Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Month	Total Maintenance Costs	Total Machine Hours
January	\$2,700	300
February	3,000	350
March	3,600	500
April	4,500	690
May	3,200	400
June	5,500	700

Instructions

- Determine the fixed- and variable-cost components using the high-low method.
- Prepare a graph showing the behavior of maintenance costs, and identify the fixed- and variable-cost elements. Use 100-hour increments and \$1,000 cost increments.

E19-4 Family Furniture Corporation incurred the following costs.

1. Wood used in the production of furniture.
2. Fuel used in delivery trucks.
3. Straight-line depreciation on factory building.
4. Screws used in the production of furniture.
5. Sales staff salaries.
6. Sales commissions.
7. Property taxes.
8. Insurance on buildings.
9. Hourly wages of furniture craftsmen.
10. Salaries of factory supervisors.
11. Utilities expense.
12. Telephone bill.

Classify variable, fixed, and mixed costs.

(LO 1)

Instructions

Identify the costs above as variable, fixed, or mixed.

E19-5 The controller of Hall Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

Determine fixed and variable costs using the high-low method and prepare graph.

(LO 1, 2)

<u>Month</u>	<u>Total Maintenance Costs</u>	<u>Total Machine Hours</u>
January	\$2,640	3,500
February	3,000	4,000
March	3,600	6,000
April	4,500	7,900
May	3,200	5,000
June	4,620	8,000

Instructions

- (a) Determine the fixed- and variable-cost components using the high-low method.
- (b) Prepare a graph showing the behavior of maintenance costs and identify the fixed- and variable-cost elements. Use 2,000-hour increments and \$1,000 cost increments.

E19-6 PCB Corporation manufactures a single product. Monthly production costs incurred in the manufacturing process are shown below for the production of 3,000 units. The utilities and maintenance costs are mixed costs. The fixed portions of these costs are \$300 and \$200, respectively.

Determine fixed, variable, and mixed costs.

(LO 1)

<u>Production in Units</u>	<u>3,000</u>
Production Costs	
Direct materials	\$ 7,500
Direct labor	18,000
Utilities	2,100
Property taxes	1,000
Indirect labor	4,500
Supervisory salaries	1,900
Maintenance	1,100
Depreciation	2,400

Instructions

- (a) Identify the above costs as variable, fixed, or mixed.
- (b) Calculate the expected costs when production is 5,000 units.

E19-7 Marty Moser wants Moser Company to use CVP analysis to study the effects of changes in costs and volume on the company. Marty has heard that certain assumptions must be valid in order for CVP analysis to be useful.

Explain assumptions underlying CVP analysis.

(LO 3)

Instructions

 Prepare a memo to Marty Moser concerning the assumptions that underlie CVP analysis.

Compute break-even point in units and dollars.

(LO 3, 4)

E19-8 All That Blooms provides environmentally friendly lawn services for homeowners. Its operating costs are as follows.

Depreciation	\$1,400 per month
Advertising	\$200 per month
Insurance	\$2,000 per month
Weed and feed materials	\$12 per lawn
Direct labor	\$10 per lawn
Fuel	\$2 per lawn

All That Blooms charges \$60 per treatment for the average single-family lawn.

Instructions

Determine the company's break-even point in (a) number of lawns serviced per month and (b) dollars.

Compute break-even point.

(LO 3, 4)

E19-9 The Palmer Acres Inn is trying to determine its break-even point during its off-peak season. The inn has 50 rooms that it rents at \$60 a night. Operating costs are as follows.

Salaries	\$5,900 per month
Utilities	\$1,100 per month
Depreciation	\$1,000 per month
Maintenance	\$100 per month
Maid service	\$14 per room
Other costs	\$28 per room

Instructions

Determine the inn's break-even point in (a) number of rented rooms per month and (b) dollars.

Compute contribution margin and break-even point.

(LO 3, 4)

E19-10 In the month of March, Style Salon services 560 clients at an average price of \$120. During the month, fixed costs were \$21,024 and variable costs were 60% of sales.

Instructions

- Determine the contribution margin in dollars, per unit, and as a ratio.
- Using the contribution margin technique, compute the break-even point in dollars and in units.

Compute break-even point.

(LO 3, 4)

E19-11 Spencer Kars provides shuttle service between four hotels near a medical center and an international airport. Spencer Kars uses two 10-passenger vans to offer 12 round trips per day. A recent month's activity in the form of a cost-volume-profit income statement is shown below.

Fare revenues (1,500 fares)		\$36,000
Variable costs		
Fuel	\$ 5,040	
Tolls and parking	3,100	
Maintenance	860	9,000
Contribution margin		27,000
Fixed costs		
Salaries	15,700	
Depreciation	1,300	
Insurance	1,000	18,000
Net income		\$ 9,000

Instructions

- Calculate the break-even point in (1) dollars and (2) number of fares.
- Without calculations, determine the contribution margin at the break-even point.

Compute variable costs per unit, contribution margin ratio, and increase in fixed costs.

(LO 3, 4)

E19-12 In 2016, Manhoff Company had a break-even point of \$350,000 based on a selling price of \$5 per unit and fixed costs of \$112,000. In 2017, the selling price and the variable costs per unit did not change, but the break-even point increased to \$420,000.

Instructions

- (a) Compute the variable costs per unit and the contribution margin ratio for 2016.
 (b) Compute the increase in fixed costs for 2017.

E19-13 Billings Company has the following information available for September 2017.

Unit selling price of video game consoles	\$ 400
Unit variable costs	\$ 280
Total fixed costs	\$54,000
Units sold	600

Prepare CVP income statements.

(LO 3, 4)

Instructions

- (a) Compute the unit contribution margin.
 (b) Prepare a CVP income statement that shows both total and per unit amounts.
 (c) Compute Billings' break-even point in units.
 (d) Prepare a CVP income statement for the break-even point that shows both total and per unit amounts.

E19-14 Naylor Company had \$210,000 of net income in 2016 when the selling price per unit was \$150, the variable costs per unit were \$90, and the fixed costs were \$570,000. Management expects per unit data and total fixed costs to remain the same in 2017. The president of Naylor Company is under pressure from stockholders to increase net income by \$52,000 in 2017.

Compute various components to derive target net income under different assumptions.

(LO 4, 5)

Instructions

- (a) Compute the number of units sold in 2016.
 (b) Compute the number of units that would have to be sold in 2017 to reach the stockholders' desired profit level.
 (c) Assume that Naylor Company sells the same number of units in 2017 as it did in 2016. What would the selling price have to be in order to reach the stockholders' desired profit level?

E19-15 Yams Company reports the following operating results for the month of August: sales \$400,000 (units 5,000), variable costs \$240,000, and fixed costs \$90,000. Management is considering the following independent courses of action to increase net income.

Compute net income under different alternatives.

(LO 5)

- Increase selling price by 10% with no change in total variable costs or units sold.
- Reduce variable costs to 55% of sales.

Instructions

Compute the net income to be earned under each alternative. Which course of action will produce the higher net income?

E19-16 Glacial Company estimates that variable costs will be 62.5% of sales, and fixed costs will total \$600,000. The selling price of the product is \$4.

Prepare a CVP graph and compute break-even point and margin of safety.

(LO 4, 5)

Instructions

- (a) Prepare a CVP graph, assuming maximum sales of \$3,200,000. (Note: Use \$400,000 increments for sales and costs and 100,000 increments for units.)
 (b) Compute the break-even point in (1) units and (2) dollars.
 (c) Assuming actual sales are \$2 million, compute the margin of safety in (1) dollars and (2) as a ratio.

E19-17 Felde Bucket Co., a manufacturer of rain barrels, had the following data for 2016:

Sales	2,500 units
Sales price	\$40 per unit
Variable costs	\$24 per unit
Fixed costs	\$19,500

Determine contribution margin ratio, break-even point in dollars, and margin of safety.

(LO 3, 4, 5)

Instructions

- (a) What is the contribution margin ratio?
 (b) What is the break-even point in dollars?
 (c) What is the margin of safety in dollars and as a ratio?
 (d) If the company wishes to increase its total dollar contribution margin by 30% in 2017, by how much will it need to increase its sales if all other factors remain constant?

(CGA adapted)

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.

(LO 1, 2, 3, 4)

P19-1A Vin Diesel owns the Fredonia Barber Shop. He employs four barbers and pays each a base rate of \$1,250 per month. One of the barbers serves as the manager and receives an extra \$500 per month. In addition to the base rate, each barber also receives a commission of \$4.50 per haircut.

Other costs are as follows.

Advertising	\$200 per month
Rent	\$1,100 per month
Barber supplies	\$0.30 per haircut
Utilities	\$175 per month plus \$0.20 per haircut
Magazines	\$25 per month

Vin currently charges \$10 per haircut.

Instructions

(a) VC \$5

- Determine the variable costs per haircut and the total monthly fixed costs.
- Compute the break-even point in units and dollars.
- Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and \$3,000 on the vertical axis.
- Determine net income, assuming 1,600 haircuts are given in a month.

Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income.

(LO 3, 4, 5)

P19-2A Jorge Company bottles and distributes B-Lite, a diet soft drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers, who charge customers 75 cents per bottle. For the year 2017, management estimates the following revenues and costs.

Sales	\$1,800,000	Selling expenses—variable	\$70,000
Direct materials	430,000	Selling expenses—fixed	65,000
Direct labor	360,000	Administrative expenses—variable	20,000
Manufacturing overhead—variable	380,000	Administrative expenses—fixed	60,000
Manufacturing overhead—fixed	280,000		

Instructions

(b) (1) 2,700,000 units
(c) CM ratio 30%

- Prepare a CVP income statement for 2017 based on management's estimates. (Show column for total amounts only.)
- Compute the break-even point in (1) units and (2) dollars.
- Compute the contribution margin ratio and the margin of safety ratio. (Round to nearest full percent.)
- Determine the sales dollars required to earn net income of \$180,000.

Compute break-even point under alternative courses of action.

(LO 4)

P19-3A Tanek Corp.'s sales slumped badly in 2017. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 500,000 units of product: sales \$2,500,000, total costs and expenses \$2,600,000, and net loss \$100,000. Costs and expenses consisted of the amounts shown below.

	<u>Total</u>	<u>Variable</u>	<u>Fixed</u>
Cost of goods sold	\$2,140,000	\$1,590,000	\$550,000
Selling expenses	250,000	92,000	158,000
Administrative expenses	210,000	68,000	142,000
	<u>\$2,600,000</u>	<u>\$1,750,000</u>	<u>\$850,000</u>

Management is considering the following independent alternatives for 2018.

1. Increase unit selling price 20% with no change in costs, expenses, and sales volume.
2. Change the compensation of salespersons from fixed annual salaries totaling \$150,000 to total salaries of \$60,000 plus a 5% commission on sales.

Instructions

- (a) Compute the break-even point in dollars for 2017.
- (b) Compute the break-even point in dollars under each of the alternative courses of action. (Round all ratios to nearest full percent.) Which course of action do you recommend? (b) Alternative 1 \$2,023,810

P19-4A Mary Willis is the advertising manager for Bargain Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add \$24,000 in fixed costs to the \$270,000 currently spent. In addition, Mary is proposing that a 5% price decrease (\$40 to \$38) will produce a 20% increase in sales volume (20,000 to 24,000). Variable costs will remain at \$24 per pair of shoes. Management is impressed with Mary's ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(LO 3, 4, 5)

Instructions

- (a) Compute the current break-even point in units, and compare it to the break-even point in units if Mary's ideas are used.
- (b) Compute the margin of safety ratio for current operations and after Mary's changes are introduced. (Round to nearest full percent.) (b) Current margin of safety ratio 16%
- (c) Prepare a CVP income statement for current operations and after Mary's changes are introduced. (Show column for total amounts only.) Would you make the changes suggested?

P19-5A Viejol Corporation has collected the following information after its first year of sales. Sales were \$1,600,000 on 100,000 units, selling expenses \$250,000 (40% variable and 60% fixed), direct materials \$490,000, direct labor \$290,000, administrative expenses \$270,000 (20% variable and 80% fixed), and manufacturing overhead \$380,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

Compute contribution margin, fixed costs, break-even point, sales for target net income, and margin of safety ratio.

(LO 3, 4, 5)

Instructions

- (a) Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
- (b) Compute the break-even point in units and sales dollars for the current year. (b) 120,000 units
- (c) The company has a target net income of \$200,000. What is the required sales in dollars for the company to meet its target?
- (d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?

P19-6A Kaiser Industries carries no inventories. Its product is manufactured only when a customer's order is received. It is then shipped immediately after it is made. For its fiscal year ended October 31, 2017, Kaiser's break-even point was \$1.3 million. On sales of \$1.2 million, its income statement showed a gross profit of \$180,000, direct materials cost of \$400,000, and direct labor costs of \$500,000. The contribution margin was \$180,000, and variable manufacturing overhead was \$50,000.

Determine contribution margin ratio, break-even point, and margin of safety.

(LO 1, 3, 5)

Instructions

- (a) Calculate the following:
 - (1) Variable selling and administrative expenses.
 - (2) Fixed manufacturing overhead.
 - (3) Fixed selling and administrative expenses.(a) (2) \$70,000
- (b) Ignoring your answer to part (a), assume that fixed manufacturing overhead was \$100,000 and the fixed selling and administrative expenses were \$80,000. The marketing vice president feels that if the company increased its advertising, sales could be increased by 25%. What is the maximum increased advertising cost the company can incur and still report the same income as before the advertising expenditure? (CGA adapted)

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

EXCEL TUTORIAL

CURRENT DESIGNS

CD19 Bill Johnson, sales manager, and Diane Buswell, controller, at Current Designs are beginning to analyze the cost considerations for one of the composite models of the kayak division. They have provided the following production and operational costs necessary to produce one composite kayak.

	A	B	C
1	Kevlar®	\$250 per kayak	
2	Resin and supplies	\$100 per kayak	
3	Finishing kit (seat, rudder, ropes, etc.)	\$170 per kayak	
4	Labor	\$420 per kayak	
5	Selling and administrative expenses—variable	\$400 per kayak	
6	Selling and administrative expenses—fixed	\$119,700 per year	
7	Manufacturing overhead—fixed	\$240,000 per year	
8			

Bill and Diane have asked you to provide a cost-volume-profit analysis, to help them finalize the budget projections for the upcoming year. Bill has informed you that the selling price of the composite kayak will be \$2,000.

Instructions

- Calculate variable costs per unit.
- Determine the unit contribution margin.
- Using the unit contribution margin, determine the break-even point in units for this product line.
- Assume that Current Designs plans to earn \$270,600 on this product line. Using the unit contribution margin, calculate the number of units that need to be sold to achieve this goal.
- Based on the most recent sales forecast, Current Designs plans to sell 1,000 units of this model. Using your results from part (c), calculate the margin of safety and the margin of safety ratio.

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–18.)

WP19 The Vice President for Sales and Marketing at Waterways Corporation is planning for production needs to meet sales demand in the coming year. He is also trying to determine how the company's profits might be increased in the coming year. This problem asks you to use cost-volume-profit concepts to help Waterways understand contribution margins of some of its products and decide whether to mass-produce any of them.

Go to the book's companion website, www.wiley.com/college/wegandt, to find the remainder of this problem.

BROADENING YOUR **PERSPECTIVE**

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP19-1 Creative Ideas Company has decided to introduce a new product. The new product can be manufactured by either a capital-intensive method or a labor-intensive method. The manufacturing method will not affect the quality of the product. The estimated manufacturing costs by the two methods are as follows.

	<u>Capital- Intensive</u>	<u>Labor- Intensive</u>
Direct materials	\$5 per unit	\$5.50 per unit
Direct labor	\$6 per unit	\$8.00 per unit
Variable overhead	\$3 per unit	\$4.50 per unit
Fixed manufacturing costs	\$2,524,000	\$1,550,000

Creative Ideas' market research department has recommended an introductory unit sales price of \$32. The incremental selling expenses are estimated to be \$502,000 annually plus \$2 for each unit sold, regardless of manufacturing method.

Instructions

With the class divided into groups, answer the following.

- (a) Calculate the estimated break-even point in annual unit sales of the new product if Creative Ideas Company uses the:
 - (1) Capital-intensive manufacturing method.
 - (2) Labor-intensive manufacturing method.
- (b) Determine the annual unit sales volume at which Creative Ideas Company would be indifferent between the two manufacturing methods.
- (c) Explain the circumstance under which Creative Ideas should employ each of the two manufacturing methods.

(CMA adapted)

Managerial Analysis

BYP19-2 The condensed income statement for the Peri and Paul partnership for 2017 is as follows.

PERI AND PAUL COMPANY		
Income Statement		
For the Year Ended December 31, 2017		
Sales (240,000 units)		\$1,200,000
Cost of goods sold		<u>800,000</u>
Gross profit		400,000
Operating expenses		
Selling	\$280,000	
Administrative	<u>150,000</u>	<u>430,000</u>
Net loss		<u><u>\$ (30,000)</u></u>

A cost behavior analysis indicates that 75% of the cost of goods sold are variable, 42% of the selling expenses are variable, and 40% of the administrative expenses are variable.

Instructions

(Round to nearest unit, dollar, and percentage, where necessary. Use the CVP income statement format in computing profits.)

- (a) Compute the break-even point in total sales dollars and in units for 2017.
- (b) Peri has proposed a plan to get the partnership "out of the red" and improve its profitability. She feels that the quality of the product could be substantially improved by spending \$0.25 more per

unit on better raw materials. The selling price per unit could be increased to only \$5.25 because of competitive pressures. Peri estimates that sales volume will increase by 25%. What effect would Peri's plan have on the profits and the break-even point in dollars of the partnership? (Round the contribution margin ratio to two decimal places.)

- (c) Paul was a marketing major in college. He believes that sales volume can be increased only by intensive advertising and promotional campaigns. He therefore proposed the following plan as an alternative to Peri's: (1) increase variable selling expenses to \$0.59 per unit, (2) lower the selling price per unit by \$0.25, and (3) increase fixed selling expenses by \$40,000. Paul quoted an old marketing research report that said that sales volume would increase by 60% if these changes were made. What effect would Paul's plan have on the profits and the break-even point in dollars of the partnership?
- (d) Which plan should be accepted? Explain your answer.

Real-World Focus

BYP19-3 The **Coca-Cola Company** hardly needs an introduction. A line taken from the cover of a recent annual report says it all: If you measured time in servings of Coca-Cola, "a billion Coca-Cola's ago was yesterday morning." On average, every U.S. citizen drinks 363 8-ounce servings of Coca-Cola products each year. Coca-Cola's primary line of business is the making and selling of syrup to bottlers. These bottlers then sell the finished bottles and cans of Coca-Cola to the consumer.

In the annual report of Coca-Cola, the information shown below was provided.

THE COCA-COLA COMPANY

Management Discussion

Our gross margin declined to 61 percent this year from 62 percent in the prior year, primarily due to costs for materials such as sweeteners and packaging.

The increases [in selling expenses] in the last two years were primarily due to higher marketing expenditures in support of our Company's volume growth.

We measure our sales volume in two ways: (1) gallon shipments of concentrates and syrups and (2) unit cases of finished product (bottles and cans of Coke sold by bottlers).

Instructions

Answer the following questions.

- (a) Are sweeteners and packaging a variable cost or a fixed cost? What is the impact on the contribution margin of an increase in the per unit cost of sweeteners or packaging? What are the implications for profitability?
- (b) In your opinion, are Coca-Cola's marketing expenditures a fixed cost, variable cost, or mixed cost? Give justification for your answer.
- (c) Which of the two measures cited for measuring volume represents the activity index as defined in this chapter? Why might Coca-Cola use two different measures?

BYP19-4 The May 21, 2010, edition of the *Wall Street Journal* includes an article by Jeffrey Trachtenberg entitled "E-Books Rewrite Bookselling."

Instructions

Read the article and answer the following questions.

- (a) What aspect of Barnes and Noble's current structure puts it at risk if electronic books become a significant portion of book sales?
- (b) What was Barnes and Noble's primary competitive advantage in a "paper book" world? How has this advantage been eliminated by e-books?
- (c) What event do the authors say might eventually be viewed as the big turning point for e-books?
- (d) What amount does Barnes and Noble earn on a \$25 hardcover book? How much would it likely earn on an e-book version of the same title? What implications does this have for Barnes and Noble versus its competitors?
- (e) What two mistakes does the author suggest that Barnes and Noble made that left it ill-prepared for an e-book environment?

CRITICAL THINKING

Communication Activity

BYP19-5 Your roommate asks for your help on the following questions about CVP analysis formulas.

- How can the mathematical equation for break-even sales show both sales units and sales dollars?
- How do the formulas differ for unit contribution margin and contribution margin ratio?
- How can contribution margin be used to determine break-even sales in units and in dollars?

Instructions

Write a memo to your roommate stating the relevant formulas and answering each question.

Ethics Case

BYP19-6 Scott Bestor is an accountant for Westfield Company. Early this year, Scott made a highly favorable projection of sales and profits over the next 3 years for Westfield's hot-selling computer PLEX. As a result of the projections Scott presented to senior management, the company decided to expand production in this area. This decision led to dislocations of some plant personnel who were reassigned to one of the company's newer plants in another state. However, no one was fired, and in fact the company expanded its workforce slightly.

Unfortunately, Scott rechecked his projection computations a few months later and found that he had made an error that would have reduced his projections substantially. Luckily, sales of PLEX have exceeded projections so far, and management is satisfied with its decision. Scott, however, is not sure what to do. Should he confess his honest mistake and jeopardize his possible promotion? He suspects that no one will catch the error because PLEX sales have exceeded his projections, and it appears that profits will materialize close to his projections.

Instructions

- Who are the stakeholders in this situation?
- Identify the ethical issues involved in this situation.
- What are the possible alternative actions for Scott? What would you do in Scott's position?

All About You

BYP19-7 Cost-volume-profit analysis can also be used in making personal financial decisions. For example, the purchase of a new car is one of your biggest personal expenditures. It is important that you carefully analyze your options.

Suppose that you are considering the purchase of a hybrid vehicle. Let's assume the following facts. The hybrid will initially cost an additional \$4,500 above the cost of a traditional vehicle. The hybrid will get 40 miles per gallon of gas, and the traditional car will get 30 miles per gallon. Also, assume that the cost of gas is \$3.60 per gallon.

Instructions

Using the facts above, answer the following questions.

- What is the variable gasoline cost of going one mile in the hybrid car? What is the variable cost of going one mile in the traditional car?
- Using the information in part (a), if "miles" is your unit of measure, what is the "contribution margin" of the hybrid vehicle relative to the traditional vehicle? That is, express the variable cost savings on a per-mile basis.
- How many miles would you have to drive in order to break even on your investment in the hybrid car?
- What other factors might you want to consider?

Cost-Volume-Profit Analysis: Additional Issues

CHAPTER PREVIEW As the Feature Story below about **Whole Foods Market** suggests, the relationship between a company's fixed and variable costs can have a huge impact on its profitability. In particular, the trend toward cost structures dominated by fixed costs has significantly increased the volatility of many companies' net income. The purpose of this chapter is to demonstrate additional uses of cost-volume-profit analysis in making sound business decisions.

FEATURE STORY

Not Even a Flood Could Stop It

America has a reputation as a country populated with people who won't buy a restaurant meal unless it can be ordered from the driver's seat of a car. Customers want to receive said "meal" 30 seconds later from a drive-up window and then consume the bagged product while driving one-handed down an 8-lane freeway. This is actually a fairly accurate depiction of the restaurant preferences (and eating habits) of one of the authors of this textbook. However, given the success of **Whole Foods Market**, this certainly cannot be true of all Americans.

Whole Foods Market began humbly in 1978 as a natural-foods store called SaferWay. (Get it? A play on **SafeWay** grocery stores.) It was founded in Austin, Texas, by 25 year-old John Mackey (a self-described college dropout) and 21 year-old Renee Lawson Hardy. They financed the first store by borrowing \$45,000 from family and friends. The early days were "interesting." First, John and Renee got kicked out of their apartment for storing grocery products there. No problem—they just moved into the store. They bathed in the store's dishwasher with an attached hose. They did whatever it took to keep their costs down and the store going.

Two years later, John and Renee merged SaferWay with another store to form the first Whole Foods Market. The store's first year was very successful. Well, that is until everything in the store was completely destroyed by Austin's biggest flood in more than 70 years. They lost \$400,000 in goods—and they had no insurance. But within 28 days, with tons of volunteer work and understanding creditors and vendors, the store reopened.

Today, Whole Foods operates approximately 270 stores. The size of the average store has actually declined in recent years. While huge stores (up to 80,000 square feet) were successful in a few cities, in most locations the fixed costs of such a large facility made it hard to achieve profit targets. Then, when sales became sluggish during the recession, the company determined that it could reduce its fixed costs, such as rent and utility costs, by reducing its average store size by about 20%. However, with fewer square feet, managers must keep a close eye on the sales mix. They need to be aware of the relative contribution margins of each product line to maximize the profit per square foot while still providing the products its customers want.

Why is a company as successful as Whole Foods so concerned about controlling costs? The answer is that the grocery business runs on very thin margins. So while we doubt that anybody is bathing in the store's dishwashers anymore, Whole Foods is as vigilant about its costs today as it was during its first year of operations.

 **Watch the *Whole Foods Market* video in WileyPLUS to learn more about the use of cost-volume-profit analysis in a changing business environment.**

CHAPTER OUTLINE

Learning Objectives

1

Apply basic CVP concepts.

- Basic concepts

Apply basic CVP concepts.

As indicated in Chapter 19, cost-volume-profit (CVP) analysis is the study of the effects of changes in costs and volume on a company's profit. CVP analysis is important to profit planning. It is also a critical factor in determining product mix, maximizing use of production facilities, and setting selling prices.

Basic Concepts

Because CVP is so important for decision-making, management often wants this information reported in a CVP income statement format for internal use. The CVP income statement classifies costs as variable or fixed, and computes a contribution margin. **Contribution margin** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

Illustration 20-1 presents the CVP income statement for Vargo Video (which was shown in Illustration 19-12 on page 895). Note that Vargo's sold 1,600 camcorders at \$500 per unit.

Illustration 20-1
Basic CVP income statement

VARGO VIDEO COMPANY		
CVP Income Statement		
For the Month Ended June 30, 2017		
	<u>Total</u>	<u>Per Unit</u>
Sales (1,600 camcorders)	\$ 800,000	\$ 500
Variable costs	480,000	300
Contribution margin	320,000	<u>200</u>
Fixed costs	200,000	
Net income	<u>120,000</u>	

Companies often prepare detailed CVP income statements. The CVP income statement in Illustration 20-2 uses the same base information as that presented in Illustration 20-1 but provides more detailed information (using assumed data) about the composition of expenses.

Illustration 20-2
Detailed CVP income statement

VARGO VIDEO COMPANY		
CVP Income Statement		
For the Month Ended June 30, 2017		
	<u>Total</u>	<u>Per Unit</u>
Sales	\$ 800,000	\$ 500
Variable expenses		
Cost of goods sold	\$400,000	
Selling expenses	60,000	
Administrative expenses	20,000	
Total variable expenses	<u>480,000</u>	<u>300</u>
Contribution margin	320,000	<u>200</u>
Fixed expenses		
Cost of goods sold	120,000	
Selling expenses	40,000	
Administrative expenses	40,000	
Total fixed expenses	<u>200,000</u>	
Net income	<u>120,000</u>	

Helpful Hint

The appendix to this chapter provides additional discussion of income statements used for decision-making.

In the applications of CVP analysis that follow, we assume that the term “cost” includes all costs and expenses related to production and sale of the product. That is, **cost includes manufacturing costs plus selling and administrative expenses.**

Basic Computations

Before we introduce additional issues of CVP analysis, let’s review some of the basic concepts that you learned in Chapter 19, specifically break-even analysis, target net income, and margin of safety.

BREAK-EVEN ANALYSIS

Vargo Video’s CVP income statement (Illustration 20-2) shows that total contribution margin (sales minus variable expenses) is \$320,000, and the company’s unit contribution margin is \$200. Recall that contribution margin can also be expressed in the form of the **contribution margin ratio** (contribution margin divided by sales), which in the case of Vargo is 40% ($\$200 \div \500).

Illustration 20-3 demonstrates how to compute Vargo’s break-even point in units (using unit contribution margin).

Fixed Costs	÷	Unit Contribution Margin	=	Break-Even Point in Units
\$200,000	÷	\$200	=	1,000 units

Illustration 20-3
Break-even point in units

Illustration 20-4 shows the computation for the break-even point in dollars (using contribution margin ratio).

Fixed Costs	÷	Contribution Margin Ratio	=	Break-Even Point in Dollars
\$200,000	÷	.40	=	\$500,000

Illustration 20-4
Break-even point in dollars

When a company is in its early stages of operation, its primary goal is to break even. Failure to break even will lead eventually to financial failure.

TARGET NET INCOME

Once a company achieves break-even, it then sets a sales goal that will generate a target net income. For example, assume that Vargo’s management has a target net income of \$250,000. Illustration 20-5 shows the required sales in units to achieve its target net income.

Illustration 20-5
Target net income in units

(Fixed Costs + Target Net Income)	÷	Unit Contribution Margin	=	Required Sales in Units
(\$200,000 + \$250,000)	÷	\$200	=	2,250 units

Illustration 20-6 uses the contribution margin ratio to compute the required sales in dollars.

Illustration 20-6
Target net income in dollars

(Fixed Costs + Target Net Income)	÷	Contribution Margin Ratio	=	Required Sales in Dollars
(\$200,000 + \$250,000)	÷	.40	=	\$1,125,000

In order to achieve net income of \$250,000, Vargo has to sell 2,250 camcorders, for a total price of \$1,125,000.

MARGIN OF SAFETY

Another measure managers use to assess profitability is the margin of safety. The **margin of safety** tells us **how far sales can drop** before the company will be operating at a loss. Managers like to have a sense of how much cushion they have between their current situation and operating at a loss. This can be expressed in dollars or as a ratio. In Illustration 20-2 (page 924), for example, Vargo reported sales of \$800,000. At that sales level, its margin of safety in dollars and as a ratio are as follows.

Illustration 20-7

Margin of safety in dollars

Actual (Expected) Sales	–	Break-Even Sales	=	Margin of Safety in Dollars
\$800,000	–	\$500,000	=	\$300,000

As shown in Illustration 20-8, Vargo's sales could drop by \$300,000, or 37.5%, before the company would operate at a loss.

Illustration 20-8

Margin of safety ratio

Margin of Safety in Dollars	÷	Actual (Expected) Sales	=	Margin of Safety Ratio
\$300,000	÷	\$800,000	=	37.5%

CVP and Changes in the Business Environment

To better understand how CVP analysis works, let's look at three independent situations that might occur at Vargo Video. Each case uses the original camcorder sales and cost data, which were as follows.

Illustration 20-9

Original camcorder sales and cost data

Unit selling price	\$500
Unit variable cost	\$300
Total fixed costs	\$200,000
Break-even sales	\$500,000 or 1,000 units

CASE I

A competitor is offering a 10% discount on the selling price of its camcorders. Management must decide whether to offer a similar discount.

Question: What effect will a 10% discount on selling price have on the break-even point for camcorders?

Answer: A 10% discount on selling price reduces the selling price per unit to \$450 [$\$500 - (\$500 \times 10\%)$]. Variable costs per unit remain unchanged at \$300. Thus, the unit contribution margin is \$150. Assuming no change in fixed costs, break-even sales are 1,333 units, computed as follows.

Illustration 20-10

Computation of break-even sales in units

Fixed Costs	÷	Unit Contribution Margin	=	Break-Even Sales
\$200,000	÷	\$150	=	1,333 units (rounded)

For Vargo, this change requires monthly sales to increase by 333 units, or 33¹/₃%, in order to break even. In reaching a conclusion about offering a 10%

discount to customers, management must determine how likely it is to achieve the increased sales. Also, management should estimate the possible loss of sales if the competitor's discount price is not matched.

CASE II

To meet the threat of foreign competition, management invests in new robotic equipment that will lower the amount of direct labor required to make camcorders. The company estimates that total fixed costs will increase 30% and that variable cost per unit will decrease 30%.

Question: What effect will the new equipment have on the sales volume required to break even?

Answer: Total fixed costs become \$260,000 [$\$200,000 + (30\% \times \$200,000)$]. The variable cost per unit becomes \$210 [$\$300 - (30\% \times \$300)$]. The new break-even point is approximately 897 units, computed as shown in Illustration 20-11.

Fixed Costs	÷	Unit Contribution Margin	=	Break-Even Sales
\$260,000	÷	(\$500 - \$210)	=	897 units (rounded)

Illustration 20-11

Computation of break-even sales in units

These changes appear to be advantageous for Vargo. The break-even point is reduced by approximately 10%, or 100 units.

CASE III

Vargo's principal supplier of raw materials has just announced a price increase. The higher cost is expected to increase the variable cost of camcorders by \$25 per unit. Management decides to hold the line on the selling price of the camcorders. It plans a cost-cutting program that will save \$17,500 in fixed costs per month. Vargo is currently realizing monthly net income of \$80,000 on sales of 1,400 camcorders.

Question: What increase in units sold will be needed to maintain the same level of net income?

Answer: The variable cost per unit increases to \$325 ($\$300 + \25). Fixed costs are reduced to \$182,500 ($\$200,000 - \$17,500$). Because of the change in variable cost, the unit contribution margin becomes \$175 ($\$500 - \325). The required number of units sold to achieve the target net income is computed as follows.

(Fixed Costs + Target Net Income)	÷	Unit Contribution Margin	=	Required Sales in Units
(\$182,500 + \$80,000)	÷	\$175	=	1,500

Illustration 20-12

Computation of required sales

To achieve the required sales, Vargo Video will have to sell 1,500 camcorders, an increase of 100 units. If this does not seem to be a reasonable expectation, management will either have to make further cost reductions or accept less net income if the selling price remains unchanged.

We hope that the concepts reviewed in this section are now familiar to you. We are now ready to examine additional ways that companies use CVP analysis to assess profitability and to help in making effective business decisions.

Management Insight Amazon.com

Warchi/iStockphoto

Don't Just Look—Buy Something

When analyzing an Internet business such as **Amazon.com**, analysts closely watch the so-called “conversion rate.” This rate is calculated by dividing the number of people who actually take action at an Internet site (buy something) by the total number of people

who visit the site. Average conversion rates are from 3% to 5%. A rate below 2% is poor, while a rate above 10% is great.

Conversion rates have an obvious effect on the break-even point. Suppose you spend \$10,000 on your site, which then attracts 5,000 visitors. If you get a 2% conversion rate

(100 purchases), your site costs \$100 per purchase ($\$10,000 \div 100$). A 4% conversion rate lowers your cost to \$50 per transaction, and an 8% conversion rate gets you down to \$25. Studies show that conversion rates increase if the site has an easy-to-use interface, fast-performing screens, a convenient ordering process, and advertising that is both clever and clear.

Sources: J. William Gurley, “The One Internet Metric That Really Counts” *Fortune* (March 6, 2000), p. 392; and Milind Mody, “Chief Mentor: How Startups Can Win Customers Online,” *Wall Street Journal Online*, (May 11, 2011).

Besides increasing their conversion rates, what steps can online merchants use to lower their break-even points? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!**1****CVP Analysis**

Krisanne Company reports the following operating results for the month of June.

KRISANNE COMPANY
CVP Income Statement
For the Month Ended June 30, 2017

	Total	Per Unit
Sales (5,000 units)	\$300,000	\$60
Variable costs	180,000	36
Contribution margin	120,000	\$24
Fixed expenses	100,000	
Net income	\$ 20,000	

To increase net income, management is considering reducing the selling price by 10%, with no changes to unit variable costs or fixed costs. Management is confident that this change will increase unit sales by 25%.

Using the contribution margin technique, compute the break-even point in units and dollars and margin of safety in dollars (a) assuming no changes to sales price or costs, and (b) assuming changes to sales price and volume as described above. (c) Comment on your findings.

Solution**Action Plan**

- ✓ Apply the formula for the break-even point in units.
- ✓ Apply the formula for the break-even point in dollars.
- ✓ Apply the formula for the margin of safety in dollars.

(a) Assuming no changes to sales price or costs:

Break-even point in units = 4,167 units (rounded) ($\$100,000 \div \24)

Break-even point in sales dollars = \$250,000 ($\$100,000 \div .40^a$)

Margin of safety in dollars = \$50,000 ($\$300,000 - \$250,000$)

^a $\$24 \div \60

(b) Assuming changes to sales price and volume:

Break-even point in units = 5,556 units (rounded) ($\$100,000 \div \18^b)

Break-even point in sales dollars = \$300,000 ($\$100,000 \div (\$18 \div \$54^c)$)

Margin of safety in dollars = \$37,500 ($\$337,500^d - \$300,000$)

^b $\$60 - (.10 \times \$60) - 36 = \$18$

^c $\$60 - (.10 \times \$60)$

^d $5,000 + (.25 \times 5,000) = 6,250$ units, $6,250$ units \times $\$54 = \$337,500$

- (c) The increase in the break-even point and the decrease in the margin of safety indicate that management should not implement the proposed change. The increase in sales volume will result in contribution margin of \$112,500 ($6,250 \times \18), which is \$7,500 ($\$120,000 - \$112,500$) less than the current amount.

LEARNING
OBJECTIVE

2

Explain the term sales mix and its effects on break-even sales.

To this point, our discussion of CVP analysis has assumed that a company sells only one product. However, most companies sell multiple products. When a company sells many products, it is important that management understand its sales mix.

Sales mix is the relative percentage in which a company sells its multiple products. For example, if 80% of **Hewlett Packard's** unit sales are printers and the other 20% are PCs, its sales mix is 80% printers to 20% PCs.

Sales mix is important to managers because different products often have substantially different contribution margins. For example, **Ford's** SUVs and F150 pickup trucks have higher contribution margins compared to its economy cars. Similarly, first-class tickets sold by **United Airlines** provide substantially higher contribution margins than coach-class tickets. **Intel's** sales of computer chips for netbook computers have increased, but the contribution margin on these chips is lower than for notebook and desktop PCs.

Break-Even Sales in Units

Companies can compute break-even sales for a mix of two or more products by determining the **weighted-average unit contribution margin of all the products**. To illustrate, assume that Vargo Video sells not only camcorders but high-definition TVs as well. Vargo sells its two products in the following amounts: 1,500 camcorders and 500 TVs. The sales mix, expressed as a percentage of the 2,000 total units sold, is as follows.

<u>Camcorders</u>	<u>TVs</u>
$1,500 \text{ units} \div 2,000 \text{ units} = 75\%$	$500 \text{ units} \div 2,000 \text{ units} = 25\%$

Illustration 20-13

Sales mix as a percentage of units sold

That is, 75% of the 2,000 units sold are camcorders, and 25% of the 2,000 units sold are TVs.

Illustration 20-14 shows additional information related to Vargo. The unit contribution margin for camcorders is \$200, and for TVs it is \$500. Vargo's fixed costs total \$275,000.

<u>Unit Data</u>	<u>Camcorders</u>	<u>TVs</u>
Selling price	\$500	\$1,000
Variable costs	300	500
Contribution margin	<u>\$200</u>	<u>\$500</u>
Sales mix—units	75%	25%
Fixed costs = \$275,000		

Illustration 20-14

Per unit data—sales mix

To compute break-even for Vargo, we must determine the weighted-average unit contribution margin for the two products. We use the **weighted-average** contribution margin because Vargo sells three times as many camcorders as TVs. As a result, in determining an average unit contribution margin, three times as much weight should be placed on the contribution margin of the camcorders as on the TVs. Therefore, the camcorders must be counted three times for every TV sold. The weighted-average contribution margin for a sales mix of 75% camcorders and 25% TVs is \$275, which is computed as follows.

Illustration 20-15

Weighted-average unit contribution margin

Camcorders			TVs			=	Weighted-Average Unit Contribution Margin	
Unit Contribution Margin	×	Sales Mix Percentage	Unit Contribution Margin	×	Sales Mix Percentage			
(\$200)	×	.75)	+	(\$500	×	.25)	=	\$275

Similar to our calculation in the single-product setting, we can compute the break-even point in units by dividing the fixed costs by the weighted-average unit contribution margin of \$275. The computation of break-even sales in units for Vargo Video, assuming \$275,000 of fixed costs, is as follows.

Illustration 20-16

Break-even point in units

Fixed Costs	÷	Weighted-Average Unit Contribution Margin	=	Break-Even Point in Units
\$275,000	÷	\$275	=	1,000 units

Illustration 20-16 shows the break-even point for Vargo is 1,000 units—camcorders and TVs combined. Management needs to know how many of the 1,000 units sold are camcorders and how many are TVs. Applying the sales mix percentages that we computed previously of 75% for camcorders and 25% for TVs, these 1,000 units would be comprised of 750 camcorders (.75 × 1,000 units) and 250 TVs (.25 × 1,000). This can be verified by the computations in Illustration 20-17, which shows that the total contribution margin is \$275,000 when 1,000 units are sold, which equals the fixed costs of \$275,000.

Illustration 20-17

Break-even proof—sales units

Product	Unit Sales	×	Unit Contribution Margin	=	Total Contribution Margin
Camcorders	750	×	\$200	=	\$ 150,000
TVs	250	×	500	=	125,000
	1,000				\$275,000

Management should continually review the company's sales mix. At any level of units sold, **net income will be greater if higher contribution margin units are sold rather than lower contribution margin units.** For Vargo, the TVs produce the higher contribution margin. Consequently, if Vargo sells 300 TVs and 700 camcorders, net income would be higher than in the current sales mix even though total units sold are the same.

An analysis of these relationships shows that a shift from low-margin sales to high-margin sales may increase net income even though there is a decline in total units sold. Likewise, a shift from high- to low-margin sales may result in a decrease in net income even though there is an increase in total units sold.

Break-Even Sales in Dollars

The calculation of the break-even point presented for Vargo Video in the previous section works well if a company has only a *small number* of products. In contrast, consider **3M**, the maker of Post-it Notes, which has more than 30,000 products. In order to calculate the break-even point for 3M using a weighted-average unit contribution margin, we would need to calculate 30,000 different unit contribution margins. That is not realistic.

Therefore, for a company with many products, we calculate the break-even point in terms of sales dollars (rather than units sold), using sales information for divisions or product lines (rather than individual products). This requires that we compute both sales mix as a percentage of total dollar sales (rather than units sold) and the contribution margin ratio (rather than unit contribution margin).

To illustrate, suppose that Kale Garden Supply Company has two divisions—Indoor Plants and Outdoor Plants. Each division has hundreds of different types of plants and plant-care products. Illustration 20-18 provides information necessary for determining the sales mix percentages for the two divisions of Kale Garden Supply.

	Indoor Plant Division	Outdoor Plant Division	Company Total
Sales	\$ 200,000	\$ 800,000	\$1,000,000
Variable costs	120,000	560,000	680,000
Contribution margin	<u>\$ 80,000</u>	<u>\$ 240,000</u>	<u>\$ 320,000</u>
Sales mix percentage (Division sales ÷ Total sales)	$\frac{\$ 200,000}{\$1,000,000} = .20$	$\frac{\$ 800,000}{\$1,000,000} = .80$	

Illustration 20-18
Cost-volume-profit data
for Kale Garden Supply

As shown in Illustration 20-19, the contribution margin ratio for the combined company is 32%, which is computed by dividing the total contribution margin by total sales.

	Indoor Plant Division	Outdoor Plant Division	Company Total
Contribution margin ratio (Contribution margin ÷ Sales)	$\frac{\$ 80,000}{\$200,000} = .40$	$\frac{\$240,000}{\$800,000} = .30$	$\frac{\$ 320,000}{\$1,000,000} = .32$

Illustration 20-19
Contribution margin ratio
for each division

It is useful to note that the contribution margin ratio of 32% for the total company is a weighted average of the individual contribution margin ratios of the two divisions (40% and 30%). To illustrate, in Illustration 20-20 we multiply each division's contribution margin ratio by its sales mix percentage, based on dollar sales, and then total these amounts. The calculation in Illustration 20-20 is useful because it enables us to determine how the break-even point changes when the sales mix changes.

Illustration 20-20
Calculation of weighted-
average contribution margin

<u>Indoor Plant Division</u>			<u>Outdoor Plant Division</u>			Weighted- Average Contribution Margin Ratio
(Contribution Margin Ratio	× Sales Mix Percentage)		(Contribution Margin Ratio	× Sales Mix Percentage)	=	
(.40	× .20)	+	(.30	× .80)	=	.32

Kale Garden Supply's break-even point in dollars is then computed by dividing its fixed costs of \$300,000 by the weighted-average contribution margin ratio of 32%, as shown in Illustration 20-21 (page 932).

Illustration 20-21

Calculation of break-even point in dollars

Fixed Costs	÷	Weighted-Average Contribution Margin Ratio	=	Break-Even Point in Dollars
\$300,000	÷	.32	=	\$937,500

The break-even point is based on the sales mix of 20% to 80%. We can determine the amount of sales contributed by each division by multiplying the sales mix percentage of each division by the total sales figure. Of the company's total break-even sales of \$937,500, a total of \$187,500 ($.20 \times \$937,500$) will come from the Indoor Plant Division, and \$750,000 ($.80 \times \$937,500$) will come from the Outdoor Plant Division.

What would be the impact on the break-even point if a higher percentage of Kale Garden Supply's sales were to come from the Indoor Plant Division? Because the Indoor Plant Division enjoys a higher contribution margin ratio, this change in the sales mix would result in a higher weighted-average contribution margin ratio and consequently a lower break-even point in dollars. For example, if the sales mix changes to 50% for the Indoor Plant Division and 50% for the Outdoor Plant Division, the weighted-average contribution margin ratio would be 35% [$(.40 \times .50) + (.30 \times .50)$]. The new, lower, break-even point is \$857,143 ($\$300,000 \div .35$). The opposite would occur if a higher percentage of sales were expected from the Outdoor Plant Division. As you can see, the information provided using CVP analysis can help managers better understand the impact of sales mix on profitability.

Service Company Insight **Zoom Kitchen**

dem10/iStockphoto

Healthy for You, and Great for the Bottom Line

Zoom Kitchen, a chain of restaurants in the Chicago area, was known for serving sizable portions of meat and potatoes. But the company's management was quite pleased when salad sales increased from 18% of its sales mix to 40%. Why were they pleased? Because the contribution margin on salads was much higher than on

meat. The restaurant made a conscious effort to encourage people to buy more salads by offering an interesting assortment of salad ingredients including jicama, beets, marinated mushrooms, grilled tuna, and carved turkey. Management had to be very sensitive to contribution margin as opening up a new Zoom Kitchen restaurant was very costly.

Source: Amy Zuber, "Salad Sales 'Zoom' at Meat-and-Potatoes Specialist," *Nation's Restaurant News* (November 12, 2001), p. 26.

Why do you suppose restaurants are so eager to sell beverages and desserts? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT! **2** Sales Mix Break-Even

Manzeck Bicycles International produces and sells three different types of mountain bikes. Information regarding the three models is shown below.

	Pro	Intermediate	Standard	Total
Units sold	5,000	10,000	25,000	40,000
Selling price	\$800	\$500	\$350	
Variable costs	\$500	\$300	\$250	

The company's total fixed costs to produce the bicycles are \$7,500,000.

Action Plan

- ✓ The sales mix is the relative percentage of each product sold in units.
- ✓ The weighted-average unit contribution margin is the sum of the unit contribution margins multiplied by the respective sales mix percentage.

- (a) Determine the sales mix as a function of units sold for the three products.
- (b) Determine the weighted-average unit contribution margin.
- (c) Determine the total number of units that the company must sell to break even.
- (d) Determine the number of units of each model that the company must sell to break even.

Solution

(a) The sales mix percentages as a function of units sold are:

<u>Pro</u>	<u>Intermediate</u>	<u>Standard</u>
$5,000/40,000 = 12.5\%$	$10,000/40,000 = 25\%$	$25,000/40,000 = 62.5\%$

(b) The weighted-average unit contribution margin is:

$$[.125 \times (\$800 - \$500)] + [.25 \times (\$500 - \$300)] + [.625 \times (\$350 - \$250)] = \$150$$

(c) The break-even point in units is:

$$\$7,500,000 \div \$150 = 50,000 \text{ units}$$

(d) The break-even units to sell for each product are:

Pro:	$50,000 \text{ units} \times 12.5\% =$	6,250 units
Intermediate:	$50,000 \text{ units} \times 25\% =$	12,500 units
Standard:	$50,000 \text{ units} \times 62.5\% =$	<u>31,250 units</u>
		<u>50,000 units</u>

Related exercise material: **BE20-7, BE20-8, BE20-9, BE20-10, E20-6, E20-7, E20-8, E20-9, E20-10, and DOB 20-2.**

Action Plan (cont.)

- ✓ Determine the break-even point in units by dividing the fixed costs by the weighted-average unit contribution margin.
- ✓ Determine the number of units of each model to sell by multiplying the total break-even units by the respective sales mix percentage for each product.

LEARNING OBJECTIVE**3****Determine sales mix when a company has limited resources.**

In the previous discussion, we assumed a certain sales mix and then determined the break-even point given that sales mix. We now discuss how limited resources influence the sales-mix decision.

All companies have resource limitations. The limited resource may be floor space in a retail department store, or raw materials, direct labor hours, or machine capacity in a manufacturing company. When a company has limited resources, management must decide which products to make and sell in order to maximize net income.

To illustrate, recall that Vargo Video manufactures camcorders and TVs. The limiting resource is machine capacity, which is 3,600 hours per month. Relevant data consist of the following.

	<u>Camcorders</u>	<u>TVs</u>
Unit contribution margin	\$200	\$500
Machine hours required per unit	.2	.625

Illustration 20-22

Contribution margin and machine hours

The TVs may appear to be more profitable since they have a higher unit contribution margin (\$500) than the camcorders (\$200). However, the camcorders take fewer machine hours to produce than the TVs. Therefore, it is necessary to find the **contribution margin per unit of limited resource**—in this case, contribution margin per machine hour. This is obtained by dividing the unit contribution margin of each product by the number of units of the limited resource required for each product, as shown in Illustration 20-23.

Helpful Hint

CM alone is not enough to make this decision. The key factor is CM per unit of limited resource.

	<u>Camcorders</u>	<u>TVs</u>
Unit contribution margin (a)	\$200	\$500
Machine hours required (b)	0.2	0.625
Contribution margin per unit of limited resource [(a) ÷ (b)]	\$1,000	\$800

Illustration 20-23

Contribution margin per unit of limited resource

The computation shows that the camcorders have a higher contribution margin per unit of limited resource. This would suggest that, given sufficient demand for camcorders, Vargo should shift the sales mix to produce more camcorders or increase machine capacity.

As indicated in Illustration 20-23, the constraint for the production of the TVs is the larger number of machine hours needed to produce them. In addressing this problem, we have taken the limited number of machine hours as a given and have attempted to maximize the contribution margin given the constraint. One question that Vargo should ask, however, is whether this constraint can be reduced or eliminated. If Vargo is able to increase machine capacity from 3,600 hours to 4,200 hours, the additional 600 hours could be used to produce either the camcorders or TVs. The total contribution margin under each alternative is found by multiplying the machine hours by the contribution margin per unit of limited resource, as shown below.

Illustration 20-24
Incremental analysis—
computation of total
contribution margin

	<u>Camcorders</u>	<u>TVs</u>
Machine hours (a)	600	600
Contribution margin per unit of limited resource (b)	\$ 1,000	\$ 800
Contribution margin [(a) × (b)]	<u>\$600,000</u>	<u>\$480,000</u>

From this analysis, we can see that to maximize net income, all of the increased capacity should be used to make and sell the camcorders.

Vargo's manufacturing constraint might be due to a bottleneck in production or to poorly trained machine operators. In addition to finding ways to solve those problems, the company should consider other possible solutions, such as outsourcing part of the production, acquiring additional new equipment (discussed in Chapter 26), or striving to eliminate any non-value-added activities (see Chapter 18). As discussed in Chapter 15, this approach to evaluating constraints is referred to as the theory of constraints. The **theory of constraints** is a specific approach used to identify and manage constraints in order to achieve the company's goals. According to this theory, a company must continually identify its constraints and find ways to reduce or eliminate them, where appropriate.

Management Insight **Macy's**

Liv Friis-Larsen/iStockphoto

Something Smells

When fragrance sales went flat, retailers such as **Macy's** turned up the heat on fragrance manufacturers. They reduced the amount of floor space devoted to fragrances, leaving fragrance manufacturers fighting each other for the smaller space. The retailer doesn't just choose

the fragrance with the highest contribution margin. Instead, it chooses the fragrance with the highest contribution margin per square foot for a given period of time. In this game, a product with a lower contribution margin, but a higher turnover, could well be the winner.

What is the limited resource for a retailer, and what implications does this have for sales mix? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!**3****Sales Mix with Limited Resources**

Carolina Corporation manufactures and sells three different types of high-quality sealed ball bearings for mountain bike wheels. The bearings vary in terms of their quality specifications—primarily with respect to their smoothness and roundness. They are referred to as Fine, Extra-Fine, and Super-Fine bearings. Machine time is limited. More machine time is required to manufacture the Extra-Fine and Super-Fine bearings. Additional information is provided below.

	Product		
	Fine	Extra-Fine	Super-Fine
Selling price	\$6.00	\$10.00	\$16.00
Variable costs and expenses	4.00	6.50	11.00
Contribution margin	<u>\$2.00</u>	<u>\$ 3.50</u>	<u>\$ 5.00</u>
Machine hours required	0.02	0.04	0.08

- Ignoring the machine time constraint, what strategy would appear optimal?
- What is the contribution margin per unit of limited resource for each type of bearing?
- If additional machine time could be obtained, how should the additional capacity be used?

Solution

- The Super-Fine bearings have the highest unit contribution margin. Thus, ignoring any manufacturing constraints, it would appear that the company should shift toward production of more Super-Fine units.
- The contribution margin per unit of limited resource (machine hours) is calculated as:

	Fine	Extra-Fine	Super-Fine
Unit contribution margin	\$2	\$3.5	\$5
Limited resource consumed per unit	.02 = \$100	.04 = \$87.50	.08 = \$62.50

- The Fine bearings have the highest contribution margin per unit of limited resource even though they have the lowest unit contribution margin. Given the resource constraint, any additional capacity should be used to make Fine bearings.

Related exercise material: **BE20-11, BE20-12, E20-11, E20-12, E20-13, and DO IT! 20-3.**

Action Plan

- ✓ Calculate the contribution margin per unit of limited resource for each product.
- ✓ Apply the formula for the contribution margin per unit of limited resource.
- ✓ To maximize net income, shift sales mix to the product with the highest contribution margin per unit of limited resource.

LEARNING OBJECTIVE**4****Indicate how operating leverage affects profitability.**

Cost structure refers to the relative proportion of fixed versus variable costs that a company incurs. Cost structure can have a significant effect on profitability. For example, computer equipment manufacturer **Cisco Systems** has substantially reduced its fixed costs by choosing to outsource much of its production. By minimizing its fixed costs, Cisco is now less susceptible to economic swings. However, as the following discussion shows, its reduced reliance on fixed costs has also reduced its ability to experience the incredible profitability that it used to have during economic booms.

The choice of cost structure should be carefully considered. There are many ways that companies can influence their cost structure. For example, by acquiring sophisticated robotic equipment, many companies have reduced their use of manual labor. Similarly, some brokerage firms, such as **E*Trade**, have reduced their reliance on human brokers and have instead invested heavily in computers and online technology. In so doing, they have increased their reliance on fixed costs (through depreciation on the robotic equipment or computer equipment)

and reduced their reliance on variable costs (the variable employee labor cost). Alternatively, some companies have reduced their fixed costs and increased their variable costs by outsourcing their production. **Nike**, for example, does very little manufacturing but instead outsources the manufacture of nearly all of its shoes. It has consequently converted many of its fixed costs into variable costs and therefore changed its cost structure.

Consider the following example of Vargo Video and one of its competitors, New Wave Company. Both make camcorders. Vargo uses a traditional, labor-intensive manufacturing process. New Wave has invested in a completely automated system. The factory employees are involved only in setting up, adjusting, and maintaining the machinery. Illustration 20-25 shows CVP income statements for each company.

Illustration 20-25
CVP income statements
for two companies

	Vargo Video	New Wave Company
Sales	\$800,000	\$800,000
Variable costs	480,000	160,000
Contribution margin	320,000	640,000
Fixed costs	200,000	520,000
Net income	<u>\$120,000</u>	<u>\$120,000</u>

Both companies have the same sales and the same net income. However, because of the differences in their cost structures, they differ greatly in the risks and rewards related to increasing or decreasing sales. Let's evaluate the impact of cost structure on the profitability of the two companies.

Effect on Contribution Margin Ratio

First let's look at the contribution margin ratio. Illustration 20-26 shows the computation of the contribution margin ratio for each company.

Illustration 20-26
Contribution margin ratio
for two companies

	Contribution Margin	÷	Sales	=	Contribution Margin Ratio
Vargo Video	\$320,000	÷	\$800,000	=	.40
New Wave	\$640,000	÷	\$800,000	=	.80

Because of its lower variable costs, New Wave has a contribution margin ratio of 80% versus only 40% for Vargo Video. That means that with every dollar of sales, New Wave generates 80 cents of contribution margin (and thus an 80-cent increase in net income), versus only 40 cents for Vargo. However, it also means that for every dollar that sales decline, New Wave loses 80 cents in net income, whereas Vargo will lose only 40 cents. New Wave's cost structure, which relies more heavily on fixed costs, makes it more sensitive to changes in sales revenue.

Effect on Break-Even Point

The difference in cost structure also affects the break-even point. The break-even point for each company is calculated in Illustration 20-27.

Illustration 20-27
Computation of break-even
point for two companies

	Fixed Costs	÷	Contribution Margin Ratio	=	Break-Even Point in Dollars
Vargo Video	\$200,000	÷	.40	=	\$500,000
New Wave	\$520,000	÷	.80	=	\$650,000

New Wave needs to generate \$150,000 (\$650,000 – \$500,000) more in sales than Vargo Video before it breaks even. This makes New Wave riskier than Vargo because a company cannot survive for very long unless it at least breaks even.

Effect on Margin of Safety Ratio

We can also evaluate the relative impact that changes in sales would have on the two companies by computing the margin of safety ratio. Illustration 20-28 shows the computation of the **margin of safety ratio** for the two companies.

	(Actual Sales	–	Break-Even Sales) ÷	Actual Sales	=	Margin of Safety Ratio
Vargo Video	(\$800,000	–	\$500,000)	÷	\$800,000	=	.38	
New Wave	(\$800,000	–	\$650,000)	÷	\$800,000	=	.19	

Illustration 20-28

Computation of margin of safety ratio for two companies

The difference in the margin of safety ratio also reflects the difference in risk between the two companies. Vargo Video could sustain a 38% decline in sales before it would be operating at a loss. New Wave could sustain only a 19% decline in sales before it would be “in the red.”

Operating Leverage

Operating leverage refers to the extent to which a company’s net income reacts to a given change in sales. Companies that have higher fixed costs relative to variable costs have higher operating leverage. When a company’s sales revenue is increasing, high operating leverage is a good thing because it means that profits will increase rapidly. But when sales are declining, too much operating leverage can have devastating consequences.

DEGREE OF OPERATING LEVERAGE

How can we compare operating leverage between two companies? The **degree of operating leverage** provides a measure of a company’s earnings volatility and can be used to compare companies. Degree of operating leverage is computed by dividing contribution margin by net income. This formula is presented in Illustration 20-29 and applied to our two manufacturers of camcorders.

	Contribution Margin	÷	Net Income	=	Degree of Operating Leverage
Vargo Video	\$320,000	÷	\$120,000	=	2.67
New Wave	\$640,000	÷	\$120,000	=	5.33

Illustration 20-29

Computation of degree of operating leverage

New Wave’s earnings would go up (or down) by about two times ($5.33 \div 2.67 = 2.00$) as much as Vargo Video’s with an equal increase (or decrease) in sales. For example, suppose both companies experience a 10% decrease in sales. Vargo’s net income will decrease by 26.7% ($2.67 \times 10\%$), while New Wave’s will decrease by 53.3% ($5.33 \times 10\%$). Thus, New Wave’s higher operating leverage exposes it to greater earnings volatility risk.

You should be careful not to conclude from this analysis that a cost structure that relies on higher fixed costs, and consequently has higher operating leverage, is necessarily bad. Some have suggested that Internet radio company **Pandora** has limited potential for growth in its profitability because it has very little operating leverage. When its revenues grow, its variable costs (fees it pays for the right to use music) grow proportionally. When used carefully, operating leverage can add considerably to a company’s profitability. For example, computer equipment manufacturer **Komag** enjoyed a 66% increase in net income when its sales

increased by only 8%. As one commentator noted, “Komag’s fourth quarter illustrates the company’s significant operating leverage; a small increase in sales leads to a big profit rise.” However, as our illustration demonstrates, increased reliance on fixed costs increases a company’s risk.

Service Company Insight Burlington Northern Railroad

Michele Wassell/Age Fotostock America, Inc.

There Is Something About a Train

A few years ago, Warren Buffett, arguably the most successful investor in history, bought a new train set—for \$44 billion.

The sage from Omaha

bought **Burlington Northern Railroad** for a price that exceeded its fair value by 31%. At a time when the rest of the investing public was obsessed with technology companies like **Facebook** and **Twitter**, what could Buffett possibly see in a railroad? What he sees is a business whose costs are

between 50–60% fixed. With such high fixed costs, railways have huge operating leverage. And because he bought the railroad at the bottom of a recession, when the economy turns around, Burlington could take off as well. Add to that the fact that railroad transport is very energy-efficient, and it has high barriers to entry. So, as energy prices increase, more people will turn to the rails, but there are a limited number of railways. Makes sense to me.

Source: Liam Denning, “Buffett’s Unusual Train of Thought,” *Wall Street Journal* (November 4, 2009).

Why did Warren Buffett think that this was a good time to invest in railroad stocks? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT! 4 Operating Leverage

Rexfield Corp., a company specializing in crime scene investigations, is contemplating an investment in automated mass-spectrometers. Its current process relies on a high number of lab technicians. The new equipment would employ a computerized expert system. The company’s CEO has requested a comparison of the old technology versus the new technology. The accounting department has prepared the following CVP income statements for use in your analysis.

	CSI Equipment	
	Old	New
Sales	\$2,000,000	\$2,000,000
Variable costs	1,400,000	600,000
Contribution margin	600,000	1,400,000
Fixed costs	400,000	1,200,000
Net income	\$ 200,000	\$ 200,000

Use the information provided above to do the following.

- Compute the degree of operating leverage for the company under each scenario.
- Discuss your results.

Solution

Action Plan

- ✓ Divide contribution margin by net income to determine degree of operating leverage.
- ✓ A higher degree of operating leverage will result in a higher change in net income with a given change in sales.

(a)	Contribution Margin	÷	Net Income	=	Degree of Operating Leverage		
	Old		\$600,000	÷	\$200,000	=	3
	New		\$1,400,000	÷	\$200,000	=	7

- The degree of operating leverage measures the company’s sensitivity to changes in sales. By switching to a cost structure dominated by fixed costs, the company would significantly increase its operating leverage. As a result, with a percentage change in sales, its percentage change in net income would be 2.33 ($7 \div 3$) times as much with the new technology as it would under the old.

LEARNING
OBJECTIVE

5

APPENDIX 20A: Explain the differences between absorption costing and variable costing.

In the earlier chapters, we classified both variable and fixed manufacturing costs as product costs. In job order costing, for example, a job is assigned the costs of direct materials, direct labor, and **both** variable and fixed manufacturing overhead. This costing approach is referred to as **full** or **absorption costing**. It is so named because all manufacturing costs are charged to, or absorbed by, the product. Absorption costing is the approach used for external reporting under generally accepted accounting principles.

An alternative approach is to use **variable costing**. Under variable costing, only direct materials, direct labor, and variable manufacturing overhead costs are considered product costs. Companies recognize fixed manufacturing overhead costs as period costs (expenses) when incurred. The difference between absorption costing and variable costing is shown graphically as follows.

**Illustration 20A-1**

Difference between absorption costing and variable costing

Under both absorption and variable costing, selling and administrative expenses are period costs.

Companies may not use variable costing for external financial reports because generally accepted accounting principles require that fixed manufacturing overhead be accounted for as a product cost.

Example Comparing Absorption Costing with Variable Costing

To illustrate absorption and variable costing, assume that Premium Products Corporation manufactures a polyurethane sealant, called Fix-It, for car windshields. Relevant data for Fix-It in January 2017, the first month of production, are shown in Illustration 20A-2.

Selling price	\$20 per unit.
Units	Produced 30,000; sold 20,000; beginning inventory zero.
Variable unit costs	Manufacturing \$9 (direct materials \$5, direct labor \$3, and variable overhead \$1).
	Selling and administrative expenses \$2.
Fixed costs	Manufacturing overhead \$120,000.
	Selling and administrative expenses \$15,000.

Illustration 20A-2

Sealant sales and cost data for Premium Products Corporation

The per unit manufacturing cost under each costing approach is computed in Illustration 20A-3.

Type of Cost	Absorption Costing	Variable Costing
Direct materials	\$ 5	\$5
Direct labor	3	3
Variable manufacturing overhead	1	1
Fixed manufacturing overhead (\$120,000 ÷ 30,000 units produced)	4	0
Manufacturing cost per unit	<u>\$13</u>	<u>\$9</u>

Illustration 20A-3

Computation of per unit manufacturing cost

The manufacturing cost per unit is \$4 higher (\$13 – \$9) for absorption costing. This occurs because fixed manufacturing overhead costs are a product cost under

absorption costing. Under variable costing, they are, instead, a period cost, and so they are expensed. Based on these data, each unit sold and each unit remaining in inventory is costed under absorption costing at \$13 and under variable costing at \$9.

ABSORPTION COSTING EXAMPLE

Illustration 20A-4 shows the income statement for Premium Products using absorption costing. It shows that cost of goods manufactured is \$390,000, computed by multiplying the 30,000 units produced times the manufacturing cost per unit of \$13 (see Illustration 20A-3). Cost of goods sold is \$260,000, after subtracting ending inventory of \$130,000. Under absorption costing, \$40,000 of the fixed overhead (10,000 units \times \$4) is deferred to a future period as part of the cost of ending inventory.

Illustration 20A-4

Absorption costing income statement

Helpful Hint

The income statement format in Illustration 20A-4 is the same as that used under generally accepted accounting principles.

PREMIUM PRODUCTS CORPORATION		
Income Statement		
For the Month Ended January 31, 2017		
Absorption Costing		
Sales (20,000 units \times \$20)		\$400,000
Cost of goods sold		
Inventory, January 1	\$ -0-	
Cost of goods manufactured (30,000 units \times \$13)	<u>390,000</u>	
Cost of goods available for sale	390,000	
Less: Inventory, January 31 (10,000 units \times \$13)	<u>130,000</u>	
Cost of goods sold (20,000 units \times \$13)		<u>260,000</u>
Gross profit		140,000
Variable selling and administrative expenses (20,000 \times \$2)	40,000	
Fixed selling and administrative expenses	<u>15,000</u>	<u>55,000</u>
Net income		<u>\$ 85,000</u>

VARIABLE COSTING EXAMPLE

As Illustration 20A-5 shows, companies use the cost-volume-profit format in preparing a variable costing income statement. The variable manufacturing cost of \$270,000 is computed by multiplying the 30,000 units produced times variable manufacturing cost of \$9 per unit (see Illustration 20A-3). As in absorption costing,

Illustration 20A-5

Variable costing income statement

Helpful Hint

Note the difference in the computation of the ending inventory: \$9 per unit here, \$13 per unit in Illustration 20A-4.

PREMIUM PRODUCTS CORPORATION		
Income Statement		
For the Month Ended January 31, 2017		
Variable Costing		
Sales (20,000 units \times \$20)		\$400,000
Variable cost of goods sold		
Inventory, January 1	\$ -0-	
Variable cost of goods manufactured (30,000 units \times \$9)	<u>270,000</u>	
Variable cost of goods available for sale	270,000	
Less: Inventory, January 31 (10,000 units \times \$9)	<u>90,000</u>	
Variable cost of goods sold	180,000	
Variable selling and administrative expenses (20,000 units \times \$2)	<u>40,000</u>	<u>220,000</u>
Contribution margin		180,000
Fixed manufacturing overhead	120,000	
Fixed selling and administrative expenses	<u>15,000</u>	<u>135,000</u>
Net income		<u>\$ 45,000</u>

both variable and fixed selling and administrative expenses are treated as period costs.

There is one primary difference between variable and absorption costing: Under variable costing, companies charge the fixed manufacturing overhead as an expense in the current period. Fixed manufacturing overhead costs of the current period, therefore, are not deferred to future periods through the ending inventory. As a result, absorption costing will show a **higher net income number** than variable costing **whenever units produced exceed units sold**. This difference can be seen in the income statements in Illustrations 20A-4 and 20A-5. There is a \$40,000 difference in the ending inventories (\$130,000 under absorption costing versus \$90,000 under variable costing). Under absorption costing, \$40,000 of the fixed overhead costs (10,000 units \times \$4) has been deferred to a future period as part of inventory. In contrast, under variable costing, all fixed manufacturing costs are expensed in the current period.

As shown, when units produced exceed units sold, income under absorption costing is *higher*. When units produced are less than units sold, income under absorption costing is *lower*. When units produced and sold are the same, net income will be *equal* under the two costing approaches. In this case, there is no increase in ending inventory. So fixed overhead costs of the current period are not deferred to future periods through the ending inventory.

Net Income Effects

To further illustrate the concepts underlying absorption and variable costing, we will look at an extended example using Overbay Inc., a manufacturer of small airplane drones. We assume that production volume stays the same each year over the 3-year period, but the number of units sold varies each year.

2016 RESULTS

As indicated in Illustration 20A-6, the variable manufacturing cost per drone is \$240,000, and the fixed manufacturing overhead cost per drone is \$60,000 (assuming 10 drones). Total manufacturing cost per drone under absorption costing is therefore \$300,000 (\$240,000 + \$60,000). Overbay also has variable selling and administrative expenses of \$5,000 per drone. The fixed selling and administrative expenses are \$80,000.

	<u>2016</u>	<u>2017</u>	<u>2018</u>
<u>Volume information</u>			
Drones in beginning inventory	0	0	2
Drones produced	10	10	10
Drones sold	10	8	12
Drones in ending inventory	0	2	0
<u>Financial information</u>			
Selling price per drone	\$400,000		
Variable manufacturing cost per drone	\$240,000		
Fixed manufacturing overhead for the year	\$600,000		
Fixed manufacturing overhead per drone	\$ 60,000 (\$600,000 \div 10)		
Variable selling and administrative expenses per drone	\$ 5,000		
Fixed selling and administrative expenses	\$ 80,000		

Illustration 20A-6
Information for Overbay Inc.

An absorption costing income statement for 2016 for Overbay Inc. is shown in Illustration 20A-7.

Illustration 20A-7
Absorption costing income
statement—2016

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2016		
Absorption Costing		
Sales (10 drones × \$400,000)		\$4,000,000
Cost of goods sold (10 drones × \$300,000)		<u>3,000,000</u>
Gross profit		1,000,000
Variable selling and administrative expenses (10 drones × \$5,000)	\$50,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>130,000</u>
Net income		<u>\$ 870,000</u>

Overbay reports net income of \$870,000 under absorption costing.

Under a variable costing system, the income statement follows a cost-volume-profit (CVP) format. In this case, the manufacturing cost is comprised solely of the variable manufacturing costs of \$240,000 per drone. The fixed manufacturing overhead costs of \$600,000 for the year are expensed in 2016. As in absorption costing, the fixed and variable selling and administrative expenses are period costs expensed in 2016. A variable costing income statement for Overbay Inc. for 2016 is shown in Illustration 20A-8.

Illustration 20A-8
Variable costing income
statement—2016

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2016		
Variable Costing		
Sales (10 drones × \$400,000)		\$4,000,000
Variable cost of goods sold (10 drones × \$240,000)	\$2,400,000	
Variable selling and administrative expenses (10 drones × \$5,000)	<u>50,000</u>	<u>2,450,000</u>
Contribution margin		1,550,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>680,000</u>
Net income		<u>\$ 870,000</u>

As shown in Illustration 20A-8, the variable costing net income of \$870,000 is the same as the absorption costing net income computed in Illustration 20A-7. **When the numbers of units produced and sold are the same, net income is equal under the two costing approaches.** Because no increase in ending inventory occurs, no fixed manufacturing overhead costs incurred in 2016 are deferred to future periods using absorption costing.

2017 RESULTS

In 2017, Overbay produced 10 drones but sold only eight drones. As a result, there are two drones in ending inventory. The absorption costing income statement for 2017 is shown in Illustration 20A-9.

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2017		
Absorption Costing		
Sales (8 drones × \$400,000)		\$3,200,000
Cost of goods sold (8 drones × \$300,000)		<u>2,400,000</u>
Gross profit		800,000
Variable selling and administrative expenses (8 drones × \$5,000)	\$40,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>120,000</u>
Net income		<u>\$ 680,000</u>

Illustration 20A-9
Absorption costing income
statement—2017

Under absorption costing, the ending inventory of two drones is \$600,000 ($\$300,000 \times 2$). Each unit of ending inventory includes \$60,000 of fixed manufacturing overhead. Therefore, fixed manufacturing overhead costs of \$120,000 ($\$60,000 \times 2$ drones) are deferred until a future period.

The variable costing income statement for 2017 is shown in Illustration 20A-10.

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2017		
Variable Costing		
Sales (8 drones × \$400,000)		\$3,200,000
Variable cost of goods sold (8 drones × \$240,000)	\$1,920,000	
Variable selling and administrative expenses (8 drones × \$5,000)	<u>40,000</u>	<u>1,960,000</u>
Contribution margin		1,240,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>680,000</u>
Net income		<u>\$ 560,000</u>

Illustration 20A-10
Variable costing income
statement—2017

As shown, when units produced (10) exceeds units sold (8), net income under absorption costing (\$680,000) is higher than net income under variable costing (\$560,000). The reason: The cost of the ending inventory is higher under absorption costing than under variable costing. In 2017, under absorption costing, fixed manufacturing overhead of \$120,000 is deferred and carried to future periods as part of inventory. Under variable costing, the \$120,000 is expensed in the current period and, therefore the difference in the two net income numbers is \$120,000 ($\$680,000 - \$560,000$).

2018 RESULTS

In 2018, Overbay produced 10 drones and sold 12 (10 drones from the current year's production and 2 drones from the beginning inventory). As a result, there are no drones in ending inventory. The absorption costing income statement for 2018 is shown in Illustration 20A-11 (page 944).

Illustration 20A-11

Absorption costing income statement—2018

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2018		
Absorption Costing		
Sales (12 drones × \$400,000)		\$4,800,000
Cost of goods sold (12 drones × \$300,000)		<u>3,600,000</u>
Gross profit		1,200,000
Variable selling and administrative expenses (12 drones × \$5,000)	\$60,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>140,000</u>
Net income		<u><u>\$1,060,000</u></u>

Fixed manufacturing costs of \$720,000 ($\$60,000 \times 12$ drones) are expensed as part of cost of goods sold in 2018. This \$720,000 includes \$120,000 of fixed manufacturing costs incurred during 2017 and included in beginning inventory, plus \$600,000 of fixed manufacturing costs incurred during 2018. Given this result for the absorption costing statement, what would you now expect the result to be under variable costing? Let's take a look.

The variable costing income statement for 2018 is shown in Illustration 20A-12.

Illustration 20A-12

Variable costing income statement—2018

OVERBAY INC.		
Income Statement		
For the Year Ended December 31, 2018		
Variable Costing		
Sales (12 drones × \$400,000)		\$4,800,000
Variable cost of goods sold (12 drones × \$240,000)	\$2,880,000	
Variable selling and administrative expenses (12 drones × \$5,000)	<u>60,000</u>	<u>2,940,000</u>
Contribution margin		1,860,000
Fixed manufacturing overhead	600,000	
Fixed selling and administrative expenses	<u>80,000</u>	<u>680,000</u>
Net income		<u><u>\$1,180,000</u></u>

When drones produced (10) are less than drones sold (12), net income under absorption costing (\$1,060,000) is less than net income under variable costing (\$1,180,000). This difference of \$120,000 ($\$1,180,000 - \$1,060,000$) results because \$120,000 of fixed manufacturing overhead costs in beginning inventory are charged to 2018 under absorption costing. Under variable costing, there is no fixed manufacturing overhead cost in beginning inventory.

Illustration 20A-13 summarizes the results of the three years.

Illustration 20A-13

Comparison of net income under two costing approaches

	Net Income under Two Costing Approaches		
	2016	2017	2018
	Production = Sales	Production > Sales	Production < Sales
Absorption costing	\$870,000	\$ 680,000	\$1,060,000
Variable costing	<u>870,000</u>	<u>560,000</u>	<u>1,180,000</u>
Difference	<u><u>\$ -0-</u></u>	<u><u>\$120,000</u></u>	<u><u>\$(120,000)</u></u>

This relationship between production and sales and its effect on net income under the two costing approaches is shown graphically in Illustration 20A-14.

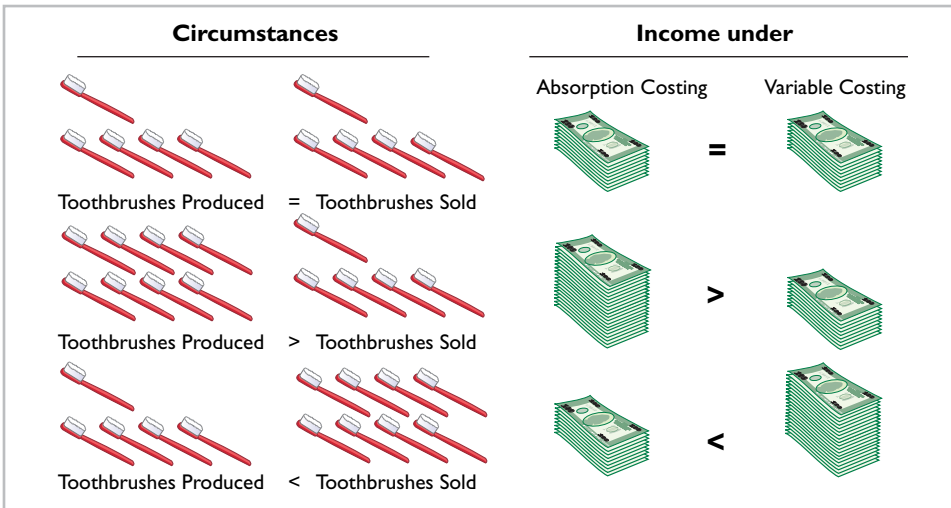

Illustration 20A-14
Summary of income effects
under absorption costing and
variable costing

Decision-Making Concerns

Generally accepted accounting principles require that absorption costing be used for the costing of inventory for external reporting purposes. Net income measured under GAAP (absorption costing) is often used internally to evaluate performance, justify cost reductions, or evaluate new projects. Some companies, however, have recognized that net income calculated using GAAP does not highlight differences between variable and fixed costs and may lead to poor business decisions. Consequently, these companies use variable costing for internal reporting purposes. The following discussion and example highlight a significant problem related to the use of absorption costing for decision-making purposes.

When production exceeds sales, absorption costing reports a higher net income than variable costing. The reason is that some fixed manufacturing costs are not expensed in the current period but are deferred to future periods as part of inventory. As a result, management may be tempted to overproduce in a given period in order to increase net income. Although net income will increase, this decision to overproduce may not be in the company's best interest.

Suppose, for example, a division manager's compensation is based upon the division's net income. In such a case, the manager may decide to meet the net income targets by increasing production. While this overproduction may increase the manager's compensation, the buildup of inventories in the long run will lead to additional costs to the company. Variable costing avoids this situation because net income under variable costing is unaffected by changes in production levels, as the following illustration shows.

Warren Lund, a division manager of Walker Enterprises, is under pressure to boost the performance of the Lighting Division in 2017. Unfortunately, recent profits have not met expectations. The expected sales for this year are 20,000 units. As he plans for the year, Warren has to decide whether to produce 20,000 or 30,000 units. The following facts are available for the division.

Illustration 20A-15Facts for Lighting
Division—2017

Beginning inventory	0
Expected sales in units	20,000
Selling price per unit	\$15
Variable manufacturing cost per unit	\$6
Fixed manufacturing overhead cost (total)	\$60,000
Fixed manufacturing overhead costs per unit	
Based on 20,000 units	\$3 per unit (\$60,000 ÷ 20,000 units)
Based on 30,000 units	\$2 per unit (\$60,000 ÷ 30,000 units)
Total manufacturing cost per unit	
Based on 20,000 units	\$9 per unit (\$6 variable + \$3 fixed)
Based on 30,000 units	\$8 per unit (\$6 variable + \$2 fixed)
Variable selling and administrative expenses per unit	\$1
Fixed selling and administrative expenses	\$15,000

Illustration 20A-16 presents the division's results based upon the two possible levels of output under absorption costing.

Illustration 20A-16Absorption costing income
statement—2017

LIGHTING DIVISION		
Income Statement		
For the Year Ended December 31, 2017		
Absorption Costing		
	20,000	30,000
	Produced	Produced
Sales (20,000 units × \$15)	\$300,000	\$ 300,000
Cost of goods sold	<u>180,000*</u>	<u>160,000**</u>
Gross profit	120,000	140,000
Variable selling and administrative expenses (20,000 units × \$1)	20,000	20,000
Fixed selling and administrative expenses	<u>15,000</u>	<u>15,000</u>
Net income	<u>\$ 85,000</u>	<u>\$105,000</u>
*20,000 units × \$9		
**20,000 units × \$8		

If the Lighting Division produces 20,000 units, its net income under absorption costing is \$85,000. If it produces 30,000 units, its net income is \$105,000. By producing 30,000 units, the division has inventory of 10,000 units. This excess inventory causes net income to increase \$20,000 because \$20,000 of fixed costs (10,000 units × \$2) are not charged to the current year, but are deferred to future periods.

What do you think Warren Lund might do in this situation? Given his concern about the profit numbers of the Lighting Division, he may be tempted to increase production. Although this increased production will increase 2017 net income, it may be costly to the company in the long run.

Now let's evaluate the same situation under variable costing. Illustration 20A-17 shows a variable costing income statement for production at both 20,000 and 30,000 units, using the information from Illustration 20A-15.

From this example, we see that under variable costing, net income is not affected by the number of units produced. Net income is \$85,000 whether the division produces 20,000 or 30,000 units. Why? Because fixed manufacturing overhead is treated as a period expense. Unlike absorption costing, no fixed manufacturing overhead is deferred through inventory buildup. Therefore, under variable costing, production does not increase income; sales do. As a result, if the

LIGHTING DIVISION		
Income Statement		
For the Year Ended December 31, 2017		
Variable Costing		
	20,000	30,000
	Produced	Produced
Sales (20,000 units × \$15)	\$300,000	\$300,000
Variable cost of goods sold (20,000 units × \$6)	120,000	120,000
Variable selling and administrative expenses (20,000 units × \$1)	<u>20,000</u>	<u>20,000</u>
Contribution margin	160,000	160,000
Fixed manufacturing overhead	60,000	60,000
Fixed selling and administrative expenses	<u>15,000</u>	<u>15,000</u>
Net income	<u>\$ 85,000</u>	<u>\$ 85,000</u>

Illustration 20A-17
Variable costing income
statement—2017

company uses variable costing, managers like Warren Lund cannot affect profitability by increasing production.

Potential Advantages of Variable Costing

Variable costing has a number of potential advantages relative to absorption costing:

1. Net income computed under variable costing is unaffected by changes in production levels. As a result, it is much easier to understand the impact of fixed and variable costs on the computation of net income when variable costing is used.
2. The use of variable costing is consistent with the cost-volume-profit material presented in Chapters 19 and 20.
3. Net income computed under variable costing is closely tied to changes in sales levels (not production levels) and therefore provides a more realistic assessment of the company's success or failure during a period.
4. The presentation of fixed and variable cost components on the face of the variable costing income statement makes it easier to identify these costs and understand their effect on the business. Under absorption costing, the allocation of fixed costs to inventory makes it difficult to evaluate the impact of fixed costs on the company's results.

Companies that use just-in-time processing techniques to minimize their inventories will not have significant differences between absorption and variable costing net income.

DO IT!

5

Variable Costing

Franklin Company produces and sells tennis balls. The following costs are available for the year ended December 31, 2017. The company has no beginning inventory. In 2017, 8,000,000 units were produced, but only 7,500,000 units were sold. The unit selling price was \$0.50 per ball. Costs and expenses were as follows.

Variable costs per unit	
Direct materials	\$0.10
Direct labor	0.05
Variable manufacturing overhead	0.08
Variable selling and administrative expenses	0.02
Annual fixed costs and expenses	
Manufacturing overhead	\$500,000
Selling and administrative expenses	100,000

- (a) Compute the manufacturing cost of one unit of product using variable costing.
- (b) Prepare a 2017 income statement for Franklin Company using variable costing.

Action Plan

- ✓ Recall that under variable costing, only variable manufacturing costs are treated as manufacturing (product) costs.
- ✓ Subtract all fixed costs, both manufacturing overhead and selling and administrative expenses, as period costs.

Solution

(a) The cost of one unit of product under variable costing would be:

Direct materials	\$0.10
Direct labor	0.05
Variable manufacturing overhead	<u>0.08</u>
	<u>\$0.23</u>

(b) The variable costing income statement would be as follows.

FRANKLIN COMPANY		
Income Statement		
For the Year Ended December 31, 2017		
Variable Costing		
Sales (7,500,000 × \$0.50)		\$3,750,000
Variable cost of goods sold (7,500,000 × \$0.23)	\$1,725,000	
Variable selling and administrative expenses (7,500,000 × .02)	<u>150,000</u>	<u>1,875,000</u>
Contribution margin		1,875,000
Fixed manufacturing overhead	500,000	
Fixed selling and administrative expenses	<u>100,000</u>	<u>600,000</u>
Net income		<u>\$1,275,000</u>

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Apply basic CVP concepts.** The CVP income statement classifies costs and expenses as variable or fixed and reports contribution margin in the body of the statement. Contribution margin is the amount of revenue remaining after deducting variable costs. It can be expressed as a per unit amount or as a ratio. The break-even point in units is fixed costs divided by unit contribution margin. The break-even point in dollars is fixed costs divided by the contribution margin ratio. These formulas can also be used to determine units or sales dollars needed to achieve target net income, simply by adding target net income to fixed costs before dividing by the contribution margin. Margin of safety indicates how much sales can decline before the company is operating at a loss. It can be expressed in dollar terms or as a percentage.
- 2 **Explain the term sales mix and its effects on break-even sales.** Sales mix is the relative proportion in which each product is sold when a company sells more than one product. For a company with a small number of products, break-even sales in units is determined by using the weighted-average unit contribution margin of all the products. If the company sells many different products, then calculating the break-even point using unit information is not practical. Instead, in a company with many products, break-even sales in dollars is calculated using the weighted-average contribution margin ratio.
- 3 **Determine sales mix when a company has limited resources.** When a company has limited resources, it is necessary to find the contribution margin per unit of limited resource. This amount is then multiplied by the units of limited resource to determine which product maximizes net income.
- 4 **Indicate how operating leverage affects profitability.** Operating leverage refers to the degree to which a company's net income reacts to a change in sales. Operating leverage is determined by a company's relative use of fixed versus variable costs. Companies with high fixed costs relative to variable costs have high operating leverage. A company with high operating leverage experiences a sharp increase (decrease) in net income with a given increase (decrease) in sales. The degree of operating leverage is measured by dividing contribution margin by net income.

- * **5 Explain the differences between absorption costing and variable costing.** Under absorption costing, fixed manufacturing costs are product costs. Under variable costing, fixed manufacturing costs are period costs.

If production volume exceeds sales volume, net income under absorption costing will exceed net income under variable costing by the amount of fixed manufacturing costs included in ending inventory that results from units produced but not sold during the period. If production volume is less than sales volume, net income

under absorption costing will be less than under variable costing by the amount of fixed manufacturing costs included in the units sold during the period that were not produced during the period.

The use of variable costing is consistent with cost-volume-profit analysis. Net income under variable costing is unaffected by changes in production levels. Instead, it is closely tied to changes in sales. The presentation of fixed costs in the variable costing approach makes it easier to identify fixed costs and to evaluate their impact on the company's profitability.

GLOSSARY REVIEW

- * **Absorption costing** A costing approach in which all manufacturing costs are charged to the product. (p. 939).
- Cost structure** The relative proportion of fixed versus variable costs that a company incurs. (p. 935).
- Degree of operating leverage** A measure of the extent to which a company's net income reacts to a change in sales. It is calculated by dividing contribution margin by net income. (p. 937).
- Operating leverage** The extent to which a company's net income reacts to a change in sales. Operating leverage

is determined by a company's relative use of fixed versus variable costs. (p. 937).

Sales mix The relative percentage in which a company sells its multiple products. (p. 929).

Theory of constraints A specific approach used to identify and manage constraints in order to achieve the company's goals. (p. 934).

* **Variable costing** A costing approach in which only variable manufacturing costs are product costs, and fixed manufacturing costs are period costs (expenses). (p. 939).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Which one of the following is the format of a CVP income statement?
- Sales – Variable costs = Fixed costs + Net income.
 - Sales – Fixed costs – Variable costs – Operating expenses = Net income.
 - Sales – Cost of goods sold – Operating expenses = Net income.
 - Sales – Variable costs – Fixed costs = Net income.
- (LO 1) 2. Croc Catchers calculates its contribution margin to be less than zero. Which statement is **true**?
- Its fixed costs are less than the variable costs per unit.
 - Its profits are greater than its total costs.
 - The company should sell more units.
 - Its selling price is less than its variable costs.
- (LO 1) 3. Which one of the following describes the break-even point?
- It is the point where total sales equal total variable plus total fixed costs.
 - It is the point where the contribution margin equals zero.
 - It is the point where total variable costs equal total fixed costs.
 - It is the point where total sales equal total fixed costs.
- (LO 1) 4. The following information is available for Chap Company.
- | | |
|-------------------------|-----------|
| Sales | \$350,000 |
| Cost of goods sold | \$120,000 |
| Total fixed expenses | \$60,000 |
| Total variable expenses | \$100,000 |
- Which amount would you find on Chap's CVP income statement?
- Contribution margin of \$250,000.
 - Contribution margin of \$190,000.
 - Gross profit of \$230,000.
 - Gross profit of \$190,000.
5. Gabriel Corporation has fixed costs of \$180,000 and variable costs of \$8.50 per unit. It has a target income of \$268,000. How many units must it sell at \$12 per unit to achieve its target net income?
- 51,429 units.
 - 128,000 units.
 - 76,571 units.
 - 21,176 units.
6. Mackey Corporation has fixed costs of \$150,000 and variable costs of \$9 per unit. If sales price per unit is \$12, what is break-even sales in dollars?
- \$200,000.
 - \$450,000.
 - \$480,000.
 - \$600,000.
7. Sales mix is:
- important to sales managers but not to accountants.
 - easier to analyze on absorption costing income statements.
 - a measure of the relative percentage of a company's variable costs to its fixed costs.
 - a measure of the relative percentage in which a company's products are sold.
8. Net income will be:
- greater if more higher-contribution margin units are sold than lower-contribution margin units.
 - greater if more lower-contribution margin units are sold than higher-contribution margin units.
 - equal as long as total sales remain equal, regardless of which products are sold.
 - unaffected by changes in the mix of products sold.

- (LO 3)** 9. If the unit contribution margin is \$15 and it takes 3.0 machine hours to produce the unit, the contribution margin per unit of limited resource is:
 (a) \$25. (c) \$4.
 (b) \$5. (d) None of the above are correct.
- (LO 3)** 10. MEM manufactures two products. Product X has a contribution margin of \$26 and requires 4 hours of machine time. Product Y has a contribution margin of \$14 and requires 2 hours of machine time. Assuming that machine time is limited to 3,000 hours, how should it allocate the machine time to maximize its income?
 (a) Use 1,500 hours to produce X and 1,500 hours to produce Y.
 (b) Use 2,250 hours to produce X and 750 hours to produce Y.
 (c) Use 3,000 hours to produce only X.
 (d) Use 3,000 hours to produce only Y.
- (LO 3)** 11. When a company has a limited resource, it should apply additional capacity of that resource to providing more units of the product or service that has:
 (a) the highest contribution margin.
 (b) the highest selling price.
 (c) the highest gross profit.
 (d) the highest unit contribution margin of that limited resource.
- (LO 4)** 12. The degree of operating leverage:
 (a) can be computed by dividing total contribution margin by net income.
 (b) provides a measure of the company's earnings volatility.
 (c) affects a company's break-even point.
 (d) All of the answer choices are correct.
13. A high degree of operating leverage: **(LO 4)**
 (a) indicates that a company has a larger percentage of variable costs relative to its fixed costs.
 (b) is computed by dividing fixed costs by contribution margin.
 (c) exposes a company to greater earnings volatility risk.
 (d) exposes a company to less earnings volatility risk.
14. Stevens Company has a degree of operating leverage of 3.5 at a sales level of \$1,200,000 and net income of \$200,000. If Stevens' sales fall by 10%, Stevens can be expected to experience a: **(LO 4)**
 (a) decrease in net income of \$70,000.
 (b) decrease in contribution margin of \$7,000.
 (c) decrease in operating leverage of 35%.
 (d) decrease in net income of \$175,000.
- *15. Fixed manufacturing overhead costs are recognized as: **(LO 5)**
 (a) period costs under absorption costing.
 (b) product costs under absorption costs.
 (c) product costs under variable costing.
 (d) part of ending inventory costs under both absorption and variable costing.
- *16. Net income computed under absorption costing will be: **(LO 5)**
 (a) higher than net income computed under variable costing in all cases.
 (b) equal to net income computed under variable costing in all cases.
 (c) higher than net income computed under variable costing when units produced are greater than units sold.
 (d) higher than net income computed under variable costing when units produced are less than units sold.

Solutions

1. **(d)** The format of a CVP income statement is Sales – Variable costs – Fixed costs = Net income. Therefore, choices (a), (b), and (c) are incorrect.
2. **(d)** If contribution margin is less than zero, selling price is less than variable costs. The other choices are incorrect because if contribution margin is less than zero (a) selling price, not fixed costs, is less than variable costs; (b) neither profits or total costs can be determined from the contribution margin amount; and (c) selling more units will only increase the negativity of the contribution margin.
3. **(a)** The break-even point is the point where total sales equal total variable costs plus total fixed costs. Choices (b), (c), and (d) are therefore incorrect.
4. **(a)** The CVP income statement would show Sales (\$350,000) – Total variable expenses (\$100,000) = Contribution margin (\$250,000), not (b) contribution margin of \$190,000. Choices (c) and (d) are incorrect because gross profit does not appear on a CVP income statement.
5. **(b)** Required sales in units to achieve net income = $(\$180,000 + \$268,000) / (\$12 - \$8.50) = 128,000$ units, not (a) 51,429 units, (c) 76,571 units, or (d) 21,176 units.
6. **(d)** Fixed costs $(\$150,000) \div$ Contribution margin ratio $(\$3 \div \$12) = \$600,000$, not (a) \$200,000, (b) \$450,000, or (c) \$480,000.
7. **(d)** Sales mix is the relative percentage in which a company sells its multiple products. The other choices are incorrect because (a) sales mix is also important to accountants, and (b) absorption costing income statements are not needed. Choice (c) is an incorrect definition of sales mix.
8. **(a)** Net income will be greater if more higher contribution margin units are sold than lower contribution units. Choices (b), (c), and (d) are therefore incorrect statements.
9. **(b)** The contribution margin per unit of limited resource is Unit contribution margin $(\$15) \div$ Units of limited resource $(3.0 \text{ machine hours}) = \5 , not (a) \$25, (c) \$4, or (d) none of the above.
10. **(d)** Unit contribution margin of Product X $(\$26 \div 4) <$ unit contribution margin of Product Y $(\$14 \div 2)$, so the machine time should be applied toward the product with the higher unit contribution margin. Choices (a), (b), and (c) are incorrect because these options will not maximize MEM's income.
11. **(d)** The company should apply additional capacity of the limited resource to providing more units of the product or service that has the highest unit contribution margin of that limited resource, not (a) the highest contribution margin, (b) the highest selling price, or (c) the highest gross profit.

12. (d) All of the above statements about operating leverage are true. So while choices (a), (b), and (c) are true statements, choice (d) is the better answer.

13. (c) A high degree of operating leverage exposes a company to greater earnings volatility risk. The other choices are incorrect because a high degree of operating leverage (a) means a company has higher fixed costs relative to variable costs, not vice versa; (b) is computed by dividing contribution margin by net income, not fixed costs by contribution margin; and (d) exposes a company to greater, not less, earnings volatility risk.

14. (a) Net income (\$200,000) \times Operating leverage (3.5) \times Decrease in sales (10%) = decrease in net income of \$70,000, not (b) decrease in contribution margin of \$7,000, (c) decrease in operating leverage of 35%, or (d) decrease in net income of \$175,000.

***15. (b)** Under absorption costing, fixed manufacturing overhead costs and variable manufacturing overhead costs are both product costs. The other choices are incorrect because (a) fixed manufacturing overhead costs are recognized as product costs under absorption costing, not period costs; (c) under variable costing, fixed manufacturing costs are recognized as period costs; and (d) fixed manufacturing costs are part of ending inventory under absorption costing only.

***16. (c)** Net income is higher under absorption costing than under variable costing when units produced exceed units sold, not (a) higher in all cases, (b) equal to net income under variable costing in all cases, or (d) higher when units produced are less than units sold.

PRACTICE EXERCISES

1. Yard-King manufactures lawnmowers, weed-trimmers, and chainsaws. Its sales mix and unit contribution margins are as follows.

	Sales Mix	Unit Contribution Margin
Lawnmowers	30%	\$35
Weed-trimmers	50%	\$25
Chainsaws	20%	\$50

Yard-King has fixed costs of \$4,620,000.

Compute break-even point in units for a company with more than one product.

(LO 2)

Instructions

Compute the number of units of each product that Yard-King must sell in order to break even under this product mix.

Solution

1.	Sales Mix Percentage	Unit Contribution Margin	Weighted-Average Contribution Margin
Lawnmowers	30%	\$35	\$10.50
Weed-trimmers	50	25	12.50
Chainsaws	20	50	10.00
			<u>\$33.00</u>
Total break-even sales in units = \$4,620,000 \div \$33.00 = 140,000 units			
	Sales Mix Percentage	Total Break-Even Sales	Sales Needed per Product
Lawnmowers	30%	\times 140,000 units	= 42,000 units
Weed-trimmers	50	\times 140,000	= 70,000
Chainsaws	20	\times 140,000	= 28,000
Total units			<u>140,000 units</u>

2. Rene Company manufactures and sells three products. Relevant per unit data concerning each product are given below.

	Product		
	A	B	C
Selling price	\$12	\$13	\$15
Variable costs and expenses	\$ 4	\$ 8	\$ 9
Machine hours to produce	2	1	2

Compute contribution margin and determine the product to be manufactured.

(LO 3)

Instructions

- Compute the contribution margin per unit of limited resource (machine hours) for each product.
- Assuming 4,500 additional machine hours are available, which product should be manufactured?
- Prepare an analysis showing the total contribution margin if the additional hours are (1) divided equally among the products, and (2) allocated entirely to the product identified in (b) above.

Solution

2. (a)

	<u>Product</u>		
	<u>A</u>	<u>B</u>	<u>C</u>
Unit contribution margin (a)	\$8	\$5	\$6
Machine hours required (b)	2	1	2
Contribution margin per unit of limited resource (a) ÷ (b)	\$4	\$5	\$3

(b) Product B should be manufactured because it results in the highest contribution margin per machine hour.

(c) (1)

	<u>Product</u>		
	<u>A</u>	<u>B</u>	<u>C</u>
Machine hours (a) (4,500 ÷ 3)	1,500	1,500	1,500
Contribution margin per unit of limited resource (b)	\$ 4	\$ 5	\$ 3
Total contribution margin [(a) × (b)]	<u>\$6,000</u>	<u>\$7,500</u>	<u>\$4,500</u>

The total contribution margin is \$18,000 (\$6,000 + \$7,500 + \$4,500)

(2)

	<u>Product</u>
	<u>B</u>
Machine hours (a)	4,500
Contribution margin per unit of limited resource (b)	\$ 5
Total contribution margin [(a) × (b)]	<u>\$22,500</u>

Compute degree of operating leverage and evaluate impact of alternative cost structures on net income.

(LO 4)

3. The CVP income statements shown below are available for Vericelli Company and Boone Company.

	<u>Vericelli Co.</u>	<u>Boone Co.</u>
Sales revenue	\$600,000	\$600,000
Variable costs	<u>320,000</u>	<u>120,000</u>
Contribution margin	280,000	480,000
Fixed costs	<u>180,000</u>	<u>380,000</u>
Net income	<u>\$100,000</u>	<u>\$100,000</u>

Instructions

- Compute the degree of operating leverage for each company and interpret your results.
- Assuming that sales revenue increases by 10%, prepare a variable costing income statement for each company.
- Discuss how the cost structure of these two companies affects their operating leverage and profitability.

Solution

3. (a)	Contribution Margin	÷	Net Income	=	Degree of Operating Leverage
Vericelli	\$280,000	÷	\$100,000	=	2.8
Boone	480,000	÷	100,000	=	4.8

Boone has a higher degree of operating leverage. Its earnings would increase (decrease) by a greater amount than Vericelli if each experienced an equal increase (decrease) in sales.

(b)	Vericelli Co.	Boone Co.
Sales revenue	\$660,000*	\$660,000
Variable costs	352,000**	132,000***
Contribution margin	308,000	528,000
Fixed costs	180,000	380,000
Net income	\$128,000	\$148,000

*\$600,000 × 1.1 **\$320,000 × 1.1 ***\$120,000 × 1.1

- (c) Each company experienced a \$60,000 increase in sales. However, because of Boone's higher operating leverage, it experienced a \$48,000 (\$148,000 – \$100,000) increase in net income while Vericelli experienced only a \$28,000 (\$128,000 – \$100,000) increase. This is what we would have expected since Boone's degree of operating leverage exceeds that of Vericelli.

PRACTICE PROBLEM

Francis Corporation manufactures and sells three different types of water-sport wakeboards. The boards vary in terms of their quality specifications—primarily with respect to their smoothness and finish. They are referred to as Smooth, Extra-Smooth, and Super-Smooth boards. Machine time is limited. More machine time is required to manufacture the Extra-Smooth and Super-Smooth boards. Additional information is provided below.

Determine sales mix with limited resources.

(LO 3)

	Product		
	Smooth	Extra-Smooth	Super-Smooth
Selling price	\$60	\$100	\$160
Variable costs and expenses	50	75	130
Contribution margin	\$10	\$25	\$30
Machine hours required	0.25	0.40	0.60
Total fixed costs: \$234,000			

Instructions

Answer each of the following questions.

- Ignoring the machine time constraint, what strategy would appear optimal?
- What is the contribution margin per unit of limited resource for each type of board?
- If additional machine time could be obtained, how should the additional capacity be used?

Solution

- The Super-Smooth boards have the highest unit contribution margin. Thus, ignoring any manufacturing constraints, it would appear that the company should shift toward production of more Super-Smooth units.
- The contribution margin per unit of limited resource is calculated as follows.

	Smooth	Extra-Smooth	Super-Smooth
Unit contribution margin	\$10	\$25	\$30
Limited resource consumed per unit	.25	.40	.60
	= \$40	= \$62.50	= \$50

- The Extra-Smooth boards have the highest contribution margin per unit of limited resource. Given the resource constraint, any additional capacity should be used to make Extra-Smooth boards.

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. What is meant by CVP analysis?
2. Provide three examples of management decisions that benefit from CVP analysis.
3. Distinguish between a traditional income statement and a CVP income statement.
4. Describe the features of a CVP income statement that make it more useful for management decision-making than the traditional income statement that is prepared for external users.
5. The traditional income statement for Wheat Company shows sales \$900,000, cost of goods sold \$500,000, and operating expenses \$200,000. Assuming all costs and expenses are 75% variable and 25% fixed, prepare a CVP income statement through contribution margin.
6. If management chooses to reduce its selling price to match that of a competitor, how will the break-even point be affected?
7. What is meant by the term sales mix? How does sales mix affect the calculation of the break-even point?
8. Performance Company sells two types of performance tires. The lower-priced model is guaranteed for only 50,000 miles; the higher-priced model is guaranteed for 150,000 miles. The unit contribution margin on the higher-priced tire is twice as high as that of the lower-priced tire. If the sales mix shifts so that the company begins to sell more units of the lower-priced tire, explain how the company's break-even point in units will change.
9. What approach should be used to calculate the break-even point of a company that has many products?
10. How is the contribution margin per unit of limited resource computed?
11. What is the theory of constraints? Provide some examples of possible constraints for a manufacturer.
12. What is meant by "cost structure?" Explain how a company's cost structure affects its break-even point.
13. What is operating leverage? How does a company increase its operating leverage?
14. How does the replacement of manual labor with automated equipment affect a company's cost structure? What implications does this have for its operating leverage and break-even point?
15. What is a measure of operating leverage, and how is it calculated?
16. Pine Company has a degree of operating leverage of 8. Fir Company has a degree of operating leverage of 4. Interpret these measures.
- *17. Distinguish between absorption costing and variable costing.
- *18. (a) What is the major rationale for the use of variable costing?
(b) Discuss why variable costing may not be used for financial reporting purposes.
- *19. Doc Rowan Corporation sells one product, its waterproof hiking boot. It began operations in the current year and had an ending inventory of 8,500 units. The company sold 20,000 units throughout the year. Fixed manufacturing overhead is \$5 per unit, and total manufacturing cost per unit is \$20 (including fixed manufacturing overhead costs). What is the difference in net income between absorption and variable costing?
- *20. If production equals sales, what, if any, is the difference between net income under absorption costing versus under variable costing?
- *21. If production is greater than sales, how does absorption costing net income differ from variable costing net income?
- *22. In the long run, will net income be higher or lower under variable costing compared to absorption costing?

BRIEF EXERCISES

Determine missing amounts for contribution margin.

(LO 1)

BE20-1 Determine the missing amounts.

	<u>Unit Selling Price</u>	<u>Unit Variable Costs</u>	<u>Unit Contribution Margin</u>	<u>Contribution Margin Ratio</u>
1.	\$250	\$180	(a)	(b)
2.	\$500	(c)	\$200	(d)
3.	(e)	(f)	\$330	30%

Prepare CVP income statement.

(LO 1)

BE20-2 Hamby Inc. has sales of \$2,000,000 for the first quarter of 2017. In making the sales, the company incurred the following costs and expenses.

	<u>Variable</u>	<u>Fixed</u>
Cost of goods sold	\$760,000	\$600,000
Selling expenses	95,000	60,000
Administrative expenses	79,000	66,000

Prepare a CVP income statement for the quarter ended March 31, 2017.

BE20-3 Eastland Corp. had total variable costs of \$150,000, total fixed costs of \$120,000, and total revenues of \$250,000. Compute the required sales in dollars to break even.

Compute the break-even point.
(LO 1)

BE20-4 Dilts Company has a unit selling price of \$400, variable costs per unit of \$250, and fixed costs of \$210,000. Compute the break-even point in units using (a) the mathematical equation and (b) unit contribution margin.

Compute the break-even point.
(LO 1)

BE20-5 For Rivera Company, variable costs are 70% of sales, and fixed costs are \$210,000. Management's net income goal is \$60,000. Compute the required sales needed to achieve management's target net income of \$60,000. (Use the mathematical equation approach.)

Compute sales for target net income.
(LO 1)

BE20-6 For Kosko Company, actual sales are \$1,200,000 and break-even sales are \$960,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

Compute the margin of safety and the margin of safety ratio.
(LO 1)

BE20-7 NoFly Corporation sells three different models of a mosquito "zapper." Model A12 sells for \$50 and has variable costs of \$35. Model B22 sells for \$100 and has variable costs of \$70. Model C124 sells for \$400 and has variable costs of \$300. The sales mix of the three models is A12, 60%; B22, 15%; and C124, 25%. What is the weighted-average unit contribution margin?

Compute weighted-average unit contribution margin based on sales mix.
(LO 2)

BE20-8 Information for NoFly Corporation is given in BE20-7. If the company has fixed costs of \$269,500, how many units of each model must the company sell in order to break even?

Compute break-even point in units for company with multiple products.
(LO 2)

BE20-9 Dixie Candle Supply makes candles. The sales mix (as a percentage of total dollar sales) of its three product lines is birthday candles 30%, standard tapered candles 50%, and large scented candles 20%. The contribution margin ratio of each candle type is shown below.

Compute break-even point in dollars for company with multiple product lines.
(LO 2)

<u>Candle Type</u>	<u>Contribution Margin Ratio</u>
Birthday	20%
Standard tapered	30%
Large scented	45%

- (a) What is the weighted-average contribution margin ratio?
- (b) If the company's fixed costs are \$450,000 per year, what is the dollar amount of each type of candle that must be sold to break even?

BE20-10 Faune Furniture Co. consists of two divisions, Bedroom Division and Dining Room Division. The results of operations for the most recent quarter are:

Determine weighted-average contribution margin.
(LO 2)

	<u>Bedroom Division</u>	<u>Dining Room Division</u>	<u>Total</u>
Sales	\$500,000	\$750,000	\$1,250,000
Variable costs	225,000	450,000	675,000
Contribution margin	<u>\$275,000</u>	<u>\$300,000</u>	<u>\$ 575,000</u>

- (a) Determine the company's sales mix.
- (b) Determine the company's weighted-average contribution margin ratio.

BE20-11 In Marshall Company, data concerning two products are unit contribution margin—Product A \$10, Product B \$12; machine hours required for one unit—Product A 2, Product B 3. Compute the contribution margin per unit of limited resource for each product.

Show allocation of limited resources.
(LO 3)

BE20-12 Sage Corporation manufactures two products with the following characteristics.

Show allocation of limited resources.
(LO 3)

	<u>Unit Contribution Margin</u>	<u>Machine Hours Required for Production</u>
Product 1	\$42	.15 hours
Product 2	\$32	.10 hours

If Sage's machine hours are limited to 2,000 per month, determine which product it should produce.

Compute degree of operating leverage.

(LO 4)

BE20-13 Sam's Shingle Corporation is considering the purchase of a new automated shingle-cutting machine. The new machine will reduce variable labor costs but will increase depreciation expense. Contribution margin is expected to increase from \$200,000 to \$240,000. Net income is expected to be the same at \$40,000. Compute the degree of operating leverage before and after the purchase of the new equipment. Interpret your results.

Compute break-even point with change in operating leverage.

(LO 4)

BE20-14 Presented below are variable costing income statements for Diggs Company and Doggs Company. They are in the same industry, with the same net incomes, but different cost structures.

	<u>Diggs Co.</u>	<u>Doggs Co.</u>
Sales	\$200,000	\$200,000
Variable costs	80,000	50,000
Contribution margin	120,000	150,000
Fixed costs	75,000	105,000
Net income	<u>\$ 45,000</u>	<u>\$ 45,000</u>

Compute the break-even point in dollars for each company and comment on your findings.

Determine contribution margin from degree of operating leverage.

(LO 4)

BE20-15 The degree of operating leverage for Montana Corp. and APK Co. are 1.6 and 5.4, respectively. Both have net incomes of \$50,000. Determine their respective contribution margins.

Compute product costs under variable costing.

(LO 5)

***BE20-16** The Rock Company produces basketballs. It incurred the following costs during the year.

Direct materials	\$14,400
Direct labor	\$25,600
Fixed manufacturing overhead	\$12,000
Variable manufacturing overhead	\$29,400
Selling costs	\$21,000

What are the total product costs for the company under variable costing?

Compute product costs under absorption costing.

(LO 5)

***BE20-17** Information concerning The Rock Company is provided in BE20-16. What are the total product costs for the company under absorption costing?

Determine manufacturing cost per unit under absorption and variable costing.

(LO 5)

***BE20-18** Burns Company incurred the following costs during the year: direct materials \$20 per unit; direct labor \$14 per unit; variable manufacturing overhead \$15 per unit; variable selling and administrative costs \$8 per unit; fixed manufacturing overhead \$128,000; and fixed selling and administrative costs \$10,000. Burns produced 8,000 units and sold 6,000 units. Determine the manufacturing cost per unit under (a) absorption costing and (b) variable costing.

Compute net income under absorption and variable costing.

(LO 5)

***BE20-19**  Harris Company's fixed overhead costs are \$4 per unit, and its variable overhead costs are \$8 per unit. In the first month of operations, 50,000 units are produced, and 46,000 units are sold. Write a short memo to the chief financial officer explaining which costing approach will produce the higher income and what the difference will be.

DO IT! Exercises

DO IT! 20-1 Victoria Company reports the following operating results for the month of April.

VICTORIA COMPANY
CVP Income Statement
For the Month Ended April 30, 2017

	<u>Total</u>	<u>Per Unit</u>
Sales (9,000 units)	\$450,000	\$50
Variable costs	270,000	30
Contribution margin	180,000	\$20
Fixed expenses	150,000	
Net income	\$ 30,000	

Compute the break-even point and margin of safety under different alternatives.

(LO 1)

Management is considering the following course of action to increase net income: Reduce the selling price by 4%, with no changes to unit variable costs or fixed costs. Management is confident that this change will increase unit sales by 20%.

Using the contribution margin technique, compute the break-even point in units and dollars and margin of safety in dollars:

- (a) Assuming no changes to selling price or costs, and
- (b) Assuming changes to sales price and volume as described above.

Comment on your findings.

DO IT! 20-2 Snow Cap Springs produces and sells water filtration systems for homeowners. Information regarding its three models is shown below.

	<u>Basic</u>	<u>Basic Plus</u>	<u>Premium</u>	<u>Total</u>
Units sold	750	450	300	1,500
Selling price	\$250	\$400	\$800	
Variable costs	\$195	\$285	\$415	

Compute sales mix, weighted-average contribution margin, and break-even point.

(LO 2)

The company's total fixed costs to produce the filtration systems are \$180,700.

- (a) Determine the sales mix as a function of units sold for the three products.
- (b) Determine the weighted-average unit contribution margin.
- (c) Determine the total number of units that the company must produce to break even.
- (d) Determine the number of units of each model that the company must produce to break even.

DO IT! 20-3 Zoom Corporation manufactures and sells three different types of binoculars. They are referred to as Good, Better, and Best binoculars. Grinding and polishing time is limited. More time is required to grind and polish the lenses used in the Better and Best binoculars. Additional information is provided below.

Determine sales mix with limited resources.

(LO 3)

	<u>Product</u>		
	<u>Good</u>	<u>Better</u>	<u>Best</u>
Selling price	\$90.00	\$330.00	\$900.00
Variable costs and expenses	50.00	180.00	480.00
Contribution margin	\$40.00	\$150.00	\$420.00
Grinding and polishing time required	0.5 hrs	1.5 hrs	6 hrs

- (a) Ignoring the time constraint, what strategy would appear to be optimal?
- (b) What is the contribution margin per unit of limited resource for each type of binocular?
- (c) If additional grinding and polishing time could be obtained, how should the additional capacity be used?

Determine operating leverage.
(LO 4)

DO IT! 20-4 Bergen Hospital is contemplating an investment in an automated surgical system. Its current process relies on the a number of skilled physicians. The new equipment would employ a computer robotic system operated by a technician. The company requested an analysis of the old technology versus the new technology. The accounting department has prepared the following CVP income statements for use in your analysis.

	<u>Old</u>	<u>New</u>
Sales	\$3,000,000	\$3,000,000
Variable costs	1,600,000	700,000
Contribution margin	1,400,000	2,300,000
Fixed costs	1,000,000	1,900,000
Net income	<u>\$ 400,000</u>	<u>\$ 400,000</u>

- (a) Compute the degree of operating leverage for the company under each scenario.
(b) Discuss your results.

EXERCISES

Compute break-even point and margin of safety.

(LO 1)

E20-1 The Soma Inn is trying to determine its break-even point. The inn has 75 rooms that are rented at \$60 a night. Operating costs are as follows.

Salaries	\$10,600 per month
Utilities	2,400 per month
Depreciation	1,500 per month
Maintenance	800 per month
Maid service	8 per room
Other costs	34 per room

Instructions

- (a) Determine the inn's break-even point in (1) number of rented rooms per month and (2) dollars.
(b) If the inn plans on renting an average of 50 rooms per day (assuming a 30-day month), what is (1) the monthly margin of safety in dollars and (2) the margin of safety ratio?

Compute contribution margin, break-even point, and margin of safety.

(LO 1)

E20-2 In the month of June, Jose Hebert's Beauty Salon gave 4,000 haircuts, shampoos, and permanents at an average price of \$30. During the month, fixed costs were \$16,800 and variable costs were 75% of sales.

Instructions

- (a) Determine the contribution margin in dollars, per unit and as a ratio.
(b) Using the contribution margin technique, compute the break-even point in dollars and in units.
(c) Compute the margin of safety in dollars and as a ratio.

Compute net income under different alternatives.

(LO 1)

E20-3 Barnes Company reports the following operating results for the month of August: sales \$325,000 (units 5,000); variable costs \$210,000; and fixed costs \$75,000. Management is considering the following independent courses of action to increase net income.

- Increase selling price by 10% with no change in total variable costs or sales volume.
- Reduce variable costs to 58% of sales.
- Reduce fixed costs by \$15,000.

Instructions

Compute the net income to be earned under each alternative. Which course of action will produce the highest net income?

E20-4 Comfi Airways, Inc., a small two-plane passenger airline, has asked for your assistance in some basic analysis of its operations. Both planes seat 10 passengers each, and they fly commuters from Comfi's base airport to the major city in the state, Metropolis. Each month, 40 round-trip flights are made. Shown below is a recent month's activity in the form of a cost-volume-profit income statement.

Fare revenues (400 passenger flights)		\$48,000
Variable costs		
Fuel	\$14,000	
Snacks and drinks	800	
Landing fees	2,000	
Supplies and forms	1,200	18,000
Contribution margin		30,000
Fixed costs		
Depreciation	3,000	
Salaries	15,000	
Advertising	500	
Airport hangar fees	1,750	20,250
Net income		\$ 9,750

Compute break-even point and prepare CVP income statement.

(LO 1)

Instructions

- Calculate the break-even point in (1) dollars and (2) number of passenger flights.
- Without calculations, determine the contribution margin at the break-even point.
- If ticket prices were decreased by 10%, passenger flights would increase by 25%. However, total variable costs would increase by the same percentage as passenger flights. Should the ticket price decrease be adopted?

E20-5 Carey Company had sales in 2016 of \$1,560,000 on 60,000 units. Variable costs totaled \$900,000, and fixed costs totaled \$500,000.

A new raw material is available that will decrease the variable costs per unit by 20% (or \$3). However, to process the new raw material, fixed operating costs will increase by \$100,000. Management feels that one-half of the decline in the variable costs per unit should be passed on to customers in the form of a sales price reduction. The marketing department expects that this sales price reduction will result in a 5% increase in the number of units sold.

Prepare a CVP income statement before and after changes in business environment.

(LO 1)

Instructions

Prepare a projected CVP income statement for 2017 (a) assuming the changes have not been made, and (b) assuming that changes are made as described.

E20-6 Yard Tools manufactures lawnmowers, weed-trimmers, and chainsaws. Its sales mix and unit contribution margin are as follows.

	Sales Mix	Unit Contribution Margin
Lawnmowers	20%	\$30
Weed-trimmers	50%	\$20
Chainsaws	30%	\$40

Compute break-even point in units for a company with more than one product.

(LO 2)

Yard Tools has fixed costs of \$4,200,000.

Instructions

Compute the number of units of each product that Yard Tools must sell in order to break even under this product mix.

E20-7 PDQ Repairs has 200 auto-maintenance service outlets nationwide. It performs primarily two lines of service: oil changes and brake repair. Oil change-related services represent 70% of its sales and provide a contribution margin ratio of 20%. Brake repair represents 30% of its sales and provides a 40% contribution margin ratio. The company's fixed costs are \$15,600,000 (that is, \$78,000 per service outlet).

Compute service line break-even point and target net income in dollars for a company with more than one service.

(LO 2)

Instructions

- Calculate the dollar amount of each type of service that the company must provide in order to break even.

- (b) The company has a desired net income of \$52,000 per service outlet. What is the dollar amount of each type of service that must be performed by each service outlet to meet its target net income per outlet?

Compute break-even point in dollars for a company with more than one service.

(LO 2)

E20-8 Express Delivery is a rapidly growing delivery service. Last year, 80% of its revenue came from the delivery of mailing “pouches” and small, standardized delivery boxes (which provides a 20% contribution margin). The other 20% of its revenue came from delivering non-standardized boxes (which provides a 70% contribution margin). With the rapid growth of Internet retail sales, Express believes that there are great opportunities for growth in the delivery of non-standardized boxes. The company has fixed costs of \$12,000,000.

Instructions

- (a) What is the company’s break-even point in total sales dollars? At the break-even point, how much of the company’s sales are provided by each type of service?
- (b) The company’s management would like to hold its fixed costs constant but shift its sales mix so that 60% of its revenue comes from the delivery of non-standardized boxes and the remainder from pouches and small boxes. If this were to occur, what would be the company’s break-even sales, and what amount of sales would be provided by each service type?

Compute break-even point in units for a company with multiple products.

(LO 2)

E20-9 Tiger Golf Accessories sells golf shoes, gloves, and a laser-guided range-finder that measures distance. Shown below are unit cost and sales data.

	<u>Pairs of Shoes</u>	<u>Pairs of Gloves</u>	<u>Range- Finder</u>
Unit sales price	\$100	\$30	\$260
Unit variable costs	60	10	200
Unit contribution margin	<u>\$ 40</u>	<u>\$20</u>	<u>\$ 60</u>
Sales mix	<u>35%</u>	<u>55%</u>	<u>10%</u>

Fixed costs are \$620,000.

Instructions

- (a) Compute the break-even point in units for the company.
- (b) Determine the number of units to be sold at the break-even point for each product line.
- (c) Verify that the mix of sales units determined in (b) will generate a zero net income.

Determine break-even point in dollars for two divisions.

(LO 2)

E20-10 Personal Electronix sells iPads and iPods. The business is divided into two divisions along product lines. CVP income statements for a recent quarter’s activity are presented below.

	<u>iPad Division</u>	<u>iPod Division</u>	<u>Total</u>
Sales	\$600,000	\$400,000	\$1,000,000
Variable costs	420,000	260,000	680,000
Contribution margin	<u>\$180,000</u>	<u>\$140,000</u>	320,000
Fixed costs			120,000
Net income			<u>\$ 200,000</u>

Instructions

- (a) Determine sales mix percentage and contribution margin ratio for each division.
- (b) Calculate the company’s weighted-average contribution margin ratio.
- (c) Calculate the company’s break-even point in dollars.
- (d) Determine the sales level in dollars for each division at the break-even point.

Compute contribution margin and determine the product to be manufactured.

(LO 3)

E20-11 Mars Company manufactures and sells three products. Relevant per unit data concerning each product are given below.

	<u>Product</u>		
	<u>A</u>	<u>B</u>	<u>C</u>
Selling price	\$9	\$12	\$15
Variable costs and expenses	\$3	\$10	\$12
Machine hours to produce	2	1	2

Instructions

- Compute the contribution margin per unit of limited resource (machine hours) for each product.
- Assuming 3,000 additional machine hours are available, which product should be manufactured?
- Prepare an analysis showing the total contribution margin if the additional hours are (1) divided equally among the products, and (2) allocated entirely to the product identified in (b) above.

E20-12 Dalton Inc. produces and sells three products. Unit data concerning each product is shown below.

	Product		
	D	E	F
Selling price	\$200	\$300	\$250
Direct labor costs	30	80	35
Other variable costs	95	80	145

The company has 2,000 hours of labor available to build inventory in anticipation of the company's peak season. Management is trying to decide which product should be produced. The direct labor hourly rate is \$10.

Instructions

- Determine the number of direct labor hours per unit.
- Determine the contribution margin per direct labor hour.
- Determine which product should be produced and the total contribution margin for that product.

E20-13 Helena Company manufactures and sells two products. Relevant per unit data concerning each product follow.

	Product	
	Basic	Deluxe
Selling price	\$40	\$52
Variable costs	\$22	\$24
Machine hours	0.5	0.8

Instructions

- Compute the contribution margin per machine hour for each product.
- If 1,000 additional machine hours are available, which product should Helena manufacture?
- Prepare an analysis showing the total contribution margin if the additional hours are:
 - Divided equally between the products.
 - Allocated entirely to the product identified in part (b).

E20-14 The CVP income statements shown below are available for Armstrong Company and Contador Company.

	Armstrong Co.	Contador Co.
Sales	\$500,000	\$500,000
Variable costs	240,000	50,000
Contribution margin	260,000	450,000
Fixed costs	160,000	350,000
Net income	<u>\$100,000</u>	<u>\$100,000</u>

Instructions

- Compute the degree of operating leverage for each company and interpret your results.
- Assuming that sales revenue increases by 10%, prepare a variable costing income statement for each company.
- Discuss how the cost structure of these two companies affects their operating leverage and profitability.

Compute contribution margin and determine the products to be manufactured.

(LO 3)

Compute contribution margin and determine the products to be manufactured.

(LO 3)

Compute degree of operating leverage and evaluate impact of alternative cost structures on net income.

(LO 4)

Compute degree of operating leverage and evaluate impact of alternative cost structures on net income and margin of safety.

(LO 4)

E20-15 Casas Modernas of Juarez, Mexico, is contemplating a major change in its cost structure. Currently, all of its drafting work is performed by skilled draftsmen. Rafael Jiminez, Casas' owner, is considering replacing the draftsmen with a computerized drafting system. However, before making the change, Rafael would like to know the consequences of the change, since the volume of business varies significantly from year to year. Shown below are CVP income statements for each alternative.

	<u>Manual System</u>	<u>Computerized System</u>
Sales	\$1,500,000	\$1,500,000
Variable costs	1,200,000	600,000
Contribution margin	300,000	900,000
Fixed costs	100,000	700,000
Net income	<u>\$ 200,000</u>	<u>\$ 200,000</u>

Instructions

- Determine the degree of operating leverage for each alternative.
- Which alternative would produce the higher net income if sales increased by \$150,000?
- Using the margin of safety ratio, determine which alternative could sustain the greater decline in sales before operating at a loss.

Compute degree of operating leverage and impact on net income of alternative cost structures.

(LO 4)

E20-16 An investment banker is analyzing two companies that specialize in the production and sale of candied yams. Traditional Yams uses a labor-intensive approach, and Auto-Yams uses a mechanized system. CVP income statements for the two companies are shown below.

	<u>Traditional Yams</u>	<u>Auto-Yams</u>
Sales	\$400,000	\$400,000
Variable costs	320,000	160,000
Contribution margin	80,000	240,000
Fixed costs	30,000	190,000
Net income	<u>\$ 50,000</u>	<u>\$ 50,000</u>

The investment banker is interested in acquiring one of these companies. However, she is concerned about the impact that each company's cost structure might have on its profitability.

Instructions

- Calculate each company's degree of operating leverage. Determine which company's cost structure makes it more sensitive to changes in sales volume.
- Determine the effect on each company's net income if sales decrease by 15% and if sales increase by 10%. Do not prepare income statements.
- Which company should the investment banker acquire? Discuss.

Compute product cost and prepare an income statement under variable and absorption costing.

(LO 5)

***E20-17** Siren Company builds custom fishing lures for sporting goods stores. In its first year of operations, 2017, the company incurred the following costs.

<u>Variable Costs per Unit</u>	
Direct materials	\$7.50
Direct labor	\$3.45
Variable manufacturing overhead	\$5.80
Variable selling and administrative expenses	\$3.90
<u>Fixed Costs per Year</u>	
Fixed manufacturing overhead	\$225,000
Fixed selling and administrative expenses	\$210,100

Siren Company sells the fishing lures for \$25. During 2017, the company sold 80,000 lures and produced 90,000 lures.

Instructions

- Assuming the company uses variable costing, calculate Siren's manufacturing cost per unit for 2017.
- Prepare a variable costing income statement for 2017.
- Assuming the company uses absorption costing, calculate Siren's manufacturing cost per unit for 2017.
- Prepare an absorption costing income statement for 2017.

***E20-18** Langdon Company produced 9,000 units during the past year, but only 8,200 of the units were sold. The following additional information is also available.

Direct materials used	\$79,000
Direct labor incurred	\$30,000
Variable manufacturing overhead	\$21,500
Fixed manufacturing overhead	\$45,000
Fixed selling and administrative expenses	\$70,000
Variable selling and administrative expenses	\$10,000

Determine ending inventory under variable costing and determine whether absorption or variable costing would result in higher net income.

(LO 5)

There was no work in process inventory at the beginning and end of the year, nor did Langdon have any beginning finished goods inventory.

Instructions

- What would be Langdon Company's finished goods inventory cost on December 31 under variable costing?
- Which costing method, absorption or variable costing, would show a higher net income for the year? By what amount?

***E20-19** Crate Express Co. produces wooden crates used for shipping products by ocean liner. In 2017, Crate Express incurred the following costs.

Wood used in crate production	\$54,000
Nails (considered insignificant and a variable expense)	\$ 350
Direct labor	\$43,000
Utilities for the plant:	
\$1,500 each month,	
plus \$0.50 for each kilowatt-hour used each month	
Rent expense for the plant for the year	\$21,400

Compute manufacturing cost under absorption and variable costing and explain difference.

(LO 5)

Assume Crate Express used an average 500 kilowatt-hours each month over the past year.

Instructions

- What is Crate Express's total manufacturing cost if it uses a variable costing approach?
- What is Crate Express's total manufacturing cost if it uses an absorption costing approach?
- What accounts for the difference in manufacturing costs between these two costing approaches?

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Compute break-even point under alternative courses of action.

(LO 1)

P20-1A Midlands Inc. had a bad year in 2016. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 80,000 units of product: net sales \$2,000,000; total costs and expenses \$2,235,000; and net loss \$235,000. Costs and expenses consisted of the following.

	<u>Total</u>	<u>Variable</u>	<u>Fixed</u>
Cost of goods sold	\$1,568,000	\$1,050,000	\$ 518,000
Selling expenses	517,000	92,000	425,000
Administrative expenses	150,000	58,000	92,000
	<u>\$2,235,000</u>	<u>\$1,200,000</u>	<u>\$1,035,000</u>

Management is considering the following independent alternatives for 2017.

- Increase unit selling price 25% with no change in costs and expenses.
- Change the compensation of salespersons from fixed annual salaries totaling \$200,000 to total salaries of \$40,000 plus a 5% commission on net sales.
- Purchase new high-tech factory machinery that will change the proportion between variable and fixed cost of goods sold to 50:50.

Instructions

- Compute the break-even point in dollars for 2017.
- Compute the break-even point in dollars under each of the alternative courses of action. (Round to the nearest dollar.) Which course of action do you recommend?

(b) (2) \$2,500,000

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(LO 1)

P20-2A Lorge Corporation has collected the following information after its first year of sales. Sales were \$1,500,000 on 100,000 units; selling expenses \$250,000 (40% variable and 60% fixed); direct materials \$511,000; direct labor \$290,000; administrative expenses \$270,000 (20% variable and 80% fixed); and manufacturing overhead \$350,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

Instructions

- Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
- Compute the break-even point in units and sales dollars for the first year.
- The company has a target net income of \$200,000. What is the required sales in dollars for the company to meet its target?
- If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?
- The company is considering a purchase of equipment that would reduce its direct labor costs by \$104,000 and would change its manufacturing overhead costs to 30% variable and 70% fixed (assume total manufacturing overhead cost is \$350,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 90% variable and 10% fixed (assume total selling expense is \$250,000, as above). Compute (1) the contribution margin and (2) the contribution margin ratio, and recompute (3) the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

(b) 157,000 units

(e) (3) \$1,735,714

Determine break-even sales under alternative sales strategies and evaluate results.

(LO 2)

P20-3A The Grand Inn is a restaurant in Flagstaff, Arizona. It specializes in southwestern style meals in a moderate price range. Paul Weld, the manager of Grand, has determined that during the last 2 years the sales mix and contribution margin ratio of its offerings are as follows.

	<u>Percent of Total Sales</u>	<u>Contribution Margin Ratio</u>
Appetizers	15%	50%
Main entrees	50%	25%
Desserts	10%	50%
Beverages	25%	80%

Paul is considering a variety of options to try to improve the profitability of the restaurant. His goal is to generate a target net income of \$117,000. The company has fixed costs of \$1,053,000 per year.

Instructions

- (a) Calculate the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income. (a) Total sales \$2,600,000
- (b) Paul believes the restaurant could greatly improve its profitability by reducing the complexity and selling price of its entrees to increase the number of clients that it serves. It would then more heavily market its appetizers and beverages. He is proposing to reduce the contribution margin ratio on the main entrees to 10% by dropping the average selling price. He envisions an expansion of the restaurant that would increase fixed costs by \$585,000. At the same time, he is proposing to change the sales mix to the following. (b) Total sales \$3,375,000

	<u>Percent of Total Sales</u>	<u>Contribution Margin Ratio</u>
Appetizers	25%	50%
Main entrees	25%	10%
Desserts	10%	50%
Beverages	40%	80%

Compute the total restaurant sales, and the sales of each product line that would be necessary to achieve the desired target net income.

- (c) Suppose that Paul reduces the selling price on entrees and increases fixed costs as proposed in part (b), but customers are not swayed by the marketing efforts and the sales mix remains what it was in part (a). Compute the total restaurant sales and the sales of each product line that would be necessary to achieve the desired target net income. Comment on the potential risks and benefits of this strategy.

P20-4A Tanek Industries manufactures and sells three different models of wet-dry shop vacuum cleaners. Although the shop vacs vary in terms of quality and features, all are good sellers. Tanek is currently operating at full capacity with limited machine time.

Sales and production information relevant to each model follows.

Determine sales mix with limited resources.

(LO 3)

	<u>Product</u>		
	<u>Economy</u>	<u>Standard</u>	<u>Deluxe</u>
Selling price	\$30	\$50	\$100
Variable costs and expenses	\$16	\$20	\$46
Machine hours required	0.5	0.8	1.6

Instructions

- (a) Ignoring the machine time constraint, which single product should Tanek Industries produce? (b) Economy \$28
- (b) What is the contribution margin per unit of limited resource for each product?
- (c) If additional machine time could be obtained, how should the additional time be used?

P20-5A The following CVP income statements are available for Blanc Company and Noir Company.

Compute degree of operating leverage and evaluate impact of operating leverage on financial results.

(LO 4)

	<u>Blanc Company</u>	<u>Noir Company</u>
Sales	\$500,000	\$500,000
Variable costs	280,000	180,000
Contribution margin	220,000	320,000
Fixed costs	170,000	270,000
Net income	<u>\$ 50,000</u>	<u>\$ 50,000</u>

Instructions

- (a) Compute the break-even point in dollars and the margin of safety ratio (round to 3 places) for each company. (a) BE, Blanc \$386,364
BE, Noir \$421,875
- (b) Compute the degree of operating leverage for each company and interpret your results. (b) DOL, Blanc 4.4
DOL, Noir 6.4
- (c) Assuming that sales revenue increases by 20%, prepare a CVP income statement for each company.

- (d) Assuming that sales revenue decreases by 20%, prepare a CVP income statement for each company.
- (e)  Discuss how the cost structure of these two companies affects their operating leverage and profitability.

Determine contribution margin, break-even point, target sales, and degree of operating leverage.

(LO 1, 4)

P20-6A Bonita Beauty Corporation manufactures cosmetic products that are sold through a network of sales agents. The agents are paid a commission of 18% of sales. The income statement for the year ending December 31, 2017, is as follows.

BONITA BEAUTY CORPORATION
Income Statement
For the Year Ended December 31, 2017

Sales		\$75,000,000
Cost of goods sold		
Variable	\$31,500,000	
Fixed	8,610,000	40,110,000
		34,890,000
Gross margin		34,890,000
Selling and marketing expenses		
Commissions	13,500,000	
Fixed costs	10,260,000	23,760,000
		23,760,000
Operating income		\$11,130,000

The company is considering hiring its own sales staff to replace the network of agents. It will pay its salespeople a commission of 8% and incur additional fixed costs of \$7.5 million.

Instructions

- (a) \$47,175
- (b) Calculate the company's break-even point in sales dollars for the year 2017 if it hires its own sales force to replace the network of agents.
- (c) (2) 3.37
- (d) Calculate the degree of operating leverage at sales of \$75 million if (1) Bonita Beauty uses sales agents, and (2) Bonita Beauty employs its own sales staff. Describe the advantages and disadvantages of each alternative.
- (d) Calculate the estimated sales volume in sales dollars that would generate an identical net income for the year ending December 31, 2017, regardless of whether Bonita Beauty Corporation employs its own sales staff and pays them an 8% commission or continues to use the independent network of agents.

(CMA-Canada adapted)

Prepare income statements under absorption costing and variable costing for a company with beginning inventory, and reconcile differences.

(LO 5)

***P20-7A** Jackson Company produces plastic that is used for injection-molding applications such as gears for small motors. In 2016, the first year of operations, Jackson produced 4,000 tons of plastic and sold 3,500 tons. In 2017, the production and sales results were exactly reversed. In each year, the selling price per ton was \$2,000, variable manufacturing costs were 15% of the sales price of units produced, variable selling expenses were 10% of the selling price of units sold, fixed manufacturing costs were \$2,800,000, and fixed administrative expenses were \$500,000.

Instructions

- (a) 2017 \$2,700,000
- (b) 2017 \$2,350,000
- (a) Prepare income statements for each year using variable costing. (Use the format from Illustration 20A-5.)
- (b) Prepare income statements for each year using absorption costing. (Use the format from Illustration 20A-4.)
- (c) Reconcile the differences each year in net income under the two costing approaches.
- (d)  Comment on the effects of production and sales on net income under the two costing approaches.

***P20-8A** Dilithium Batteries is a division of Enterprise Corporation. The division manufactures and sells a long-life battery used in a wide variety of applications. During the coming year, it expects to sell 60,000 units for \$30 per unit. Nyota Uthura is the division manager. She is considering producing either 60,000 or 90,000 units during the period. Other information is presented in the schedule.

Division Information for 2017

Beginning inventory	0
Expected sales in units	60,000
Selling price per unit	\$30
Variable manufacturing costs per unit	\$12
Fixed manufacturing overhead costs (total)	\$540,000
Fixed manufacturing overhead costs per unit:	
Based on 60,000 units	\$9 per unit (\$540,000 ÷ 60,000)
Based on 90,000 units	\$6 per unit (\$540,000 ÷ 90,000)
Manufacturing costs per unit:	
Based on 60,000 units	\$21 per unit (\$12 variable + \$9 fixed)
Based on 90,000 units	\$18 per unit (\$12 variable + \$6 fixed)
Variable selling and administrative expenses	\$2
Fixed selling and administrative expenses (total)	\$50,000

Instructions

- Prepare an absorption costing income statement, with one column showing the results if 60,000 units are produced and one column showing the results if 90,000 units are produced.
- Prepare a variable costing income statement, with one column showing the results if 60,000 units are produced and one column showing the results if 90,000 units are produced.
- Reconcile the difference in net incomes under the two approaches and explain what accounts for this difference.
-  Discuss the relative usefulness of the variable costing income statements versus the absorption costing income statements for decision making and for evaluating the manager's performance.

Prepare absorption and variable costing income statements and reconcile differences between absorption and variable costing income statements when sales level and production level change. Discuss relative usefulness of absorption costing versus variable costing.

(LO 5)

(a) 90,000 units: NI \$550,000

(b) 90,000 units: NI \$370,000

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

CURRENT DESIGNS

CD20 **Current Designs** manufactures two different types of kayaks, rotomolded kayaks and composite kayaks. The following information is available for each product line.

	<u>Rotomolded</u>	<u>Composite</u>
Sales price/unit	\$950	\$2,000
Variable costs/unit	\$570	\$1,340

The company's fixed costs are \$820,000. An analysis of the sales mix identifies that rotomolded kayaks make up 80% of the total units sold.

Instructions

- Determine the weighted-average unit contribution margin for Current Designs.
- Determine the break-even point in units for Current Designs and identify how many units of each type of kayak will be sold at the break-even point. (Round to the nearest whole number.)
- Assume that the sales mix changes, and rotomolded kayaks now make up 70% of total units sold. Calculate the total number of units that would need to be sold to earn a net income of \$2,000,000

**EXCEL
TUTORIAL**

- and identify how many units of each type of kayak will be sold at this level of income. (Round to the nearest whole number.)
- (d) Assume that Current Designs will have sales of \$3,000,000 with two-thirds of the sales dollars in rotomolded kayaks and one-third of the sales dollars in composite kayaks. Assuming \$660,000 of fixed costs are allocated to the rotomolded kayaks and \$160,000 to the composite kayaks, prepare a CVP income statement for each product line.
- (e) Using the information in part (d), calculate the degree of operating leverage for each product line and interpret your findings. (Round to two decimal places.)

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–19.)

WP20 This problem asks you to perform break-even analysis based on Waterways' sales mix and to make sales mix decisions related to Waterways' use of its productive facilities. An optional extension of the problem (related to the chapter appendix) also asks you to prepare a variable costing income statement and an absorption costing income statement.

Go to the book's companion website, www.wiley.com/college/weygandt, to find the remainder of this problem.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP20-1 E-Z Seats manufactures swivel seats for customized vans. It currently manufactures 10,000 seats per year, which it sells for \$500 per seat. It incurs variable costs of \$200 per seat and fixed costs of \$2,000,000. It is considering automating the upholstery process, which is now largely manual. It estimates that if it does so, its fixed costs will be \$3,000,000, and its variable costs will decline to \$100 per seat.

Instructions

With the class divided into groups, answer the following questions.

- Prepare a CVP income statement based on current activity.
- Compute contribution margin ratio, break-even point in dollars, margin of safety ratio, and degree of operating leverage based on current activity.
- Prepare a CVP income statement assuming that the company invests in the automated upholstery system.
- Compute contribution margin ratio, break-even point in dollars, margin of safety ratio, and degree of operating leverage assuming the new upholstery system is implemented.
- Discuss the implications of adopting the new system.

Managerial Analysis

BYP20-2 For nearly 20 years, Specialized Coatings has provided painting and galvanizing services for manufacturers in its region. Manufacturers of various metal products have relied on the quality and quick turnaround time provided by Specialized Coatings and its 20 skilled employees. During the last year, as a result of a sharp upturn in the economy, the company's sales have increased by 30% relative to the previous year. The company has not been able to increase its capacity fast enough, so Specialized Coatings has had to turn work away because it cannot keep up with customer requests.

Top management is considering the purchase of a sophisticated robotic painting booth. The booth would represent a considerable move in the direction of automation versus manual labor. If Specialized Coatings purchases the booth, it would most likely lay off 15 of its skilled painters. To analyze the decision, the company compiled production information from the most recent year and then prepared a parallel compilation assuming that the company would purchase the new equipment and lay off the workers. As shown in the following data, the company projects

that during the last year it would have been far more profitable if it had used the automated approach.

	<u>Current Approach</u>	<u>Automated Approach</u>
Sales	\$2,000,000	\$2,000,000
Variable costs	1,500,000	1,000,000
Contribution margin	500,000	1,000,000
Fixed costs	380,000	800,000
Net income	<u>\$ 120,000</u>	<u>\$ 200,000</u>

Instructions

- Compute and interpret the contribution margin ratio under each approach.
- Compute the break-even point in sales dollars under each approach. Discuss the implications of your findings.
- Using the current level of sales, compute the margin of safety ratio under each approach and interpret your findings.
- Determine the degree of operating leverage for each approach at current sales levels. How much would the company's net income decline under each approach with a 10% decline in sales?
- At what level of sales would the company's net income be the same under either approach?
- Discuss the issues that the company must consider in making this decision.

Real-World Focus

BYP20-3 In a recent report, the **Del Monte Foods Company** reported three separate operating segments: consumer products (which includes a variety of canned foods including tuna, fruit, and vegetables); pet products (which includes pet food and snacks and veterinary products); and soup and infant-feeding products (which includes soup, broth, and infant feeding and pureed products).

In its annual report, Del Monte uses absorption costing. As a result, information regarding the relative composition of its fixed and variable costs is not available. We have assumed that \$860.3 million of its total operating expenses of \$1,920.3 million are fixed and have allocated the remaining variable costs across the three divisions. Sales data, along with assumed expense data, are provided below.

	(in millions)	
	<u>Sales</u>	<u>Variable Costs</u>
Consumer products	\$1,031.8	\$ 610
Pet products	837.3	350
Soup and infant-feeding products	302.0	100
	<u>\$2,171.1</u>	<u>\$1,060</u>

Instructions

- Compute each segment's contribution margin ratio and the sales mix.
- Using the information computed in part (a), compute the company's break-even point in dollars, and then determine the amount of sales that would be generated by each division at the break-even point.

BYP20-4 The external financial statements published by publicly traded companies are based on absorption cost accounting. As a consequence, it is very difficult to gain an understanding of the relative composition of the companies' fixed and variable costs. It is possible, however, to learn about a company's sales mix and the relative profitability of its various divisions. This exercise looks at the financial statements of **FedEx Corporation**.

Address: www.fedex.com/us/investorrelations, or go to www.wiley.com/college/weygandt

Steps

- Go to the site above.
- Under "Financial Information," choose "Annual Reports."
- Choose "2013 Annual Report."

Instructions

- Read page 9 of the report under the heading "Description of Business." What are the three primary product lines of the company? What does the company identify as the key factors affecting operating results?

- (b) Page 21 of the report lists the operating expenses of FedEx Ground. Assuming that rentals, depreciation, and “other” are all fixed costs, prepare a variable costing income statement for 2013, and compute the division’s contribution margin ratio and the break-even point in dollars.
- (c) Page 61, Note 14 (“Business segment information”) provides additional information regarding the relative profitability of the business segments.
- Calculate the sales mix for 2011 and 2013. (*Note:* Exclude “other” when you calculate total revenue.)
 - The company does not provide the contribution margin for each division, but it does provide “operating margin” (operating income divided by revenues) on pages 21, 22, and 23 for three divisions. List these for each division for 2011 and 2013.
 - Assuming that the “operating margin” (operating income divided by revenues) moves in parallel with each division’s contribution margin, how has the shift in sales mix affected the company’s profitability from 2011 to 2013?

BYP20-5 The June 8, 2009, edition of the *Wall Street Journal* has an article by JoAnn Lublin entitled “Smart Balance Keeps Tight Focus on Creativity.”

Instructions

Read the article and answer the following questions.

- Describe **Smart Balance**’s approach to employment and cost structure.
- What function does it keep “in-house”?
- Based on the discussion in this chapter, what are the advantages to Smart Balance’s approach?
- Based on the discussion in this chapter, what are the disadvantages to Smart Balance’s approach?

CRITICAL THINKING

Communication Activity

BYP20-6 Easton Corporation makes two different boat anchors—a traditional fishing anchor and a high-end yacht anchor—using the same production machinery. The contribution margin of the yacht anchor is three times as high as that of the other product. The company is currently operating at full capacity and has been doing so for nearly two years. Bjorn Borg, the company’s CEO, wants to cut back on production of the fishing anchor so that the company can make more yacht anchors. He says that this is a “no-brainer” because the contribution margin of the yacht anchor is so much higher.

Instructions

Write a short memo to Bjorn Borg describing the analysis that the company should do before it makes this decision and any other considerations that would affect the decision.

Ethics Case

***BYP20-7** Brett Stern was hired during January 2017 to manage the home products division of Hi-Tech Products. As part of his employment contract, he was told that he would get \$5,000 of additional bonus for every 1% increase that the division’s profits exceeded those of the previous year.

Soon after coming on board, Brett met with his plant managers and explained that he wanted the plants to be run at full capacity. Previously, the plant had employed just-in-time inventory practices and had consequently produced units only as they were needed. Brett stated that under previous management the company had missed out on too many sales opportunities because it didn’t have enough inventory on hand. Because previous management had employed just-in-time inventory practices, when Brett came on board there was virtually no beginning inventory. The selling price and variable costs per unit remained the same from 2016 to 2017. Additional information is provided below.

	<u>2016</u>	<u>2017</u>
Net income	\$ 300,000	\$ 525,000
Units produced	25,000	30,000
Units sold	25,000	25,000
Fixed manufacturing overhead costs	\$1,350,000	\$1,350,000
Fixed manufacturing overhead costs per unit	\$ 54	\$ 45

Instructions

- Calculate Brett's bonus based upon the net income shown above.
- Recompute the 2016 and 2017 results using variable costing.
- Recompute Brett's 2017 bonus under variable costing.
- Were Brett's actions unethical? Do you think any actions need to be taken by the company?

All About You

BYP20-8 Many of you will some day own your own business. One rapidly growing opportunity is no-frills workout centers. Such centers attract customers who want to take advantage of state-of-the-art fitness equipment but do not need the other amenities of full-service health clubs. One way to own your own fitness business is to buy a franchise. **Snap Fitness** is a Minnesota-based business that offers franchise opportunities. For a very low monthly fee (\$26, without an annual contract), customers can access a Snap Fitness center 24 hours a day.

The Snap Fitness website (www.snapfitness.com) indicates that start-up costs range from \$60,000 to \$184,000. This initial investment covers the following pre-opening costs: franchise fee, grand opening marketing, leasehold improvements, utility/rent deposits, and training.

Instructions

- Suppose that Snap Fitness estimates that each location incurs \$4,000 per month in fixed operating expenses plus \$1,460 to lease equipment. A recent newspaper article describing no-frills fitness centers indicated that a Snap Fitness site might require only 300 members to break even. Using the information provided above and your knowledge of CVP analysis, estimate the amount of variable costs. (When performing your analysis, assume that the only fixed costs are the estimated monthly operating expenses and the equipment lease.)
- Using the information from part (a), what would monthly sales in members and dollars have to be to achieve a target net income of \$3,640 for the month?
- Provide five examples of variable costs for a fitness center.
- Go to a fitness-business website, such as **Curves**, **Snap Fitness**, or **Anytime Fitness**, and find information about purchasing a franchise. Summarize the franchise information needed to decide whether entering into a franchise agreement would be a good idea.

Considering People, Planet, and Profit

BYP20-9 Many politicians, scientists, economists, and businesspeople have become concerned about the potential implications of global warming. The largest source of the emissions thought to contribute to global warming is from coal-fired power plants. The cost of alternative energy has declined, but it is still higher than coal. In 1980, wind-power electricity cost 80 cents per kilowatt hour. Using today's highly efficient turbines with rotor diameters of up to 125 meters, the cost can be as low as 4 cents (about the same as coal), or as much as 20 cents in places with less wind.

Some people have recently suggested that conventional cost comparisons are not adequate because they do not take environmental costs into account. For example, while coal is a very cheap energy source, it is also a significant contributor of greenhouse gases. Should environmental costs be incorporated into decision formulas when planners evaluate new power plants? The basic arguments for and against are as follows.

YES: As long as environmental costs are ignored, renewable energy will appear to be too expensive relative to coal.

NO: If one country decides to incorporate environmental costs into its decision-making process but other countries do not, the country that does so will be at a competitive disadvantage because its products will cost more to produce.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

21

Incremental Analysis

CHAPTER PREVIEW An important purpose of management accounting is to provide managers with relevant information for decision-making. Companies of all sorts must make product decisions. **Oral-B Laboratories** opted to produce a new, higher-priced toothbrush. **General Motors** announced the closure of its Oldsmobile Division. **Quaker Oats** decided to sell off a line of beverages, at a price more than \$1 billion less than it paid for that product line only a few years before.

This chapter explains management's decision-making process and a decision-making approach called incremental analysis. The use of incremental analysis is demonstrated in a variety of situations.

FEATURE STORY

Keeping It Clean

When you think of new, fast-growing, San Francisco companies, you probably think of fun products like smartphones, social networks, and game apps. You don't tend to think of soap. In fact, given that some of the biggest, most powerful companies in the world dominate the soap market (e.g., **Proctor & Gamble**, **Clorox**, and **Unilever**), starting a new soap company seems like an outrageously bad idea. But that didn't dissuade Adam Lowry and Eric Ryan from giving it a try. The long-time friends and former roommates combined their skills (Adam's chemical engineering and Eric's design and marketing) to start **Method Products**. Their goal: selling environmentally friendly soaps that actually remove dirt.

Within a year of its formation, the company had products on the shelves at **Target** stores. Within 5 years, Method was cited by numerous business publications as one of the fastest-growing companies in the country. It was easy—right? Wrong. Running a company is never easy, and given Method's commitment to sustainability, all of its business decisions are just a little more complex than usual. For example, the company wanted to use solar power to charge the batteries for the forklifts used in its factories. No problem, just put solar panels on the buildings. But because Method outsources its manufacturing, it doesn't actually own factory buildings. In fact, the company that does Method's manufacturing doesn't own the buildings either. Solution—

Method parked old semi-trailers next to the factories and installed solar panels on those.

Since Method insists on using natural products and sustainable production practices, its production costs are higher than companies that don't adhere to these standards. Adam and Eric insist, however, that this actually benefits them because they have to be far more careful about controlling costs and far more innovative in solving problems. Consider Method's most recently developed laundry detergent. It is 8 times stronger than normal detergent, so it can be sold in a substantially smaller package. This reduces both its packaging and shipping costs. In fact, when the cost of the raw materials used for soap production recently jumped by as much as 40%, Method actually viewed it as an opportunity to grab market share. It determined that it could offset the cost increases in other places in its supply chain, thus absorbing the cost much easier than its big competitors.

In these and other instances, Adam and Eric identified their alternative courses of action, determined what was relevant to each choice and what wasn't, and then carefully evaluated the incremental costs of each alternative. When you are small and your competitors have some of the biggest marketing budgets in the world, you can't afford to make very many mistakes.

Watch the *Method Products* video in WileyPLUS to learn more about incremental analysis in the real world.

CHAPTER OUTLINE

Gabriela Hasbun/Redux

Learning Objectives

1

Describe management's decision-making process and incremental analysis.

- Incremental analysis approach
- How incremental analysis works
- Qualitative factors
- Incremental analysis and ABC
- Types of incremental analysis

DO IT!

1

Incremental Analysis

2

Analyze the relevant costs in accepting an order at a special price.

- Special price
- Available capacity

DO IT!

2

Special Orders

3

Analyze the relevant costs in a make-or-buy decision.

- Make-or-buy
- Opportunity cost

DO IT!

3

Make or Buy

4

Analyze the relevant costs in determining whether to sell or process materials further.

- Single-product case

LEARNING
OBJECTIVE

1

Describe management's decision-making process and incremental analysis.

Making decisions is an important management function. Management's decision-making process does not always follow a set pattern because decisions vary significantly in their scope, urgency, and importance. It is possible, though, to identify some steps that are frequently involved in the process. These steps are shown in Illustration 21-1.

Illustration 21-1
Management's decision-making process

Accounting's contribution to the decision-making process occurs primarily in Steps 2 and 4—evaluating possible courses of action and reviewing results. In Step 2, for each possible course of action, relevant revenue and cost data are provided. These show the expected overall effect on net income. In Step 4, internal reports are prepared that review the actual impact of the decision.

In making business decisions, management ordinarily considers both financial and nonfinancial information. **Financial** information is related to revenues and costs and their effect on the company's overall profitability. **Nonfinancial** information relates to such factors as the effect of the decision on employee turnover, the environment, or the overall image of the company in the community. (These are considerations that we touched on in our Chapter 15 discussion of corporate social responsibility.) Although nonfinancial information can be as important as financial information, we will focus primarily on financial information that is relevant to the decision.

Incremental Analysis Approach

Decisions involve a choice among alternative courses of action. Suppose you face the personal financial decision of whether to purchase or lease a car. The financial data relate to the cost of leasing versus the cost of purchasing. For example, leasing involves periodic lease payments; purchasing requires “up-front” payment of the purchase price. In other words, the financial information relevant to the decision are the data that vary in the future among the possible alternatives. The process used to identify the financial data that change under alternative courses of action is called **incremental analysis**. In some cases, you will find that when you use incremental analysis, both costs **and** revenues vary. In other cases, only costs **or** revenues vary.

Just as your decision to buy or lease a car affects your future financial situation, similar decisions, on a larger scale, affect a company's future. Incremental analysis identifies the probable effects of those decisions on future earnings. Such analysis inevitably involves estimates and uncertainty. Gathering data for incremental analyses may involve market analysts, engineers, and accountants. In quantifying the data, the accountant must produce the most reliable information available.

Alternative Terminology

Incremental analysis is also called *differential analysis* because the analysis focuses on differences.

How Incremental Analysis Works

The basic approach in incremental analysis is illustrated in the following example.

Illustration 21-2

Basic approach in incremental analysis

	A	B	C	D
1		Alternative A	Alternative B	Net Income Increase (Decrease)
2	Revenues	\$125,000	\$110,000	\$ (15,000)
3	Costs	100,000	80,000	20,000
4	Net income	\$ 25,000	\$ 30,000	\$ 5,000
5				

This example compares Alternative B with Alternative A. The net income column shows the differences between the alternatives. In this case, incremental revenue will be \$15,000 less under Alternative B than under Alternative A. But a \$20,000 incremental cost savings will be realized.¹ Thus, Alternative B will produce \$5,000 more net income than Alternative A.

In the following pages, you will encounter three important cost concepts used in incremental analysis, as defined and discussed in Illustration 21-3.

Illustration 21-3

Key cost concepts in incremental analysis

- Relevant cost** In incremental analysis, the only factors to be considered are those costs and revenues that differ across alternatives. Those factors are called **relevant costs**. Costs and revenues that do not differ across alternatives can be ignored when trying to choose between alternatives.
- Opportunity cost** Often in choosing one course of action, the company must give up the opportunity to benefit from some other course of action. For example, if a machine is used to make one type of product, the benefit of making another type of product with that machine is lost. This lost benefit is referred to as **opportunity cost**.
- Sunk cost** Costs that have already been incurred and will not be changed or avoided by any present or future decisions are referred to as **sunk costs**. For example, the amount you spent in the past to purchase or repair a laptop should have no bearing on your decision whether to buy a new laptop. **Sunk costs are not relevant costs.**

¹Although income taxes are sometimes important in incremental analysis, they are ignored in the chapter for simplicity's sake.

Incremental analysis sometimes involves changes that at first glance might seem contrary to your intuition. For example, sometimes variable costs **do not change** under the alternative courses of action. Also, sometimes fixed costs **do change**. For example, direct labor, normally a variable cost, is not an incremental cost in deciding between two new factory machines if each asset requires the same amount of direct labor. In contrast, rent expense, normally a fixed cost, is an incremental cost in a decision whether to continue occupancy of a building or to purchase or lease a new building.

It is also important to understand that **the approaches to incremental analysis discussed in this chapter do not take into consideration the time value of money**. That is, amounts to be paid or received in future years are not discounted for the cost of interest. Time value of money is addressed in Chapter 26 and Appendix G.

Service Company Insight **American Express**

Tina Spruce/iStockphoto

That Letter from AmEx Might Not Be a Bill

No doubt every one of you has received an invitation from a credit card company to open a new account—some of you have probably received three in one day. But how many of you have received an offer of \$300 to close out your

credit card account? **American Express** decided to offer some of its customers \$300 if they would give back their credit card. You could receive the \$300 even if you hadn't paid off your balance yet, as long as you agreed to give up your credit card.

Source: Aparajita Saha-Bubna and Lauren Pollock, "AmEx Offers Some Holders \$300 to Pay and Leave," *Wall Street Journal Online* (February 23, 2009).

What are the relevant costs that American Express would need to know in order to determine to whom to make this offer? (Go to **WileyPLUS** for this answer and additional questions.)

Qualitative Factors

In this chapter, we focus primarily on the quantitative factors that affect a decision—those attributes that can be easily expressed in terms of numbers or dollars. However, many of the decisions involving incremental analysis have important qualitative features. Though not easily measured, they should not be ignored.

Consider, for example, the potential effects of the make-or-buy decision or of the decision to eliminate a line of business on existing employees and the community in which the plant is located. The cost savings that may be obtained from outsourcing or from eliminating a plant should be weighed against these qualitative attributes. One example would be the cost of lost morale that might result. Al "Chainsaw" Dunlap was a so-called "turnaround" artist who went into many companies, identified inefficiencies (using incremental analysis techniques), and tried to correct these problems to improve corporate profitability. Along the way, he laid off thousands of employees at numerous companies. As head of **Sunbeam**, it was Al Dunlap who lost his job because his Draconian approach failed to improve Sunbeam's profitability. It was reported that Sunbeam's employees openly rejoiced for days after his departure. Clearly, qualitative factors can matter.

Relationship of Incremental Analysis and Activity-Based Costing

In Chapter 18, we noted that many companies have shifted to activity-based costing to allocate overhead costs to products. The primary reason for using activity-based costing is that it results in a more accurate allocation of overhead. The concepts presented in this chapter are completely consistent with the use of

activity-based costing. In fact, activity-based costing results in better identification of relevant costs and, therefore, better incremental analysis.

Types of Incremental Analysis

A number of different types of decisions involve incremental analysis. The more common types of decisions are whether to:

1. Accept an order at a special price.
2. Make or buy component parts or finished products.
3. Sell products or process them further.
4. Repair, retain, or replace equipment.
5. Eliminate an unprofitable business segment or product.

We consider each of these types of decisions in the following pages.

DO IT!

1

Incremental Analysis

Owen T Corporation is comparing two different options. The company currently follows Option 1, with revenues of \$80,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$38,000 per year. Option 2 provides revenues of \$80,000 per year, maintenance expenses of \$12,000 per year, and operating expenses of \$32,000 per year. Option 1 employs a piece of equipment that was upgraded 2 years ago at a cost of \$22,000. If Option 2 is chosen, it will free up resources that will increase revenues by \$3,000.

Complete the following table to show the change in income from choosing Option 2 versus Option 1. Designate any sunk costs with an “S.”

	<u>Option 1</u>	<u>Option 2</u>	<u>Net Income Increase (Decrease)</u>	<u>Sunk (\$)</u>
Revenues				
Maintenance expenses				
Operating expenses				
Equipment upgrade				
Opportunity cost				

Solution

	<u>Option 1</u>	<u>Option 2</u>	<u>Net Income Increase (Decrease)</u>	<u>Sunk (\$)</u>
Revenues	\$80,000	\$80,000	\$ 0	
Maintenance expenses	5,000	12,000	(7,000)	
Operating expenses	38,000	32,000	6,000	
Equipment upgrade	22,000	0	0	S
Opportunity cost	3,000	0	3,000	
			<u>\$ 2,000</u>	

Action Plan

- ✓ Past costs that cannot be changed are sunk costs.
- ✓ Benefits lost by choosing one option over another are opportunity costs.

Related exercise material: **BE21-1, BE21-2, E21-1, E21-18, and DO IT! 21-1.**

LEARNING OBJECTIVE

2

Analyze the relevant costs in accepting an order at a special price.

Sometimes a company has an opportunity to obtain additional business if it is willing to make a price concession to a specific customer. To illustrate, assume that Sunbelt Company produces 100,000 Smoothie blenders per month, which is 80% of plant capacity. Variable manufacturing costs are \$8 per unit. Fixed

manufacturing costs are \$400,000, or \$4 per unit. The Smoothie blenders are normally sold directly to retailers at \$20 each. Sunbelt has an offer from Kensington Co. (a foreign wholesaler) to purchase an additional 2,000 blenders at \$11 per unit. Acceptance of the offer would not affect normal sales of the product, and the additional units can be manufactured without increasing plant capacity. What should management do?

Helpful Hint

This is a good example of different costs for different purposes. In the long run all costs are relevant, but for this decision only costs that change are relevant.

If management makes its decision on the basis of the total cost per unit of \$12 (\$8 variable + \$4 fixed), the order would be rejected because costs per unit (\$12) exceed revenues per unit (\$11) by \$1 per unit. However, since the units can be produced within existing plant capacity, the special order **will not increase fixed costs**. Let's identify the relevant data for the decision. First, the variable manufacturing costs increase \$16,000 ($\$8 \times 2,000$). Second, the expected revenue increases \$22,000 ($\$11 \times 2,000$). Thus, as shown in Illustration 21-4, Sunbelt increases its net income by \$6,000 by accepting this special order.

	A	B	C	D
		Reject Order	Accept Order	Net Income Increase (Decrease)
1				
2	Revenues	\$0	\$22,000	\$ 22,000
3	Costs	0	16,000	(16,000)
4	Net income	\$0	\$ 6,000	\$ 6,000
5				

Illustration 21-4

Incremental analysis—accepting an order at a special price

Two points should be emphasized. First, we assume that sales of the product in other markets **would not be affected by this special order**. If other sales were affected, then Sunbelt would have to consider the lost sales in making the decision. Second, if Sunbelt is operating **at full capacity**, it is likely that the special order would be rejected. Under such circumstances, the company would have to expand plant capacity. In that case, the special order would have to absorb these additional fixed manufacturing costs, as well as the variable manufacturing costs.

DO IT!

2

Special Orders

Cobb Company incurs costs of \$28 per unit (\$18 variable and \$10 fixed) to make a product that normally sells for \$42. A foreign wholesaler offers to buy 5,000 units at \$25 each. The special order results in additional shipping costs of \$1 per unit. Compute the increase or decrease in net income Cobb realizes by accepting the special order, assuming Cobb has excess operating capacity. Should Cobb Company accept the special order?

Solution

Action Plan

- ✓ Identify all revenues that change as a result of accepting the order.
- ✓ Identify all costs that change as a result of accepting the order, and net this amount against the change in revenues.

	Reject	Accept	Net Income Increase (Decrease)
Revenues	\$-0-	\$125,000*	\$125,000
Costs	-0-	95,000**	(95,000)
Net income	\$-0-	\$ 30,000	\$ 30,000

*5,000 × \$25

** $(5,000 \times \$18) + (5,000 \times \$1)$

The analysis indicates net income increases by \$30,000; therefore, Cobb Company should accept the special order.

Related exercise material: **BE21-3, E21-2, E21-3, E21-4, and DO IT! 21-2.**

LEARNING OBJECTIVE

3

Analyze the relevant costs in a make-or-buy decision.

When a manufacturer assembles component parts in producing a finished product, management must decide whether to make or buy the components. The decision to buy parts or services is often referred to as outsourcing. For example, as discussed in the Feature Story, a company such as **Method Products** may either make or buy the soaps used in its products. Similarly, **Hewlett-Packard Corporation** may make or buy the electronic circuitry, cases, and printer heads for its printers. **Boeing** recently sold some of its commercial aircraft factories in an effort to cut production costs and focus on engineering and final assembly rather than manufacturing. The decision to make or buy components should be made on the basis of incremental analysis.

Baron Company makes motorcycles and scooters. It incurs the following annual costs in producing 25,000 ignition switches for scooters.

Direct materials	\$ 50,000
Direct labor	75,000
Variable manufacturing overhead	40,000
Fixed manufacturing overhead	60,000
Total manufacturing costs	<u>\$225,000</u>
Total cost per unit (\$225,000 ÷ 25,000)	<u>\$9.00</u>

Illustration 21-5
Annual product cost data

Instead of making its own switches, Baron Company might purchase the ignition switches from Ignition, Inc. at a price of \$8 per unit. What should management do?

At first glance, it appears that management should purchase the ignition switches for \$8 rather than make them at a cost of \$9. However, a review of operations indicates that if the ignition switches are purchased from Ignition, Inc., *all* of Baron's variable costs but only \$10,000 of its fixed manufacturing costs will be eliminated (avoided). Thus, \$50,000 of the fixed manufacturing costs remain if the ignition switches are purchased. The relevant costs for incremental analysis, therefore, are as shown below.

Illustration 21-6
Incremental analysis—make or buy

	A	B	C	D
		Make	Buy	Net Income Increase (Decrease)
1				
2	Direct materials	\$ 50,000	\$ 0	\$ 50,000
3	Direct labor	75,000	0	75,000
4	Variable manufacturing costs	40,000	0	40,000
5	Fixed manufacturing costs	60,000	50,000	10,000
6	Purchase price (25,000 × \$8)	0	200,000	(200,000)
7	Total annual cost	\$225,000	\$250,000	\$ (25,000)
8				

This analysis indicates that Baron Company incurs \$25,000 of additional costs by buying the ignition switches rather than making them. Therefore, Baron should continue to make the ignition switches even though the total manufacturing

ETHICS NOTE

In the make-or-buy decision, it is important for management to take into account the social impact of its choice. For instance, buying may be the most economically feasible solution, but such action could result in the closure of a manufacturing plant that employs many good workers.

cost is \$1 higher per unit than the purchase price. The primary cause of this result is that, even if the company purchases the ignition switches, it will still have fixed costs of \$50,000 to absorb.

Opportunity Cost

The foregoing make-or-buy analysis is complete only if it is assumed that the productive capacity used to make the ignition switches cannot be converted to another purpose. If there is an opportunity to use this productive capacity in some other manner, then this opportunity cost must be considered. As indicated earlier, **opportunity cost** is the potential benefit that may be obtained by following an alternative course of action.

To illustrate, assume that through buying the switches, Baron Company can use the released productive capacity to generate additional income of \$38,000 from producing a different product. This lost income is an additional cost of continuing to make the switches in the make-or-buy decision. This opportunity cost is therefore added to the “Make” column for comparison. As shown in Illustration 21-7, it is now advantageous to buy the ignition switches. The company’s income would increase by \$13,000.

Illustration 21-7

Incremental analysis—make or buy, with opportunity cost

	A	B	C	D
1		Make	Buy	Net Income Increase (Decrease)
2	Total annual cost	\$225,000	\$250,000	\$(25,000)
3	Opportunity cost	38,000	0	38,000
4	Total cost	\$263,000	\$250,000	\$ 13,000
5				

The qualitative factors in this decision include the possible loss of jobs for employees who produce the ignition switches. In addition, management must assess the supplier’s ability to satisfy the company’s quality control standards at the quoted price per unit.

Service Company Insight Amazon.com

Giving Away the Store?

In an earlier chapter, we discussed Amazon.com’s incredible growth. However, some analysts have questioned whether some of the methods that Amazon uses to increase its sales make good business sense. For example, a

few years ago, Amazon initiated a “Prime” free-shipping subscription program. For a \$79 fee per year, Amazon’s customers get free shipping on as many goods as they want to buy. At the time, CEO Jeff Bezos promised that the program would be costly in the short-term but benefit the company

in the long-term. Six years later, it was true that Amazon’s sales had grown considerably. It was also estimated that its Prime customers buy two to three times as much as non-Prime customers. But, its shipping costs rose from 2.8% of sales to 4% of sales, which is remarkably similar to the drop in its gross margin from 24% to 22.3%. Perhaps even less easy to justify is a proposal by Mr. Bezos to start providing a free Internet movie-streaming service to Amazon’s Prime customers. Perhaps some incremental analysis is in order?

Source: Martin Peers, “Amazon’s Prime Numbers,” *Wall Street Journal Online* (February 3, 2011).

What are the relevant revenues and costs that Amazon should consider relative to the decision whether to offer the Prime free-shipping subscription? (Go to WileyPLUS for this answer and additional questions.)

DO IT!
3
Make or Buy

Juanita Company must decide whether to make or buy some of its components for the appliances it produces. The costs of producing 166,000 electrical cords for its appliances are as follows.

Direct materials	\$90,000	Variable overhead	\$32,000
Direct labor	\$20,000	Fixed overhead	\$24,000

Instead of making the electrical cords at an average cost per unit of \$1.00 ($\$166,000 \div 166,000$), the company has an opportunity to buy the cords at \$0.90 per unit. If the company purchases the cords, all variable costs and one-fourth of the fixed costs are eliminated.

(a) Prepare an incremental analysis showing whether the company should make or buy the electrical cords. (b) Will your answer be different if the released productive capacity will generate additional income of \$5,000?

Solution

(a)

	<u>Make</u>	<u>Buy</u>	<u>Net Income Increase (Decrease)</u>
Direct materials	\$ 90,000	\$ -0-	\$ 90,000
Direct labor	20,000	-0-	20,000
Variable manufacturing costs	32,000	-0-	32,000
Fixed manufacturing costs	24,000	18,000*	6,000
Purchase price	-0-	149,400**	(149,400)
Total cost	<u>\$166,000</u>	<u>\$167,400</u>	<u>\$ (1,400)</u>

* $\$24,000 \times .75$
 ** $166,000 \times \$0.90$

This analysis indicates that Juanita Company will incur \$1,400 of additional costs if it buys the electrical cords rather than making them.

(b)

	<u>Make</u>	<u>Buy</u>	<u>Net Income Increase (Decrease)</u>
Total cost	\$166,000	\$167,400	\$(1,400)
Opportunity cost	5,000	-0-	5,000
Total cost	<u>\$171,000</u>	<u>\$167,400</u>	<u>\$ 3,600</u>

Yes, the answer is different. The analysis shows that net income increases by \$3,600 if Juanita Company purchases the electrical cords rather than making them.

Action Plan

- ✓ Look for the costs that change.
- ✓ Ignore the costs that do not change.
- ✓ Use the format in the chapter for your answer.
- ✓ Recognize that opportunity cost can make a difference.

**LEARNING
OBJECTIVE**
4
Analyze the relevant costs in determining whether to sell or process materials further.

Many manufacturers have the option of selling products at a given point in the production cycle or continuing to process with the expectation of selling them at a later point at a higher price. For example, a bicycle manufacturer such as **Trek** could sell its bicycles to retailers either unassembled or assembled. A furniture manufacturer such as **Ethan Allen** could sell its dining room sets to furniture stores either unfinished or finished. The sell-or-process-further decision should be made on the basis of incremental analysis. The basic decision rule is: **Process**

further as long as the incremental revenue from such processing exceeds the incremental processing costs.

Single-Product Case

Assume, for example, that Woodmasters Inc. makes tables. It sells unfinished tables for \$50. The cost to manufacture an unfinished table is \$35, computed as follows.

Illustration 21-8

Per unit cost of unfinished table

Direct materials	\$15
Direct labor	10
Variable manufacturing overhead	6
Fixed manufacturing overhead	4
Manufacturing cost per unit	\$35

Helpful Hint

Current net income is known. Net income from processing further is an estimate. In making its decision, management could add a "risk" factor for the estimate.

Woodmasters currently has unused productive capacity that is expected to continue indefinitely. Some of this capacity could be used to finish the tables and sell them at \$60 per unit. For a finished table, direct materials will increase \$2 and direct labor costs will increase \$4. Variable manufacturing overhead costs will increase by \$2.40 (60% of direct labor). No increase is anticipated in fixed manufacturing overhead.

Should the company sell the unfinished tables, or should it process them further? The incremental analysis on a per unit basis is as follows.

	A	B	C	D
		Sell Unfinished	Process Further	Net Income Increase (Decrease)
1				
2	Sales price per unit	\$50.00	\$60.00	\$10.00
3	Cost per unit			
4	Direct materials	15.00	17.00	(2.00)
5	Direct labor	10.00	14.00	(4.00)
6	Variable manufacturing overhead	6.00	8.40	(2.40)
7	Fixed manufacturing overhead	4.00	4.00	0.00
8	Total	35.00	43.40	(8.40)
9	Net income per unit	\$15.00	\$16.60	\$ 1.60
10				

Illustration 21-9

Incremental analysis—sell or process further

It would be advantageous for Woodmasters to process the tables further. The incremental revenue of \$10.00 from the additional processing is \$1.60 higher than the incremental processing costs of \$8.40.

Multiple-Product Case

Sell-or-process-further decisions are particularly applicable to processes that produce multiple products simultaneously. In many industries, a number of end-products are produced from a single raw material and a common production process. These multiple end-products are commonly referred to as **joint products**. For example, in the meat-packing industry, **Armour** processes a cow or pig into meat, internal organs, hides, bones, and fat products. In the petroleum industry, **ExxonMobil** refines crude oil to produce gasoline, lubricating oil, kerosene, paraffin, and ethylene.

Illustration 21-10 presents a joint product situation for Marais Creamery involving a decision to **sell or process further** cream and skim milk. Cream and skim milk are joint products that result from the processing of raw milk.

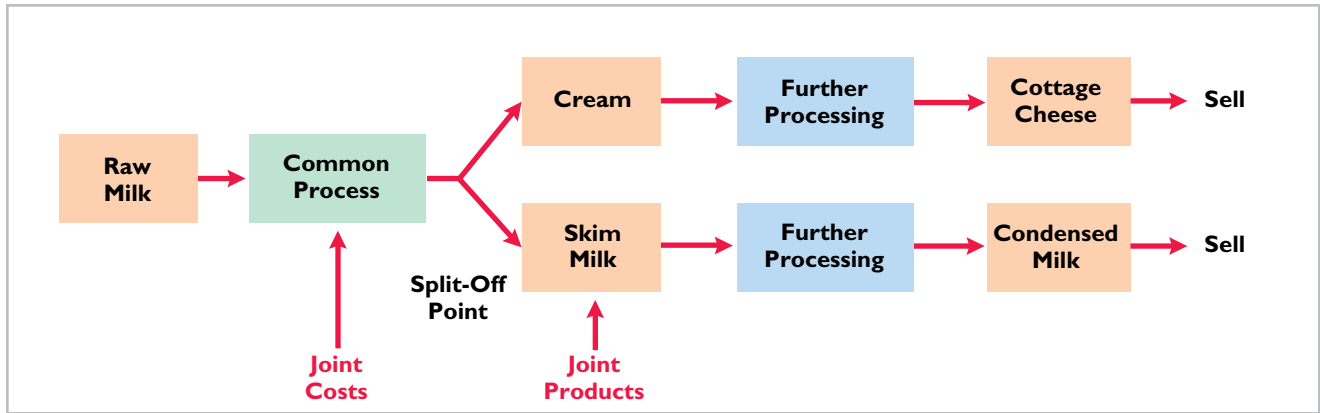

Illustration 21-10
Joint production process—
Creamery

Marais incurs many costs prior to the manufacture of the cream and skim milk. All costs incurred prior to the point at which the two products are separately identifiable (the **split-off point**) are called **joint costs**. For purposes of determining the cost of each product, joint product costs must be allocated to the individual products. This is frequently done based on the relative sales value of the joint products. While this allocation is important for determination of product cost, **it is irrelevant for any sell-or-process-further decisions**. The reason is that these **joint product costs are sunk costs**. That is, they have already been incurred, and they cannot be changed or avoided by any subsequent decision.

Illustration 21-11 provides the daily cost and revenue data for Marais Creamery related to cream and cottage cheese.

Costs (per day)	
Joint cost allocated to cream	\$ 9,000
Cost to process cream into cottage cheese	10,000
Revenues from Products (per day)	
Cream	\$19,000
Cottage cheese	27,000

Illustration 21-11
Cost and revenue data per day
for cream

From this information, we can determine whether the company should simply sell the cream or process it further into cottage cheese. Illustration 21-12 shows the necessary analysis. Note that the joint cost that is allocated to the cream is not included in this decision. It is not relevant to the decision because it is a sunk cost. It has been incurred in the past and will remain the same no matter whether the cream is subsequently processed into cottage cheese or not.

Illustration 21-12
Analysis of whether to sell
cream or process into cottage
cheese

	A	B	C	D
		Sell	Process Further	Net Income Increase (Decrease)
1				
2	Sales per day	\$19,000	\$27,000	\$ 8,000
3	Cost per day to process cream into cottage cheese	0	10,000	(10,000)
4		\$19,000	\$17,000	\$ (2,000)
5				

From this analysis, we can see that Marais should not process the cream further because it will sustain an incremental loss of \$2,000.

Illustration 21-13 (page 984) provides the daily cost and revenue data for the company related to skim milk and condensed milk.

Illustration 21-13

Cost and revenue data per day for skim milk

Costs (per day)	
Joint cost allocated to skim milk	\$ 5,000
Cost to process skim milk into condensed milk	8,000
Revenues from Products (per day)	
Skim milk	\$11,000
Condensed milk	26,000

Illustration 21-14 shows that Marais Company should process the skim milk into condensed milk, as it will increase net income by \$7,000.

	A	B	C	D
		Sell	Process Further	Net Income Increase (Decrease)
1				
2	Sales per day	\$11,000	\$26,000	\$15,000
3	Cost per day to process skim milk into condensed milk	0	8,000	(8,000)
4		\$11,000	\$18,000	\$ 7,000
5				

Illustration 21-14

Analysis of whether to sell skim milk or process into condensed milk

Again, note that the \$5,000 of joint cost allocated to the skim milk is irrelevant in deciding whether to sell or process further. Why? The joint cost remains the same, whether or not further processing is performed.

These decisions need to be reevaluated as market conditions change. For example, if the price of skim milk increases relative to the price of condensed milk, it may become more profitable to sell the skim milk rather than process it into condensed milk. Consider also oil refineries. As market conditions change, the companies must constantly re-assess which products to produce from the oil they receive at their plants.

DO IT!

4

Sell or Process Further

Easy Does It manufactures unpainted furniture for the do-it-yourself (DIY) market. It currently sells a child’s rocking chair for \$25. Production costs are \$12 variable and \$8 fixed. Easy Does It is considering painting the rocking chair and selling it for \$35. Variable costs to paint each chair are expected to be \$9, and fixed costs are expected to be \$2.

Prepare an analysis showing whether Easy Does It should sell unpainted or painted chairs.

Solution

Action Plan

- ✓ Identify the revenues that change as a result of painting the rocking chair.
- ✓ Identify all costs that change as a result of painting the rocking chair, and net the amount against the revenues.

	Sell	Process Further	Net Income Increase (Decrease)
Revenues	\$25	\$35	\$10
Variable costs	12	21 ^a	(9)
Fixed costs	8	10 ^b	(2)
Net income	<u>\$ 5</u>	<u>\$ 4</u>	<u>\$ (1)</u>

^a\$12 + \$9 ^b\$8 + \$2

The analysis indicates that the rocking chair should be sold unpainted because net income per chair will be \$1 greater.

Related exercise material: **BE21-5, BE21-6, E21-9, E21-10, E21-11, E21-12, and DO IT! 21-4.**

LEARNING
OBJECTIVE

5

Analyze the relevant costs to be considered in repairing, retaining, or replacing equipment.

Management often has to decide whether to continue using an asset, repair, or replace it. For example, **Delta Airlines** must decide whether to replace old jets with new, more fuel-efficient ones. To illustrate, assume that Jeffcoat Company has a factory machine that originally cost \$110,000. It has a balance in Accumulated Depreciation of \$70,000, so the machine's book value is \$40,000. It has a remaining useful life of four years. The company is considering replacing this machine with a new machine. A new machine is available that costs \$120,000. It is expected to have zero salvage value at the end of its four-year useful life. If the new machine is acquired, variable manufacturing costs are expected to decrease from \$160,000 to \$125,000 annually, and the old unit could be sold for \$5,000. The incremental analysis for the **four-year period** is as follows.

Illustration 21-15
Incremental analysis—retain or replace equipment

	A	B	C	D	E	F
		Retain Equipment		Replace Equipment		Net Income Increase (Decrease)
1						
2	Variable manufacturing costs	\$640,000	^a	\$500,000	^b	\$140,000
3	New machine cost			120,000		(120,000)
4	Sale of old machine			(5,000)		5,000
5	Total	\$640,000		\$615,000		\$ 25,000
6						
7	^a (4 years × \$160,000)					
8	^b (4 years × \$125,000)					
9						

In this case, it would be to the company's advantage to replace the equipment. The lower variable manufacturing costs due to replacement more than offset the cost of the new equipment. Note that the \$5,000 received from the sale of the old machine is relevant to the decision because it will only be received if the company chooses to replace its equipment. In general, any trade-in allowance or cash disposal value of existing assets is relevant to the decision to retain or replace equipment.

One other point should be mentioned regarding Jeffcoat's decision: **The book value of the old machine does not affect the decision.** Book value is a **sunk cost**, which is a cost that cannot be changed by any present or future decision. **Sunk costs are not relevant in incremental analysis.** In this example, if the asset is retained, book value will be depreciated over its remaining useful life. Or, if the new unit is acquired, book value will be recognized as a loss of the current period. Thus, the effect of book value on cumulative future earnings is the same regardless of the replacement decision.

Sometimes, decisions regarding whether to replace equipment are clouded by behavioral decision-making errors. For example, suppose a manager spent \$90,000 repairing a machine two months ago. Suppose that the machine now breaks down again. The manager might be inclined to think that because the company recently spent a large amount of money to repair the machine, the machine should be repaired again rather than replaced. However, the amount spent in the past to repair the machine is irrelevant to the current decision. It is a sunk cost.

Similarly, suppose a manager spent \$5,000,000 to purchase a machine. Six months later, a new machine comes on the market that is significantly more efficient than the one recently purchased. The manager might be inclined to think that he or she should not buy the new machine because of the recent purchase.

In fact, the manager might fear that buying a different machine so quickly might call into question the merit of the previous decision. Again, the fact that the company recently bought a machine is not relevant. Instead, the manager should use incremental analysis to determine whether the savings generated by the efficiencies of the new machine would justify its purchase.

DO IT!**5****Repair or Replace Equipment**

Rochester Roofing is faced with a decision. The company relies very heavily on the use of its 60-foot extension lift for work on large homes and commercial properties. Last year, the company spent \$60,000 refurbishing the lift. It has just determined that another \$40,000 of repair work is required. Alternatively, Rochester Roofing has found a newer used lift that is for sale for \$170,000. The company estimates that both the old and new lifts would have useful lives of 6 years. However, the new lift is more efficient and thus would reduce operating expenses by about \$20,000 per year. The company could also rent out the new lift for about \$2,000 per year. The old lift is not suitable for rental. The old lift could currently be sold for \$25,000 if the new lift is purchased. Prepare an incremental analysis that shows whether the company should repair or replace the equipment.

Solution**Action Plan**

- ✓ Those costs and revenues that differ across the alternatives are relevant to the decision.
- ✓ Past costs that cannot be changed are sunk costs.

	Retain Equipment	Replace Equipment	Net Income Increase (Decrease)
Operating expenses	\$120,000*		\$120,000
Repair costs	40,000		40,000
Rental revenue		\$ (12,000)**	12,000
New machine cost		170,000	(170,000)
Sale of old machine		(25,000)	25,000
Total cost	<u>\$160,000</u>	<u>\$133,000</u>	<u>\$ 27,000</u>
*(6 years × \$20,000)			
**(6 years × \$2,000)			

The analysis indicates that purchasing the new machine would increase net income for the 6-year period by \$27,000.

Related exercise material: **BE21-7, E21-13, E21-14, and DO IT! 21-5.**

**LEARNING
OBJECTIVE****6****Analyze the relevant costs in deciding whether to eliminate an unprofitable segment or product.**

Management sometimes must decide whether to eliminate an unprofitable business segment or product. For example, in recent years, many airlines quit servicing certain cities or cut back on the number of flights. **Goodyear** quit producing several brands in the low-end tire market. Again, the key is to **focus on the relevant costs—the data that change under the alternative courses of action**. To illustrate, assume that Venus Company manufactures tennis racquets in three models: Pro, Master, and Champ. Pro and Master are profitable lines. Champ (highlighted in red in the table below) operates at a loss. Condensed income statement data are as follows.

Illustration 21-16

Segment income data

	Pro	Master	Champ	Total
Sales	\$800,000	\$300,000	\$100,000	\$1,200,000
Variable costs	520,000	210,000	90,000	820,000
Contribution margin	280,000	90,000	10,000	380,000
Fixed costs	80,000	50,000	30,000	160,000
Net income	<u>\$200,000</u>	<u>\$ 40,000</u>	<u>\$ (20,000)</u>	<u>\$ 220,000</u>

Helpful Hint

A decision to discontinue a segment based solely on the bottom line—net loss—is inappropriate.

You might think that total net income will increase by \$20,000 to \$240,000 if the unprofitable Champ line of racquets is eliminated. However, **net income may actually decrease if the Champ line is discontinued**. The reason is that if the fixed costs allocated to the Champ racquets cannot be eliminated, they will have to be absorbed by the other products. To illustrate, assume that the \$30,000 of fixed costs applicable to the unprofitable segment are allocated $\frac{2}{3}$ to the Pro model and $\frac{1}{3}$ to the Master model if the Champ model is eliminated. Fixed costs will increase to \$100,000 (\$80,000 + \$20,000) in the Pro line and to \$60,000 (\$50,000 + \$10,000) in the Master line. The revised income statement is as follows.

	Pro	Master	Total
Sales	\$800,000	\$300,000	\$1,100,000
Variable costs	520,000	210,000	730,000
Contribution margin	280,000	90,000	370,000
Fixed costs	100,000	60,000	160,000
Net income	\$180,000	\$ 30,000	\$ 210,000

Illustration 21-17

Income data after eliminating unprofitable product line

Total net income has decreased \$10,000 (\$220,000 – \$210,000). This result is also obtained in the following incremental analysis of the Champ racquets.

Illustration 21-18

Incremental analysis—eliminating unprofitable segment with no reduction in fixed costs

	A	B	C	D
		Continue	Eliminate	Net Income Increase (Decrease)
1				
2	Sales	\$100,000	\$ 0	\$(100,000)
3	Variable costs	90,000	0	90,000
4	Contribution margin	10,000	0	(10,000)
5	Fixed costs	30,000	30,000	0
6	Net income	\$(20,000)	\$(30,000)	\$ (10,000)
7				

The loss in net income is attributable to the Champ line's contribution margin (\$10,000) that will not be realized if the segment is discontinued.

Assume the same facts as above, except now assume that \$22,000 of the fixed costs attributed to the Champ line can be eliminated if the line is discontinued. Illustration 21-19 presents the incremental analysis based on this revised assumption.

Illustration 21-19

Incremental analysis—eliminating unprofitable segment with reduction in fixed costs

	A	B	C	D
		Continue	Eliminate	Net Income Increase (Decrease)
1				
2	Sales	\$100,000	\$ 0	\$(100,000)
3	Variable costs	90,000	0	90,000
4	Contribution margin	10,000	0	(10,000)
5	Fixed costs	30,000	8,000	22,000
6	Net income	\$(20,000)	\$(8,000)	\$ 12,000
7				

In this case, because the company is able to eliminate some of its fixed costs by eliminating the division, it can increase its net income by \$12,000. **This occurs because the \$22,000 savings that results from the eliminated fixed costs exceeds the \$10,000 in lost contribution margin by \$12,000 (\$22,000 – \$10,000).**

In deciding on the future status of an unprofitable segment, management should consider the effect of elimination on related product lines. It may be possible for continuing product lines to obtain some or all of the sales lost by the discontinued product line. In some businesses, services or products may be linked—for example, free checking accounts at a bank, or coffee at a donut shop. In addition, management should consider the effect of eliminating the product line on employees who may have to be discharged or retrained.

Management Insight **Buck Knives**

Max Blain/iStockphoto

Time to Move to a New Neighborhood?

If you have ever moved, then you know how complicated and costly it can be. Now consider what it would be like for a manufacturing company with 260 employees and a 170,000-square-foot facility to move from southern California to Idaho. That is what **Buck Knives** did in order to save its company from financial

ruin. Electricity rates in Idaho were half those in California, workers' compensation was one-third the cost, and factory wages were 20% lower. Combined, this would reduce

manufacturing costs by \$600,000 per year. Moving the factory would cost about \$8.5 million, plus \$4 million to move key employees. Offsetting these costs was the estimated \$11 million selling price of the California property. Based on these estimates, the move would pay for itself in three years.

Ultimately, the company received only \$7.5 million for its California property, only 58 of 75 key employees were willing to move, construction was delayed by a year which caused the new plant to increase in price by \$1.5 million, and wages surged in Idaho due to low unemployment. Despite all of these complications, though, the company considers the move a great success.

Source: Chris Lydgate, "The Buck Stopped," *Inc. Magazine* (May 2006), pp. 87–95.

What were some of the factors that complicated the company's decision to move? How should the company have incorporated such factors into its incremental analysis? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT! 6 Unprofitable Segments

Lambert, Inc. manufactures several types of accessories. For the year, the knit hats and scarves line had sales of \$400,000, variable expenses of \$310,000, and fixed expenses of \$120,000. Therefore, the knit hats and scarves line had a net loss of \$30,000. If Lambert eliminates the knit hats and scarves line, \$20,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate the knit hats and scarves line.

Solution

Action Plan

- ✓ Identify the revenues that change as a result of eliminating a product line.
- ✓ Identify all costs that change as a result of eliminating a product line, and net the amount against the revenues.

	Continue	Eliminate	Net Income Increase (Decrease)
Sales	\$400,000	\$ 0	\$(400,000)
Variable costs	310,000	0	310,000
Contribution margin	90,000	0	(90,000)
Fixed costs	120,000	20,000	100,000
Net income	<u>\$(30,000)</u>	<u>\$(20,000)</u>	<u>\$ 10,000</u>

The analysis indicates that Lambert should eliminate the knit hats and scarves line because net income will increase \$10,000.

Related exercise material: **BE21-8, E21-15, E21-16, E21-17, and DO IT! 21-6.**

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Describe management's decision-making process and incremental analysis.** Management's decision-making process consists of (a) identifying the problem and assigning responsibility for the decision, (b) determining and evaluating possible courses of action, (c) making the decision, and (d) reviewing the results of the decision. Incremental analysis identifies financial data that change under alternative courses of action. These data are relevant to the decision because they vary across the possible alternatives.
- 2 Analyze the relevant costs in accepting an order at a special price.** The relevant costs are those that change if the order is accepted. The relevant information in accepting an order at a special price is the difference between the variable manufacturing costs to produce the special order and expected revenues. Any changes in fixed costs, opportunity cost, or other incremental costs or savings (such as additional shipping) should be considered.
- 3 Analyze the relevant costs in a make-or-buy decision.** In a make-or-buy decision, the relevant costs are (a) the variable manufacturing costs that will be saved as well as changes to fixed manufacturing costs, (b) the purchase price, and (c) opportunity cost.
- 4 Analyze the relevant costs in determining whether to sell or process materials further.** The decision rule for whether to sell or process materials further is: Process further as long as the incremental revenue from processing exceeds the incremental processing costs.
- 5 Analyze the relevant costs to be considered in repairing, retaining, or replacing equipment.** The relevant costs to be considered in determining whether equipment should be repaired, retained, or replaced are the effects on variable costs and the cost of the new equipment. Also, any disposal value of the existing asset must be considered.
- 6 Analyze the relevant costs in deciding whether to eliminate an unprofitable segment or product.** In deciding whether to eliminate an unprofitable segment or product, the relevant costs are the variable costs that drive the contribution margin, if any, produced by the segment or product. Opportunity cost and reduction of fixed expenses must also be considered.

GLOSSARY REVIEW

Incremental analysis The process of identifying the financial data that change under alternative courses of action. (p. 974).

Joint costs For joint products, all costs incurred prior to the point at which the two products are separately identifiable (known as the **split-off point**). (p. 983).

Joint products Multiple end-products produced from a single raw material and a common production process. (p. 982).

Opportunity cost The potential benefit that is lost when one course of action is chosen rather than an alternative course of action. (p. 975).

Relevant costs Those costs and revenues that differ across alternatives. (p. 975).

Sunk cost A cost that cannot be changed or avoided by any present or future decision. (p. 975).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Three of the steps in management's decision-making process are (1) review results of decision, (2) determine and evaluate possible courses of action, and (3) make the decision. The steps are prepared in the following order:
 (a) (1), (2), (3). (c) (2), (1), (3).
 (b) (3), (2), (1). (d) (2), (3), (1).
- (LO 1) 2. Incremental analysis is the process of identifying the financial data that:
 (a) do not change under alternative courses of action.
 (b) change under alternative courses of action.
 (c) are mixed under alternative courses of action.
 (d) No correct answer is given.
3. In making business decisions, management ordinarily considers: (LO 1)
 (a) quantitative factors but not qualitative factors.
 (b) financial information only.
 (c) both financial and nonfinancial information.
 (d) relevant costs, opportunity cost, and sunk costs.
4. A company is considering the following alternatives: (LO 1)
- | | Alternative A | Alternative B |
|----------------|---------------|---------------|
| Revenues | \$50,000 | \$50,000 |
| Variable costs | 24,000 | 24,000 |
| Fixed costs | 12,000 | 15,000 |

Which of the following are relevant in choosing between these alternatives?

- (a) Revenues, variable costs, and fixed costs.
 (b) Variable costs and fixed costs.
 (c) Variable costs only.
 (d) Fixed costs only.
- (LO 2)** 5. It costs a company \$14 of variable costs and \$6 of fixed costs to produce product Z200 that sells for \$30. A foreign buyer offers to purchase 3,000 units at \$18 each. If the special offer is accepted and produced with unused capacity, net income will:
 (a) decrease \$6,000. (c) increase \$12,000.
 (b) increase \$6,000. (d) increase \$9,000.
- (LO 2)** 6. It costs a company \$14 of variable costs and \$6 of fixed costs to produce product Z200. Product Z200 sells for \$30. A buyer offers to purchase 3,000 units at \$18 each. The seller will incur special shipping costs of \$5 per unit. If the special offer is accepted and produced with unused capacity, net income will:
 (a) increase \$3,000. (c) decrease \$12,000.
 (b) increase \$12,000. (d) decrease \$3,000.
- (LO 3)** 7. Jobart Company is currently operating at full capacity. It is considering buying a part from an outside supplier rather than making it in-house. If Jobart purchases the part, it can use the released productive capacity to generate additional income of \$30,000 from producing a different product. When conducting incremental analysis in this make-or-buy decision, the company should:
 (a) ignore the \$30,000.
 (b) add \$30,000 to other costs in the "Make" column.
 (c) add \$30,000 to other costs in the "Buy" column.
 (d) subtract \$30,000 from the other costs in the "Make" column.
- (LO 3)** 8. In a make-or-buy decision, relevant costs are:
 (a) manufacturing costs that will be saved.
 (b) the purchase price of the units.
 (c) the opportunity cost.
 (d) All of the above.
- (LO 3)** 9. Derek is performing incremental analysis in a make-or-buy decision for Item X. If Derek buys Item X, he can use its released productive capacity to produce Item Z. Derek will sell Item Z for \$12,000 and incur production costs of \$8,000. Derek's incremental analysis should include an opportunity cost of:
 (a) \$12,000. (c) \$4,000.
 (b) \$8,000. (d) \$0.
10. The decision rule in a sell-or-process-further decision is: process further as long as the incremental revenue from processing exceeds:
 (a) incremental processing costs.
 (b) variable processing costs.
 (c) fixed processing costs.
 (d) No correct answer is given.
11. Walton, Inc. makes an unassembled product that it currently sells for \$55. Production costs are \$20. Walton is considering assembling the product and selling it for \$68. The cost to assemble the product is estimated at \$12. What decision should Walton make?
 (a) Sell before assembly; net income per unit will be \$12 greater.
 (b) Sell before assembly; net income per unit will be \$1 greater.
 (c) Process further; net income per unit will be \$13 greater.
 (d) Process further; net income per unit will be \$1 greater.
12. In a decision to retain or replace equipment, the book value of the old equipment is a (an):
 (a) opportunity cost. (c) incremental cost.
 (b) sunk cost. (d) marginal cost.
13. If an unprofitable segment is eliminated:
 (a) net income will always increase.
 (b) variable costs of the eliminated segment will have to be absorbed by other segments.
 (c) fixed costs allocated to the eliminated segment will have to be absorbed by other segments.
 (d) net income will always decrease.
14. A segment of Hazard Inc. has the following data.
- | | |
|-------------------|-----------|
| Sales | \$200,000 |
| Variable expenses | 140,000 |
| Fixed expenses | 100,000 |
- If this segment is eliminated, what will be the effect on the remaining company? Assume that 50% of the fixed expenses will be eliminated and the rest will be allocated to the segments of the remaining company.
 (a) \$120,000 increase. (c) \$50,000 increase.
 (b) \$10,000 decrease. (d) \$10,000 increase.

Solutions

1. **(d)** The order of the steps in the decision process is (2) determine and evaluate possible courses of action, (3) make the decision, and (1) review the results of decision. Choices (a), (b), and (c) list the steps in the incorrect order.
2. **(b)** Incremental analysis is the process of identifying the financial data that change under alternative courses of action, not the financial data that (a) do not change or (c) are mixed. Choice (d) is wrong as there is a correct answer given.
3. **(c)** Management ordinarily considers both financial and nonfinancial information in making business decisions. The other choices are incorrect because they are all limited to financial data and do not consider nonfinancial information.
4. **(d)** Fixed costs is the only relevant factor; that is, the only factor that differs across Alternatives A and B. The other choices are incorrect because they list either revenues, variable costs, or both, which are the same amounts for both alternatives.
5. **(c)** If the special offer is accepted and produced with unused capacity, variable cost per unit = \$14, income per unit = (\$18 - \$14), so net income will increase by \$12,000 (3,000 × \$4), not (a) decrease \$6,000, (b) increase \$6,000, or (d) increase \$9,000.
6. **(d)** If the special offer is accepted and produced with unused capacity, variable cost per unit = \$19 (\$14 variable + \$5 shipping costs), income per unit = -\$1 (\$18 - \$19), so net income will decrease by \$3,000 (3,000 × -\$1), not (a) increase \$3,000, (b) increase \$12,000, or (c) decrease \$12,000.
7. **(b)** Jobart Company should add \$30,000 to other costs in the "Make" column as it represents lost income of continuing to make the part in-house. The other choices are incorrect because the \$30,000 (a) should not be ignored as it is an opportunity cost,

(c) represents potential lost income if the company continues to make the part instead of buying it so therefore should not be placed in the “Buy” column, and (d) should be added to, not subtracted from, the other costs in the “Make” column.

8. (d) All the costs in choices (a), (b), and (c) are relevant in a make-or-buy decision. So although choices (a), (b), and (c) are true statements, choice (d) is a better answer.

9. (c) Derek’s opportunity cost in its make-or-buy decision is \$12,000 (revenue for Item Z) – \$8,000 (production costs for Item Z) = \$4,000, not (a) \$12,000, (b) \$8,000, or (d) \$0.

10. (a) The decision rule in a sell-or-process-further decision is to process further as long as the incremental revenue from such processing exceeds incremental processing costs, not (b) variable processing costs or (c) fixed processing costs. Choice (d) is wrong as there is a correct answer given.

11. (d) If Walton processes further, net income per unit will increase \$13 (\$68 – \$55), which is \$1 more than its additional production costs (\$12). The other choices are therefore incorrect.

12. (b) In the decision to retain or replace equipment, the book value of the old equipment is a sunk cost (it reflects the original cost less accumulated depreciation, neither of which is relevant to the decision), not (a) an opportunity cost, (c) an incremental cost, or (d) a marginal cost.

13. (c) Even though the segment is eliminated, the fixed costs allocated to that segment will still have to be covered. This is done by having other segments absorb the fixed costs of that segment. Choices (a) and (d) are incorrect because net income can either increase or decrease if a segment is eliminated. Choice (b) is incorrect because when a segment is eliminated, the variable costs of that segment will also be eliminated and will not need to be absorbed by other segments.

14. (b) If the segment continues, net income = –\$40,000 (\$200,000 – \$140,000 – \$100,000). If the segment is eliminated, the contribution margin will also be eliminated but \$50,000 (\$100,000 × .50) of the fixed costs will remain. Therefore, the effect of eliminating the segment will be a \$10,000 decrease not (a) a \$120,000 increase, (c) a \$50,000 increase, or (d) a \$10,000 increase.

PRACTICE EXERCISES

1. Maningly Inc. has been manufacturing its own lampshades for its table lamps. The company is currently operating at 100% of capacity. Variable manufacturing overhead is charged to production at the rate of 50% of direct labor cost. The direct materials and direct labor cost per unit to make the lampshades are \$4 and \$6, respectively. Normal production is 50,000 table lamps per year.

Use incremental analysis for make-or-buy decision.

(LO 3)

A supplier offers to make the lampshades at a price of \$13.50 per unit. If Maningly accepts the supplier’s offer; all variable manufacturing costs will be eliminated, but the \$50,000 of fixed manufacturing overhead currently being charged to the lampshades will have to be absorbed by other products.

Instructions

- Prepare the incremental analysis for the decision to make or buy the lampshades.
- Should Maningly buy the lampshades?
- Would your answer be different in (b) if the productive capacity released by not making the lampshades could be used to produce income of \$40,000?

Solution

1. (a)

	<u>Make</u>	<u>Buy</u>	<u>Net Income Increase (Decrease)</u>
Direct materials (50,000 × \$4.00)	\$200,000	\$ 0	\$ 200,000
Direct labor (50,000 × \$6.00)	300,000	0	300,000
Variable manufacturing costs (500,000 × 50%)	150,000	0	150,000
Fixed manufacturing costs	50,000	50,000	0
Purchase price (50,000 × \$13.50)	0	675,000	(675,000)
Total annual cost	<u>\$700,000</u>	<u>\$725,000</u>	<u>\$ (25,000)</u>

- (b) No, Maningly should not purchase the lampshades. As indicated by the incremental analysis, it would cost the company \$25,000 more to purchase the lampshades.
 (c) Yes, by purchasing the lampshades, a total cost saving of \$15,000 will result as shown below.

	<u>Make</u>	<u>Buy</u>	<u>Net Income Increase (Decrease)</u>
Total annual cost (from (a))	\$700,000	\$725,000	\$(25,000)
Opportunity cost	40,000	0	40,000
Total cost	<u>\$740,000</u>	<u>\$725,000</u>	<u>\$ 15,000</u>

Use incremental analysis for whether to sell or process materials further.

(LO 4)

2. A company manufactures three products using same production process. The costs incurred up to the split-off point are \$200,000. These costs are allocated to the products on the basis of their sales value at the split-off point. The number of units produced, the selling prices per unit of the three products at the split-off point and after further processing, and the additional processing costs are as follows.

<u>Product</u>	<u>Number of Units Produced</u>	<u>Selling Price at Split-Off</u>	<u>Selling Price after Processing</u>	<u>Additional Processing Costs</u>
D	3,000	\$11.00	\$15.00	\$14,000
E	6,000	12.00	16.20	16,000
F	2,000	19.40	24.00	9,000

Instructions

- (a) Which information is relevant to the decision on whether or not to process the products further? Explain why this information is relevant.
 (b) Which product(s) should be processed further and which should be sold at the split-off point?
 (c) Would your decision be different if the company was using the quantity of output to allocate joint costs? Explain.

(CGA adapted)

Solution

2. (a) The costs that are relevant in this decision are the incremental revenues and the incremental costs associated with processing the material past the split-off point. Any costs incurred up to the split-off point are sunk costs and therefore irrelevant to this decision.

- (b) Revenue after further processing:

Product D: \$45,000 (3,000 units × \$15.00 per unit)
 Product E: \$97,200 (6,000 units × \$16.20 per unit)
 Product F: \$48,000 (2,000 units × \$24.00 per unit)

Revenue at split-off:

Product D: \$33,000 (3,000 units × \$11.00 per unit)
 Product E: \$72,000 (6,000 units × \$12.00 per unit)
 Product F: \$38,800 (2,000 units × \$19.40 per unit)

	<u>D</u>	<u>E</u>	<u>F</u>
Incremental revenue	\$ 12,000 ^a	\$ 25,200 ^b	\$ 9,200 ^c
Incremental cost	(14,000)	(16,000)	(9,000)
Increase (decrease) in profit	<u>\$ (2,000)</u>	<u>\$ 9,200</u>	<u>\$ 200</u>

^a\$45,000 – \$33,000; ^b\$97,200 – \$72,000; ^c\$48,000 – \$38,800

Products E and F should be processed further.

- (c) The decision would remain the same. It does not matter how the joint costs are allocated because joint costs are irrelevant to this decision.

3. Tek Enterprises uses a computer to handle its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

Use incremental analysis for retaining or replacing equipment.

(LO 5)

	<u>Current Machine</u>	<u>New Machine</u>
Original purchase cost	\$15,000	\$25,000
Accumulated depreciation	6,000	—
Estimated operating costs	25,000	20,000
Useful life	6 years	6 years

If sold now, the current machine would have a salvage value of \$5,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 6 years.

Instructions

Should the current machine be replaced? (Ignore the time value of money.)

Solution

3.

	<u>Retain Machine</u>	<u>Replace Machine</u>	<u>Net Income Increase (Decrease)</u>
Operating costs	\$150,000*	\$120,000**	\$30,000
New machine cost (depr.)	0	25,000	(25,000)
Salvage value (old)	0	(5,000)	5,000
Total	<u>\$150,000</u>	<u>\$140,000</u>	<u>\$10,000</u>

*\$25,000 × 6

**\$20,000 × 6

The current machine should be replaced. The incremental analysis shows that net income for the 6-year period will be \$10,000 higher by replacing the current machine.

4. Benai Lorenzo, a recent graduate of Bonita's accounting program, evaluated the operating performance of Wasson Company's six divisions. Benai made the following presentation to the Wasson board of directors and suggested the Ortiz Division be eliminated. "If the Ortiz Division is eliminated," she said, "our total profits would increase by \$23,870."

Use incremental analysis for elimination of division.

(LO 6)

	<u>The Other Five Divisions</u>	<u>Ortiz Division</u>	<u>Total</u>
Sales	\$1,664,200	\$ 96,200	\$1,760,400
Cost of goods sold	978,520	76,470	1,054,990
Gross profit	685,680	19,730	705,410
Operating expenses	527,940	43,600	571,540
Net income	<u>\$ 157,740</u>	<u>\$(23,870)</u>	<u>\$ 133,870</u>

In the Ortiz Division, cost of goods sold is \$70,000 variable and \$6,470 fixed, and operating expenses are \$15,000 variable and \$28,600 fixed. None of the Ortiz Division's fixed costs will be eliminated if the division is discontinued.

Instructions

Is Benai right about eliminating the Ortiz Division? Prepare a schedule to support your answer.

Solution

	<u>Continue</u>	<u>Eliminate</u>	Net Income Increase (Decrease)
4.			
Sales	\$ 96,200	\$ 0	\$(96,200)
Variable expenses			
Cost of goods sold	70,000	0	70,000
Operating expenses	15,000	0	15,000
Total variable	<u>85,000</u>	<u>0</u>	<u>85,000</u>
Contribution margin	<u>11,200</u>	<u>0</u>	<u>(11,200)</u>
Fixed expenses			
Cost of goods sold	6,470	6,470	0
Operating expenses	28,600	28,600	0
Total fixed	<u>35,070</u>	<u>35,070</u>	<u>0</u>
Net income (loss)	<u>\$(23,870)</u>	<u>\$(35,070)</u>	<u>\$(11,200)</u>

Benai is incorrect. The incremental analysis shows that net income will be \$11,200 less if the Ortiz Division is eliminated. This amount equals the contribution margin that would be lost by discontinuing the division.

PRACTICE PROBLEM

Use incremental analysis for a special order.

(LO 2)

Walston Company produces kitchen cabinets for homebuilders across the western United States. The cost of producing 5,000 cabinets is as follows.

Materials	\$ 500,000
Labor	250,000
Variable overhead	100,000
Fixed overhead	400,000
Total	<u>\$1,250,000</u>

Walston also incurs selling expenses of \$20 per cabinet. Wellington Corp. has offered Walston \$165 per cabinet for a special order of 1,000 cabinets. The cabinets would be sold to homebuilders in the eastern United States and thus would not conflict with Walston's current sales. Selling expenses per cabinet would be only \$5 per cabinet. Walston has available capacity to do the work.

Instructions

- Prepare an incremental analysis for the special order.
- Should Walston accept the special order? Why or why not?

Solution

(a) Relevant costs per unit would be:	
Materials	\$500,000/5,000 = \$100
Labor	250,000/5,000 = 50
Variable overhead	100,000/5,000 = 20
Selling expenses	5
Total relevant cost per unit	<u>\$175</u>

	<u>Reject Order</u>	<u>Accept Order</u>	Net Income Increase (Decrease)
Revenues	\$0	\$165,000*	\$165,000
Costs	<u>0</u>	<u>175,000**</u>	<u>(175,000)</u>
Net income	<u>\$0</u>	<u>\$(10,000)</u>	<u>\$(10,000)</u>

*\$165 × 1,000; **\$175 × 1,000

- Walston should reject the offer. The incremental benefit of \$165 per cabinet is less than the incremental cost of \$175. By accepting the order, Walston's net income would actually decline by \$10,000.

QUESTIONS

1. What steps are frequently involved in management's decision-making process?
2. Your roommate, Anna Polis, contends that accounting contributes to most of the steps in management's decision-making process. Is your roommate correct? Explain.
3. "Incremental analysis involves the accumulation of information concerning a single course of action." Do you agree? Why?
4. Sydney Greene asks for your help concerning the relevance of variable and fixed costs in incremental analysis. Help Sydney with her problem.
5. What data are relevant in deciding whether to accept an order at a special price?
6. Emil Corporation has an opportunity to buy parts at \$9 each that currently cost \$12 to make. What manufacturing costs are relevant to this make-or-buy decision?
7. Define the term "opportunity cost." How may this cost be relevant in a make-or-buy decision?
8. What is the decision rule in deciding whether to sell a product or process it further?
9. What are joint products? What accounting issue results from the production process that creates joint products?
10. How are allocated joint costs treated when making a sell-or-process-further decision?
11. Your roommate, Gale Dunham, is confused about sunk costs. Explain to your roommate the meaning of sunk costs and their relevance to a decision to retain or replace equipment.
12. Huang Inc. has one product line that is unprofitable. What circumstances may cause overall company net income to be lower if the unprofitable product line is eliminated?

BRIEF EXERCISES

BE21-1 The steps in management's decision-making process are listed in random order below. Indicate the order in which the steps should be executed.

- | | |
|--|---|
| _____ Make a decision | _____ Review results of the decision |
| _____ Identify the problem and assign responsibility | _____ Determine and evaluate possible courses of action |

Identify the steps in management's decision-making process.

(LO 1)

BE21-2 Bogart Company is considering two alternatives. Alternative A will have revenues of \$160,000 and costs of \$100,000. Alternative B will have revenues of \$180,000 and costs of \$125,000. Compare Alternative A to Alternative B showing incremental revenues, costs, and net income.

Determine incremental changes.

(LO 1)

BE21-3 At Bargain Electronics, it costs \$30 per unit (\$20 variable and \$10 fixed) to make an MP3 player that normally sells for \$45. A foreign wholesaler offers to buy 3,000 units at \$25 each. Bargain Electronics will incur special shipping costs of \$3 per unit. Assuming that Bargain Electronics has excess operating capacity, indicate the net income (loss) Bargain Electronics would realize by accepting the special order.

Determine whether to accept a special order.

(LO 2)

BE21-4 Manson Industries incurs unit costs of \$8 (\$5 variable and \$3 fixed) in making an assembly part for its finished product. A supplier offers to make 10,000 of the assembly part at \$6 per unit. If the offer is accepted, Manson will save all variable costs but no fixed costs. Prepare an analysis showing the total cost saving, if any, Manson will realize by buying the part.

Determine whether to make or buy a part.

(LO 3)

BE21-5 Pine Street Inc. makes unfinished bookcases that it sells for \$62. Production costs are \$36 variable and \$10 fixed. Because it has unused capacity, Pine Street is considering finishing the bookcases and selling them for \$70. Variable finishing costs are expected to be \$6 per unit with no increase in fixed costs. Prepare an analysis on a per unit basis showing whether Pine Street should sell unfinished or finished bookcases.

Determine whether to sell or process further.

(LO 4)

Determine whether to sell or process further, joint products.

(LO 4)

BE21-6 Each day, Adama Corporation processes 1 ton of a secret raw material into two resulting products, AB1 and XY1. When it processes 1 ton of the raw material, the company incurs joint processing costs of \$60,000. It allocates \$25,000 of these costs to AB1 and \$35,000 of these costs to XY1. The resulting AB1 can be sold for \$100,000. Alternatively, it can be processed further to make AB2 at an additional processing cost of \$45,000, and sold for \$150,000. Each day's batch of XY1 can be sold for \$95,000. Or, it can be processed further to create XY2, at an additional processing cost of \$50,000, and sold for \$130,000. Discuss what products Adama Corporation should make.

Determine whether to retain or replace equipment.

(LO 5)

BE21-7 Bryant Company has a factory machine with a book value of \$90,000 and a remaining useful life of 5 years. It can be sold for \$30,000. A new machine is available at a cost of \$400,000. This machine will have a 5-year useful life with no salvage value. The new machine will lower annual variable manufacturing costs from \$600,000 to \$500,000. Prepare an analysis showing whether the old machine should be retained or replaced.

Determine whether to eliminate an unprofitable segment.

(LO 6)

BE21-8 Lisah, Inc., manufactures golf clubs in three models. For the year, the Big Bart line has a net loss of \$10,000 from sales \$200,000, variable costs \$180,000, and fixed costs \$30,000. If the Big Bart line is eliminated, \$20,000 of fixed costs will remain. Prepare an analysis showing whether the Big Bart line should be eliminated.

DO IT! Exercises

Determine incremental costs.

(LO 1)

DO IT! 21-1 Nathan T Corporation is comparing two different options. Nathan T currently uses Option 1, with revenues of \$65,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$26,000 per year. Option 2 provides revenues of \$60,000 per year, maintenance expenses of \$5,000 per year, and operating expenses of \$22,000 per year. Option 1 employs a piece of equipment which was upgraded 2 years ago at a cost of \$17,000. If Option 2 is chosen, it will free up resources that will bring in an additional \$4,000 of revenue. Complete the following table to show the change in income from choosing Option 2 versus Option 1. Designate Sunk costs with an "S."

	<u>Option 1</u>	<u>Option 2</u>	<u>Net Income Increase (Decrease)</u>	<u>Sunk (\$)</u>
Revenues				
Maintenance expenses				
Operating expenses				
Equipment upgrade				
Opportunity cost				

Evaluate special order.

(LO 2)

DO IT! 21-2 Maize Company incurs a cost of \$35 per unit, of which \$20 is variable, to make a product that normally sells for \$58. A foreign wholesaler offers to buy 6,000 units at \$30 each. Maize will incur additional costs of \$4 per unit to imprint a logo and to pay for shipping. Compute the increase or decrease in net income Maize will realize by accepting the special order, assuming Maize has sufficient excess operating capacity. Should Maize Company accept the special order?

Evaluate make-or-buy opportunity.

(LO 3)

DO IT! 21-3 Wilma Company must decide whether to make or buy some of its components. The costs of producing 60,000 switches for its generators are as follows.

Direct materials	\$30,000	Variable overhead	\$45,000
Direct labor	\$42,000	Fixed overhead	\$60,000

Instead of making the switches at an average cost of \$2.95 ($\$177,000 \div 60,000$), the company has an opportunity to buy the switches at \$2.70 per unit. If the company purchases the switches, all the variable costs and one-fourth of the fixed costs will be eliminated. (a) Prepare an incremental analysis showing whether the company should make or buy the switches. (b) Would your answer be different if the released productive capacity will generate additional income of \$34,000?

DO IT! 21-4 Mesa Verde manufactures unpainted furniture for the do-it-yourself (DIY) market. It currently sells a table for \$75. Production costs are \$40 variable and \$10 fixed. Mesa Verde is considering staining and sealing the table to sell it for \$100. Variable costs to finish each table are expected to be \$19, and fixed costs are expected to be \$3. Prepare an analysis showing whether Mesa Verde should sell unpainted or finished tables.

Sell or process further.

(LO 4)

DO IT! 21-5 Darcy Roofing is faced with a decision. The company relies very heavily on the use of its 60-foot extension lift for work on large homes and commercial properties. Last year, Darcy Roofing spent \$60,000 refurbishing the lift. It has just determined that another \$40,000 of repair work is required. Alternatively, it has found a newer used lift that is for sale for \$170,000. The company estimates that both lifts would have useful lives of 6 years. The new lift is more efficient and thus would reduce operating expenses by about \$20,000 per year. Darcy Roofing could also rent out the new lift for about \$10,000 per year. The old lift is not suitable for rental. The old lift could currently be sold for \$25,000 if the new lift is purchased. Prepare an incremental analysis showing whether the company should repair or replace the equipment.

Repair or replace equipment.

(LO 5)

DO IT! 21-6 Gator Corporation manufactures several types of accessories. For the year, the gloves and mittens line had sales of \$500,000, variable expenses of \$370,000, and fixed expenses of \$150,000. Therefore, the gloves and mittens line had a net loss of \$20,000. If Gator eliminates the line, \$38,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate the gloves and mittens line.

Analyze whether to eliminate unprofitable segment.

(LO 6)

EXERCISES

E21-1 As a study aid, your classmate Pascal Adams has prepared the following list of statements about decision-making and incremental analysis.

Analyze statements about decision-making and incremental analysis.

1. The first step in management's decision-making process is, "Determine and evaluate possible courses of action."
2. The final step in management's decision-making process is to actually make the decision.
3. Accounting's contribution to management's decision-making process occurs primarily in evaluating possible courses of action and in reviewing the results.
4. In making business decisions, management ordinarily considers only financial information because it is objectively determined.
5. Decisions involve a choice among alternative courses of action.
6. The process used to identify the financial data that change under alternative courses of action is called incremental analysis.
7. Costs that are the same under all alternative courses of action sometimes affect the decision.
8. When using incremental analysis, some costs will always change under alternative courses of action, but revenues will not.
9. Variable costs will change under alternative courses of action, but fixed costs will not.

(LO 1)

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E21-2 Gruden Company produces golf discs which it normally sells to retailers for \$7 each. The cost of manufacturing 20,000 golf discs is:

Use incremental analysis for special-order decision.

Materials	\$ 10,000
Labor	30,000
Variable overhead	20,000
Fixed overhead	40,000
Total	<u>\$100,000</u>

(LO 2)

Gruden also incurs 5% sales commission (\$0.35) on each disc sold.

McGee Corporation offers Gruden \$4.80 per disc for 5,000 discs. McGee would sell the discs under its own brand name in foreign markets not yet served by Gruden. If Gruden accepts the offer, its fixed overhead will increase from \$40,000 to \$46,000 due to the purchase of a new imprinting machine. No sales commission will result from the special order.

Instructions

- (a) Prepare an incremental analysis for the special order.
 (b) Should Gruden accept the special order? Why or why not?
 (c) What assumptions underlie the decision made in part (b)?

Use incremental analysis for special order.

(LO 2)

E21-3 Moonbeam Company manufactures toasters. For the first 8 months of 2017, the company reported the following operating results while operating at 75% of plant capacity:

Sales (350,000 units)	\$4,375,000
Cost of goods sold	<u>2,600,000</u>
Gross profit	1,775,000
Operating expenses	<u>840,000</u>
Net income	<u><u>\$ 935,000</u></u>

Cost of goods sold was 70% variable and 30% fixed; operating expenses were 80% variable and 20% fixed.

In September, Moonbeam receives a special order for 15,000 toasters at \$7.60 each from Luna Company of Ciudad Juarez. Acceptance of the order would result in an additional \$3,000 of shipping costs but no increase in fixed costs.

Instructions

- (a) Prepare an incremental analysis for the special order.
 (b) Should Moonbeam accept the special order? Why or why not?

Use incremental analysis for special order.

(LO 2)

E21-4 Klean Fiber Company is the creator of Y-Go, a technology that weaves silver into its fabrics to kill bacteria and odor on clothing while managing heat. Y-Go has become very popular in undergarments for sports activities. Operating at capacity, the company can produce 1,000,000 Y-Go undergarments a year. The per unit and the total costs for an individual garment when the company operates at full capacity are as follows.

	<u>Per Undergarment</u>	<u>Total</u>
Direct materials	\$2.00	\$2,000,000
Direct labor	0.75	750,000
Variable manufacturing overhead	1.00	1,000,000
Fixed manufacturing overhead	1.50	1,500,000
Variable selling expenses	<u>0.25</u>	<u>250,000</u>
Totals	<u><u>\$5.50</u></u>	<u><u>\$5,500,000</u></u>

The U.S. Army has approached Klean Fiber and expressed an interest in purchasing 250,000 Y-Go undergarments for soldiers in extremely warm climates. The Army would pay the unit cost for direct materials, direct labor, and variable manufacturing overhead costs. In addition, the Army has agreed to pay an additional \$1 per undergarment to cover all other costs and provide a profit. Presently, Klean Fiber is operating at 70% capacity and does not have any other potential buyers for Y-Go. If Klean Fiber accepts the Army's offer, it will not incur any variable selling expenses related to this order.

Instructions

Using incremental analysis, determine whether Klean Fiber should accept the Army's offer.

Use incremental analysis for make-or-buy decision.

(LO 3)

E21-5 Pottery Ranch Inc. has been manufacturing its own finials for its curtain rods. The company is currently operating at 100% of capacity, and variable manufacturing overhead is charged to production at the rate of 70% of direct labor cost. The direct materials and direct labor cost per unit to make a pair of finials are \$4 and \$5, respectively. Normal production is 30,000 curtain rods per year.

A supplier offers to make a pair of finials at a price of \$12.95 per unit. If Pottery Ranch accepts the supplier's offer, all variable manufacturing costs will be eliminated, but the \$45,000 of fixed manufacturing overhead currently being charged to the finials will have to be absorbed by other products.

Instructions

- Prepare the incremental analysis for the decision to make or buy the finials.
- Should Pottery Ranch buy the finials?
- Would your answer be different in (b) if the productive capacity released by not making the finials could be used to produce income of \$20,000?

E21-6 Jobs, Inc. has recently started the manufacture of Tri-Robo, a three-wheeled robot that can scan a home for fires and gas leaks and then transmit this information to a smart-phone. The cost structure to manufacture 20,000 Tri-Robos is as follows.

Use incremental analysis for make-or-buy decision.

(LO 3)

	<u>Cost</u>
Direct materials (\$50 per robot)	\$1,000,000
Direct labor (\$40 per robot)	800,000
Variable overhead (\$6 per robot)	120,000
Allocated fixed overhead (\$30 per robot)	600,000
Total	<u>\$2,520,000</u>

Jobs is approached by Tienh Inc., which offers to make Tri-Robo for \$115 per unit or \$2,300,000.

Instructions

- Using incremental analysis, determine whether Jobs should accept this offer under each of the following independent assumptions.
 - Assume that \$405,000 of the fixed overhead cost can be avoided.
 - Assume that none of the fixed overhead can be avoided. However, if the robots are purchased from Tienh Inc., Jobs can use the released productive resources to generate additional income of \$375,000.
- Describe the qualitative factors that might affect the decision to purchase the robots from an outside supplier.

E21-7 Riggs Company purchases sails and produces sailboats. It currently produces 1,200 sailboats per year, operating at normal capacity, which is about 80% of full capacity. Riggs purchases sails at \$250 each, but the company is considering using the excess capacity to manufacture the sails instead. The manufacturing cost per sail would be \$100 for direct materials, \$80 for direct labor, and \$90 for overhead. The \$90 overhead is based on \$78,000 of annual fixed overhead that is allocated using normal capacity.

Prepare incremental analysis for make-or-buy decision.

(LO 3)

The president of Riggs has come to you for advice. "It would cost me \$270 to make the sails," she says, "but only \$250 to buy them. Should I continue buying them, or have I missed something?"

Instructions

- Prepare a per unit analysis of the differential costs. Briefly explain whether Riggs should make or buy the sails.
- If Riggs suddenly finds an opportunity to rent out the unused capacity of its factory for \$77,000 per year, would your answer to part (a) change? Briefly explain.
- Identify three qualitative factors that should be considered by Riggs in this make-or-buy decision.

(CGA adapted)

E21-8 Innova uses 1,000 units of the component IMC2 every month to manufacture one of its products. The unit costs incurred to manufacture the component are as follows.

Prepare incremental analysis concerning make-or-buy decision.

(LO 3)

Direct materials	\$ 65.00
Direct labor	45.00
Overhead	126.50
Total	<u>\$236.50</u>

Overhead costs include variable material handling costs of \$6.50, which are applied to products on the basis of direct material costs. The remainder of the overhead costs are applied on the basis of direct labor dollars and consist of 60% variable costs and 40% fixed costs.

A vendor has offered to supply the IMC2 component at a price of \$200 per unit.

Instructions

- Should Innova purchase the component from the outside vendor if Innova's capacity remains idle?
- Should Innova purchase the component from the outside vendor if it can use its facilities to manufacture another product? What information will Innova need to make an accurate decision? Show your calculations.
- What are the qualitative factors that Innova will have to consider when making this decision?

(CGA adapted)

Use incremental analysis for further processing of materials decision.

(LO 4)

E21-9 Anna Garden recently opened her own basketweaving studio. She sells finished baskets in addition to the raw materials needed by customers to weave baskets of their own. Anna has put together a variety of raw material kits, each including materials at various stages of completion. Unfortunately, owing to space limitations, Anna is unable to carry all varieties of kits originally assembled and must choose between two basic packages.

The basic introductory kit includes undyed, uncut reeds (with dye included) for weaving one basket. This basic package costs Anna \$16 and sells for \$30. The second kit, called Stage 2, includes cut reeds that have already been dyed. With this kit the customer need only soak the reeds and weave the basket. Anna is able to produce the second kit by using the basic materials included in the first kit and adding one hour of her own time, which she values at \$18 per hour. Because she is more efficient at cutting and dyeing reeds than her average customer, Anna is able to make two kits of the dyed reeds, in one hour, from one kit of undyed reeds. The Stage 2 kit sells for \$36.

Instructions

Determine whether Anna's basketweaving studio should carry the basic introductory kit with undyed and uncut reeds or the Stage 2 kit with reeds already dyed and cut. Prepare an incremental analysis to support your answer.

Determine whether to sell or process further, joint products.

(LO 4)

E21-10 Stahl Inc. produces three separate products from a common process costing \$100,000. Each of the products can be sold at the split-off point or can be processed further and then sold for a higher price. Shown below are cost and selling price data for a recent period.

	Sales Value at Split-Off Point	Cost to Process Further	Sales Value after Further Processing
Product 10	\$60,000	\$100,000	\$190,000
Product 12	15,000	30,000	35,000
Product 14	55,000	150,000	215,000

Instructions

- Determine total net income if all products are sold at the split-off point.
- Determine total net income if all products are sold after further processing.
- Using incremental analysis, determine which products should be sold at the split-off point and which should be processed further.
- Determine total net income using the results from (c) and explain why the net income is different from that determined in (b).

Determine whether to sell or process further, joint products.

(LO 4)

E21-11 Kirk Minerals processes materials extracted from mines. The most common raw material that it processes results in three joint products: Spock, Uhura, and Sulu. Each of these products can be sold as is, or each can be processed further and sold for a higher price. The company incurs joint costs of \$180,000 to process one batch of the raw material that produces the three joint products. The following cost and sales information is available for one batch of each product.

	Sales Value at Split-Off Point	Allocated Joint Costs	Cost to Process Further	Sales Value of Processed Product
Spock	\$210,000	\$40,000	\$110,000	\$300,000
Uhura	300,000	60,000	85,000	400,000
Sulu	455,000	80,000	250,000	800,000

Instructions

Determine whether each of the three joint products should be sold as is, or processed further.

E21-12 A company manufactures three products using the same production process. The costs incurred up to the split-off point are \$200,000. These costs are allocated to the products on the basis of their sales value at the split-off point. The number of units produced, the selling prices per unit of the three products at the split-off point and after further processing, and the additional processing costs are as follows.

Product	Number of Units Produced	Selling Price at Split-Off	Selling Price after Processing	Additional Processing Costs
D	4,000	\$10.00	\$15.00	\$14,000
E	6,000	11.60	16.20	20,000
F	2,000	19.40	22.60	9,000

Instructions

- Which information is relevant to the decision on whether or not to process the products further? Explain why this information is relevant.
- Which product(s) should be processed further and which should be sold at the split-off point?
- Would your decision be different if the company was using the quantity of output to allocate joint costs? Explain.

(CGA adapted)

E21-13 On January 2, 2016, Twilight Hospital purchased a \$100,000 special radiology scanner from Bella Inc. The scanner had a useful life of 4 years and was estimated to have no disposal value at the end of its useful life. The straight-line method of depreciation is used on this scanner. Annual operating costs with this scanner are \$105,000.

Approximately one year later, the hospital is approached by Dyno Technology salesperson, Jacob Cullen, who indicated that purchasing the scanner in 2016 from Bella Inc. was a mistake. He points out that Dyno has a scanner that will save Twilight Hospital \$25,000 a year in operating expenses over its 3-year useful life. Jacob notes that the new scanner will cost \$110,000 and has the same capabilities as the scanner purchased last year. The hospital agrees that both scanners are of equal quality. The new scanner will have no disposal value. Jacob agrees to buy the old scanner from Twilight Hospital for \$50,000.

Instructions

- If Twilight Hospital sells its old scanner on January 2, 2017, compute the gain or loss on the sale.
- Using incremental analysis, determine if Twilight Hospital should purchase the new scanner on January 2, 2017.
- Explain why Twilight Hospital might be reluctant to purchase the new scanner, regardless of the results indicated by the incremental analysis in (b).

E21-14 Johnson Enterprises uses a computer to handle its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

	Current Machine	New Machine
Original purchase cost	\$15,000	\$25,000
Accumulated depreciation	\$ 6,000	—
Estimated annual operating costs	\$25,000	\$20,000
Remaining useful life	5 years	5 years

If sold now, the current machine would have a salvage value of \$6,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 5 years.

Instructions

Should the current machine be replaced?

E21-15 Veronica Mars, a recent graduate of Bell's accounting program, evaluated the operating performance of Dunn Company's six divisions. Veronica made the following presentation to Dunn's board of directors and suggested the Percy Division be eliminated. "If the Percy Division is eliminated," she said, "our total profits would increase by \$26,000."

Prepare incremental analysis for whether to sell or process materials further.

(LO 4)

Use incremental analysis for retaining or replacing equipment decision.

(LO 5)

Use incremental analysis for retaining or replacing equipment decision.

(LO 5)

Use incremental analysis concerning elimination of division.

(LO 6)

	The Other Five Divisions	Percy Division	Total
Sales	\$1,664,200	\$100,000	\$1,764,200
Cost of goods sold	<u>978,520</u>	<u>76,000</u>	<u>1,054,520</u>
Gross profit	685,680	24,000	709,680
Operating expenses	<u>527,940</u>	<u>50,000</u>	<u>577,940</u>
Net income	<u>\$ 157,740</u>	<u>\$ (26,000)</u>	<u>\$ 131,740</u>

In the Percy Division, cost of goods sold is \$61,000 variable and \$15,000 fixed, and operating expenses are \$30,000 variable and \$20,000 fixed. None of the Percy Division's fixed costs will be eliminated if the division is discontinued.

Instructions

Is Veronica right about eliminating the Percy Division? Prepare a schedule to support your answer.

Use incremental analysis for elimination of a product line.

(LO 6)

E21-16 Cawley Company makes three models of tasers. Information on the three products is given below.

	Tingler	Shocker	Stunner
Sales	\$300,000	\$500,000	\$200,000
Variable expenses	<u>150,000</u>	<u>200,000</u>	<u>145,000</u>
Contribution margin	150,000	300,000	55,000
Fixed expenses	<u>120,000</u>	<u>230,000</u>	<u>95,000</u>
Net income	<u>\$ 30,000</u>	<u>\$ 70,000</u>	<u>\$ (40,000)</u>

Fixed expenses consist of \$300,000 of common costs allocated to the three products based on relative sales, and additional fixed expenses of \$30,000 (Tingler), \$80,000 (Shocker), and \$35,000 (Stunner). The common costs will be incurred regardless of how many models are produced. The other fixed expenses would be eliminated if a model is phased out.

James Watt, an executive with the company, feels the Stunner line should be discontinued to increase the company's net income.

Instructions

- Compute current net income for Cawley Company.
- Compute net income by product line and in total for Cawley Company if the company discontinues the Stunner product line. (*Hint:* Allocate the \$300,000 common costs to the two remaining product lines based on their relative sales.)
- Should Cawley eliminate the Stunner product line? Why or why not?

Prepare incremental analysis concerning keeping or dropping a product to maximize operating income.

(LO 6)

E21-17 Tharp Company operates a small factory in which it manufactures two products: C and D. Production and sales results for last year were as follows.

	C	D
Units sold	9,000	20,000
Selling price per unit	\$95	\$75
Variable cost per unit	50	40
Fixed cost per unit	24	24

For purposes of simplicity, the firm averages total fixed costs over the total number of units of C and D produced and sold.

The research department has developed a new product (E) as a replacement for product D. Market studies show that Tharp Company could sell 10,000 units of E next year at a price of \$115; the variable cost per unit of E is \$45. The introduction of product E will lead to a 10% increase in demand for product C and discontinuation of product D. If the company does not introduce the new product, it expects next year's results to be the same as last year's.

Instructions

Should Tharp Company introduce product E next year? Explain why or why not. Show calculations to support your decision.

(CMA-Canada adapted)

E21-18 The costs listed below relate to a variety of different decision situations.

Identify relevant costs for different decisions.

(LO 1, 2, 3, 4, 5, 6)

Cost	Decision
1. Unavoidable fixed overhead	Eliminate an unprofitable segment
2. Direct labor	Make or buy
3. Original cost of old equipment	Equipment replacement
4. Joint production costs	Sell or process further
5. Opportunity cost	Accepting a special order
6. Segment manager's salary	Eliminate an unprofitable segment (manager will be terminated)
7. Cost of new equipment	Equipment replacement
8. Incremental production costs	Sell or process further
9. Direct materials	Equipment replacement (the amount of materials required does not change)
10. Rent expense	Purchase or lease a building

Instructions

For each cost listed above, indicate if it is relevant or not to the related decision. For those costs determined to be irrelevant, briefly explain why.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

P21-1A ThreePoint Sports Inc. manufactures basketballs for the Women's National Basketball Association (WNBA). For the first 6 months of 2017, the company reported the following operating results while operating at 80% of plant capacity and producing 120,000 units.

Use incremental analysis for special order and identify nonfinancial factors in the decision.

(LO 2)

	Amount
Sales	\$4,800,000
Cost of goods sold	3,600,000
Selling and administrative expenses	405,000
Net income	<u>\$ 795,000</u>

Fixed costs for the period were cost of goods sold \$960,000, and selling and administrative expenses \$225,000.

In July, normally a slack manufacturing month, ThreePoint Sports receives a special order for 10,000 basketballs at \$28 each from the Greek Basketball Association (GBA). Acceptance of the order would increase variable selling and administrative expenses \$0.75 per unit because of shipping costs but would not increase fixed costs and expenses.

Instructions

- Prepare an incremental analysis for the special order.
- Should ThreePoint Sports Inc. accept the special order? Explain your answer.
- What is the minimum selling price on the special order to produce net income of \$5.00 per ball?
- What nonfinancial factors should management consider in making its decision?

(a) NI increase \$37,500

P21-2A The management of Shatner Manufacturing Company is trying to decide whether to continue manufacturing a part or to buy it from an outside supplier. The part, called CISCO, is a component of the company's finished product.

The following information was collected from the accounting records and production data for the year ending December 31, 2017.

Use incremental analysis related to make or buy, consider opportunity cost, and identify nonfinancial factors.

(LO 3)

- 8,000 units of CISCO were produced in the Machining Department.
- Variable manufacturing costs applicable to the production of each CISCO unit were: direct materials \$4.80, direct labor \$4.30, indirect labor \$0.43, utilities \$0.40.
- Fixed manufacturing costs applicable to the production of CISCO were:

<u>Cost Item</u>	<u>Direct</u>	<u>Allocated</u>
Depreciation	\$2,100	\$ 900
Property taxes	500	200
Insurance	900	600
	<u>\$3,500</u>	<u>\$1,700</u>

All variable manufacturing and direct fixed costs will be eliminated if CISCO is purchased. Allocated costs will have to be absorbed by other production departments.

- The lowest quotation for 8,000 CISCO units from a supplier is \$80,000.
- If CISCO units are purchased, freight and inspection costs would be \$0.35 per unit, and receiving costs totaling \$1,300 per year would be incurred by the Machining Department.

Instructions

(a) NI (decrease) \$(1,160)

(a) Prepare an incremental analysis for CISCO. Your analysis should have columns for (1) Make CISCO, (2) Buy CISCO, and (3) Net Income Increase/(Decrease).

(b) Based on your analysis, what decision should management make?

(c) NI increase \$1,840

(c) Would the decision be different if Shatner Company has the opportunity to produce \$3,000 of net income with the facilities currently being used to manufacture CISCO? Show computations.

(d)  What nonfinancial factors should management consider in making its decision?

Determine if product should be sold or processed further.

(LO 4)

P21-3A Thompson Industrial Products Inc. (TIPI) is a diversified industrial-cleaner processing company. The company's Dargan plant produces two products: a table cleaner and a floor cleaner from a common set of chemical inputs (CDG). Each week, 900,000 ounces of chemical input are processed at a cost of \$210,000 into 600,000 ounces of floor cleaner and 300,000 ounces of table cleaner. The floor cleaner has no market value until it is converted into a polish with the trade name FloorShine. The additional processing costs for this conversion amount to \$240,000.

FloorShine sells at \$20 per 30-ounce bottle. The table cleaner can be sold for \$17 per 25-ounce bottle. However, the table cleaner can be converted into two other products by adding 300,000 ounces of another compound (TCP) to the 300,000 ounces of table cleaner. This joint process will yield 300,000 ounces each of table stain remover (TSR) and table polish (TP). The additional processing costs for this process amount to \$100,000. Both table products can be sold for \$14 per 25-ounce bottle.

The company decided not to process the table cleaner into TSR and TP based on the following analysis.

	<u>Table Cleaner</u>	<u>Process Further</u>		
		<u>Table Stain Remover (TSR)</u>	<u>Table Polish (TP)</u>	<u>Total</u>
Production in ounces	300,000	300,000	300,000	
Revenues	\$204,000	\$168,000	\$168,000	\$336,000
Costs:				
CDG costs	70,000*	52,500	52,500	105,000**
TCP costs	0	50,000	50,000	100,000
Total costs	70,000	102,500	102,500	205,000
Weekly gross profit	<u>\$134,000</u>	<u>\$ 65,500</u>	<u>\$ 65,500</u>	<u>\$131,000</u>

*If table cleaner is not processed further, it is allocated 1/3 of the \$210,000 of CDG cost, which is equal to 1/3 of the total physical output.

**If table cleaner is processed further, total physical output is 1,200,000 ounces. TSR and TP combined account for 50% of the total physical output and are each allocated 25% of the CDG cost.

Instructions

- (a) Determine if management made the correct decision to not process the table cleaner further by doing the following.
- (1) Calculate the company's total weekly gross profit assuming the table cleaner is not processed further.
 - (2) Calculate the company's total weekly gross profit assuming the table cleaner is processed further.
 - (3) Compare the resulting net incomes and comment on management's decision.
- (b) Using incremental analysis, determine if the table cleaner should be processed further.
(CMA adapted)

(2) Gross profit \$186,000

P21-4A Last year (2016), Richter Condos installed a mechanized elevator for its tenants. The owner of the company, Ron Richter, recently returned from an industry equipment exhibition where he watched a computerized elevator demonstrated. He was impressed with the elevator's speed, comfort of ride, and cost efficiency. Upon returning from the exhibition, he asked his purchasing agent to collect price and operating cost data on the new elevator. In addition, he asked the company's accountant to provide him with cost data on the company's elevator. This information is presented below.

Compute gain or loss, and determine if equipment should be replaced.

(LO 5)

	<u>Old Elevator</u>	<u>New Elevator</u>
Purchase price	\$120,000	\$160,000
Estimated salvage value	0	0
Estimated useful life	5 years	4 years
Depreciation method	Straight-line	Straight-line
Annual operating costs other than depreciation:		
Variable	\$ 35,000	\$ 10,000
Fixed	23,000	8,500

Annual revenues are \$240,000, and selling and administrative expenses are \$29,000, regardless of which elevator is used. If the old elevator is replaced now, at the beginning of 2017, Richter Condos will be able to sell it for \$25,000.

Instructions

- Determine any gain or loss if the old elevator is replaced.
- Prepare a 4-year summarized income statement for each of the following assumptions:
 - (1) The old elevator is retained.
 - (2) The old elevator is replaced.
- Using incremental analysis, determine if the old elevator should be replaced.
-  Write a memo to Ron Richter explaining why any gain or loss should be ignored in the decision to replace the old elevator.

(b) (2) NI \$539,000

(c) NI increase \$23,000

P21-5A Brislin Company has four operating divisions. During the first quarter of 2017, the company reported aggregate income from operations of \$213,000 and the following divisional results.

Prepare incremental analysis concerning elimination of divisions.

(LO 6)

	<u>Division</u>			
	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>
Sales	\$250,000	\$200,000	\$500,000	\$450,000
Cost of goods sold	200,000	192,000	300,000	250,000
Selling and administrative expenses	75,000	60,000	60,000	50,000
Income (loss) from operations	<u>\$ (25,000)</u>	<u>\$ (52,000)</u>	<u>\$140,000</u>	<u>\$150,000</u>

Analysis reveals the following percentages of variable costs in each division.

	<u>I</u>	<u>II</u>	<u>III</u>	<u>IV</u>
Cost of goods sold	70%	90%	80%	75%
Selling and administrative expenses	40	60	50	60

Discontinuance of any division would save 50% of the fixed costs and expenses for that division.

Top management is very concerned about the unprofitable divisions (I and II). Consensus is that one or both of the divisions should be discontinued.

Instructions

- (a) I \$80,000
- (c) Income III \$132,800
- Compute the contribution margin for Divisions I and II.
 - Prepare an incremental analysis concerning the possible discontinuance of (1) Division I and (2) Division II. What course of action do you recommend for each division?
 - Prepare a columnar condensed income statement for Brislin Company, assuming Division II is eliminated. (Use the CVP format.) Division II's unavoidable fixed costs are allocated equally to the continuing divisions.
 - Reconcile the total income from operations (\$213,000) with the total income from operations without Division II.

CONTINUING PROBLEMS

EXCEL
TUTORIAL

CURRENT DESIGNS

CD21 Current Designs faces a number of important decisions that require incremental analysis. Consider each of the following situations independently.

Situation 1

Recently, Mike Cichanowski, owner and CEO of Current Designs, received a phone call from the president of a brewing company. He was calling to inquire about the possibility of Current Designs producing "floating coolers" for a promotion his company was planning. These coolers resemble a kayak but are about one-third the size. They are used to float food and beverages while paddling down the river on a weekend leisure trip. The company would be interested in purchasing 100 coolers for the upcoming summer. It is willing to pay \$250 per cooler. The brewing company would pick up the coolers upon completion of the order.

Mike met with Diane Buswell, controller, to identify how much it would cost Current Designs to produce the coolers. After careful analysis, the following costs were identified.

Direct materials	\$80/unit	Variable overhead	\$20/unit
Direct labor	\$60/unit	Fixed overhead	\$1,000

Current Designs would be able to modify an existing mold to produce the coolers. The cost of these modifications would be approximately \$2,000.

Instructions

- Prepare an incremental analysis to determine whether Current Designs should accept this special order to produce the coolers.
- Discuss additional factors that Mike and Diane should consider if Current Designs is currently operating at full capacity.

Situation 2

Current Designs is always working to identify ways to increase efficiency while becoming more environmentally conscious. During a recent brainstorming session, one employee suggested to Diane Buswell, controller, that the company should consider replacing the current rotomold oven as a way

to realize savings from reduced energy consumption. The oven operates on natural gas, using 17,000 therms of natural gas for an entire year. A new, energy-efficient rotomold oven would operate on 15,000 therms of natural gas for an entire year. After seeking out price quotes from a few suppliers, Diane determined that it would cost approximately \$250,000 to purchase a new, energy-efficient rotomold oven. She determines that the expected useful life of the new oven would be 10 years, and it would have no salvage value at the end of its useful life. Current Designs would be able to sell the current oven for \$10,000.

Instructions

- Prepare an incremental analysis to determine if Current Designs should purchase the new rotomold oven, assuming that the average price for natural gas over the next 10 years will be \$0.65 per therm.
- Diane is concerned that natural gas prices might increase at a faster rate over the next 10 years. If the company projects that the average natural gas price of the next 10 years could be as high as \$0.85 per therm, discuss how that might change your conclusion in (a).

Situation 3

One of Current Designs' competitive advantages is found in the ingenuity of its owner and CEO, Mike Cichanowski. His involvement in the design of kayak molds and production techniques has led to Current Designs being recognized as an industry leader in the design and production of kayaks. This ingenuity was evident in an improved design of one of the most important components of a kayak, the seat. The "Revolution Seating System" is a one-of-a-kind, rotating axis seat that gives unmatched, full-contact, under-leg support. It is quickly adjustable with a lever-lock system that allows for a customizable seat position that maximizes comfort for the rider.

Having just designed the "Revolution Seating System," Current Designs must now decide whether to produce the seats internally or buy them from an outside supplier. The costs for Current Designs to produce the seats are as follows.

Direct materials	\$20/unit	Direct labor	\$15/unit
Variable overhead	\$12/unit	Fixed overhead	\$20,000

Current Designs will need to produce 3,000 seats this year; 25% of the fixed overhead will be avoided if the seats are purchased from an outside vendor. After soliciting prices from outside suppliers, the company determined that it will cost \$50 to purchase a seat from an outside vendor.

Instructions

- Prepare an incremental analysis showing whether Current Designs should make or buy the "Revolution Seating System."
- Would your answer in (a) change if the productive capacity released by not making the seats could be used to produce income of \$20,000?

WATERWAYS

(This is a continuation of the Waterways problem from Chapters 15–20.)

WP21 Waterways Corporation is considering various business opportunities. It wants to make the best use of its production facilities to maximize income. This problem asks you to help Waterways do incremental analysis on these various opportunities.

Go to the book's companion website, www.wiley.com/college/weygandt, to find the remainder of this problem.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP21-1 Aurora Company is considering the purchase of a new machine. The invoice price of the machine is \$140,000, freight charges are estimated to be \$4,000, and installation costs are expected to be \$6,000. Salvage value of the new equipment is expected to be zero after a useful life of 5 years.

Existing equipment could be retained and used for an additional 5 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would have to be scrapped. Aurora's accountant, Lisah Huang, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Aurora can sell 12,000 units of product annually at a per unit selling price of \$100. If the new machine is purchased, the number of units produced and sold would increase by 10%, and the selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine the gross profit rate will be 25% of sales, whereas the rate will be 30% of sales with the new machine.
3. Annual selling expenses are \$180,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be \$100,000 with the old machine, and \$113,000 with the new machine.
5. The current book value of the existing machine is \$36,000. Aurora uses straight-line depreciation.

Instructions

With the class divided into groups, prepare an incremental analysis for the 5 years showing whether Aurora should keep the existing machine or buy the new machine. (Ignore income tax effects.)

Managerial Analysis

BYP21-2 MiniTek manufactures private-label small electronic products, such as alarm clocks, calculators, kitchen timers, stopwatches, and automatic pencil sharpeners. Some of the products are sold as sets, and others are sold individually. Products are studied as to their sales potential, and then cost estimates are made. The Engineering Department develops production plans, and then production begins. The company has generally had very successful product introductions. Only two products introduced by the company have been discontinued.

One of the products currently sold is a multi-alarm clock. The clock has four alarms that can be programmed to sound at various times and for varying lengths of time. The company has experienced a great deal of difficulty in making the circuit boards for the clocks. The production process has never operated smoothly. The product is unprofitable at the present time, primarily because of warranty repairs and product recalls. Two models of the clocks were recalled, for example, because they sometimes caused an electric shock when the alarms were being shut off. The Engineering Department is attempting to revise the manufacturing process, but the revision will take another 6 months at least.

The clocks were very popular when they were introduced, and since they are private-label, the company has not suffered much from the recalls. Presently, the company has a very large order for several items from **Kmart Stores**. The order includes 5,000 of the multi-alarm clocks. When the company suggested that Kmart purchase the clocks from another manufacturer, Kmart threatened to rescind the entire order unless the clocks were included.

The company has therefore investigated the possibility of having another company make the clocks for them. The clocks were bid for the Kmart order based on an estimated \$6.90 cost to manufacture:

Circuit board, 1 each @ \$2.00	\$2.00
Plastic case, 1 each @ \$0.80	0.80
Alarms, 4 @ \$0.15 each	0.60
Labor, 15 minutes @ \$12/hour	3.00
Overhead, \$2.00 per labor hour	0.50

MiniTek could purchase clocks to fill the Kmart order for \$10 from Trans-Tech Asia, a Korean manufacturer with a very good quality record. Trans-Tech has offered to reduce the price to \$7.50 after MiniTek has been a customer for 6 months, placing an order of at least 1,000 units per month. If MiniTek becomes a "preferred customer" by purchasing 15,000 units per year, the price would be reduced still further to \$4.50.

Omega Products, a local manufacturer, has also offered to make clocks for MiniTek. They have offered to sell 5,000 clocks for \$5 each. However, Omega Products has been in business for only

6 months. They have experienced significant turnover in their labor force, and the local press has reported that the owners may face tax evasion charges soon. The owner of Omega Products is an electronic engineer, however, and the quality of the clocks is likely to be good.

If MiniTek decides to purchase the clocks from either Trans-Tech or Omega, all the costs to manufacture could be avoided, except a total of \$1,000 in overhead costs for machine depreciation. The machinery is fairly new, and has no alternate use.

Instructions

- (a) What is the difference in profit under each of the alternatives if the clocks are to be sold for \$14.50 each to Kmart?
- (b) What are the most important nonfinancial factors that MiniTek should consider when making this decision?
- (c) What do you think MiniTek should do in regard to the Kmart order? What should it do in regard to continuing to manufacture the multi-alarm clocks? Be prepared to defend your answer.

Real-World Focus

BYP21-3 Founded in 1983 and foreclosed in 1996 **Beverly Hills Fan Company** was located in Woodland Hills, California. With 23 employees and sales of less than \$10 million, the company was relatively small. In 1992, management felt that there was potential for growth in the upscale market for ceiling fans and lighting. They were particularly optimistic about growth in Mexican and Canadian markets.

Presented below is information from the president's letter in one of the company's last annual reports.

BEVERLY HILLS FAN COMPANY President's Letter

An aggressive product development program was initiated during the past year resulting in new ceiling fan models planned for introduction this year. Award winning industrial designer Ron Rezek created several new fan models for the Beverly Hills Fan and L.A. Fan lines, including a new Showroom Collection, designed specifically for the architectural and designer markets. Each of these models has received critical acclaim, and order commitments for this year have been outstanding. Additionally, our Custom Color and special order fans continued to enjoy increasing popularity and sales gains as more and more customers desire fans that match their specific interior decors. Currently, Beverly Hills Fan Company offers a product line of over 100 models of contemporary, traditional, and transitional ceiling fans.

Instructions

- (a) What points did the company management need to consider before deciding to offer the special-order fans to customers?
- (b) How would have incremental analysis been employed to assist in this decision?

BYP21-4 Outsourcing by both manufacturers and service companies is becoming increasingly common. There are now many firms that specialize in outsourcing consulting.

Address: www.alsbridge.com, or go to www.wiley.com/college/weygandt

Instructions

Go to the website of Alsbridge, Inc. at the address shown above, and answer the following questions.

- (a) What are some of the types of outsourcing for which the company provides assistance?
- (b) What is insourcing?
- (c) What are some of the potential benefits of insourcing?

CRITICAL THINKING

Communication Activity

BYP21-5 Hank Jewell is a production manager at a metal fabricating plant. Last night, he read an article about a new piece of equipment that would dramatically reduce his division's costs. Hank was very excited about the prospect, and the first thing he did this morning was to bring the article to his supervisor, Preston Thiese, the plant manager. The following conversation occurred:

Hank: Preston, I thought you would like to see this article on the new PDD1130; they've made some fantastic changes that could save us millions of dollars.

Preston: I appreciate your interest, Hank, but I actually have been aware of the new machine for two months. The problem is that we just bought a new machine last year. We spent \$2 million on that machine, and it was supposed to last us 12 years. If we replace it now, we would have to write its book value off of the books for a huge loss. If I go to top management now and say that I want a new machine, they will fire me. I think we should use our existing machine for a couple of years, and then when it becomes obvious that we have to have a new machine, I will make the proposal.

Instructions

Hank just completed a course in managerial accounting, and he believes that Preston is making a big mistake. Write a memo from Hank to Preston explaining Preston's decision-making error.

Ethics Case

BYP21-6 Blake Romney became Chief Executive Officer of Peters Inc. two years ago. At the time, the company was reporting lagging profits, and Blake was brought in to "stir things up." The company has three divisions, electronics, fiber optics, and plumbing supplies. Blake has no interest in plumbing supplies, and one of the first things he did was to put pressure on his accountants to reallocate some of the company's fixed costs away from the other two divisions to the plumbing division. This had the effect of causing the plumbing division to report losses during the last two years; in the past it had always reported low, but acceptable, net income. Blake felt that this reallocation would shine a favorable light on him in front of the board of directors because it meant that the electronics and fiber optics divisions would look like they were improving. Given that these are "businesses of the future," he believed that the stock market would react favorably to these increases, while not penalizing the poor results of the plumbing division. Without this shift in the allocation of fixed costs, the profits of the electronics and fiber optics divisions would not have improved. But now the board of directors has suggested that the plumbing division be closed because it is reporting losses. This would mean that nearly 500 employees, many of whom have worked for Peters their whole lives, would lose their jobs.

Instructions

- If a division is reporting losses, does that necessarily mean that it should be closed?
- Was the reallocation of fixed costs across divisions unethical?
- What should Blake do?

All About You

BYP21-7 Managerial accounting techniques can be used in a wide variety of settings. As we have frequently pointed out, you can use them in many personal situations. They also can be useful in trying to find solutions for societal issues that appear to be hard to solve.

Instructions

Read the Fortune article, "The Toughest Customers: How Hardheaded Business Metrics Can Help the Hard-core Homeless," by Cait Murphy, available at http://money.cnn.com/magazines/fortune/fortune_archive/2006/04/03/8373067/index.htm. Answer the following questions.

- How does the article define "chronic" homelessness?
- In what ways does homelessness cost a city money? What are the estimated costs of a chronic homeless person to various cities?
- What are the steps suggested to address the problem?
- What is the estimated cost of implementing this program in New York? What results have been seen?
- In terms of incremental analysis, frame the relevant costs in this situation.

Considering Your Costs and Benefits

BYP21-8 School costs money. Is this an expenditure that you should have avoided? A year of tuition at a public four-year college costs about \$8,655, and a year of tuition at a public two-year college costs about \$1,359. If you did not go to college, you might avoid mountains of school-related debt. In fact, each year, about 600,000 students decide to drop out of school. Many of them never return. Suppose that you are working two jobs and going to college, and that you are not making ends meet. Your grades are suffering due to your lack of available study time. You feel depressed. Should you drop out of school?

YES: You can always go back to school. If your grades are bad and you are depressed, what good is school doing you anyway?

NO: Once you drop out, it is very hard to get enough momentum to go back. Dropping out will dramatically reduce your long-term opportunities. It is better to stay in school, even if you take only one class per semester. While you cannot go back and redo your initial decision, you can look at some facts to evaluate the wisdom of your decision.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

22

Pricing

CHAPTER PREVIEW As the Feature Story about Zappos.com below indicates, few management decisions are more important than setting prices. [Intel](http://Intel.com), for example, must sell computer chips at a price that is high enough to cover its costs and ensure a reasonable profit. But if the price is too high, the chips will not sell. In this chapter, we examine two types of pricing situations. The first part of the chapter addresses pricing for goods sold or services provided to external parties. The second part of the chapter addresses pricing decisions managers face when they sell goods to other divisions within the company.

FEATURE STORY

They've Got Your Size—and Color

Nick Swinmurn was shopping for a pair of shoes. He found a store with the right style, but not the right color. The next store had the right color, but not the right size. After visiting numerous stores, he went home, figuring he would buy them online. After all, it was 1999, so you could buy everything online, right? Well, apparently not shoes. After an exhaustive search, Nick still came up shoeless.

Nick lived in San Francisco, where in 1999 everybody with even half an idea started an Internet company and became a millionaire. Or so it seemed. So Nick started Zappos.com. The company is dedicated to providing the best selection in shoes in terms of brands, styles, colors, size, and, most importantly, service.

To make sure that Zappos had a fighting chance of evolving from a half-baked idea to a thriving business, Nick brought in Tony Hsieh. At the age of 24, Tony had developed and recently sold a business to [Microsoft](http://Microsoft.com) for \$265 million. Tony then brought in Alfred Lin to manage the company's finances. Tony and Alfred first met when Tony was running a pizza business and Alfred was Tony's best pizza customer.

Together, Tony and Alfred have run Zappos based on 10 basic principles:

1. Deliver WOW through service.
2. Embrace and drive change.
3. Create fun and a little weirdness.
4. Be adventurous, creative, and open-minded.
5. Pursue growth and learning.
6. Build open and honest relationships with communication.
7. Build a positive team and family spirit.
8. Do more with less.
9. Be passionate and determined.
10. Be humble.

Are you looking for a pair of size 6 Giuseppe Zanotti heels for \$1,295 or a pair of Keen size 17 sandals for \$95? Zappos is committed to having what you want and getting it to you as fast as possible. Providing this kind of service is not cheap, however. It means having vast warehouses and sophisticated order processing systems. The company's price has to cover its costs and provide a reasonable profit yet still be competitive. If the price is too high, Zappos loses business. Too low and the company could lose its shirt (or in this case, shoes).

Source: www.zappos.com.

 Watch the Zappos.com video in WileyPLUS to learn more about how the company sets prices.

CHAPTER OUTLINE

Learning Objectives

1

Compute a target cost when the market determines a product price.

- Target costing

DO IT!

1

Target Costing

2

Compute a target selling price using cost-plus pricing.

- Cost-plus pricing
- Variable-cost pricing

DO IT!

2

Target Selling Price

3

Use time-and-material pricing to determine the cost of services provided.

- Calculate labor rate
- Calculate material loading charge

DO IT!

3

Time-and-Material Pricing

4

Determine a transfer price using the negotiated, cost-based, and market-based approaches.

- Negotiated transfer prices
- Cost-based transfer prices
- Market-based transfer prices
- Effect of outsourcing on transfer pricing
- Transfers between divisions in different countries

DO IT!

4

Transfer Pricing

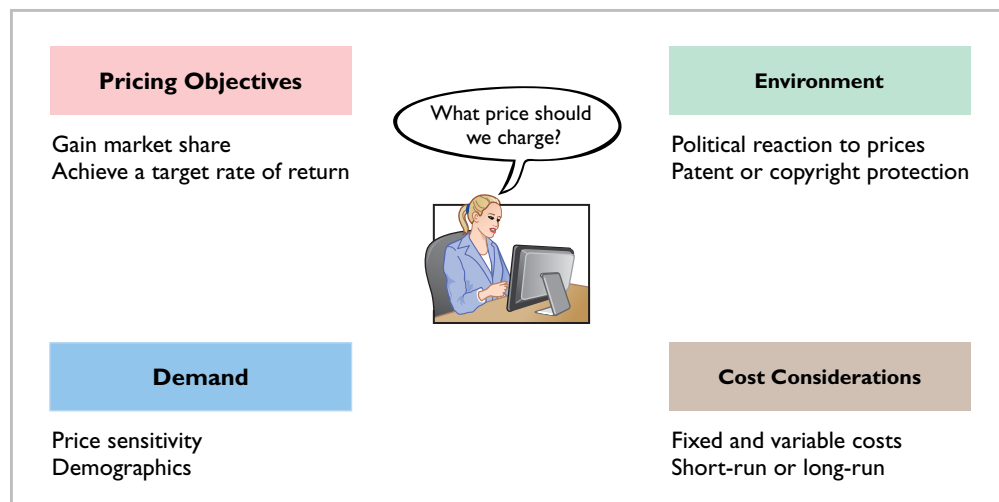

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

Compute a target cost when the market determines a product price.

Establishing the price for any good or service is affected by many factors. Take the pharmaceutical industry as an example. Its approach to profitability has been to spend heavily on research and development in an effort to find and patent a few new drugs, price them high, and market them aggressively. However, the AIDS crisis in Africa placed the drug industry under considerable pressure to lower prices on drugs used to treat the disease. For example, **Merck Co.** lowered the price of its AIDS drug Crixivan to \$600 per patient in these countries. This compares with the \$6,016 it typically charged in the United States.¹ As a consequence, individuals in the United States questioned whether prices in the U.S. market were too high. The drug companies countered that to cover their substantial financial risks to develop these products, they need to set the prices high. Illustration 22-1 indicates the many factors that can affect pricing decisions.

Illustration 22-1
Pricing factors

In the long run, a company must price its product to cover its costs and earn a reasonable profit. But to price its product appropriately, it must have a good understanding of market forces at work. In most cases, a company does not set the prices. Instead, the price is set by the competitive market (the laws of supply and demand). For example, a company such as **ChevronTexaco** or **Exxon-Mobil** cannot set the price of gasoline by itself. These companies are called **price takers** because the price of gasoline is set by market forces (the supply of oil and the demand by customers). This is the case for any product that is not easily differentiated from competing products, such as farm products (corn or wheat) or minerals (coal or sand).

In other situations, the company sets the prices. This would be the case where the product is specially made for a customer, as in a one-of-a-kind product such as a designer dress by **Versace** or **Armani**. A company also sets the price when there are few or no other producers capable of manufacturing a similar item. An example would be a company that has a patent or copyright on a unique process, such as the case of computer chips by **Intel**. Finally, a company can set prices when it effectively differentiates its product or service from others. Even in a competitive

¹“AIDS Gaffes in Africa Come Back to Haunt Drug Industry at Home,” *Wall Street Journal* (April 23, 2001), p. 1.

market like coffee, **Starbucks** has been able to differentiate its product and charge a premium for a cup of java.

Management Insight Google

Frank Gärtner/iStockphoto

The Only Game in Town?

Pricing plays a critical role in corporate strategy. For example, almost 50% of tablet computer users say

that they use them to read newspapers and magazines. And since **Apple's** iPad tablet computer at one time represented 75% of the tablets being sold, Apple felt like it had the newspaper and magazine publishers right where it wanted them. So it decided to charge the publishers a fee of 30% of subscription revenue for subscriptions sold at Apple's App Store. Publishers were outraged, but it didn't

take long for somebody to come to their rescue. Within 1 day of Apple's announcement, **Google** announced that it would only charge a fee of about 10% of subscription revenue for users of its Android system. That might at least partially explain why *Sports Illustrated* provided an app to run on Android tablets before it provided one for iPads, even though at that time Android tablets only had a small share of the market.

Source: Martin Peers, "Apple Risks App-lash on iPad," *Wall Street Journal Online* (February 17, 2011).

Do the substantially different prices that Apple and Google charge for a similar service reflect different costs incurred by each company, or is the price difference due to something else? (Go to **WileyPLUS** for this answer and additional questions.)

Target Costing

Automobile manufacturers like **Ford** or **Toyota** face a competitive market. The price of an automobile is affected greatly by the laws of supply and demand, so no company in this industry can affect the price to a significant degree. Therefore, to earn a profit, companies in the auto industry must focus on controlling costs. This requires setting a **target cost** that provides a desired profit. Illustration 22-2 shows the relationship of target cost to market price and desired profit.

$$\text{Market Price} - \text{Desired Profit} = \text{Target Cost}$$

Illustration 22-2

Target cost as related to price and profit

Assuming it reaches sales targets, if **General Motors** can produce its automobiles for its target cost (or less), it will meet its profit goal. If it cannot achieve its target cost, it will fail to achieve the desired profit, which will disappoint its stockholders.

In a competitive market, a company chooses the segment of the market it wants to compete in—that is, its market niche. For example, it may choose between selling luxury goods or economy goods in order to focus its efforts on one segment or the other. Once the company has identified the segment of the market in which it wants to compete, it conducts market research. This determines the features its product should have, and what the market price is for a product with those features. Once the company has determined this price, it can determine its target cost by setting a desired profit. The difference between the market price and the desired profit is the target cost of the product (shown in Illustration 22-2). After the company determines the target cost, it assembles a team of employees with expertise in a variety of areas (production and operations, marketing, and finance). The team's task is to design and develop a product that can meet quality specifications while not exceeding the target cost. The target cost includes all product and period costs necessary to make and market the product or service.

Management Insight Wal-Mart Stores, Inc.

Paul Hart/iStockphoto

Wal-Mart Says the Price Is Too High

"And the price should be \$19 per pair of jeans instead of \$23," said the retailer **Wal-Mart Stores, Inc.** to jean maker **Levi Strauss.**

What happened to Levi Strauss is what happens to many manufacturers who deal with Wal-Mart. Wal-Mart often sets the price, and the manufacturer has to figure out how to make a profit, given that price. In Levi Strauss's case, it revamped its distribution and production to serve Wal-

Mart and improve its overall record of timely deliveries. Producing a season of new jeans styles, from conception to store shelves, used to take Levi 12 to 15 months. Today, it takes just 10 months for Levi Strauss signature jeans; for regular Levi's, the time is down to 7 1/2 months. As the chief executive of Levi Strauss noted, "We had to change people and practice. It's been somewhat of a D-Day invasion approach."

Source: "In Bow to Retailers' New Clout, Levi Strauss Makes Alterations," *Wall Street Journal* (June 17, 2004), p A1.

What are some issues that Levi Strauss should consider in deciding whether it should agree to meet Wal-Mart's target price? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!

1

Target Costing

Fine Line Phones is considering introducing a fashion cover for its phones. Market research indicates that 200,000 units can be sold if the price is no more than \$20. If Fine Line decides to produce the covers, it will need to invest \$1,000,000 in new production equipment. Fine Line requires a minimum rate of return of 25% on all investments.

Determine the target cost per unit for the cover.

Solution

The desired profit for this new product line is \$250,000 ($\$1,000,000 \times 25\%$).

Each cover must result in \$1.25 of profit ($\$250,000/200,000$ units).

$$\begin{array}{rcl} \text{Market price} & - & \text{Desired profit} & = & \text{Target cost per unit} \\ \$20 & - & \$1.25 & = & \$18.75 \text{ per unit} \end{array}$$

Related exercise material: **BE22-1, E22-1, E22-2, and DO IT! 22-1.**

Action Plan

- ✓ Recall that $\text{Market price} - \text{Desired profit} = \text{Target cost}$.
- ✓ The minimum rate of return is a company's desired profit.

LEARNING OBJECTIVE

2

Compute a target selling price using cost-plus pricing.

Cost-Plus Pricing

As discussed, in a competitive product environment, the price of a product is set by the market. In order to achieve its desired profit, the company focuses on achieving a target cost. In a less competitive environment, companies have a greater ability to set the product price. Commonly, when a company sets a product price, it does so as a function of, or relative to, the cost of the product or service. This is referred to as **cost-plus pricing**. Under cost-plus pricing, a company first determines a cost base and then adds a **markup** to the cost base to determine the **target selling price**.

If the cost base includes all of the costs required to produce and sell the product, then the markup represents the desired profit. This can be seen in Illustration 22-3, where the markup represents the difference between the selling price and cost—the profit on the product.

$$\text{Selling Price} - \text{Cost} = \text{Markup (Profit)}$$

Illustration 22-3
Relation of markup to cost and selling price

The size of the markup (profit) depends on the return the company hopes to generate on the amount it has invested. In determining the optimal markup, the company must consider competitive and market conditions, political and legal issues, and other relevant factors. Once the company has determined its cost base and its desired markup, it can add the two together to determine the target selling price. The basic cost-plus pricing formula is expressed as follows.

$$\text{Cost} + \text{Markup} = \text{Target Selling Price}$$

Illustration 22-4
Cost-plus pricing formula

To illustrate, assume that Thinkmore Products, Inc. is in the process of setting a selling price on its new video camera pen. It is a functioning pen that records up to 2 hours of audio and video. The per unit variable cost estimates for the video camera pen are as follows.

	<u>Per Unit</u>
Direct materials	\$23
Direct labor	17
Variable manufacturing overhead	12
Variable selling and administrative expenses	<u>8</u>
Variable cost per unit	<u>\$60</u>

Illustration 22-5
Variable cost per unit

To produce and sell its product, Thinkmore incurs fixed manufacturing overhead of \$350,000 and fixed selling and administrative expenses of \$300,000. To determine the cost per unit, we divide total fixed costs by the number of units the company expects to produce. Illustration 22-6 shows the computation of fixed cost per unit for Thinkmore, assuming the production of 10,000 units.

	<u>Total Costs</u>	÷	<u>Budgeted Volume</u>	=	<u>Cost per Unit</u>
Fixed manufacturing overhead	\$350,000	÷	10,000	=	\$35
Fixed selling and administrative expenses	300,000	÷	10,000	=	<u>30</u>
Fixed cost per unit					<u>\$65</u>

Illustration 22-6
Fixed cost per unit, 10,000 units

Management is ultimately evaluated based on its ability to generate a high return on the company's investment. This is frequently expressed as a return on investment (ROI) percentage, calculated as income divided by the average amount invested in a product or service. A higher percentage reflects a greater success in generating profits from the investment in a product or service. Chapter 24 provides a more in-depth discussion of the use of ROI to evaluate the performance of investment center managers.

To achieve a desired return on investment percentage, a product's markup should be determined by calculating the desired return on investment (ROI) per unit. This is calculated by multiplying the desired ROI percentage times the amount invested to produce the product, and then dividing this by the number of

units produced. Illustration 22-7 shows the computation used to determine a markup amount based on a desired ROI per unit for Thinkmore, assuming that the company desires a 20% ROI and that it has invested \$2,000,000.

Illustration 22-7

Calculation of markup based on desired ROI per unit

Desired ROI Percentage	×	Amount Invested	=	Markup (Desired ROI per Unit)
<u>20%</u>		<u>\$2,000,000</u>		
		10,000 units	=	\$40

Thinkmore expects to receive income of \$400,000 (20% × \$2,000,000) on its \$2,000,000 investment. On a per unit basis, the markup based on the desired ROI per unit is \$40 (\$400,000 ÷ 10,000 units). Given the per unit costs shown above, Illustration 22-8 computes the sales price to be \$165.

Illustration 22-8

Computation of selling price, 10,000 units

	<u>Per Unit</u>
Variable cost	\$ 60
Fixed cost	<u>65</u>
Total cost	125
Markup (desired ROI per unit)	<u>40</u>
Selling price per unit	<u>\$165</u>

In most cases, companies like Thinkmore use a markup percentage on cost to determine the selling price. The formula to compute the markup percentage to achieve a desired ROI of \$40 per unit is as follows.

Illustration 22-9

Computation of markup percentage

Markup (Desired ROI per Unit)	÷	Total Unit Cost	=	Markup Percentage
\$40		\$125	=	32%

Using a 32% markup on cost, Thinkmore would compute the target selling price as follows.

Illustration 22-10

Computation of selling price—markup approach

Total Unit Cost	+	(Total Unit Cost × Markup Percentage)	=	Target Selling Price per Unit
\$125		(\$125 × 32%)	=	\$165

Thinkmore should set the price for its video camera pen at \$165 per unit.

LIMITATIONS OF COST-PLUS PRICING

The cost-plus pricing approach has a major advantage: It is simple to compute. However, the cost model does not give consideration to the demand side. That is, will customers pay the price Thinkmore Products computed for its video camera pen? In addition, sales volume plays a large role in determining per unit costs. The lower the sales volume, for example, the higher the price Thinkmore must charge to meet its desired ROI. To illustrate, if the budgeted sales volume was 5,000 instead of 10,000, Thinkmore's variable cost per unit would remain the same. However, the fixed cost per unit would change as follows.

	<u>Total Costs</u>	÷	<u>Budgeted Volume</u>	=	<u>Cost per Unit</u>
Fixed manufacturing overhead	\$350,000	÷	5,000	=	\$70
Fixed selling and administrative expenses	300,000	÷	5,000	=	60
Fixed cost per unit					<u>\$130</u>

Illustration 22-11

 Fixed cost per unit,
5,000 units

As indicated in Illustration 22-6 (page 1017), the fixed cost per unit for 10,000 units was \$65. However, at a lower sales volume of 5,000 units, the fixed cost per unit increases to \$130. Thinkmore's desired 20% ROI now results in a \$80 ROI per unit $[(20\% \times \$2,000,000) \div 5,000]$. Thinkmore computes the selling price at 5,000 units as follows.

	<u>Per Unit</u>
Variable cost	\$ 60
Fixed cost	130
Total cost	190
Markup (desired ROI per unit)	80
Selling price per unit	<u>\$270</u>

Illustration 22-12

 Computation of selling price,
5,000 units

As shown, the lower the budgeted volume, the higher the per unit price. The reason: Fixed costs and ROI are spread over fewer units, and therefore the fixed cost and ROI per unit increase. In this case, at 5,000 units, Thinkmore would have to mark up its total unit costs 42.11% to earn a desired ROI of \$80 per unit, as shown below.

$$42.11\% = \frac{\$80 \text{ (desired ROI per unit)}}{\$190 \text{ (total unit cost)}}$$

The target selling price would then be \$270, as indicated earlier:

$$\$190 + (\$190 \times 42.11\%) = \$270$$

The opposite effect will occur if budgeted volume is higher (say, at 12,000 units) because fixed costs and ROI can be spread over more units. As a result, the cost-plus model of pricing will achieve its desired ROI only when Thinkmore sells the quantity it budgeted. If actual volume is much less than budgeted volume, Thinkmore may sustain losses unless it can raise its prices.

Variable-Cost Pricing

In determining the target price for Thinkmore Products' video camera pen, we calculated the cost base by including all costs incurred. This approach is referred to as **full-cost pricing**. Instead of using full costs to set prices, some companies simply add a markup to their variable costs (thus excluding fixed manufacturing and fixed selling and administrative costs). Using **variable-cost pricing** as the basis for setting prices avoids the problem of using uncertain cost information (as discussed above for Thinkmore) related to fixed-cost-per-unit computations. Variable-cost pricing also is helpful in pricing special orders or when excess capacity exists.

The major disadvantage of variable-cost pricing is that managers may set the price too low and consequently fail to cover their fixed costs. In the long run, failure to cover fixed costs will lead to losses. As a result, companies that use variable-cost pricing must adjust their markups to make sure that the price set will provide a fair return. The use of variable costs as the basis for setting prices is discussed in Appendix 22A.

Management Insight Parker Hannifin

Wesley VanDinter/iStockphoto

At Least It Was Simple

For nearly 90 years, **Parker Hannifin** used the same simple approach to price its industrial parts. It calculated the production cost, then added on a percentage of the cost (about 35%) to arrive at the price. It didn't matter if a product was a premium product or a standard product. And if Parker reduced its production costs, it then also cut the price for the product.

The problem with this approach was that it made it difficult for the company to ever substantially increase its profit

margins. So the company's CEO decided to break with tradition and implement strategic pricing schemes similar to those used by retailers. It determined that for about a third of its products, it had a competitive advantage that would allow it to charge a higher markup. For example, there might be limited competition for the product, or its product might be of higher quality, or it might have the ability to produce a product faster. The company determined that the price increases raised net income by \$200 million—not bad considering that net income was \$130 million before the price increases.

What kind of help might the sales staff need in implementing this new approach? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!

2

Target Selling Price

Air Corporation produces air purifiers. The following per unit cost information is available: direct materials \$16, direct labor \$18, variable manufacturing overhead \$11, variable selling and administrative expenses \$6. Fixed selling and administrative expenses are \$50,000, and fixed manufacturing overhead is \$150,000. Using a 45% markup percentage on total per unit cost and assuming 10,000 units, compute the target selling price.

Solution

Action Plan

- ✓ Calculate the total cost per unit.
- ✓ Multiply the total cost per unit by the markup percentage, then add this amount to the total cost per unit to determine the target selling price.

Direct materials	\$16		
Direct labor	18		
Variable manufacturing overhead	11		
Variable selling and administrative expenses	6		
Fixed selling and administrative expenses	5*		
Fixed manufacturing overhead	15**		
Total unit cost	\$71		
$\begin{array}{r} \text{Total} \\ \text{unit cost} \end{array} + \left(\begin{array}{r} \text{Total} \\ \text{unit cost} \end{array} \times \begin{array}{r} \text{Markup} \\ \text{percentage} \end{array} \right) = \begin{array}{r} \text{Target selling} \\ \text{price per unit} \end{array}$			
\$71	+ (\$71 × 45%)	=	\$102.95

*\$50,000 ÷ 10,000; **\$150,000 ÷ 10,000

LEARNING OBJECTIVE

3

Use time-and-material pricing to determine the cost of services provided.

Another variation on cost-plus pricing is **time-and-material pricing**. Under this approach, the company sets two pricing rates—one for the **labor** used on a job and another for the **material**. The labor rate includes direct labor time and other

employee costs. The material charge is based on the cost of direct parts and materials used and a **material loading charge** for related overhead costs. Time-and-material pricing is widely used in service industries, especially professional firms such as public accounting, law, engineering, and consulting firms, as well as construction companies, repair shops, and printers.

To illustrate a time-and-material pricing situation, assume the following data for Lake Holiday Marina, a boat and motor repair shop.

LAKE HOLIDAY MARINA		
Budgeted Costs for the Year 2017		
	Time Charges	Material Loading Charges*
Mechanics' wages and benefits	\$103,500	—
Parts manager's salary and benefits	—	\$11,500
Office employee's salary and benefits	20,700	2,300
Other overhead (supplies, depreciation, property taxes, advertising, utilities)	26,800	14,400
Total budgeted costs	\$151,000	\$28,200

*The material loading charges exclude the invoice cost of the materials.

Illustration 22-13

Total annual budgeted time and material costs

Using time-and-material pricing involves three steps: (1) calculate the per hour labor charge, (2) calculate the charge for obtaining and holding materials, and (3) calculate the charges for a particular job.

STEP 1: CALCULATE THE LABOR RATE. The first step for time-and-material pricing is to determine a charge for labor time. The charge for labor time is expressed as a rate per hour of labor. This rate includes (1) the direct labor cost of the employees, including hourly pay rate plus fringe benefits; (2) selling, administrative, and similar overhead costs; and (3) an allowance for a desired profit or ROI per hour of employee time. In some industries, such as repair shops for autos and boats, the same hourly labor rate is charged regardless of which employee performs the work. In other industries, the rate that is charged is adjusted according to classification or level of the employee. A public accounting firm, for example, would charge different rates for the services of an assistant, senior, manager, or partner; a law firm would charge different rates for the work of a paralegal, associate, or partner.

Illustration 22-14 shows computation of the hourly charges for Lake Holiday Marina during 2017. The marina budgets 5,000 annual labor hours in 2017, and it desires a profit margin of \$8 per hour of labor.

**Illustration 22-14**

Computation of hourly time-charge rate

Lake Holiday Marina.xls						
P18						
	A	B	C	D	E	F
1	Per Hour	Total Cost	÷	Total Hours	=	Per Hour Charge
2	Hourly labor rate for repairs					
3	Mechanics' wages and benefits	\$103,500	÷	5,000	=	\$20.70
4	Overhead costs					
5	Office employee's salary and benefits	20,700	÷	5,000	=	4.14
6	Other overhead	26,800	÷	5,000	=	5.36
7	Total hourly cost	<u>\$151,000</u>	÷	5,000	=	30.20
8	Profit margin					8.00
9	Rate charged per hour of labor					<u>\$38.20</u>
10						

To determine the labor charge for a job, the marina multiplies this rate of \$38.20 by the number of hours of labor used.

STEP 2: CALCULATE THE MATERIAL LOADING CHARGE. The charge for materials typically includes the invoice price of any materials used on the job plus a material loading charge. The **material loading charge** covers the costs of purchasing, receiving, handling, and storing materials, plus any desired profit margin on the materials themselves. The material loading charge is expressed as a **percentage** of the total estimated costs of parts and materials for the year. To determine this percentage, the company does the following. (1) It estimates its total annual costs for purchasing, receiving, handling, and storing materials. (2) It divides this amount by the total estimated cost of parts and materials. (3) It adds a desired profit margin on the materials themselves.

Illustration 22-15 shows computation of the material loading charge used by Lake Holiday Marina during 2017. The marina estimates that the total invoice cost of parts and materials used in 2017 will be \$120,000. The marina desires a 20% profit margin on the invoice cost of parts and materials.

Illustration 22-15
Computation of material loading charge

	A	B	C	D	E	F
1		Material Loading Charges	÷	Total Invoice Cost, Parts and Materials	=	Material Loading Percentage
2	Overhead costs					
3	Parts manager's salary and benefits	\$11,500				
4	Office employee's salary	2,300				
5		13,800	÷	\$120,000	=	11.50%
6						
7	Other overhead	14,400	÷	120,000	=	12.00%
8		\$28,200	÷	120,000	=	23.50%
9	Profit margin					20.00%
10	Material loading percentage					43.50%
11						

The marina's material loading charge on any particular job is 43.50% multiplied by the cost of materials used on the job. For example, if the marina used \$100 of parts, the additional material loading charge would be \$43.50.

STEP 3: CALCULATE CHARGES FOR A PARTICULAR JOB. The charges for any particular job are the sum of (1) the labor charge, (2) the charge for the materials, and (3) the material loading charge. For example, suppose that Lake Holiday Marina prepares a price quotation to estimate the cost to refurbish a used 28-foot pontoon boat. Lake Holiday Marina estimates the job will require 50 hours of labor and \$3,600 in parts and materials. Illustration 22-16 shows the marina's price quotation.

Illustration 22-16
Price quotation for time and material

LAKE HOLIDAY MARINA			
Time-and-Material Price Quotation			
Job: Marianne Perino, repair of 28-foot pontoon boat			
Labor charges: 50 hours @ \$38.20			\$1,910
Material charges			
Cost of parts and materials	\$3,600		
Material loading charge (43.5% × \$3,600)	1,566		5,166
Total price of labor and material			<u>\$7,076</u>

Included in the \$7,076 price quotation for the boat repair are charges for labor costs, overhead costs, materials costs, materials handling and storage costs, and a profit margin on both labor and parts. Lake Holiday Marina used labor hours as a basis for computing the time rate. Other companies, such as machine shops, plastic molding shops, and printers, might use machine hours.

Service Company Insight **Button Worldwide**

Don Bayley/iStockphoto

It Ain't Like It Used to Be

For many decades, professionals in most service industries used some form of hourly based price, regardless of the outcome. But the most recent recession appears to have

brought an end to that practice. Many customers are now demanding that bills be tied to actual performance, rather than to the amount of hours worked. For example, communications company **Button Worldwide**, which used to

charge about \$15,000 or more per month as its "retainer fee," now instead charges based on achieving particular outcomes. For example, the company might charge \$10,000 if it obtains a desirable public speaking engagement for a company executive. Similarly, a digital marketing agency reduced its hourly fee from \$135 to \$80, but it gets a bonus if it achieves specified increases in the sales volume on a customer's website.

Source: Simona Covell, "Firms Try Alternative to Hourly Fees," *Wall Street Journal Online* (April 2, 2009).

What implications does this have for a service company's need for managerial accounting? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT! 3 Time-and-Material Pricing

Presented below are data for Harmon Electrical Repair Shop for next year.

Repair-technicians' wages	\$130,000
Fringe benefits	30,000
Overhead	20,000

The desired profit margin per labor hour is \$10. The material loading charge is 40% of invoice cost. Harmon estimates that 8,000 labor hours will be worked next year. If Harmon repairs a TV that takes 4 hours to repair and uses parts costing \$50, compute the bill for this job.

Solution

	<u>Total Cost</u>	÷	<u>Total Hours</u>	=	<u>Per Hour Charge</u>
Repair-technicians' wages	\$130,000	÷	8,000	=	\$16.25
Fringe benefits	30,000	÷	8,000	=	3.75
Overhead	20,000	÷	8,000	=	2.50
	<u>\$180,000</u>	÷	8,000	=	22.50
Profit margin					10.00
Rate charged per hour of labor					<u>\$32.50</u>
Job: Repair TV					
Labor charges: 4 hours @ \$32.50			\$130		
Material charges					
Cost of parts and materials	\$50				
Material loading charge (40% × \$50)	20		70		
Total price of labor and material			<u>\$200</u>		

Action Plan

- ✓ Calculate the labor charge.
- ✓ Calculate the material loading charge.
- ✓ Compute the bill for specific repair.

Determine a transfer price using the negotiated, cost-based, and market-based approaches.

In today's global economy, growth is often vital to survival. Some companies grow "vertically," meaning they expand in the direction of either their suppliers or customers. For example, a manufacturer of bicycles like **Trek** may acquire a bicycle component manufacturer or a chain of bicycle shops. A movie production company like **Walt Disney** or **Time Warner** may acquire a movie theater chain or a cable television company.

In addition to customer sales, divisions within vertically integrated companies often transfer goods or services to other divisions in the company. When goods are transferred between divisions of the same company, the price used to record the transaction is the **transfer price**. Illustration 22-17 shows transfers between divisions for Aerobic Bicycle Company. As shown, the Component Division sells goods to the Company's Assembly Division, as well as to outside parties. Units sold to the Assembly Division are recorded at the transfer price.

Illustration 22-17
Transfer pricing example

The primary objective of transfer pricing is the same as that of pricing a product to an outside party. The objective is to maximize the return to the company. An additional objective of transfer pricing is to measure divisional performance accurately. Setting a transfer price is complicated because of competing interests among divisions within the company. For example, in the case of the bicycle company shown in Illustration 22-17, setting the transfer price high will benefit the Component Division (the selling division) but will hurt the Assembly Division (the purchasing division).

There are three possible approaches for determining a transfer price:

1. Negotiated transfer prices.
2. Cost-based transfer prices.
3. Market-based transfer prices.

Conceptually, a negotiated transfer price should work best, but due to practical considerations, companies often use the other two methods.

Negotiated Transfer Prices

A **negotiated transfer price** is determined through agreement of division managers. To illustrate negotiated transfer pricing, we examine Alberta Company. Until recently, Alberta focused exclusively on making rubber soles for work boots

and hiking boots. It sold these rubber soles to boot manufacturers. However, last year the company decided to take advantage of its strong reputation by expanding into the business of making hiking boots. As a consequence of this expansion, the company is now structured as two independent divisions, the Boot Division and the Sole Division. The company compensates the manager of each division based on achievement of profitability targets for that division.

The Boot Division manufactures leather uppers for hiking boots and attaches these uppers to rubber soles. During its first year, the Boot Division purchased its rubber soles from an outside supplier so as not to disrupt the operations of the Sole Division. However, top management now wants the Sole Division to provide at least some of the soles used by the Boot Division. Illustration 22-18 shows the computation of the contribution margin per unit for each division when the Boot Division purchases soles from an outside supplier.

Boot Division		Sole Division	
Selling price of boots	\$90	Selling price of sole	\$18
Variable cost of boot (not including sole)	35	Variable cost per sole	11
Cost of sole purchased from outside supplier	17	Contribution margin per unit	\$ 7
Contribution margin per unit	\$38		
Total contribution margin per unit \$45 (\$38 + \$7)			

Illustration 22-18

Computation of contribution margin for two divisions, when Boot Division purchases soles from an outside supplier

This information indicates that the contribution margin per unit for the Boot Division is \$38 and for the Sole Division is \$7. The total contribution margin per unit is \$45 (\$38 + \$7).

Now let's ask the question, "What would be a fair transfer price if the Sole Division sold 10,000 soles to the Boot Division?" The answer depends on how busy the Sole Division is—that is, whether it has excess capacity.

NO EXCESS CAPACITY

As indicated in Illustration 22-18, the Sole Division charges outside customers \$18 and derives a contribution margin of \$7 per sole. The Sole Division has **no excess capacity** and produces and sells 80,000 units (soles) to outside customers. Therefore, the Sole Division must receive from the Boot Division a payment that will at least cover its variable cost per sole **plus** its lost contribution margin per sole. (This lost contribution margin is often referred to as **opportunity cost**.) If the Sole Division cannot recover that amount—called the **minimum transfer price**—it should not sell its soles to the Boot Division. The minimum transfer price that would be acceptable to the Sole Division is \$18, as shown below.

Variable Cost	+	Opportunity Cost	=	Minimum Transfer Price
\$11	+	\$7	=	\$18

Illustration 22-19

Minimum transfer price—no excess capacity

From the perspective of the Boot Division (the buyer), the most it will pay is what the sole would cost from an outside supplier. In this case, therefore, the Boot Division would pay no more than \$17. As shown in Illustration 22-20 (page 1026), an acceptable transfer price is not available in this situation.

Illustration 22-20

Transfer price negotiations—no deal

**EXCESS CAPACITY**

What happens if the Sole Division **has excess capacity**? For example, assume the Sole Division can produce 80,000 soles but can sell only 70,000 soles in the open market. As a result, it has available capacity of 10,000 units. Because it has excess capacity, the Sole Division could provide 10,000 units to the Boot Division without losing its \$7 contribution margin on these units. Therefore, the minimum price it would now accept is \$11, as shown below.

Illustration 22-21

Minimum transfer price formula—excess capacity

Variable Cost	+	Opportunity Cost	=	Minimum Transfer Price
\$11	+	\$0	=	\$11

In this case, the Boot Division and the Sole Division should negotiate a transfer price within the range of \$11 to \$17, as shown in Illustration 22-22.

Illustration 22-22

Transfer pricing negotiations—deal

Given excess capacity, Alberta Company will increase its overall net income if the Boot Division purchases the 10,000 soles internally. This is true as long as the Sole Division's variable cost is less than the outside price of \$17. The Sole Division will receive a positive contribution margin from any transfer price above its variable cost of \$11. The Boot Division will benefit from any price below \$17. At any transfer price above \$17 the Boot Division will go to an outside supplier, a solution that would be undesirable to both divisions as well as to the company as a whole.

VARIABLE COSTS

In the minimum transfer price formula, **variable cost is defined as the variable cost of units sold internally**. In some instances, the variable cost of units sold internally will differ from the variable cost of units sold externally. For example, companies often can avoid some variable selling expenses when units are sold

internally. In this case, the variable cost of units sold internally will be lower than that of units sold externally.

Alternatively, the variable cost of units sold internally could be higher than normal if the internal division requests a special order that requires more expensive materials or additional labor. For example, assume that the Boot Division designs a new high-margin, heavy-duty boot. The sole for this boot will use denser rubber with an intricate lug design. Alberta Company is not aware of any supplier that currently makes such a sole, nor does it feel that any other supplier can meet its quality expectations. As a consequence, there is no available market price to use as the transfer price.

We can, however, employ the formula for the minimum transfer price to assist in arriving at a reasonable solution. After evaluating the special sole, the Sole Division determines that its variable cost would be \$19 per sole. The Sole Division is at full capacity. The Sole Division's opportunity cost at full capacity is the \$7 (\$18 – \$11) per sole that it earns producing the standard sole and selling it to an outside customer. Therefore, the minimum transfer price that the Sole Division would be willing to accept for the special-order sole is as follows.

Variable Cost	+	Opportunity Cost	=	Minimum Transfer Price
\$19	+	\$7	=	\$26

Illustration 22-23
Minimum transfer price
formula—special order

The transfer price of \$26 provides the Sole Division with enough revenue to cover its increased variable cost and its opportunity cost (contribution margin on its standard sole).

SUMMARY OF NEGOTIATED TRANSFER PRICING

Under negotiated transfer pricing, the selling division establishes a minimum transfer price, and the purchasing division establishes a maximum transfer price. This system provides a sound basis for establishing a transfer price because both divisions are better off if the proper decision-making rules are used. However, companies often do not use negotiated transfer pricing because:

- Market price information is sometimes not easily obtainable.
- A lack of trust between the two negotiating divisions may lead to a breakdown in the negotiations.
- Negotiations often lead to different pricing strategies from division to division, which is cumbersome and sometimes costly to implement.

Many companies, therefore, often use simple systems based on cost or market information to develop transfer prices.

Cost-Based Transfer Prices

An alternative to negotiated transfer pricing is cost-based pricing. A **cost-based transfer price** is based on the costs incurred by the division producing the goods or services. A cost-based transfer price can be based on variable costs alone, or on variable costs plus fixed costs. Also, in some cases the selling division may add a markup.

The cost-based approach sometimes results in improper transfer prices. Improper transfer prices can reduce company profits and provide unfair evaluations of division performance. To illustrate, assume that Alberta Company requires the division to use a transfer price based on the variable cost of the sole.

With no excess capacity, the contribution margins per unit for the two divisions are as follows.

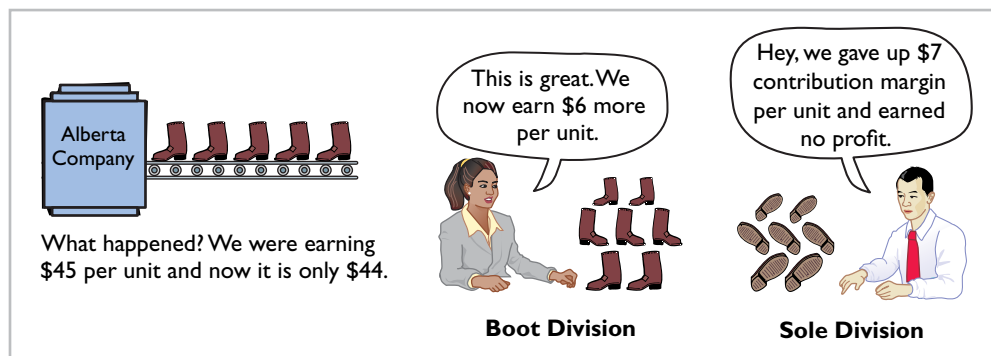

Illustration 22-24
Cost-based transfer price—10,000 units

Boot Division		Sole Division	
Selling price of boots	\$90	Selling price of sole	\$11
Variable cost of boot (not including sole)	35	Variable cost per sole	11
Cost of sole purchased from sole division	11	Contribution margin	
Contribution margin per unit	\$44	per unit	\$ 0
Total contribution margin per unit \$44 (\$44 + \$0)			

This cost-based transfer system is a bad deal for the Sole Division as it reports no profit on the transfer of 10,000 soles to the Boot Division. If the Sole Division could sell these soles to an outside customer, it would make \$70,000 [10,000 × (\$18 – \$11)]. The Boot Division, on the other hand, is delighted: its contribution margin per unit increases from \$38 to \$44, or \$6 per boot. Thus, this transfer price results in an unfair evaluation of these two divisions.

Further examination of this example reveals that this transfer price reduces the company's overall profits. The Sole Division lost a contribution margin per unit of \$7 (Illustration 22-18, page 1025), and the Boot Division experiences only a \$6 increase in its contribution margin per unit. Overall, Alberta Company loses \$10,000 [10,000 boots × (\$7 – \$6)]. Illustration 22-25 illustrates this deficiency.

Illustration 22-25
Cost-based transfer price results—no excess capacity

The overall results change if the Sole Division **has excess capacity**. In this case, the Sole Division continues to report a zero profit on these 10,000 units but does not lose the \$7 per unit of contribution margin (because it had excess capacity). The Boot Division gains \$6. So overall, the company is better off by \$60,000 (10,000 × \$6). However, with a cost-based system, the Sole Division continues to report a zero profit on these 10,000 units.

We can see that a cost-based system does not reflect the division's true profitability. What's more, **it does not provide adequate incentive for the Sole Division to control costs**. The division's costs are simply passed on to the next division.

Notwithstanding these disadvantages, the cost system is simple to understand and easy to use because the information is already available in the accounting system. In addition, market information is sometimes not available, so the only alternative is some type of cost-based system. As a result, it is the most common method used by companies to establish transfer prices.

Market-Based Transfer Prices

The **market-based transfer price** is based on existing market prices of competing goods or services. A market-based system is often considered the best approach

because it is objective and generally provides the proper economic incentives. For example, if the Sole Division can charge the market price, it is indifferent as to whether soles are sold to outside customers or internally to the Boot Division—it does not lose any contribution margin. Similarly, the Boot Division pays a price for the soles that is at or reasonably close to market.

When the Sole Division has no excess capacity, the market-based system works reasonably well. The Sole Division receives market price, and the Boot Division pays market price.

If the Sole Division has excess capacity, however, the market-based system can lead to actions that are not in the best interest of the company. The minimum transfer price that the Sole Division should receive is its variable cost plus opportunity cost. If the Sole Division has excess capacity, its opportunity cost is zero. However, under the market-based system, the Sole Division transfers the goods at the market price of \$18, for a contribution margin per unit of \$7 ($\$18 - \11). The Boot Division manager has to accept the \$18 sole price. This price may not accurately reflect a fair cost of the sole, given that the Sole Division had excess capacity. As a result, the Boot Division may overprice its boots in the market if it uses the market price of the sole plus a markup in setting the price of the boot. This action can lead to losses for Alberta overall.

As indicated earlier, in many cases, there simply is not a well-defined market for the good or service being transferred. When this is the case, a reasonable market value cannot be developed, so companies often resort to a cost-based system.

Effect of Outsourcing on Transfer Pricing

An increasing number of companies rely on **outsourcing**. Outsourcing involves contracting with an external party to provide a good or service, rather than performing the work internally. Some companies have taken outsourcing to the extreme by outsourcing all of their production. Many of these so-called **virtual companies** have well-established brand names though they do not manufacture any of their own products. Companies use incremental analysis (Chapter 21) to determine whether outsourcing is profitable. When companies outsource, fewer components are transferred internally between divisions. This reduces the need for transfer prices.

Transfers Between Divisions in Different Countries

As more companies “globalize” their operations, an increasing number of inter-company transfers are between divisions that are located in different countries. One estimate suggests that 60% of trade between countries is simply transfers between company divisions. Differences in tax rates across countries can complicate the determination of the appropriate transfer price. Appendix 22B discusses in more detail transfer pricing issues that occur when goods are exchanged between divisions in different countries.

DO IT!

4

Transfer Pricing

The clock division of Control Central Corporation manufactures clocks and then sells them to customers for \$10 per unit. Its variable cost is \$4 per unit, and its fixed cost per unit is \$2.50. Management would like the clock division to transfer 8,000 of these clocks to another division within the company at a price of \$5. The clock division could avoid \$0.50 per clock of variable packaging costs by selling internally.

(a) Determine the minimum transfer price, assuming the clock division is not operating at full capacity. (b) Determine the minimum transfer price, assuming the clock division is operating at full capacity.

Action Plan

- ✓ Determine whether the company is at full capacity or not.
- ✓ Determine variable cost and opportunity cost.
- ✓ Apply minimum transfer price formula.

Solution

(a) If the clock division is not operating at full capacity, the opportunity cost for the clocks is \$0. Since internal sales will eliminate \$0.50 of packaging costs, the variable cost per clock is \$3.50 (\$4 – \$0.50).

$$\begin{array}{rclcl} \text{Minimum transfer price} & = & \text{Variable cost} & + & \text{Opportunity cost} \\ \$3.50 & = & \$3.50 & + & \$0 \end{array}$$

(b) If the clock division is already operating at full capacity, the opportunity cost for the clocks is \$6 (\$10 – \$4). Since internal sales will eliminate \$0.50 of packaging costs, the variable cost per clock is \$3.50 (\$4 – \$0.50).

$$\begin{array}{rclcl} \text{Minimum transfer price} & = & \text{Variable cost} & + & \text{Opportunity cost} \\ \$9.50 & = & \$3.50 & + & \$6 \end{array}$$

LEARNING
OBJECTIVE

5

APPENDIX 22A: Determine prices using absorption-cost pricing and variable-cost pricing.

In determining the target price for Thinkmore Products' video camera pen in the chapter, we calculated the cost base **by including all costs incurred**. This approach is referred to as **full-cost pricing**. Using total cost as the basis of the markup makes sense conceptually because, in the long run, the price must cover all costs and provide a reasonable profit. However, total cost is difficult to determine in practice. This is because period costs (selling and administrative expenses) are difficult to trace to a specific product. Activity-based costing can be used to overcome this difficulty to some extent.

In practice, companies sometimes use two other cost approaches: (1) absorption-cost pricing or (2) variable-cost pricing. Absorption-cost pricing is more popular than variable-cost pricing.² We illustrate both approaches because both have merit.

Absorption-Cost Pricing

Absorption-cost pricing is consistent with generally accepted accounting principles (GAAP). The reason: It includes both variable and fixed manufacturing costs as product costs. **It excludes from this cost base both variable and fixed selling and administrative costs.** Thus, companies must somehow provide for selling and administrative costs plus the target ROI. They do this through the markup.

The **first step** in absorption-cost pricing is to compute the unit **manufacturing cost**. For Thinkmore Products, this amounts to \$87 per unit at a volume of 10,000 units, as shown in Illustration 22A-1.

Illustration 22A-1

Computation of unit manufacturing cost

	<u>Per Unit</u>
Direct materials	\$23
Direct labor	17
Variable manufacturing overhead	12
Fixed manufacturing overhead (\$350,000 ÷ 10,000)	35
Total unit manufacturing cost (absorption cost)	<u>\$87</u>

²For a discussion of cost-plus pricing, see Eunsup Skim and Ephraim F. Sudit, "How Manufacturers Price Products," *Management Accounting* (February 1995), pp. 37–39; and V. Govindarajan and R.N. Anthony, "How Firms Use Cost Data in Pricing Decisions," *Management Accounting* (65, no. 1), pp. 30–36.

In addition, Thinkmore provides the following information regarding selling and administrative expenses per unit and desired ROI per unit.

Variable selling and administrative expenses	\$ 8
Fixed selling and administrative expenses (\$300,000 ÷ 10,000)	30
Total selling and administrative expenses per unit	<u>\$38</u>
Desired ROI per unit (see Illustration 22-7)	<u>\$40</u>

Illustration 22A-2
Other information

The **second step** in absorption-cost pricing is to compute the markup percentage using the formula in Illustration 22A-3. Note that when companies use manufacturing cost per unit as the cost base to compute the markup percentage, the **percentage must cover the desired ROI and also the selling and administrative expenses**.

Desired ROI per Unit	+	Selling and Administrative Expenses per Unit	=	Markup Percentage	×	Manufacturing Cost per Unit
\$40	+	\$38	=	MP	×	\$87

Illustration 22A-3
Markup percentage—
absorption-cost pricing

Solving, we find:

$$MP = (\$40 + \$38) \div \$87 = 89.66\%$$

The **third** and final **step** is to set the target selling price. Using a markup percentage of 89.66% and absorption-cost pricing, Thinkmore computes the target selling price as shown in Illustration 22A-4.

Manufacturing Cost per Unit	+	(Markup Percentage	×	Manufacturing Cost per Unit)	=	Target Selling Price
\$87	+	(89.66%	×	\$87))	=	\$165

Illustration 22A-4
Computation of target price—
absorption-cost pricing

Using a target price of \$165 will produce the desired 20% return on investment for Thinkmore on its video camera pen at a volume level of 10,000 units, as shown in Illustration 22A-5.

THINKMORE PRODUCTS, INC.	
Budgeted Absorption-Cost Income Statement	
Revenue (10,000 camera pens × \$165)	\$1,650,000
Cost of goods sold (10,000 camera pens × \$87)	<u>870,000</u>
Gross profit	780,000
Selling and administrative expenses	
[10,000 camera pens × (\$8 + \$30)]	<u>380,000</u>
Net income	<u>\$ 400,000</u>
Budgeted ROI	
Net income	\$400,000
Invested assets	\$2,000,000
= <u>20%</u>	
Markup Percentage	
Net income + Selling and administrative expenses	\$400,000 + \$380,000
Cost of goods sold	\$870,000
= <u>89.66%</u>	

Illustration 22A-5
Proof of 20% ROI—
absorption-cost pricing

Because of the fixed-cost element, if Thinkmore sells more than 10,000 units, the ROI will be greater than 20%. If it sells fewer than 10,000 units, the ROI will be less than 20%. The markup percentage is also verified by adding \$400,000 (the net income) and \$380,000 (selling and administrative expenses) and then dividing by \$870,000 (the cost of goods sold or the cost base).

Most companies that use cost-plus pricing use either absorption cost or full cost as the basis. The reasons for this tendency are as follows.

1. Absorption-cost information is most readily provided by a company's cost accounting system. Because absorption-cost data already exist in general ledger accounts, it is cost-effective to use the data for pricing.
2. Basing the cost-plus formula on only variable costs could encourage managers to set too low a price to boost sales. There is the fear that if managers use only variable costs, they will substitute variable costs for full costs, which can lead to suicidal price cutting.
3. Absorption-cost or full-cost pricing provides the most defensible base for justifying prices to all interested parties—managers, customers, and government.

Variable-Cost Pricing

Under **variable-cost pricing**, the cost base consists of all of the **variable costs** associated with a product, including variable selling and administrative costs. **Because fixed costs are not included in the base, the markup must provide for all fixed costs (manufacturing, and selling and administrative) and the target ROI.** Variable-cost pricing is more useful for making short-run decisions because it considers variable-cost and fixed-cost behavior patterns separately.

The **first step** in variable-cost pricing is to compute the unit variable cost. For Thinkmore Products, this amounts to \$60 per unit, as shown in Illustration 22A-6.

Illustration 22A-6

Computation of unit variable cost

	<u>Per Unit</u>
Direct materials	\$23
Direct labor	17
Variable manufacturing overhead	12
Variable selling and administrative expense	<u>8</u>
Total unit variable cost	<u>\$60</u>

The **second step** in variable-cost pricing is to compute the markup percentage. Illustration 22A-7 shows the formula for the markup percentage. For Thinkmore, fixed costs include fixed manufacturing overhead of \$35 per unit (\$350,000 ÷ 10,000) and fixed selling and administrative expenses of \$30 per unit (\$300,000 ÷ 10,000).

Illustration 22A-7

Computation of markup percentage—variable-cost pricing

Desired ROI per Unit	+	Fixed Cost per Unit	=	Markup Percentage	×	Variable Cost per Unit
\$40	+	(\$35 + \$30)	=	MP	×	\$60

Solving, we find:

$$\text{MP} = \frac{\$40 + (\$35 + \$30)}{\$60} = 175\%$$

The **third step** is to set the target selling price. Using a markup percentage of 175% and the contribution approach, Thinkmore computes the selling price as shown in Illustration 22A-8.

Variable Cost per Unit	+	(Markup Percentage	×	(Variable Cost per Unit)	=	Target Selling Price
\$60	+	(175%	×	(\$60))	=	\$165

Illustration 22A-8

Computation of target price—
variable-cost pricing

Using a target price of \$165 will produce the desired 20% return on investment for Thinkmore on its video camera pen at a volume level of 10,000 units, as shown in Illustration 22A-9.

THINKMORE PRODUCTS, INC.		
Budgeted Variable-Cost Income Statement		
Revenue (10,000 camera pens × \$165)		\$1,650,000
Variable costs (10,000 camera pens × \$60)		<u>600,000</u>
Contribution margin		1,050,000
Fixed manufacturing overhead (10,000 camera pens × \$35)	\$350,000	
Fixed selling and administrative expenses (10,000 camera pens × \$30)	<u>300,000</u>	<u>650,000</u>
Net income		<u><u>\$ 400,000</u></u>
Budgeted ROI		
Net income	=	$\frac{\$400,000}{\$2,000,000} = \underline{\underline{20\%}}$
Invested assets		
Markup Percentage		
Net income + Fixed costs	=	$\frac{\$400,000 + \$650,000}{\$600,000} = \underline{\underline{175\%}}$
Variable costs		

Illustration 22A-9

Proof of 20% ROI—
contribution approach

Under any of the three pricing approaches we have looked at (full-cost, absorption-cost, and variable-cost), the desired ROI will be attained only if the budgeted sales volume for the period is attained. None of these approaches guarantees a profit or a desired ROI. Achieving a desired ROI is the result of many factors, some of which are beyond the company's control, such as market conditions, political and legal issues, customers' tastes, and competitive actions.

Because absorption-cost pricing includes allocated fixed costs, it does not make clear how the company's costs will change as volume changes. To avoid blurring the effects of cost behavior on net income, some managers therefore prefer variable-cost pricing. The specific reasons for using variable-cost pricing, even though the basic accounting data are less accessible, are as follows.

1. Variable-cost pricing, being based on variable cost, is more consistent with cost-volume-profit analysis used by managers to measure the profit implications of changes in price and volume.
2. Variable-cost pricing provides the type of data managers need for pricing special orders. It shows the incremental cost of accepting one more order.
3. Variable-cost pricing avoids arbitrary allocation of common fixed costs (such as executive salaries) to individual product lines.

APPENDIX 22B: Explain issues involved in transferring goods between divisions in different countries.

Companies must pay income tax in the country where they generate the income. In order to maximize income and minimize income tax, many companies prefer to report more income in countries with low tax rates, and less income in countries with high tax rates. They accomplish this by adjusting the transfer prices they use on internal transfers between divisions located in different countries. They allocate more contribution margin to the division in the low-tax-rate country, and allocate less to the division in the high-tax-rate country.

To illustrate, suppose that Alberta's Boot Division is located in a country with a corporate tax rate of 10%, and the Sole Division is located in a country with a tax rate of 30%. Illustration 22B-1 compares the after-tax contribution margin to the company using a transfer price of \$18 versus a transfer price of \$11.

Illustration 22B-1

After-tax contribution margin per unit under alternative transfer prices

At \$18 Transfer Price			
Boot Division		Sole Division	
Selling price of boots	\$90.00	Selling price of sole	\$18.00
Variable cost of boot (not including sole)	35.00	Variable cost per sole	11.00
Cost of sole purchased internally	18.00		
Before-tax contribution margin	37.00	Before-tax contribution margin	7.00
Tax at 10%	3.70	Tax at 30%	2.10
After-tax contribution margin	\$33.30	After-tax contribution margin	\$ 4.90
Before-tax total contribution margin per unit to company = \$37 + \$7 = \$44			
After-tax total contribution margin per unit to company = \$33.30 + \$4.90 = \$38.20			

At \$11 Transfer Price			
Boot Division		Sole Division	
Selling price of boots	\$90.00	Selling price of sole	\$11.00
Variable cost of boot (not including sole)	35.00	Variable cost per sole	11.00
Cost of sole purchased internally	11.00		
Before-tax contribution margin	44.00	Before-tax contribution margin	0.00
Tax at 10%	4.40	Tax at 30%	0.00
After-tax contribution margin	\$39.60	After-tax contribution margin	\$ 0.00
Before-tax total contribution margin per unit to company = \$44 + \$0 = \$44			
After-tax total contribution margin per unit to company = \$39.60 + \$0 = \$39.60			

Note that the **before-tax** total contribution margin to Alberta Company is \$44 regardless of whether the transfer price is \$18 or \$11. However, the **after-tax** total contribution margin to Alberta Company is \$38.20 using the \$18 transfer price and \$39.60 using the \$11 transfer price. The reason: When Alberta uses the \$11 transfer price, more of the contribution margin is attributed to the division that is in the country with the lower tax rate, so it pays \$1.40 less per shoe in taxes [(\$3.70 + \$2.10) - \$4.40].

As this analysis shows, Alberta Company would be better off using the \$11 transfer price. However, this presents some concerns. First, the Sole Division manager will not be happy with an \$11 transfer price. This price may lead to

unfair evaluations of the Sole Division's manager. Second, the company must ask whether it is legal and ethical to use an \$11 transfer price when the market price clearly is higher than that.

Additional consideration of international transfer pricing is discussed in advanced accounting courses.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Compute a target cost when the market determines a product price.** To compute a target cost, the company determines its target selling price. Once the target selling price is set, it determines its target cost by setting a desired profit. The difference between the target price and desired profit is the target cost of the product.
- 2 **Compute a target selling price using cost-plus pricing.** Cost-plus pricing involves establishing a cost base and adding to this cost base a markup to determine a target selling price. The cost-plus pricing formula is expressed as follows: Target selling price = Cost + (Markup percentage \times Cost).
- 3 **Use time-and-material pricing to determine the cost of services provided.** Under time-and-material pricing, two pricing rates are set—one for the labor used on a job and another for the material. The labor rate includes direct labor time and other employee costs. The material charge is based on the cost of direct parts and materials used and a material loading charge for related overhead costs.
- 4 **Determine a transfer price using the negotiated, cost-based, and market-based approaches.** The negotiated price is determined through agreement of division managers. Under a cost-based approach, the transfer price may be based on variable cost alone or on variable costs plus fixed costs. Companies may add a markup to these numbers. The cost-based approach often leads to poor performance evaluations and purchasing decisions. The advantage of the cost-based system is its simplicity. A market-based transfer price is based on existing competing market prices and services. A market-based system is often considered the best approach because it is objective and generally provides the proper economic incentives.
- * 5 **Determine prices using absorption-cost pricing and variable-cost pricing.** Absorption-cost pricing uses total manufacturing cost as the cost base and provides for selling and administrative costs plus the target ROI through the markup. The target selling price is computed as: Manufacturing cost per unit + (Markup percentage \times Manufacturing cost per unit). Variable-cost pricing uses all of the variable costs, including selling and administrative costs, as the cost base and provides for fixed costs and target ROI through the markup. The target selling price is computed as: Variable cost per unit + (Markup percentage \times Variable cost per unit).
- * 6 **Explain issues involved in transferring goods between divisions in different countries.** Companies must pay income tax in the country where they generate the income. In order to maximize income and minimize income tax, many companies prefer to report more income in countries with low tax rates, and less income in countries with high tax rates. This is accomplished by adjusting the transfer prices they use on internal transfers between divisions located in different countries.

GLOSSARY REVIEW

- * **Absorption-cost pricing** An approach to pricing that defines the cost base as the manufacturing cost; it excludes both variable and fixed selling and administrative costs. (p. 1030).
- Cost-based transfer price** A transfer price that uses as its foundation the costs incurred by the division producing the goods. (p. 1027).
- Cost-plus pricing** A process whereby a product's selling price is determined by adding a markup to a cost base. (p. 1016).
- Full-cost pricing** An approach to pricing that defines the cost base as all costs incurred. (p. 1019).
- Market-based transfer price** A transfer price that is based on existing market prices of competing products. (p. 1028).

Markup The amount added to a product's cost base to determine the product's selling price. (p. 1016).

Material loading charge A charge added to cover the cost of purchasing, receiving, handling, and storing materials, plus any desired profit margin on the materials themselves. (p. 1022).

Negotiated transfer price A transfer price that is determined by the agreement of the division managers. (p. 1024).

Outsourcing Contracting with an external party to provide a good or service, rather than performing the work internally. (p. 1029).

Target cost The cost that will provide the desired profit on a product when the seller does not have control over the product's price. (p. 1015).

Target selling price The selling price that will provide the desired profit on a product when the seller has the ability to determine the product's price. (p. 1016).

Time-and-material pricing An approach to cost-plus pricing in which the company uses two pricing rates, one for the labor used on a job and another for the material. (p. 1020).

Transfer price The price used to record the transfer of goods between two divisions of a company. (p. 1024).

Variable-cost pricing An approach to pricing that defines the cost base as all variable costs; it excludes both fixed manufacturing and fixed selling and administrative costs. (pp. 1019, 1032).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Target cost related to price and profit means that:
- cost and desired profit must be determined before selling price.
 - cost and selling price must be determined before desired profit.
 - price and desired profit must be determined before costs.
 - costs can be achieved only if the company is at full capacity.

- (LO 1) 2. Classic Toys has examined the market for toy train locomotives. It believes there is a market niche in which it can sell locomotives at \$80 each. It estimates that it could sell 10,000 of these locomotives annually. Variable costs to make a locomotive are expected to be \$25. Classic anticipates a profit of \$15 per locomotive. The target cost for the locomotive is:
- \$80.
 - \$65.
 - \$40.
 - \$25.

- (LO 1) 3. In a competitive, common-product environment, a seller would most likely use:
- time-and-material pricing.
 - variable costing.
 - target costing.
 - cost-plus pricing.

- (LO 2) 4. Cost-plus pricing means that:
- Selling price = Variable cost + (Markup percentage + Variable cost).
 - Selling price = Cost + (Markup percentage × Cost).
 - Selling price = Manufacturing cost + (Markup percentage + Manufacturing cost).
 - Selling price = Fixed cost + (Markup percentage × Fixed cost).

- (LO 2) 5. Adler Company is considering developing a new product. The company has gathered the following information on this product.

Expected total unit cost	\$25
Estimated investment for new product	\$500,000
Expected ROI	10%
Expected number of units to be produced and sold	1,000

Given this information, the desired markup percentage and selling price are:

- markup percentage 10%; selling price \$55.
 - markup percentage 200%; selling price \$75.
 - markup percentage 10%; selling price \$50.
 - markup percentage 100%; selling price \$55.
6. Mystique Co. provides the following information for the new product it recently introduced. (LO 2)

Total unit cost	\$30
Desired ROI per unit	\$10
Target selling price	\$40

What would be Mystique Co.'s percentage markup on cost?

- 125%.
 - 75%.
 - 33⅓%.
 - 25%.
7. Crescent Electrical Repair has decided to price its work on a time-and-material basis. It estimates the following costs for the year related to labor. (LO 3)

Technician wages and benefits	\$100,000
Office employee's salary and benefits	\$ 40,000
Other overhead	\$ 80,000

Crescent desires a profit margin of \$10 per labor hour and budgets 5,000 hours of repair time for the year. The office employee's salary, benefits, and other overhead costs should be divided evenly between time charges and material loading charges. Crescent labor charge per hour would be:

- \$42.
 - \$34.
 - \$32.
 - \$30.
8. Time-and-material pricing would most likely be used by a: (LO 3)
- garden-fertilizer producer.
 - lawn-mower manufacturer.
 - tree farm.
 - lawn-care provider.
9. When a company uses time-and-material pricing, the material loading charge is expressed as a percentage of: (LO 3)
- the total estimated labor costs for the year.

- (b) the total estimated costs of parts and materials for the year.
 (c) the total estimated overhead costs for the year.
 (d) the total estimated costs of parts, materials, and labor for the year.
- (LO 4) 10. The Plastics Division of Weston Company manufactures plastic molds and then sells them to customers for \$70 per unit. Its variable cost is \$30 per unit, and its fixed cost per unit is \$10. Management would like the Plastics Division to transfer 10,000 of these molds to another division within the company at a price of \$40. The Plastics Division is operating at full capacity. What is the minimum transfer price that the Plastics Division should accept?
 (a) \$10. (c) \$40.
 (b) \$30. (d) \$70.
- (LO 4) 11. Assume the same information as Question 10, except that the Plastics Division has available capacity of 10,000 units for plastic moldings. What is the minimum transfer price that the Plastics Division should accept?
 (a) \$10. (c) \$40.
 (b) \$30. (d) \$70.
- (LO 4) 12. The most common method used to establish transfer prices is the:
 (a) negotiated transfer pricing approach.
 (b) opportunity costing transfer pricing approach.
 (c) cost-based transfer pricing approach.
 (d) market-based transfer pricing approach.
- (LO 5) *13. AST Electrical provides the following cost information related to its production of electronic circuit boards.
- | | Per Unit |
|--|----------|
| Variable manufacturing cost | \$40 |
| Fixed manufacturing cost | \$30 |
| Variable selling and administrative expenses | \$ 8 |
| Fixed selling and administrative expenses | \$12 |
| Desired ROI per unit | \$15 |
- What is its markup percentage assuming that AST Electrical uses absorption-cost pricing?
 (a) 16.67%. (c) 54.28%.
 (b) 50%. (d) 118.75%.
- *14. Assume the same information as Question 13 and determine AST Electrical's markup percentage using variable-cost pricing. (LO 5)
 (a) 16.67%. (c) 54.28%.
 (b) 50%. (d) 118.75%.
- *15. Global Industries transfers parts between divisions in two countries, Eastland and Westland. Eastland's tax rate is 8%, and Westland's tax rate is 16%. To minimize tax payments and maximize net income, Global should establish transfer prices that: (LO 6)
 (a) allocate contribution margin equally between Eastland and Westland.
 (b) allocate more contribution margin to Eastland.
 (c) allocate more contribution margin to Westland.
 (d) allocate half as much contribution margin to Eastland as it does to Westland.

Solutions

1. (c) The selling price and the desired profit must be decided before costs are determined. Therefore, the other choices are incorrect.
2. (b) The target cost for the locomotive is selling price less desired profit or $\$80 - \$15 = \$65$, not (a) \$80, (c) \$40, or (d) \$25.
3. (c) A seller would most likely use target costing in a competitive common-product environment as the price is set by the market. In a less competitive environment, companies have a greater ability to set the product price and therefore could use (a) time-and-material pricing, (b) variable costing, or (d) cost-plus pricing.
4. (b) In cost-plus pricing, $\text{Selling price} = \text{Cost} + (\text{Markup percentage} \times \text{Cost})$. The other choices are therefore incorrect.
5. (b) The desired markup percentage = $[(.10 \times \$500,000) \div 1,000] / \$25 = 200\%$. The selling price = $\$25 + \$50 = \$75$. The other choices are therefore incorrect.
6. (c) The percentage markup on cost = $(\$10 \div \$30) = 33\frac{1}{3}\%$, not (a) 125%, (b) 75%, or (d) 25%.
7. (a) The labor charge per hour = $\$10 + [(\$100,000 + .5(\$40,000) + .5(\$80,000)) \div 5,000] = \$42$, not (b) \$34, (c), \$32, or (d) \$30.
8. (d) A lawn-care provider would be most likely to use time-and-material pricing as it is a service company. The other choices are manufacturing companies.
9. (b) In time-and-material pricing, the material loading charge is expressed as a percentage of the total estimated costs of parts and materials for the year. Therefore, the other choices are incorrect.
10. (d) The minimum transfer price the Plastics Division should accept = Variable cost per unit + Opportunity cost per unit. Since the Plastics Division is operating at full capacity, the opportunity cost per unit is equal to the contribution margin per unit of \$40 (selling price of \$70 – variable cost per unit of \$30). The minimum transfer price is therefore $\$30 + \$40 = \$70$, not (a) \$10, (b) \$30, or (c) \$40.
11. (b) Since we assume the Plastics Division has excess capacity of 10,000 units, the minimum transfer price is equal to the variable cost per unit of \$30, not (a) \$10, (c) \$40, or (d) \$70.
12. (c) The most common method to establish transfer prices is the cost-based transfer pricing approach as it is simple to use, easy to understand, and has available cost data. Negotiated transfer pricing and market-based transfer pricing are considered better approaches but often are not used because of lack of market price information or other considerations.

*13. (b) Using the absorption-cost approach, add the desired ROI per unit (\$15) and selling and administrative expenses per unit (\$20) = \$35 per unit, then divide that by the manufacturing cost per unit (\$70), which equals the markup percentage of 50%, not (a) 16.67%, (c) 54.28%, or (d) 118.75%.

*14. (d) Using variable-cost pricing, add the desired ROI per unit (\$15), fixed manufacturing costs per unit (\$30) and fixed selling and administrative expenses per unit (\$12) = \$57, then divide that by the total variable costs per unit (\$40 + \$8) = \$57/\$48 = 118.75%, not (a) 16.67%, (b) 50%, or (c) 54.28%.

*15. (b) To minimize tax payments and maximize net income, Global's transfer prices should allocate more contribution margin to Eastland as it has a lower tax rate. The other choices are therefore incorrect.

PRACTICE EXERCISES

Use cost-plus pricing to determine various amounts.

(LO 2)

1. Notown Recording Studio rents studio time to musicians in 2-hour blocks. Each session includes the use of the studio facilities, a digital recorded CD of the performance, and a professional music producer/mixer. Anticipated annual volume is 1,000 sessions. The company has invested \$2,300,000 in the studio and expects a return on investment (ROI) of 15%. Budgeted costs for the coming year are as follows.

	<u>Per Session</u>	<u>Total</u>
Direct materials (CDs, etc.)	\$ 20	
Direct labor	\$400	
Variable overhead	\$ 50	
Fixed overhead		\$950,000
Variable selling and administrative expenses	\$ 40	
Fixed selling and administrative expenses		\$540,000

Instructions

- Determine the total cost per session.
- Determine the desired ROI per session.
- Calculate the markup percentage on the total cost per session.
- Calculate the target price per session.

Solution

1. (a) Total cost per session:

	<u>Per Session</u>
Direct materials	\$ 20
Direct labor	400
Variable overhead	50
Fixed overhead (\$950,000 ÷ 1,000)	950
Variable selling & administrative expenses	40
Fixed selling & administrative expenses (\$540,000 ÷ 1,000)	540
Total cost per session	<u>\$2,000</u>

(b) Desired ROI per session = $(15\% \times \$2,300,000) \div 1,000 = \345

(c) Markup percentage on total cost per session = $\$345 \div \$2,000 = 17.25\%$

(d) Target price per session = $\$2,000 + (\$2,000 \times 17.25\%) = \$2,345$

Determine minimum transfer price.

(LO 4)

2. Mercury Corporation manufactures car audio systems. It is a division of Country-Wide Motors, which manufactures vehicles. Mercury sells car audio systems to other divisions of Country-Wide, as well as to other vehicle manufacturers and retail stores. The following information is available for Mercury's standard unit: variable cost per unit \$31, fixed cost per unit \$23, and selling price to outside customer \$85. Country-Wide currently purchases a standard unit from an outside supplier for \$80. Because of quality concerns and to ensure a reliable supply, the top management of Country-Wide has ordered Mercury to provide 200,000 units per year at a transfer price of \$30 per unit. Mercury is already

operating at full capacity. Mercury can avoid \$2 per unit of variable selling costs by selling the unit internally.

Instructions

- What is the minimum transfer price that Mercury should accept?
- What is the potential loss to the corporation as a whole resulting from this forced transfer?
- How should the company resolve this situation?

Solution

2. (a) The minimum transfer price that Mercury should accept is:

$$\text{Minimum transfer price} = (\$31 - \$2) + (\$85 - \$31) = \$83$$

- (b) The lost contribution margin per unit to the company is:

Contribution margin lost by Mercury	
$\{(\$85 - \$31) - [\$30 - (\$31 - \$2)]\}$	\$ 53
Increased contribution margin to vehicle division $(\$80 - \$30)$	<u>(50)</u>
Net loss in contribution margin	<u>\$ 3</u>

$$\text{Total lost contribution margin is } \$3 \times 200,000 \text{ units} = \$600,000$$

- (c) If management insists that it wants Mercury to provide the car audio systems and Mercury is operating at full capacity, then it must be willing to pay the minimum transfer price for those units. Otherwise, it will penalize the managers of Mercury by not giving them adequate credit for their contribution to the corporation's contribution margin.

PRACTICE PROBLEM

Revco Electronics is a division of International Motors, an automobile manufacturer. Revco produces car radio/CD players. Revco sells its products to other divisions of International Motors, as well as to other car manufacturers and electronics distributors. The following information is available regarding Revco's car radio/CD player.

Determine minimum transfer price under different situations.

(LO 4)

Selling price of car radio/CD player to external customers	\$49
Variable cost per unit	\$28
Capacity	200,000 units

Instructions

Determine whether the goods should be transferred internally or purchased externally and what the appropriate transfer price should be under each of the following **independent** situations.

- Revco Electronics is operating at full capacity. There is a saving of \$4 per unit for variable cost if the car radio is made for internal sale. International Motors can purchase a comparable car radio from an outside supplier for \$47.
- Revco Electronics has sufficient existing capacity to meet the needs of International Motors. International Motors can purchase a comparable car radio from an outside supplier for \$47.
- International Motors wants to purchase a special-order car radio/CD player with additional features. It needs 15,000 units. Revco Electronics has determined that the additional variable cost would be \$12 per unit. Revco Electronics has no spare capacity. It will have to forgo sales of 15,000 units to external parties in order to provide this special order.

Solution

- (a) Revco Electronics' opportunity cost (its lost contribution margin) would be \$21 $(\$49 - \$28)$. Using the formula for minimum transfer price, we determine:

$$\begin{aligned} \text{Minimum transfer price} &= \text{Variable cost} + \text{Opportunity cost} \\ \$45 &= (\$28 - \$4) + \$21 \end{aligned}$$

Since this minimum transfer price is less than the \$47 it would cost if International Motors purchases from an external party, internal transfer should take place. Revco Electronics and International Motors should negotiate a transfer price between \$45 and \$47.

- (b) Since Revco Electronics has available capacity, its opportunity cost (its lost contribution margin) would be \$0. Using the formula for minimum transfer price, we determine the following.

$$\begin{array}{rcll} \text{Minimum transfer price} & = & \text{Variable cost} & + \text{Opportunity cost} \\ \$28 & = & \$28 & + \$0 \end{array}$$

Since International Motors can purchase the unit for \$47 from an external party, the most it would be willing to pay would be \$47. It is in the best interest of the company as a whole, as well as the two divisions, for a transfer to take place. The two divisions must reach a negotiated transfer price between \$28 and \$47 that recognizes the costs and benefits to each party and is acceptable to both.

- (c) Revco Electronics' opportunity cost (its lost contribution margin per unit) would be \$21 (\$49 – \$28). Its variable cost would be \$40 (\$28 + \$12). Using the formula for minimum transfer price, we determine the following.

$$\begin{array}{rcll} \text{Minimum transfer price} & = & \text{Variable cost} & + \text{Opportunity cost} \\ \$61 & = & \$40 & + \$21 \end{array}$$

Note that in this case Revco Electronics has no available capacity. Its management may decide that it does not want to provide this special order because to do so will require that it cut off the supply of the standard unit to some of its existing customers. This may anger those customers and result in the loss of customers.

WileyPLUS

Brief Exercises, Exercises, **do it!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

- What are the two types of pricing environments for sales to external parties?
- In what situation does a company place the greatest focus on its target cost? How is the target cost determined?
- What is the basic formula to determine the target selling price in cost-plus pricing?
- Benz Corporation produces a filter that has a per unit cost of \$18. The company would like a 30% markup. Using cost-plus pricing, determine the per unit selling price.
- What is the basic formula for the markup percentage?
- What are some of the factors that affect a company's desired ROI?
- Stanley Corporation manufactures an electronic switch for dishwashers. The cost base per unit, excluding selling and administrative expenses, is \$60. The per unit cost of selling and administrative expenses is \$15. The company's desired ROI per unit is \$6. Calculate its markup percentage on total unit cost.
- Sheen Co. manufactures a standard cabinet for a Blu-ray player. The variable cost per unit is \$16. The fixed cost per unit is \$9. The desired ROI per unit is \$6. Compute the markup percentage on total unit cost and the target selling price for the cabinet.
- In what circumstances is time-and-material pricing most often used?
- What is the material loading charge? How is it expressed?
- What is a transfer price? Why is determining a fair transfer price important to division managers?
- When setting a transfer price, what objective(s) should the company have in mind?
- What are the three approaches for determining transfer prices?
- Describe the cost-based approach to transfer pricing. What is the strength of this approach? What are the weaknesses of this approach?
- What is the general formula for determining the minimum transfer price that the selling division should be willing to accept?
- When determining the minimum transfer price, what is meant by the "opportunity cost"?
- In what circumstances will a negotiated transfer price be used instead of a market-based price?
- *18. What costs are excluded from the cost base when absorption-cost pricing is used to determine the markup percentage?
- *19. Marie Corporation manufactures a fiber optic connector. The variable cost per unit is \$16. The fixed cost per unit is \$9. The company's desired ROI per unit is \$3. Compute the markup percentage using variable-cost pricing.
- *20. Explain how companies use transfer pricing between divisions located in different countries to reduce tax payments, and discuss the propriety of this approach.

BRIEF EXERCISES

- BE22-1** Ortega Company manufactures computer hard drives. The market for hard drives is very competitive. The current market price for a computer hard drive is \$45. Ortega would like a profit of \$10 per drive. How can Ortega accomplish this objective? *Compute target cost.* (LO 1)
- BE22-2** Mussatto Corporation produces snowboards. The following per unit cost information is available: direct materials \$12, direct labor \$8, variable manufacturing overhead \$6, fixed manufacturing overhead \$14, variable selling and administrative expenses \$4, and fixed selling and administrative expenses \$12. Using a 30% markup percentage on total per unit cost, compute the target selling price. *Use cost-plus pricing to determine selling price.* (LO 2)
- BE22-3** Jaymes Corporation produces high-performance rotors. It expects to produce 50,000 rotors in the coming year. It has invested \$10,000,000 to produce rotors. The company has a required return on investment of 12%. What is its ROI per unit? *Compute ROI per unit.* (LO 2)
- BE22-4** Morales Corporation produces microwave ovens. The following per unit cost information is available: direct materials \$36, direct labor \$24, variable manufacturing overhead \$18, fixed manufacturing overhead \$40, variable selling and administrative expenses \$14, and fixed selling and administrative expenses \$28. Its desired ROI per unit is \$30. Compute its markup percentage using a total-cost approach. *Compute markup percentage.* (LO 2)
- BE22-5** During the current year, Chudrick Corporation expects to produce 10,000 units and has budgeted the following: net income \$300,000, variable costs \$1,100,000, and fixed costs \$100,000. It has invested assets of \$1,500,000. The company's budgeted ROI was 20%. What was its budgeted markup percentage using a full-cost approach? *Compute ROI and markup percentage.* (LO 2)
- BE22-6** Rooney Small Engine Repair charges \$42 per hour of labor. It has a material loading percentage of 40%. On a recent job replacing the engine of a riding lawnmower, Rooney worked 10.5 hours and used parts with a cost of \$700. Calculate Rooney's total bill. *Use time-and-material pricing to determine bill.* (LO 3) 
- BE22-7** The Heating Division of Kobe International produces a heating element that it sells to its customers for \$45 per unit. Its variable cost per unit is \$25, and its fixed cost per unit is \$10. Top management of Kobe International would like the Heating Division to transfer 15,000 heating units to another division within the company at a price of \$29. The Heating Division is operating at full capacity. What is the minimum transfer price that the Heating Division should accept? *Determine minimum transfer price.* (LO 4)
- BE22-8** Use the data from BE22-7 but assume that the Heating Division has sufficient excess capacity to provide the 15,000 heating units to the other division. What is the minimum transfer price that the Heating Division should accept? *Determine minimum transfer price with excess capacity.* (LO 4)
- BE22-9** Use the data from BE22-7 but assume that the units being requested are special high-performance units and that the division's variable cost would be \$27 per unit (rather than \$25). What is the minimum transfer price that the Heating Division should accept? *Determine minimum transfer price for special order.* (LO 4)
- *BE22-10** Using the data in BE22-4, compute the markup percentage using absorption-cost pricing. *Compute markup percentage using absorption-cost pricing.* (LO 5)
- *BE22-11** Using the data in BE22-4, compute the markup percentage using variable-cost pricing. *Compute markup percentage using variable-cost pricing.* (LO 5)

DO IT! Exercises

Determine target cost.
(LO 1)

DO IT! 22-1 Maize Water is considering introducing a water filtration device for its 20-ounce water bottles. Market research indicates that 1,000,000 units can be sold if the price is no more than \$3. If Maize Water decides to produce the filters, it will need to invest \$2,000,000 in new production equipment. Maize Water requires a minimum rate of return of 16% on all investments.

Determine the target cost per unit for the filter.

Use cost-plus pricing to determine various amounts.
(LO 2)

DO IT! 22-2 Gundy Corporation produces area rugs. The following per unit cost information is available: direct materials \$18, direct labor \$9, variable manufacturing overhead \$5, fixed manufacturing overhead \$6, variable selling and administrative expenses \$3, and fixed selling and administrative expenses \$7.

Using a 30% markup on total per unit cost, compute the target selling price.

Use time-and-material pricing to determine bill.
(LO 3)

DO IT! 22-3 Presented below are data relating to labor for Verde Appliance Repair Shop.

Repair-technicians' wages	\$110,000
Fringe benefits	40,000
Overhead	50,000

The desired profit margin per hour is \$20. The material loading charge is 60% of invoice cost. Verde estimates that 5,000 labor hours will be worked next year. If Verde repairs a dishwasher that takes 1.5 hours to repair and uses parts of \$70, compute the bill for the job.

Determine transfer prices.
(LO 4)

DO IT! 22-4 The fastener division of Southern Fasteners manufactures zippers and then sells them to customers for \$8 per unit. Its variable cost is \$3 per unit, and its fixed cost per unit is \$1.50. Management would like the fastener division to transfer 12,000 of these zippers to another division within the company at a price of \$3. The fastener division could avoid \$0.20 per zipper of variable packaging costs by selling internally.

Determine the minimum transfer price (a) assuming the fastener division is not operating at full capacity, and (b) assuming the fastener division is operating at full capacity.

EXERCISES

Compute target cost.
(LO 1)

E22-1 Mesa Cheese Company has developed a new cheese slicer called Slim Slicer. The company plans to sell this slicer through its catalog, which it issues monthly. Given market research, Mesa believes that it can charge \$20 for the Slim Slicer. Prototypes of the Slim Slicer, however, are costing \$22. By using cheaper materials and gaining efficiencies in mass production, Mesa believes it can reduce Slim Slicer's cost substantially. Mesa wishes to earn a return of 40% of the selling price.

Instructions

- Compute the target cost for the Slim Slicer.
- When is target costing particularly helpful in deciding whether to produce a given product?

Compute target cost.
(LO 1)

E22-2 Eckert Company is involved in producing and selling high-end golf equipment. The company has recently been involved in developing various types of laser guns to measure yardages on the golf course. One small laser gun, called LittleLaser, appears to have a very large potential market. Because of competition, Eckert does not believe that it can charge more than \$90 for LittleLaser. At this price, Eckert believes it can sell 100,000 of these laser guns. Eckert will require an investment of \$8,000,000 to manufacture, and the company wants an ROI of 20%.

Instructions

Determine the target cost for one LittleLaser.

E22-3 Leno Company makes swimsuits and sells these suits directly to retailers. Although Leno has a variety of suits, it does not make the All-Body suit used by highly skilled swimmers. The market research department believes that a strong market exists for this type of suit. The department indicates that the All-Body suit would sell for approximately \$100. Given its experience, Leno believes the All-Body suit would have the following manufacturing costs.

Direct materials	\$ 25
Direct labor	30
Manufacturing overhead	45
Total costs	<u>\$100</u>

Instructions

- (a) Assume that Leno uses cost-plus pricing, setting the selling price 25% above its costs.
 (1) What would be the price charged for the All-Body swimsuit? (2) Under what circumstances might Leno consider manufacturing the All-Body swimsuit given this approach?
- (b) Assume that Leno uses target costing. What is the price that Leno would charge the retailer for the All-Body swimsuit?
- (c) What is the highest acceptable manufacturing cost Leno would be willing to incur to produce the All-Body swimsuit, if it desired a profit of \$25 per unit? (Assume target costing.)

E22-4 Kaspar Corporation makes a commercial-grade cooking griddle. The following information is available for Kaspar Corporation's anticipated annual volume of 30,000 units.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$17	
Direct labor	\$ 8	
Variable manufacturing overhead	\$11	
Fixed manufacturing overhead		\$300,000
Variable selling and administrative expenses	\$ 4	
Fixed selling and administrative expenses		\$150,000

The company uses a 40% markup percentage on total cost.

Instructions

- (a) Compute the total cost per unit.
 (b) Compute the target selling price.

E22-5 Schopp Corporation makes a mechanical stuffed alligator that sings the Martian national anthem. The following information is available for Schopp Corporation's anticipated annual volume of 500,000 units.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$ 7	
Direct labor	\$11	
Variable manufacturing overhead	\$15	
Fixed manufacturing overhead		\$3,000,000
Variable selling and administrative expenses	\$14	
Fixed selling and administrative expenses		\$1,500,000

The company has a desired ROI of 25%. It has invested assets of \$28,000,000.

Instructions

- (a) Compute the total cost per unit.
 (b) Compute the desired ROI per unit.
 (c) Compute the markup percentage using total cost per unit.
 (d) Compute the target selling price.

E22-6 Alma's Recording Studio rents studio time to musicians in 2-hour blocks. Each session includes the use of the studio facilities, a digital recording of the performance, and a professional music producer/mixer. Anticipated annual volume is 1,000 sessions. The

Compute target cost and cost-plus pricing.

(LO 1, 2)

Use cost-plus pricing to determine selling price.

(LO 2)

Use cost-plus pricing to determine various amounts.

(LO 2)

Use cost-plus pricing to determine various amounts.

(LO 2)

company has invested \$2,352,000 in the studio and expects a return on investment (ROI) of 20%. Budgeted costs for the coming year are as follows.

	<u>Per Session</u>	<u>Total</u>
Direct materials (CDs, etc.)	\$ 20	
Direct labor	\$400	
Variable overhead	\$ 50	
Fixed overhead		\$950,000
Variable selling and administrative expenses	\$ 40	
Fixed selling and administrative expenses		\$500,000

Instructions

- Determine the total cost per session.
- Determine the desired ROI per session.
- Calculate the markup percentage on the total cost per session.
- Calculate the target price per session.

Use cost-plus pricing to determine various amounts.

(LO 2)

E22-7 Gibbs Corporation produces industrial robots for high-precision manufacturing. The following information is given for Gibbs Corporation.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$380	
Direct labor	\$290	
Variable manufacturing overhead	\$ 72	
Fixed manufacturing overhead		\$1,500,000
Variable selling and administrative expenses	\$ 55	
Fixed selling and administrative expenses		\$ 324,000

The company has a desired ROI of 20%. It has invested assets of \$54,000,000. It anticipates production of 3,000 units per year.

Instructions

- Compute the cost per unit of the fixed manufacturing overhead and the fixed selling and administrative expenses.
- Compute the desired ROI per unit. (Round to the nearest dollar.)
- Compute the target selling price.

Use time-and-material pricing to determine bill.

(LO 3)

E22-8 Second Chance Welding rebuilds spot welders for manufacturers. The following budgeted cost data for 2017 is available for Second Chance.

	<u>Time Charges</u>	<u>Material Loading Charges</u>
Technicians' wages and benefits	\$228,000	—
Parts manager's salary and benefits	—	\$42,500
Office employee's salary and benefits	38,000	9,000
Other overhead	15,200	24,000
Total budgeted costs	<u>\$281,200</u>	<u>\$75,500</u>

The company desires a \$30 profit margin per hour of labor and a 20% profit margin on parts. It has budgeted for 7,600 hours of repair time in the coming year, and estimates that the total invoice cost of parts and materials in 2017 will be \$400,000.

Instructions

- Compute the rate charged per hour of labor.
- Compute the material loading percentage. (Round to three decimal places.)
- Pace Corporation has requested an estimate to rebuild its spot welder. Second Chance estimates that it would require 40 hours of labor and \$2,000 of parts. Compute the total estimated bill.

E22-9 Rey Custom Electronics (RCE) sells and installs complete security, computer, audio, and video systems for homes. On newly constructed homes it provides bids using time-and-material pricing. The following budgeted cost data are available.

Use time-and-material pricing to determine bill.

(LO 3)

	<u>Time Charges</u>	<u>Material Loading Charges</u>
Technicians' wages and benefits	\$150,000	—
Parts manager's salary and benefits	—	\$34,000
Office employee's salary and benefits	30,000	15,000
Other overhead	15,000	42,000
Total budgeted costs	<u>\$195,000</u>	<u>\$91,000</u>

The company has budgeted for 6,250 hours of technician time during the coming year. It desires a \$38 profit margin per hour of labor and an 80% profit on parts. It estimates the total invoice cost of parts and materials in 2017 will be \$700,000.

Instructions

- Compute the rate charged per hour of labor.
- Compute the material loading percentage.
- RCE has just received a request for a bid from Buil Builders on a \$1,200,000 new home. The company estimates that it would require 80 hours of labor and \$40,000 of parts. Compute the total estimated bill.

E22-10 Wasson's Classic Cars restores classic automobiles to showroom status. Budgeted data for the current year are as follows.

Use time-and-material pricing to determine bill.

(LO 3)

	<u>Time Charges</u>	<u>Material Loading Charges</u>
Restorers' wages and fringe benefits	\$270,000	
Purchasing agent's salary and fringe benefits		\$ 67,500
Administrative salaries and fringe benefits	54,000	21,960
Other overhead costs	24,000	77,490
Total budgeted costs	<u>\$348,000</u>	<u>\$166,950</u>

The company anticipated that the restorers would work a total of 12,000 hours this year. Expected parts and materials were \$1,260,000.

In late January, the company experienced a fire in its facilities that destroyed most of the accounting records. The accountant remembers that the hourly labor rate was \$70.00 and that the material loading charge was 83.25%.

Instructions

- Determine the profit margin per hour on labor.
- Determine the profit margin on materials.
- Determine the total price of labor and materials on a job that was completed after the fire that required 150 hours of labor and \$60,000 in parts and materials.

E22-11 Chen Company's Small Motor Division manufactures a number of small motors used in household and office appliances. The Household Division of Chen then assembles and packages such items as blenders and juicers. Both divisions are free to buy and sell any of their components internally or externally. The following costs relate to small motor LN233 on a per unit basis.

Determine minimum transfer price.

(LO 4)

Fixed cost per unit	\$ 5
Variable cost per unit	\$11
Selling price per unit	\$35

Instructions

- Assuming that the Small Motor Division has excess capacity, compute the minimum acceptable price for the transfer of small motor LN233 to the Household Division.
- Assuming that the Small Motor Division does not have excess capacity, compute the minimum acceptable price for the transfer of the small motor to the Household Division.
- Explain why the level of capacity in the Small Motor Division has an effect on the transfer price.

Determine effect on income from transfer price.

(LO 4)

E22-12 The Cycle Division of Ayala Company has the following per unit data related to its most recent cycle called Roadbuster.

Selling price		\$2,200
Variable cost of goods sold		
Body frame	\$300	
Other variable costs	<u>900</u>	<u>1,200</u>
Contribution margin		<u><u>\$1,000</u></u>

Presently, the Cycle Division buys its body frames from an outside supplier. However Ayala has another division, FrameBody, that makes body frames for other cycle companies. The Cycle Division believes that FrameBody's product is suitable for its new Roadbuster cycle. Presently, FrameBody sells its frames for \$350 per frame. The variable cost for FrameBody is \$270. The Cycle Division is willing to pay \$280 to purchase the frames from FrameBody.

Instructions

- Assume that FrameBody has excess capacity and is able to meet all of the Cycle Division's needs. If the Cycle Division buys 1,000 frames from FrameBody, determine the following: (1) effect on the income of the Cycle Division; (2) effect on the income of FrameBody; and (3) effect on the income of Ayala.
- Assume that FrameBody does not have excess capacity and therefore would lose sales if the frames were sold to the Cycle Division. If the Cycle Division buys 1,000 frames from FrameBody, determine the following: (1) effect on the income of the Cycle Division; (2) effect on the income of FrameBody; and (3) effect on the income of Ayala.

Determine minimum transfer price.

(LO 4)

E22-13 Benson Corporation manufactures car stereos. It is a division of Berna Motors, which manufactures vehicles. Benson sells car stereos to Berna, as well as to other vehicle manufacturers and retail stores. The following information is available for Benson's standard unit: variable cost per unit \$37, fixed cost per unit \$23, and selling price to outside customer \$86. Berna currently purchases a standard unit from an outside supplier for \$80. Because of quality concerns and to ensure a reliable supply, the top management of Berna has ordered Benson to provide 200,000 units per year at a transfer price of \$35 per unit. Benson is already operating at full capacity. Benson can avoid \$3 per unit of variable selling costs by selling the unit internally.

Instructions

Answer each of the following questions.

- What is the minimum transfer price that Benson should accept?
- What is the potential loss to the corporation as a whole resulting from this forced transfer?
- How should the company resolve this situation?

Compute minimum transfer price.

(LO 4)

E22-14 The Bathtub Division of Kirk Plumbing Corporation has recently approached the Faucet Division with a proposal. The Bathtub Division would like to make a special "ivory" tub with gold-plated fixtures for the company's 50-year anniversary. It would make only 5,000 of these units. It would like the Faucet Division to make the fixtures and provide them to the Bathtub Division at a transfer price of \$160. If sold externally, the estimated variable cost per unit would be \$140. However, by selling internally, the Faucet Division would save \$6 per unit on variable selling expenses. The Faucet Division is currently operating at full capacity. Its standard unit sells for \$50 per unit and has variable costs of \$29.

Instructions

Compute the minimum transfer price that the Faucet Division should be willing to accept, and discuss whether it should accept this offer.

Determine minimum transfer price.

(LO 4)

E22-15 The Appraisal Department of Jean Bank performs appraisals of business properties for loans being considered by the bank and appraisals for home buyers that are financing their purchase through some other financial institution. The department charges \$160 per home appraisal, and its variable costs are \$130 per appraisal.

Recently, Jean Bank has opened its own Home-Loan Department and wants the Appraisal Department to perform 1,200 appraisals on all Jean Bank-financed home loans. Bank management feels that the cost of these appraisals to the Home-Loan Department should be \$150. The variable cost per appraisal to the Home-Loan Department would be \$8 less than those performed for outside customers due to savings in administrative costs.

Instructions

- Determine the minimum transfer price, assuming the Appraisal Department has excess capacity.
- Determine the minimum transfer price, assuming the Appraisal Department has no excess capacity.
- Assuming the Appraisal Department has no excess capacity, should management force the department to charge the Home-Loan Department only \$150? Discuss.

E22-16 Crede Inc. has two divisions. Division A makes and sells student desks. Division B manufactures and sells reading lamps.

Each desk has a reading lamp as one of its components. Division A can purchase reading lamps at a cost of \$10 from an outside vendor. Division A needs 10,000 lamps for the coming year.

Division B has the capacity to manufacture 50,000 lamps annually. Sales to outside customers are estimated at 40,000 lamps for the next year. Reading lamps are sold at \$12 each. Variable costs are \$7 per lamp and include \$1 of variable sales costs that are not incurred if lamps are sold internally to Division A. The total amount of fixed costs for Division B is \$80,000.

Instructions

Consider the following independent situations.

- What should be the minimum transfer price accepted by Division B for the 10,000 lamps and the maximum transfer price paid by Division A? Justify your answer.
- Suppose Division B could use the excess capacity to produce and sell externally 15,000 units of a new product at a price of \$7 per unit. The variable cost for this new product is \$5 per unit. What should be the minimum transfer price accepted by Division B for the 10,000 lamps and the maximum transfer price paid by Division A? Justify your answer.
- If Division A needs 15,000 lamps instead of 10,000 during the next year, what should be the minimum transfer price accepted by Division B and the maximum transfer price paid by Division A? Justify your answer.

(CGA adapted)

E22-17 Twyla Company is a multidivisional company. Its managers have full responsibility for profits and complete autonomy to accept or reject transfers from other divisions. Division A produces a subassembly part for which there is a competitive market. Division B currently uses this subassembly for a final product that is sold outside at \$2,400. Division A charges Division B market price for the part, which is \$1,500 per unit. Variable costs are \$1,100 and \$1,200 for Divisions A and B, respectively.

The manager of Division B feels that Division A should transfer the part at a lower price than market because at market, Division B is unable to make a profit.

Instructions

- Calculate Division B's contribution margin if transfers are made at the market price, and calculate the company's total contribution margin.
- Assume that Division A can sell all its production in the open market. Should Division A transfer the goods to Division B? If so, at what price?
- Assume that Division A can sell in the open market only 500 units at \$1,500 per unit out of the 1,000 units that it can produce every month. Assume also that a 20% reduction in price is necessary to sell all 1,000 units each month. Should transfers be made? If so, how many units should the division transfer and at what price? To support your decision, submit a schedule that compares the contribution margins under the following three different alternatives. Alternative 1: maintain price, no transfers; Alternative 2: cut price, no transfers; and Alternative 3: maintain price and transfers.

(CMA-Canada adapted)

* **E22-18** Information for Schopp Corporation is given in E22-5.

Instructions

Using the information given in E22-5, answer the following.

- Compute the total cost per unit.
- Compute the desired ROI per unit.
- Using absorption-cost pricing, compute the markup percentage.
- Using variable-cost pricing, compute the markup percentage.

Determine minimum transfer price under different situations.

(LO 4)

Determine minimum transfer price under different situations.

(LO 4)

Compute total cost per unit, ROI, and markup percentages using absorption-cost pricing and variable-cost pricing.

(LO 5)

Compute markup percentage using absorption-cost pricing and variable-cost pricing.

(LO 5)

*** E22-19** Rap Corporation produces outdoor portable fireplace units. The following per unit cost information is available: direct materials \$20, direct labor \$25, variable manufacturing overhead \$14, fixed manufacturing overhead \$21, variable selling and administrative expenses \$9, and fixed selling and administrative expenses \$11. The company's ROI per unit is \$24.

Instructions

Compute Rap Corporation's markup percentage using (a) absorption-cost pricing and (b) variable-cost pricing.

Compute various amounts using absorption-cost pricing and variable-cost pricing.

(LO 5)

*** E22-20** Information for Gibbs Corporation is given in E22-7.

Instructions

Using the information given in E22-7, answer the following.

- Compute the cost per unit of the fixed manufacturing overhead and the fixed selling and administrative expenses.
- Compute the desired ROI per unit. (Round to the nearest dollar.)
- Compute the markup percentage and target selling price using absorption-cost pricing. (Round the markup percentage to three decimal places.)
- Compute the markup percentage and target selling price using variable-cost pricing. (Round the markup percentage to three decimal places.)

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Use cost-plus pricing to determine various amounts.

(LO 2)

P22-1A National Corporation needs to set a target price for its newly designed product M14–M16. The following data relate to this new product.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$25	
Direct labor	\$40	
Variable manufacturing overhead	\$10	
Fixed manufacturing overhead		\$1,440,000
Variable selling and administrative expenses	\$ 5	
Fixed selling and administrative expenses		\$ 960,000

These costs are based on a budgeted volume of 80,000 units produced and sold each year. National uses cost-plus pricing methods to set its target selling price. The markup percentage on total unit cost is 40%.

Instructions

(a) Variable cost per unit \$80

- Compute the total variable cost per unit, total fixed cost per unit, and total cost per unit for M14–M16.
- Compute the desired ROI per unit for M14–M16.
- Compute the target selling price for M14–M16.
- Compute variable cost per unit, fixed cost per unit, and total cost per unit assuming that 60,000 M14–M16s are produced and sold during the year.

Use cost-plus pricing to determine various amounts.

(LO 2)

P22-2A Lovell Computer Parts Inc. is in the process of setting a selling price on a new component it has just designed and developed. The following cost estimates for this new component have been provided by the accounting department for a budgeted volume of 50,000 units.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$50	
Direct labor	\$26	
Variable manufacturing overhead	\$20	
Fixed manufacturing overhead		\$600,000
Variable selling and administrative expenses	\$19	
Fixed selling and administrative expenses		\$400,000

Lovell Computer Parts management requests that the total cost per unit be used in cost-plus pricing its products. On this particular product, management also directs that the target price be set to provide a 25% return on investment (ROI) on invested assets of \$1,000,000.

Instructions

(Round all calculations to two decimal places.)

- Compute the markup percentage and target selling price that will allow Lovell Computer Parts to earn its desired ROI of 25% on this new component.
- Assuming that the volume is 40,000 units, compute the markup percentage and target selling price that will allow Lovell Computer Parts to earn its desired ROI of 25% on this new component.

(b) Target selling price
\$146.25

P22-3A Sutton's Electronic Repair Shop has budgeted the following time and material for 2017.

Use time-and-material pricing to determine bill.

(LO 3)

SUTTON'S ELECTRONIC REPAIR SHOP
Budgeted Costs for the Year 2017

	<u>Time Charges</u>	<u>Material Loading Charges</u>
Shop employees' wages and benefits	\$108,000	—
Parts manager's salary and benefits	—	\$25,400
Office employee's salary and benefits	23,500	13,600
Overhead (supplies, depreciation, advertising, utilities)	26,000	16,000
Total budgeted costs	<u>\$157,500</u>	<u>\$55,000</u>

Sutton's budgets 5,000 hours of repair time in 2017 and will bill a profit of \$10 per labor hour along with a 25% profit markup on the invoice cost of parts. The estimated invoice cost for parts to be used is \$100,000.

On January 5, 2017, Sutton's is asked to submit a price estimate to fix a 72-inch flat-screen TV. Sutton's estimates that this job will consume 4 hours of labor and \$200 in parts.

Instructions

- Compute the labor rate for Sutton's Electronic Repair Shop for the year 2017.
- Compute the material loading charge percentage for Sutton's Electronic Repair Shop for the year 2017.
- Prepare a time-and-material price quotation for fixing the flat-screen TV.

(c) \$526

P22-4A Word Wizard is a publishing company with a number of different book lines. Each line has contracts with a number of different authors. The company also owns a printing operation called Quick Press. The book lines and the printing operation each operate as a separate profit center. The printing operation earns revenue by printing books by authors under contract with the book lines owned by Word Wizard, as well as authors under contract with other companies. The printing operation bills out at \$0.01 per page, and a typical book requires 500 pages of print. A manager from Business Books, one of the Word Wizard's book lines, has approached the manager of the printing operation offering to pay \$0.007 per page for 1,500 copies of a 500-page book. The book line pays outside printers \$0.009 per page. The printing operation's variable cost per page is \$0.004.

Determine minimum transfer price with no excess capacity and with excess capacity.

(LO 4)

Instructions

Determine whether the printing should be done internally or externally, and the appropriate transfer price, under each of the following situations.

- Assume that the printing operation is booked solid for the next 2 years, and it would have to cancel an obligation with an outside customer in order to meet the needs of the internal division.
- Assume that the printing operation has available capacity.
-  The top management of Word Wizard believes that the printing operation should always do the printing for the company's authors. On a number of occasions, it has forced the printing operation to cancel jobs with outside customers in order to meet the needs of its own lines. Discuss the pros and cons of this approach.
- Calculate the change in contribution margin to each division, and to the company as a whole, if top management forces the printing operation to accept the \$0.007 per page transfer price when it has no available capacity.

(d) Loss to company (\$750)

Determine minimum transfer price with no excess capacity.

(LO 4)

(b) Total loss to company
\$160,000

Determine minimum transfer price under different situations.

(LO 4)

(b) Minimum transfer price \$140

Compute the target price using absorption-cost pricing and variable-cost pricing.

(LO 5)

P22-5A Gutierrez Company makes various electronic products. The company is divided into a number of autonomous divisions that can either sell to internal units or sell externally. All divisions are located in buildings on the same piece of property. The Board Division has offered the Chip Division \$21 per unit to supply it with chips for 40,000 boards. It has been purchasing these chips for \$22 per unit from outside suppliers. The Chip Division receives \$22.50 per unit for sales made to outside customers on this type of chip. The variable cost of chips sold externally by the Chip Division is \$14.50. It estimates that it will save \$4.50 per chip of selling expenses on units sold internally to the Board Division. The Chip Division has no excess capacity.

Instructions

- Calculate the minimum transfer price that the Chip Division should accept. Discuss whether it is in the Chip Division's best interest to accept the offer.
- Suppose that the Chip Division decides to reject the offer. What are the financial implications for each division, and for the company as a whole, of this decision?

P22-6A Comm Devices (CD) is a division of Worldwide Communications, Inc. CD produces pagers and other personal communication devices. These devices are sold to other Worldwide divisions, as well as to other communication companies. CD was recently approached by the manager of the Personal Communications Division regarding a request to make a special pager designed to receive signals from anywhere in the world. The Personal Communications Division has requested that CD produce 12,000 units of this special pager. The following facts are available regarding the Comm Devices Division.

Selling price of standard pager	\$95
Variable cost of standard pager	\$50
Additional variable cost of special pager	\$30

Instructions

For each of the following independent situations, calculate the minimum transfer price, and discuss whether the internal transfer should take place or whether the Personal Communications Division should purchase the pager externally.

- The Personal Communications Division has offered to pay the CD Division \$105 per pager. The CD Division has no available capacity. The CD Division would have to forgo sales of 10,000 pagers to existing customers in order to meet the request of the Personal Communications Division. (*Note:* The number of special pagers to be produced does not equal the number of existing pagers that would be forgone.)
- The Personal Communications Division has offered to pay the CD Division \$150 per pager. The CD Division has no available capacity. The CD Division would have to forgo sales of 16,000 pagers to existing customers in order to meet the request of the Personal Communications Division. (*Note:* The number of special pagers to be produced does not equal the number of existing pagers that would be forgone.)
- The Personal Communications Division has offered to pay the CD Division \$100 per pager. The CD Division has available capacity.

***P22-7A** Stent Corporation needs to set a target price for its newly designed product EverReady. The following data relate to this new product.

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$20	
Direct labor	\$40	
Variable manufacturing overhead	\$10	
Fixed manufacturing overhead		\$1,600,000
Variable selling and administrative expenses	\$ 5	
Fixed selling and administrative expenses		\$1,120,000

The costs shown above are based on a budgeted volume of 80,000 units produced and sold each year. Stent uses cost-plus pricing methods to set its target selling price. Because some managers prefer absorption-cost pricing and others prefer variable-cost pricing, the accounting department provides information under both approaches using a markup of 50% on absorption cost and a markup of 80% on variable cost.

Instructions

- (a) Compute the target price for one unit of EverReady using absorption-cost pricing.
 (b) Compute the target price for one unit of EverReady using variable-cost pricing.

- (a) Markup \$45
 (b) Markup \$60

***P22-8A** Anderson Windows Inc. is in the process of setting a target price on its newly designed tinted window. Cost data relating to the window at a budgeted volume of 4,000 units are as follows.

Compute various amounts using absorption-cost pricing and variable-cost pricing.

(LO 5)

	<u>Per Unit</u>	<u>Total</u>
Direct materials	\$100	
Direct labor	\$ 70	
Variable manufacturing overhead	\$ 20	
Fixed manufacturing overhead		\$120,000
Variable selling and administrative expenses	\$ 10	
Fixed selling and administrative expenses		\$102,000

Anderson Windows uses cost-plus pricing methods that are designed to provide the company with a 25% ROI on its tinted window line. A total of \$1,016,000 in assets is committed to production of the new tinted window.

Instructions

- (a) Compute the markup percentage under absorption-cost pricing that will allow Anderson Windows to realize its desired ROI.
 (b) Compute the target price of the window under absorption-cost pricing, and show proof that the desired ROI is realized.
 (c) Compute the markup percentage under variable-cost pricing that will allow Anderson Windows to realize its desired ROI. (Round to three decimal places.)
 (d) Compute the target price of the window under variable-cost pricing, and show proof that the desired ROI is realized.
 (e)  Since both absorption-cost pricing and variable-cost pricing produce the same target price and provide the same desired ROI, why do both methods exist? Isn't one method clearly superior to the other?

- (a) 45%

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

CURRENT DESIGNS

CD22 As a service to its customers, **Current Designs** repairs damaged kayaks. This is especially valuable to customers that have made a significant investment in the composite kayaks. To price the repair jobs, Current Designs uses time-and-material pricing with a desired profit margin of \$20 per labor hour and a 50% materials loading charge.

Recently, Bill Johnson, Vice President of Sales and Marketing, received a phone call from a dealer in Brainerd, Minnesota. The dealer has a customer who recently damaged his composite kayak and would like an estimate of the cost to repair it. After the dealer emailed pictures of the damage, Bill reviewed the pictures with the repair technician and determined that the total materials charges for the repair would be \$100. Bill estimates that the job will take 3 labor hours to complete. Following is the budgeted cost data for Current Designs:

Repair technician wages	\$30,000
Fringe benefits	\$10,000
Overhead	\$10,000

Current Designs has allocated 2,000 hours of repair time for the upcoming year. The customer has agreed to transport the kayak to the Winona production facility for the repairs.

Instructions

Determine the price that Current Designs would charge to complete the repairs for the customer.

**EXCEL
TUTORIAL**

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–21.)

WP22 Waterways Corporation competes in a market economy in which its products must be sold at market prices. Its emphasis is therefore on manufacturing its products at a cost that allows the company to earn its desired profit. This problem asks you to consider various pricing situations for Waterways' projects.

Go to the book's companion website, www.wiley.com/college/weygandt, to find the remainder of this problem.

COMPREHENSIVE CASE

Greetings, Inc., a retailer of greeting cards and small gift items, needs to change its transfer pricing strategy for its Wall Décor division. In this case, you will have the opportunity to evaluate profitability using two different transfer pricing approaches and comment on the terms of the proposed transfer pricing agreement.

Go to the book's companion website, at www.wiley.com/college/weygandt, for complete case details and techniques.

BROADENING YOUR PERSPECTIVE**MANAGEMENT DECISION-MAKING****Decision-Making Across the Organization**

BYP22-1 Lanier Manufacturing has multiple divisions that make a wide variety of products. Recently, the Bearing Division and the Wheel Division got into an argument over a transfer price. The Wheel Division needed bearings for garden tractor wheels. It normally buys its bearings from an outside supplier for \$25 per set. The company's top management recently initiated a campaign to persuade the different divisions to buy their materials from within the company whenever possible. As a result, Hank Sherril, the purchasing manager for the Wheel Division, received a letter from the vice president of Purchasing, ordering him to contact the Bearing Division to discuss buying bearings from this division.

To comply with this request, Hank from the Wheel Division called Mary Plimpton of the Bearing Division, and asked the price for 15,000 bearings. Mary responded that the bearings normally sell for \$36 per set. However, Mary noted that the Bearing Division would save \$3 on marketing costs by selling internally, and would pass this cost savings on to the Wheel Division. She further commented that they were at full capacity, and therefore would not be able to provide any bearings presently. In the future, if they had available capacity, they would be happy to provide bearings.

Hank responded indignantly, "Thanks but no thanks." He said, "We can get all the bearings we need from Falk Manufacturing for \$25 per set." Mary snorted back, "Falk makes junk. It costs us \$22 per set just to make our bearings. Our bearings can withstand heat of 2,000 degrees centigrade, and are good to within .00001 centimeters. If you guys are happy buying junk, then go ahead and buy from Falk."

Two weeks later, Hank's boss from the central office stopped in to find out whether he had placed an order with the Bearing Division. Hank responded that he would sooner buy his bearings from his worst enemy than from the Bearing Division.

Instructions

With the class divided into groups, prepare answers to the following questions.

- Why might the company's top management want the divisions to start doing more business with one another?
- Under what conditions should a buying division be forced to buy from an internal supplier? Under what conditions should a selling division be forced to sell to an internal division rather than to an outside customer?
- The vice president of Purchasing thinks that this problem should be resolved by forcing the Bearing Division to sell to the Wheel Division at its cost of \$22. Is this a good solution for the Wheel Division? Is this a good solution for the Bearing Division? Is this a good solution for the company?
- Provide at least two other possible solutions to this problem. Discuss the merits and drawbacks of each.

Managerial Analysis

BYP22-2 Construction on the Bonita Full-Service Car Wash is nearing completion. The owner is Dave Kear, a retired accounting professor. The car wash is strategically located on a busy street that separates an affluent suburban community from a middle-class community. It has two state-of-the-art stalls. Each stall can provide anything from a basic two-stage wash and rinse to a five-stage luxurious bath. It is all “touchless,” that is, there are no brushes to potentially damage the car. Outside each stall, there is also a 400 horse-power vacuum. Dave likes to joke that these vacuums are so strong that they will pull the carpet right out of your car if you aren’t careful.

Dave has some important decisions to make before he can open the car wash. First, he knows that there is one drive-through car wash only a 10-minute drive away. It is attached to a gas station; it charges \$5 for a basic wash, and \$4 if you also buy at least 8 gallons of gas. It is a “brush”-type wash with rotating brush heads. There is also a self-serve “stand outside your car and spray until you are soaked” car wash a 15-minute drive away from Dave’s location. He went over and tried this out. He went through \$3 in quarters to get the equivalent of a basic wash. He knows that both of these locations always have long lines, which is one reason why he decided to build a new car wash.

Dave is planning to offer three levels of wash service—Basic, Deluxe, and Premium. The Basic is all automated; it requires no direct intervention by employees. The Deluxe is all automated except that at the end an employee will wipe down the car and will put a window treatment on the windshield that reduces glare and allows rainwater to run off more quickly. The Premium level is a “pampered” service. This will include all the services of the Deluxe, plus a special wax after the machine wax, and an employee will vacuum the car, wipe down the entire interior, and wash the inside of the windows. To provide the Premium service, Dave will have to hire a couple of “car wash specialists” to do the additional pampering.

Dave has pulled together the following estimates, based on data he received from the local Chamber of Commerce and information from a trade association.

	<u>Per Unit</u>	<u>Total</u>
Direct materials per Basic wash	\$0.30	
Direct materials per Deluxe wash	\$0.80	
Direct materials per Premium wash	\$1.10	
Direct labor per Basic wash	na	
Direct labor per Deluxe wash	\$0.40	
Direct labor per Premium wash	\$2.40	
Variable overhead per Basic wash	\$0.10	
Variable overhead per Deluxe and Premium washes	\$0.20	
Fixed overhead		\$117,000
Variable selling and administrative expenses all washes	\$0.10	
Fixed selling and administrative expenses		\$130,500

The total estimated number of washes of any type is 45,000. Dave has invested assets of \$393,750. He would like a return on investment (ROI) of 20%.

Instructions

Answer each of the following questions.

- Identify the issues that Dave must consider in deciding on the price of each level of service of his car wash. Also discuss what issues he should consider in deciding on what levels of service to provide.
- Dave estimates that of the total 45,000 washes, 20,000 will be Basic, 20,000 will be Deluxe, and 5,000 will be Premium. Calculate the selling price, using cost-plus pricing, that Dave should use for each type of wash to achieve his desired ROI of 20%.
- During the first year, instead of selling 45,000 washes, Dave sold 43,000 washes. He was quite accurate in his estimate of first-year sales, but he was way off on the types of washes that he sold. He sold 3,000 Basic, 31,000 Deluxe, and 9,000 Premium. His actual total fixed expenses were as he expected, and his variable cost per unit was as estimated. Calculate Dave’s actual net income and his actual ROI. (Round to two decimal places.)
- Dave is using a traditional approach to allocate overhead. As a consequence, he is allocating overhead equally to all three types of washes, even though the Basic wash is considerably less complicated and uses very little of the technical capabilities of the machinery. What should Dave do to determine more accurate costs per unit? How will this affect his pricing and, consequently, his sales?

Real-World Focus

BYP22-3 Merck & Co., Inc. is a global, research-driven pharmaceutical company that discovers, develops, manufactures, and markets a broad range of human and animal health products. The following are excerpts from the financial review section of the company’s annual report.

MERCK & CO., INC.
Financial Review Section (partial)

In the United States, the Company has been working with private and governmental employers to slow the increase of health care costs.

Outside of the United States, in difficult environments encumbered by government cost containment actions, the Company has worked with payers to help them allocate scarce resources to optimize health care outcomes, limiting potentially detrimental effects of government actions on sales growth.

Several products face expiration of product patents in the near term.

The Company, along with other pharmaceutical manufacturers, received a notice from the Federal Trade Commission (FTC) that it was conducting an investigation into pricing practices.

Instructions

Answer each of the following questions.

- (a) In light of the above excerpts from Merck's annual report, discuss some unique pricing issues faced by companies that operate in the pharmaceutical industry.
- (b) What are some reasons why the same company often sells identical drugs for dramatically different prices in different countries? How can the same drug used for both humans and animals cost significantly different prices?
- (c) Suppose that Merck has just developed a revolutionary new drug. Discuss the steps it would go through in setting a price. Include a discussion of the information it would need to gather, and the issues it would need to consider.

BYP22-4 Shopping “robots” have become very popular online. These are sites that will find the price of a specified product that is listed by retailers on the Internet (“e-tailers”). This allows the customer to search for the lowest possible price.

Address: www.dealtime.com or go to www.wiley.com/college/weygandt

Steps

1. Go to DealTime's website.
2. Under the heading “**Electronics**,” click on **DVD players**.
3. Choose one of the models.

Instructions

- (a) Write down the name of the retailer and the price of the two lowest-priced units and the two highest-priced units.
- (b) As a consumer, what concerns might you have in clicking on the “buy” button?
- (c) Why might a consumer want to purchase a unit from a retailer that isn't offering the lowest price?
- (d) What implications does the existence of these sites have for retailers?

CRITICAL THINKING

Communication Activity

BYP22-5 Jane Fleming recently graduated from college with a degree in landscape architecture. Her father runs a tree, shrub, and perennial-flower nursery, and her brother has a business delivering top-soil, mulch, and compost. Jane has decided that she would like to start a landscape business. She believes that she can generate a nice profit for herself, while providing an opportunity for both her brother's and father's businesses to grow.

One potential problem that Jane is concerned about is that her father and brother tend to charge the highest prices of any local suppliers for their products. She is hoping that she can demonstrate that it would be in her interest, as well as theirs, for them to sell to her at a discounted price.

Instructions

Write a memo to Jane explaining what information she must gather, and what issues she must consider in working out an arrangement with her father and brother. In your memo, discuss how this

situation differs from a “standard” transfer pricing problem, but also how it has many of the characteristics of a transfer pricing problem.

Ethics Case

BYP22-6 Jumbo Airlines operates out of three main “hub” airports in the United States. Recently, Econo Airlines began operating a flight from Reno, Nevada, into Jumbo’s Metropolis hub for \$190. Jumbo Airlines offers a price of \$425 for the same route. The management of Jumbo is not happy about Econo invading its turf. In fact, Jumbo has driven off nearly every other competing airline from its hub, so that today 90% of flights into and out of Metropolis are Jumbo Airline flights. Econo is able to offer a lower fare because its pilots are paid less, it uses older planes, and it has lower overhead costs. Econo has been in business for only 6 months, and it services only two other cities. It expects the Metropolis route to be its most profitable.

Jumbo estimates that it would have to charge \$210 just to break even on this flight. It estimates that Econo can break even at a price of \$160. Within one day of Econo’s entry into the market, Jumbo dropped its price to \$140, whereupon Econo matched its price. They both maintained this fare for a period of 9 months, until Econo went out of business. As soon as Econo went out of business, Jumbo raised its fare back to \$425.

Instructions

Answer each of the following questions.

- Who are the stakeholders in this case?
- What are some of the reasons why Econo’s break-even point is lower than that of Jumbo?
- What are the likely reasons why Jumbo was able to offer this price for this period of time, while Econo couldn’t?
- What are some of the possible courses of action available to Econo in this situation?
- Do you think that this kind of pricing activity is ethical? What are the implications for the stakeholders in this situation?

Considering Your Costs and Benefits

BYP22-7 The January 2011 issue of *Strategic Finance* includes an article by J. Lockhart, A. Taylor, K. Thomas, B. Levetsovitis, and J. Wise entitled “When a Higher Price Pays Off.”

Instructions

Read the article and answer the following questions.

- Explain what is meant by a “low-cost” supplier versus a “low-priced” supplier.
- Clarus Technologies’** products are typically priced significantly higher than its competitors’ products. How is it able to overcome the initial “sticker shock”?
- List the five categories of costs that the authors used to compare the Tornado to competing products. Give examples of specific types of costs in each category.
- The article discusses full-cost accounting as developed by the Environmental Protection Agency (EPA). What are the characteristics of this approach, and what implications does the approach used in this article have for corporate social responsibility?

23

Budgetary Planning

CHAPTER PREVIEW As the Feature Story below about **BabyCakes NYC** indicates, budgeting is critical to financial well-being. As a student, you budget your study time and your money. Families budget income and expenses. Governmental agencies budget revenues and expenditures. Businesses use budgets in planning and controlling their operations.

Our primary focus in this chapter is budgeting—specifically, how budgeting is used as a planning tool by management. Through budgeting, it should be possible for management to maintain enough cash to pay creditors as well as have sufficient raw materials to meet production requirements and adequate finished goods to meet expected sales.

FEATURE STORY

What's in Your Cupcake?

The best business plans often result from meeting a basic human need. Many people would argue that cupcakes aren't necessarily essential to support life. But if you found out that allergies were going to deprive you forever of cupcakes, you might view baked goods in a whole new light. Such was the dilemma faced by Erin McKenna. When she found that her wheat allergies prevented her from consuming most baked sweets, she decided to open a bakery that met her needs. Her vegan and kosher bakery, **BabyCakes NYC**, advertises that it is refined-sugar-free, gluten-free, wheat-free, soy-free, dairy-free, and egg-free. So if you're one of the more than 10 million Americans with a food allergy or some other dietary constraint, this is probably the bakery for you.

Those of you that have spent a little time in the kitchen might wonder what kind of ingredients **BabyCakes** uses. To avoid the gluten in wheat, the company uses **Bob's Red Mill** rice flour, a garbanzo/fava bean mix, or oat flours. How does **BabyCakes** get all those great frosting colors without artificial dyes? The company achieves pink with beets, green with

chlorophyll, yellow with turmeric, and blue/purple with red cabbage. To eliminate dairy and soy, the bakers use rice and coconut milk. And finally, to accomplish over-the-top deliciousness without refined sugar, **BabyCakes** uses agave nectar (a sweetener derived from cactus) and evaporated cane juice (often referred to as organic or unrefined sugar).

With cupcakes priced at over \$3 per item and a brisk business, you might think that making money is easy for **BabyCakes**. But all of these specialty ingredients don't come cheap. In addition, **BabyCakes'** shops are located in Manhattan, Los Angeles, and Orlando, so rent isn't exactly inexpensive either. Despite these costs, Erin's first store made a profit its first year and did even better in later years. To achieve this profitability, Erin relies on careful budgeting. First, she needs to estimate how many items she will sell. Then, she determines her needs for materials, labor, and overhead. Prices for **BabyCakes'** materials can fluctuate significantly, so Erin needs to update her budget accordingly. Finally, she has to budget for other products such as her cookbooks, baking kits, and T-shirts. Without a budget, Erin's business might not be so sweet.

Watch the **BabyCakes NYC** video in WileyPLUS to learn more about real-world budgetary planning.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

State the essentials of effective budgeting and the components of the master budget.

One of management's major responsibilities is planning. As explained in Chapter 15, **planning** is the process of establishing company-wide objectives. A successful organization makes both long-term and short-term plans. These plans establish the objectives of the company and the proposed way of accomplishing them.

A **budget** is a formal written statement of management's plans for a specified future time period, expressed in financial terms. It represents the primary method of communicating agreed-upon objectives throughout the organization. Once adopted, a budget becomes an important basis for evaluating performance. It promotes efficiency and serves as a deterrent to waste and inefficiency. We consider the role of budgeting as a **control device** in Chapter 24.

Budgeting and Accounting

Accounting information makes major contributions to the budgeting process. From the accounting records, companies can obtain historical data on revenues, costs, and expenses. These data are helpful in formulating future budget goals.

Normally, accountants have the responsibility for presenting management's budgeting goals in financial terms. In this role, they translate management's plans and communicate the budget to employees throughout the company. They prepare periodic budget reports that provide the basis for measuring performance and comparing actual results with planned objectives. The budget itself and the administration of the budget, however, are entirely management responsibilities.

The Benefits of Budgeting

The primary benefits of budgeting are as follows.

1. It requires all levels of management to **plan ahead** and to formalize goals on a recurring basis.
2. It provides **definite objectives** for evaluating performance at each level of responsibility.
3. It creates an **early warning system** for potential problems so that management can make changes before things get out of hand.
4. It facilitates the **coordination of activities** within the business. It does this by correlating the goals of each segment with overall company objectives. Thus, the company can integrate production and sales promotion with expected sales.
5. It results in greater **management awareness** of the entity's overall operations and the impact on operations of external factors, such as economic trends.
6. It **motivates personnel** throughout the organization to meet planned objectives.

A budget is an aid to management; it is not a *substitute* for management. A budget cannot operate or enforce itself. Companies can realize the benefits of budgeting only when managers carefully administer budgets.

Essentials of Effective Budgeting

Effective budgeting depends on a **sound organizational structure**. In such a structure, authority and responsibility for all phases of operations are clearly defined. Budgets based on **research and analysis** are more likely to result in

realistic goals that will contribute to the growth and profitability of a company. And, the effectiveness of a budget program is directly related to its **acceptance by all levels of management**.

Once adopted, the budget is an important tool for evaluating performance. Managers should systematically and periodically review variations between actual and expected results to determine their cause(s). However, individuals should not be held responsible for variations that are beyond their control.

LENGTH OF THE BUDGET PERIOD

The budget period is not necessarily one year in length. **A budget may be prepared for any period of time.** Various factors influence the length of the budget period. These factors include the type of budget, the nature of the organization, the need for periodic appraisal, and prevailing business conditions.

The budget period should be long enough to provide an attainable goal under normal business conditions. Ideally, the time period should minimize the impact of seasonal or cyclical fluctuations. On the other hand, the budget period should not be so long that reliable estimates are impossible.

The **most common budget period is one year.** The annual budget, in turn, is often supplemented by monthly and quarterly budgets. Many companies use **continuous 12-month budgets.** These budgets drop the month just ended and add a future month. One benefit of continuous budgeting is that it keeps management planning a full year ahead.

Accounting Across the Organization

Thinkstock/Comstock/Getty Images, Inc.

Businesses Often Feel Too Busy to Plan for the Future

A study by Willard & Shullman Group Ltd. found that fewer than 14% of businesses with less than 500 employees do an annual budget or have a written business plan. For many

small businesses, the basic assumption is that, "As long as I sell as much as I can, and keep my employees paid, I'm doing OK." A few small business owners even say that they see no need for budgeting and planning. Most small business owners, though, say that they understand that budgeting and planning are critical for survival and growth. But given the long hours that they already work addressing day-to-day challenges, they also say that they are "just too busy to plan for the future."

Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." (Go to [WileyPLUS](#) for this answer and additional questions.)

THE BUDGETING PROCESS

The development of the budget for the coming year generally starts several months before the end of the current year. The budgeting process usually begins with the collection of data from each organizational unit of the company. Past performance is often the starting point from which future budget goals are formulated.

The budget is developed within the framework of a **sales forecast**. This forecast shows potential sales for the industry and the company's expected share of such sales. Sales forecasting involves a consideration of various factors: (1) general economic conditions, (2) industry trends, (3) market research studies, (4) anticipated advertising and promotion, (5) previous market share, (6) changes

in prices, and (7) technological developments. The input of sales personnel and top management is essential to the sales forecast.

In small companies like **BabyCakes NYC**, the budgeting process is often informal. In larger companies, a **budget committee** has responsibility for coordinating the preparation of the budget. The committee ordinarily includes the president, treasurer, chief accountant (controller), and management personnel from each of the major areas of the company, such as sales, production, and research. The budget committee serves as a review board where managers can defend their budget goals and requests. Differences are reviewed, modified if necessary, and reconciled. The budget is then put in its final form by the budget committee, approved, and distributed.

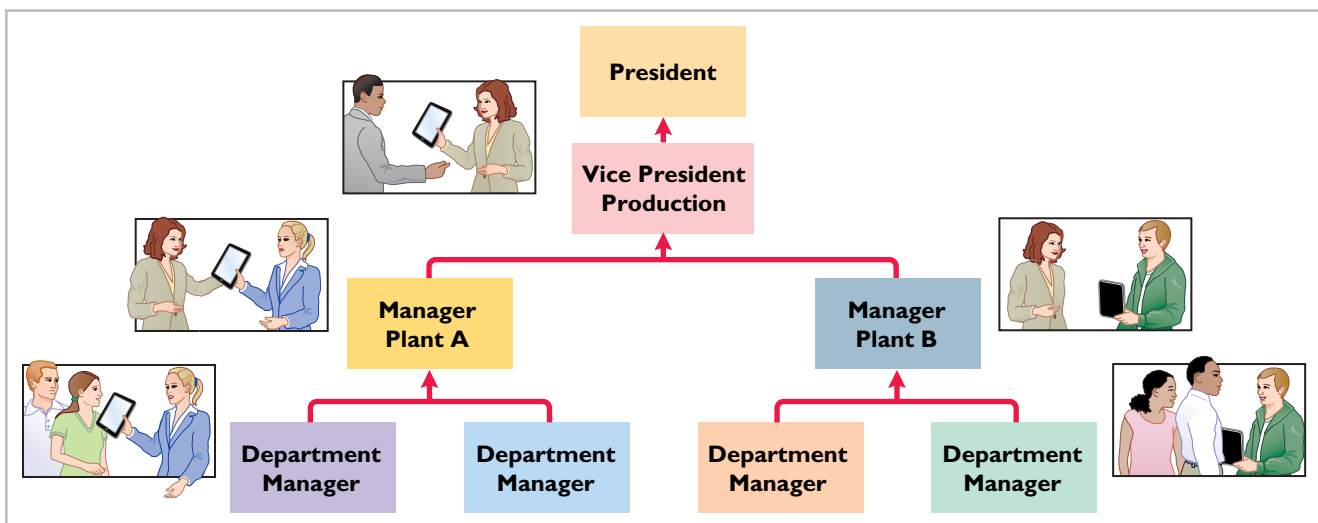

BUDGETING AND HUMAN BEHAVIOR

A budget can have a significant impact on human behavior. If done well, it can inspire managers to higher levels of performance. However, if done poorly, budgets can discourage additional effort and pull down the morale of managers. Why do these diverse effects occur? The answer is found in how the budget is developed and administered.

In developing the budget, each level of management should be invited to participate. This “bottom-to-top” approach is referred to as **participative budgeting**. One benefit of participative budgeting is that lower-level managers have more detailed knowledge of their specific area and thus are able to provide more accurate budgetary estimates. Also, when lower-level managers participate in the budgeting process, they are more likely to perceive the resulting budget as fair. The overall goal is to reach agreement on a budget that the managers consider fair and achievable, but which also meets the corporate goals set by top management. When this goal is met, the budget will provide positive motivation for the managers. In contrast, if managers view the budget as unfair and unrealistic, they may feel discouraged and uncommitted to budget goals. The risk of having unrealistic budgets is generally greater when the budget is developed from top management down to lower management than vice versa. Illustration 23-1 graphically displays the flow of budget data from bottom to top under participative budgeting.

Illustration 23-1

Flow of budget data under participative budgeting

For example, at one time, in an effort to revive its plummeting stock price, **Time Warner**'s top management determined and publicly announced bold new financial goals for the coming year. Unfortunately, these goals were not reached.

The next year, the company got a new CEO who said the company would now actually set reasonable goals that it could meet. The new budgets were developed with each operating unit setting what it felt were optimistic but attainable goals. In the words of one manager, using this approach created a sense of teamwork.

Participative budgeting does, however, have potential disadvantages. First, the “give and take” of participative budgeting is time-consuming (and thus more costly). Under a “top-down” approach, the budget is simply developed by top management and then dictated to lower-level managers. A second disadvantage is that participative budgeting can foster budgetary “gaming” through budgetary slack. **Budgetary slack** occurs when managers intentionally underestimate budgeted revenues or overestimate budgeted expenses in order to make it easier to achieve budgetary goals. To minimize budgetary slack, higher-level managers must carefully review and thoroughly question the budget projections provided to them by employees whom they supervise.

For the budget to be effective, top management must completely support the budget. The budget is an important basis for evaluating performance. It also can be used as a positive aid in achieving projected goals. The effect of an evaluation is positive when top management tempers criticism with advice and assistance. In contrast, a manager is likely to respond negatively if top management uses the budget exclusively to assess blame. A budget should not be used as a pressure device to force improved performance. In sum, a budget can be a manager’s friend or foe.

ETHICS NOTE

Unrealistic budgets can lead to unethical employee behavior such as cutting corners on the job or distorting internal financial reports.

BUDGETING AND LONG-RANGE PLANNING

Budgeting and long-range planning are not the same. One important difference is the **time period involved**. The maximum length of a budget is usually one year, and budgets are often prepared for shorter periods of time, such as a month or a quarter. In contrast, long-range planning usually encompasses a period of at least five years.

A second significant difference is in **emphasis**. Budgeting focuses on achieving specific short-term goals, such as meeting annual profit objectives. **Long-range planning**, on the other hand, identifies long-term goals, selects strategies to achieve those goals, and develops policies and plans to implement the strategies. In long-range planning, management also considers anticipated trends in the economic and political environment and how the company should cope with them.

The final difference between budgeting and long-range planning relates to the **amount of detail presented**. Budgets, as you will see in this chapter, can be very detailed. Long-range plans contain considerably less detail. The data in long-range plans are intended more for a review of progress toward long-term goals than as a basis of control for achieving specific results. The primary objective of long-range planning is to develop the best strategy to maximize the company’s performance over an extended future period.

Helpful Hint

In comparing a budget with a long-range plan, a budget has more detail and is more concerned with short-term goals, while a long-range plan is done for a longer period of time.

The Master Budget

The term “budget” is actually a shorthand term to describe a variety of budget documents. All of these documents are combined into a master budget. The **master budget** is a set of interrelated budgets that constitutes a plan of action for a specified time period.

The master budget contains two classes of budgets. **Operating budgets** are the individual budgets that result in the preparation of the budgeted income statement. These budgets establish goals for the company’s sales and production personnel. In contrast, **financial budgets** focus primarily on the cash resources needed to fund expected operations and planned capital expenditures. Financial

budgets include the capital expenditure budget, the cash budget, and the budgeted balance sheet.

Illustration 23-2 shows the individual budgets included in a master budget, and the sequence in which they are prepared. The company first develops the operating budgets, beginning with the sales budget. Then, it prepares the financial budgets. We will explain and illustrate each budget shown in Illustration 23-2 except the capital expenditure budget. That budget is discussed under the topic of capital budgeting in Chapter 26.

Illustration 23-2
Components of the master budget

DO IT!

1

Budget Terminology

Use this list of terms to complete the sentences that follow.

Long-range planning

Participative budgeting

Sales forecast

Operating budgets

Master budget

Financial budgets

1. A _____ shows potential sales for the industry and a company's expected share of such sales.
2. _____ are used as the basis for the preparation of the budgeted income statement.
3. The _____ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
4. _____ identifies long-term goals, selects strategies to achieve these goals, and develops policies and plans to implement the strategies.

5. Lower-level managers are more likely to perceive results as fair and achievable under a _____ approach.
6. _____ focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

Solution

- | | |
|-----------------------|-----------------------------|
| 1. Sales forecast. | 4. Long-range planning. |
| 2. Operating budgets. | 5. Participative budgeting. |
| 3. Master budget. | 6. Financial budgets. |

Action Plan

- ✓ Understand the budgeting process, including the importance of the sales forecast.
- ✓ Understand the difference between an operating budget and a financial budget.
- ✓ Differentiate budgeting from long-range planning.
- ✓ Realize that the master budget is a set of interrelated budgets.

LEARNING OBJECTIVE

2

Prepare budgets for sales, production, and direct materials.

We use a case study of Hayes Company in preparing the operating budgets. Hayes manufactures and sells a single product, an ergonomically designed bike seat with multiple customizable adjustments, called the Rightride. The budgets are prepared by quarters for the year ending December 31, 2017. Hayes Company begins its annual budgeting process on September 1, 2016, and it completes the budget for 2017 by December 1, 2016. The company begins by preparing the budgets for sales, production, and direct materials.

Sales Budget

As shown in the master budget in Illustration 23-2, **the sales budget is prepared first**. Each of the other budgets depends on the sales budget. The **sales budget** is derived from the sales forecast. It represents management's best estimate of sales revenue for the budget period. An inaccurate sales budget may adversely affect net income. For example, an overly optimistic sales budget may result in excessive inventories that may have to be sold at reduced prices. In contrast, an unduly pessimistic sales budget may result in loss of sales revenue due to inventory shortages.

For example, at one time **Amazon.com** significantly underestimated demand for its e-book reader, the Kindle. As a consequence, it did not produce enough Kindles and was completely sold out well before the holiday shopping season. Not only did this represent a huge lost opportunity for Amazon, but it exposed the company to potential competitors, who were eager to provide customers with alternatives to the Kindle.

Forecasting sales is challenging. For example, consider the forecasting challenges faced by major sports arenas, whose revenues depend on the success of the home team. **Madison Square Garden's** revenues from April to June were \$193 million during a year when the Knicks made the NBA playoffs. But revenues were only \$133.2 million a couple of years later when the team did not make the playoffs. Or, consider the challenges faced by Hollywood movie producers in predicting the complicated revenue stream produced by a new movie. Movie theater ticket sales represent only 20% of total revenue. The bulk of revenue comes from global sales, DVDs, video-on-demand, merchandising products, and videogames, all of which are difficult to forecast.

The sales budget is prepared by multiplying the expected unit sales volume for each product by its anticipated unit selling price. Hayes Company expects sales volume to be 3,000 units in the first quarter, with 500-unit increases in each succeeding quarter. Illustration 23-3 (page 1064) shows the sales budget for the year, by quarter, based on a sales price of \$60 per unit.

Helpful Hint

For a retail or manufacturing company, the sales budget is the starting point for the master budget. It sets the level of activity for other functions such as production and purchasing.

Illustration 23-3

7	Unit selling price	× \$60	× \$60	× \$60	× \$60	× \$60
8	Total sales	\$180,000	\$210,000	\$240,000	\$270,000	\$900,000

Some companies classify the anticipated sales revenue as cash or credit sales and by geographical regions, territories, or salespersons.

Service Company Insight

Marcela Barse/iStockphoto

The Implications of Budgetary Optimism

Companies aren't the only ones that have to estimate revenues. Governments at all levels (e.g., local, state

or federal) prepare annual budgets. Most are required to submit balanced budgets, that is, estimated revenues are supposed to cover anticipated expenditures. Unfortunately, estimating government revenues can be as difficult as, or even more difficult than, estimating company revenues. For example, during a recent year, the median state government

overestimated revenues by 10.2%, with four state governments missing by more than 25%.

What makes estimation so difficult for these governments? Most states rely on income taxes, which fluctuate widely with economic gyrations. Some states rely on sales taxes, which are problematic because the laws regarding sales taxes haven't adjusted for the shift from manufacturing to service companies and from brick-and-mortar stores to online sales.

Source: Conor Dougherty, "States Fumble Revenue Forecasts," *Wall Street Journal Online* (March 2, 2011).

[Why is it important that government budgets accurately estimate future revenues during economic downturns? \(Go to WileyPLUS for this answer and additional questions.\)](#)

Production Budget

The **production budget** shows the number of units of a product to produce to meet anticipated sales demand. Production requirements are determined from the following formula.¹

Illustration 23-4
Production requirements formula

Budgeted Sales Units	+	Desired Ending Finished Goods Units	-	Beginning Finished Goods Units	=	Required Production Units
-----------------------------	---	--	---	---------------------------------------	---	----------------------------------

¹This formula ignores any work in process inventories, which are assumed to be nonexistent in Hayes Company.

A realistic estimate of ending inventory is essential in scheduling production requirements. Excessive inventories in one quarter may lead to cutbacks in production and employee layoffs in a subsequent quarter. On the other hand, inadequate inventories may result either in added costs for overtime work or in lost sales. Hayes Company believes it can meet future sales requirements by maintaining an ending inventory equal to 20% of the next quarter's budgeted sales volume. For example, the ending finished goods inventory for the first quarter is 700 units (20% × anticipated second-quarter sales of 3,500 units). Illustration 23-5 shows the production budget.

Units of Finished Goods Inventory	
Beg. Inv.	
Required Prod. Units	Sales
End. Inv.	

HAYES COMPANY Production Budget For the Year Ending December 31, 2017						
	Quarter				Year	
	1	2	3	4		
Expected unit sales (Illustration 23-3)	3,000	3,500	4,000	4,500		
Add: Desired ending finished goods units ^a	700	800	900	1,000 ^b		
Total required units	3,700	4,300	4,900	5,500		
Less: Beginning finished goods units	600 ^c	700	800	900		
Required production units	3,100	3,600	4,100	4,600	15,400	
^a 20% of next quarter's sales						
^b Expected 2018 first-quarter sales, 5,000 units × 20%						
^c 20% of estimated first-quarter 2017 sales units						

Units of Finished Goods Inventory	
600	
3,100	3,000
700	

Illustration 23-5
Production budget

The production budget, in turn, provides the basis for the budgeted costs for each manufacturing cost element, as explained in the following pages.

Direct Materials Budget

The **direct materials budget** shows both the quantity and cost of direct materials to be purchased. The quantities of direct materials are derived from the following formula.

Direct Materials Units Required for Production	+	Desired Ending Direct Materials Units	-	Beginning Direct Materials Units	=	Required Direct Materials Units to Be Purchased
---	---	---	---	--	---	--

Illustration 23-6
Formula for direct materials quantities

After the company determines the number of units to purchase, it can compute the budgeted cost of direct materials to be purchased. It does so by multiplying the required units of direct materials by the anticipated cost per unit.

Units of Direct Materials

Beg. Inv.	Direct Materials Required for Prod.
Direct Materials to Purchase	
End. Inv.	

The desired ending inventory is again a key component in the budgeting process. For example, inadequate inventories could result in temporary shut-downs of production. Because of its close proximity to suppliers, Hayes Company maintains an ending inventory of raw materials equal to 10% of the next quarter's production requirements. The manufacture of each Rightride requires 2 pounds of raw materials, and the expected cost per pound is \$4. Illustration 23-7 shows the direct materials budget. Assume that the desired ending direct materials amount is 1,020 pounds for the fourth quarter of 2017.

Illustration 23-7
Direct materials budget

Management Insight

© William Wang/iStockphoto

Betting That Prices Won't Fall

Sometimes things happen that cause managers to reevaluate their normal purchasing patterns. Consider, for example, the predicament that businesses faced when the price of many raw materials recently skyrocketed. Rubber, cotton, oil, corn, wheat, steel, copper, and spices—prices for seemingly everything were going straight up. Anticipating that prices might continue to go up, many

managers decided to stockpile much larger quantities of raw materials to avoid paying even higher prices in the future. For example, after cotton prices rose 92%, one manager of a printed T-shirt manufacturer decided to stockpile a huge supply of plain T-shirts in anticipation of additional price increases. While he normally has about 30 boxes of T-shirts in inventory, he purchased 2,500 boxes.

Source: Liam Plevin and Matt Wirz, "Companies Stock Up as Commodities Prices Rise," *Wall Street Journal Online* (February 3, 2011).

What are the potential downsides of stockpiling a huge amount of raw materials? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!**2****Sales, Production, and Direct Materials Budgets**

Soriano Company is preparing its master budget for 2017. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

Sales. Sales for the year are expected to total 1,200,000 units. Quarterly sales, as a percentage of total sales, are 20%, 25%, 30%, and 25%, respectively. The sales price is expected to be \$50 per unit for the first three quarters and \$55 per unit beginning in the fourth quarter. Sales in the first quarter of 2018 are expected to be 10% higher than the budgeted sales for the first quarter of 2017.

Production. Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

Direct materials. Each unit requires 3 pounds of raw materials at a cost of \$5 per pound. Management desires to maintain raw materials inventories at 5% of the next quarter's production requirements. Assume the production requirements for the first quarter of 2018 are 810,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2017.

Solution**Action Plan**

- ✓ Know the form and content of the sales budget.
- ✓ Prepare the sales budget first, as the basis for the other budgets.
- ✓ Determine the units that must be produced to meet anticipated sales.
- ✓ Know how to compute the beginning and ending finished goods units.
- ✓ Determine the materials required to meet production needs.
- ✓ Know how to compute the beginning and ending direct materials units.

SORIANO COMPANY					
Sales Budget

LEARNING
OBJECTIVE

3

Prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses, and a budgeted income statement.

As shown in Illustration 23-2 (page 1062), the operating budgets culminate with preparation of the budgeted income statement. Before we can do that, we need to prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses.

Direct Labor Budget

Like the direct materials budget, the **direct labor budget** contains the quantity (hours) and cost of direct labor necessary to meet production requirements. The total direct labor cost is derived from the following formula.

Illustration 23-8
Formula for direct labor cost

Units to Be Produced	×	Direct Labor Hours per Unit	×	Direct Labor Cost per Hour	=	Total Direct Labor Cost
----------------------	---	-----------------------------	---	----------------------------	---	-------------------------

Direct labor hours are determined from the production budget. At Hayes Company, two hours of direct labor are required to produce each unit of finished goods. The anticipated hourly wage rate is \$10. Illustration 23-9 shows these data.

HAYES COMPANY					
Direct Labor Budget					
For the Year Ending December 31, 2017					
	Quarter				Year
	1	2	3	4	
Units to be produced (Illustration 23-5)	3,100	3,600	4,100	4,600	
Direct labor time (hours) per unit	× 2	× 2	× 2	× 2	
Total required direct labor hours	6,200	7,200	8,200	9,200	
Direct labor cost per hour	× \$10	× \$10	× \$10	× \$10	
Total direct labor cost	\$62,000	\$72,000	\$82,000	\$92,000	\$308,000

Illustration 23-9
Direct labor budget

The direct labor budget is critical in maintaining a labor force that can meet the expected levels of production.

Manufacturing Overhead Budget

The **manufacturing overhead budget** shows the expected manufacturing overhead costs for the budget period. As Illustration 23-10 shows, **this budget distinguishes between variable and fixed overhead costs**. Hayes Company expects variable costs to fluctuate with production volume on the basis of the following rates per direct labor hour: indirect materials \$1.00, indirect labor \$1.40, utilities \$0.40, and maintenance \$0.20. Thus, for the 6,200 direct labor hours to produce 3,100 units, budgeted indirect materials are \$6,200 ($6,200 \times \1), and budgeted indirect labor is \$8,680 ($6,200 \times \1.40). Hayes also recognizes that some maintenance is fixed. The amounts reported for fixed costs are assumed for our example.

Helpful Hint
An important assumption in Illustration 23-9 is that the company can add to and subtract from its work force as needed so that the \$10 per hour labor cost applies to a wide range of possible production activity.

HAYES COMPANY					
Manufacturing Overhead Budget					
For the Year Ending December 31, 2017					
	Quarter				Year
	1	2	3	4	
Variable costs					
Indirect materials (\$1.00/hour)	\$ 6,200	\$ 7,200	\$ 8,200	\$ 9,200	\$ 30,800
Indirect labor (\$1.40/hour)	8,680	10,080	11,480	12,880	43,120
Utilities (\$0.40/hour)	2,480	2,880	3,280	3,680	12,320
Maintenance (\$0.20/hour)	1,240	1,440	1,640	1,840	6,160
Total variable costs	18,600	21,600	24,600	27,600	92,400
Fixed costs					
Supervisory salaries	20,000	20,000	20,000	20,000	80,000
Depreciation	3,800	3,800	3,800	3,800	15,200
Property taxes and insurance	9,000	9,000	9,000	9,000	36,000
Maintenance	5,700	5,700	5,700	5,700	22,800
Total fixed costs	38,500	38,500	38,500	38,500	154,000
Total manufacturing overhead	\$57,100	\$60,100	\$63,100	\$66,100	\$246,400
Direct labor hours (Illustration 23-9)	6,200	7,200	8,200	9,200	30,800
Manufacturing overhead rate per direct labor hour ($\$246,400 \div 30,800$)					\$8

Illustration 23-10
Manufacturing overhead budget

The accuracy of budgeted overhead cost estimates can be greatly improved by employing activity-based costing.

At Hayes Company, overhead is applied to production on the basis of direct labor hours. Thus, as Illustration 23-10 shows, the budgeted annual rate is \$8 per hour ($\$246,400 \div 30,800$).

Selling and Administrative Expense Budget

Hayes Company combines its operating expenses into one budget, the **selling and administrative expense budget**. This budget projects anticipated selling and administrative expenses for the budget period. This budget (Illustration 23-11) also classifies expenses as either variable or fixed. In this case, the variable expense rates per unit of sales are sales commissions \$3 and freight-out \$1. Variable expenses per quarter are based on the unit sales from the sales budget (see Illustration 23-3, page 1064). For example, Hayes expects sales in the first quarter to be 3,000 units. Thus, sales commissions expense is \$9,000 ($3,000 \times \3), and freight-out is \$3,000 ($3,000 \times \1). Fixed expenses are based on assumed data.

Illustration 23-11

19						

Budgeted Income Statement

The **budgeted income statement** is the important end-product of the operating budgets. This budget indicates the expected profitability of operations for the budget period. The budgeted income statement provides the basis for evaluating company performance. Budgeted income statements often act as a call to action. For example, a board member at **XM Satellite Radio Holdings** felt that budgeted costs were too high relative to budgeted revenues. When management refused to cut its marketing and programming costs, the board member resigned. He felt that without the cuts, the company risked financial crisis.

As you would expect, the budgeted income statement is prepared from the various operating budgets. For example, to find the cost of goods sold, Hayes Company must first determine the total unit cost of producing one Rightride, as follows.

Cost Element	Cost of One Rightride			Total
	Illustration	Quantity	Unit Cost	
Direct materials	23-7	2 pounds	\$ 4.00	\$ 8.00
Direct labor	23-9	2 hours	\$10.00	20.00
Manufacturing overhead	23-10	2 hours	\$ 8.00	16.00
Total unit cost				<u>\$44.00</u>

Illustration 23-12
Computation of total unit cost

Hayes then determines cost of goods sold by multiplying the units sold by the unit cost. Its budgeted cost of goods sold is \$660,000 ($15,000 \times \44). All data for the income statement come from the individual operating budgets except the following: (1) interest expense is expected to be \$100, and (2) income taxes are estimated to be \$12,000. Illustration 23-13 shows the budgeted multiple-step income statement.

HAYES COMPANY	
Budgeted Income Statement	
For the Year Ending December 31, 2017	
Sales (Illustration 23-3)	\$900,000
Cost of goods sold ($15,000 \times \$44$)	<u>660,000</u>
Gross profit	240,000
Selling and administrative expenses (Illustration 23-11)	<u>180,000</u>
Income from operations	60,000
Interest expense	<u>100</u>
Income before income taxes	59,900
Income tax expense	<u>12,000</u>
Net income	<u>\$ 47,900</u>

Illustration 23-13
Budgeted multiple-step income statement

DO IT! 3 Budgeted Income Statement

Soriano Company is preparing its budgeted income statement for 2017. Relevant data pertaining to its sales, production, and direct materials budgets can be found in **do it! 2** (page 1067).

In addition, Soriano budgets 0.5 hours of direct labor per unit, labor costs at \$15 per hour, and manufacturing overhead at \$25 per direct labor hour. Its budgeted selling and administrative expenses for 2017 are \$12,000,000.

(a) Calculate the budgeted total unit cost. (b) Prepare the budgeted multiple-step income statement for 2017. (Ignore income taxes.)

Solution

(a)				
	<u>Cost Element</u>	<u>Quantity</u>	<u>Unit Cost</u>	<u>Total</u>
	Direct materials	3.0 pounds	\$ 5	\$ 15.00
	Direct labor	0.5 hours	\$15	7.50
	Manufacturing overhead	0.5 hours	\$25	12.50
	Total unit cost			<u>\$35.00</u>

Action Plan

✓ Recall that total unit cost consists of direct materials, direct labor, and manufacturing overhead.

Action Plan (cont.)

- ✓ Recall that direct materials costs are included in the direct materials budget.
- ✓ Know the form and content of the income statement.
- ✓ Use the total unit sales information from the sales budget to compute annual sales and cost of goods sold.

(b)

SORIANO COMPANY
Budgeted Income Statement
For the Year Ending December 31, 2017

Sales (1,200,000 units from sales budget, page 1067)	\$61,500,000
Cost of goods sold (1,200,000 × \$35.00/unit)	<u>42,000,000</u>
Gross profit	19,500,000
Selling and administrative expenses	<u>12,000,000</u>
Net income	<u>\$ 7,500,000</u>

LEARNING OBJECTIVE

4**Prepare a cash budget and a budgeted balance sheet.**

As shown in Illustration 23-2 (page 1062), the financial budgets consist of the capital expenditure budget, the cash budget, and the budgeted balance sheet. We will discuss the capital expenditure budget in Chapter 26.

Cash Budget

The **cash budget** shows anticipated cash flows. Because cash is so vital, this budget is often considered to be the most important financial budget. The cash budget contains three sections (cash receipts, cash disbursements, and financing) and the beginning and ending cash balances, as shown in Illustration 23-14.

Illustration 23-14

Basic form of a cash budget

Helpful Hint

The cash budget is prepared after the other budgets because the information generated by the other budgets dictates the expected inflows and outflows of cash.

Any Company Cash Budget.xls			
Home Insert Page Layout Formulas Data Review View			
P18 fx			
	A	B	C
1	ANY COMPANY		
2	Cash Budget		
3	Beginning cash balance	\$X,XXX	
4	Add: Cash receipts (itemized)	X,XXX	
5	Total available cash	X,XXX	
6	Less: Cash disbursements (itemized)	X,XXX	
7	Excess (deficiency) of available cash over cash disbursements	X,XXX	
8	Financing	X,XXX	
9	Ending cash balance	<u>\$X,XXX</u>	

The **cash receipts section** includes expected receipts from the company's principal source(s) of revenue. These are usually cash sales and collections from customers on credit sales. This section also shows anticipated receipts of interest and dividends, and proceeds from planned sales of investments, plant assets, and the company's capital stock.

The **cash disbursements section** shows expected cash payments. Such payments include direct materials, direct labor, manufacturing overhead, and selling and administrative expenses. This section also includes projected payments for income taxes, dividends, investments, and plant assets.

The **financing section** shows expected borrowings and the repayment of the borrowed funds plus interest. Companies need this section when there is a cash deficiency or when the cash balance is below management's minimum required balance.

Data in the cash budget are prepared in sequence. The ending cash balance of one period becomes the beginning cash balance for the next period. Companies obtain data for preparing the cash budget from other budgets and from information provided by management. In practice, cash budgets are often prepared for the year on a monthly basis.

To minimize detail, we will assume that Hayes Company prepares an annual cash budget by quarters. Its cash budget is based on the following assumptions.

1. The January 1, 2017, cash balance is expected to be \$38,000. Hayes wishes to maintain a balance of at least \$15,000.
2. Sales (Illustration 23-3, page 1064): 60% are collected in the quarter sold and 40% are collected in the following quarter. Accounts receivable of \$60,000 at December 31, 2016, are expected to be collected in full in the first quarter of 2017.
3. Short-term investment securities are expected to be sold for \$2,000 cash in the first quarter.
4. Direct materials (Illustration 23-7, page 1066): 50% are paid in the quarter purchased and 50% are paid in the following quarter. Accounts payable of \$10,600 at December 31, 2016, are expected to be paid in full in the first quarter of 2017.
5. Direct labor (Illustration 23-9, page 1069): 100% is paid in the quarter incurred.
6. Manufacturing overhead (Illustration 23-10, page 1069) and selling and administrative expenses (Illustration 23-11, page 1070): All items except depreciation are paid in the quarter incurred.
7. Management plans to purchase a truck in the second quarter for \$10,000 cash.
8. Hayes makes equal quarterly payments of its estimated \$12,000 annual income taxes.
9. Loans are repaid in the earliest quarter in which there is sufficient cash (that is, when the cash on hand exceeds the \$15,000 minimum required balance).

In preparing the cash budget, it is useful to prepare schedules for collections from customers (assumption 2) and cash payments for direct materials (assumption 4). These schedules are shown in Illustrations 23-15 (below) and 23-16 (page 1074).

13						

Illustration 23-17 shows the cash budget for Hayes Company. The budget indicates that Hayes will need \$3,000 of financing in the second quarter to maintain a minimum cash balance of \$15,000. Since there is an excess of available cash over disbursements of \$22,500 at the end of the third quarter, the borrowing, plus \$100 interest, is repaid in this quarter.

27	^b \$42,000 – \$1,000 depreciation									

A cash budget contributes to more effective cash management. It shows managers when additional financing is necessary well before the actual need arises. And, it indicates when excess cash is available for investments or other purposes.

Service Company Insight Olympic Games

Marianna Day Massey/ZumaPress/NewsCom

Without a Budget, Can the Games Begin?

Behind the grandeur of the Olympic Games lies a huge financial challenge—how to keep budgeted costs in line with revenues. For example, the 2006 Winter Olympics in Turin, Italy, narrowly avoided going into bankruptcy before the Games even started. In order for the event to remain solvent, organizers

cancelled glitzy celebrations and shifted promotional responsibilities to an Italian state-run agency. Despite these efforts, after the Games were over, the Italian government created a lottery game to cover its financial losses.

As another example, organizers of the 2002 Winter Olympics in Salt Lake City cut budgeted costs by \$200 million shortly before the events began. According to the chief operating and financial officer, the organizers went through every line item in the budget, sorting each one into “must have” versus “nice to have.” As a result, the Salt Lake City Games produced a surplus of \$100 million.

Source: Gabriel Kahn and Roger Thurow, “In Turin, Paying for Games Went Down to the Wire,” *Wall Street Journal* (February 10, 2006).

Why does it matter whether the Olympic Games meet their budget? (Go to **WileyPLUS** for this answer and additional questions.)

Budgeted Balance Sheet

The **budgeted balance sheet** is a projection of financial position at the end of the budget period. This budget is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. Pertinent data from the budgeted balance sheet at December 31, 2016, are as follows.

Buildings and equipment	\$182,000	Common stock	\$225,000
Accumulated depreciation	\$ 28,800	Retained earnings	\$ 46,480

Illustration 23-18 shows Hayes Company’s budgeted classified balance sheet at December 31, 2017.

HAYES COMPANY Budgeted Balance Sheet December 31, 2017

Illustration 23-18
Budgeted classified balance sheet

<u>Assets</u>		
Current assets		
Cash		\$ 37,900
Accounts receivable		108,000
Finished goods inventory		44,000
Raw materials inventory		<u>4,080</u>
Total current assets		193,980
Property, plant, and equipment		
Buildings and equipment	\$192,000	
Less: Accumulated depreciation	<u>48,000</u>	<u>144,000</u>
Total assets		<u>\$337,980</u>

<u>Liabilities and Stockholders' Equity</u>		
Liabilities		
Accounts payable		\$ 18,600
Stockholders' equity		
Common stock	\$225,000	
Retained earnings	<u>94,380</u>	
Total stockholders' equity		<u>319,380</u>
Total liabilities and stockholders' equity		<u><u>\$337,980</u></u>

The computations and sources of the amounts are explained below.

Cash: Ending cash balance \$37,900, shown in the cash budget (Illustration 23-17, page 1074).

Accounts receivable: 40% of fourth-quarter sales \$270,000, shown in the schedule of expected collections from customers (Illustration 23-15, page 1073).

Finished goods inventory: Desired ending inventory 1,000 units, shown in the production budget (Illustration 23-5, page 1065) times the total unit cost \$44 (shown in Illustration 23-12, page 1071).

Raw materials inventory: Desired ending inventory 1,020 pounds, times the cost per pound \$4, shown in the direct materials budget (Illustration 23-7, page 1066).

Buildings and equipment: December 31, 2016, balance \$182,000, plus purchase of truck for \$10,000 (Illustration 23-17, page 1074).

Accumulated depreciation: December 31, 2016, balance \$28,800, plus \$15,200 depreciation shown in manufacturing overhead budget (Illustration 23-10, page 1069) and \$4,000 depreciation shown in selling and administrative expense budget (Illustration 23-11, page 1070).

Accounts payable: 50% of fourth-quarter purchases \$37,200, shown in schedule of expected payments for direct materials (Illustration 23-16, page 1074).

Common stock: Unchanged from the beginning of the year.

Retained earnings: December 31, 2016, balance \$46,480, plus net income \$47,900, shown in budgeted income statement (Illustration 23-13, page 1071).

After budget data are entered into the computer, Hayes prepares the various budgets (sales, cash, etc.), as well as the budgeted financial statements. Using spreadsheets, management can also perform “what if” (sensitivity) analyses based on different hypothetical assumptions. For example, suppose that sales managers project that sales will be 10% higher in the coming quarter. What impact does this change have on the rest of the budgeting process and the financing needs of the business? The impact of the various assumptions on the budget is quickly determined by the spreadsheet. Armed with these analyses, managers make more informed decisions about the impact of various projects. They also anticipate future problems and business opportunities. As seen in this chapter, budgeting is an excellent use of computer spreadsheets.

DO IT!**4****Cash Budget**

Martian Company management wants to maintain a minimum monthly cash balance of \$15,000. At the beginning of March, the cash balance is \$16,500, expected cash receipts for March are \$210,000, and cash disbursements are expected to be \$220,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

Solution

Martian Company Cash Budget.xls			
P18 fx			
	A	B	C
1	MARTIAN COMPANY		
2	Cash Budget		
3	For the Month Ending March 31, 2017		
4	Beginning cash balance	\$ 16,500	
5	Add: Cash receipts for March	210,000	
6	Total available cash	226,500	
7	Less: Cash disbursements for March	220,000	
8	Excess (deficiency) of available cash over cash disbursements	6,500	
9	Financing	8,500	
10	Ending cash balance	\$ 15,000	
11			

To maintain the desired minimum cash balance of \$15,000, Martian Company must borrow \$8,500 of cash.

Action Plan

- ✓ Write down the basic form of the cash budget, starting with the beginning cash balance, adding cash receipts for the period, deducting cash disbursements, and identifying the needed financing to achieve the desired minimum ending cash balance.
- ✓ Insert the data given into the outlined form of the cash budget.

LEARNING OBJECTIVE
5
Apply budgeting principles to nonmanufacturing companies.

Budgeting is not limited to manufacturers. Budgets are also used by merchandisers, service companies, and not-for-profit organizations.

Merchandisers

As in manufacturing operations, the sales budget for a merchandiser is both the starting point and the key factor in the development of the master budget. The major differences between the master budgets of a merchandiser and a manufacturer are as follows.

1. A merchandiser **uses a merchandise purchases budget instead of a production budget.**
2. A merchandiser **does not use the manufacturing budgets (direct materials, direct labor, and manufacturing overhead).**

The **merchandise purchases budget** shows the estimated cost of goods to be purchased to meet expected sales. The formula for determining budgeted merchandise purchases is as follows.

Budgeted Cost of Goods Sold	+	Desired Ending Merchandise Inventory	-	Beginning Merchandise Inventory	=	Required Merchandise Purchases
--	---	---	---	--	---	---

Illustration 23-19
Merchandise purchases formula

To illustrate, assume that the budget committee of Lima Company is preparing the merchandise purchases budget for July 2017. It estimates that budgeted sales will be \$300,000 in July and \$320,000 in August. Cost of goods sold is expected to be 70% of sales—that is, \$210,000 in July ($.70 \times \$300,000$) and \$224,000 in August ($.70 \times \$320,000$). The company's desired ending inventory is

30% of the following month's cost of goods sold. Required merchandise purchases for July are \$214,200, computed as follows.

Illustration 23-20
Merchandise purchases budget

Lima Company Merchandise Purchases Budget.xls			
P18 fx			
	A	B	C
1	LIMA COMPANY		
2	Merchandise Purchases Budget		
3	For the Month Ending July 31, 2017		
4	Budgeted cost of goods sold ($\$300,000 \times 70\%$)	\$210,000	
5	Add: Desired ending merchandise inventory ($\$224,000 \times 30\%$)	67,200	
6	Total	277,200	
7	Less: Beginning merchandise inventory ($\$210,000 \times 30\%$)	63,000	
8	Required merchandise purchases for July	\$214,200	

When a merchandiser is departmentalized, it prepares separate budgets for each department. For example, a grocery store prepares sales budgets and purchases budgets for each of its major departments, such as meats, dairy, and produce. The store then combines these budgets into a master budget for the store. When a retailer has branch stores, it prepares separate master budgets for each store. Then, it incorporates these budgets into master budgets for the company as a whole.

Service Companies

In a service company, such as a public accounting firm, a law office, or a medical practice, the critical factor in budgeting is **coordinating professional staff needs with anticipated services**. If a firm is overstaffed, several problems may result: Labor costs are disproportionately high. Profits are lower because of the additional salaries. Staff turnover sometimes increases because of lack of challenging work. In contrast, if a service company is understaffed, it may lose revenue because existing and prospective client needs for service cannot be met. Also, professional staff may seek other jobs because of excessive work loads.

Suppose that Stephan Lawn and Plowing Service estimates that it will service 300 small lawns, 200 medium lawns, and 100 large lawns during the month of July. It estimates its direct labor needs as 1 hour per small lawn, 1.75 hours for a medium lawn, and 2.75 hours for a large lawn. Its average cost for direct labor is \$15 per hour. Stephan prepares a direct labor budget as follows.

Illustration 23-21
Direct labor budget for service company

Stephan Lawn and Plowing Service Direct Labor Budget.xls					
P18 fx					
	A	B	C	D	E
1	STEPHAN LAWN AND PLOWING SERVICE				
2	Direct Labor Budget				
3	For the Month Ending July 31, 2017				
4		Small	Medium	Large	Total
5	Lawns to be serviced	300	200	100	
6	Direct labor time (hours) per lawn	$\times 1$	$\times 1.75$	$\times 2.75$	
7	Total required direct labor hours	300	350	275	
8	Direct labor cost per hour	$\times \$15$	$\times \$15$	$\times \$15$	
9	Total direct labor cost	\$4,500	\$5,250	\$4,125	\$13,875

Service companies can obtain budget data for service revenue from **expected output** or **expected input**. When output is used, it is necessary to determine the expected billings of clients for services performed. In a public accounting firm, for example, output is the sum of its billings in auditing, tax, and consulting services. When input data are used, each professional staff member projects his or her billable time. The firm then applies billing rates to billable time to produce expected service revenue.

Not-for-Profit Organizations

Budgeting is just as important for not-for-profit organizations as for profit-oriented businesses. The budget process, however, is different. In most cases, not-for-profit entities budget **on the basis of cash flows (expenditures and receipts), rather than on a revenue and expense basis**. Further, the starting point in the process is usually expenditures, not receipts. For the not-for-profit entity, management's task generally is to find the receipts needed to support the planned expenditures. The activity index is also likely to be significantly different. For example, in a not-for-profit entity, such as a university, budgeted faculty positions may be based on full-time equivalent students or credit hours expected to be taught in a department.

For some governmental units, voters approve the budget. In other cases, such as state governments and the federal government, legislative approval is required. After the budget is adopted, it must be followed. Overspending is often illegal. In governmental budgets, authorizations tend to be on a line-by-line basis. That is, the budget for a municipality may have a specified authorization for police and fire protection, garbage collection, street paving, and so on. The line-item authorization of governmental budgets significantly limits the amount of discretion management can exercise. The city manager often cannot use savings from one line item, such as street paving, to cover increased spending in another line item, such as snow removal.

Service Company Insight

Museum of Contemporary Art

©ZUMA Press/Newscom/NewsCom

Budget Shortfalls as Far as the Eye Can See

All organizations need to stick to budgets. The **Museum of Contemporary Art** in Los Angeles learned this the hard way. Over a 10-year period, its endowment shrank from \$50 million to \$6 million as its newly hired director strove to build the museum's reputation through spending. The director consistently ran budget deficits, which

eventually threatened the museum's survival.

The most recent recession created budgeting challenges for nearly all governmental agencies. Tax revenues dropped

rapidly as earnings declined and unemployment skyrocketed. At the same time, sources of debt financing dried up. Even **Princeton University**, with the largest endowment per student of any U.S. university (\$2 million per student), experienced a 25% drop in the value of its endowment when the financial markets plunged. Because the endowment supports 45% of the university's \$1.25 billion budget, when the endowment fell the university had to make cuts. Many raises were capped at \$2,000, administrative budgets were cut by 5%, and major construction projects were put on hold.

Sources: Edward Wyatt and Jori Finkel, "Soaring in Art, Museum Trips Over Finances," *Wall Street Journal Online* (December 4, 2008); Stu Woo, "California's Plans to Close Gap Become More Drastic," *Wall Street Journal Online* (January 8, 2009); and John Hechinger, "Princeton Cuts Budget as Endowment Slides," *Wall Street Journal Online* (January 9, 2009).

Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!**5****Merchandise Purchases Budget**

Becker Company estimates that 2017 sales will be \$15,000 in quarter 1, \$20,000 in quarter 2, and \$25,000 in quarter 3. Cost of goods sold is 80% of sales. Management desires to have ending finished goods inventory equal to 15% of the next quarter's expected cost of goods sold. Prepare a merchandise purchases budget by quarter for the first six months of 2017.

Solution**Action Plan**

- ✓ Begin with budgeted cost of goods sold.
- ✓ Add desired ending merchandise inventory.
- ✓ Subtract beginning merchandise inventory.

BECKER COMPANY				
Merchandise Purchases Budget				
For the Six Months Ending June 30, 2017				
	Quarter			
	1	2	Six Months	
6	Budgeted cost of goods sold (sales × .80)	\$12,000	\$16,000	
7	Add: Desired ending merchandise inventory (15% of next quarter's cost of goods sold)	2,400	3,000	
8	Total	14,400	19,000	
9	Less: Beginning merchandise inventory (15% this quarter's cost of goods sold)	1,800	2,400	
10	Required merchandise purchases	\$12,600	\$16,600	\$29,200

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **State the essentials of effective budgeting and the components of the master budget.** The primary benefits of budgeting are that it (a) requires management to plan ahead, (b) provides definite objectives for evaluating performance, (c) creates an early warning system for potential problems, (d) facilitates coordination of activities, (e) results in greater management awareness, and (f) motivates personnel to meet planned objectives. The essentials of effective budgeting are (a) sound organizational structure, (b) research and analysis, and (c) acceptance by all levels of management. The master budget consists of the following budgets: (a) sales, (b) production, (c) direct materials, (d) direct labor, (e) manufacturing overhead, (f) selling and administrative expense, (g) budgeted income statement, (h) capital expenditure budget, (i) cash budget, and (j) budgeted balance sheet.
- 2 **Prepare budgets for sales, production, and direct materials.** The sales budget is derived from sales forecasts. The production budget starts with budgeted

sales units, adds desired ending finished goods inventory, and subtracts beginning finished goods inventory to arrive at the required number of production units. The direct materials budget starts with the direct materials units (e.g., pounds) required for budgeted production, adds desired ending direct materials units, and subtracts beginning direct materials units to arrive at required direct materials units to be purchased. This amount is multiplied by the direct materials cost (e.g., cost per pound) to arrive at the total cost of direct materials purchases.

- 3 **Prepare budgets for direct labor, manufacturing overhead, and selling and administrative expenses, and a budgeted income statement.** The direct labor budget starts with the units to be produced as determined in the production budget. This amount is multiplied by the direct labor hours per unit and the direct labor cost per hour to arrive at the total direct labor cost. The manufacturing overhead budget lists all of the individual types of overhead costs, distinguishing

between fixed and variable costs. The selling and administrative expense budget lists all of the individual types of selling and administrative expense items, distinguishing between fixed and variable costs. The budgeted income statement is prepared from the various operating budgets. Cost of goods sold is determined by calculating the budgeted cost to produce one unit, then multiplying this amount by the number of units sold.

- 4 Prepare a cash budget and a budgeted balance sheet.** The cash budget has three sections (receipts, disbursements, and financing) and the beginning and ending cash balances. Receipts and payments sec-

tions are determined after preparing separate schedules for collections from customers and payments to suppliers. The budgeted balance sheet is developed from the budgeted balance sheet from the preceding year and the various budgets for the current year.

- 5 Apply budgeting principles to nonmanufacturing companies.** Budgeting may be used by merchandisers for development of a merchandise purchases budget. In service companies, budgeting is a critical factor in coordinating staff needs with anticipated services. In not-for-profit organizations, the starting point in budgeting is usually expenditures, not receipts.

GLOSSARY REVIEW

Budget A formal written statement of management's plans for a specified future time period, expressed in financial terms. (p. 1058).

Budgetary slack The amount by which a manager intentionally underestimates budgeted revenues or overestimates budgeted expenses in order to make it easier to achieve budgetary goals. (p. 1061).

Budget committee A group responsible for coordinating the preparation of the budget. (p. 1060).

Budgeted balance sheet A projection of financial position at the end of the budget period. (p. 1075).

Budgeted income statement An estimate of the expected profitability of operations for the budget period. (p. 1070).

Cash budget A projection of anticipated cash flows. (p. 1072).

Direct labor budget A projection of the quantity and cost of direct labor necessary to meet production requirements. (p. 1068).

Direct materials budget An estimate of the quantity and cost of direct materials to be purchased. (p. 1065).

Financial budgets Individual budgets that focus primarily on the cash resources needed to fund expected operations and planned capital expenditures. (p. 1061).

Long-range planning A formalized process of identifying long-term goals, selecting strategies to achieve

those goals, and developing policies and plans to implement the strategies. (p. 1061).

Manufacturing overhead budget An estimate of expected manufacturing overhead costs for the budget period. (p. 1069).

Master budget A set of interrelated budgets that constitutes a plan of action for a specific time period. (p. 1061).

Merchandise purchases budget The estimated cost of goods to be purchased by a merchandiser to meet expected sales. (p. 1077).

Operating budgets Individual budgets that result in a budgeted income statement. (p. 1061).

Participative budgeting A budgetary approach that starts with input from lower-level managers and works upward so that managers at all levels participate. (p. 1060).

Production budget A projection of the units that must be produced to meet anticipated sales. (p. 1064).

Sales budget An estimate of expected sales revenue for the budget period. (p. 1063).

Sales forecast The projection of potential sales for the industry and the company's expected share of such sales. (p. 1059).

Selling and administrative expense budget A projection of anticipated selling and administrative expenses for the budget period. (p. 1070).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Which of the following is **not** a benefit of budgeting?
- Management can plan ahead.
 - An early warning system is provided for potential problems.
 - It enables disciplinary action to be taken at every level of responsibility.
 - The coordination of activities is facilitated.
- (LO 1) 2. A budget:
- is the responsibility of management accountants.
 - is the primary method of communicating agreed-upon objectives throughout an organization.
 - ignores past performance because it represents management's plans for a future time period.
 - may promote efficiency but has no role in evaluating performance.
3. The essentials of effective budgeting do **not** include: (LO 1)
- top-down budgeting.
 - management acceptance.
 - research and analysis.
 - sound organizational structure.
4. Compared to budgeting, long-range planning generally (LO 1) has the:
- same amount of detail.
 - longer time period.
 - same emphasis.
 - same time period.

- (LO 2) 5. A sales budget is:
 (a) derived from the production budget.
 (b) management's best estimate of sales revenue for the year.
 (c) not the starting point for the master budget.
 (d) prepared only for credit sales.
- (LO 2) 6. The formula for the production budget is budgeted sales in units plus:
 (a) desired ending merchandise inventory less beginning merchandise inventory.
 (b) beginning finished goods units less desired ending finished goods units.
 (c) desired ending direct materials units less beginning direct materials units.
 (d) desired ending finished goods units less beginning finished goods units.
- (LO 2) 7. Direct materials inventories are kept in pounds in Byrd Company, and the total pounds of direct materials needed for production is 9,500. If the beginning inventory is 1,000 pounds and the desired ending inventory is 2,200 pounds, the total pounds to be purchased is:
 (a) 9,400. (c) 9,700.
 (b) 9,500. (d) 10,700.
- (LO 3) 8. The formula for computing the direct labor budget is to multiply the direct labor cost per hour by the:
 (a) total required direct labor hours.
 (b) physical units to be produced.
 (c) equivalent units to be produced.
 (d) No correct answer is given.
- (LO 3) 9. Each of the following budgets is used in preparing the budgeted income statement **except** the:
 (a) sales budget.
 (b) selling and administrative expense budget.
 (c) capital expenditure budget.
 (d) direct labor budget.
- (LO 3) 10. The budgeted income statement is:
 (a) the end-product of the operating budgets.
 (b) the end-product of the financial budgets.
 (c) the starting point of the master budget.
 (d) dependent on cash receipts and cash disbursements.
11. The budgeted balance sheet is: (LO 4)
 (a) developed from the budgeted balance sheet for the preceding year and the budgets for the current year.
 (b) the last operating budget prepared.
 (c) used to prepare the cash budget.
 (d) All of the above.
12. The format of a cash budget is: (LO 4)
 (a) Beginning cash balance + Cash receipts + Cash from financing – Cash disbursements = Ending cash balance.
 (b) Beginning cash balance + Cash receipts – Cash disbursements +/- Financing = Ending cash balance.
 (c) Beginning cash balance + Net income – Cash dividends = Ending cash balance.
 (d) Beginning cash balance + Cash revenues – Cash expenses = Ending cash balance.
13. Expected direct materials purchases in Read Company are \$70,000 in the first quarter and \$90,000 in the second quarter. Forty percent of the purchases are paid in cash as incurred, and the balance is paid in the following quarter. The budgeted cash payments for purchases in the second quarter are: (LO 4)
 (a) \$96,000. (c) \$78,000.
 (b) \$90,000. (d) \$72,000.
14. The budget for a merchandiser differs from a budget for a manufacturer because: (LO 5)
 (a) a merchandise purchases budget replaces the production budget.
 (b) the manufacturing budgets are not applicable.
 (c) None of the above.
 (d) Both (a) and (b) above.
15. In most cases, not-for-profit entities: (LO 5)
 (a) prepare budgets using the same steps as those used by profit-oriented businesses.
 (b) know budgeted cash receipts at the beginning of a time period, so they budget only for expenditures.
 (c) begin the budgeting process by budgeting expenditures rather than receipts.
 (d) can ignore budgets because they are not expected to generate net income.

Solutions

1. (c) Budgeting does not necessarily enable disciplinary action to be taken at every level of responsibility. The other choices are all benefits of budgeting.
2. (b) A budget is the primary method of communicating agreed-upon objectives throughout an organization. The other choices are incorrect because (a) a budget is the responsibility of all levels of management, not management accountants; (c) past performance is not ignored in the budgeting process but instead is the starting point from which future budget goals are formulated; and (d) the budget not only may promote efficiency but is an important tool for evaluating performance.
3. (a) Top-down budgeting is not one of the essentials of effective budgeting. The other choices are true statements.
4. (b) Long-range planning generally encompasses a period of at least 5 years whereas budgeting usually covers a period of 1 year. The other choices are incorrect because budgeting and long-range planning (a) do not have the same amount of detail, (c) do not have the same emphasis, and (d) do not cover the same time period.
5. (b) A sales budget is management's best estimate of sales revenue for the year. The other choices are incorrect because a sales budget (a) is the first budget prepared and is the one budget that is not derived from any other budget, (c) is the starting point for the master budget, and (d) is prepared for both cash and credit sales.
6. (d) The formula for the production budget is budgeted sales in units plus desired ending finished goods units less beginning finished goods units. The other choices are therefore incorrect.
7. (d) Pounds to be purchased = Amount needed for production (9,500) + Desired ending inventory (2,200) – Beginning inventory (1,000) = 10,700, not (a) 9,400, (b) 9,500, or (c) 9,700.

8. (a) Direct labor cost = Direct labor cost per hour \times Total required direct labor hours. The other choices are therefore incorrect.
9. (c) The capital expenditure budget is not used in preparing the budgeted income statement. The other choices are true statements.
10. (a) The budgeted income statement is the end-product of the operating budgets, not (b) the financial budgets, (c) the starting point of the master budget, or (d) dependent on cash receipts and cash disbursements.
11. (a) The budgeted balance sheet is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. The other choices are therefore incorrect.
12. (b) The format of a cash budget is Beginning cash balance + Cash receipts – Cash disbursements +/- Financing = Ending cash balance. The other choices are therefore incorrect.
13. (c) Budgeted cash payments for the second quarter = Purchases for the first quarter (\$42,000; $\$70,000 \times 60\%$) + 40% of the purchases for the second quarter ($\$36,000$; $\$90,000 \times 40\%$) = \$78,000, not (a) \$96,000, (b) \$90,000, or (d) \$72,000.
14. (d) The budget for a merchandiser uses a merchandise purchases budget in place of a production budget, and the manufacturing budgets are not applicable for a merchandiser. Therefore, as both choices (a) and (b) are correct, choice (d) is the best answer.
15. (c) In most cases, not-for-profit entities begin the budgeting process by budgeting expenditures rather than receipts. The other choices are incorrect because in most cases not-for-profit entities (a) prepare budgets using different, not the same, steps as those used by profit-oriented enterprises; (b) budget for both expenditures and receipts; and (d) cannot ignore budgets.

PRACTICE EXERCISES

1. On January 1, 2017 the Heche Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2017.

Prepare production and direct materials budgets by quarter for 6 months.

Sales units:	First quarter 5,000; second quarter 6,000; third quarter 7,000
Ending raw materials inventory:	40% of the next quarter's production requirements
Ending finished goods inventory:	30% of the next quarter's expected sales units
Third-quarter 2017 production:	7,500 units

(LO 2)

The ending raw materials and finished goods inventories at December 31, 2016, follow the same percentage relationships to production and sales that occur in 2017. Two pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost \$5 per pound.

Instructions

- (a) Prepare a production budget by quarters for the 6-month period ended June 30, 2017.
(b) Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2017.

Solution

1. (a)

Heche Company Production Budget.xls					
HECHE COMPANY Production Budget For the Six Months Ending June 30, 2017					
	Quarter				
	1	2	Six Months		
Expected unit sales	5,000	6,000			
Add: Desired ending finished goods units	1,800 ⁽¹⁾	2,100 ⁽²⁾			
Total required units	6,800	8,100			
Less: Beginning finished goods units	1,500 ⁽³⁾	1,800			
Required production units	5,300	6,300			11,600
⁽¹⁾ 30% \times 6,000; ⁽²⁾ 30% \times 7,000; ⁽³⁾ 30% \times 5,000

17						

Prepare a cash budget for 2 months.

(LO 4)

2. Jake Company expects to have a cash balance of \$45,000 on January 1, 2017. Relevant monthly budget data for the first 2 months of 2017 are as follows.

Collections from customers: January \$100,000, February \$160,000.

Payments for direct materials: January \$60,000, February \$80,000.

Direct labor: January \$30,000, February \$45,000. Wages are paid in the month they are incurred.

Manufacturing overhead: January \$26,000, February \$31,000. These costs include depreciation of \$1,000 per month. All other overhead costs are paid as incurred.

Selling and administrative expenses: January \$15,000, February \$20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize \$10,000 in cash. Jake Company has a line of credit at a local bank that enables it to borrow up to \$25,000. The company wants to maintain a minimum monthly cash balance of \$25,000.

Instructions

Prepare a cash budget for January and February.

Solution

2.

	A	B	C
1	JAKE COMPANY		
2	Cash Budget		
3	For the Two Months Ending February 28, 2017		
4		January	February
5	Beginning cash balance	\$ 45,000	\$ 25,000
6	Add: Receipts		
7	Collections from customers	100,000	160,000
8	Sale of marketable securities	10,000	0
9	Total receipts	110,000	160,000
10	Total available cash	155,000	185,000
11	Less: Disbursements		
12	Direct materials	60,000	80,000
13	Direct labor	30,000	45,000
14	Manufacturing overhead	25,000	30,000
15	Selling and administrative expenses	15,000	20,000
16	Total disbursements	130,000	175,000
17	Excess (deficiency) of available cash over cash		
18	Disbursements	25,000	10,000
19	Financing		
20	Borrowings	0	15,000
21	Repayments	0	0
22	Ending cash balance	\$ 25,000	\$ 25,000
23			

PRACTICE PROBLEMS

1. Asheville Company is preparing its master budget for 2017. Relevant data pertaining to its sales and production budgets are as follows.

Prepare sales and production budgets.

Sales. Sales for the year are expected to total 2,100,000 units. Quarterly sales, as a percentage of total sales, are 15%, 25%, 35%, and 25%, respectively. The sales price is expected to be \$70 per unit for the first three quarters and \$75 per unit beginning in the fourth quarter. Sales in the first quarter of 2018 are expected to be 10% higher than the budgeted sales volume for the first quarter of 2017.

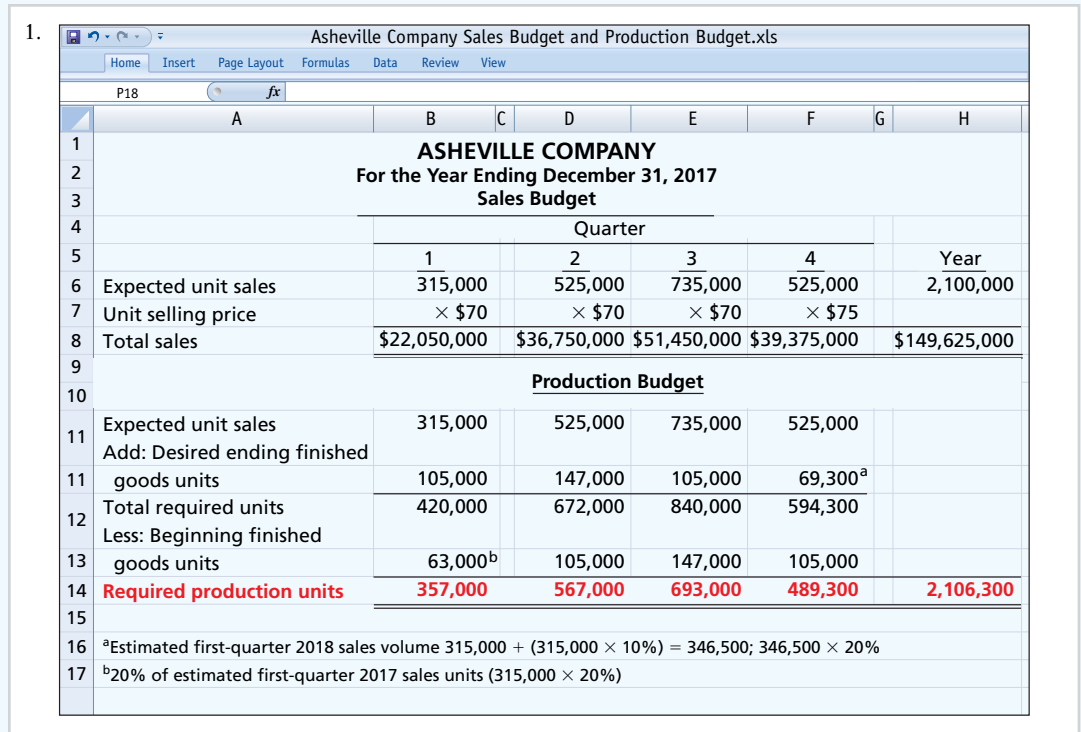

(LO 2)

Production. Management desires to maintain ending finished goods inventories at 20% of the next quarter's budgeted sales volume.

Instructions

Prepare the sales budget and production budget by quarters for 2017.

Solution

1. 

ASHEVILLE COMPANY					
For the Year Ending December 31, 2017					
Sales Budget					
	Quarter				
	1	2	3	4	Year
Expected unit sales	315,000	525,000	735,000	525,000	2,100,000
Unit selling price	× \$70	× \$70	× \$70	× \$75	
Total sales	\$22,050,000	\$36,750,000	\$51,450,000	\$39,375,000	\$149,625,000
Production Budget					
Expected unit sales	315,000	525,000	735,000	525,000	
Add: Desired ending finished goods units	105,000	147,000	105,000	69,300 ^a	
Total required units	420,000	672,000	840,000	594,300	
Less: Beginning finished goods units	63,000 ^b	105,000	147,000	105,000	
Required production units	357,000	567,000	693,000	489,300	2,106,300
^a Estimated first-quarter 2018 sales volume 315,000 + (315,000 × 10%) = 346,500; 346,500 × 20%					
^b 20% of estimated first-quarter 2017 sales units (315,000 × 20%)					

Prepare budgeted cost of goods sold, income statement, and balance sheet.

(LO 3, 4)

2. Barrett Company has completed all operating budgets other than the income statement for 2017. Selected data from these budgets follow.

Sales: \$300,000

Purchases of raw materials: \$145,000

Ending inventory of raw materials: \$15,000

Direct labor: \$40,000

Manufacturing overhead: \$73,000, including \$3,000 of depreciation expense

Selling and administrative expenses: \$36,000 including depreciation expense of \$1,000

Interest expense: \$1,000

Principal payment on note: \$2,000

Dividends declared: \$2,000

Income tax rate: 30%

Other information:

Assume that the number of units produced equals the number sold.

Year-end accounts receivable: 4% of 2017 sales.

Year-end accounts payable: 50% of ending inventory of raw materials.

Interest, direct labor, manufacturing overhead, and selling and administrative expenses other than depreciation are paid as incurred.

Dividends declared and income taxes for 2017 will not be paid until 2018.

BARRETT COMPANY

Balance Sheet

December 31, 2016

Assets

Current assets		
Cash		\$20,000
Raw materials inventory		10,000
Total current assets		<u>30,000</u>
Property, plant, and equipment		
Equipment	\$40,000	
Less: Accumulated depreciation	4,000	36,000
Total assets		<u>\$66,000</u>

Liabilities and Stockholders' Equity

Liabilities		
Accounts payable	\$ 5,000	
Notes payable	<u>22,000</u>	
Total liabilities		\$27,000
Stockholders' equity		
Common stock	25,000	
Retained earnings	<u>14,000</u>	
Total stockholders' equity		<u>39,000</u>
Total liabilities and stockholders' equity		<u><u>\$66,000</u></u>

Instructions

- (a) Calculate budgeted cost of goods sold.
 (b) Prepare a budgeted multiple-step income statement for the year ending December 31, 2017.
 (c) Prepare a budgeted classified balance sheet as of December 31, 2017.

Solution

2. (a) Beginning raw materials + Purchases – Ending raw materials = Cost of direct materials used (\$10,000 + \$145,000 – \$15,000 = \$140,000)
 Direct materials used + Direct labor + Manufacturing overhead = Cost of goods sold (\$140,000 + \$40,000 + \$73,000 = \$253,000)

(b) **BARRETT COMPANY**
Budgeted Income Statement
For the Year Ending December 31, 2017

Sales	\$300,000
Cost of goods sold	<u>253,000</u>
Gross profit	47,000
Selling and administrative expenses	<u>36,000</u>
Income from operations	11,000
Interest expense	<u>1,000</u>
Income before income tax expense	10,000
Income tax expense (30%)	<u>3,000</u>
Net income	<u><u>\$ 7,000</u></u>

(c) **BARRETT COMPANY**
Budgeted Balance Sheet
December 31, 2017

<u>Assets</u>	
Current assets	
Cash ⁽¹⁾	\$17,500
Accounts receivable (4% × \$300,000)	12,000
Raw materials inventory	<u>15,000</u>
Total current assets	44,500
Property, plant and equipment	
Equipment	\$40,000
Less: Accumulated depreciation	<u>8,000</u>
Total assets	<u><u>\$76,500</u></u>

⁽¹⁾ Beginning cash balance	\$ 20,000
Add: Collections from customers (96% × \$300,000 sales)	<u>288,000</u>
Total available cash	<u>308,000</u>

Less: Disbursements		
Direct materials (\$5,000 + \$145,000 – \$7,500)	\$142,500	
Direct labor	40,000	
Manufacturing overhead	70,000	
Selling and administrative expenses	35,000	
Total disbursements		<u>287,500</u>
Excess of available cash over cash disbursements		20,500
Financing		
Less: Repayment of principal and interest		<u>3,000</u>
Ending cash balance		<u>\$ 17,500</u>

Liabilities and Stockholders' Equity

Liabilities		
Accounts payable (50% × \$15,000)	\$ 7,500	
Income taxes payable	3,000	
Dividends payable	2,000	
Note payable	<u>20,000</u>	
Total liabilities		\$32,500
Stockholders' equity		
Common stock	25,000	
Retained earnings ⁽²⁾	<u>19,000</u>	
Total stockholders' equity		<u>44,000</u>
Total liabilities and stockholders' equity		<u>\$76,500</u>

⁽²⁾Beginning retained earnings + Net income – Dividends declared = Ending retained earnings
(\$14,000 + \$7,000 – \$2,000 = \$19,000)

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

- (a) What is a budget?
(b) How does a budget contribute to good management?
- Kate Cey and Joe Coulter are discussing the benefits of budgeting. They ask you to identify the primary benefits of budgeting. Comply with their request.
- Jane Gilligan asks your help in understanding the essentials of effective budgeting. Identify the essentials for Jane.
- (a) "Accounting plays a relatively unimportant role in budgeting." Do you agree? Explain.
(b) What responsibilities does management have in budgeting?
- What criteria are helpful in determining the length of the budget period? What is the most common budget period?
- Lori Wilkins maintains that the only difference between budgeting and long-range planning is time. Do you agree? Why or why not?
- What is participative budgeting? What are its potential benefits? What are its potential disadvantages?
- What is budgetary slack? What incentive do managers have to create budgetary slack?
- Distinguish between a master budget and a sales forecast.
- What budget is the starting point in preparing the master budget? What may result if this budget is inaccurate?
- "The production budget shows both unit production data and unit cost data." Is this true? Explain.
- Alou Company has 20,000 beginning finished goods units. Budgeted sales units are 160,000. If management desires 15,000 ending finished goods units, what are the required units of production?
- In preparing the direct materials budget for Quan Company, management concludes that required purchases are 64,000 units. If 52,000 direct materials units are required in production and there are 9,000 units of beginning direct materials, what is the desired units of ending direct materials?
- The production budget of Justus Company calls for 80,000 units to be produced. If it takes 45 minutes to make one unit and the direct labor rate is \$16 per hour, what is the total budgeted direct labor cost?
- Ortiz Company's manufacturing overhead budget shows total variable costs of \$198,000 and total fixed

- costs of \$162,000. Total production in units is expected to be 150,000. It takes 20 minutes to make one unit, and the direct labor rate is \$15 per hour. Express the manufacturing overhead rate as (a) a percentage of direct labor cost, and (b) an amount per direct labor hour.
16. Everly Company's variable selling and administrative expenses are 12% of net sales. Fixed expenses are \$50,000 per quarter. The sales budget shows expected sales of \$200,000 and \$240,000 in the first and second quarters, respectively. What are the total budgeted selling and administrative expenses for each quarter?
 17. For Goody Company, the budgeted cost for one unit of product is direct materials \$10, direct labor \$20, and manufacturing overhead 80% of direct labor cost. If 25,000 units are expected to be sold at \$65 each, what is the budgeted gross profit?
 18. Indicate the supporting schedules used in preparing a budgeted income statement through gross profit for a manufacturer.
 19. Identify the three sections of a cash budget. What balances are also shown in this budget?
 20. Noterman Company has credit sales of \$600,000 in January. Past experience suggests that 40% is collected in the month of sale, 50% in the month following the sale, and 10% in the second month following the sale. Compute the cash collections from January sales in January, February, and March.
 21. What is the formula for determining required merchandise purchases for a merchandiser?
 22. How may expected revenues in a service company be computed?

BRIEF EXERCISES

- BE23-1** Maris Company uses the following budgets: balance sheet, capital expenditure, cash, direct labor, direct materials, income statement, manufacturing overhead, production, sales, and selling and administrative expense. Prepare a diagram of the interrelationships of the budgets in the master budget. Indicate whether each budget is an operating or a financial budget. *Prepare a diagram of a master budget.* (LO 1)
- BE23-2** Paige Company estimates that unit sales will be 10,000 in quarter 1, 14,000 in quarter 2, 15,000 in quarter 3, and 18,000 in quarter 4. Using a sales price of \$70 per unit, prepare the sales budget by quarters for the year ending December 31, 2017. *Prepare a sales budget.* (LO 2)
- BE23-3** Sales budget data for Paige Company are given in BE23-2. Management desires to have an ending finished goods inventory equal to 25% of the next quarter's expected unit sales. Prepare a production budget by quarters for the first 6 months of 2017. *Prepare a production budget for 2 quarters.* (LO 2)
- BE23-4** Perine Company has 2,000 pounds of raw materials in its December 31, 2016, ending inventory. Required production for January and February of 2017 are 4,000 and 5,000 units, respectively. Two pounds of raw materials are needed for each unit, and the estimated cost per pound is \$6. Management desires an ending inventory equal to 25% of next month's materials requirements. Prepare the direct materials budget for January. *Prepare a direct materials budget for 1 month.* (LO 2)
- BE23-5** For Gundy Company, units to be produced are 5,000 in quarter 1 and 7,000 in quarter 2. It takes 1.6 hours to make a finished unit, and the expected hourly wage rate is \$15 per hour. Prepare a direct labor budget by quarters for the 6 months ending June 30, 2017. *Prepare a direct labor budget for 2 quarters.* (LO 3)
- BE23-6** For Roche Inc., variable manufacturing overhead costs are expected to be \$20,000 in the first quarter of 2017, with \$5,000 increments in each of the remaining three quarters. Fixed overhead costs are estimated to be \$40,000 in each quarter. Prepare the manufacturing overhead budget by quarters and in total for the year. *Prepare a manufacturing overhead budget.* (LO 3)
- BE23-7** Elbert Company classifies its selling and administrative expense budget into variable and fixed components. Variable expenses are expected to be \$24,000 in the first quarter, and \$4,000 increments are expected in the remaining quarters of 2017. Fixed expenses are expected to be \$40,000 in each quarter. Prepare the selling and administrative expense budget by quarters and in total for 2017. *Prepare a selling and administrative expense budget.* (LO 3)
- BE23-8** North Company has completed all of its operating budgets. The sales budget for the year shows 50,000 units and total sales of \$2,250,000. The total unit cost of making one unit of sales is \$25. Selling and administrative expenses are expected to be \$300,000. Interest is estimated to be \$10,000. Income taxes are estimated to be \$200,000. Prepare a budgeted multiple-step income statement for the year ending December 31, 2017. *Prepare a budgeted income statement for the year.* (LO 3)

Prepare data for a cash budget.

(LO 4)

BE23-9 Kaspar Industries expects credit sales for January, February, and March to be \$220,000, \$260,000, and \$300,000, respectively. It is expected that 75% of the sales will be collected in the month of sale, and 25% will be collected in the following month. Compute cash collections from customers for each month.

Determine required merchandise purchases for 1 month.

(LO 5)

BE23-10 Moore Wholesalers is preparing its merchandise purchases budget. Budgeted sales are \$400,000 for April and \$480,000 for May. Cost of goods sold is expected to be 65% of sales. The company's desired ending inventory is 20% of the following month's cost of goods sold. Compute the required purchases for April.

DO IT! Exercises

Identify budget terminology.

(LO 1)

DO IT! 23-1 Use this list of terms to complete the sentences that follow.

Long-range plans	Participative budgeting
Sales forecast	Operating budgets
Master budget	Financial budgets

- _____ establish goals for the company's sales and production personnel.
- The _____ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
- _____ reduces the risk of having unrealistic budgets.
- _____ include the cash budget and the budgeted balance sheet.
- The budget is formed within the framework of a _____.
- _____ contain considerably less detail than budgets.

Prepare sales, production, and direct materials budgets.

(LO 2)

DO IT! 23-2 Pargo Company is preparing its master budget for 2017. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

Sales. Sales for the year are expected to total 1,000,000 units. Quarterly sales are 20%, 25%, 25%, and 30%, respectively. The sales price is expected to be \$40 per unit for the first three quarters and \$45 per unit beginning in the fourth quarter. Sales in the first quarter of 2018 are expected to be 20% higher than the budgeted sales for the first quarter of 2017.

Production. Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

Direct materials. Each unit requires 2 pounds of raw materials at a cost of \$12 per pound. Management desires to maintain raw materials inventories at 10% of the next quarter's production requirements. Assume the production requirements for first quarter of 2018 are 450,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2017.

Calculate budgeted total unit cost and prepare budgeted income statement.

(LO 3)

DO IT! 23-3 Pargo Company is preparing its budgeted income statement for 2017. Relevant data pertaining to its sales, production, and direct materials budgets can be found in **DO IT! 23-2**.

In addition, Pargo budgets 0.3 hours of direct labor per unit, labor costs at \$15 per hour, and manufacturing overhead at \$20 per direct labor hour. Its budgeted selling and administrative expenses for 2017 are \$6,000,000.

- Calculate the budgeted total unit cost.
- Prepare the budgeted multiple-step income statement for 2017. (Ignore income taxes.)

Determine amount of financing needed.

(LO 4)

DO IT! 23-4 Batista Company management wants to maintain a minimum monthly cash balance of \$25,000. At the beginning of April, the cash balance is \$25,000, expected cash receipts for April are \$245,000, and cash disbursements are expected to be \$255,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

Prepare merchandise purchases budget.

(LO 5)

DO IT! 23-5 Zeller Company estimates that 2017 sales will be \$40,000 in quarter 1, \$48,000 in quarter 2, and \$58,000 in quarter 3. Cost of goods sold is 50% of sales. Management desires to have ending finished goods inventory equal to 10% of the next quarter's expected cost of goods sold. Prepare a merchandise purchases budget by quarter for the first 6 months of 2017.

EXERCISES

E23-1 Trusler Company has always done some planning for the future, but the company has never prepared a formal budget. Now that the company is growing larger, it is considering preparing a budget.

Explain the concept of budgeting.

(LO 1)

Instructions

Write a memo to Jim Dixon, the president of Trusler Company, in which you define budgeting, identify the budgets that comprise the master budget, identify the primary benefits of budgeting, and discuss the essentials of effective budgeting.

E23-2 Edington Electronics Inc. produces and sells two models of pocket calculators, XQ-103 and XQ-104. The calculators sell for \$15 and \$25, respectively. Because of the intense competition Edington faces, management budgets sales semiannually. Its projections for the first 2 quarters of 2017 are as follows.

Prepare a sales budget for 2 quarters.

(LO 2)

Product	Unit Sales	
	Quarter 1	Quarter 2
XQ-103	20,000	22,000
XQ-104	12,000	15,000

No changes in selling prices are anticipated.

Instructions

Prepare a sales budget for the 2 quarters ending June 30, 2017. List the products and show for each quarter and for the 6 months, units, selling price, and total sales by product and in total.

E23-3 Thome and Crede, CPAs, are preparing their service revenue (sales) budget for the coming year (2017). The practice is divided into three departments: auditing, tax, and consulting. Billable hours for each department, by quarter, are provided below.

Prepare a sales budget for 4 quarters.

(LO 2)

Department	Quarter 1	Quarter 2	Quarter 3	Quarter 4
Auditing	2,300	1,600	2,000	2,400
Tax	3,000	2,200	2,000	2,500
Consulting	1,500	1,500	1,500	1,500

Average hourly billing rates are auditing \$80, tax \$90, and consulting \$110.

Instructions

Prepare the service revenue (sales) budget for 2017 by listing the departments and showing for each quarter and the year in total, billable hours, billable rate, and total revenue.

E23-4 Turney Company produces and sells automobile batteries, the heavy-duty HD-240. The 2017 sales forecast is as follows.

Prepare quarterly production budgets.

(LO 2)

Quarter	HD-240
1	5,000
2	7,000
3	8,000
4	10,000

The January 1, 2017, inventory of HD-240 is 2,000 units. Management desires an ending inventory each quarter equal to 40% of the next quarter's sales. Sales in the first quarter of 2018 are expected to be 25% higher than sales in the same quarter in 2017.

Instructions

Prepare quarterly production budgets for each quarter and in total for 2017.

Prepare a direct materials purchases budget.

(LO 2)

E23-5 DeWitt Industries has adopted the following production budget for the first 4 months of 2017.

<u>Month</u>	<u>Units</u>	<u>Month</u>	<u>Units</u>
January	10,000	March	5,000
February	8,000	April	4,000

Each unit requires 2 pounds of raw materials costing \$3 per pound. On December 31, 2016, the ending raw materials inventory was 4,000 pounds. Management wants to have a raw materials inventory at the end of the month equal to 20% of next month's production requirements.

Instructions

Prepare a direct materials purchases budget by month for the first quarter.

Prepare production and direct materials budgets by quarters for 6 months.

(LO 2)

E23-6 On January 1, 2017, the Hardin Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2017.

Sales units: First quarter 5,000; second quarter 6,000; third quarter 7,000.

Ending raw materials inventory: 40% of the next quarter's production requirements.

Ending finished goods inventory: 25% of the next quarter's expected sales units.

Third-quarter production: 7,200 units.

The ending raw materials and finished goods inventories at December 31, 2016, follow the same percentage relationships to production and sales that occur in 2017. Three pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost \$4 per pound.

Instructions

- Prepare a production budget by quarters for the 6-month period ended June 30, 2017.
- Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2017.

Calculate raw materials purchases in dollars.

(LO 2)

E23-7 Rensing Ltd. estimates sales for the second quarter of 2017 will be as follows.

<u>Month</u>	<u>Units</u>
April	2,550
May	2,675
June	2,390

The target ending inventory of finished products is as follows.

March 31	2,000
April 30	2,230
May 31	2,200
June 30	2,310

Two units of material are required for each unit of finished product. Production for July is estimated at 2,700 units to start building inventory for the fall sales period. Rensing's policy is to have an inventory of raw materials at the end of each month equal to 50% of the following month's production requirements.

Raw materials are expected to cost \$4 per unit throughout the period.

Instructions

Calculate the May raw materials purchases in dollars.

(CGA adapted)

Prepare a production and a direct materials budget.

(LO 2)

E23-8 Fuqua Company's sales budget projects unit sales of part 198Z of 10,000 units in January, 12,000 units in February, and 13,000 units in March. Each unit of part 198Z requires 4 pounds of materials, which cost \$2 per pound. Fuqua Company desires its ending raw materials inventory to equal 40% of the next month's production requirements, and its ending finished goods inventory to equal 20% of the next month's expected unit sales. These goals were met at December 31, 2016.

Instructions

- (a) Prepare a production budget for January and February 2017.
 (b) Prepare a direct materials budget for January 2017.

E23-9 Rodriguez, Inc., is preparing its direct labor budget for 2017 from the following production budget based on a calendar year:

Prepare a direct labor budget.

<u>Quarter</u>	<u>Units</u>	<u>Quarter</u>	<u>Units</u>
1	20,000	3	35,000
2	25,000	4	30,000

(LO 3)

Each unit requires 1.5 hours of direct labor.

Instructions

Prepare a direct labor budget for 2017. Wage rates are expected to be \$16 for the first 2 quarters and \$18 for quarters 3 and 4.

E23-10 Lowell Company makes and sells artistic frames for pictures. The controller is responsible for preparing the master budget and has accumulated the following information for 2017.

Prepare production and direct labor budgets.

(LO 2, 3)

	<u>January</u>	<u>February</u>	<u>March</u>	<u>April</u>	<u>May</u>
Estimated unit sales	12,000	14,000	13,000	11,000	11,000
Sales price per unit	\$50.00	\$47.50	\$47.50	\$47.50	\$47.50
Direct labor hours per unit	2.0	2.0	1.5	1.5	1.5
Wage per direct labor hour	\$8.00	\$8.00	\$8.00	\$9.00	\$9.00

Lowell has a labor contract that calls for a wage increase to \$9.00 per hour on April 1. New labor-saving machinery has been installed and will be fully operational by March 1.

Lowell expects to begin the year with 17,600 frames on hand and has a policy of carrying an end-of-month inventory of 100% of the following month's sales, plus 40% of the second following month's sales.

Instructions

Prepare a production budget and a direct labor budget for Lowell Company by month and for the first quarter of the year. The direct labor budget should include direct labor hours.
 (CMA-Canada adapted)

E23-11 Atlanta Company is preparing its manufacturing overhead budget for 2017. Relevant data consist of the following.

Prepare a manufacturing overhead budget for the year.

Units to be produced (by quarters): 10,000, 12,000, 14,000, 16,000.

Direct labor: time is 1.5 hours per unit.

Variable overhead costs per direct labor hour: indirect materials \$0.80; indirect labor \$1.20; and maintenance \$0.50.

Fixed overhead costs per quarter: supervisory salaries \$35,000; depreciation \$15,000; and maintenance \$12,000.

(LO 3)

**Instructions**

Prepare the manufacturing overhead budget for the year, showing quarterly data.

E23-12 Kirkland Company combines its operating expenses for budget purposes in a selling and administrative expense budget. For the first 6 months of 2017, the following data are available.

Prepare a selling and administrative expense budget for 2 quarters.

(LO 3)

- Sales: 20,000 units quarter 1; 22,000 units quarter 2.
- Variable costs per dollar of sales: sales commissions 5%, delivery expense 2%, and advertising 3%.
- Fixed costs per quarter: sales salaries \$12,000, office salaries \$8,000, depreciation \$4,200, insurance \$1,500, utilities \$800, and repairs expense \$500.
- Unit selling price: \$20.

Instructions

Prepare a selling and administrative expense budget by quarters for the first 6 months of 2017.

Prepare a budgeted income statement for the year.

(LO 3)

E23-13 Fultz Company has accumulated the following budget data for the year 2017.

1. Sales: 30,000 units, unit selling price \$85.
2. Cost of one unit of finished goods: direct materials 1 pound at \$5 per pound, direct labor 3 hours at \$15 per hour, and manufacturing overhead \$5 per direct labor hour.
3. Inventories (raw materials only): beginning, 10,000 pounds; ending, 15,000 pounds.
4. Selling and administrative expenses: \$170,000; interest expense: \$30,000.
5. Income taxes: 30% of income before income taxes.

Instructions

- (a) Prepare a schedule showing the computation of cost of goods sold for 2017.
- (b) Prepare a budgeted multiple-step income statement for 2017.

Prepare a cash budget for 2 months.

(LO 4)

E23-14 Danner Company expects to have a cash balance of \$45,000 on January 1, 2017. Relevant monthly budget data for the first 2 months of 2017 are as follows.

Collections from customers: January \$85,000, February \$150,000.

Payments for direct materials: January \$50,000, February \$75,000.

Direct labor: January \$30,000, February \$45,000. Wages are paid in the month they are incurred.

Manufacturing overhead: January \$21,000, February \$25,000. These costs include depreciation of \$1,500 per month. All other overhead costs are paid as incurred.

Selling and administrative expenses: January \$15,000, February \$20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize \$12,000 in cash. Danner Company has a line of credit at a local bank that enables it to borrow up to \$25,000. The company wants to maintain a minimum monthly cash balance of \$20,000.

Instructions

Prepare a cash budget for January and February.

Prepare a cash budget.

(LO 4)

E23-15 Deitz Corporation is projecting a cash balance of \$30,000 in its December 31, 2016, balance sheet. Deitz's schedule of expected collections from customers for the first quarter of 2017 shows total collections of \$185,000. The schedule of expected payments for direct materials for the first quarter of 2017 shows total payments of \$43,000. Other information gathered for the first quarter of 2017 is sale of equipment \$3,000, direct labor \$70,000, manufacturing overhead \$35,000, selling and administrative expenses \$45,000, and purchase of securities \$14,000. Deitz wants to maintain a balance of at least \$25,000 cash at the end of each quarter.

Instructions

Prepare a cash budget for the first quarter.

Prepare cash budget for a month.

(LO 4)

E23-16 The controller of Trenshaw Company wants to improve the company's control system by preparing a month-by-month cash budget. The following information is for the month ending July 31, 2017.

June 30, 2017, cash balance	\$45,000
Dividends to be declared on July 15*	12,000
Cash expenditures to be paid in July for operating expenses	40,800
Amortization expense in July	4,500
Cash collections to be received in July	90,000
Merchandise purchases to be paid in cash in July	56,200
Equipment to be purchased for cash in July	20,000

*Dividends are payable 30 days after declaration to shareholders of record on the declaration date.

Trenshaw Company wants to keep a minimum cash balance of \$25,000.

Instructions

- (a) Prepare a cash budget for the month ended July 31, 2017, and indicate how much money, if any, Trenshaw Company will need to borrow to meet its minimum cash requirement.
- (b) Explain how cash budgeting can reduce the cost of short-term borrowing.
- (CGA adapted)

E23-17 Nieto Company's budgeted sales and direct materials purchases are as follows.

Prepare schedules of expected collections and payments.

(LO 4)

	<u>Budgeted Sales</u>	<u>Budgeted D.M. Purchases</u>
January	\$200,000	\$30,000
February	220,000	36,000
March	250,000	38,000

Nieto's sales are 30% cash and 70% credit. Credit sales are collected 10% in the month of sale, 50% in the month following sale, and 36% in the second month following sale; 4% are uncollectible. Nieto's purchases are 50% cash and 50% on account. Purchases on account are paid 40% in the month of purchase, and 60% in the month following purchase.

Instructions

- (a) Prepare a schedule of expected collections from customers for March.
- (b) Prepare a schedule of expected payments for direct materials for March.

E23-18 Green Landscaping Inc. is preparing its budget for the first quarter of 2017. The next step in the budgeting process is to prepare a cash receipts schedule and a cash payments schedule. To that end the following information has been collected.

Prepare schedules for cash receipts and cash payments, and determine ending balances for balance sheet.

(LO 4)

Clients usually pay 60% of their fee in the month that service is performed, 30% the month after, and 10% the second month after receiving service.

Actual service revenue for 2016 and expected service revenues for 2017 are November 2016, \$80,000; December 2016, \$90,000; January 2017, \$100,000; February 2017, \$120,000; and March 2017, \$140,000.

Purchases of landscaping supplies (direct materials) are paid 60% in the month of purchase and 40% the following month. Actual purchases for 2016 and expected purchases for 2017 are December 2016, \$14,000; January 2017, \$12,000; February 2017, \$15,000; and March 2017, \$18,000.

**Instructions**

- (a) Prepare the following schedules for each month in the first quarter of 2017 and for the quarter in total:
- (1) Expected collections from clients.
 - (2) Expected payments for landscaping supplies.
- (b) Determine the following balances at March 31, 2017:
- (1) Accounts receivable.
 - (2) Accounts payable.

E23-19 Pletcher Dental Clinic is a medium-sized dental service specializing in family dental care. The clinic is currently preparing the master budget for the first 2 quarters of 2017. All that remains in this process is the cash budget. The following information has been collected from other portions of the master budget and elsewhere.

Prepare a cash budget for 2 quarters.

(LO 4, 5)

Beginning cash balance	\$ 30,000
Required minimum cash balance	25,000
Payment of income taxes (2nd quarter)	4,000
Professional salaries:	
1st quarter	140,000
2nd quarter	140,000
Interest from investments (2nd quarter)	7,000
Overhead costs:	
1st quarter	77,000
2nd quarter	100,000

Selling and administrative costs, including \$2,000 depreciation:	
1st quarter	50,000
2nd quarter	70,000
Purchase of equipment (2nd quarter)	50,000
Sale of equipment (1st quarter)	12,000
Collections from patients:	
1st quarter	235,000
2nd quarter	380,000
Interest payments (2nd quarter)	200

Instructions

Prepare a cash budget for each of the first two quarters of 2017.

Prepare a purchases budget and budgeted income statement for a merchandiser.

(LO 5)

E23-20 In May 2017, the budget committee of Grand Stores assembles the following data in preparation of budgeted merchandise purchases for the month of June.

- Expected sales: June \$500,000, July \$600,000.
- Cost of goods sold is expected to be 75% of sales.
- Desired ending merchandise inventory is 30% of the following (next) month's cost of goods sold.
- The beginning inventory at June 1 will be the desired amount.

Instructions

- Compute the budgeted merchandise purchases for June.
- Prepare the budgeted multiple-step income statement for June through gross profit.

Prepare a direct labor budget for a service company.

(LO 5)

E23-21 Emeric and Ellie's Painting Service estimates that it will paint 10 small homes, 5 medium homes, and 2 large homes during the month of June 2017. The company estimates its direct labor needs as 40 hours per small home, 70 hours for a medium home, and 120 hours for a large home. Its average cost for direct labor is \$18 per hour.

Instructions

Prepare a direct labor budget for Emeric and Ellie's Painting Service for June 2017.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare budgeted income statement and supporting budgets.

(LO 2, 3)

P23-1A Cook Farm Supply Company manufactures and sells a pesticide called Snare. The following data are available for preparing budgets for Snare for the first 2 quarters of 2017.

- Sales: quarter 1, 40,000 bags; quarter 2, 56,000 bags. Selling price is \$60 per bag.
- Direct materials: each bag of Snare requires 4 pounds of Gumm at a cost of \$3.80 per pound and 6 pounds of Tarr at \$1.50 per pound.
- Desired inventory levels:

Type of Inventory	January 1	April 1	July 1
Snare (bags)	8,000	15,000	18,000
Gumm (pounds)	9,000	10,000	13,000
Tarr (pounds)	14,000	20,000	25,000

- Direct labor: direct labor time is 15 minutes per bag at an hourly rate of \$16 per hour.
- Selling and administrative expenses are expected to be 15% of sales plus \$175,000 per quarter.
- Interest expense is \$100,000.
- Income taxes are expected to be 30% of income before income taxes.

Your assistant has prepared two budgets: (1) the manufacturing overhead budget shows expected costs to be 125% of direct labor cost, and (2) the direct materials budget for Tarr shows the cost of Tarr purchases to be \$297,000 in quarter 1 and \$439,500 in quarter 2.

Instructions

Prepare the budgeted multiple-step income statement for the first 6 months and all required operating budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Tarr.

Net income \$881,160
Cost per bag \$33.20

P23-2A Deleon Inc. is preparing its annual budgets for the year ending December 31, 2017. Accounting assistants furnish the data shown below.

	<u>Product JB 50</u>	<u>Product JB 60</u>
Sales budget:		
Anticipated volume in units	400,000	200,000
Unit selling price	\$20	\$25
Production budget:		
Desired ending finished goods units	30,000	15,000
Beginning finished goods units	25,000	10,000
Direct materials budget:		
Direct materials per unit (pounds)	2	3
Desired ending direct materials pounds	30,000	10,000
Beginning direct materials pounds	40,000	15,000
Cost per pound	\$3	\$4
Direct labor budget:		
Direct labor time per unit	0.4	0.6
Direct labor rate per hour	\$12	\$12
Budgeted income statement:		
Total unit cost	\$13	\$20

Prepare sales, production, direct materials, direct labor, and income statement budgets.

(LO 2, 3)

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of \$560,000 for product JB 50 and \$360,000 for product JB 60, and administrative expenses of \$540,000 for product JB 50 and \$340,000 for product JB 60. Interest expense is \$150,000 (not allocated to products). Income taxes are expected to be 30%.

Instructions

Prepare the following budgets for the year. Show data for each product. Quarterly budgets should not be prepared.

- (a) Sales. (d) Direct labor.
(b) Production. (e) Multiple-step income statement (*Note:* income taxes are not allocated to the products).
(c) Direct materials.

- (a) Total sales \$13,000,000
(b) Required production units: JB 50, 405,000
JB 60, 205,000
(c) Total cost of direct materials purchases \$4,840,000
(d) Total direct labor cost \$3,420,000
(e) Net income \$1,295,000

P23-3A Hill Industries had sales in 2016 of \$6,800,000 and gross profit of \$1,100,000. Management is considering two alternative budget plans to increase its gross profit in 2017.

Plan A would increase the selling price per unit from \$8.00 to \$8.40. Sales volume would decrease by 10% from its 2016 level. Plan B would decrease the selling price per unit by \$0.50. The marketing department expects that the sales volume would increase by 100,000 units.

At the end of 2016, Hill has 40,000 units of inventory on hand. If Plan A is accepted, the 2017 ending inventory should be equal to 5% of the 2017 sales. If Plan B is accepted, the ending inventory should be equal to 60,000 units. Each unit produced will cost \$1.80 in direct labor, \$1.40 in direct materials, and \$1.20 in variable overhead. The fixed overhead for 2017 should be \$1,895,000.

Instructions

- (a) Prepare a sales budget for 2017 under each plan.
(b) Prepare a production budget for 2017 under each plan.
(c) Compute the production cost per unit under each plan. Why is the cost per unit different for each of the two plans? (Round to two decimals.)
(d) Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

Prepare sales and production budgets and compute cost per unit under two plans.

(LO 2)

- (c) Unit cost: Plan A \$6.88
Plan B \$6.35
(d) Gross profit:
Plan A \$1,162,800
Plan B \$1,092,500

Prepare cash budget for 2 months.

(LO 4)

P23-4A Colter Company prepares monthly cash budgets. Relevant data from operating budgets for 2017 are as follows.

	<u>January</u>	<u>February</u>
Sales	\$360,000	\$400,000
Direct materials purchases	120,000	125,000
Direct labor	90,000	100,000
Manufacturing overhead	70,000	75,000
Selling and administrative expenses	79,000	85,000

All sales are on account. Collections are expected to be 50% in the month of sale, 30% in the first month following the sale, and 20% in the second month following the sale. Sixty percent (60%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred except for selling and administrative expenses that include \$1,000 of depreciation per month.

Other data:

1. Credit sales: November 2016, \$250,000; December 2016, \$320,000.
2. Purchases of direct materials: December 2016, \$100,000.
3. Other receipts: January—collection of December 31, 2016, notes receivable \$15,000; February—proceeds from sale of securities \$6,000.
4. Other disbursements: February—payment of \$6,000 cash dividend.

The company's cash balance on January 1, 2017, is expected to be \$60,000. The company wants to maintain a minimum cash balance of \$50,000.

Instructions

- (a) January: collections
\$326,000 payments
\$112,000
- (b) Ending cash balance:
January \$51,000
February \$50,000

- (a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases for January and February.
- (b) Prepare a cash budget for January and February in columnar form.

Prepare purchases and income statement budgets for a merchandiser.

(LO 5)

P23-5A The budget committee of Suppar Company collects the following data for its San Miguel Store in preparing budgeted income statements for May and June 2017.

1. Sales for May are expected to be \$800,000. Sales in June and July are expected to be 5% higher than the preceding month.
2. Cost of goods sold is expected to be 75% of sales.
3. Company policy is to maintain ending merchandise inventory at 10% of the following month's cost of goods sold.
4. Operating expenses are estimated to be as follows:

Sales salaries	\$35,000 per month
Advertising	6% of monthly sales
Delivery expense	2% of monthly sales
Sales commissions	5% of monthly sales
Rent expense	\$5,000 per month
Depreciation	\$800 per month
Utilities	\$600 per month
Insurance	\$500 per month

5. Interest expense is \$2,000 per month. Income taxes are estimated to be 30% of income before income taxes.

Instructions

- (a) Purchases:
May \$603,000
June \$633,150
- (b) Net income:
May \$36,470
June \$39,830

- (a) Prepare the merchandise purchases budget for each month in columnar form.
- (b) Prepare budgeted multiple-step income statements for each month in columnar form. Show in the statements the details of cost of goods sold.

P23-6A Krause Industries' balance sheet at December 31, 2016, is presented below.

Prepare budgeted cost of goods sold, income statement, retained earnings, and balance sheet.

(LO 3, 4)

KRAUSE INDUSTRIES
Balance Sheet
December 31, 2016

<u>Assets</u>		
Current assets		
Cash		\$ 7,500
Accounts receivable		73,500
Finished goods inventory (1,500 units)		<u>24,000</u>
Total current assets		105,000
Property, plant, and equipment		
Equipment	\$40,000	
Less: Accumulated depreciation	<u>10,000</u>	<u>30,000</u>
Total assets		<u><u>\$135,000</u></u>

Liabilities and Stockholders' Equity

Liabilities		
Notes payable		\$ 25,000
Accounts payable		<u>45,000</u>
Total liabilities		70,000
Stockholders' equity		
Common stock	\$40,000	
Retained earnings	<u>25,000</u>	
Total stockholders' equity		<u>65,000</u>
Total liabilities and stockholders' equity		<u><u>\$135,000</u></u>

Budgeted data for the year 2017 include the following.

	<u>2017</u>	
	<u>Quarter 4</u>	<u>Total</u>
Sales budget (8,000 units at \$32)	\$76,800	\$256,000
Direct materials used	17,000	62,500
Direct labor	12,500	50,900
Manufacturing overhead applied	10,000	48,600
Selling and administrative expenses	18,000	75,000

To meet sales requirements and to have 2,500 units of finished goods on hand at December 31, 2017, the production budget shows 9,000 required units of output. The total unit cost of production is expected to be \$18. Krause uses the first-in, first-out (FIFO) inventory costing method. Interest expense is expected to be \$3,500 for the year. Income taxes are expected to be 40% of income before income taxes. In 2017, the company expects to declare and pay an \$8,000 cash dividend.

The company's cash budget shows an expected cash balance of \$5,880 at December 31, 2017. All sales and purchases are on account. It is expected that 60% of quarterly sales are collected in cash within the quarter and the remainder is collected in the following quarter. Direct materials purchased from suppliers are paid 50% in the quarter incurred and the remainder in the following quarter. Purchases in the fourth quarter were the same as the materials used. In 2017, the company expects to purchase additional equipment costing \$9,000. \$4,000 of depreciation expense on equipment is included in the budget data and split equally between manufacturing overhead and selling and administrative expenses. Krause expects to pay \$8,000 on the outstanding notes payable balance plus all interest due and payable to December 31 (included in interest expense \$3,500, above). Accounts payable at December 31, 2017, includes amounts due suppliers (see above) plus other accounts payable of \$7,200. Unpaid income taxes at December 31 will be \$5,000.

Net income \$21,900
Total assets \$116,600

Instructions

Prepare a budgeted statement of cost of goods sold, budgeted multiple-step income statement and retained earnings statement for 2017, and a budgeted classified balance sheet at December 31, 2017.

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/wegandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS**EXCEL
TUTORIAL****CURRENT DESIGNS**

CD23 Diane Buswell is preparing the 2017 budget for one of **Current Designs'** rotomolded kayaks. Extensive meetings with members of the sales department and executive team have resulted in the following unit sales projections for 2017.

Quarter 1	1,000 kayaks
Quarter 2	1,500 kayaks
Quarter 3	750 kayaks
Quarter 4	750 kayaks

Current Designs' policy is to have finished goods ending inventory in a quarter equal to 20% of the next quarter's anticipated sales. Preliminary sales projections for 2018 are 1,100 units for the first quarter and 1,500 units for the second quarter. Ending inventory of finished goods at December 31, 2016, will be 200 rotomolded kayaks.

Production of each kayak requires 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). Company policy is that the ending inventory of polyethylene powder should be 25% of the amount needed for production in the next quarter. Assume that the ending inventory of polyethylene powder on December 31, 2016, is 19,400 pounds. The finishing kits can be assembled as they are needed. As a result, Current Designs does not maintain a significant inventory of the finishing kits.

The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Production of a single kayak requires 2 hours of time by more experienced, type I employees and 3 hours of finishing time by type II employees. The type I employees are paid \$15 per hour, and the type II employees are paid \$12 per hour.

Selling and administrative expenses for this line are expected to be \$45 per unit sold plus \$7,500 per quarter. Manufacturing overhead is assigned at 150% of labor costs.

Instructions

Prepare the production budget, direct materials budget, direct labor budget, manufacturing overhead budget, and selling and administrative budget for this product line by quarter and in total for 2017.

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–22.)

WP23 Waterways Corporation is preparing its budget for the coming year, 2017. The first step is to plan for the first quarter of that coming year. The company has gathered information from its managers in preparation of the budgeting process. This problem asks you to prepare the various budgets that comprise the master budget for 2017.

Go to the book's companion website, at www.wiley.com/college/wegandt, to see the completion of this problem.

COMPREHENSIVE CASES

CC23-1 Auburn Circular Club is planning a major fundraiser that it hopes will become a successful annual event: sponsoring a professional rodeo. For this case, you will encounter many managerial accounting issues that would be common for a start-up business, such as CVP analysis (Chapter 19), incremental analysis (Chapter 21), and budgetary planning (Chapter 23).

Go to the book's companion website, at www.wiley.com/college/wegandt, for complete case details and instructions.

CC23-2 Sweats Galore is a new business venture that will make custom sweatshirts using a silk-screen process. In helping the company's owner, Michael Woods, set up his business, you will have the opportunity to apply your understanding of CVP relationships (Chapter 19) and budgetary planning (Chapter 23).

Go to the book's companion website, at www.wiley.com/college/wegandt, for complete case details and instructions.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP23-1 Palmer Corporation operates on a calendar-year basis. It begins the annual budgeting process in late August when the president establishes targets for the total dollar sales and net income before taxes for the next year.

The sales target is given first to the marketing department. The marketing manager formulates a sales budget by product line in both units and dollars. From this budget, sales quotas by product line in units and dollars are established for each of the corporation's sales districts. The marketing manager also estimates the cost of the marketing activities required to support the target sales volume and prepares a tentative marketing expense budget.

The executive vice president uses the sales and profit targets, the sales budget by product line, and the tentative marketing expense budget to determine the dollar amounts that can be devoted to manufacturing and corporate office expense. The executive vice president prepares the budget for corporate expenses. She then forwards to the production department the product-line sales budget in units and the total dollar amount that can be devoted to manufacturing.

The production manager meets with the factory managers to develop a manufacturing plan that will produce the required units when needed within the cost constraints set by the executive vice president. The budgeting process usually comes to a halt at this point because the production department does not consider the financial resources allocated to be adequate.

When this standstill occurs, the vice president of finance, the executive vice president, the marketing manager, and the production manager meet together to determine the final budgets for each of the areas. This normally results in a modest increase in the total amount available for manufacturing costs and cuts in the marketing expense and corporate office expense budgets. The total sales and net income figures proposed by the president are seldom changed. Although the participants are seldom pleased with the compromise, these budgets are final. Each executive then develops a new detailed budget for the operations in his or her area.

None of the areas has achieved its budget in recent years. Sales often run below the target. When budgeted sales are not achieved, each area is expected to cut costs so that the president's profit target can be met. However, the profit target is seldom met because costs are not cut enough. In fact, costs often run above the original budget in all functional areas (marketing, production, and corporate office).

The president is disturbed that Palmer has not been able to meet the sales and profit targets. He hired a consultant with considerable experience with companies in Palmer's industry. The consultant reviewed the budgets for the past 4 years. He concluded that the product line sales budgets were reasonable and that the cost and expense budgets were adequate for the budgeted sales and production levels.

Instructions

With the class divided into groups, answer the following.

- Discuss how the budgeting process employed by Palmer Corporation contributes to the failure to achieve the president's sales and profit targets.
- Suggest how Palmer Corporation's budgeting process could be revised to correct the problems.
- Should the functional areas be expected to cut their costs when sales volume falls below budget? Explain your answer.

(CMA adapted)

Managerial Analysis

BYP23-2 Elliot & Hesse Inc. manufactures ergonomic devices for computer users. Some of its more popular products include anti-glare filters and privacy filters (for computer monitors) and keyboard stands with wrist rests. Over the past 5 years, it experienced rapid growth, with sales of all products increasing 20% to 50% each year.

Last year, some of the primary manufacturers of computers began introducing new products with some of the ergonomic designs, such as anti-glare filters and wrist rests, already built in. As a result, sales of Elliot & Hesse's accessory devices have declined somewhat. The company believes that the privacy filters will probably continue to show growth, but that the other products will probably continue to decline. When the next year's budget was prepared, increases were built into research and development so that replacement products could be developed or the company could expand into some other product line. Some product lines being considered are general-purpose ergonomic devices including back supports, foot rests, and sloped writing pads.

The most recent results have shown that sales decreased more than was expected for the anti-glare filters. As a result, the company may have a shortage of funds. Top management has therefore asked that all expenses be reduced 10% to compensate for these reduced sales. Summary budget information is as follows.

Direct materials	\$240,000
Direct labor	110,000
Insurance	50,000
Depreciation	90,000
Machine repairs	30,000
Sales salaries	50,000
Office salaries	80,000
Factory salaries (indirect labor)	50,000
Total	<u>\$700,000</u>

Instructions

Using the information above, answer the following questions.

- What are the implications of reducing each of the costs? For example, if the company reduces direct materials costs, it may have to do so by purchasing lower-quality materials. This may affect sales in the long run.
- Based on your analysis in (a), what do you think is the best way to obtain the \$70,000 in cost savings requested? Be specific. Are there any costs that cannot or should not be reduced? Why?

Real-World Focus

BYP23-3 Information regarding many approaches to budgeting can be found online. The following activity investigates the merits of “zero-based” budgeting, as discussed by Michael LaFaive, Director of Fiscal Policy of the Mackinac Center for Public Policy.

Address: www.mackinac.org/5928, or go to www.wiley.com/college/weygandt

Instructions

Read the article at the website and answer the following questions.

- How does zero-based budgeting differ from standard budgeting procedures?
- What are some potential advantages of zero-based budgeting?
- What are some potential disadvantages of zero-based budgeting?
- How often do departments in Oklahoma undergo zero-based budgeting?

CRITICAL THINKING

Communication Activity

BYP23-4 In order to better serve their rural patients, Drs. Joe and Rick Parcels (brothers) began giving safety seminars. Especially popular were their “emergency-preparedness” talks given to farmers. Many people asked whether the “kit” of materials the doctors recommended for common farm emergencies was commercially available.

After checking with several suppliers, the doctors realized that no other company offered the supplies they recommended in their seminars, packaged in the way they described. Their wives, Megan and Sue, agreed to make a test package by ordering supplies from various medical supply companies and assembling them into a “kit” that could be sold at the seminars. When these kits proved a runaway success, the sisters-in-law decided to market them. At the advice of their accountant, they organized this venture as a separate company, called Life Protection Products (LPP), with Megan Parcels as CEO and Sue Parcels as Secretary-Treasurer.

LPP soon started receiving requests for the kits from all over the country, as word spread about their availability. Even without advertising, LPP was able to sell its full inventory every month. However, the company was becoming financially strained. Megan and Sue had about \$100,000 in savings, and they invested about half that amount initially. They believed that this venture would allow them to make money. However, at the present time, only about \$30,000 of the cash remains, and the company is constantly short of cash.

Megan has come to you for advice. She does not understand why the company is having cash flow problems. She and Sue have not even been withdrawing salaries. However, they have rented a local building and have hired two more full-time workers to help them cope with the increasing demand. They do not think they could handle the demand without this additional help.

Megan is also worried that the cash problems mean that the company may not be able to support itself. She has prepared the cash budget shown below. All seminar customers pay for their products in full at the time of purchase. In addition, several large companies have ordered the kits for use by employees who work in remote sites. They have requested credit terms and have been allowed to pay in the month following the sale. These large purchasers amount to about 25% of the sales at the present time. LPP purchases the materials for the kits about 2 months ahead of time. Megan and Sue are considering slowing the growth of the company by simply purchasing less materials, which will mean selling fewer kits.

The workers are paid weekly. Megan and Sue need about \$15,000 cash on hand at the beginning of the month to pay for purchases of raw materials. Right now they have been using cash from their savings, but as noted, only \$30,000 is left.

LIFE PROTECTION PRODUCTS
Cash Budget
For the Quarter Ending June 30, 2017

	April	May	June
Cash balance, beginning	\$15,000	\$15,000	\$15,000
Cash received			
From prior month sales	5,000	7,500	12,500
From current sales	15,000	22,500	37,500
Total cash on hand	35,000	45,000	65,000
Cash payments			
To employees	3,000	3,000	3,000
For products	25,000	35,000	45,000
Miscellaneous expenses	5,000	6,000	7,000
Postage	1,000	1,000	1,000
Total cash payments	34,000	45,000	56,000
Cash balance	\$ 1,000	\$ 0	\$ 9,000
Borrow from savings	\$14,000	\$15,000	\$ 1,000
Borrow from bank?	\$ 0	\$ 0	\$ 5,000

Instructions

Write a response to Megan Parcels. Explain why LPP is short of cash. Will this company be able to support itself? Explain your answer. Make any recommendations you deem appropriate.

Ethics Case

BYP23-5 You are an accountant in the budgetary, projections, and special projects department of Ferneti Conductor, Inc., a large manufacturing company. The president, Richard Brown, asks you on very short notice to prepare some sales and income projections covering the next 2 years of the company's much heralded new product lines. He wants these projections for a series of speeches he is making while on a 2-week trip to eight East Coast brokerage firms. The president hopes to bolster Ferneti's stock sales and price.

You work 23 hours in 2 days to compile the projections, hand-deliver them to the president, and are swiftly but graciously thanked as he departs. A week later, you find time to go over some of your computations and discover a miscalculation that makes the projections grossly overstated. You quickly inquire about the president's itinerary and learn that he has made half of his speeches and has half yet to make. You are in a quandary as to what to do.

Instructions

- (a) What are the consequences of telling the president of your gross miscalculations?
- (b) What are the consequences of not telling the president of your gross miscalculations?
- (c) What are the ethical considerations to you and the president in this situation?

All About You

BYP23-6 In order to get your personal finances under control, you need to prepare a personal budget. Assume that you have compiled the following information regarding your expected cash flows for a typical month.

Rent payment	\$ 500	Miscellaneous costs	\$210
Interest income	50	Savings	50
Income tax withheld	300	Eating out	150
Electricity bill	85	Telephone and Internet costs	125
Groceries	100	Student loan payments	375
Wages earned	2,500	Entertainment costs	250
Insurance	100	Transportation costs	150

Instructions

Using the information above, prepare a personal budget. In preparing this budget, use the format found at <http://financialplan.about.com/cs/budgeting/l/blbudget.htm>. Just skip any unused line items.

Considering Your Costs and Benefits

BYP23-7 You might hear people say that they “need to learn to live within a budget.” The funny thing is that most people who say this haven’t actually prepared a personal budget, nor do they intend to. Instead, what they are referring to is a vaguely defined, poorly specified collection of rough ideas of how much they should spend on various aspects of their lives. However, you can’t live within or even outside of something that doesn’t exist. With that in mind, let’s take a look at one aspect of personal-budget templates.

Many personal-budget worksheet templates that are provided for college students treat student loans as an income source. See, for example, the template provided at <http://financialplan.about.com/cs/budgeting/l/blmocolbud.htm>. Based on your knowledge of accounting, is this correct?

YES: Student loans provide a source of cash, which can be used to pay costs. As the saying goes, “It all spends the same.” Therefore, student loans are income.

NO: Student loans must eventually be repaid; therefore, they are not income. As the name suggests, they are loans.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

24

Budgetary Control and Responsibility Accounting

CHAPTER PREVIEW In Chapter 23, we discussed the use of budgets for planning. We now consider how budgets are used by management to control operations. In the Feature Story below on the **Tribeca Grand Hotel**, we see that management uses the budget to adapt to the business environment. This chapter focuses on two aspects of management control: (1) budgetary control and (2) responsibility accounting.

FEATURE STORY

Pumpkin Madeleines and a Movie

Perhaps no place in the world has a wider variety of distinctive, high-end accommodations than New York City. It's tough to set yourself apart in the Big Apple, but unique is what the **Tribeca Grand Hotel** is all about.

When you walk through the doors of this triangular-shaped building, nestled in one of Manhattan's most affluent neighborhoods, you immediately encounter a striking eight-story atrium. Although the hotel was completely renovated, it still maintains its funky mid-century charm. Just consider the always hip Church Bar. Besides serving up cocktails until 2 a.m., Church's also provides food. These are not the run-of-the-mill, chain hotel, borderline edibles. Church's chef is famous for tantalizing delectables such as duck rillettes, sea salt baked branzino, housemade pappardelle, and pumpkin madeleines.

Another thing that really sets the Tribeca Grand apart is its private screening room. As a guest, you can enjoy plush

leather seating, state-of-the-art projection, and digital surround sound, all while viewing a cult classic from the hotel's film series. In fact, on Sundays, free screenings are available to guests and non-guests alike on a first-come-first-served basis.

To attract and satisfy a discerning clientele, the Tribeca Grand's management incurs higher and more unpredictable costs than those of your standard hotel. As fun as it might be to run a high-end hotel, management can't be cavalier about spending money. To maintain profitability, management closely monitors costs and revenues to make sure that they track with budgeted amounts. Further, because of unexpected fluctuations (think Hurricane Sandy or a bitterly cold stretch of winter weather), management must sometimes revise forecasts and budgets and adapt quickly. To evaluate performance when things happen that are beyond management's control, the budget needs to be flexible.

 Watch the *Tribeca Grand* video in WileyPLUS to learn more about real-world budgeting.

Describe budgetary control and static budget reports.

Budgetary Control

One of management's functions is to control company operations. Control consists of the steps taken by management to see that planned objectives are met. We now ask: How do budgets contribute to control of operations?

The use of budgets in controlling operations is known as **budgetary control**. Such control takes place by means of **budget reports** that compare actual results with planned objectives. The use of budget reports is based on the belief that planned objectives lose much of their potential value without some monitoring of progress along the way. Just as your professors give midterm exams to evaluate your progress, top management requires periodic reports on the progress of department managers toward their planned objectives.

Budget reports provide management with feedback on operations. The feedback for a crucial objective, such as having enough cash on hand to pay bills, may be made daily. For other objectives, such as meeting budgeted annual sales and operating expenses, monthly budget reports may suffice. Budget reports are prepared as frequently as needed. From these reports, management analyzes any differences between actual and planned results and determines their causes. Management then takes corrective action, or it decides to modify future plans. Budgetary control involves the activities shown in Illustration 24-1.

Illustration 24-1
Budgetary control activities

Budgetary control works best when a company has a formalized reporting system. The system does the following:

1. Identifies the name of the budget report, such as the sales budget or the manufacturing overhead budget.
2. States the frequency of the report, such as weekly or monthly.
3. Specifies the purpose of the report.
4. Indicates the primary recipient(s) of the report.

Illustration 24-2 provides a partial budgetary control system for a manufacturing company. Note the frequency of the reports and their emphasis on control. For example, there is a daily report on scrap and a weekly report on labor.

<u>Name of Report</u>	<u>Frequency</u>	<u>Purpose</u>	<u>Primary Recipient(s)</u>
Sales	Weekly	Determine whether sales goals are met	Top management and sales manager
Labor	Weekly	Control direct and indirect labor costs	Vice president of production and production department managers
Scrap	Daily	Determine efficient use of materials	Production manager
Departmental overhead costs	Monthly	Control overhead costs	Department manager
Selling expenses	Monthly	Control selling expenses	Sales manager
Income statement	Monthly and quarterly	Determine whether income goals are met	Top management

Static Budget Reports

You learned in Chapter 23 that the master budget formalizes management's planned objectives for the coming year. When used in budgetary control, each budget included in the master budget is considered to be static. A **static budget** is a projection of budget data **at one level of activity**. These budgets do not consider data for different levels of activity. As a result, companies always compare actual results with budget data at the activity level that was used in developing the master budget.

EXAMPLES

To illustrate the role of a static budget in budgetary control, we will use selected data prepared for Hayes Company in Chapter 23. Budget and actual sales data for the Rightride product in the first and second quarters of 2017 are as follows.

<u>Sales</u>	<u>First Quarter</u>	<u>Second Quarter</u>	<u>Total</u>
Budgeted	\$180,000	\$210,000	\$390,000
Actual	179,000	199,500	378,500
Difference	\$ 1,000	\$ 10,500	\$ 11,500

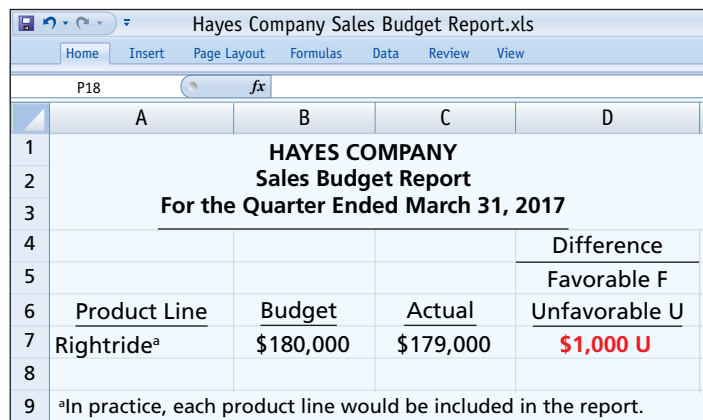

Illustration 24-2

Budgetary control reporting system

Illustration 24-3

Budget and actual sales data

The sales budget report for Hayes' first quarter is shown below. The rightmost column reports the difference between the budgeted and actual amounts.

	A	B	C	D
1	HAYES COMPANY			
2	Sales Budget Report			
3	For the Quarter Ended March 31, 2017			
4				Difference
5				Favorable F
6	<u>Product Line</u>	<u>Budget</u>	<u>Actual</u>	<u>Unfavorable U</u>
7	Rightride ^a	\$180,000	\$179,000	\$1,000 U
8				
9	^a In practice, each product line would be included in the report.			

Illustration 24-4

Sales budget report—first quarter

The report shows that sales are \$1,000 under budget—an unfavorable result. This difference is less than 1% of budgeted sales ($\$1,000 \div \$180,000 = .0056$). Top management's reaction to unfavorable differences is often influenced by the materiality (significance) of the difference. Since the difference of \$1,000 is immaterial in this case, we assume that Hayes management takes no specific corrective action.

Alternative Terminology

The difference between budget and actual is sometimes called a *budget variance*.

Illustration 24-5 shows the budget report for the second quarter. It contains one new feature: cumulative year-to-date information. This report indicates that sales for the second quarter are \$10,500 below budget. This is 5% of budgeted sales ($\$10,500 \div \$210,000$). Top management may now conclude that the difference between budgeted and actual sales requires investigation.

HAYES COMPANY Sales Budget Report For the Quarter Ended June 30, 2017							
	Second Quarter			Year-to-Date			
			Difference				Difference
			Favorable F				Favorable F
Product Line	Budget	Actual	Unfavorable U	Budget	Actual	Unfavorable U	
Rightride	\$210,000	\$199,500	\$10,500 U	\$390,000	\$378,500	\$11,500 U	

Illustration 24-5

Sales budget report—second quarter

Management's analysis should start by asking the sales manager the cause(s) of the shortfall. Managers should consider the need for corrective action. For example, management may decide to spur sales by offering sales incentives to customers or by increasing the advertising of Rightrides. Or, if management concludes that a downturn in the economy is responsible for the lower sales, it may modify planned sales and profit goals for the remainder of the year.

USES AND LIMITATIONS

From these examples, you can see that a master sales budget is useful in evaluating the performance of a sales manager. It is now necessary to ask: Is the master budget appropriate for evaluating a manager's performance in controlling costs? Recall that in a static budget, data are not modified or adjusted, regardless of changes in activity. It follows, then, that a static budget is appropriate in evaluating a manager's effectiveness in controlling costs when:

1. The actual level of activity closely approximates the master budget activity level, and/or
2. The behavior of the costs in response to changes in activity is fixed.

A static budget report is, therefore, appropriate for **fixed manufacturing costs** and for **fixed selling and administrative expenses**. But, as you will see shortly, static budget reports may not be a proper basis for evaluating a manager's performance in controlling variable costs.

DO IT!

1

Static Budget Reports

Lawler Company expects to produce 5,000 units of product CV93 during the current month. Budgeted variable manufacturing costs per unit are direct materials \$6, direct labor \$15, and overhead \$24. Monthly budgeted fixed manufacturing overhead costs are \$10,000 for depreciation and \$5,000 for supervision.

In the current month, Lawler actually produced 5,500 units and incurred the following costs: direct materials \$33,900, direct labor \$74,200, variable overhead \$120,500, depreciation \$10,000, and supervision \$5,000.

Prepare a static budget report. (*Hint:* The Budget column is based on estimated production of 5,000 units while the Actual column is the actual costs incurred during the period.) Were costs controlled? Discuss limitations of this budget.

Solution

	A	B	C	D	
1				Difference	
2				Favorable - F	
3				Unfavorable - U	
4	Production in units	Budget 5,000	Actual 5,500		
5					
6	Variable costs				
7	Direct materials (\$6)	\$ 30,000	\$ 33,900	\$3,900	U
8	Direct labor (\$15)	75,000	74,200	800	F
9	Overhead (\$24)	120,000	120,500	500	U
10	Total variable costs	225,000	228,600	3,600	U
11					
12	Fixed costs				
13	Depreciation	10,000	10,000	0	
14	Supervision	5,000	5,000	0	
15	Total fixed costs	15,000	15,000	0	
16	Total costs	\$240,000	\$243,600	\$3,600	U
17					
18					

The static budget indicates that actual variable costs exceeded budgeted amounts by \$3,600. Fixed costs were exactly as budgeted. The static budget gives the impression that the company did not control its variable costs. However, the static budget does not give consideration to the fact that the company produced 500 more units than planned. As a result, the static budget is not a good tool to evaluate variable costs. It is, however, a good tool to evaluate fixed costs as those should not vary with changes in production volume.

Related exercise material: **BE24-1, BE24-2, E24-1, E24-2, and DO IT! 24-1.**

Action Plan

- ✓ Classify each cost as variable or fixed.
- ✓ Determine the difference as favorable or unfavorable.
- ✓ Determine the difference in total variable costs, total fixed costs, and total costs.

LEARNING OBJECTIVE

2

Prepare flexible budget reports.

In contrast to a static budget, which is based on one level of activity, a **flexible budget** projects budget data for various levels of activity. In essence, **the flexible budget is a series of static budgets at different levels of activity**. The flexible budget recognizes that the budgetary process is more useful if it is adaptable to changed operating conditions.

Flexible budgets can be prepared for each of the types of budgets included in the master budget. For example, **Marriott Hotels** can budget revenues and net income on the basis of 60%, 80%, and 100% of room occupancy. Similarly, **American Van Lines** can budget its operating expenses on the basis of various levels of truck-miles driven. **Duke Energy** can budget revenue and net income on the basis of estimated billions of kwh (kilowatt hours) of residential, commercial, and industrial electricity generated. In the following pages, we will illustrate a flexible budget for manufacturing overhead.

Why Flexible Budgets?

Assume that you are the manager in charge of manufacturing overhead in the Assembly Department of Barton Robotics. In preparing the manufacturing

overhead budget for 2017, you prepare the following static budget based on a production volume of 10,000 units of robotic controls.

Illustration 24-6
Static overhead budget

BARTON ROBOTICS Manufacturing Overhead Budget (Static) Assembly Department For the Year Ended December 31, 2017	
Budgeted production in units (robotic controls)	10,000
Budgeted costs	
Indirect materials	\$ 250,000
Indirect labor	260,000
Utilities	190,000
Depreciation	280,000
Property taxes	70,000
Supervision	50,000
	\$1,100,000

Helpful Hint

The master budget described in Chapter 23 is based on a static budget.

Fortunately for the company, the demand for robotic controls has increased, and Barton produces and sells 12,000 units during the year rather than 10,000. You are elated! Increased sales means increased profitability, which should mean a bonus or a raise for you and the employees in your department. Unfortunately, a comparison of Assembly Department actual and budgeted costs has put you on the spot. The budget report is shown below.

Illustration 24-7
Overhead static budget report

BARTON ROBOTICS Manufacturing Overhead Static Budget Report For the Year Ended December 31, 2017				
			Difference	
	Budget	Actual	Favorable - F	Unfavorable - U
Production in units	10,000	12,000		
Costs				
Indirect materials	\$ 250,000	\$ 295,000	\$ 45,000	U
Indirect labor	260,000	312,000	52,000	U
Utilities	190,000	225,000	35,000	U
Depreciation	280,000	280,000	0	
Property taxes	70,000	70,000	0	
Supervision	50,000	50,000	0	
	\$1,100,000	\$1,232,000	\$132,000	U

This comparison uses budget data based on the original activity level (10,000 robotic controls). It indicates that the Assembly Department is significantly **over budget** for three of the six overhead costs. There is a total unfavorable difference of \$132,000, which is 12% over budget ($\$132,000 \div \$1,100,000$). Your supervisor is very unhappy. Instead of sharing in the company's success, you may find yourself looking for another job. What went wrong?

When you calm down and carefully examine the manufacturing overhead budget, you identify the problem: The budget data are not relevant! At the time the budget was developed, the company anticipated that only 10,000 units would be produced, **not** 12,000. Comparing actual with budgeted variable costs is meaningless. As production increases, the budget allowances for variable costs should increase proportionately. The variable costs in this example are indirect materials, indirect labor, and utilities.

Analyzing the budget data for these costs at 10,000 units, you arrive at the following per unit results.

<u>Item</u>	<u>Total Cost</u>	<u>Per Unit</u>
Indirect materials	\$250,000	\$25
Indirect labor	260,000	26
Utilities	190,000	19
	<u>\$700,000</u>	<u>\$70</u>

Helpful Hint

A static budget is not useful for performance evaluation if a company has substantial variable costs.

Illustration 24-8

Variable costs per unit

Illustration 24-9 calculates the budgeted variable costs at 12,000 units.

<u>Item</u>	<u>Computation</u>	<u>Total</u>
Indirect materials	$\$25 \times 12,000$	\$300,000
Indirect labor	$26 \times 12,000$	312,000
Utilities	$19 \times 12,000$	228,000
		<u>\$840,000</u>

Illustration 24-9

Budgeted variable costs, 12,000 units

Because fixed costs do not change in total as activity changes, the budgeted amounts for these costs remain the same. Illustration 24-10 shows the budget report based on the flexible budget for **12,000 units** of production. (Compare this with Illustration 24-7.)

20					

Illustration 24-10

Overhead flexible budget report

This report indicates that the Assembly Department's costs are **under budget**—a favorable difference. Instead of worrying about being fired, you may be in line for a bonus or a raise after all! As this analysis shows, the only appropriate comparison is between actual costs at 12,000 units of production and budgeted costs at 12,000 units. Flexible budget reports provide this comparison.

Developing the Flexible Budget

The flexible budget uses the master budget as its basis. To develop the flexible budget, management uses the following steps.

1. Identify the activity index and the relevant range of activity.
2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.
3. Identify the fixed costs, and determine the budgeted amount for each cost.
4. Prepare the budget for selected increments of activity within the relevant range.

The activity index chosen should significantly influence the costs being budgeted. For manufacturing overhead costs, for example, the activity index is usually the same as the index used in developing the predetermined overhead rate—that is, direct labor hours or machine hours. For selling and administrative expenses, the activity index usually is sales or net sales.

The choice of the increment of activity is largely a matter of judgment. For example, if the relevant range is 8,000 to 12,000 direct labor hours, increments of 1,000 hours may be selected. The flexible budget is then prepared for each increment within the relevant range.

Service Company Insight **NBCUniversal**

Fox Broadcasting Company/
Album/Newscom

Just What the Doctor Ordered?

Nobody is immune from the effects of declining revenues—not even movie stars. When the number of viewers of the television show “House,” a medical drama, declined by almost 20%, **Fox Broadcasting** said it wanted to cut the license fee that it paid to **NBCUniversal** by 20%. What would **NBCUniversal** do

in response? It might cut the size of the show's cast, which would reduce the payroll costs associated with the show. Or, it could reduce the number of episodes that take advantage of the full cast. Alternatively, it might threaten to quit providing the show to Fox altogether and instead present the show on its own NBC-affiliated channels.

Source: Sam Schechner, “Media Business Shorts: NBCU, Fox Taking Scalpel to ‘House,’” *Wall Street Journal Online* (April 17, 2011).

[Explain how the use of flexible budgets might help to identify the best solution to this problem. \(Go to WileyPLUS for this answer and additional questions.\)](#)

Flexible Budget—A Case Study

To illustrate the flexible budget, we use Fox Company. Fox's management uses a **flexible budget for monthly comparisons** of actual and budgeted manufacturing overhead costs of the Finishing Department. The master budget for the year ending December 31, 2017, shows expected **annual** operating capacity of 120,000 direct labor hours and the following overhead costs.

Variable Costs		Fixed Costs	
Indirect materials	\$180,000	Depreciation	\$180,000
Indirect labor	240,000	Supervision	120,000
Utilities	60,000	Property taxes	60,000
Total	<u>\$480,000</u>	Total	<u>\$360,000</u>

Illustration 24-11
Master budget data

The four steps for developing the flexible budget are applied as follows.

STEP 1. Identify the activity index and the relevant range of activity. The activity index is direct labor hours. The relevant range is 8,000–12,000 direct labor hours per **month**.

STEP 2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. There are three variable costs. The variable cost per unit is found by dividing each total budgeted cost by the direct labor hours used in preparing the annual master budget (120,000 hours). Illustration 24-12 shows the computations for Fox Company.

Variable Costs	Computation	Variable Cost per Direct Labor Hour
Indirect materials	$\$180,000 \div 120,000$	\$1.50
Indirect labor	$\$240,000 \div 120,000$	2.00
Utilities	$\$ 60,000 \div 120,000$	0.50
Total		<u>\$4.00</u>

Illustration 24-12
Computation of variable cost per direct labor hour

STEP 3. Identify the fixed costs, and determine the budgeted amount for each cost. There are three fixed costs. Since Fox desires **monthly budget data**, it divides each annual budgeted cost by 12 to find the monthly amounts. Therefore, the monthly budgeted fixed costs are depreciation \$15,000, supervision \$10,000, and property taxes \$5,000.

STEP 4. Prepare the budget for selected increments of activity within the relevant range. Management prepares the budget in increments of 1,000 direct labor hours.

Illustration 24-13 shows Fox's flexible budget.

FOX COMPANY						
Monthly Manufacturing Overhead Flexible Budget						
Finishing Department						
For Months During the Year 2017						
Activity level						
Direct labor hours	8,000	9,000	10,000	11,000	12,000	
Variable costs						
Indirect materials (\$1.50) ^a	\$12,000 ^b	\$13,500	\$15,000	\$16,500	\$18,000	
Indirect labor (\$2.00) ^a	16,000 ^c	18,000	20,000	22,000	24,000	
Utilities (\$0.50) ^a	4,000 ^d	4,500	5,000	5,500	6,000	
Total variable costs	32,000	36,000	40,000	44,000	48,000	
Fixed costs						
Depreciation	15,000	15,000	15,000	15,000	15,000	
Supervision	10,000	10,000	10,000	10,000	10,000	
Property taxes	5,000	5,000	5,000	5,000	5,000	
Total fixed costs	30,000	30,000	30,000	30,000	30,000	
Total costs	\$62,000	\$66,000	\$70,000	\$74,000	\$78,000	
^a Cost per direct labor hour; ^b 8,000 x \$1.50; ^c 8,000 x \$2.00; ^d 8,000 x \$0.50						

Illustration 24-13
Monthly overhead flexible budget

Fox uses the formula below to determine total budgeted costs at any level of activity.

Illustration 24-14

Formula for total budgeted costs

$$\text{Fixed Costs} + \text{Variable Costs*} = \text{Total Budgeted Costs}$$

*Total variable cost per unit of activity \times Activity level.

Helpful Hint

Using the data given for Fox, the amount of total costs to be budgeted for 10,600 direct labor hours would be \$30,000 fixed + \$42,400 variable ($10,600 \times \$4$) = \$72,400 total.

For Fox, fixed costs are \$30,000, and total variable cost per direct labor hour is \$4 (\$1.50 + \$2.00 + \$0.50). At 9,000 direct labor hours, total budgeted costs are \$66,000 [$\$30,000 + (\$4 \times 9,000)$]. At 8,622 direct labor hours, total budgeted costs are \$64,488 [$\$30,000 + (\$4 \times 8,622)$].

Total budgeted costs can also be shown graphically, as in Illustration 24-15. In the graph, the horizontal axis represents the activity index, and costs are indicated on the vertical axis. The graph highlights two activity levels (10,000 and 12,000). As shown, total budgeted costs at these activity levels are \$70,000 [$\$30,000 + (\$4 \times 10,000)$] and \$78,000 [$\$30,000 + (\$4 \times 12,000)$], respectively.

Illustration 24-15

Graphic flexible budget data highlighting 10,000 and 12,000 activity levels

**Flexible Budget Reports**

Flexible budget reports are another type of internal report. The flexible budget report consists of two sections: (1) production data for a selected activity index, such as direct labor hours, and (2) cost data for variable and fixed costs. The report provides a basis for evaluating a manager's performance in two areas: production control and cost control. Flexible budget reports are widely used in production and service departments.

Illustration 24-16 shows a budget report for the Finishing Department of Fox Company for the month of January. In this month, 9,000 hours are worked. The budget data are therefore based on the flexible budget for 9,000 hours in Illustration 24-13 (page 1115). The actual cost data are assumed.

How appropriate is this report in evaluating the Finishing Department manager's performance in controlling overhead costs? The report clearly provides a reliable basis. Both actual and budget costs are based on the activity level worked during January. Since variable costs generally are incurred directly by the department, the difference between the budget allowance for those hours and the actual costs is the responsibility of the department manager.

FOX COMPANY				
Manufacturing Overhead Flexible Budget Report				
Finishing Department				
For the Month Ended January 31, 2017				
			Difference	
	Budget at	Actual costs at	Favorable - F	Unfavorable - U
Direct labor hours (DLH)	9,000 DLH	9,000 DLH		
Variable costs				
Indirect materials (\$1.50) ^a	\$13,500	\$14,000	\$ 500	U
Indirect labor (\$2.00) ^a	18,000	17,000	1,000	F
Utilities (\$0.50) ^a	4,500	4,600	100	U
Total variable costs	36,000	35,600	400	F
Fixed costs				
Depreciation	15,000	15,000	0	
Supervision	10,000	10,000	0	
Property taxes	5,000	5,000	0	
Total fixed costs	30,000	30,000	0	
Total costs	\$66,000	\$65,600	\$ 400	F
^a Cost per direct labor hour				

Illustration 24-16
Overhead flexible budget report

In subsequent months, Fox Company will prepare other flexible budget reports. For each month, the budget data are based on the actual activity level attained. In February that level may be 11,000 direct labor hours, in July 10,000, and so on.

Note that this flexible budget is based on a single cost driver. A more accurate budget often can be developed using the activity-based costing concepts explained in Chapter 18.

Service Company Insight San Diego Zoo

Eric Isselée/iStockphoto

Budgets and the Exotic Newcastle Disease

Exotic Newcastle Disease, one of the most infectious bird diseases in the world, kills so swiftly that many victims die before any symptoms appear. When it broke out in Southern California, it could have spelled disaster for the **San Diego Zoo**. "We have one of the most valuable collections of birds in the world, if not the most valuable," says Paula Brock, CFO of the Zoological Society of San Diego, which operates the zoo.

Bird exhibits were closed to the public for several months (the disease, which is harmless to humans, can be carried on clothes and shoes). The tires of arriving delivery trucks were sanitized, as were the shoes of anyone visiting the zoo's nonpublic areas. Zookeeper uniforms had to be

changed and cleaned daily. And ultimately, the zoo, with \$150 million in revenues, spent almost half a million dollars on quarantine measures.

It worked: No birds got sick. Better yet, the damage to the rest of the zoo's budget was minimized by another protective measure: the monthly budget reforecast. "When we get a hit like this, we still have to find a way to make our bottom line," says Brock. Thanks to a new planning process Brock had introduced a year earlier, the zoo's scientists were able to raise the financial alarm as they redirected resources to ward off the disease. "Because we had timely awareness," she says, "we were able to make adjustments to weather the storm."

Source: Tim Reason, "Budgeting in the Real World," *CFO Magazine* (July 12, 2005), www.cfodirect.com/cfopublic.nsf/vContentPrint/649A82C8FF8AB06B85257037004 (accessed July 2005).

What is the major benefit of tying a budget to the overall goals of the company? (Go to WileyPLUS for this answer and additional questions.)

DO IT!**2****Flexible Budgets**

In Strassel Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$36,000. The total budgeted cost line is \$186,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 30,000 direct labor hours.

**Action Plan**

- ✓ Apply the formula:
 Fixed costs + Variable costs (Total variable cost per unit \times Activity level) = Total budgeted costs.

Solution

Using the graph, fixed costs are \$36,000, and variable costs are \$3 per direct labor hour $[(\$186,000 - \$36,000) \div 50,000]$. Thus, at 30,000 direct labor hours, total budgeted costs are \$126,000 $[\$36,000 + (\$3 \times 30,000)]$.

LEARNING OBJECTIVE**3****Apply responsibility accounting to cost and profit centers.**

Like budgeting, responsibility accounting is an important part of management accounting. **Responsibility accounting** involves accumulating and reporting costs (and revenues, where relevant) on the basis of the manager who has the authority to make the day-to-day decisions about the items. Under responsibility accounting, a manager's performance is evaluated on matters directly under that manager's control. Responsibility accounting can be used at every level of management in which the following conditions exist.

1. Costs and revenues can be directly associated with the specific level of management responsibility.
2. The costs and revenues can be controlled by employees at the level of responsibility with which they are associated.
3. Budget data can be developed for evaluating the manager's effectiveness in controlling the costs and revenues.

Illustration 24-17 depicts levels of responsibility for controlling costs.

Under responsibility accounting, any individual who controls a specified set of activities can be a responsibility center. Thus, responsibility accounting may

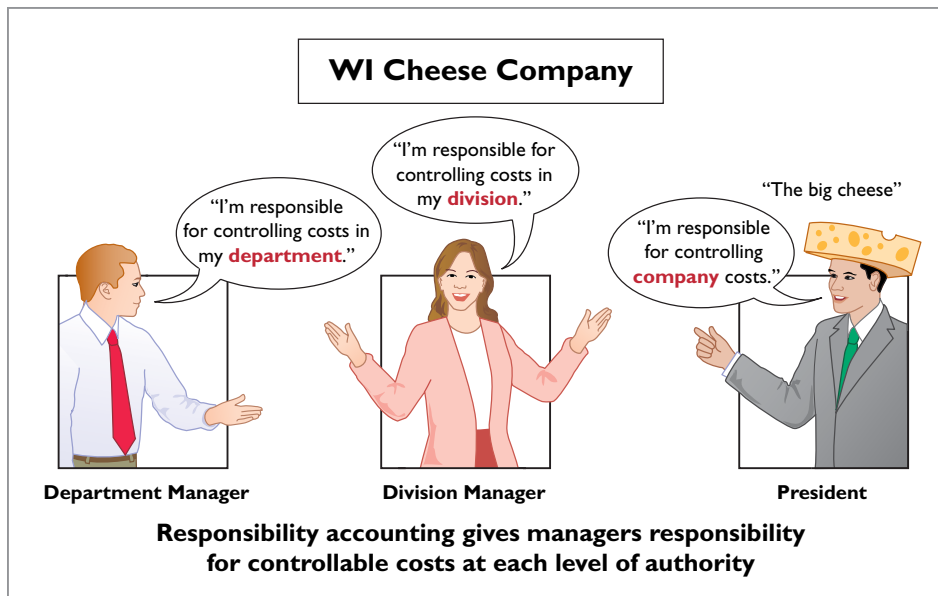

Illustration 24-17
Responsibility for controllable costs at varying levels of management

extend from the lowest level of control to the top strata of management. Once responsibility is established, the company first measures and reports the effectiveness of the individual's performance for the specified activity. It then reports that measure upward throughout the organization.

Responsibility accounting is especially valuable in a decentralized company. **Decentralization** means that the control of operations is delegated to many managers throughout the organization. The term **segment** is sometimes used to identify an area of responsibility in decentralized operations. Under responsibility accounting, companies prepare segment reports periodically, such as monthly, quarterly, and annually, to evaluate managers' performance.

Responsibility accounting is an essential part of any effective system of budgetary control. The reporting of costs and revenues under responsibility accounting differs from budgeting in two respects:

1. A distinction is made between controllable and noncontrollable items.
2. Performance reports either emphasize or include only items controllable by the individual manager.

Responsibility accounting applies to both profit and not-for-profit entities. For-profit entities seek to maximize net income. Not-for-profit entities wish to provide services as efficiently as possible.

Helpful Hint

All companies use responsibility accounting. Without some form of responsibility accounting, there would be chaos in discharging management's control function.

Management Insight Procter & Gamble

Khuong Hoang/iStockphoto

Competition versus Collaboration

Many compensation and promotion programs encourage competition among employees for pay raises.

To get ahead, you have to perform better than your fellow employees. While this may encourage hard work, it does not foster collaboration, and it can lead to distrust and disloyalty. Such negative effects have led some companies to believe that cooperation and collaboration, not competition, are essential in order to succeed in today's work environment.

As a consequence, many companies now explicitly include measures of collaboration in their performance measures. For example, **Procter & Gamble** measures collaboration in employees' annual performance reviews. At **Cisco Systems**, the assessment of an employee's teamwork can affect the annual bonus by as much as 20%.

Source: Carol Hymowitz, "Rewarding Competitors Over Collaboration No Longer Makes Sense," *Wall Street Journal* (February 13, 2006).

How might managers of separate divisions be able to reduce division costs through collaboration? (Go to **WileyPLUS** for this answer and additional questions.)

Helpful Hint

There are more, not fewer, controllable costs as you move to higher levels of management.

Helpful Hint

The longer the time span, the more likely that the cost becomes controllable.

Controllable versus Noncontrollable Revenues and Costs

All costs and revenues are controllable at some level of responsibility within a company. This truth underscores the adage by the CEO of any organization that “the buck stops here.” Under responsibility accounting, the critical issue is **whether the cost or revenue is controllable at the level of responsibility with which it is associated**. A cost over which a manager has control is called a **controllable cost**. From this definition, it follows that:

1. All costs are controllable by top management because of the broad range of its authority.
2. Fewer costs are controllable as one moves down to each lower level of managerial responsibility because of the manager’s decreasing authority.

In general, **costs incurred directly by a level of responsibility are controllable at that level**. In contrast, costs incurred indirectly and allocated to a responsibility level are **noncontrollable costs** at that level.

Principles of Performance Evaluation

Performance evaluation is at the center of responsibility accounting. It is a management function that compares actual results with budget goals. It involves both behavioral and reporting principles.

MANAGEMENT BY EXCEPTION

Management by exception means that top management’s review of a budget report is focused either entirely or primarily on differences between actual results and planned objectives. This approach enables top management to focus on problem areas. For example, many companies now use online reporting systems for employees to file their travel and entertainment expense reports. In addition to cutting reporting time in half, the online system enables managers to quickly analyze variances from travel budgets. This cuts down on expense account “padding” such as spending too much on meals or falsifying documents for costs that were never actually incurred.

Management by exception does not mean that top management will investigate every difference. For this approach to be effective, there must be guidelines for identifying an exception. The usual criteria are materiality and controllability.

MATERIALITY Without quantitative guidelines, management would have to investigate every budget difference regardless of the amount. Materiality is usually expressed as a percentage difference from budget. For example, management may set the percentage difference at 5% for important items and 10% for other items. Managers will investigate all differences either over or under budget by the specified percentage. Costs over budget warrant investigation to determine why they were not controlled. Likewise, costs under budget merit investigation to determine whether costs critical to profitability are being curtailed. For example, if maintenance costs are budgeted at \$80,000 but only \$40,000 is spent, major unexpected breakdowns in productive facilities may occur in the future. Alternatively, as discussed earlier, cost might be under budget due to budgetary slack.

Alternatively, a company may specify a single percentage difference from budget for all items and supplement this guideline with a minimum dollar limit. For example, the exception criteria may be stated at 5% of budget or more than \$10,000.

CONTROLLABILITY OF THE ITEM Exception guidelines are more restrictive for controllable items than for items the manager cannot control. In fact, there may

be no guidelines for noncontrollable items. For example, a large unfavorable difference between actual and budgeted property tax expense may not be flagged for investigation because the only possible causes are an unexpected increase in the tax rate or in the assessed value of the property. An investigation into the difference would be useless: The manager cannot control either cause.

BEHAVIORAL PRINCIPLES

The human factor is critical in evaluating performance. Behavioral principles include the following.

1. **Managers of responsibility centers should have direct input into the process of establishing budget goals of their area of responsibility.** Without such input, managers may view the goals as unrealistic or arbitrarily set by top management. Such views adversely affect the managers' motivation to meet the targeted objectives.
2. **The evaluation of performance should be based entirely on matters that are controllable by the manager being evaluated.** Criticism of a manager on matters outside his or her control reduces the effectiveness of the evaluation process. It leads to negative reactions by a manager and to doubts about the fairness of the company's evaluation policies.
3. **Top management should support the evaluation process.** As explained earlier, the evaluation process begins at the lowest level of responsibility and extends upward to the highest level of management. Managers quickly lose faith in the process when top management ignores, overrules, or bypasses established procedures for evaluating a manager's performance.
4. **The evaluation process must allow managers to respond to their evaluations.** Evaluation is not a one-way street. Managers should have the opportunity to defend their performance. Evaluation without feedback is both impersonal and ineffective.
5. **The evaluation should identify both good and poor performance.** Praise for good performance is a powerful motivating factor for a manager. This is especially true when a manager's compensation includes rewards for meeting budget goals.

REPORTING PRINCIPLES

Performance evaluation under responsibility accounting should be based on certain reporting principles. These principles pertain primarily to the internal reports that provide the basis for evaluating performance. Performance reports should:

1. Contain only data that are controllable by the manager of the responsibility center.
2. Provide accurate and reliable budget data to measure performance.
3. Highlight significant differences between actual results and budget goals.
4. Be tailor-made for the intended evaluation.
5. Be prepared at reasonable time intervals.

In recent years, companies have come under increasing pressure from influential shareholder groups to do a better job of linking executive pay to corporate performance. For example, software maker **Siebel Systems** unveiled a new incentive plan after lengthy discussions with the California Public Employees' Retirement System. One unique feature of the plan is that managers' targets will be publicly disclosed at the beginning of each year for investors to evaluate.

Management Insight Honda

Kyodo/AP/Wide World Photos

Flexible Manufacturing Requires Flexible Accounting

Flexible budgeting is useful because it enables managers to evaluate performance in light of changing conditions. But the ability to react quickly to changing conditions is even more important. Among automobile manufacturing facilities in the U.S., few plants are more flexible than **Honda**.

The manufacturing facilities of some auto companies can make slight alterations to the features of a vehicle in response to changes in demand for particular features. But for most plants, to switch from production of one type of

vehicle to a completely different one typically takes months and costs hundreds of millions of dollars. At the Honda plant, however, the switch takes minutes. For example, it takes about five minutes to install different hand-like parts on the robots so they can switch from making Civic compacts to the longer, taller CR-V crossover. This ability to adjust quickly to changing demand gave Honda a huge advantage when gas prices surged and demand for more fuel-efficient cars increased quickly.

Source: Kate Linebaugh, "Honda's Flexible Plants Provide Edge," *Wall Street Journal Online* (September 23, 2008).

What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? (Go to **WileyPLUS** for this answer and additional questions.)

Responsibility Reporting System

A **responsibility reporting system** involves the preparation of a report for each level of responsibility in the company's organization chart. To illustrate such a system, we use the partial organization chart and production departments of Francis Chair Company in Illustration 24-18.

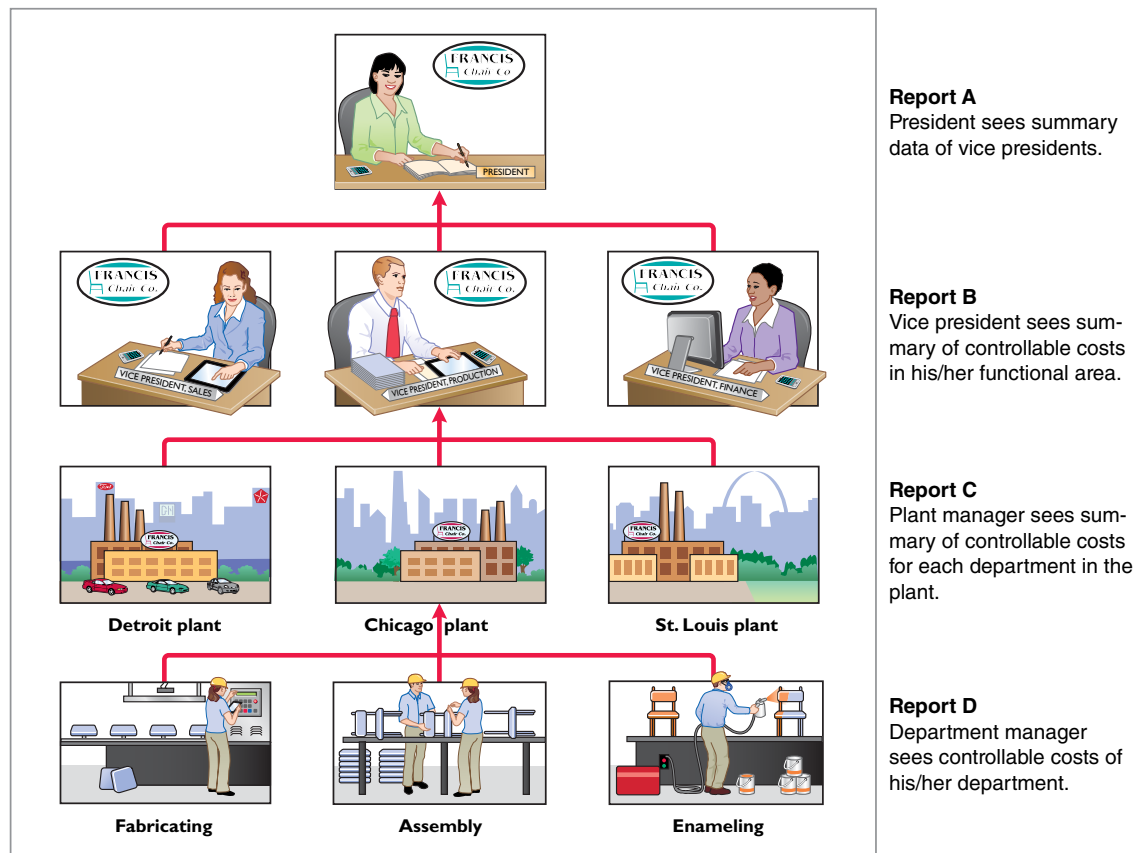

Illustration 24-18
Partial organization chart

The responsibility reporting system begins with the lowest level of responsibility for controlling costs and moves upward to each higher level. Illustration 24-19 details the connections between levels.

A brief description of the four reports for Francis Chair is as follows.

1. **Report D** is typical of reports that go to department managers. Similar reports are prepared for the managers of the Assembly and Enameling Departments.
2. **Report C** is an example of reports that are sent to plant managers. It shows the costs of the Chicago plant that are controllable at the second level of responsibility. In addition, Report C shows summary data for each department that is controlled by the plant manager. Similar reports are prepared for the Detroit and St. Louis plant managers.
3. **Report B** illustrates the reports at the third level of responsibility. It shows the controllable costs of the vice president of production and summary data on the three assembly plants for which this officer is responsible. Similar reports are prepared for the vice presidents of sales and finance.
4. **Report A** is typical of reports that go to the top level of responsibility—the president. It shows the controllable costs and expenses of this office and summary data on the vice presidents that are accountable to the president.

A responsibility reporting system permits management by exception at each level of responsibility. And, each higher level of responsibility can obtain the detailed report for each lower level of responsibility. For example, the vice president of production in Francis Chair may request the Chicago plant manager's report because this plant is \$5,300 over budget.

This type of reporting system also permits comparative evaluations. In Illustration 24-19, the Chicago plant manager can easily rank the department managers' effectiveness in controlling manufacturing costs. Comparative rankings provide further incentive for a manager to control costs.

Types of Responsibility Centers

There are three basic types of responsibility centers: cost centers, profit centers, and investment centers. These classifications indicate the degree of responsibility the manager has for the performance of the center.

A **cost center** incurs costs (and expenses) but does not directly generate revenues. Managers of cost centers have the authority to incur costs. They are evaluated on their ability to control costs. **Cost centers are usually either production departments or service departments.** Production departments participate directly in making the product. Service departments provide only support services. In a **Ford Motor Company** automobile plant, the welding, painting, and assembling departments are production departments. Ford's maintenance, cafeteria, and human resources departments are service departments. All of them are cost centers.

A **profit center** incurs costs (and expenses) and also generates revenues. Managers of profit centers are judged on the profitability of their centers. Examples of profit centers include the individual departments of a retail store, such as clothing, furniture, and automotive products, and branch offices of banks.

Like a profit center, an **investment center** incurs costs (and expenses) and generates revenues. In addition, an investment center has control over decisions regarding the assets available for use. Investment center managers are evaluated on both the profitability of the center and the rate of return earned on the funds invested. Investment centers are often associated with subsidiary companies. Utility **Duke Energy** has operating divisions such as electric utility, energy trading, and natural gas. Investment center managers control or significantly influence investment decisions related to such matters as plant expansion and entry into new market areas. Illustration 24-20 depicts the three types of responsibility centers.

Helpful Hint

The jewelry department of **Macy's** department store is a profit center, while the props department of a movie studio is a cost center.

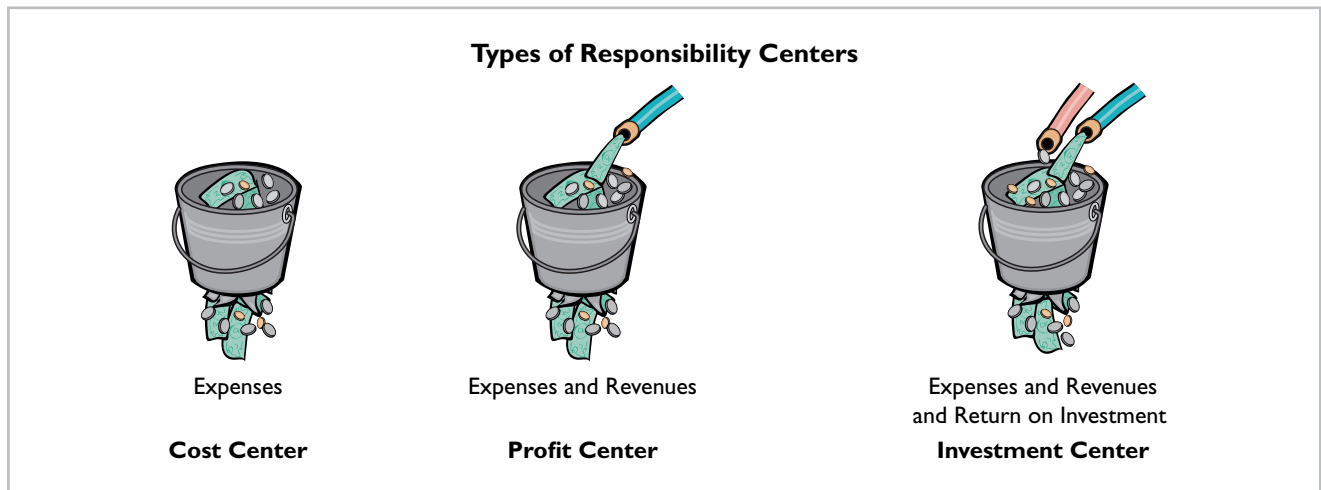

Illustration 24-20
Types of responsibility centers

RESPONSIBILITY ACCOUNTING FOR COST CENTERS

The evaluation of a manager's performance for cost centers is based on his or her ability to meet budgeted goals for controllable costs. **Responsibility reports for cost centers compare actual controllable costs with flexible budget data.**

Illustration 24-21 shows a responsibility report. The report is adapted from the flexible budget report for Fox Company in Illustration 24-16 (page 1117). It assumes that the Finishing Department manager is able to control all manufacturing overhead costs except depreciation, property taxes, and his own monthly salary of \$6,000. The remaining \$4,000 (\$10,000 – \$6,000) of supervision costs are assumed to apply to other supervisory personnel within the Finishing Department, whose salaries are controllable by the manager.

FOX COMPANY Finishing Department Responsibility Report For the Month Ended January 31, 2017				
Controllable Costs	Budget	Actual	Difference Favorable - F Unfavorable - U	
Indirect materials	\$13,500	\$14,000	\$ 500	U
Indirect labor	18,000	17,000	\$1,000	F
Utilities	4,500	4,600	100	U
Supervision	4,000	4,000	0	
Total	\$40,000	\$39,600	\$ 400	F

Illustration 24-21
Responsibility report for a cost center

The report in Illustration 24-21 includes **only controllable costs**, and no distinction is made between variable and fixed costs. The responsibility report continues the concept of management by exception. In this case, top management may request an explanation of the \$1,000 favorable difference in indirect labor and/or the \$500 unfavorable difference in indirect materials.

RESPONSIBILITY ACCOUNTING FOR PROFIT CENTERS

To evaluate the performance of a profit center manager, upper management needs detailed information about both controllable revenues and controllable costs. The operating revenues earned by a profit center, such as sales, are controllable by the

manager. All variable costs (and expenses) incurred by the center are also controllable by the manager because they vary with sales. However, to determine the controllability of fixed costs, it is necessary to distinguish between direct and indirect fixed costs.

DIRECT AND INDIRECT FIXED COSTS A profit center may have both direct and indirect fixed costs. **Direct fixed costs** relate specifically to one center and are incurred for the sole benefit of that center. Examples of such costs include the salaries established by the profit center manager for supervisory personnel and the cost of a timekeeping department for the center's employees. Since these fixed costs can be traced directly to a center, they are also called **traceable costs**. **Most direct fixed costs are controllable by the profit center manager.**

In contrast, **indirect fixed costs** pertain to a company's overall operating activities and are incurred for the benefit of more than one profit center. Management allocates indirect fixed costs to profit centers on some type of equitable basis. For example, property taxes on a building occupied by more than one center may be allocated on the basis of square feet of floor space used by each center. Or, the costs of a company's human resources department may be allocated to profit centers on the basis of the number of employees in each center. Because these fixed costs apply to more than one center, they are also called **common costs**. **Most indirect fixed costs are not controllable by the profit center manager.**

Helpful Hint

Recognize that we are emphasizing *financial* measures of performance. Companies are now making an effort to also stress *nonfinancial* performance measures such as product quality, labor productivity, market growth, materials' yield, manufacturing flexibility, and technological capability.

RESPONSIBILITY REPORT The responsibility report for a profit center shows budgeted and actual **controllable revenues and costs**. The report is prepared using the cost-volume-profit income statement explained in Chapter 19. In the report:

1. Controllable fixed costs are deducted from contribution margin.
2. The excess of contribution margin over controllable fixed costs is identified as **controllable margin**.
3. Noncontrollable fixed costs are not reported.

Illustration 24-22 shows the responsibility report for the manager of the Marine Division, a profit center of Mantle Company. For the year, the Marine Division also had \$60,000 of indirect fixed costs that were not controllable by the profit center manager.

Illustration 24-22

MANTLE COMPANY Marine Division Responsibility Report For the Year Ended December 31, 2017					
	Budget	Actual	Difference Favorable - F Unfavorable - U		
Sales	\$1,200,000	\$1,150,000	\$50,000		U
Variable costs					
Cost of goods sold	500,000	490,000	10,000		F
Selling and administrative	160,000	156,000	4,000		F
Total	660,000	646,000	14,000		F
Contribution margin	540,000	504,000	36,000		U
Controllable fixed costs					
Cost of goods sold	100,000	100,000	0		
Selling and administrative	80,000	80,000	0		
Total	180,000	180,000	0		
Controllable margin	\$ 360,000	\$ 324,000	\$36,000		U

Controllable margin is considered to be the best measure of the manager's performance **in controlling revenues and costs**. The report in Illustration 24-22 shows that the manager's performance was below budgeted expectations by 10% ($\$36,000 \div \$360,000$). Top management would likely investigate the causes of this unfavorable result. Note that the report does not show the Marine Division's noncontrollable fixed costs of \$60,000. These costs would be included in a report on the profitability of the profit center.

Management also may choose to see **monthly** responsibility reports for profit centers. In addition, responsibility reports may include cumulative year-to-date results.

DO IT! 3 Profit Center Responsibility Report

Midwest Division operates as a profit center. It reports the following for the year:

	<u>Budget</u>	<u>Actual</u>
Sales	\$1,500,000	\$1,700,000
Variable costs	700,000	800,000
Controllable fixed costs	400,000	400,000
Noncontrollable fixed costs	200,000	200,000

Prepare a responsibility report for the Midwest Division for December 31, 2017.

Solution

MIDWEST DIVISION Responsibility Report For the Year Ended December 31, 2017					
	Budget	Actual	Difference		
			Favorable F Unfavorable U		
Sales	\$1,500,000	\$1,700,000	\$200,000		F
Variable costs	700,000	800,000	100,000		U
Contribution margin	800,000	900,000	100,000		F
Controllable fixed costs	400,000	400,000	0		
Controllable margin	\$ 400,000	\$ 500,000	\$100,000		F

Action Plan

- ✓ Deduct variable costs from sales to show contribution margin.
- ✓ Deduct controllable fixed costs from the contribution margin to show controllable margin.
- ✓ Do not report noncontrollable fixed costs.

LEARNING OBJECTIVE

4

Evaluate performance in investment centers.

As explained earlier, an investment center manager can control or significantly influence the investment funds available for use. Thus, the primary basis for evaluating the performance of a manager of an investment center is **return on investment (ROI)**. The return on investment is considered to be a useful performance measurement because it shows the **effectiveness of the manager in utilizing the assets at his or her disposal**.

Return on Investment (ROI)

The formula for computing ROI for an investment center, together with assumed illustrative data, is shown in Illustration 24-23 (page 1128).

Illustration 24-23
ROI formula

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
\$1,000,000	÷	\$5,000,000	=	20%

Both factors in the formula are controllable by the investment center manager. Operating assets consist of current assets and plant assets used in operations by the center and controlled by the manager. Nonoperating assets such as idle plant assets and land held for future use are excluded. Average operating assets are usually based on the cost or book value of the assets at the beginning and end of the year.

Responsibility Report

The scope of the investment center manager's responsibility significantly affects the content of the performance report. Since an investment center is an independent entity for operating purposes, **all fixed costs are controllable by its manager**. For example, the manager is responsible for depreciation on investment center assets. Therefore, more fixed costs are identified as controllable in the performance report for an investment center manager than in a performance report for a profit center manager. The report also shows budgeted and actual ROI below controllable margin.

To illustrate this responsibility report, we will now assume that the Marine Division of Mantle Company is an investment center. It has budgeted and actual average operating assets of \$2,000,000. The manager can control \$60,000 of fixed costs that were not controllable when the division was a profit center. Illustration 24-24 shows the division's responsibility report.

Illustration 24-24
Responsibility report for
investment center

MANTLE COMPANY Marine Division Responsibility Report For the Year Ended December 31, 2017				
	Budget	Actual	Difference Favorable - F Unfavorable - U	
Sales	\$ 1,200,000	\$ 1,150,000	\$ 50,000	U
Variable costs				
Cost of goods sold	500,000	490,000	10,000	F
Selling and administrative	160,000	156,000	4,000	F
Total	660,000	646,000	14,000	F
Contribution margin	540,000	504,000	36,000	U
Controllable fixed costs				
Cost of goods sold	100,000	100,000	0	
Selling and administrative	80,000	80,000	0	
Other fixed costs	60,000	60,000	0	
Total	240,000	240,000	0	
Controllable margin	\$ 300,000	\$ 264,000	\$ 36,000	U
Return on investment	15.0%	13.2%	1.8%	U
	(a)	(b)	(c)	
	(a) \$ 300,000	(b) \$ 264,000	(c) \$ 36,000	
	\$2,000,000	\$2,000,000	\$2,000,000	

The report shows that the manager's performance based on ROI was below budget expectations by 1.8% (15.0% versus 13.2%). Top management would likely want explanations for this unfavorable result.

Judgmental Factors in ROI

The return on investment approach includes two judgmental factors:

- 1. Valuation of operating assets.** Operating assets may be valued at acquisition cost, book value, appraised value, or fair value. The first two bases are readily available from the accounting records.
- 2. Margin (income) measure.** This measure may be controllable margin, income from operations, or net income.

Each of the alternative values for operating assets can provide a reliable basis for evaluating a manager's performance as long as it is consistently applied between reporting periods. However, the use of income measures other than controllable margin will not result in a valid basis for evaluating the performance of an investment center manager.

Improving ROI

The manager of an investment center can improve ROI by increasing controllable margin, and/or reducing average operating assets. To illustrate, we will use the following assumed data for the Laser Division of Berra Company.

Sales	\$2,000,000
Variable costs	1,100,000
Contribution margin (45%)	900,000
Controllable fixed costs	300,000
Controllable margin (a)	<u>\$ 600,000</u>
Average operating assets (b)	\$5,000,000
Return on investment (a) ÷ (b)	12%

Illustration 24-25
Assumed data for Laser Division

INCREASING CONTROLLABLE MARGIN

Controllable margin can be increased by increasing sales or by reducing variable and controllable fixed costs as follows.

- 1. Increase sales 10%.** Sales will increase \$200,000 ($\$2,000,000 \times .10$). Assuming no change in the contribution margin percentage of 45%, contribution margin will increase \$90,000 ($\$200,000 \times .45$). Controllable margin will increase by the same amount because controllable fixed costs will not change. Thus, controllable margin becomes \$690,000 ($\$600,000 + \$90,000$). The new ROI is 13.8%, computed as follows.

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$690,000}{\$5,000,000} = \mathbf{13.8\%}$$

Illustration 24-26
ROI computation—increase in sales

An increase in sales benefits both the investment center and the company if it results in new business. It would not benefit the company if the increase was achieved at the expense of other investment centers.

- 2. Decrease variable and fixed costs 10%.** Total costs decrease \$140,000 [$(\$1,100,000 + \$300,000) \times .10$]. This reduction results in a corresponding increase in controllable margin. Thus, controllable margin becomes \$740,000 ($\$600,000 + \$140,000$). The new ROI is 14.8%, computed as follows.

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$740,000}{\$5,000,000} = \mathbf{14.8\%}$$

Illustration 24-27
ROI computation—decrease in costs

This course of action is clearly beneficial when the reduction in costs is the result of eliminating waste and inefficiency. But, a reduction in costs that results from cutting expenditures on vital activities, such as required maintenance and inspections, is not likely to be acceptable to top management.

REDUCING AVERAGE OPERATING ASSETS

Assume that average operating assets are reduced 10% or \$500,000 ($\$5,000,000 \times .10$). Average operating assets become \$4,500,000 ($\$5,000,000 - \$500,000$). Since controllable margin remains unchanged at \$600,000, the new ROI is 13.3%, computed as follows.

Illustration 24-28

ROI computation—decrease in operating assets

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$600,000}{\$4,500,000} = 13.3\%$$

Reductions in operating assets may or may not be prudent. It is beneficial to eliminate overinvestment in inventories and to dispose of excessive plant assets. However, it is unwise to reduce inventories below expected needs or to dispose of essential plant assets.

Accounting Across the Organization **Hollywood**

brentmelissa/iStockphoto

Does Hollywood Look at ROI?

If Hollywood were run like a real business, where things like return on investment mattered, there would be one unchallenged,

sacred principle that studio chieftains would never violate: Make lots of G-rated movies.

No matter how you slice the movie business—by star vehicles, by budget levels, or by sequels or franchises—by far the best return on investment comes from the not-so-glamorous world of G-rated films. The problem is, these movies represent only 3% of the total films made in a typical year.

On the flip side are the R-rated films, which dominate the total releases and yet yield the worst return on investment. A whopping 646 R-rated films were released in a recent year—69% of the total output—but only four of the top-20 grossing movies of the year were R-rated films.

This trend—G-rated movies are good for business but underproduced, R-rated movies are bad for business and yet overdone—is something that has been driving economists batty for the past several years.

Source: David Grainger, "The Dysfunctional Family-Film Business," *Fortune* (January 10, 2005), pp. 20–21.

What might be the reason that movie studios do not produce G-rated movies as much as R-rated ones? (Go to WileyPLUS for this answer and additional questions.)

DO IT!

4

Performance Evaluation

The service division of Metro Industries reported the following results for 2017.

Sales	\$400,000
Variable costs	320,000
Controllable fixed costs	40,800
Average operating assets	280,000

Management is considering the following independent courses of action in 2018 in order to maximize the return on investment for this division.

- Reduce average operating assets by \$80,000, with no change in controllable margin.
- Increase sales \$80,000, with no change in the contribution margin percentage.
 - Compute the controllable margin and the return on investment for 2017.
 - Compute the controllable margin and the expected return on investment for each proposed alternative.

Solution

(a) Return on investment for 2017:

Sales		\$400,000	
Variable costs		320,000	
Contribution margin		80,000	
Controllable fixed costs		40,800	
Controllable margin		<u>\$ 39,200</u>	
Return on investment	$\frac{\$39,200}{\$280,000}$	=	14%

(b) Expected return on investment for alternative 1:

$$\frac{\$39,200}{\$280,000 - \$80,000} = 19.6\%$$

Expected return on investment for alternative 2:

Sales (\$400,000 + \$80,000)		\$480,000	
Variable costs (\$320,000/\$400,000 × \$480,000)		384,000	
Contribution margin		96,000	
Controllable fixed costs		40,800	
Controllable margin		<u>\$ 55,200</u>	
Return on investment	$\frac{\$55,200}{\$280,000}$	=	19.7%

Related exercise material: **BE24-8, BE24-9, BE24-10, E24-16, E24-17, and DO IT! 24-4.****Action Plan**

- ✓ Recall key formulas:
Sales – Variable costs = Contribution margin.
- ✓ Contribution margin ÷ Sales = Contribution margin percentage.
- ✓ Contribution margin – Controllable fixed costs = Controllable margin.
- ✓ Return on investment = Controllable margin ÷ Average operating assets.

LEARNING OBJECTIVE**5****APPENDIX 24A: Explain the difference between ROI and residual income.**

Although most companies use ROI to evaluate investment performance, ROI has a significant disadvantage. To illustrate, let's look at the Electronics Division of Pujols Company. It has an ROI of 20%, computed as follows.

Controllable Margin	÷	Average Operating Assets	=	Return on Investment (ROI)
\$1,000,000	÷	\$5,000,000	=	20%

Illustration 24A-1
ROI formula

The Electronics Division is considering producing a new product, a GPS device (hereafter referred to as Tracker) for its boats. To produce Tracker, operating assets will have to increase \$2,000,000. Tracker is expected to generate an additional \$260,000 of controllable margin. Illustration 24A-2 shows how Tracker will effect ROI.

	Without Tracker	Tracker	With Tracker
Controllable margin (a)	\$1,000,000	\$ 260,000	\$1,260,000
Average operating assets (b)	\$5,000,000	\$2,000,000	\$7,000,000
Return on investment [(a) ÷ (b)]	20%	13%	18%

Illustration 24A-2
ROI comparison

The investment in Tracker reduces ROI from 20% to 18%.

Let's suppose that you are the manager of the Electronics Division and must make the decision to produce or not produce Tracker. If you were evaluated using ROI, you probably would not produce Tracker because your ROI would drop from 20% to 18%. The problem with this ROI analysis is that it ignores an important variable: the minimum rate of return on a company's operating assets. The **minimum rate of return** is the rate at which the Electronics Division can cover its costs and earn a profit. Assuming that the Electronics Division has a minimum rate of return of 10%, it should invest in Tracker because its ROI of 13% is greater than 10%.

Residual Income Compared to ROI

To evaluate performance using the minimum rate of return, companies use the residual income approach. **Residual income** is the income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets. The residual income for Tracker would be computed as follows.

Illustration 24A-3
Residual income formula

Controllable Margin	–	Minimum Rate of Return × Average Operating Assets	=	Residual Income
\$260,000	–	10% × \$2,000,000	=	\$60,000

As shown, the residual income related to the Tracker investment is \$60,000. Illustration 24A-4 indicates how residual income changes as the additional investment is made.

Illustration 24A-4
Residual income comparison

	<u>Without Tracker</u>	<u>Tracker</u>	<u>With Tracker</u>
Controllable margin (a)	\$1,000,000	\$260,000	\$1,260,000
Average operating assets × 10% (b)	500,000	200,000	700,000
Residual income [(a) – (b)]	<u>\$ 500,000</u>	<u>\$ 60,000</u>	<u>\$ 560,000</u>

This example illustrates how performance evaluation based on ROI can be misleading and can even cause managers to reject projects that would actually increase income for the company. As a result, many companies such as **Coca-Cola**, **Briggs and Stratton**, **Eli Lilly**, and **Siemens AG** use residual income (or a variant often referred to as economic value added) to evaluate investment alternatives and measure company performance.

Residual Income Weakness

It might appear from the above discussion that the goal of any company should be to maximize the total amount of residual income in each division. This goal, however, ignores the fact that one division might use substantially fewer assets to attain the same level of residual income as another division. For example, we know that to produce Tracker, the Electronics Division of Pujols Company used \$2,000,000 of average operating assets to generate \$260,000 of controllable margin. Now let's say a different division produced a product called SeaDog, which used \$4,000,000 to generate \$460,000 of controllable margin, as shown in Illustration 24A-5.

Illustration 24A-5
Comparison of two products

	<u>Tracker</u>	<u>SeaDog</u>
Controllable margin (a)	\$260,000	\$460,000
Average operating assets × 10% (b)	200,000	400,000
Residual income [(a) – (b)]	<u>\$ 60,000</u>	<u>\$ 60,000</u>

If the performance of these two investments were evaluated using residual income, they would be considered equal: Both products have the same total residual income. This ignores, however, the fact that SeaDog required **twice** as many operating assets to achieve the same level of residual income.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

1 Describe budgetary control and static budget reports.

Budgetary control consists of (a) preparing periodic budget reports that compare actual results with planned objectives, (b) analyzing the differences to determine their causes, (c) taking appropriate corrective action, and (d) modifying future plans, if necessary.

Static budget reports are useful in evaluating the progress toward planned sales and profit goals. They are also appropriate in assessing a manager's effectiveness in controlling costs when (a) actual activity closely approximates the master budget activity level, and/or (b) the behavior of the costs in response to changes in activity is fixed.

2 Prepare flexible budget reports.

To develop the flexible budget it is necessary to: (a) Identify the activity index and the relevant range of activity. (b) Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. (c) Identify the fixed costs, and determine the budgeted amount for each cost. (d) Prepare the budget for selected increments of activity within the relevant range. Flexible budget reports permit an evaluation of a manager's performance in controlling production and costs.

3 Apply responsibility accounting to cost and profit centers.

Responsibility accounting involves accumulating and reporting revenues and costs on the basis of the individual manager who has the authority to

make the day-to-day decisions about the items. The evaluation of a manager's performance is based on the matters directly under the manager's control. In responsibility accounting, it is necessary to distinguish between controllable and noncontrollable fixed costs and to identify three types of responsibility centers: cost, profit, and investment.

Responsibility reports for cost centers compare actual costs with flexible budget data. The reports show only controllable costs, and no distinction is made between variable and fixed costs. Responsibility reports show contribution margin, controllable fixed costs, and controllable margin for each profit center.

4 Evaluate performance in investment centers.

The primary basis for evaluating performance in investment centers is return on investment (ROI). The formula for computing ROI for investment centers is Controllable margin \div Average operating assets.

*5 Explain the difference between ROI and residual income.

ROI is controllable margin divided by average operating assets. Residual income is the income that remains after subtracting the minimum rate of return on a company's average operating assets. ROI sometimes provides misleading results because profitable investments are often rejected when the investment reduces ROI but increases overall profitability.

GLOSSARY REVIEW

Budgetary control The use of budgets to control operations. (p. 1108).

Controllable cost A cost over which a manager has control. (p. 1120).

Controllable margin Contribution margin less controllable fixed costs. (p. 1126).

Cost center A responsibility center that incurs costs but does not directly generate revenues. (p. 1124).

Decentralization Control of operations is delegated to many managers throughout the organization. (p. 1119).

Direct fixed costs Costs that relate specifically to a responsibility center and are incurred for the sole benefit of the center. (p. 1126).

Flexible budget A projection of budget data for various levels of activity. (p. 1111).

Indirect fixed costs Costs that are incurred for the benefit of more than one profit center. (p. 1126).

Investment center A responsibility center that incurs costs, generates revenues, and has control over decisions regarding the assets available for use. (p. 1124).

Management by exception The review of budget reports by top management focused entirely or primarily on differences between actual results and planned objectives. (p. 1120).

Noncontrollable costs Costs incurred indirectly and allocated to a responsibility center that are not controllable at that level. (p. 1120).

Profit center A responsibility center that incurs costs and also generates revenues. (p. 1124).

***Residual income** The income that remains after subtracting from the controllable margin the minimum rate of return on a company's average operating assets. (p. 1132).

Responsibility accounting A part of management accounting that involves accumulating and reporting

revenues and costs on the basis of the manager who has the authority to make the day-to-day decisions about the items. (p. 1118).

Responsibility reporting system The preparation of reports for each level of responsibility in the company's organization chart. (p. 1122).

Return on investment (ROI) A measure of management's effectiveness in utilizing assets at its disposal in an investment center. (p. 1127).

Segment An area of responsibility in decentralized operations. (p. 1119).

Static budget A projection of budget data at one level of activity. (p. 1109).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Budgetary control involves all but one of the following:
 (a) modifying future plans.
 (b) analyzing differences.
 (c) using static budgets but **not** flexible budgets.
 (d) determining differences between actual and planned results.
- (LO 1) 2. Budget reports are prepared:
 (a) daily. (c) monthly.
 (b) weekly. (d) All of the above.
- (LO 1) 3. A production manager in a manufacturing company would most likely receive a:
 (a) sales report.
 (b) income statement.
 (c) scrap report.
 (d) shipping department overhead report.
- (LO 1) 4. A static budget is:
 (a) a projection of budget data at several levels of activity within the relevant range of activity.
 (b) a projection of budget data at a single level of activity.
 (c) compared to a flexible budget in a budget report.
 (d) never appropriate in evaluating a manager's effectiveness in controlling costs.
- (LO 1) 5. A static budget is useful in controlling costs when cost behavior is:
 (a) mixed. (c) variable.
 (b) fixed. (d) linear.
- (LO 2) 6. At zero direct labor hours in a flexible budget graph, the total budgeted cost line intersects the vertical axis at \$30,000. At 10,000 direct labor hours, a horizontal line drawn from the total budgeted cost line intersects the vertical axis at \$90,000. Fixed and variable costs may be expressed as:
 (a) \$30,000 fixed plus \$6 per direct labor hour variable.
 (b) \$30,000 fixed plus \$9 per direct labor hour variable.
 (c) \$60,000 fixed plus \$3 per direct labor hour variable.
 (d) \$60,000 fixed plus \$6 per direct labor hour variable.
7. At 9,000 direct labor hours, the flexible budget for indirect materials is \$27,000. If \$28,000 of indirect materials costs are incurred at 9,200 direct labor hours, the flexible budget report should show the following difference for indirect materials:
 (a) \$1,000 unfavorable.
 (b) \$1,000 favorable.
 (c) \$400 favorable.
 (d) \$400 unfavorable.
8. Under responsibility accounting, the evaluation of a manager's performance is based on matters that the manager:
 (a) directly controls.
 (b) directly and indirectly controls.
 (c) indirectly controls.
 (d) has shared responsibility for with another manager.
9. Responsibility centers include:
 (a) cost centers.
 (b) profit centers.
 (c) investment centers.
 (d) All of the above.
10. Responsibility reports for cost centers:
 (a) distinguish between fixed and variable costs.
 (b) use static budget data.
 (c) include both controllable and noncontrollable costs.
 (d) include only controllable costs.
11. The accounting department of a manufacturing company is an example of:
 (a) a cost center.
 (b) a profit center.
 (c) an investment center.
 (d) a contribution center.
12. To evaluate the performance of a profit center manager, upper management needs detailed information about:
 (a) controllable costs.

- (b) controllable revenues.
 (c) controllable costs and revenues.
 (d) controllable costs and revenues and average operating assets.
- (LO 3) 13.** In a responsibility report for a profit center, controllable fixed costs are deducted from contribution margin to show:
 (a) profit center margin.
 (b) controllable margin.
 (c) net income.
 (d) income from operations.
- (LO 4) 14.** In the formula for return on investment (ROI), the factors for controllable margin and operating assets are, respectively:
 (a) controllable margin percentage and total operating assets.
 (b) controllable margin dollars and average operating assets.
 (c) controllable margin dollars and total assets.
 (d) controllable margin percentage and average operating assets.
- 15.** A manager of an investment center can improve ROI by: **(LO 4)**
 (a) increasing average operating assets.
 (b) reducing sales.
 (c) increasing variable costs.
 (d) reducing variable and/or controllable fixed costs.

Solutions

- 1. (c)** Budgetary control involves using flexible budgets and sometimes static budgets. The other choices are all part of budgetary control.
- 2. (d)** Budget reports are prepared daily, weekly, or monthly. The other choices are correct, but choice (d) is the better answer.
- 3. (c)** A production manager in a manufacturing company would most likely receive a scrap report. The other choices are incorrect because (a) top management or a sales manager would most likely receive a sales report, (b) top management would most likely receive an income statement, and (d) a department manager would most likely receive a shipping department overhead report.
- 4. (b)** A static budget is a projection of budget data at a single level of activity. The other choices are incorrect because a static budget (a) is a projection of budget data at a single level of activity, not at several levels of activity within the relevant range of activity; (c) is not compared to a flexible budget in a budget report; and (d) is appropriate in evaluating a manager's effectiveness in controlling fixed costs.
- 5. (b)** A static budget is useful for controlling fixed costs. The other choices are incorrect because a static budget is not useful for controlling (a) mixed costs, (c) variable costs, or (d) linear costs.
- 6. (a)** The intersection point of \$90,000 is total budgeted costs, or budgeted fixed costs plus budgeted variable costs. Fixed costs are \$30,000 (amount at zero direct labor hours), so budgeted variable costs are \$60,000 [$\$90,000$ (Total costs) $-$ $\$30,000$ (Fixed costs)]. Budgeted variable costs (\$60,000) divided by total activity level (10,000 direct labor hours) gives the variable cost per unit of \$6 per direct labor hour. The other choices are therefore incorrect.
- 7. (d)** Budgeted indirect materials per direct labor hour (DLH) is \$3 ($\$27,000/9,000$). At an activity level of 9,200 direct labor hours, budgeted indirect materials are \$27,600 ($9,200 \times \3 per DLH) but actual indirect materials costs are \$28,000, resulting in a \$400 unfavorable difference. The other choices are therefore incorrect.
- 8. (a)** The evaluation of a manager's performance is based only on matters that the manager directly controls. The other choices are therefore incorrect as they include indirect controls and shared responsibility.
- 9. (d)** Cost centers, profit centers, and investment centers are all responsibility centers. The other choices are correct, but choice (d) is the better answer.
- 10. (d)** Responsibility reports for cost centers report only controllable costs; they (a) do not distinguish between fixed and variable costs; (b) use flexible budget data, not static budget data; and (c) do not include noncontrollable costs.
- 11. (a)** The accounting department of a manufacturing company is an example of a cost center, not (b) a profit center, (c) an investment center, or (d) contribution center.
- 12. (c)** To evaluate the performance of a profit center manager, upper management needs detailed information about controllable costs and revenues, not just (a) controllable costs or (b) controllable revenues. Choice (d) is incorrect because upper management does not need information about average operating assets.
- 13. (b)** Contribution margin less controllable fixed costs is the controllable margin, not (a) the profit center margin, (c) net income, or (d) income from operations.
- 14. (b)** The factors in the formula for ROI are controllable margin dollars and average operating assets. The other choices are therefore incorrect.
- 15. (d)** Reducing variable or controllable fixed costs will cause the controllable margin to increase, which is one way a manager of an investment center can improve ROI. The other choices are incorrect because (a) increasing average operating assets will lower ROI; (b) reducing sales will cause contribution margin to go down, thereby decreasing controllable margin since there will be less contribution margin to cover controllable fixed costs and resulting in lower ROI; and (c) increasing variable costs will cause the contribution margin to be lower, thereby decreasing controllable margin and resulting in lower ROI.

PRACTICE EXERCISES

Prepare flexible manufacturing overhead budget.

(LO 2)

1. Felix Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

Indirect labor	\$0.70
Indirect materials	0.50
Utilities	0.40

Fixed overhead costs per month are supervision \$4,000, depreciation \$3,000, and property taxes \$800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

Instructions

Prepare a monthly flexible manufacturing overhead budget for 2017 for the expected range of activity, using increments of 1,000 direct labor hours.

Solution

FELIX COMPANY				
Monthly Flexible Manufacturing Overhead Budget				
For the Year 2017				
Activity level				
Direct labor hours	7,000	8,000	9,000	10,000
Variable costs				
Indirect labor (\$.70)	\$ 4,900	\$ 5,600	\$ 6,300	\$ 7,000
Indirect materials (\$.50)	3,500	4,000	4,500	5,000
Utilities (\$.40)	2,800	3,200	3,600	4,000
Total variable costs (\$1.60)	<u>11,200</u>	<u>12,800</u>	<u>14,400</u>	<u>16,000</u>
Fixed costs				
Supervision	4,000	4,000	4,000	4,000
Depreciation	3,000	3,000	3,000	3,000
Property taxes	800	800	800	800
Total fixed costs	<u>7,800</u>	<u>7,800</u>	<u>7,800</u>	<u>7,800</u>
Total costs	<u>\$19,000</u>	<u>\$20,600</u>	<u>\$22,200</u>	<u>\$23,800</u>

Compute ROI for current year and for possible future changes.

(LO 4)

2. The White Division of Mesin Company reported the following data for the current year.

Sales	\$3,000,000
Variable costs	2,400,000
Controllable fixed costs	400,000
Average operating assets	5,000,000

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the White Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

- Increase sales by \$300,000 with no change in the contribution margin percentage.
- Reduce variable costs by \$100,000.
- Reduce average operating assets by 4%.

Instructions

- Compute the return on investment (ROI) for the current year.
- Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

Solution

$$2. (a) \text{ Controllable margin} = (\$3,000,000 - \$2,400,000 - \$400,000) = \$200,000$$

$$\text{ROI} = \$200,000 \div \$5,000,000 = 4\%$$

- (b) (1) Contribution margin percentage is 20%, or $(\$600,000 \div \$3,000,000)$
 Increase in controllable margin = $\$300,000 \times 20\% = \$60,000$
 ROI = $(\$200,000 + \$60,000) \div \$5,000,000 = 5.2\%$
- (2) $(\$200,000 + \$100,000) \div \$5,000,000 = 6\%$
- (3) $\$200,000 \div [\$5,000,000 - (\$5,000,000 \times .04)] = 4.2\%$

PRACTICE PROBLEM

Glenda Company uses a flexible budget for manufacturing overhead based on direct labor hours. For 2017, the master overhead budget for the Packaging Department based on 300,000 direct labor hours was as follows.

Prepare flexible budget report.
(LO 2)

Variable Costs		Fixed Costs	
Indirect labor	\$360,000	Supervision	\$ 60,000
Supplies and lubricants	150,000	Depreciation	24,000
Maintenance	210,000	Property taxes	18,000
Utilities	120,000	Insurance	12,000
	<u>\$840,000</u>		<u>\$114,000</u>

During July, 24,000 direct labor hours were worked. The company incurred the following variable costs in July: indirect labor \$30,200, supplies and lubricants \$11,600, maintenance \$17,500, and utilities \$9,200. Actual fixed overhead costs were the same as monthly budgeted fixed costs.

Instructions

Prepare a flexible budget report for the Packaging Department for July.

Solution

GLENDA COMPANY Manufacturing Overhead Budget Report (Flexible) Packaging Department For the Month Ended July 31, 2017			
Direct labor hours (DLH)	Budget 24,000 DLH	Actual Costs 24,000 DLH	Difference
			Favorable F Unfavorable U
Variable costs			
Indirect labor (\$1.20 ^a)	\$28,800	\$30,200	\$1,400 U
Supplies and lubricants (\$0.50 ^a)	12,000	11,600	400 F
Maintenance (\$0.70 ^a)	16,800	17,500	700 U
Utilities (\$0.40 ^a)	9,600	9,200	400 F
Total variable	<u>67,200</u>	<u>68,500</u>	<u>1,300 U</u>
Fixed costs			
Supervision	\$ 5,000 ^b	\$ 5,000	-0-
Depreciation	2,000 ^b	2,000	-0-
Property taxes	1,500 ^b	1,500	-0-
Insurance	1,000 ^b	1,000	-0-
Total fixed	<u>9,500</u>	<u>9,500</u>	<u>-0-</u>
Total costs	<u>\$76,700</u>	<u>\$78,000</u>	<u>\$1,300 U</u>

^a $(\$360,000 \div 300,000; \$150,000 \div 300,000; \$210,000 \div 300,000; \$120,000 \div 300,000)$.
^bAnnual cost divided by 12.

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

QUESTIONS

1. (a) What is budgetary control?
(b) Fred Barone is describing budgetary control. What steps should be included in Fred's description?
2. The following purposes are part of a budgetary reporting system: (a) Determine efficient use of materials. (b) Control overhead costs. (c) Determine whether income objectives are being met. For each purpose, indicate the name of the report, the frequency of the report, and the primary recipient(s) of the report.
3. How may a budget report for the second quarter differ from a budget report for the first quarter?
4. Ken Bay questions the usefulness of a master sales budget in evaluating sales performance. Is there justification for Ken's concern? Explain.
5. Under what circumstances may a static budget be an appropriate basis for evaluating a manager's effectiveness in controlling costs?
6. "A flexible budget is really a series of static budgets." Is this true? Why?
7. The static manufacturing overhead budget based on 40,000 direct labor hours shows budgeted indirect labor costs of \$54,000. During March, the department incurs \$64,000 of indirect labor while working 45,000 direct labor hours. Is this a favorable or unfavorable performance? Why?
8. A static overhead budget based on 40,000 direct labor hours shows Factory Insurance \$6,500 as a fixed cost. At the 50,000 direct labor hours worked in March, factory insurance costs were \$6,300. Is this a favorable or unfavorable performance? Why?
9. Megan Pedigo is confused about how a flexible budget is prepared. Identify the steps for Megan.
10. Cali Company has prepared a graph of flexible budget data. At zero direct labor hours, the total budgeted cost line intersects the vertical axis at \$20,000. At 10,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$85,000. How may the fixed and variable costs be expressed?
11. The flexible budget formula is fixed costs \$50,000 plus variable costs of \$4 per direct labor hour. What is the total budgeted cost at (a) 9,000 hours and (b) 12,345 hours?
12. What is management by exception? What criteria may be used in identifying exceptions?
13. What is responsibility accounting? Explain the purpose of responsibility accounting.
14. Eve Rooney is studying for an accounting examination. Describe for Eve what conditions are necessary for responsibility accounting to be used effectively.
15. Distinguish between controllable and noncontrollable costs.
16. How do responsibility reports differ from budget reports?
17. What is the relationship, if any, between a responsibility reporting system and a company's organization chart?
18. Distinguish among the three types of responsibility centers.
19. (a) What costs are included in a performance report for a cost center? (b) In the report, are variable and fixed costs identified?
20. How do direct fixed costs differ from indirect fixed costs? Are both types of fixed costs controllable?
21. Jane Nott is confused about controllable margin reported in an income statement for a profit center. How is this margin computed, and what is its primary purpose?
22. What is the primary basis for evaluating the performance of the manager of an investment center? Indicate the formula for this basis.
23. Explain the ways that ROI can be improved.
24. Indicate two behavioral principles that pertain to (a) the manager being evaluated and (b) top management.
- *25. What is a major disadvantage of using ROI to evaluate investment and company performance?
- *26. What is residual income, and what is one of its major weaknesses?

BRIEF EXERCISES

Prepare static budget report.

(LO 1)

BE24-1 For the quarter ended March 31, 2017, Croix Company accumulates the following sales data for its newest guitar, The Edge: \$315,000 budget; \$305,000 actual. Prepare a static budget report for the quarter.

Prepare static budget report for 2 quarters.

(LO 1)

BE24-2 Data for Croix Company are given in BE24-1. In the second quarter, budgeted sales were \$380,000, and actual sales were \$384,000. Prepare a static budget report for the second quarter and for the year to date.

BE24-3 In Rooney Company, direct labor is \$20 per hour. The company expects to operate at 10,000 direct labor hours each month. In January 2017, direct labor totaling \$206,000 is incurred in working 10,400 hours. Prepare (a) a static budget report and (b) a flexible budget report. Evaluate the usefulness of each report.

Show usefulness of flexible budgets in evaluating performance.

(LO 2)

BE24-4 Gundy Company expects to produce 1,200,000 units of Product XX in 2017. Monthly production is expected to range from 80,000 to 120,000 units. Budgeted variable manufacturing costs per unit are direct materials \$5, direct labor \$6, and overhead \$8. Budgeted fixed manufacturing costs per unit for depreciation are \$2 and for supervision are \$1. Prepare a flexible manufacturing budget for the relevant range value using 20,000 unit increments.

Prepare a flexible budget for variable costs.

(LO 2)

BE24-5 Data for Gundy Company are given in BE24-4. In March 2017, the company incurs the following costs in producing 100,000 units: direct materials \$520,000, direct labor \$596,000, and variable overhead \$805,000. Actual fixed costs were equal to budgeted fixed costs. Prepare a flexible budget report for March. Were costs controlled?

Prepare flexible budget report.

(LO 2)

BE24-6 In the Assembly Department of Hannon Company, budgeted and actual manufacturing overhead costs for the month of April 2017 were as follows.

	<u>Budget</u>	<u>Actual</u>
Indirect materials	\$16,000	\$14,300
Indirect labor	20,000	20,600
Utilities	10,000	10,850
Supervision	5,000	5,000

Prepare a responsibility report for a cost center.

(LO 3)

All costs are controllable by the department manager. Prepare a responsibility report for April for the cost center.

BE24-7 Torres Company accumulates the following summary data for the year ending December 31, 2017, for its Water Division, which it operates as a profit center: sales—\$2,000,000 budget, \$2,080,000 actual; variable costs—\$1,000,000 budget, \$1,050,000 actual; and controllable fixed costs—\$300,000 budget, \$305,000 actual. Prepare a responsibility report for the Water Division.

Prepare a responsibility report for a profit center.

(LO 3)

BE24-8 For the year ending December 31, 2017, Cobb Company accumulates the following data for the Plastics Division which it operates as an investment center: contribution margin—\$700,000 budget, \$710,000 actual; controllable fixed costs—\$300,000 budget, \$302,000 actual. Average operating assets for the year were \$2,000,000. Prepare a responsibility report for the Plastics Division beginning with contribution margin.

Prepare a responsibility report for an investment center.

(LO 4)

BE24-9 For its three investment centers, Gerrard Company accumulates the following data:

	<u>I</u>	<u>II</u>	<u>III</u>
Sales	\$2,000,000	\$4,000,000	\$ 4,000,000
Controllable margin	1,400,000	2,000,000	3,600,000
Average operating assets	5,000,000	8,000,000	10,000,000

Compute return on investment using the ROI formula.

(LO 4)

Compute the return on investment (ROI) for each center.

BE24-10 Data for the investment centers for Gerrard Company are given in BE24-9. The centers expect the following changes in the next year: (I) increase sales 15%, (II) decrease costs \$400,000, and (III) decrease average operating assets \$500,000. Compute the expected return on investment (ROI) for each center. Assume center I has a controllable margin percentage of 70%.

Compute return on investment under changed conditions.

(LO 4)

***BE24-11** Sterling, Inc. reports the following financial information.

Average operating assets	\$3,000,000
Controllable margin	\$ 630,000
Minimum rate of return	10%

Compute ROI and residual income.

(LO 5)

Compute the return on investment and the residual income.

Compute ROI and residual income.

(LO 5)

***BE24-12** Presented below is information related to the Southern Division of Lumber, Inc.

Contribution margin	\$1,200,000
Controllable margin	\$ 800,000
Average operating assets	\$4,000,000
Minimum rate of return	15%

Compute the Southern Division's return on investment and residual income.

DO IT! Exercises

Prepare and evaluate a static budget report.

(LO 1)

DO IT! 24-1 Wade Company estimates that it will produce 6,000 units of product IOA during the current month. Budgeted variable manufacturing costs per unit are direct materials \$7, direct labor \$13, and overhead \$18. Monthly budgeted fixed manufacturing overhead costs are \$8,000 for depreciation and \$3,800 for supervision.

In the current month, Wade actually produced 6,500 units and incurred the following costs: direct materials \$38,850, direct labor \$76,440, variable overhead \$116,640, depreciation \$8,000, and supervision \$4,000.

Prepare a static budget report. *Hint:* The Budget column is based on estimated production while the Actual column is the actual cost incurred during the period. (*Note:* You do not need to prepare the heading.) Were costs controlled? Discuss limitations of the budget.

Compute total budgeted costs in flexible budget.

(LO 2)

DO IT! 24-2 In Pargo Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$90,000. The total budgeted cost line is \$350,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 65,000 direct labor hours.

Prepare a responsibility report.

(LO 3)

DO IT! 24-3 The Rockies Division operates as a profit center. It reports the following for the year.

	<u>Budget</u>	<u>Actual</u>
Sales	\$2,000,000	\$1,890,000
Variable costs	800,000	760,000
Controllable fixed costs	550,000	550,000
Noncontrollable fixed costs	250,000	250,000

Prepare a responsibility report for the Rockies Division at December 31, 2017.

Compute ROI and expected return on investments.

(LO 4)

DO IT! 24-4 The service division of Raney Industries reported the following results for 2017.

Sales	\$500,000
Variable costs	300,000
Controllable fixed costs	75,000
Average operating assets	625,000

Management is considering the following independent courses of action in 2018 in order to maximize the return on investment for this division.

1. Reduce average operating assets by \$125,000, with no change in controllable margin.
 2. Increase sales \$100,000, with no change in the contribution margin percentage.
- (a) Compute the controllable margin and the return on investment for 2017. (b) Compute the controllable margin and the expected return on investment for each proposed alternative.

EXERCISES

Understand the concept of budgetary control.

(LO 1, 2)

E24-1 Connie Rice has prepared the following list of statements about budgetary control.

1. Budget reports compare actual results with planned objectives.
2. All budget reports are prepared on a weekly basis.
3. Management uses budget reports to analyze differences between actual and planned results and determine their causes.

4. As a result of analyzing budget reports, management may either take corrective action or modify future plans.
5. Budgetary control works best when a company has an informal reporting system.
6. The primary recipients of the sales report are the sales manager and the production supervisor.
7. The primary recipient of the scrap report is the production manager.
8. A static budget is a projection of budget data at one level of activity.
9. Top management's reaction to unfavorable differences is not influenced by the materiality of the difference.
10. A static budget is not appropriate in evaluating a manager's effectiveness in controlling costs unless the actual activity level approximates the static budget activity level or the behavior of the costs is fixed.

Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

E24-2 Crede Company budgeted selling expenses of \$30,000 in January, \$35,000 in February, and \$40,000 in March. Actual selling expenses were \$31,200 in January, \$34,525 in February, and \$46,000 in March.

Prepare and evaluate static budget report.

(LO 1)

Instructions

- (a) Prepare a selling expense report that compares budgeted and actual amounts by month and for the year to date.
- (b) What is the purpose of the report prepared in (a), and who would be the primary recipient?
- (c) What would be the likely result of management's analysis of the report?

E24-3 Myers Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

Indirect labor	\$1.00
Indirect materials	0.70
Utilities	0.40

Prepare flexible manufacturing overhead budget.

(LO 2)

Fixed overhead costs per month are supervision \$4,000, depreciation \$1,200, and property taxes \$800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

Instructions

Prepare a monthly manufacturing overhead flexible budget for 2017 for the expected range of activity, using increments of 1,000 direct labor hours.

E24-4 Using the information in E24-3, assume that in July 2017, Myers Company incurs the following manufacturing overhead costs.

Variable Costs		Fixed Costs	
Indirect labor	\$8,800	Supervision	\$4,000
Indirect materials	5,800	Depreciation	1,200
Utilities	3,200	Property taxes	800

Prepare flexible budget reports for manufacturing overhead costs, and comment on findings.

(LO 2)

**Instructions**

- (a) Prepare a flexible budget performance report, assuming that the company worked 9,000 direct labor hours during the month.
- (b) Prepare a flexible budget performance report, assuming that the company worked 8,500 direct labor hours during the month.
- (c)  Comment on your findings.

E24-5 Fallon Company uses flexible budgets to control its selling expenses. Monthly sales are expected to range from \$170,000 to \$200,000. Variable costs and their percentage relationship to sales are sales commissions 6%, advertising 4%, traveling 3%, and delivery 2%. Fixed selling expenses will consist of sales salaries \$35,000, depreciation on delivery equipment \$7,000, and insurance on delivery equipment \$1,000.

Prepare flexible selling expense budget.

(LO 2)

Instructions

Prepare a monthly flexible budget for each \$10,000 increment of sales within the relevant range for the year ending December 31, 2017.

Prepare flexible budget reports for selling expenses.

(LO 2)

E24-6 The actual selling expenses incurred in March 2017 by Fallon Company are as follows.

Variable Expenses		Fixed Expenses	
Sales commissions	\$11,000	Sales salaries	\$35,000
Advertising	6,900	Depreciation	7,000
Travel	5,100	Insurance	1,000
Delivery	3,450		

Instructions

- Prepare a flexible budget performance report for March using the budget data in E24-5, assuming that March sales were \$170,000.
- Prepare a flexible budget performance report, assuming that March sales were \$180,000.
-  Comment on the importance of using flexible budgets in evaluating the performance of the sales manager.

Prepare flexible budget report.

(LO 2)

E24-7 Appliance Possible Inc. (AP) is a manufacturer of toaster ovens. To improve control over operations, the president of AP wants to begin using a flexible budgeting system, rather than use only the current master budget. The following data are available for AP's expected costs at production levels of 90,000, 100,000, and 110,000 units.

Variable costs	
Manufacturing	\$6 per unit
Administrative	\$4 per unit
Selling	\$3 per unit
Fixed costs	
Manufacturing	\$160,000
Administrative	\$ 80,000

Instructions

- Prepare a flexible budget for each of the possible production levels: 90,000, 100,000, and 110,000 units.
- If AP sells the toaster ovens for \$16 each, how many units will it have to sell to make a profit of \$60,000 before taxes?

(CGA adapted)

Prepare flexible budget report; compare flexible and static budgets.

(LO 1, 2)

E24-8 Rensing Groomers is in the dog-grooming business. Its operating costs are described by the following formulas:

Grooming supplies (variable)	$y = \$0 + \$5x$
Direct labor (variable)	$y = \$0 + \$14x$
Overhead (mixed)	$y = \$10,000 + \$1x$

Milo, the owner, has determined that direct labor is the cost driver for all three categories of costs.

Instructions

- Prepare a flexible budget for activity levels of 550, 600, and 700 direct labor hours.
-  Explain why the flexible budget is more informative than the static budget.
- Calculate the total cost per direct labor hour at each of the activity levels specified in part (a).
- The groomers at Rensing normally work a total of 650 direct labor hours during each month. Each grooming job normally takes a groomer 1.3 hours. Milo wants to earn a profit equal to 40% of the costs incurred. Determine what he should charge each pet owner for grooming.

(CGA adapted)

Prepare flexible budget report, and answer question.

(LO 1, 2)

E24-9 As sales manager, Joe Batista was given the following static budget report for selling expenses in the Clothing Department of Soria Company for the month of October.

SORIA COMPANY
Clothing Department
Budget Report
For the Month Ended October 31, 2017

	<u>Budget</u>	<u>Actual</u>	<u>Difference</u>
			<u>Favorable F</u> <u>Unfavorable U</u>
Sales in units	8,000	10,000	2,000 F
Variable expenses			
Sales commissions	\$ 2,400	\$ 2,600	\$ 200 U
Advertising expense	720	850	130 U
Travel expense	3,600	4,100	500 U
Free samples given out	1,600	1,400	200 F
Total variable	<u>8,320</u>	<u>8,950</u>	<u>630 U</u>
Fixed expenses			
Rent	1,500	1,500	–0–
Sales salaries	1,200	1,200	–0–
Office salaries	800	800	–0–
Depreciation—autos (sales staff)	500	500	–0–
Total fixed	<u>4,000</u>	<u>4,000</u>	<u>–0–</u>
Total expenses	<u>\$12,320</u>	<u>\$12,950</u>	<u>\$ 630 U</u>

As a result of this budget report, Joe was called into the president's office and congratulated on his fine sales performance. He was reprimanded, however, for allowing his costs to get out of control. Joe knew something was wrong with the performance report that he had been given. However, he was not sure what to do, and comes to you for advice.

Instructions

- (a) Prepare a budget report based on flexible budget data to help Joe.
- (b) Should Joe have been reprimanded? Explain.

E24-10 Chubbs Inc.'s manufacturing overhead budget for the first quarter of 2017 contained the following data.

<u>Variable Costs</u>		<u>Fixed Costs</u>	
Indirect materials	\$12,000	Supervisory salaries	\$36,000
Indirect labor	10,000	Depreciation	7,000
Utilities	8,000	Property taxes and insurance	8,000
Maintenance	6,000	Maintenance	5,000

Actual variable costs were indirect materials \$13,500, indirect labor \$9,500, utilities \$8,700, and maintenance \$5,000. Actual fixed costs equaled budgeted costs except for property taxes and insurance, which were \$8,300. The actual activity level equaled the budgeted level.

All costs are considered controllable by the production department manager except for depreciation, and property taxes and insurance.

Instructions

- (a) Prepare a manufacturing overhead flexible budget report for the first quarter.
- (b) Prepare a responsibility report for the first quarter.

E24-11 UrLink Company is a newly formed company specializing in high-speed Internet service for home and business. The owner, Lenny Kirkland, had divided the company into two segments: Home Internet Service and Business Internet Service. Each segment is run by its own supervisor, while basic selling and administrative services are shared by both segments.

Lenny has asked you to help him create a performance reporting system that will allow him to measure each segment's performance in terms of its profitability. To that end, the following information has been collected on the Home Internet Service segment for the first quarter of 2017.

Prepare flexible budget and responsibility report for manufacturing overhead.

(LO 2, 3)

Prepare and discuss a responsibility report.

(LO 2, 3)

	<u>Budget</u>	<u>Actual</u>
Service revenue	\$25,000	\$26,200
Allocated portion of:		
Building depreciation	11,000	11,000
Advertising	5,000	4,200
Billing	3,500	3,000
Property taxes	1,200	1,000
Material and supplies	1,600	1,200
Supervisory salaries	9,000	9,500
Insurance	4,000	3,900
Wages	3,000	3,250
Gas and oil	2,800	3,400
Equipment depreciation	1,500	1,300

Instructions

- Prepare a responsibility report for the first quarter of 2017 for the Home Internet Service segment.
-  Write a memo to Lenny Kirkland discussing the principles that should be used when preparing performance reports.

State total budgeted cost formulas, and prepare flexible budget graph.

(LO 2)

E24-12 Venetian Company has two production departments, Fabricating and Assembling. At a department managers' meeting, the controller uses flexible budget graphs to explain total budgeted costs. Separate graphs based on direct labor hours are used for each department. The graphs show the following.

- At zero direct labor hours, the total budgeted cost line and the fixed cost line intersect the vertical axis at \$50,000 in the Fabricating Department and \$40,000 in the Assembling Department.
- At normal capacity of 50,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$150,000 in the Fabricating Department, and \$120,000 in the Assembling Department.

Instructions

- State the total budgeted cost formula for each department.
- Compute the total budgeted cost for each department, assuming actual direct labor hours worked were 53,000 and 47,000, in the Fabricating and Assembling Departments, respectively.
- Prepare the flexible budget graph for the Fabricating Department, assuming the maximum direct labor hours in the relevant range is 100,000. Use increments of 10,000 direct labor hours on the horizontal axis and increments of \$50,000 on the vertical axis.

Prepare reports in a responsibility reporting system.

(LO 3)

E24-13 Fey Company's organization chart includes the president; the vice president of production; three assembly plants—Dallas, Atlanta, and Tucson; and two departments within each plant—Machining and Finishing. Budget and actual manufacturing cost data for July 2017 are as follows.

Finishing Department—Dallas: direct materials \$42,500 actual, \$44,000 budget; direct labor \$83,400 actual, \$82,000 budget; manufacturing overhead \$51,000 actual, \$49,200 budget.

Machining Department—Dallas: total manufacturing costs \$220,000 actual, \$219,000 budget.

Atlanta Plant: total manufacturing costs \$424,000 actual, \$420,000 budget.

Tucson Plant: total manufacturing costs \$494,200 actual, \$496,500 budget.

The Dallas plant manager's office costs were \$95,000 actual and \$92,000 budget. The vice president of production's office costs were \$132,000 actual and \$130,000 budget. Office costs are not allocated to departments and plants.

Instructions

Using the format shown in Illustration 24-19 (page 1123), prepare the reports in a responsibility system for:

- The Finishing Department—Dallas.
- The plant manager—Dallas.
- The vice president of production.

E24-14 The Mixing Department manager of Malone Company is able to control all overhead costs except rent, property taxes, and salaries. Budgeted monthly overhead costs for the Mixing Department, in alphabetical order, are:

Indirect labor	\$12,000	Property taxes	\$ 1,000
Indirect materials	7,700	Rent	1,800
Lubricants	1,675	Salaries	10,000
Maintenance	3,500	Utilities	5,000

Actual costs incurred for January 2017 are indirect labor \$12,250; indirect materials \$10,200; lubricants \$1,650; maintenance \$3,500; property taxes \$1,100; rent \$1,800; salaries \$10,000; and utilities \$6,400.

Instructions

- Prepare a responsibility report for January 2017.
- What would be the likely result of management's analysis of the report?

Prepare a responsibility report for a cost center.

(LO 3)

E24-15 Horatio Inc. has three divisions which are operated as profit centers. Actual operating data for the divisions listed alphabetically are as follows.

<u>Operating Data</u>	<u>Women's Shoes</u>	<u>Men's Shoes</u>	<u>Children's Shoes</u>
Contribution margin	\$270,000	(3)	\$180,000
Controllable fixed costs	100,000	(4)	(5)
Controllable margin	(1)	\$ 90,000	95,000
Sales	600,000	450,000	(6)
Variable costs	(2)	320,000	250,000

Compute missing amounts in responsibility reports for three profit centers, and prepare a report.

(LO 3)

Instructions

- Compute the missing amounts. Show computations.
- Prepare a responsibility report for the Women's Shoes Division assuming (1) the data are for the month ended June 30, 2017, and (2) all data equal budget except variable costs which are \$5,000 over budget.

E24-16 The Sports Equipment Division of Harrington Company is operated as a profit center. Sales for the division were budgeted for 2017 at \$900,000. The only variable costs budgeted for the division were cost of goods sold (\$440,000) and selling and administrative (\$60,000). Fixed costs were budgeted at \$100,000 for cost of goods sold, \$90,000 for selling and administrative, and \$70,000 for noncontrollable fixed costs. Actual results for these items were:

Prepare a responsibility report for a profit center, and compute ROI.

(LO 3, 4)

Sales	\$880,000
Cost of goods sold	
Variable	408,000
Fixed	105,000
Selling and administrative	
Variable	61,000
Fixed	66,000
Noncontrollable fixed	90,000

Instructions

- Prepare a responsibility report for the Sports Equipment Division for 2017.
- Assume the division is an investment center, and average operating assets were \$1,000,000. The noncontrollable fixed costs are controllable at the investment center level. Compute ROI.

E24-17 The South Division of Wiig Company reported the following data for the current year.

Compute ROI for current year and for possible future changes.

(LO 4)

Sales	\$3,000,000
Variable costs	1,950,000
Controllable fixed costs	600,000
Average operating assets	5,000,000

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the South Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

1. Increase sales by \$300,000 with no change in the contribution margin percentage.
2. Reduce variable costs by \$150,000.
3. Reduce average operating assets by 4%.

Instructions

- (a) Compute the return on investment (ROI) for the current year.
- (b) Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

Prepare a responsibility report for an investment center.

(LO 4)

E24-18 The Dinkle and Frizell Dental Clinic provides both preventive and orthodontic dental services. The two owners, Reese Dinkle and Anita Frizell, operate the clinic as two separate investment centers: Preventive Services and Orthodontic Services. Each of them is in charge of one of the centers: Reese for Preventive Services and Anita for Orthodontic Services. Each month, they prepare an income statement for the two centers to evaluate performance and make decisions about how to improve the operational efficiency and profitability of the clinic.

Recently, they have been concerned about the profitability of the Preventive Services operations. For several months, it has been reporting a loss. The responsibility report for the month of May 2017 is shown below.

	<u>Actual</u>	<u>Difference from Budget</u>
Service revenue	\$ 40,000	\$1,000 F
Variable costs		
Filling materials	5,000	100 U
Novocain	3,900	100 U
Supplies	1,900	350 F
Dental assistant wages	2,500	-0-
Utilities	500	110 U
Total variable costs	<u>13,800</u>	<u>40 F</u>
Fixed costs		
Allocated portion of receptionist's salary	3,000	200 U
Dentist salary	9,800	400 U
Equipment depreciation	6,000	-0-
Allocated portion of building depreciation	<u>15,000</u>	<u>1,000 U</u>
Total fixed costs	<u>33,800</u>	<u>1,600 U</u>
Operating income (loss)	<u>\$ (7,600)</u>	<u>\$ 560 U</u>

In addition, the owners know that the investment in operating assets at the beginning of the month was \$82,400, and it was \$77,600 at the end of the month. They have asked for your assistance in evaluating their current performance reporting system.

Instructions

- (a) Prepare a responsibility report for an investment center as illustrated in the chapter.
- (b) Write a memo to the owners discussing the deficiencies of their current reporting system.

Prepare missing amounts in responsibility reports for three investment centers.

(LO 4)

E24-19 The Ferrell Transportation Company uses a responsibility reporting system to measure the performance of its three investment centers: Planes, Taxis, and Limos. Segment performance is measured using a system of responsibility reports and return on investment calculations. The allocation of resources within the company and the segment managers' bonuses are based in part on the results shown in these reports.

Recently, the company was the victim of a computer virus that deleted portions of the company's accounting records. This was discovered when the current period's responsibility reports were being prepared. The printout of the actual operating results appeared as follows.

	<u>Planes</u>	<u>Taxis</u>	<u>Limos</u>
Service revenue	\$?	\$500,000	\$?
Variable costs	5,500,000	?	300,000
Contribution margin	?	250,000	480,000
Controllable fixed costs	1,500,000	?	?
Controllable margin	?	80,000	210,000
Average operating assets	25,000,000	?	1,500,000
Return on investment	12%	10%	?

Instructions

Determine the missing pieces of information above.

- *E24-20** Presented below is selected information for three regional divisions of Medina Company.

Compare ROI and residual income.

(LO 5)

	<u>Divisions</u>		
	<u>North</u>	<u>West</u>	<u>South</u>
Contribution margin	\$ 300,000	\$ 500,000	\$ 400,000
Controllable margin	\$ 140,000	\$ 360,000	\$ 210,000
Average operating assets	\$1,000,000	\$2,000,000	\$1,500,000
Minimum rate of return	13%	16%	10%

Instructions

- (a) Compute the return on investment for each division.
- (b) Compute the residual income for each division.
- (c) Assume that each division has an investment opportunity that would provide a rate of return of 16%.
 - (1) If ROI is used to measure performance, which division or divisions will probably make the additional investment?
 - (2) If residual income is used to measure performance, which division or divisions will probably make the additional investment?

- *E24-21** Presented below is selected financial information for two divisions of Samberg Brewing.

Fill in information related to ROI and residual income.

(LO 5)

	<u>Lager</u>	<u>Lite Lager</u>
Contribution margin	\$500,000	\$ 300,000
Controllable margin	200,000	(c)
Average operating assets	(a)	\$1,200,000
Minimum rate of return	(b)	11%
Return on investment	16%	(d)
Residual income	\$100,000	\$ 204,000

Instructions

Supply the missing information for the lettered items.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

- P24-1A** Bumblebee Company estimates that 300,000 direct labor hours will be worked during the coming year, 2017, in the Packaging Department. On this basis, the following budgeted manufacturing overhead cost data are computed for the year.

Prepare flexible budget and budget report for manufacturing overhead.

(LO 2)

Fixed Overhead Costs		Variable Overhead Costs	
Supervision	\$ 96,000	Indirect labor	\$126,000
Depreciation	72,000	Indirect materials	90,000
Insurance	30,000	Repairs	69,000
Rent	24,000	Utilities	72,000
Property taxes	18,000	Lubricants	18,000
	<u>\$240,000</u>		<u>\$375,000</u>

It is estimated that direct labor hours worked each month will range from 27,000 to 36,000 hours.

During October, 27,000 direct labor hours were worked and the following overhead costs were incurred.

Fixed overhead costs: supervision \$8,000, depreciation \$6,000, insurance \$2,460, rent \$2,000, and property taxes \$1,500.

Variable overhead costs: indirect labor \$12,432, indirect materials \$7,680, repairs \$6,100, utilities \$6,840, and lubricants \$1,920.

Instructions

- (a) Total costs: DLH 27,000, \$53,750; DLH 36,000, \$65,000
 (b) Total \$1,182 U
- (a) Prepare a monthly manufacturing overhead flexible budget for each increment of 3,000 direct labor hours over the relevant range for the year ending December 31, 2017.
 (b) Prepare a flexible budget report for October.
 (c)  Comment on management's efficiency in controlling manufacturing overhead costs in October.

Prepare flexible budget, budget report, and graph for manufacturing overhead.

(LO 2)

P24-2A Zelmer Company manufactures tablecloths. Sales have grown rapidly over the past 2 years. As a result, the president has installed a budgetary control system for 2017. The following data were used in developing the master manufacturing overhead budget for the Ironing Department, which is based on an activity index of direct labor hours.

Variable Costs	Rate per Direct Labor Hour	Annual Fixed Costs	
Indirect labor	\$0.40	Supervision	\$48,000
Indirect materials	0.50	Depreciation	18,000
Factory utilities	0.30	Insurance	12,000
Factory repairs	0.20	Rent	30,000

The master overhead budget was prepared on the expectation that 480,000 direct labor hours will be worked during the year. In June, 41,000 direct labor hours were worked. At that level of activity, actual costs were as shown below.

Variable—per direct labor hour: indirect labor \$0.44, indirect materials \$0.48, factory utilities \$0.32, and factory repairs \$0.25.

Fixed: same as budgeted.

Instructions

- (a) Total costs: 35,000 DLH, \$58,000; 50,000 DLH, \$79,000
 (b) Budget \$66,400
 Actual \$70,090
- (a) Prepare a monthly manufacturing overhead flexible budget for the year ending December 31, 2017, assuming production levels range from 35,000 to 50,000 direct labor hours. Use increments of 5,000 direct labor hours.
 (b) Prepare a budget report for June comparing actual results with budget data based on the flexible budget.
 (c) Were costs effectively controlled? Explain.
 (d) State the formula for computing the total budgeted costs for the Ironing Department.
 (e) Prepare the flexible budget graph, showing total budgeted costs at 35,000 and 45,000 direct labor hours. Use increments of 5,000 direct labor hours on the horizontal axis and increments of \$10,000 on the vertical axis.

State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.

(LO 1, 2)

P24-3A Ratchet Company uses budgets in controlling costs. The August 2017 budget report for the company's Assembling Department is as follows.

RATCHET COMPANY
Budget Report
Assembling Department
For the Month Ended August 31, 2017

<u>Manufacturing Costs</u>	<u>Budget</u>	<u>Actual</u>	<u>Difference</u>
			<u>Favorable F</u> <u>Unfavorable U</u>
Variable costs			
Direct materials	\$ 48,000	\$ 47,000	\$1,000 F
Direct labor	54,000	51,200	2,800 F
Indirect materials	24,000	24,200	200 U
Indirect labor	18,000	17,500	500 F
Utilities	15,000	14,900	100 F
Maintenance	12,000	12,400	400 U
Total variable	<u>171,000</u>	<u>167,200</u>	<u>3,800 F</u>
Fixed costs			
Rent	12,000	12,000	-0-
Supervision	17,000	17,000	-0-
Depreciation	6,000	6,000	-0-
Total fixed	<u>35,000</u>	<u>35,000</u>	<u>-0-</u>
Total costs	<u>\$206,000</u>	<u>\$202,200</u>	<u>\$3,800 F</u>

The monthly budget amounts in the report were based on an expected production of 60,000 units per month or 720,000 units per year. The Assembling Department manager is pleased with the report and expects a raise, or at least praise for a job well done. The company president, however, is unhappy with the results for August because only 58,000 units were produced.

Instructions

- (a) State the total monthly budgeted cost formula.
- (b) Prepare a budget report for August using flexible budget data. Why does this report provide a better basis for evaluating performance than the report based on static budget data? (b) Budget \$200,300
- (c) In September, 64,000 units were produced. Prepare the budget report using flexible budget data, assuming (1) each variable cost was 10% higher than its actual cost in August, and (2) fixed costs were the same in September as in August. (c) Budget \$217,400
Actual \$218,920

P24-4A Clarke Inc. operates the Patio Furniture Division as a profit center. Operating data for this division for the year ended December 31, 2017, are as shown below.

Prepare responsibility report for a profit center.

(LO 3)

	<u>Budget</u>	<u>Difference from Budget</u>
Sales	\$2,500,000	\$50,000 F
Cost of goods sold		
Variable	1,300,000	41,000 F
Controllable fixed	200,000	3,000 U
Selling and administrative		
Variable	220,000	6,000 U
Controllable fixed	50,000	2,000 U
Noncontrollable fixed costs	70,000	4,000 U

In addition, Clarke incurs \$180,000 of indirect fixed costs that were budgeted at \$175,000. Twenty percent (20%) of these costs are allocated to the Patio Furniture Division.

Instructions

- (a) Prepare a responsibility report for the Patio Furniture Division for the year. (a) Contribution margin \$85,000 F
- (b) Comment on the manager's performance in controlling revenues and costs. Controllable margin \$80,000 F
- (c) Identify any costs excluded from the responsibility report and explain why they were excluded.

Prepare responsibility report for an investment center, and compute ROI.

(LO 4)

P24-5A Optimus Company manufactures a variety of tools and industrial equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Home Division for the year ended December 31, 2017, and relevant budget data are as follows.

	<u>Actual</u>	<u>Comparison with Budget</u>
Sales	\$1,400,000	\$100,000 favorable
Variable cost of goods sold	665,000	45,000 unfavorable
Variable selling and administrative expenses	125,000	25,000 unfavorable
Controllable fixed cost of goods sold	170,000	On target
Controllable fixed selling and administrative expenses	80,000	On target

Average operating assets for the year for the Home Division were \$2,000,000 which was also the budgeted amount.

Instructions

(a) Controllable margin:
Budget \$330;
Actual \$360

- Prepare a responsibility report (in thousands of dollars) for the Home Division.
- Evaluate the manager's performance. Which items will likely be investigated by top management?
- Compute the expected ROI in 2017 for the Home Division, assuming the following independent changes to actual data.
 - Variable cost of goods sold is decreased by 5%.
 - Average operating assets are decreased by 10%.
 - Sales are increased by \$200,000, and this increase is expected to increase contribution margin by \$80,000.

Prepare reports for cost centers under responsibility accounting, and comment on performance of managers.

(LO 3)

P24-6A Durham Company uses a responsibility reporting system. It has divisions in Denver, Seattle, and San Diego. Each division has three production departments: Cutting, Shaping, and Finishing. The responsibility for each department rests with a manager who reports to the division production manager. Each division manager reports to the vice president of production. There are also vice presidents for marketing and finance. All vice presidents report to the president.

In January 2017, controllable actual and budget manufacturing overhead cost data for the departments and divisions were as shown below.

<u>Manufacturing Overhead</u>	<u>Actual</u>	<u>Budget</u>
Individual costs—Cutting Department—Seattle		
Indirect labor	\$ 73,000	\$ 70,000
Indirect materials	47,900	46,000
Maintenance	20,500	18,000
Utilities	20,100	17,000
Supervision	22,000	20,000
	<u>\$183,500</u>	<u>\$171,000</u>
Total costs		
Shaping Department—Seattle	\$158,000	\$148,000
Finishing Department—Seattle	210,000	205,000
Denver division	678,000	673,000
San Diego division	722,000	715,000

Additional overhead costs were incurred as follows: Seattle division production manager—actual costs \$52,500, budget \$51,000; vice president of production—actual costs \$65,000, budget \$64,000; president—actual costs \$76,400, budget \$74,200. These expenses are not allocated.

The vice presidents who report to the president, other than the vice president of production, had the following expenses.

<u>Vice President</u>	<u>Actual</u>	<u>Budget</u>
Marketing	\$133,600	\$130,000
Finance	109,000	104,000

Instructions

- (a) Using the format in Illustration 24-19 (page 1123), prepare the following responsibility reports.
- (1) Manufacturing overhead—Cutting Department manager—Seattle division.
 - (2) Manufacturing overhead—Seattle division manager.
 - (3) Manufacturing overhead—vice president of production.
 - (4) Manufacturing overhead and expenses—president.
- (b) Comment on the comparative performances of:
- (1) Department managers in the Seattle division.
 - (2) Division managers.
 - (3) Vice presidents.

(a) (1) \$12,500 U
 (2) \$29,000 U
 (3) \$42,000 U
 (4) \$52,800 U

***P24-7A** Sentinel Industries has manufactured prefabricated houses for over 20 years. The houses are constructed in sections to be assembled on customers' lots. Sentinel expanded into the precut housing market when it acquired Jensen Company, one of its suppliers. In this market, various types of lumber are precut into the appropriate lengths, banded into packages, and shipped to customers' lots for assembly. Sentinel designated the Jensen Division as an investment center.

Compare ROI and residual income.

(LO 5)

Sentinel uses return on investment (ROI) as a performance measure with investment defined as average operating assets. Management bonuses are based in part on ROI. All investments are expected to earn a minimum rate of return of 18%. Jensen's ROI has ranged from 20.1% to 23.5% since it was acquired. Jensen had an investment opportunity in 2017 that had an estimated ROI of 19%. Jensen management decided against the investment because it believed the investment would decrease the division's overall ROI.

Selected financial information for Jensen are presented below. The division's average operating assets were \$12,300,000 for the year 2017.

SENTINEL INDUSTRIES
Jensen Division
Selected Financial Information
For the Year Ended December 31, 2017

Sales	\$24,000,000
Contribution margin	9,100,000
Controllable margin	2,460,000

Instructions

- (a) Calculate the following performance measures for 2017 for the Jensen Division.
- (1) Return on investment (ROI).
 - (2) Residual income.
- (b)  Would the management of Jensen Division have been more likely to accept the investment opportunity it had in 2017 if residual income were used as a performance measure instead of ROI? Explain your answer.

(CMA adapted)

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

CURRENT DESIGNS

CD24 The **Current Designs** staff has prepared the annual manufacturing budget for the rotomolded line based on an estimated annual production of 4,000 kayaks during 2017. Each kayak will require 54 pounds of polyethylene powder and a finishing kit (rope, seat, hardware, etc.). The polyethylene powder used in these kayaks costs \$1.50 per pound, and the finishing kits cost \$170 each. Each kayak

EXCEL
TUTORIAL

will use two kinds of labor—2 hours of type I labor from people who run the oven and trim the plastic, and 3 hours of work from type II workers who attach the hatches and seat and other hardware. The type I employees are paid \$15 per hour, and the type II are paid \$12 per hour.

Manufacturing overhead is budgeted at \$396,000 for 2017, broken down as follows.

Variable costs	
Indirect materials	\$ 40,000
Manufacturing supplies	53,800
Maintenance and utilities	88,000
	<u>181,800</u>
Fixed costs	
Supervision	90,000
Insurance	14,400
Depreciation	109,800
	<u>214,200</u>
Total	<u>\$396,000</u>

During the first quarter, ended March 31, 2017, 1,050 units were actually produced with the following costs.

Polyethylene powder	\$ 87,000
Finishing kits	178,840
Type I labor	31,500
Type II labor	39,060
Indirect materials	10,500
Manufacturing supplies	14,150
Maintenance and utilities	26,000
Supervision	20,000
Insurance	3,600
Depreciation	27,450
Total	<u>\$438,100</u>

Instructions

- Prepare the annual manufacturing budget for 2017, assuming that 4,000 kayaks will be produced.
- Prepare the flexible budget for manufacturing for the quarter ended March 31, 2017. Assume activity levels of 900, 1,000, and 1,050 units.
- Assuming the rotomolded line is treated as a profit center, prepare a flexible budget report for manufacturing for the quarter ended March 31, 2017, when 1,050 units were produced.

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–23.)

WP24 Waterways Corporation is continuing its budget preparations. This problem gives you static budget information as well as actual overhead costs, and asks you to calculate amounts related to budgetary control and responsibility accounting.

Go to the book's companion website, at www.wiley.com/college/weygandt, to find the completion of this problem.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP24-1 Green Pastures is a 400-acre farm on the outskirts of the Kentucky Bluegrass, specializing in the boarding of broodmares and their foals. A recent economic downturn in the thoroughbred industry has led to a decline in breeding activities, and it has made the boarding business extremely competitive. To meet the competition, Green Pastures planned in 2017 to entertain clients, advertise more extensively, and absorb expenses formerly paid by clients such as veterinary and blacksmith fees.

The budget report for 2017 is presented below. As shown, the static income statement budget for the year is based on an expected 21,900 boarding days at \$25 per mare. The variable expenses per mare per day were budgeted: feed \$5, veterinary fees \$3, blacksmith fees \$0.25, and supplies \$0.55. All other budgeted expenses were either semifixed or fixed.

During the year, management decided not to replace a worker who quit in March, but it did issue a new advertising brochure and did more entertaining of clients.¹

GREEN PASTURES
Static Budget Income Statement
For the Year Ended December 31, 2017

	<u>Actual</u>	<u>Master Budget</u>	<u>Difference</u>
Number of mares	52	60	8 U
Number of boarding days	19,000	21,900	2,900 U
Sales	\$380,000	\$547,500	\$167,500 U
Less: Variable expenses			
Feed	104,390	109,500	5,110 F
Veterinary fees	58,838	65,700	6,862 F
Blacksmith fees	4,984	5,475	491 F
Supplies	10,178	12,045	1,867 F
Total variable expenses	178,390	192,720	14,330 F
Contribution margin	201,610	354,780	153,170 U
Less: Fixed expenses			
Depreciation	40,000	40,000	–0–
Insurance	11,000	11,000	–0–
Utilities	12,000	14,000	2,000 F
Repairs and maintenance	10,000	11,000	1,000 F
Labor	88,000	95,000	7,000 F
Advertisement	12,000	8,000	4,000 U
Entertainment	7,000	5,000	2,000 U
Total fixed expenses	180,000	184,000	4,000 F
Net income	<u>\$ 21,610</u>	<u>\$170,780</u>	<u>\$149,170 U</u>

Instructions

With the class divided into groups, answer the following.

- (a) Based on the static budget report:
 - (1) What was the primary cause(s) of the loss in net income?
 - (2) Did management do a good, average, or poor job of controlling expenses?
 - (3) Were management's decisions to stay competitive sound?
- (b) Prepare a flexible budget report for the year.
- (c) Based on the flexible budget report, answer the three questions in part (a) above.
- (d) What course of action do you recommend for the management of Green Pastures?

Managerial Analysis

BYP24-2 Lanier Company manufactures expensive watch cases sold as souvenirs. Three of its sales departments are Retail Sales, Wholesale Sales, and Outlet Sales. The Retail Sales Department is a profit center. The Wholesale Sales Department is a cost center. Its managers merely take orders from customers who purchase through the company's wholesale catalog. The Outlet Sales Department is an investment center because each manager is given full responsibility for an outlet store location. The

¹Data for this case are based on Hans Sprohge and John Talbott, "New Applications for Variance Analysis," *Journal of Accountancy* (AICPA, New York), April 1989, pp. 137–141.

manager can hire and discharge employees, purchase, maintain, and sell equipment, and in general is fairly independent of company control.

Mary Gammel is a manager in the Retail Sales Department. Stephen Flott manages the Wholesale Sales Department. Jose Gomez manages the Golden Gate Club outlet store in San Francisco. The following are the budget responsibility reports for each of the three departments.

	Budget		
	Retail Sales	Wholesale Sales	Outlet Sales
Sales	\$ 750,000	\$ 400,000	\$200,000
Variable costs			
Cost of goods sold	150,000	100,000	25,000
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	20,000	30,000	2,000
Fixed costs			
Rent	50,000	30,000	10,000
Insurance	5,000	2,000	1,000
Depreciation	75,000	100,000	40,000
Investment in assets	1,000,000	1,200,000	800,000

	Actual Results		
	Retail Sales	Wholesale Sales	Outlet Sales
Sales	\$ 750,000	\$ 400,000	\$200,000
Variable costs			
Cost of goods sold	192,000	122,000	26,500
Advertising	100,000	30,000	5,000
Sales salaries	75,000	15,000	3,000
Printing	10,000	20,000	5,000
Travel	14,000	21,000	1,500
Fixed costs			
Rent	40,000	50,000	12,300
Insurance	5,000	2,000	1,000
Depreciation	80,000	90,000	56,000
Investment in assets	1,000,000	1,200,000	800,000

Instructions

- Determine which of the items should be included in the responsibility report for each of the three managers.
- Compare the budgeted measures with the actual results. Decide which results should be called to the attention of each manager.

Real-World Focus

BYP24-3 Computer Associates International, Inc., the world's leading business software company, delivers the end-to-end infrastructure to enable e-business through innovative technology, services, and education. Recently, Computer Associates had 19,000 employees worldwide and revenue of over \$6 billion.

The following information is from the company's annual report.

COMPUTER ASSOCIATES INTERNATIONAL, INC.

Management Discussion

The Company has experienced a pattern of business whereby revenue for its third and fourth fiscal quarters reflects an increase over first- and second-quarter revenue. The Company attributes this increase to clients' increased spending at the end of their calendar year budgetary periods and the culmination of its annual sales plan. Since the Company's costs do not increase proportionately with the third- and fourth-quarters' increase in revenue, the higher revenue in these quarters results in greater profit margins and income. Fourth-quarter profitability is traditionally affected by significant new hirings, training, and education expenditures for the succeeding year.

Instructions

- (a) Why don't the company's costs increase proportionately as the revenues increase in the third and fourth quarters?
- (b) What type of budgeting seems appropriate for the Computer Associates situation?

BYP24-4 There are many useful resources regarding budgeting available on websites. The following activity investigates the results of a comprehensive budgeting study.

Address: http://www.accountingweb.com/whitepapers/centage_ioma.pdf, or go to www.wiley.com/college/weygandt

Instructions

Go to the address above and then answer the following questions.

- (a) What are cited as the two most common "pain points" of budgeting?
- (b) What percentage of companies that participated in the survey said that they prepare annual budgets? Of those that prepare budgets, what percentage say that they start the budgeting process by first generating sales projections?
- (c) What is the most common amount of time for the annual budgeting process?
- (d) When evaluating variances from budgeted amounts, what was the most commonly defined range of acceptable tolerance levels?
- (e) The study defines three types of consequences for varying from budgeted amounts. How does it describe "severe" consequences?

CRITICAL THINKING

Communication Activity

BYP24-5 The manufacturing overhead budget for Fleming Company contains the following items.

Variable costs		Fixed costs	
Indirect materials	\$22,000	Supervision	\$17,000
Indirect labor	12,000	Inspection costs	1,000
Maintenance expense	10,000	Insurance expense	2,000
Manufacturing supplies	6,000	Depreciation	15,000
Total variable	\$50,000	Total fixed	\$35,000

The budget was based on an estimated 2,000 units being produced. During the past month, 1,500 units were produced, and the following costs incurred.

Variable costs		Fixed costs	
Indirect materials	\$22,500	Supervision	\$18,400
Indirect labor	13,500	Inspection costs	1,200
Maintenance expense	8,200	Insurance expense	2,200
Manufacturing supplies	5,000	Depreciation	14,700
Total variable	\$49,200	Total fixed	\$36,500

Instructions

- Determine which items would be controllable by Fred Bedner, the production manager.
- How much should have been spent during the month for the manufacture of the 1,500 units?
- Prepare a flexible manufacturing overhead budget report for Mr. Bedner.
- Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Bedner. Assume that the supervision cost above includes Mr. Bedner's salary of \$10,000, both at budget and actual. In an attached memo, describe clearly for Mr. Bedner the areas in which his performance needs to be improved.

Ethics Case

BYP24-6 American Products Corporation participates in a highly competitive industry. In order to meet this competition and achieve profit goals, the company has chosen the decentralized form of organization. Each manager of a decentralized investment center is measured on the basis of profit contribution, market penetration, and return on investment. Failure to meet the objectives established by corporate management for these measures has not been acceptable and usually has resulted in demotion or dismissal of an investment center manager.

An anonymous survey of managers in the company revealed that the managers feel the pressure to compromise their personal ethical standards to achieve the corporate objectives. For example, at certain plant locations there was pressure to reduce quality control to a level which could not assure that all unsafe products would be rejected. Also, sales personnel were encouraged to use questionable sales tactics to obtain orders, including gifts and other incentives to purchasing agents.

The chief executive officer is disturbed by the survey findings. In his opinion, such behavior cannot be condoned by the company. He concludes that the company should do something about this problem.

Instructions

- Who are the stakeholders (the affected parties) in this situation?
- Identify the ethical implications, conflicts, or dilemmas in the above described situation.
- What might the company do to reduce the pressures on managers and decrease the ethical conflicts?

(CMA adapted)

All About You

BYP24-7 It is one thing to prepare a personal budget; it is another thing to stick to it. Financial planners have suggested various mechanisms to provide support for enforcing personal budgets. One approach is called “envelope budgeting.”

Instructions

Read the article provided at http://en.wikipedia.org/wiki/Envelope_budgeting, and answer the following questions.

- Summarize the process of envelope budgeting.
- Evaluate whether you think you would benefit from envelope budgeting. What do you think are its strengths and weaknesses relative to your situation?

Considering Your Costs and Benefits

BYP24-8 Preparing a personal budget is a great first step toward control over your personal finances. It is especially useful to prepare a budget when you face a big decision. For most people, the biggest decision they will ever make is whether to purchase a house. The percentage of people in the United States who own a home is high compared to many other countries. This is partially the result of U.S. government programs and incentives that encourage home ownership. For example, the interest on a home mortgage is tax-deductible.

Before purchasing a house, you should first consider whether buying it is the best choice for you. Suppose you just graduated from college and are moving to a new community. Should you immediately buy a new home?

YES: If I purchase a home, I am making my housing cost more like a “fixed cost,” thus minimizing increases in my future housing costs. Also, I benefit from the appreciation in my home’s value. Although recent turbulence in the economy has caused home prices in many communities to decline, I know that over the long term, home prices have increased across the country.

NO: I just moved to a new town, so I don’t know the housing market. I am new to my job, so I don’t know whether I will like it or my new community. Also, if my job does go well, it is likely that my income will increase in the next few years, so I will be able to afford a better house if I wait. Therefore, the flexibility provided by renting is very valuable to me at this point in my life.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

25

Standard Costs and Balanced Scorecard

CHAPTER PREVIEW Standards are a fact of life. You met the admission standards for the school you are attending. The vehicle that you drive had to meet certain governmental emissions standards. The hamburgers and salads that you eat in a restaurant have to meet certain health and nutritional standards before they can be sold. As described in our Feature Story below, **Starbucks** has standards for the costs of its materials, labor, and overhead. The reason for standards in these cases is very simple: They help to ensure that overall product quality is high while keeping costs under control.

In this chapter, we continue the study of controlling costs. You will learn how to evaluate performance using standard costs and a balanced scorecard.

FEATURE STORY

80,000 Different Caffeinated Combinations

When Howard Schultz purchased a small Seattle coffee-roasting business in 1987, he set out to create a new kind of company. He thought the company should sell coffee by the cup in its store, in addition to the bags of roasted beans it already sold. He also saw the store as a place where you could order a beverage, custom-made to your unique tastes, in an environment that would give you the sense that you had escaped, if only momentarily, from the chaos we call life. Finally, Schultz believed that the company would prosper if employees shared in its success.

In a little more than 20 years, Howard Schultz's company, **Starbucks**, grew from that one store to over 17,000 locations in 54 countries. That is an incredible rate of growth, and it didn't happen by accident. While Starbucks does everything it can to maximize the customer's experience, behind the scenes it needs to control costs. Consider the almost infinite options

of beverage combinations and variations at Starbucks. The company must determine the most efficient way to make each beverage, it must communicate these methods in the form of standards to its employees, and it must then evaluate whether those standards are being met.

Schultz's book, *Onward: How Starbucks Fought for Its Life Without Losing Its Soul*, describes a painful period in which Starbucks had to close 600 stores and lay off thousands of employees. However, when a prominent shareholder suggested that the company eliminate its employee healthcare plan, as so many other companies had done, Schultz refused. The healthcare plan represented one of the company's most tangible commitments to employee well-being as well as to corporate social responsibility. Schultz feels strongly that providing health care to the company's employees is an essential part of the standard cost of a cup of Starbucks' coffee.

 In WileyPLUS, watch the **Starbucks** video to learn more about how the company sets standards, and watch the **Southwest Airlines** video to learn more about the real-world use of the balanced scorecard.

4

Reporting Variances

Go to the **REVIEW AND PRACTICE** section at the end of the chapter for a review of key concepts and practice applications with solutions.

Visit **WileyPLUS with ORION** for additional tutorials and practice opportunities.

LEARNING
OBJECTIVE

1

Describe standard costs.

Standards are common in business. Those imposed by government agencies are often called **regulations**. They include the Fair Labor Standards Act, the Equal Employment Opportunity Act, and a multitude of environmental standards. Standards established internally by a company may extend to personnel matters, such as employee absenteeism and ethical codes of conduct, quality control standards for products, and standard costs for goods and services. In managerial accounting, **standard costs** are predetermined unit costs, which companies use as measures of performance.

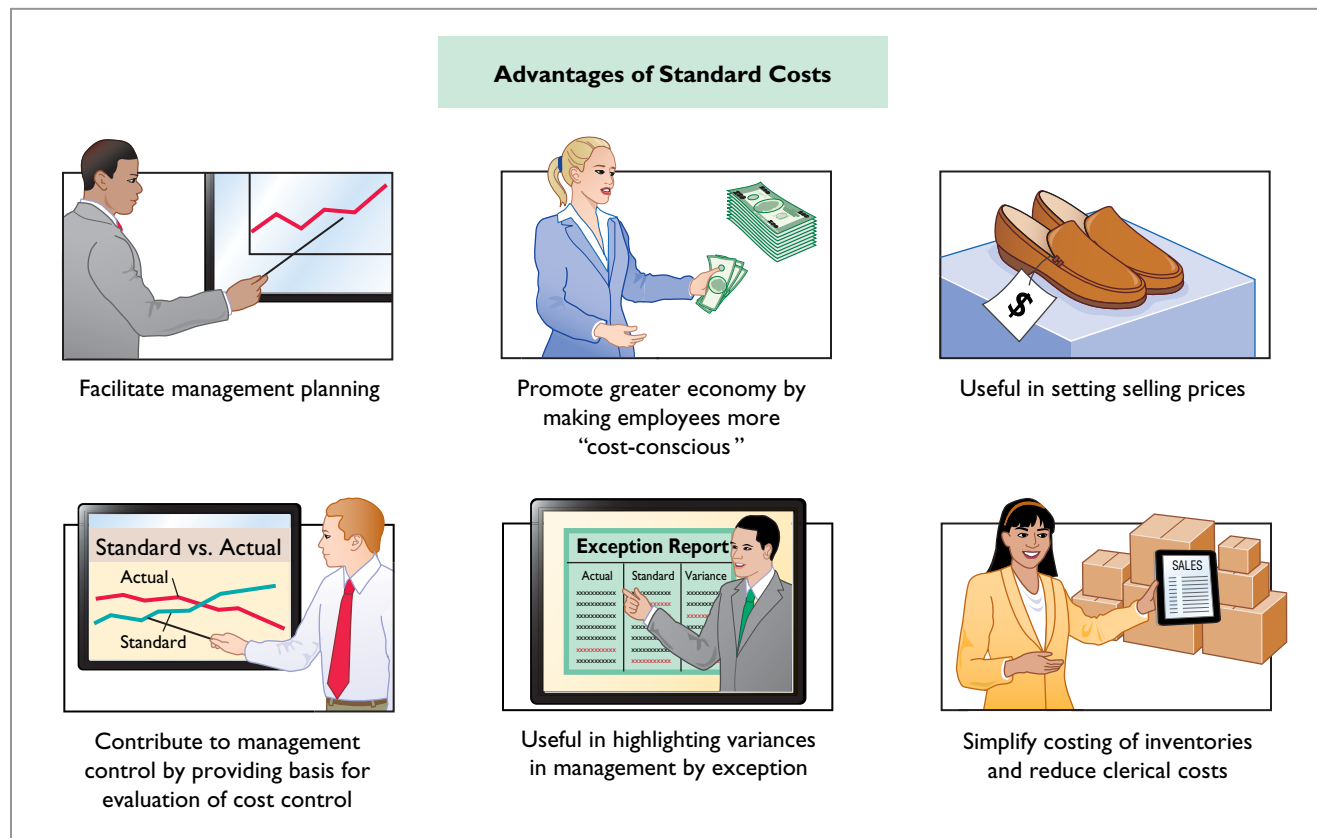

We focus on manufacturing operations in this chapter. But you should recognize that standard costs also apply to many types of service businesses as well. For example, a fast-food restaurant such as **McDonald's** knows the price it should pay for pickles, beef, buns, and other ingredients. It also knows how much time it should take an employee to flip hamburgers. If the company pays too much for pickles or if employees take too much time to prepare Big Macs, McDonald's notices the deviations and takes corrective action. Not-for-profit entities, such as universities, charitable organizations, and governmental agencies, also may use standard costs as measures of performance.

Standard costs offer a number of advantages to an organization, as shown in Illustration 25-1. The organization will realize these advantages only when standard costs are carefully established and prudently used. Using standards solely as

Illustration 25-1

Advantages of standard costs

a way to place blame can have a negative effect on managers and employees. To minimize this effect, many companies offer wage incentives to those who meet the standards.

Distinguishing Between Standards and Budgets

Both **standards** and **budgets** are predetermined costs, and both contribute to management planning and control. There is a difference, however, in the way the terms are expressed. A standard is a **unit** amount. A budget is a **total** amount. Thus, it is customary to state that the **standard cost** of direct labor for a unit of product is, say, \$10. If the company produces 5,000 units of the product, the \$50,000 of direct labor is the **budgeted** labor cost. A standard is the budgeted **cost per unit** of product. A standard is therefore concerned with each individual cost component that makes up the entire budget.

There are important accounting differences between budgets and standards. Except in the application of manufacturing overhead to jobs and processes, budget data are not journalized in cost accounting systems. In contrast, as we illustrate in the appendix to this chapter, standard costs may be incorporated into cost accounting systems. Also, a company may report its inventories at standard cost in its financial statements, but it would not report inventories at budgeted costs.

Setting Standard Costs

The setting of standard costs to produce a unit of product is a difficult task. It requires input from all persons who have responsibility for costs and quantities. To determine the standard cost of direct materials, management consults purchasing agents, product managers, quality control engineers, and production supervisors. In setting the standard cost for direct labor, managers obtain pay rate data from the payroll department. Industrial engineers generally determine the labor time requirements. The managerial accountant provides important input for the standard-setting process by accumulating historical cost data and by knowing how costs respond to changes in activity levels.

To be effective in controlling costs, standard costs need to be current at all times. Thus, standards are under continuous review. They should change whenever managers determine that the existing standard is not a good measure of performance. Circumstances that warrant revision of a standard include changed wage rates resulting from a new union contract, a change in product specifications, or the implementation of a new manufacturing method.

IDEAL VERSUS NORMAL STANDARDS

Companies set standards at one of two levels: ideal or normal. **Ideal standards** represent optimum levels of performance under perfect operating conditions. **Normal standards** represent efficient levels of performance that are attainable under expected operating conditions.

Some managers believe ideal standards will stimulate workers to ever-increasing improvement. However, most managers believe that ideal standards lower the morale of the entire workforce because they are difficult, if not impossible, to meet. Very few companies use ideal standards.

Most companies that use standards set them at a normal level. Properly set, normal standards should be **rigorous but attainable**. Normal standards allow for rest periods, machine breakdowns, and other “normal” contingencies in the production process. In the remainder of this chapter, we will assume that standard costs are set at a normal level.

ETHICS NOTE

When standards are set too high, employees sometimes feel pressure to consider unethical practices to meet these standards.

Accounting Across the Organization

U.S. Navy

SpotX/iStockphoto

How Do Standards Help a Business?

A number of organizations, including corporations, consultants, and governmental agencies, share information regarding performance standards in an effort to create a standard set of measures for thousands of business processes. The group, referred to as

the Open Standards Benchmarking Collaborative, includes IBM, Procter and Gamble, the U.S. Navy, and the World Bank. Companies that are interested in participating can go to the group's website and enter their information.

Source: Becky Partida, "Benchmark Your Manufacturing Performance," Control Engineering (February 4, 2013).

How will the creation of such standards help a business or organization? (Go to WileyPLUS for this answer and additional questions.)

A CASE STUDY

To establish the standard cost of producing a product, it is necessary to establish standards for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead. The standard for each element is derived from the standard price to be paid and the standard quantity to be used.

To illustrate, we use an extended example. Xonic Beverage Company uses standard costs to measure performance at the production facility of its caffeinated energy drink, Xonic Tonic. Xonic produces one-gallon containers of concentrated syrup that it sells to coffee and smoothie shops, and other retail outlets. The syrup is mixed with ice water or ice "slush" before serving. The potency of the beverage varies depending on the amount of concentrated syrup used.

DIRECT MATERIALS The **direct materials price standard** is the cost per unit of direct materials that should be incurred. This standard is based on the purchasing department's best estimate of the **cost of raw materials**. This cost is frequently based on current purchase prices. The price standard also includes an amount for related costs such as receiving, storing, and handling. The materials price standard per pound of material for Xonic Tonic is as follows.

Illustration 25-2

Setting direct materials price standard

Item	Price
Purchase price, net of discounts	\$ 2.70
Freight	0.20
Receiving and handling	0.10
Standard direct materials price per pound	<u>\$3.00</u>

The **direct materials quantity standard** is the quantity of direct materials that should be used per unit of finished goods. This standard is expressed as a physical measure, such as pounds, barrels, or board feet. In setting the standard, management considers both the quality and quantity of materials required to manufacture the product. The standard includes allowances for unavoidable waste and normal spoilage. The standard quantity per unit for Xonic Tonic is shown in Illustration 25-3.

Item	Quantity (Pounds)
Required materials	3.5
Allowance for waste	0.4
Allowance for spoilage	0.1
Standard direct materials quantity per unit	4.0

Illustration 25-3
Setting direct materials
quantity standard

The **standard direct materials cost per unit is the standard direct materials price times the standard direct materials quantity**. For Xonic, the standard direct materials cost per gallon of Xonic Tonic is \$12.00 ($\3×4 pounds).

DIRECT LABOR The **direct labor price standard** is the rate per hour that should be incurred for direct labor. This standard is based on current wage rates, adjusted for anticipated changes such as cost of living adjustments (COLAs). The price standard also generally includes employer payroll taxes and fringe benefits, such as paid holidays and vacations. For Xonic, the direct labor price standard is as follows.

Alternative Terminology
The direct labor price standard is also called the *direct labor rate standard*.

Item	Price
Hourly wage rate	\$ 12.50
COLA	0.25
Payroll taxes	0.75
Fringe benefits	1.50
Standard direct labor rate per hour	\$15.00

Illustration 25-4
Setting direct labor price
standard

The **direct labor quantity standard** is the time that should be required to make one unit of the product. This standard is especially critical in labor-intensive companies. Allowances should be made in this standard for rest periods, cleanup, machine setup, and machine downtime. Illustration 25-5 shows the direct labor quantity standard for Xonic.

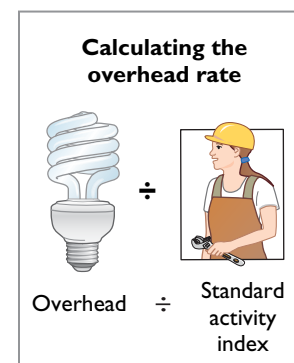

Alternative Terminology
The direct labor quantity standard is also called the *direct labor efficiency standard*.

Item	Quantity (Hours)
Actual production time	1.5
Rest periods and cleanup	0.2
Setup and downtime	0.3
Standard direct labor hours per unit	2.0

Illustration 25-5
Setting direct labor quantity
standard

The **standard direct labor cost per unit is the standard direct labor rate times the standard direct labor hours**. For Xonic, the standard direct labor cost per gallon is \$30 ($\15×2 hours).

MANUFACTURING OVERHEAD For manufacturing overhead, companies use a **standard predetermined overhead rate** in setting the standard. This overhead rate is determined by dividing budgeted overhead costs by an expected standard activity index. For example, the index may be standard direct labor hours or standard machine hours.

As discussed in Chapter 18, many companies employ activity-based costing (ABC) to allocate overhead costs. Because ABC uses multiple activity indices to allocate overhead costs, it results in a better correlation between activities and costs incurred than do other methods. As a result, the use of ABC can significantly improve the usefulness of standard costing for management decision-making.

Xonic uses standard direct labor hours as the activity index. The company expects to produce 13,200 gallons of Xonic Tonic during the year at normal capacity. **Normal capacity** is the average activity output that a company should experience over the long run. Since it takes two direct labor hours for each gallon, total standard direct labor hours are 26,400 (13,200 gallons \times 2 hours).

At normal capacity of 26,400 direct labor hours, overhead costs are expected to be \$132,000. Of that amount, \$79,200 are variable and \$52,800 are fixed. Illustration 25-6 shows computation of the standard predetermined overhead rates for Xonic.

Illustration 25-6
Computing predetermined overhead rates

<u>Budgeted Overhead Costs</u>			<u>Standard Direct Labor Hours</u>	=	<u>Overhead Rate per Direct Labor Hour</u>
	<u>Amount</u>	÷			
Variable	\$ 79,200		26,400		\$3.00
Fixed	52,800		26,400		2.00
Total	<u>\$132,000</u>		26,400		<u>\$5.00</u>

The standard manufacturing overhead cost per unit is the predetermined overhead rate times the activity index quantity standard. For Xonic, which uses direct labor hours as its activity index, the standard manufacturing overhead cost per gallon of Xonic Tonic is \$10 (\$5 \times 2 hours).

TOTAL STANDARD COST PER UNIT After a company has established the standard quantity and price per unit of product, it can determine the total standard cost. The total standard cost per unit is the sum of the standard costs of direct materials, direct labor, and manufacturing overhead. The total standard cost per gallon of Xonic Tonic is \$52, as shown on the following standard cost card.

Illustration 25-7
Standard cost per gallon of Xonic Tonic

<u>Product: Xonic Tonic</u>		<u>Unit Measure: Gallon</u>			
<u>Manufacturing Cost Elements</u>	<u>Standard Quantity</u>	\times	<u>Standard Price</u>	=	<u>Standard Cost</u>
Direct materials	4 pounds		\$ 3.00		\$12.00
Direct labor	2 hours		\$15.00		30.00
Manufacturing overhead	2 hours		\$ 5.00		10.00
					<u>\$52.00</u>

The company prepares a standard cost card for each product. This card provides the basis for determining variances from standards.

DO IT!**1****Standard Costs****Action Plan**

- ✓ Know that standard costs are predetermined unit costs.
- ✓ To establish the standard cost of producing a product, establish the standard for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead.
- ✓ Compute the standard cost for each element from the standard price to be paid and the standard quantity to be used.

Ridette Inc. accumulated the following standard cost data concerning product Cty31.

Direct materials per unit: 1.5 pounds at \$4 per pound

Direct labor per unit: 0.25 hours at \$13 per hour.

Manufacturing overhead: allocated based on direct labor hours at a predetermined rate of \$15.60 per direct labor hour.

Compute the standard cost of one unit of product Cty31.

Solution

<u>Manufacturing Cost Element</u>	<u>Standard Quantity</u>	×	<u>Standard Price</u>	=	<u>Standard Cost</u>
Direct materials	1.5 pounds		\$ 4.00		\$ 6.00
Direct labor	0.25 hours		\$13.00		3.25
Manufacturing overhead	0.25 hours		\$15.60		3.90
Total					<u><u>\$13.15</u></u>

Related exercise material: **BE25-2, BE25-3, E25-1, E25-2, E25-3, and DO IT! 25-1.**

LEARNING OBJECTIVE**2****Determine direct materials variances.****Analyzing and Reporting Variances**

One of the major management uses of standard costs is to identify variances from standards. **Variances** are the differences between total actual costs and total standard costs.

To illustrate, assume that in producing 1,000 gallons of Xonic Tonic in the month of June, Xonic incurred the following costs.

Direct materials	\$13,020
Direct labor	31,080
Variable overhead	6,500
Fixed overhead	4,400
Total actual costs	<u><u>\$55,000</u></u>

Alternative Terminology

In business, the term *variance* is also used to indicate differences between total budgeted and total actual costs.

Illustration 25-8

Actual production costs

Companies determine total standard costs by multiplying the units produced by the standard cost per unit. The total standard cost of Xonic Tonic is \$52,000 (1,000 gallons × \$52). Thus, the total variance is \$3,000, as shown below.

Actual costs	\$55,000
Less: Standard costs	<u>52,000</u>
Total variance	<u><u>\$ 3,000</u></u>

Illustration 25-9

Computation of total variance

Note that the variance is expressed in total dollars, not on a per unit basis.

When actual costs exceed standard costs, the variance is **unfavorable**. The \$3,000 variance in June for Xonic Tonic is unfavorable. An unfavorable variance has a negative connotation. It suggests that the company paid too much for one

or more of the manufacturing cost elements or that it used the elements inefficiently.

If actual costs are less than standard costs, the variance is **favorable**. A favorable variance has a positive connotation. It suggests efficiencies in incurring manufacturing costs and in using direct materials, direct labor, and manufacturing overhead.

However, be careful: A favorable variance could be obtained by using inferior materials. In printing wedding invitations, for example, a favorable variance could result from using an inferior grade of paper. Or, a favorable variance might be achieved in installing tires on an automobile assembly line by tightening only half of the lug bolts. A variance is not favorable if the company has sacrificed quality control standards.

To interpret a variance, you must analyze its components. A variance can result from differences related to the cost of materials, labor, or overhead. Illustration 25-10 shows that the total variance is the sum of the materials, labor, and overhead variances.

Illustration 25-10
Components of total variance

$$\text{Materials Variance} + \text{Labor Variance} + \text{Overhead Variance} = \text{Total Variance}$$

In the following discussion, you will see that the materials variance and the labor variance are the sum of variances resulting from price differences and quantity differences. Illustration 25-11 shows a format for computing the price and quantity variances.

Illustration 25-11
Breakdown of materials or labor variance into price and quantity variances

Note that the left side of the matrix is actual cost (actual quantity times actual price). The right hand is standard cost (standard quantity times standard price). The only additional element you need in order to compute the price and quantity variances is the middle element, the actual quantity at the standard price.

Direct Materials Variances

Part of Xonic's total variance of \$3,000 is due to a materials variance. In completing the order for 1,000 gallons of Xonic Tonic, the company used 4,200 pounds of direct materials. The direct materials were purchased at a price of \$3.10 per unit. From Illustration 25-3, we know that Xonic's standards require it

to use 4 pounds of materials per gallon produced, so it should have only used 4,000 ($4 \times 1,000$) pounds of direct materials to produce 1,000 gallons. Illustration 25-2 shows that the standard cost of each pound of direct materials is \$3 instead of the \$3.10 actually paid. Illustration 25-12 shows that the **total materials variance** is computed as the difference between the amount paid (actual quantity times actual price) and the amount that should have been paid based on standards (standard quantity times standard price of materials).

Actual Quantity × Actual Price	–	Standard Quantity × Standard Price	=	Total Materials Variance
(AQ) × (AP) (4,200 × \$3.10)	–	(SQ) × (SP) (4,000 × \$3.00)	=	(TMV) \$1,020 U

Illustration 25-12

Formula for total materials variance

Thus, for Xonic, the total materials variance is \$1,020 ($\$13,020 - \$12,000$) unfavorable.

The total materials variance could be caused by differences in the price paid for the materials or by differences in the amount of materials used. Illustration 25-13 shows that the total materials variance is the sum of the materials price variance and the materials quantity variance.

$$\text{Materials Price Variance} + \text{Materials Quantity Variance} = \text{Total Materials Variance}$$

Illustration 25-13

Components of total materials variance

The materials price variance results from a difference between the actual price and the standard price. Illustration 25-14 shows that the **materials price variance** is computed as the difference between the actual amount paid (actual quantity of materials times actual price) and the standard amount that should have been paid for the materials used (actual quantity of materials times standard price).¹

Actual Quantity × Actual Price	–	Actual Quantity × Standard Price	=	Materials Price Variance
(AQ) × (AP) (4,200 × \$3.10)	–	(AQ) × (SP) (4,200 × \$3.00)	=	(MPV) \$420 U

Illustration 25-14

Formula for materials price variance

For Xonic, the materials price variance is \$420 ($\$13,020 - \$12,600$) unfavorable.

The price variance can also be computed by multiplying the actual quantity purchased by the difference between the actual and standard price per unit. The computation in this case is $4,200 \times (\$3.10 - \$3.00) = \$420 \text{ U}$.

As seen in Illustration 25-13, the other component of the materials variance is the quantity variance. The quantity variance results from differences between the amount of material actually used and the amount that should have been used. As shown in Illustration 25-15, the **materials quantity variance** is computed as the difference between the standard cost of the actual quantity (actual quantity times standard price) and the standard cost of the amount that should have been used (standard quantity times standard price for materials).

Actual Quantity × Standard Price	–	Standard Quantity × Standard Price	=	Materials Quantity Variance
(AQ) × (SP) (4,200 × \$3.00)	–	(SQ) × (SP) (4,000 × \$3.00)	=	(MQV) \$600 U

Illustration 25-15

Formula for materials quantity variance

Helpful Hint

The alternative formula is:

$$\boxed{\text{AQ}} \times \boxed{\text{AP} - \text{SP}} = \boxed{\text{MPV}}$$

¹Assume that all materials purchased during the period are used in production and that no units remain in inventory at the end of the period.

Thus, for Xonic, the materials quantity variance is \$600 (\$12,600 – \$12,000) unfavorable.

Helpful Hint

The alternative formula is:

$$SP \times AQ - SQ = MQV$$

The quantity variance can also be computed by applying the standard price to the difference between actual and standard quantities used. The computation in this example is $\$3.00 \times (4,200 - 4,000) = \600 U .

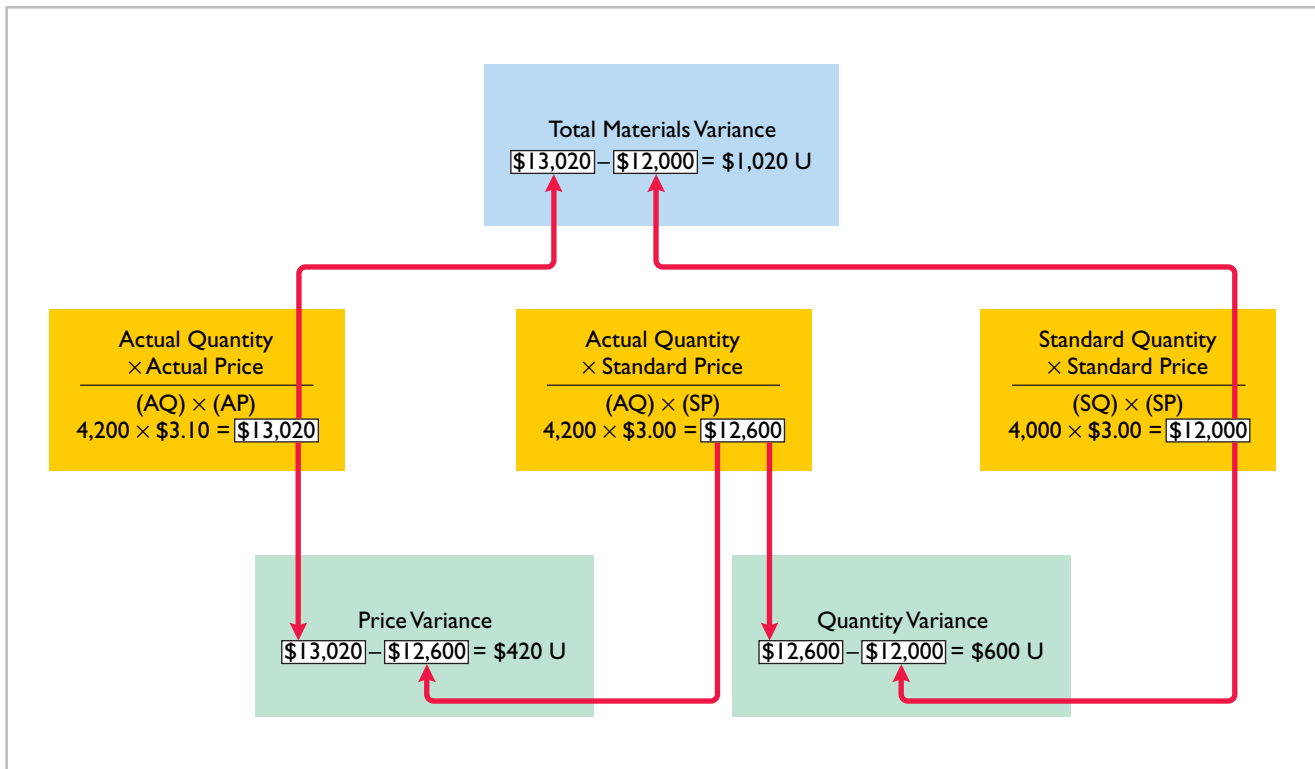

The total materials variance of \$1,020 U, therefore, consists of the following.

Illustration 25-16
Summary of materials variances

Materials price variance	\$ 420 U
Materials quantity variance	600 U
Total materials variance	<u>\$1,020 U</u>

Companies sometimes use a matrix to analyze a variance. **When the matrix is used, a company computes the amounts using the formulas for each cost element first and then computes the variances.** Illustration 25-17 shows the completed matrix for the direct materials variance for Xonic. The matrix provides a convenient structure for determining each variance.

Illustration 25-17
Matrix for direct materials variances

CAUSES OF MATERIALS VARIANCES

What are the causes of a variance? The causes may relate to both internal and external factors. The investigation of a **materials price variance usually begins in the purchasing department.** Many factors affect the price paid for raw materials. These include availability of quantity and cash discounts, the quality of the materials requested, and the delivery method used. To the extent that these factors are considered in setting the price standard, the purchasing department is responsible for any variances.

However, a variance may be beyond the control of the purchasing department. Sometimes, for example, prices may rise faster than expected. Moreover, actions by groups over which the company has no control, such as the OPEC nations’ oil price increases, may cause an unfavorable variance. For example,

during a recent year, **Kraft Foods** and **Kellogg Company** both experienced unfavorable materials price variances when the cost of dairy and wheat products jumped unexpectedly. There are also times when a production department may be responsible for the price variance. This may occur when a rush order forces the company to pay a higher price for the materials.

The starting point for determining the cause(s) of a significant **materials quantity variance is in the production department**. If the variances are due to inexperienced workers, faulty machinery, or carelessness, the production department is responsible. However, if the materials obtained by the purchasing department were of inferior quality, then the purchasing department is responsible.

**DO IT!****2****Direct Materials Variances**

The standard cost of Wonder Walkers includes two units of direct materials at \$8.00 per unit. During July, the company buys 22,000 units of direct materials at \$7.50 and uses those materials to produce 10,000 Wonder Walkers. Compute the total, price, and quantity variances for materials.

Solution

Standard quantity = $10,000 \times 2$

Substituting amounts into the formulas, the variances are:

Total materials variance = $(22,000 \times \$7.50) - (20,000 \times \$8.00) = \$5,000$ unfavorable

Materials price variance = $(22,000 \times \$7.50) - (22,000 \times \$8.00) = \$11,000$ favorable

Materials quantity variance = $(22,000 \times \$8.00) - (20,000 \times \$8.00) = \$16,000$ unfavorable

Related exercise material: **BE25-4, E25-5, and DO IT! 25-2.**

Action Plan

Use the formulas for computing each of the materials variances:

- ✓ Total materials variance = $(AQ \times AP) - (SQ \times SP)$
- ✓ Materials price variance = $(AQ \times AP) - (AQ \times SP)$
- ✓ Materials quantity variance = $(AQ \times SP) - (SQ \times SP)$

LEARNING OBJECTIVE

3**Determine direct labor and total manufacturing overhead variances.****Direct Labor Variances**

The process of determining direct labor variances is the same as for determining the direct materials variances. In completing the Xonic Tonic order, the company incurred 2,100 direct labor hours at an average hourly rate of \$14.80. The standard hours allowed for the units produced were 2,000 hours (1,000 gallons \times 2 hours). The standard labor rate was \$15 per hour.

The total labor variance is the difference between the amount actually paid for labor versus the amount that should have been paid. Illustration 25-18 shows that the **total labor variance** is computed as the difference between the amount actually paid for labor (actual hours times actual rate) and the amount that should have been paid (standard hours times standard rate for labor).

Actual Hours \times Actual Rate	–	Standard Hours \times Standard Rate	=	Total Labor Variance
(AH) \times (AR)		(SH) \times (SR)		(TLV)
(2,100 \times \$14.80)	–	(2,000 \times \$15.00)	=	\$1,080 U

Illustration 25-18

Formula for total labor variance

The total labor variance is \$1,080 (\$31,080 – \$30,000) unfavorable.

The total labor variance is caused by differences in the labor rate or difference in labor hours. Illustration 25-19 shows that the total labor variance is the sum of the labor price variance and the labor quantity variance.

Illustration 25-19

Components of total labor variance

Labor Price Variance	+	Labor Quantity Variance	=	Total Labor Variance
-----------------------------	---	--------------------------------	---	-----------------------------

The labor price variance results from the difference between the rate paid to workers versus the rate that was supposed to be paid. Illustration 25-20 shows that the **labor price variance** is computed as the difference between the actual amount paid (actual hours times actual rate) and the amount that should have been paid for the number of hours worked (actual hours times standard rate for labor).

Illustration 25-20

Formula for labor price variance

Actual Hours × Actual Rate	–	Actual Hours × Standard Rate	=	Labor Price Variance
(AH) × (AR)		(AH) × (SR)		(LPV)
(2,100 × \$14.80)	–	(2,100 × \$15.00)	=	\$420 F

Helpful Hint

The alternative formula is:

$$\boxed{\text{AH}} \times \boxed{\text{AR} - \text{SR}} = \boxed{\text{LPV}}$$

For Xonic, the labor price variance is \$420 (\$31,080 – \$31,500) favorable.

The labor price variance can also be computed by multiplying actual hours worked by the difference between the actual pay rate and the standard pay rate. The computation in this example is $2,100 \times (\$15.00 - \$14.80) = \$420 \text{ F}$.

The other component of the total labor variance is the labor quantity variance. The labor quantity variance results from the difference between the actual number of labor hours and the number of hours that should have been worked for the quantity produced. Illustration 25-21 shows that the **labor quantity variance** is computed as the difference between the amount that should have been paid for the hours worked (actual hours times standard rate) and the amount that should have been paid for the amount of hours that should have been worked (standard hours times standard rate for labor).

Illustration 25-21

Formula for labor quantity variance

Actual Hours × Standard Rate	–	Standard Hours × Standard Rate	=	Labor Quantity Variance
(AH) × (SR)		(SH) × (SR)		(LQV)
(2,100 × \$15.00)	–	(2,000 × \$15.00)	=	\$1,500 U

Helpful Hint

The alternative formula is:

$$\boxed{\text{SR}} \times \boxed{\text{AH} - \text{SH}} = \boxed{\text{LQV}}$$

Thus, for Xonic, the labor quantity variance is \$1,500 (\$31,500 – \$30,000) unfavorable.

The same result can be obtained by multiplying the standard rate by the difference between actual hours worked and standard hours allowed. In this case, the computation is $\$15.00 \times (2,100 - 2,000) = \$1,500 \text{ U}$.

The total direct labor variance of \$1,080 U, therefore, consists of the following.

Illustration 25-22

Summary of labor variances

Labor price variance	\$ 420 F
Labor quantity variance	<u>1,500 U</u>
Total direct labor variance	<u><u>\$1,080 U</u></u>

These results can also be obtained from the matrix in Illustration 25-23.

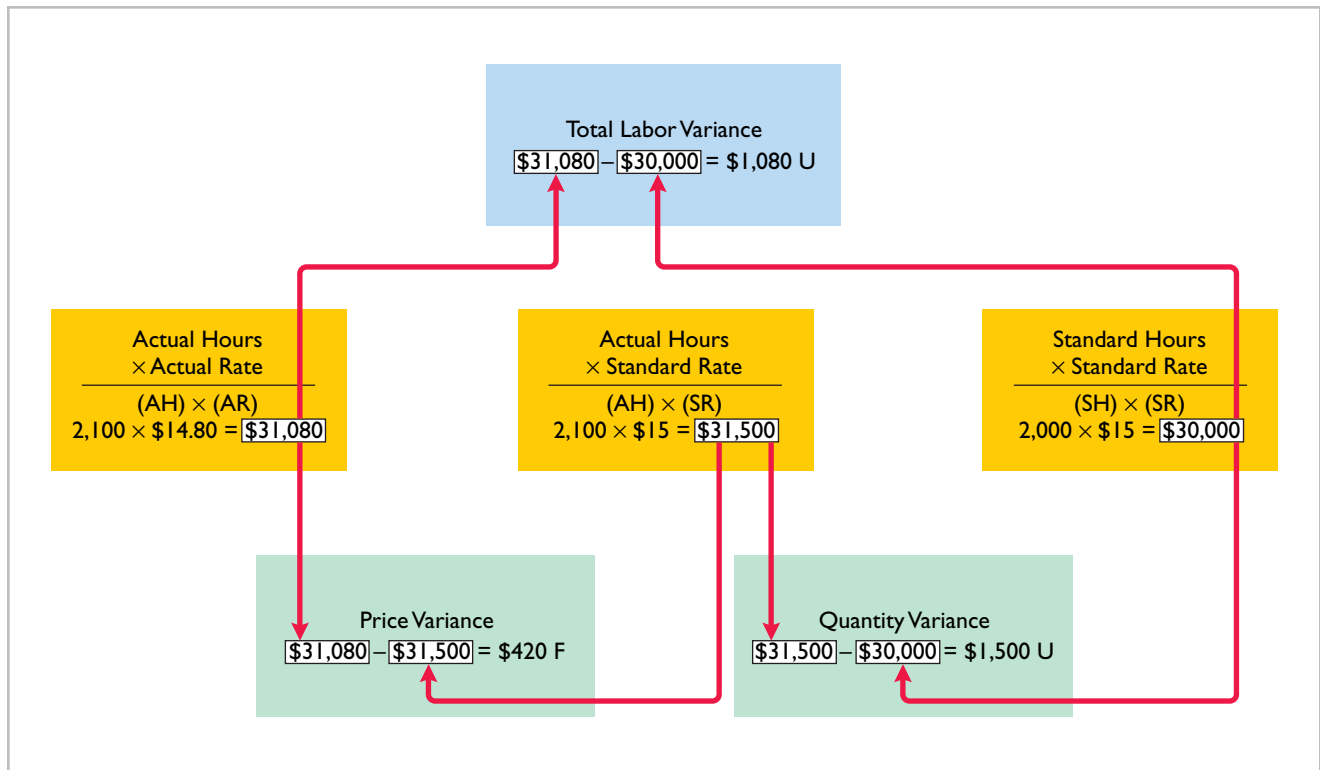

Illustration 25-23
Matrix for direct labor variances

CAUSES OF LABOR VARIANCES

Labor price variances usually result from two factors: (1) paying workers **different wages than expected**, and (2) **misallocation of workers**. In companies where pay rates are determined by union contracts, labor price variances should be infrequent. When workers are not unionized, there is a much higher likelihood of such variances. The responsibility for these variances rests with the manager who authorized the wage change.

Misallocation of the workforce refers to using skilled workers in place of unskilled workers and vice versa. The use of an inexperienced worker instead of an experienced one will result in a favorable price variance because of the lower pay rate of the unskilled worker. An unfavorable price variance would result if a skilled worker were substituted for an inexperienced one. The production department generally is responsible for labor price variances resulting from misallocation of the workforce.

Labor quantity variances relate to the **efficiency of workers**. The cause of a quantity variance generally can be traced to the production department. The causes of an unfavorable variance may be poor training, worker fatigue, faulty machinery, or carelessness. These causes are the responsibility of the **production department**. However, if the excess time is due to inferior materials, the responsibility falls outside the production department.

Manufacturing Overhead Variances

The **total overhead variance** is the difference between the actual overhead costs and overhead costs applied based on standard hours allowed for the amount of goods produced. As indicated in Illustration 25-8 (page 1165), Xonic incurred overhead costs of \$10,900 to produce 1,000 gallons of Xonic Tonic in June. The computation of the actual overhead is comprised of a variable and a fixed component. Illustration 25-24 (page 1172) shows this computation.

Illustration 25-24
Actual overhead costs

Variable overhead	\$ 6,500
Fixed overhead	4,400
Total actual overhead	\$10,900

To find the total overhead variance in a standard costing system, we determine the overhead costs applied based on standard hours allowed. **Standard hours allowed** are the hours that *should* have been worked for the units produced. Overhead costs for Xonic Tonic are applied based on direct labor hours. Because it takes two hours of direct labor to produce one gallon of Xonic Tonic, for the 1,000-gallon Xonic Tonic order, the standard hours allowed are 2,000 hours (1,000 gallons \times 2 hours). We then apply the predetermined overhead rate to the 2,000 standard hours allowed.

Recall from Illustration 25-6 (page 1164) that the amount of budgeted overhead costs at normal capacity of \$132,000 was divided by normal capacity of 26,400 direct labor hours, to arrive at a predetermined overhead rate of \$5 (\$132,000 \div 26,400). The predetermined rate of \$5 is then multiplied by the 2,000 standard hours allowed, to determine the overhead costs applied.

Illustration 25-25 shows the formula for the total overhead variance and the calculation for Xonic for the month of June.

Illustration 25-25
Formula for total overhead variance

Actual Overhead	–	Overhead Applied*	=	Total Overhead Variance
\$10,900 (\$6,500 + \$4,400)	–	\$10,000 (\$5 \times 2,000 hours)	=	\$900 U

*Based on standard hours allowed.

Thus, for Xonic, the total overhead variance is \$900 unfavorable.

The overhead variance is generally analyzed through a price and a quantity variance. (These computations are discussed in more detail in advanced courses.) The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**. Appendix 25B discusses how the total overhead variance can be broken down into these two variances.

CAUSES OF MANUFACTURING OVERHEAD VARIANCES

One reason for an overhead variance relates to over- or underspending on overhead items. For example, overhead may include indirect labor for which a company paid wages higher than the standard labor price allowed. Or, the price of electricity to run the company's machines increased, and the company did not anticipate this additional cost. Companies should investigate any spending variances to determine whether they will continue in the future. Generally, the responsibility for these variances rests with the production department.

The overhead variance can also result from the inefficient use of overhead. For example, because of poor maintenance, a number of the manufacturing machines are experiencing breakdowns on a consistent basis, leading to reduced production. Or, the flow of materials through the production process is impeded because of a lack of skilled labor to perform the necessary production tasks, due to a lack of planning. In both of these cases, the production department is responsible for the cause of these variances. On the other hand, overhead can also be underutilized because of a lack of sales orders. When the cause is a lack of sales orders, the responsibility rests outside the production department. For example,

at one point **Chrysler** experienced a very significant unfavorable overhead variance because plant capacity was maintained at excessively high levels, due to overly optimistic sales forecasts.

People, Planet, and Profit Insight Starbucks

Archer Colin/SIPA/NewsCom

What's Brewing at Starbucks?

It's easy for a company to say it's committed to corporate social responsibility. But **Starbucks** actually spells out measurable goals. Recently, the company published

its annual *Global Responsibility Report* in which it describes its goals, achievements, and even its shortcomings related to corporate social responsibility. For example, Starbucks achieved its goal of getting more than 50% of its electricity from renewable sources. It also has numerous goals related to purchasing coffee from sources that are certified as responsibly grown and ethically traded; providing funds for loans to coffee farmers; and fostering partner-

ships with **Conservation International** to provide training to farmers on ecologically friendly growing.

The report also candidly explains that the company did not meet its goal to cut energy consumption by 25%. It also fell far short of its goal of getting customers to reuse their cups. In those instances where it didn't achieve its goals, Starbucks set new goals and described steps it would take to achieve them. You can view the company's *Global Responsibility Report* at www.starbucks.com.

Source: "Starbucks Launches 10th Global Responsibility Report," *Business Wire* (April 18, 2011).

What implications does Starbucks' commitment to corporate social responsibility have for the standard cost of a cup of coffee? (Go to **WileyPLUS** for this answer and additional questions.)

DO IT!

3

Labor and Manufacturing Overhead Variances

The standard cost of Product YY includes 3 hours of direct labor at \$12.00 per hour. The predetermined overhead rate is \$20.00 per direct labor hour. During July, the company incurred 3,500 hours of direct labor at an average rate of \$12.40 per hour and \$71,300 of manufacturing overhead costs. It produced 1,200 units.

(a) Compute the total, price, and quantity variances for labor. (b) Compute the total overhead variance.

Solution

Substituting amounts into the formulas, the variances are:

$$\text{Total labor variance} = (3,500 \times \$12.40) - (3,600 \times \$12.00) = \$200 \text{ unfavorable}$$

$$\text{Labor price variance} = (3,500 \times \$12.40) - (3,500 \times \$12.00) = \$1,400 \text{ unfavorable}$$

$$\text{Labor quantity variance} = (3,500 \times \$12.00) - (3,600 \times \$12.00) = \$1,200 \text{ favorable}$$

$$\text{Total overhead variance} = \$71,300 - \$72,000^* = \$700 \text{ favorable}$$

$$^*(1,200 \times 3 \text{ hours}) \times \$20.00$$

Related exercise material: **BE25-5, BE25-6, E25-4, E25-6, E25-7, E25-8, E25-11, and DO IT! 25-3.**

Action Plan

✓ Use the formulas for computing each of the variances:

$$\text{Total labor variance} = (\text{AH} \times \text{AR}) - (\text{SH} \times \text{SR})$$

$$\text{Labor price variance} = (\text{AH} \times \text{AR}) - (\text{AH} \times \text{SR})$$

$$\text{Labor quantity variance} = (\text{AH} \times \text{SR})$$

$$- (\text{SH} \times \text{SR})$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

*Based on standard hours allowed.

LEARNING OBJECTIVE

4

Prepare variance reports and balanced scorecards.

Reporting Variances

All variances should be reported to appropriate levels of management as soon as possible. The sooner managers are informed, the sooner they can evaluate problems and take corrective action.

The form, content, and frequency of variance reports vary considerably among companies. One approach is to prepare a weekly report for each department that has primary responsibility for cost control. Under this approach, materials price variances are reported to the purchasing department, and all other variances are reported to the production department that did the work. The following report for Xonic, with the materials for the Xonic Tonic order listed first, illustrates this approach.

Illustration 25-26
Materials price variance report

XONIC					
Variance Report—Purchasing Department					
For Week Ended June 8, 2017					
<u>Type of Materials</u>	<u>Quantity Purchased</u>	<u>Actual Price</u>	<u>Standard Price</u>	<u>Price Variance</u>	<u>Explanation</u>
X100	4,200 lbs.	\$3.10	\$3.00	\$ 420 U	Rush order
X142	1,200 units	2.75	2.80	60 F	Quantity discount
A85	600 doz.	5.20	5.10	60 U	Regular supplier on strike
Total price variance				<u>\$420 U</u>	

The explanation column is completed after consultation with the purchasing department manager.

Variance reports facilitate the principle of “management by exception” explained in Chapter 24. For example, the vice president of purchasing can use the report shown above to evaluate the effectiveness of the purchasing department manager. Or, the vice president of production can use production department variance reports to determine how well each production manager is controlling costs. In using variance reports, top management normally looks for **significant variances**. These may be judged on the basis of some quantitative measure, such as more than 10% of the standard or more than \$1,000.

Income Statement Presentation of Variances

In income statements **prepared for management** under a standard cost accounting system, **cost of goods sold is stated at standard cost and the variances are disclosed separately**. Unfavorable variances increase cost of goods sold, while favorable variances decrease cost of goods sold. Illustration 25-27 shows

Illustration 25-27
Variances in income statement for management

XONIC	
Income Statement	
For the Month Ended June 30, 2017	
Sales revenue	\$70,000
Cost of goods sold (at standard)	<u>52,000</u>
Gross profit (at standard)	18,000
Variances	
Materials price	\$ 420 U
Materials quantity	600 U
Labor price	420 F
Labor quantity	1,500 U
Overhead	<u>900 U</u>
Total variance unfavorable	<u>3,000</u>
Gross profit (actual)	15,000
Selling and administrative expenses	<u>3,000</u>
Net income	<u><u>\$12,000</u></u>

the presentation of variances in an income statement. This income statement is based on the production and sale of 1,000 units of Xonic Tonic at \$70 per unit. It also assumes selling and administrative costs of \$3,000. Observe that each variance is shown, as well as the total net variance. In this example, variations from standard costs reduced net income by \$3,000.

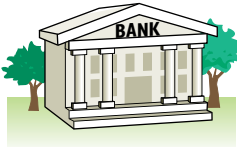

Standard costs may be used in financial statements prepared for stockholders and other external users. The costing of inventories at standard costs is in accordance with generally accepted accounting principles when there are no significant differences between actual costs and standard costs. **Hewlett-Packard** and **Jostens, Inc.**, for example, report their inventories at standard costs. However, if there are significant differences between actual and standard costs, the financial statements must report inventories and cost of goods sold at actual costs.

It is also possible to show the variances in an income statement prepared in the variable costing (CVP) format. To do so, it is necessary to analyze the overhead variances into variable and fixed components. This type of analysis is explained in cost accounting textbooks.

Balanced Scorecard

Financial measures (measurement of dollars), such as variance analysis and return on investment (ROI), are useful tools for evaluating performance. However, many companies now supplement these financial measures with nonfinancial measures to better assess performance and anticipate future results. For example, airlines like **Delta** and **United** use capacity utilization as an important measure to understand and predict future performance. Companies that publish the *New York Times* and the *Chicago Tribune* newspapers use circulation figures as another measure by which to assess performance. **Penske Automotive Group**, the owner of 300 dealerships, rewards executives for meeting employee retention targets. Illustration 25-28 lists some key nonfinancial measures used in various industries.

Illustration 25-28
Nonfinancial measures used in various industries

Industry	Measure
Automobiles 	Capacity utilization of plants. Average age of key assets. Impact of strikes. Brand-loyalty statistics.
Computer Systems 	Market profile of customer end-products. Number of new products. Employee stock ownership percentages. Number of scientists and technicians used in R&D.
Chemicals 	Customer satisfaction data. Factors affecting customer product selection. Number of patents and trademarks held. Customer brand awareness.
Regional Banks 	Number of ATMs by state. Number of products used by average customer. Percentage of customer service calls handled by interactive voice response units. Personnel cost per employee. Credit card retention rates.

Source: Financial Accounting Standards Board, *Business Reporting: Insights into Enhancing Voluntary Disclosures* (Norwalk, Conn.: FASB, 2001).

Most companies recognize that both financial and nonfinancial measures can provide useful insights into what is happening in the company. As a result, many companies now use a broad-based measurement approach, called the **balanced scorecard**, to evaluate performance. The **balanced scorecard** incorporates financial and nonfinancial measures in an integrated system that links performance measurement with a company's strategic goals. Nearly 50% of the largest companies in the United States, including **Unilever**, **Chase**, and **Wal-Mart Stores Inc.**, are using the balanced scorecard approach.

The balanced scorecard evaluates company performance from a series of "perspectives." The four most commonly employed perspectives are as follows.

1. The **financial perspective** is the most traditional view of the company. It employs financial measures of performance used by most firms.
2. The **customer perspective** evaluates the company from the viewpoint of those people who buy its products or services. This view compares the company to competitors in terms of price, quality, product innovation, customer service, and other dimensions.
3. The **internal process perspective** evaluates the internal operating processes critical to success. All critical aspects of the value chain—including product development, production, delivery, and after-sale service—are evaluated to ensure that the company is operating effectively and efficiently.
4. The **learning and growth perspective** evaluates how well the company develops and retains its employees. This would include evaluation of such things as employee skills, employee satisfaction, training programs, and information dissemination.

Within each perspective, the balanced scorecard identifies objectives that contribute to attainment of strategic goals. Illustration 25-29 shows examples of objectives within each perspective.

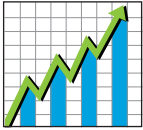

Perspective		Objective
Financial		Return on assets. Net income. Credit rating. Share price. Profit per employee.
Customer		Percentage of customers who would recommend product. Customer retention. Response time per customer request. Brand recognition. Customer service expense per customer.
Internal Process		Percentage of defect-free products. Stockouts. Labor utilization rates. Waste reduction. Planning accuracy.
Learning and Growth		Percentage of employees leaving in less than one year. Number of cross-trained employees. Ethics violations. Training hours. Reportable accidents.

Illustration 25-29
Examples of objectives
within the four perspectives
of balanced scorecard

The objectives are linked across perspectives in order to tie performance measurement to company goals. The financial-perspective objectives are normally set first, and then objectives are set in the other perspectives in order to accomplish the financial goals.

For example, within the financial perspective, a common goal is to increase profit per dollars invested as measured by ROI. In order to increase ROI, a customer-perspective objective might be to increase customer satisfaction as measured by the percentage of customers who would recommend the product to a friend. In order to increase customer satisfaction, an internal-process-perspective objective might be to increase product quality as measured by the percentage of defect-free units. Finally, in order to increase the percentage of defect-free units, the learning-and-growth-perspective objective might be to reduce factory employee turnover as measured by the percentage of employees leaving in under one year.

Illustration 25-30 illustrates this linkage across perspectives.

Illustration 25-30
Linked process across balanced scorecard perspectives

Through this linked process, the company can better understand how to achieve its goals and what measures to use to evaluate performance.

In summary, the balanced scorecard does the following:

1. Employs both **financial and nonfinancial measures**. (For example, ROI is a financial measure; employee turnover is a nonfinancial measure.)
2. **Creates linkages** so that high-level corporate goals can be communicated all the way down to the shop floor.
3. **Provides measurable objectives for nonfinancial measures** such as product quality, rather than vague statements such as “We would like to improve quality.”
4. Integrates all of the company’s goals into a single performance measurement system, so that **an inappropriate amount of weight will not be placed on any single goal**.

Service Company Insight United Airlines

PhotoDisc, Inc./Getty Images

It May Be Time to Fly United Again

Many of the benefits of a balanced scorecard approach are evident in the improved operations at **United Airlines**. At the time it filed for bankruptcy, United had a reputation for some of the worst service in the airline business. But when Glenn Tilton took over as United’s chief executive officer, he recognized that things had to change.

He implemented an incentive program that allows all of United’s 63,000 employees to earn a bonus of 2.5% or more of their wages if the company “exceeds its goals for

on-time flight departures and for customer intent to fly United again.” After instituting this program, the company’s on-time departures were among the best, its customer complaints were reduced considerably, and the number of customers who said that they would fly United again was at its highest level ever.

Sources: Susan Carey, “Friendlier Skies: In Bankruptcy, United Airlines Forges a Path to Better Service,” *Wall Street Journal* (June 15, 2004); and Emre Serpen, “More to Maintain,” *Airline Business* (November 2012), pp. 38–40.

Which of the perspectives of a balanced scorecard were the focus of United’s CEO? (Go to **WileyPLUS** for this answer and additional questions.)

APPENDIX 25A: Identify the features of a standard cost accounting system.

A **standard cost accounting system** is a double-entry system of accounting. In this system, companies use standard costs in making entries, and they formally recognize variances in the accounts. Companies may use a standard cost system with either job order or process costing.

In this appendix, we will explain and illustrate a **standard cost, job order cost accounting system**. The system is based on two important assumptions:

1. Variances from standards are recognized at the earliest opportunity.
2. The Work in Process account is maintained exclusively on the basis of standard costs.

In practice, there are many variations among standard cost systems. The system described here should prepare you for systems you see in the “real world.”

Journal Entries

We will use the transactions of Xonic to illustrate the journal entries. Note as you study the entries that the major difference between the entries here and those for the job order cost accounting system in Chapter 16 is the **variance accounts**.

1. Purchase raw materials on account for \$13,020 when the standard cost is \$12,600.

Raw Materials Inventory	12,600	
Materials Price Variance	420	
Accounts Payable		13,020
(To record purchase of materials)		

Xonic debits the inventory account for actual quantities at standard cost. This enables the perpetual materials records to show actual quantities. Xonic debits the price variance, which is unfavorable, to Materials Price Variance.

2. Incur direct labor costs of \$31,080 when the standard labor cost is \$31,500.

Factory Labor	31,500	
Labor Price Variance		420
Factory Wages Payable		31,080
(To record direct labor costs)		

Like the raw materials inventory account, Xonic debits Factory Labor for actual hours worked at the standard hourly rate of pay. In this case, the labor variance is favorable. Thus, Xonic credits Labor Price Variance.

3. Incur actual manufacturing overhead costs of \$10,900.

Manufacturing Overhead	10,900	
Accounts Payable/Cash/Acc. Depreciation		10,900
(To record overhead incurred)		

The controllable overhead variance (see Appendix 25B) is not recorded at this time. It depends on standard hours applied to work in process. This amount is not known at the time overhead is incurred.

4. Issue raw materials for production at a cost of \$12,600 when the standard cost is \$12,000.

Work in Process Inventory	12,000	
Materials Quantity Variance	600	
Raw Materials Inventory		12,600
(To record issuance of raw materials)		

Xonic debits Work in Process Inventory for standard materials quantities used at standard prices. It debits the variance account because the variance is unfavorable. The company credits Raw Materials Inventory for actual quantities at standard prices.

5. Assign factory labor to production at a cost of \$31,500 when standard cost is \$30,000.

Work in Process Inventory	30,000	
Labor Quantity Variance	1,500	
Factory Labor		31,500
(To assign factory labor to jobs)		

Xonic debits Work in Process Inventory for standard labor hours at standard rates. It debits the unfavorable variance to Labor Quantity Variance. The credit to Factory Labor produces a zero balance in this account.

6. Apply manufacturing overhead to production \$10,000.

Work in Process Inventory	10,000	
Manufacturing Overhead		10,000
(To assign overhead to jobs)		

Xonic debits Work in Process Inventory for standard hours allowed multiplied by the standard overhead rate.

7. Transfer completed work to finished goods \$52,000.

Finished Goods Inventory	52,000	
Work in Process Inventory		52,000
(To record transfer of completed work to finished goods)		

In this example, both inventory accounts are at standard cost.

8. Sell the 1,000 gallons of Xonic Tonic for \$70,000.

Accounts Receivable	70,000	
Cost of Goods Sold	52,000	
Sales		70,000
Finished Goods Inventory		52,000
(To record sale of finished goods and the cost of goods sold)		

The company debits Cost of Goods Sold at standard cost. Gross profit, in turn, is the difference between sales and the standard cost of goods sold.

9. Recognize unfavorable total overhead variance:

Overhead Variance	900	
Manufacturing Overhead		900
(To recognize overhead variances)		

Prior to this entry, a debit balance of \$900 existed in Manufacturing Overhead. This entry therefore produces a zero balance in the Manufacturing Overhead account. The information needed for this entry is often not available until the end of the accounting period.

Ledger Accounts

Illustration 25A-1 shows the cost accounts for Xonic after posting the entries. Note that five variance accounts are included in the ledger. The remaining accounts are the same as those illustrated for a job order cost system in Chapter 16, in which only actual costs were used.

Illustration 25A-1

OBJECTIVE

6

APPENDIX 25B: Compute overhead controllable and volume variances.

As indicated in the chapter, the total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**.

Overhead Controllable Variance

The **overhead controllable variance** shows whether overhead costs are effectively controlled. To compute this variance, the company compares actual overhead costs incurred with budgeted costs for the **standard hours allowed**. The budgeted costs are determined from a flexible manufacturing overhead budget. The concepts related to a flexible budget were discussed in Chapter 24.

For Xonic, the budget formula for manufacturing overhead is variable manufacturing overhead cost of \$3 per hour of labor plus fixed manufacturing overhead costs of \$4,400 (\$52,800 ÷ 12, per Illustration 25-6 on page 1164). Illustration 25B-1 shows the monthly flexible budget for Xonic.

Xonic.xls

17	Total costs	\$9,800	\$10,400	\$11,000	\$11,600

Illustration 25B-1

Flexible budget using standard direct labor hours

As shown, the budgeted costs for 2,000 standard hours are \$10,400 (\$6,000 variable and \$4,400 fixed).

Illustration 25B-2 shows the formula for the overhead controllable variance and the calculation for Xonic at 1,000 units of output (2,000 standard labor hours).

Actual Overhead	–	Overhead Budgeted*	=	Overhead Controllable Variance
\$10,900 (\$6,500 + \$4,400)	–	\$10,400 (\$6,000 + \$4,400)	=	\$500 U

*Based on standard hours allowed.

Illustration 25B-2

Formula for overhead controllable variance

The overhead controllable variance for Xonic is \$500 unfavorable.

Most controllable variances are associated with variable costs, which are controllable costs. Fixed costs are often known at the time the budget is prepared and are therefore not as likely to deviate from the budgeted amount. In Xonic's case, all of the overhead controllable variance is due to the difference between the actual variable overhead costs (\$6,500) and the budgeted variable costs (\$6,000).

Management can compare actual and budgeted overhead for each manufacturing overhead cost that contributes to the controllable variance. In addition, management can develop cost and quantity variances for each overhead cost, such as indirect materials and indirect labor.

Overhead Volume Variance

The **overhead volume variance** is the difference between normal capacity hours and standard hours allowed times the fixed overhead rate. The overhead volume variance relates to whether fixed costs were under- or overapplied during the year. For example, the overhead volume variance answers the question of whether Xonic effectively used its fixed costs. If Xonic produces less Xonic Tonic than normal capacity would allow, an unfavorable variance results. Conversely, if Xonic produces more Xonic Tonic than what is considered normal capacity, a favorable variance results.

The formula for computing the overhead volume variance is as follows.

Illustration 25B-3

Formula for overhead volume variance

$$\text{Fixed Overhead Rate} \times \left(\text{Normal Capacity Hours} - \text{Standard Hours Allowed} \right) = \text{Overhead Volume Variance}$$

To illustrate the fixed overhead rate computation, recall that Xonic budgeted fixed overhead cost for the year of \$52,800 (Illustration 25-6 on page 1164). At normal capacity, 26,400 standard direct labor hours are required. The fixed overhead rate is therefore \$2 per hour (\$52,800 ÷ 26,400 hours).

Xonic produced 1,000 units of Xonic Tonic in June. The standard hours allowed for the 1,000 gallons produced in June is 2,000 (1,000 gallons × 2 hours). For Xonic, normal capacity for June is 1,100, so standard direct labor hours for June at normal capacity is 2,200 (26,400 annual hours ÷ 12 months). The computation of the overhead volume variance in this case is as follows.

Illustration 25B-4

Computation of overhead volume variance for Xonic

$$\begin{array}{r} \text{Fixed} \\ \text{Overhead} \\ \text{Rate} \end{array} \times \left(\begin{array}{r} \text{Normal} \\ \text{Capacity} \\ \text{Hours} \end{array} - \begin{array}{r} \text{Standard} \\ \text{Hours} \\ \text{Allowed} \end{array} \right) = \begin{array}{r} \text{Overhead} \\ \text{Volume} \\ \text{Variance} \end{array}$$

$$\$2 \quad \times \quad (2,200 \quad - \quad 2,000) \quad = \quad \$400 \text{ U}$$

In Xonic's case, a \$400 unfavorable volume variance results. The volume variance is unfavorable because Xonic produced only 1,000 gallons rather than the normal capacity of 1,100 gallons in the month of June. As a result, it underapplied fixed overhead for that period.

In computing the overhead variances, it is important to remember the following.

1. Standard hours allowed are used in each of the variances.
2. Budgeted costs for the controllable variance are derived from the flexible budget.
3. The controllable variance generally pertains to variable costs.
4. The volume variance pertains solely to fixed costs.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Describe standard costs.** Both standards and budgets are predetermined costs. The primary difference is that a standard is a unit amount, whereas a budget is a total amount. A standard may be regarded as the budgeted cost per unit of product.

Standard costs offer a number of advantages. They (a) facilitate management planning, (b) promote greater economy, (c) are useful in setting selling prices, (d) contribute to management control, (e) permit “management by exception,” and (f) simplify the costing of inventories and reduce clerical costs.

The direct materials price standard should be based on the delivered cost of raw materials plus an allowance for receiving and handling. The direct materials quantity standard should establish the required quantity plus an allowance for waste and spoilage.

The direct labor price standard should be based on current wage rates and anticipated adjustments such as COLAs. It also generally includes payroll taxes and fringe benefits. Direct labor quantity standards should be based on required production time plus an allowance for rest periods, cleanup, machine setup, and machine downtime.

For manufacturing overhead, a standard predetermined overhead rate is used. It is based on an expected standard activity index such as standard direct labor hours or standard machine hours.

- 2 Determine direct materials variances.** The formulas for the direct materials variances are as follows.

$$\left(\begin{array}{l} \text{Actual quantity} \\ \times \text{Actual price} \end{array} \right) - \left(\begin{array}{l} \text{Standard quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Total} \\ \text{materials} \\ \text{variance} \end{array}$$

$$\left(\begin{array}{l} \text{Actual quantity} \\ \times \text{Actual price} \end{array} \right) - \left(\begin{array}{l} \text{Actual quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Materials} \\ \text{price} \\ \text{variance} \end{array}$$

$$\left(\begin{array}{l} \text{Actual quantity} \\ \times \text{Standard price} \end{array} \right) - \left(\begin{array}{l} \text{Standard quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Materials} \\ \text{quantity} \\ \text{variance} \end{array}$$

- 3 Determine direct labor and total manufacturing overhead variances.** The formulas for the direct labor variances are as follows.

$$\left(\begin{array}{l} \text{Actual hours} \\ \times \text{Actual rate} \end{array} \right) - \left(\begin{array}{l} \text{Standard hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Total} \\ \text{labor} \\ \text{variance} \end{array}$$

$$\left(\begin{array}{l} \text{Actual hours} \\ \times \text{Actual rate} \end{array} \right) - \left(\begin{array}{l} \text{Actual hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Labor} \\ \text{price} \\ \text{variance} \end{array}$$

$$\left(\begin{array}{l} \text{Actual hours} \\ \times \text{Standard rate} \end{array} \right) - \left(\begin{array}{l} \text{Standard hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Labor} \\ \text{quantity} \\ \text{variance} \end{array}$$

The formula for the total manufacturing overhead variance is as follows.

$$\left(\begin{array}{l} \text{Actual} \\ \text{overhead} \end{array} \right) - \left(\begin{array}{l} \text{Overhead} \\ \text{applied at} \\ \text{standard hours} \\ \text{allowed} \end{array} \right) = \begin{array}{l} \text{Total overhead} \\ \text{variance} \end{array}$$

- 4 Prepare variance reports and balanced scorecards.** Variances are reported to management in variance reports. The reports facilitate management by exception by highlighting significant differences. Under a standard costing system, an income statement prepared for management will report cost of goods sold at standard cost and then disclose each variance separately.

The balanced scorecard incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. It employs four perspectives: financial, customer, internal process, and learning and growth. Objectives are set within each of these perspectives that link to objectives within the other perspectives.

- *5 Identify the features of a standard cost accounting system.** In a standard cost accounting system, companies journalize and post standard costs, and they maintain separate variance accounts in the ledger.

- *6 Compute overhead controllable and volume variances.** The total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the overhead controllable variance. The quantity variance is referred to as the overhead volume variance.

GLOSSARY REVIEW

Balanced scorecard An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. (p. 1176).

Customer perspective A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services. (p. 1176).

Direct labor price standard The rate per hour that should be incurred for direct labor. (p. 1163).

Direct labor quantity standard The time that should be required to make one unit of product. (p. 1163).

Direct materials price standard The cost per unit of direct materials that should be incurred. (p. 1162).

Direct materials quantity standard The quantity of direct materials that should be used per unit of finished goods. (p. 1162).

Financial perspective A viewpoint employed in the balanced scorecard to evaluate a company's performance using financial measures. (p. 1176).

Ideal standards Standards based on the optimum level of performance under perfect operating conditions. (p. 1161).

Internal process perspective A viewpoint employed in the balanced scorecard to evaluate the effectiveness and efficiency of a company's value chain, including product development, production, delivery, and after-sale service. (p. 1176).

Labor price variance The difference between the actual hours times the actual rate and the actual hours times the standard rate for labor. (p. 1170).

Labor quantity variance The difference between actual hours times the standard rate and standard hours times the standard rate for labor. (p. 1170).

Learning and growth perspective A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees. (p. 1176).

Materials price variance The difference between the actual quantity times the actual price and the actual quantity times the standard price for materials. (p. 1167).

Materials quantity variance The difference between the actual quantity times the standard price and the standard quantity times the standard price for materials. (p. 1167).

Normal capacity The average activity output that a company should experience over the long run. (p. 1164).

Normal standards Standards based on an efficient level of performance that are attainable under expected operating conditions. (p. 1161).

***Overhead controllable variance** The difference between actual overhead incurred and overhead budgeted for the standard hours allowed. (p. 1181).

***Overhead volume variance** The difference between normal capacity hours and standard hours allowed times the fixed overhead rate. (p. 1182).

***Standard cost accounting system** A double-entry system of accounting in which standard costs are used in making entries, and variances are recognized in the accounts. (p. 1178).

Standard costs Predetermined unit costs which companies use as measures of performance. (p. 1160).

Standard hours allowed The hours that should have been worked for the units produced. (p. 1172).

Standard predetermined overhead rate An overhead rate determined by dividing budgeted overhead costs by an expected standard activity index. (p. 1163).

Total labor variance The difference between actual hours times the actual rate and standard hours times the standard rate for labor. (p. 1169).

Total materials variance The difference between the actual quantity times the actual price and the standard quantity times the standard price of materials. (p. 1167).

Total overhead variance The difference between actual overhead costs and overhead costs applied to work done, based on standard hours allowed. (p. 1171).

Variance The difference between total actual costs and total standard costs. (p. 1165).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Standards differ from budgets in that:
- budgets but not standards may be used in valuing inventories.
 - budgets but not standards may be journalized and posted.
 - budgets are a total amount and standards are a unit amount.
 - only budgets contribute to management planning and control.
- (LO 1) 2. Standard costs:
- are imposed by governmental agencies.
 - are predetermined unit costs which companies use as measures of performance.
 - can be used by manufacturing companies but not by service or not-for-profit companies.
 - All of the above.
3. The advantages of standard costs include all of the following **except**:
- management by exception may be used.
 - management planning is facilitated.
 - they may simplify the costing of inventories.
 - management must use a static budget.
- (LO 1)

- (LO 1) 4. Normal standards:
- allow for rest periods, machine breakdowns, and setup time.
 - represent levels of performance under perfect operating conditions.
 - are rarely used because managers believe they lower workforce morale.
 - are more likely than ideal standards to result in unethical practices.
- (LO 1) 5. The setting of standards is:
- a managerial accounting decision.
 - a management decision.
 - a worker decision.
 - preferably set at the ideal level of performance.
- (LO 2) 6. Each of the following formulas is correct **except**:
- Labor price variance = (Actual hours × Actual rate) – (Actual hours × Standard rate).
 - Total overhead variance = Actual overhead – Overhead applied.
 - Materials price variance = (Actual quantity × Actual price) – (Standard quantity × Standard price).
 - Labor quantity variance = (Actual hours × Standard rate) – (Standard hours × Standard rate).
- (LO 2) 7. In producing product AA, 6,300 pounds of direct materials were used at a cost of \$1.10 per pound. The standard was 6,000 pounds at \$1.00 per pound. The direct materials quantity variance is:
- \$330 unfavorable.
 - \$300 unfavorable.
 - \$600 unfavorable.
 - \$630 unfavorable.
- (LO 3) 8. In producing product ZZ, 14,800 direct labor hours were used at a rate of \$8.20 per hour. The standard was 15,000 hours at \$8.00 per hour. Based on these data, the direct labor:
- quantity variance is \$1,600 favorable.
 - quantity variance is \$1,600 unfavorable.
 - price variance is \$3,000 favorable.
 - price variance is \$3,000 unfavorable.
- (LO 3) 9. Which of the following is **correct** about the total overhead variance?
- Budgeted overhead and overhead applied are the same.
 - Total actual overhead is composed of variable overhead, fixed overhead, and period costs.
 - Standard hours actually worked are used in computing the variance.
 - Standard hours allowed for the work done is the measure used in computing the variance.
- (LO 3) 10. The formula for computing the total overhead variance is:
- actual overhead less overhead applied.
 - overhead budgeted less overhead applied.
 - actual overhead less overhead budgeted.
 - No correct answer is given.
11. Which of the following is **incorrect** about variance reports? (LO 4)
- They facilitate “management by exception.”
 - They should only be sent to the top level of management.
 - They should be prepared as soon as possible.
 - They may vary in form, content, and frequency among companies.
12. In using variance reports to evaluate cost control, management normally looks into: (LO 4)
- all variances.
 - favorable variances only.
 - unfavorable variances only.
 - both favorable and unfavorable variances that exceed a predetermined quantitative measure such as a percentage or dollar amount.
13. Generally accepted accounting principles allow a company to: (LO 4)
- report inventory at standard cost but cost of goods sold must be reported at actual cost.
 - report cost of goods sold at standard cost but inventory must be reported at actual cost.
 - report inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost.
 - report inventory and cost of goods sold only at actual costs; standard costing is never permitted.
14. Which of the following would **not** be an objective used in the customer perspective of the balanced scorecard approach? (LO 4)
- Percentage of customers who would recommend product to a friend.
 - Customer retention.
 - Brand recognition.
 - Earnings per share.
- *15. Which of the following is **incorrect** about a standard cost accounting system? (LO 5)
- It is applicable to job order costing.
 - It is applicable to process costing.
 - It reports only favorable variances.
 - It keeps separate accounts for each variance.
- *16. The formula to compute the overhead volume variance is: (LO 6)
- Fixed overhead rate × (Standard hours – Actual hours).
 - Fixed overhead rate × (Normal capacity hours – Actual hours).
 - Fixed overhead rate × (Normal capacity hours – Standard hours allowed).
 - (Variable overhead rate + Fixed overhead rate) × (Normal capacity hours – Standard hours allowed).

Solutions

- (c) Budgets are expressed in total amounts, and standards are expressed in unit amounts. The other choices are incorrect because (a) standards, not budgets, may be used in valuing inventories; (b) standards, not budgets, may be journalized and posted; and (d) both budgets and standards contribute to management planning and control.
- (b) Standard costs are predetermined unit costs which companies use as measures of performance. The other choices are incorrect because (a) only those that are called regulations are imposed by governmental agencies, (c) standard costs can be used by all types of companies, and (d) choices (a) and (c) are incorrect.

3. (d) Standard costs are separate from a static budget. The other choices are all advantages of using standard costs.
4. (a) Normal standards allow for rest periods, machine breakdowns, and setup time. The other choices are incorrect because they describe ideal standards, not normal standards.
5. (b) Standards are set by management. The other choices are incorrect because setting standards requires input from (a) managerial accountants and (c) sometimes workers, but the final decision is made by management. Choice (d) is incorrect because setting standards at the ideal level of performance is uncommon because of the perceived negative effect on worker morale.
6. (c) Materials price variance = (Actual quantity × Actual price) – (Actual quantity (not Standard quantity) × Standard price). The other choices are correct formulas.
7. (b) The direct materials quantity variance is $(6,300 \times \$1.00) - (6,000 \times \$1.00) = \$300$. This variance is unfavorable because more material was used than prescribed by the standard. The other choices are therefore incorrect.
8. (a) The direct labor quantity variance is $(14,800 \times \$8) - (15,000 \times \$8) = \$1,600$. This variance is favorable because less labor was used than prescribed by the standard. The other choices are therefore incorrect.
9. (d) Standard hours allowed for work done is the measure used in computing the variance. The other choices are incorrect because (a) budgeted overhead is used to calculate the predetermined overhead rate while overhead applied is equal to standard hours allowed times the predetermined overhead rate, (b) overhead is a product cost and does not include period costs, and (c) standard hours allowed, not hours actually worked, are used in computing the overhead variance.
10. (a) Total overhead variance equals actual overhead less overhead applied. The other choices are therefore incorrect.
11. (b) Variance reports should be sent to the level of management responsible for the area in which the variance occurred so it can be remedied as quickly as possible. The other choices are correct statements.
12. (d) In using variance reports to evaluate cost control, management normally looks into both favorable and unfavorable variances that exceed a predetermined quantitative measure such as percentage or dollar amount. The other choices are therefore incorrect.
13. (c) GAAP allows a company to report both inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost. The other choices are therefore incorrect.
14. (d) Earnings per share is not an objective used in the customer perspective of the balanced scorecard approach. The other choices are all true statements.
- *15. (c) A standard cost accounting system reports both favorable and unfavorable variances. The other choices are all correct statements.
- *16. (c) The formula to compute the overhead volume variance is Fixed overhead rate × (Normal capacity hours – Standard hours allowed). The other choices are therefore incorrect.

PRACTICE EXERCISES

Compute materials and labor variances.

(LO 2, 3)

1. Hector Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

Direct materials (6 pounds at \$2.50 per pound)	\$15.00
Direct labor (3.1 hours at \$12.00 per hour)	\$37.20

During the month of April, the company manufactures 250 units and incurs the following actual costs.

Direct materials purchased and used (1,600 pounds)	\$4,192
Direct labor (760 hours)	\$8,740

Instructions

Compute the total, price, and quantity variances for materials and labor.

Solution

1. Total materials variance:			
	(AQ × AP)	–	(SQ × SP)
	(1,600 × \$2.62*)		(1,500** × \$2.50)
	\$4,192	–	\$3,750 = \$442 U
*\$4,192 ÷ 1,600	**250 × 6		

Materials price variance:

$$\begin{array}{rcl} (\text{AQ} \times \text{AP}) & - & (\text{AQ} \times \text{SP}) \\ (1,600 \times \$2.62) & - & (1,600 \times \$2.50) \\ \$4,192 & - & \$4,000 & = & \$192 \text{ U} \end{array}$$

Materials quantity variance:

$$\begin{array}{rcl} (\text{AQ} \times \text{SP}) & - & (\text{SQ} \times \text{SP}) \\ (1,600 \times \$2.50) & - & (1,500 \times \$2.50) \\ \$4,000 & - & \$3,750 & = & \$250 \text{ U} \end{array}$$

Total labor variance:

$$\begin{array}{rcl} (\text{AH} \times \text{AR}) & - & (\text{SH} \times \text{SR}) \\ (760 \times \$11.50^*) & - & (775^{**} \times \$12.00) \\ \$8,740 & - & \$9,300 & = & \$560 \text{ F} \end{array}$$

$$*\$8,740 \div 760 \quad **250 \times 3.1$$

Labor price variance:

$$\begin{array}{rcl} (\text{AH} \times \text{AR}) & - & (\text{AH} \times \text{SR}) \\ (760 \times \$11.50) & - & (760 \times \$12.00) \\ \$8,740 & - & \$9,120 & = & \$380 \text{ F} \end{array}$$

Labor quantity variance:

$$\begin{array}{rcl} (\text{AH} \times \text{SR}) & - & (\text{SH} \times \text{SR}) \\ (760 \times \$12.00) & - & (775 \times \$12.00) \\ \$9,120 & - & \$9,300 & = & \$180 \text{ F} \end{array}$$

2. Manufacturing overhead data for the production of Product H by Yamato Company are as follows.

Compute overhead variances.
(LO 3)

Overhead incurred for 35,000 actual direct labor hours worked	\$140,000
Overhead rate (variable \$3; fixed \$1) at normal capacity of 36,000 direct labor hours	\$4
Standard hours allowed for work done	34,000

Instructions

Compute the total overhead variance.

Solution

2. Total overhead variance:

$$\begin{array}{rcl} \text{Actual Overhead} & - & \text{Overhead Applied} \\ \$140,000 & - & \$136,000 & = & \$4,000 \text{ U} \\ & & (34,000 \times \$4) & & \end{array}$$

PRACTICE PROBLEM

Manlow Company makes a cologne called Allure. The standard cost for one bottle of Allure is as follows.

Compute variances.
(LO 2, 3)

Manufacturing Cost Elements	Standard		=	Cost
	Quantity	Price		
Direct materials	6 oz.	× \$ 0.90	=	\$ 5.40
Direct labor	0.5 hrs.	× \$12.00	=	6.00
Manufacturing overhead	0.5 hrs.	× \$ 4.80	=	2.40
				<u>\$13.80</u>

During the month, the following transactions occurred in manufacturing 10,000 bottles of Allure.

- 58,000 ounces of materials were purchased at \$1.00 per ounce.
- All the materials purchased were used to produce the 10,000 bottles of Allure.

3. 4,900 direct labor hours were worked at a total labor cost of \$56,350.
4. Variable manufacturing overhead incurred was \$15,000 and fixed overhead incurred was \$10,400.

The manufacturing overhead rate of \$4.80 is based on a normal capacity of 5,200 direct labor hours. The total budget at this capacity is \$10,400 fixed and \$14,560 variable.

Instructions

- (a) Compute the total variance and the variances for direct materials and direct labor elements.
- (b) Compute the total variance for manufacturing overhead.

Solution

(a)		<u>Total Variance</u>	
	Actual costs incurred		
	Direct materials	\$ 58,000	
	Direct labor	56,350	
	Manufacturing overhead	<u>25,400</u>	
		139,750	
	Standard cost (10,000 × \$13.80)	<u>138,000</u>	
	Total variance	<u>\$ 1,750 U</u>	
		<u>Direct Materials Variances</u>	
	Total	= \$58,000 (58,000 × \$1.00) – \$54,000 (60,000* × \$0.90)	= \$4,000 U
	Price	= \$58,000 (58,000 × \$1.00) – \$52,200 (58,000 × \$0.90)	= \$5,800 U
	Quantity	= \$52,200 (58,000 × \$0.90) – \$54,000 (60,000 × \$0.90)	= \$1,800 F
			*10,000 × 6
		<u>Direct Labor Variances</u>	
	Total	= \$56,350 (4,900 × \$11.50*) – \$60,000 (5,000** × \$12.00)	= \$3,650 F
	Price	= \$56,350 (4,900 × \$11.50) – \$58,800 (4,900 × \$12.00)	= \$2,450 F
	Quantity	= \$58,800 (4,900 × \$12.00) – \$60,000 (5,000 × \$12.00)	= \$1,200 F
			*\$56,350 ÷ 4,900; **10,000 × 0.5
(b)		<u>Overhead Variance</u>	
	Total	= \$25,400 (\$15,000 + \$10,400) – \$24,000 (5,000 × \$4.80)	= \$1,400 U

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

NOTE: All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

QUESTIONS

1. (a) "Standard costs are the expected total cost of completing a job." Is this correct? Explain.
(b) "A standard imposed by a governmental agency is known as a regulation." Do you agree? Explain.
2. (a) Explain the similarities and differences between standards and budgets.
(b) Contrast the accounting for standards and budgets.
3. Standard costs facilitate management planning. What are the other advantages of standard costs?
4. Contrast the roles of the management accountant and management in setting standard costs.
5. Distinguish between an ideal standard and a normal standard.
6. What factors should be considered in setting (a) the direct materials price standard and (b) the direct materials quantity standard?
7. "The objective in setting the direct labor quantity standard is to determine the aggregate time required to make one unit of product." Do you agree? What allowances should be made in setting this standard?
8. How is the predetermined overhead rate determined when standard costs are used?
9. What is the difference between a favorable cost variance and an unfavorable cost variance?
10. In each of the following formulas, supply the words that should be inserted for each number in parentheses.
 - (a) (Actual quantity × (1)) – (Standard quantity × (2)) = Total materials variance
 - (b) ((3) × Actual price) – (Actual quantity × (4)) = Materials price variance
 - (c) (Actual quantity × (5)) – ((6) × Standard price) = Materials quantity variance

11. In the direct labor variance matrix, there are three factors: (1) Actual hours \times Actual rate, (2) Actual hours \times Standard rate, and (3) Standard hours \times Standard rate. Using the numbers, indicate the formulas for each of the direct labor variances.
12. Mikan Company's standard predetermined overhead rate is \$9 per direct labor hour. For the month of June, 26,000 actual hours were worked, and 27,000 standard hours were allowed. How much overhead was applied?
13. How often should variances be reported to management? What principle may be used with variance reports?
14. What circumstances may cause the purchasing department to be responsible for both an unfavorable materials price variance and an unfavorable materials quantity variance?
15. What are the four perspectives used in the balanced scorecard? Discuss the nature of each, and how the perspectives are linked.
16. Kerry James says that the balanced scorecard was created to replace financial measures as the primary mechanism for performance evaluation. He says that it uses only nonfinancial measures. Is this true?
17. What are some examples of nonfinancial measures used by companies to evaluate performance?
18. (a) How are variances reported in income statements prepared for management? (b) May standard costs be used in preparing financial statements for stockholders? Explain.
- *19. (a) Explain the basic features of a standard cost accounting system. (b) What type of balance will exist in the variance account when (1) the materials price variance is unfavorable and (2) the labor quantity variance is favorable?
- *20. If the \$9 per hour overhead rate in Question 12 includes \$5 variable, and actual overhead costs were \$248,000, what is the overhead controllable variance for June? The normal capacity hours were 28,000. Is the variance favorable or unfavorable?
- *21. What is the purpose of computing the overhead volume variance? What is the basic formula for this variance?
- *22. Alma Ortiz does not understand why the overhead volume variance indicates that fixed overhead costs are under- or overapplied. Clarify this matter for Alma.
- *23. John Hsu is attempting to outline the important points about overhead variances on a class examination. List four points that John should include in his outline.

BRIEF EXERCISES

- BE25-1** Lopez Company uses both standards and budgets. For the year, estimated production of Product X is 500,000 units. Total estimated cost for materials and labor are \$1,400,000 and \$1,700,000. Compute the estimates for (a) a standard cost and (b) a budgeted cost. *Distinguish between a standard and a budget.* (LO 1)
- BE25-2** Tang Company accumulates the following data concerning raw materials in making one gallon of finished product. (1) Price—net purchase price \$2.30, freight-in \$0.20, and receiving and handling \$0.10. (2) Quantity—required materials 3.6 pounds, allowance for waste and spoilage 0.4 pounds. Compute the following. *Set direct materials standard.* (LO 1)
- (a) Standard direct materials price per gallon.
 - (b) Standard direct materials quantity per gallon.
 - (c) Total standard materials cost per gallon.
- BE25-3** Labor data for making one gallon of finished product in Bing Company are as follows. (1) Price—hourly wage rate \$14.00, payroll taxes \$0.80, and fringe benefits \$1.20. (2) Quantity—actual production time 1.1 hours, rest periods and cleanup 0.25 hours, and setup and downtime 0.15 hours. Compute the following. *Set direct labor standard.* (LO 1)
- (a) Standard direct labor rate per hour.
 - (b) Standard direct labor hours per gallon.
 - (c) Standard labor cost per gallon.
- BE25-4** Simba Company's standard materials cost per unit of output is \$10 (2 pounds \times \$5). During July, the company purchases and uses 3,200 pounds of materials costing \$16,192 in making 1,500 units of finished product. Compute the total, price, and quantity materials variances. *Compute direct materials variances.* (LO 2)
- BE25-5** Mordica Company's standard labor cost per unit of output is \$22 (2 hours \times \$11 per hour). During August, the company incurs 2,150 hours of direct labor at an hourly cost of \$10.80 per hour in making 1,000 units of finished product. Compute the total, price, and quantity labor variances. *Compute direct labor variances.* (LO 3)
- BE25-6** In October, Pine Company reports 21,000 actual direct labor hours, and it incurs \$118,000 of manufacturing overhead costs. Standard hours allowed for the work done is 20,600 hours. The predetermined overhead rate is \$6 per direct labor hour. Compute the total overhead variance. *Compute total overhead variance.* (LO 3)

Match balanced scorecard perspectives.

(LO 4)

BE25-7 The four perspectives in the balanced scorecard are (1) financial, (2) customer, (3) internal process, and (4) learning and growth. Match each of the following objectives with the perspective it is most likely associated with: (a) plant capacity utilization, (b) employee work days missed due to injury, (c) return on assets, and (d) brand recognition.

Journalize materials variances.

(LO 5)

***BE25-8** Journalize the following transactions for Combs Company.

- (a) Purchased 6,000 units of raw materials on account for \$11,500. The standard cost was \$12,000.
- (b) Issued 5,600 units of raw materials for production. The standard units were 5,800.

Journalize labor variances.

(LO 5)

***BE25-9** Journalize the following transactions for Shelton, Inc.

- (a) Incurred direct labor costs of \$24,000 for 3,000 hours. The standard labor cost was \$24,900.
- (b) Assigned 3,000 direct labor hours costing \$24,000 to production. Standard hours were 3,150.

Compute the overhead controllable variance.

(LO 6)

***BE25-10** Some overhead data for Pine Company are given in BE25-6. In addition, the flexible manufacturing overhead budget shows that budgeted costs are \$4 variable per direct labor hour and \$50,000 fixed. Compute the overhead controllable variance.

Compute overhead volume variance.

(LO 6)

***BE25-11** Using the data in BE25-6 and BE25-10, compute the overhead volume variance. Normal capacity was 25,000 direct labor hours.

DO IT! Exercises

Compute standard cost.

(LO 1)

DO IT! 25-1 Larkin Company accumulated the following standard cost data concerning product I-Tal.

Direct materials per unit: 2 pounds at \$5 per pound

Direct labor per unit: 0.2 hours at \$16 per hour

Manufacturing overhead: Allocated based on direct labor hours at a predetermined rate of \$20 per direct labor hour

Compute the standard cost of one unit of product I-Tal.

Compute materials variance.

(LO 2)

DO IT! 25-2 The standard cost of product 777 includes 2 units of direct materials at \$6.00 per unit. During August, the company bought 29,000 units of materials at \$6.30 and used those materials to produce 16,000 units. Compute the total, price, and quantity variances for materials.

Compute labor and manufacturing overhead variances.

(LO 3)

DO IT! 25-3 The standard cost of product 5252 includes 1.9 hours of direct labor at \$14.00 per hour. The predetermined overhead rate is \$22.00 per direct labor hour. During July, the company incurred 4,000 hours of direct labor at an average rate of \$14.30 per hour and \$81,300 of manufacturing overhead costs. It produced 2,000 units.

(a) Compute the total, price, and quantity variances for labor. (b) Compute the total overhead variance.

Prepare variance report.

(LO 4)

DO IT! 25-4 Tropic Zone Corporation experienced the following variances: materials price \$350 U, materials quantity \$1,700 F, labor price \$800 F, labor quantity \$500 F, and overhead \$1,200 U. Sales revenue was \$92,100, and cost of goods sold (at standard) was \$51,600. Determine the actual gross profit.

EXERCISES

Compute budget and standard.

(LO 1)

E25-1 Parsons Company is planning to produce 2,000 units of product in 2017. Each unit requires 3 pounds of materials at \$5 per pound and a half-hour of labor at \$16 per hour. The overhead rate is 70% of direct labor.

Instructions

- Compute the budgeted amounts for 2017 for direct materials to be used, direct labor, and applied overhead.
- Compute the standard cost of one unit of product.
- What are the potential advantages to a corporation of using standard costs?

E25-2 Hank Itzek manufactures and sells homemade wine, and he wants to develop a standard cost per gallon. The following are required for production of a 50-gallon batch.

- 3,000 ounces of grape concentrate at \$0.06 per ounce
- 54 pounds of granulated sugar at \$0.30 per pound
- 60 lemons at \$0.60 each
- 50 yeast tablets at \$0.25 each
- 50 nutrient tablets at \$0.20 each
- 2,600 ounces of water at \$0.005 per ounce

Hank estimates that 4% of the grape concentrate is wasted, 10% of the sugar is lost, and 25% of the lemons cannot be used.

Instructions

Compute the standard cost of the ingredients for one gallon of wine. (Carry computations to two decimal places.)

E25-3 Stefani Company has gathered the following information about its product.

Direct materials. Each unit of product contains 4.5 pounds of materials. The average waste and spoilage per unit produced under normal conditions is 0.5 pounds. Materials cost \$5 per pound, but Stefani always takes the 2% cash discount all of its suppliers offer. Freight costs average \$0.25 per pound.

Direct labor. Each unit requires 2 hours of labor. Setup, cleanup, and downtime average 0.4 hours per unit. The average hourly pay rate of Stefani's employees is \$12. Payroll taxes and fringe benefits are an additional \$3 per hour.

Manufacturing overhead. Overhead is applied at a rate of \$7 per direct labor hour.

Instructions

Compute Stefani's total standard cost per unit.

E25-4 Monte Services, Inc. is trying to establish the standard labor cost of a typical oil change. The following data have been collected from time and motion studies conducted over the past month.

Actual time spent on the oil change	1.0 hour
Hourly wage rate	\$12
Payroll taxes	10% of wage rate
Setup and downtime	20% of actual labor time
Cleanup and rest periods	30% of actual labor time
Fringe benefits	25% of wage rate

Instructions

- Determine the standard direct labor hours per oil change.
- Determine the standard direct labor hourly rate.
- Determine the standard direct labor cost per oil change.
- If an oil change took 1.6 hours at the standard hourly rate, what was the direct labor quantity variance?

E25-5 The standard cost of Product B manufactured by Pharrell Company includes three units of direct materials at \$5.00 per unit. During June, 29,000 units of direct materials are purchased at a cost of \$4.70 per unit, and 29,000 units of direct materials are used to produce 9,400 units of Product B.

Instructions

- Compute the total materials variance and the price and quantity variances.
- Repeat (a), assuming the purchase price is \$5.15 and the quantity purchased and used is 28,000 units.

Compute standard materials costs.

(LO 1)

Compute standard cost per unit.

(LO 1)

Compute labor cost and labor quantity variance.

(LO 3)

Compute materials price and quantity variances.

(LO 2)

Compute labor price and quantity variances.

(LO 3)

E25-6 Lewis Company's standard labor cost of producing one unit of Product DD is 4 hours at the rate of \$12.00 per hour. During August, 40,600 hours of labor are incurred at a cost of \$12.15 per hour to produce 10,000 units of Product DD.

Instructions

- (a) Compute the total labor variance.
- (b) Compute the labor price and quantity variances.
- (c) Repeat (b), assuming the standard is 4.1 hours of direct labor at \$12.25 per hour.

Compute materials and labor variances.

(LO 2, 3)

E25-7 Levine Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

Direct materials (8 pounds at \$2.50 per pound)	\$20
Direct labor (3 hours at \$12.00 per hour)	\$36

During the month of April, the company manufactures 230 units and incurs the following actual costs.

Direct materials purchased and used (1,900 pounds)	\$5,035
Direct labor (700 hours)	\$8,120

Instructions

Compute the total, price, and quantity variances for materials and labor.

Compute the materials and labor variances and list reasons for unfavorable variances.

(LO 2, 3)

E25-8 The following direct materials and direct labor data pertain to the operations of Laurel Company for the month of August.

	Costs		Quantities
Actual labor rate	\$13 per hour	Actual hours incurred and used	4,150 hours
Actual materials price	\$128 per ton	Actual quantity of materials purchased and used	1,220 tons
Standard labor rate	\$12.50 per hour	Standard hours used	4,300 hours
Standard materials price	\$130 per ton	Standard quantity of materials used	1,200 tons

Instructions

- (a) Compute the total, price, and quantity variances for materials and labor.
- (b) Provide two possible explanations for each of the unfavorable variances calculated above, and suggest where responsibility for the unfavorable result might be placed.

Determine amounts from variance report.

(LO 2, 3)

E25-9 You have been given the following information about the production of Usher Co., and are asked to provide the plant manager with information for a meeting with the vice president of operations.

Standard Cost Card

Direct materials (5 pounds at \$4 per pound)	\$20.00
Direct labor (0.8 hours at \$10)	8.00
Variable overhead (0.8 hours at \$3 per hour)	2.40
Fixed overhead (0.8 hours at \$7 per hour)	5.60
	\$36.00

The following is a variance report for the most recent period of operations.

		Variances	
Costs	Total Standard Cost	Price	Quantity
Direct materials	\$410,000	\$2,095 F	\$9,000 U
Direct labor	180,000	3,840 U	6,000 U

Instructions

- (a) How many units were produced during the period?
- (b) How many pounds of raw materials were purchased and used during the period?
- (c) What was the actual cost per pound of raw materials?
- (d) How many actual direct labor hours were worked during the period?
- (e) What was the actual rate paid per direct labor hour?

(CGA adapted)

E25-10 During March 2017, Toby Tool & Die Company worked on four jobs. A review of direct labor costs reveals the following summary data.

Prepare a variance report for direct labor.

(LO 3, 4)

Job Number	Actual		Standard		Total
	Hours	Costs	Hours	Costs	Variance
A257	221	\$4,420	225	\$4,500	\$ 80 F
A258	450	9,450	430	8,600	850 U
A259	300	6,180	300	6,000	180 U
A260	116	2,088	110	2,200	112 F
Total variance					<u>\$838 U</u>

Analysis reveals that Job A257 was a repeat job. Job A258 was a rush order that required overtime work at premium rates of pay. Job A259 required a more experienced replacement worker on one shift. Work on Job A260 was done for one day by a new trainee when a regular worker was absent.

Instructions

Prepare a report for the plant supervisor on direct labor cost variances for March. The report should have columns for (1) Job No., (2) Actual Hours, (3) Standard Hours, (4) Quantity Variance, (5) Actual Rate, (6) Standard Rate, (7) Price Variance, and (8) Explanation.

E25-11 Manufacturing overhead data for the production of Product H by Shakira Company are as follows.

Compute overhead variance.

(LO 3)

Overhead incurred for 52,000 actual direct labor hours worked	\$263,000
Overhead rate (variable \$3; fixed \$2) at normal capacity of 54,000 direct labor hours	\$5
Standard hours allowed for work done	52,000

Instructions

Compute the total overhead variance.

E25-12 Byrd Company produces one product, a putter called GO-Putter. Byrd uses a standard cost system and determines that it should take one hour of direct labor to produce one GO-Putter. The normal production capacity for this putter is 100,000 units per year. The total budgeted overhead at normal capacity is \$850,000 comprised of \$250,000 of variable costs and \$600,000 of fixed costs. Byrd applies overhead on the basis of direct labor hours.

Compute overhead variances.

(LO 3)

During the current year, Byrd produced 95,000 putters, worked 94,000 direct labor hours, and incurred variable overhead costs of \$256,000 and fixed overhead costs of \$600,000.

Instructions

- Compute the predetermined variable overhead rate and the predetermined fixed overhead rate.
- Compute the applied overhead for Byrd for the year.
- Compute the total overhead variance.

E25-13 Ceelo Company purchased (at a cost of \$10,200) and used 2,400 pounds of materials during May. Ceelo's standard cost of materials per unit produced is based on 2 pounds per unit at a cost \$5 per pound. Production in May was 1,050 units.

Compute variances for materials.

(LO 2, 3)

Instructions

- Compute the total, price, and quantity variances for materials.
- Assume Ceelo also had an unfavorable labor quantity variance. What is a possible scenario that would provide one cause for the variances computed in (a) and the unfavorable labor quantity variance?

E25-14 Picard Landscaping plants grass seed as the basic landscaping for business campuses. During a recent month, the company worked on three projects (Remington, Chang, and Wyco). The company is interested in controlling the materials costs, namely the grass seed, for these plantings projects.

Prepare a variance report.

(LO 2, 4)

In order to provide management with useful cost control information, the company uses standard costs and prepares monthly variance reports. Analysis reveals that the purchasing agent mistakenly purchased poor-quality seed for the Remington project.

The Chang project, however, received higher-than-standard-quality seed that was on sale. The Wyco project received standard-quality seed. However, the price had increased and a new employee was used to spread the seed.

Shown below are quantity and cost data for each project.

Project	Actual		Standard		Total Variance
	Quantity	Costs	Quantity	Costs	
Remington	500 lbs.	\$1,200	460 lbs.	\$1,150	\$ 50 U
Chang	400	920	410	1,025	105 F
Wyco	550	1,430	480	1,200	230 U
Total variance					<u>\$175 U</u>

Instructions

- Prepare a variance report for the purchasing department with the following columns: (1) Project, (2) Actual Pounds Purchased, (3) Actual Price per Pound, (4) Standard Price per Pound, (5) Price Variance, and (6) Explanation.
- Prepare a variance report for the production department with the following columns: (1) Project, (2) Actual Pounds, (3) Standard Pounds, (4) Standard Price per Pound, (5) Quantity Variance, and (6) Explanation.

Complete variance report.

(LO 4)

E25-15 Urban Corporation prepared the following variance report.

URBAN CORPORATION
Variance Report—Purchasing Department
For the Week Ended January 9, 2017

Type of Materials	Quantity Purchased	Actual Price	Standard Price	Price Variance	Explanation
Rogue11	? lbs.	\$5.20	\$5.00	\$5,500 ?	Price increase
Storm17	7,000 oz.	?	3.30	1,050 U	Rush order
Beast29	22,000 units	0.40	?	660 F	Bought larger quantity

Instructions

Fill in the appropriate amounts or letters for the question marks in the report.

Prepare income statement for management.

(LO 4)

E25-16 Fisk Company uses a standard cost accounting system. During January, the company reported the following manufacturing variances.

Materials price variance	\$1,200 U	Labor quantity variance	\$750 U
Materials quantity variance	800 F	Overhead variance	800 U
Labor price variance	550 U		

In addition, 8,000 units of product were sold at \$8 per unit. Each unit sold had a standard cost of \$5. Selling and administrative expenses were \$8,000 for the month.

Instructions

Prepare an income statement for management for the month ended January 31, 2017.

Identify performance evaluation terminology.

(LO 1, 4)

E25-17 The following is a list of terms related to performance evaluation.

- Balanced scorecard
- Variance
- Learning and growth perspective
- Nonfinancial measures
- Customer perspective
- Internal process perspective
- Ideal standards
- Normal standards

Instructions

Match each of the following descriptions with one of the terms above.

- The difference between total actual costs and total standard costs.
- An efficient level of performance that is attainable under expected operating conditions.
- An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals.
- A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees.
- An evaluation tool that is not based on dollars.

- (f) A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy its products or services.
- (g) An optimum level of performance under perfect operating conditions.
- (h) A viewpoint employed in the balanced scorecard to evaluate the efficiency and effectiveness of the company's value chain.

E25-18 Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Percentage of repeat customers.
2. Number of suggestions for improvement from employees.
3. Contribution margin.
4. Brand recognition.
5. Number of cross-trained employees.
6. Amount of setup time.

Identify balanced scorecard perspectives.

(LO 4)

E25-19 Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Ethics violations.
2. Credit rating.
3. Customer retention.
4. Stockouts.
5. Reportable accidents.
6. Brand recognition.

Identify balance scorecard perspectives.

(LO 4)

***E25-20** Vista Company installed a standard cost system on January 1. Selected transactions for the month of January are as follows.

1. Purchased 18,000 units of raw materials on account at a cost of \$4.50 per unit. Standard cost was \$4.40 per unit.
2. Issued 18,000 units of raw materials for jobs that required 17,500 standard units of raw materials.
3. Incurred 15,300 actual hours of direct labor at an actual rate of \$5.00 per hour. The standard rate is \$5.50 per hour. (Credit Factory Wages Payable.)
4. Performed 15,300 hours of direct labor on jobs when standard hours were 15,400.
5. Applied overhead to jobs at the rate of 100% of direct labor cost for standard hours allowed.

Journalize entries in a standard cost accounting system.

(LO 5)

Instructions

Journalize the January transactions.

***E25-21** Lopez Company uses a standard cost accounting system. Some of the ledger accounts have been destroyed in a fire. The controller asks your help in reconstructing some missing entries and balances.

Answer questions concerning missing entries and balances.

(LO 2, 3, 5)

Instructions

Answer the following questions.

- (a) Materials Price Variance shows a \$2,000 unfavorable balance. Accounts Payable shows \$138,000 of raw materials purchases. What was the amount debited to Raw Materials Inventory for raw materials purchased?
- (b) Materials Quantity Variance shows a \$3,000 favorable balance. Raw Materials Inventory shows a zero balance. What was the amount debited to Work in Process Inventory for direct materials used?
- (c) Labor Price Variance shows a \$1,500 favorable balance. Factory Labor shows a debit of \$145,000 for wages incurred. What was the amount credited to Factory Wages Payable?
- (d) Factory Labor shows a credit of \$145,000 for direct labor used. Labor Quantity Variance shows a \$900 favorable balance. What was the amount debited to Work in Process for direct labor used?
- (e) Overhead applied to Work in Process totaled \$165,000. If the total overhead variance was \$1,200 favorable, what was the amount of overhead costs debited to Manufacturing Overhead?

Journalize entries for materials and labor variances.

(LO 5)

Compute manufacturing overhead variances and interpret findings.

(LO 6)

***E25-22** Data for Levine Inc. are given in E25-7.

Instructions

Journalize the entries to record the materials and labor variances.

***E25-23** The information shown below was taken from the annual manufacturing overhead cost budget of Connick Company.

Variable manufacturing overhead costs	\$34,650
Fixed manufacturing overhead costs	\$19,800
Normal production level in labor hours	16,500
Normal production level in units	4,125
Standard labor hours per unit	4

During the year, 4,050 units were produced, 16,100 hours were worked, and the actual manufacturing overhead was \$55,500. Actual fixed manufacturing overhead costs equaled budgeted fixed manufacturing overhead costs. Overhead is applied on the basis of direct labor hours.

Instructions

- Compute the total, fixed, and variable predetermined manufacturing overhead rates.
- Compute the total, controllable, and volume overhead variances.
-  Briefly interpret the overhead controllable and volume variances computed in (b).

Compute overhead variances.

(LO 6)

***E25-24** The loan department of Calgary Bank uses standard costs to determine the overhead cost of processing loan applications. During the current month, a fire occurred, and the accounting records for the department were mostly destroyed. The following data were salvaged from the ashes.

Standard variable overhead rate per hour	\$9
Standard hours per application	2
Standard hours allowed	2,000
Standard fixed overhead rate per hour	\$6
Actual fixed overhead cost	\$12,600
Variable overhead budget based on standard hours allowed	\$18,000
Fixed overhead budget	\$12,600
Overhead controllable variance	\$ 1,200 U

Instructions

- Determine the following.
 - Total actual overhead cost.
 - Actual variable overhead cost.
 - Variable overhead costs applied.
 - Fixed overhead costs applied.
 - Overhead volume variance.
- Determine how many loans were processed.

Compute variances.

(LO 6)

***E25-25** Seacrest Company's overhead rate was based on estimates of \$200,000 for overhead costs and 20,000 direct labor hours. Seacrest's standards allow 2 hours of direct labor per unit produced. Production in May was 900 units, and actual overhead incurred in May was \$19,500. The overhead budgeted for 1,800 standard direct labor hours is \$17,600 (\$5,000 fixed and \$12,600 variable).

Instructions

- Compute the total, controllable, and volume variances for overhead.
- What are possible causes of the variances computed in part (a)?

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

P25-1A Rogen Corporation manufactures a single product. The standard cost per unit of product is shown below.

Compute variances.
(LO 2, 3)

Direct materials—1 pound plastic at \$7.00 per pound	\$ 7.00
Direct labor—1.6 hours at \$12.00 per hour	19.20
Variable manufacturing overhead	12.00
Fixed manufacturing overhead	4.00
Total standard cost per unit	<u>\$42.20</u>

The predetermined manufacturing overhead rate is \$10 per direct labor hour ($\$16.00 \div 1.6$). It was computed from a master manufacturing overhead budget based on normal production of 8,000 direct labor hours (5,000 units) for the month. The master budget showed total variable costs of \$60,000 (\$7.50 per hour) and total fixed overhead costs of \$20,000 (\$2.50 per hour). Actual costs for October in producing 4,800 units were as follows.

Direct materials (5,100 pounds)	\$ 36,720
Direct labor (7,400 hours)	92,500
Variable overhead	59,700
Fixed overhead	21,000
Total manufacturing costs	<u>\$209,920</u>

The purchasing department buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

Instructions

- Compute all of the materials and labor variances.
- Compute the total overhead variance.

(a) MPV \$1,020 U

P25-2A Ayala Corporation accumulates the following data relative to jobs started and finished during the month of June 2017.

Compute variances, and prepare income statement.
(LO 2, 3, 4)

<u>Costs and Production Data</u>	<u>Actual</u>	<u>Standard</u>
Raw materials unit cost	\$2.25	\$2.10
Raw materials units used	10,600	10,000
Direct labor payroll	\$120,960	\$120,000
Direct labor hours worked	14,400	15,000
Manufacturing overhead incurred	\$189,500	
Manufacturing overhead applied		\$193,500
Machine hours expected to be used at normal capacity		42,500
Budgeted fixed overhead for June		\$55,250
Variable overhead rate per machine hour		\$3.00
Fixed overhead rate per machine hour		\$1.30

Overhead is applied on the basis of standard machine hours. Three hours of machine time are required for each direct labor hour. The jobs were sold for \$400,000. Selling and administrative expenses were \$40,000. Assume that the amount of raw materials purchased equaled the amount used.

Instructions

- Compute all of the variances for (1) direct materials and (2) direct labor.
- Compute the total overhead variance.
- Prepare an income statement for management. (Ignore income taxes.)

(a) LQV \$4,800 F

P25-3A Rudd Clothiers is a small company that manufactures tall-men's suits. The company has used a standard cost accounting system. In May 2017, 11,250 suits were produced. The following standard and actual cost data applied to the month of May when normal capacity was 14,000 direct labor hours. All materials purchased were used.

Compute and identify significant variances.
(LO 2, 3, 4)

<u>Cost Element</u>	<u>Standard (per unit)</u>	<u>Actual</u>
Direct materials	8 yards at \$4.40 per yard	\$375,575 for 90,500 yards (\$4.15 per yard)
Direct labor	1.2 hours at \$13.40 per hour	\$200,925 for 14,250 hours (\$14.10 per hour)
Overhead	1.2 hours at \$6.10 per hour (fixed \$3.50; variable \$2.60)	\$49,000 fixed overhead \$37,000 variable overhead

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were \$49,000, and budgeted variable overhead was \$36,400.

Instructions

(a) MPV \$22,625 F

- Compute the total, price, and quantity variances for (1) materials and (2) labor.
- Compute the total overhead variance.
-  Which of the materials and labor variances should be investigated if management considers a variance of more than 4% from standard to be significant?

Answer questions about variances.

(LO 2, 3)

P25-4A Kansas Company uses a standard cost accounting system. In 2017, the company produced 28,000 units. Each unit took several pounds of direct materials and 1.6 standard hours of direct labor at a standard hourly rate of \$12.00. Normal capacity was 50,000 direct labor hours. During the year, 117,000 pounds of raw materials were purchased at \$0.92 per pound. All materials purchased were used during the year.

Instructions

(b) 4.0 pounds

- If the materials price variance was \$3,510 favorable, what was the standard materials price per pound?
- If the materials quantity variance was \$4,750 unfavorable, what was the standard materials quantity per unit?
- What were the standard hours allowed for the units produced?
- If the labor quantity variance was \$7,200 unfavorable, what were the actual direct labor hours worked?
- If the labor price variance was \$9,080 favorable, what was the actual rate per hour?
- If total budgeted manufacturing overhead was \$360,000 at normal capacity, what was the predetermined overhead rate?
- What was the standard cost per unit of product?
- How much overhead was applied to production during the year?
- Using one or more answers above, what were the total costs assigned to work in process?

(f) \$7.20 per DLH

Compute variances, prepare an income statement, and explain unfavorable variances.

(LO 2, 3, 4)

P25-5A Hart Labs, Inc. provides mad cow disease testing for both state and federal governmental agricultural agencies. Because the company's customers are governmental agencies, prices are strictly regulated. Therefore, Hart Labs must constantly monitor and control its testing costs. Shown below are the standard costs for a typical test.

Direct materials (2 test tubes @ \$1.46 per tube)	\$ 2.92
Direct labor (1 hour @ \$24 per hour)	24.00
Variable overhead (1 hour @ \$6 per hour)	6.00
Fixed overhead (1 hour @ \$10 per hour)	<u>10.00</u>
Total standard cost per test	<u>\$42.92</u>

The lab does not maintain an inventory of test tubes. As a result, the tubes purchased each month are used that month. Actual activity for the month of November 2017, when 1,475 tests were conducted, resulted in the following.

Direct materials (3,050 test tubes)	\$ 4,270
Direct labor (1,550 hours)	35,650
Variable overhead	7,400
Fixed overhead	15,000

Monthly budgeted fixed overhead is \$14,000. Revenues for the month were \$75,000, and selling and administrative expenses were \$5,000.

Instructions

(a) LQV \$1,800 U

- Compute the price and quantity variances for direct materials and direct labor.
- Compute the total overhead variance.
- Prepare an income statement for management.
- Provide possible explanations for each unfavorable variance.

***P25-6A** Jorgensen Corporation uses standard costs with its job order cost accounting system. In January, an order (Job No. 12) for 1,900 units of Product B was received. The standard cost of one unit of Product B is as follows.

Direct materials	3 pounds at \$1.00 per pound	\$ 3.00
Direct labor	1 hour at \$8.00 per hour	8.00
Overhead	2 hours (variable \$4.00 per machine hour; fixed \$2.25 per machine hour)	12.50
Standard cost per unit		<u>\$23.50</u>

Journalize and post standard cost entries, and prepare income statement.

(LO 2, 3, 4, 5)

Normal capacity for the month was 4,200 machine hours. During January, the following transactions applicable to Job No. 12 occurred.

1. Purchased 6,200 pounds of raw materials on account at \$1.05 per pound.
2. Requisitioned 6,200 pounds of raw materials for Job No. 12.
3. Incurred 2,000 hours of direct labor at a rate of \$7.80 per hour.
4. Worked 2,000 hours of direct labor on Job No. 12.
5. Incurred manufacturing overhead on account \$25,000.
6. Applied overhead to Job No. 12 on basis of standard machine hours allowed.
7. Completed Job No. 12.
8. Billed customer for Job No. 12 at a selling price of \$65,000.

Instructions

- (a) Journalize the transactions.
- (b) Post to the job order cost accounts.
- (c) Prepare the entry to recognize the total overhead variance.
- (d) Prepare the January 2017 income statement for management. Assume selling and administrative expenses were \$2,000.

***P25-7A** Using the information in P25-1A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(LO 6)

***P25-8A** Using the information in P25-2A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(LO 6)

***P25-9A** Using the information in P25-3A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(LO 6)

***P25-10A** Using the information in P25-5A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(LO 6)

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS

CURRENT DESIGNS

CD25 The executive team at **Current Designs** has gathered to evaluate the company's operations for the last month. One of the topics on the agenda is the special order from Huegel Hollow, which was presented in CD2. Recall that Current Designs had a special order to produce a batch of 20 kayaks for a client, and you were asked to determine the cost of the order and the cost per kayak.

Mike Cichanowski asked the others if the special order caused any particular problems in the production process. Dave Thill, the production manager, made the following comments: "Since we wanted to complete this order quickly and make a good first impression on this new customer, we had

**EXCEL
TUTORIAL**

some of our most experienced type I workers run the rotomold oven and do the trimming. They were very efficient and were able to complete that part of the manufacturing process even more quickly than the regular crew. However, the finishing on these kayaks required a different technique than what we usually use, so our type II workers took a little longer than usual for that part of the process.”

Deb Welch, who is in charge of the purchasing function, said, “We had to pay a little more for the polyethylene powder for this order because the customer wanted a color that we don’t usually stock. We also ordered a little extra since we wanted to make sure that we had enough to allow us to calibrate the equipment. The calibration was a little tricky, and we used all of the powder that we had purchased. Since the number of kayaks in the order was fairly small, we were able to use some rope and other parts that were left over from last year’s production in the finishing kits. We’ve seen a price increase for these components in the last year, so using the parts that we already had in inventory cut our costs for the finishing kits.”

Instructions

- (a) Based on the comments above, predict whether each of the following variances will be favorable or unfavorable. If you don’t have enough information to make a prediction, use “NEI” to indicate “Not Enough Information.”
- | | |
|--|--|
| (1) Quantity variance for polyethylene powder. | (5) Quantity variance for type I workers. |
| (2) Price variance for polyethylene powder. | (6) Price variance for type I workers. |
| (3) Quantity variance for finishing kits. | (7) Quantity variance for type II workers. |
| (4) Price variance for finishing kits. | (8) Price variance for type II workers. |
- (b) Diane Buswell examined some of the accounting records and reported that Current Designs purchased 1,200 pounds of pellets for this order at a total cost of \$2,040. Twenty (20) finishing kits were assembled at a total cost of \$3,240. The payroll records showed that the type I employees worked 38 hours on this project at a total cost of \$570. The type II finishing employees worked 65 hours at a total cost of \$796.25. A total of 20 kayaks were produced for this order.

The standards that had been developed for this model of kayak were used in CD2 and are reproduced here. For each kayak:

54 pounds of polyethylene powder at \$1.50 per pound

1 finishing kit (rope, seat, hardware, etc.) at \$170

2 hours of type I labor from people who run the oven and trim the plastic at a standard wage rate of \$15 per hour

3 hours of type II labor from people who attach the hatches and seat and other hardware at a standard wage rate of \$12 per hour.

Calculate the eight variances that are listed in part (a) of this problem.

WATERWAYS

(This is a continuation of the Waterways problem from Chapters 15–24.)

WP25 Waterways Corporation uses very stringent standard costs in evaluating its manufacturing efficiency. These standards are not “ideal” at this point, but management is working toward that as a goal. This problem asks you to calculate and evaluate the company’s variances.

Go to the book’s companion website, at www.wiley.com/college/weygandt, to find the completion of this problem.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP25-1 Milton Professionals, a management consulting firm, specializes in strategic planning for financial institutions. James Hahn and Sara Norton, partners in the firm, are assembling a new strategic planning model for use by clients. The model is designed for use on most personal computers and replaces a rather lengthy manual model currently marketed by the firm. To market the new model, James and Sara will need to provide clients with an estimate of the number of labor hours and computer time needed to operate the model. The model is currently being test-marketed at five small financial institutions. These financial institutions are listed on the next page, along with the number of combined computer/labor hours used by each institution to run the model one time.

<u>Financial Institutions</u>	<u>Computer/Labor Hours Required</u>
Midland National	25
First State	45
Financial Federal	40
Pacific America	30
Lakeview National	30
Total	<u>170</u>
Average	<u>34</u>

Any company that purchases the new model will need to purchase user manuals for the system. User manuals will be sold to clients in cases of 20, at a cost of \$320 per case. One manual must be used each time the model is run because each manual includes a nonreusable computer-accessed password for operating the system. Also required are specialized computer forms that are sold only by Milton. The specialized forms are sold in packages of 250, at a cost of \$60 per package. One application of the model requires the use of 50 forms. This amount includes two forms that are generally wasted in each application due to printer alignment errors. The overall cost of the strategic planning model to clients is \$12,000. Most clients will use the model four times annually.

Milton must provide its clients with estimates of ongoing costs incurred in operating the new planning model, and would like to do so in the form of standard costs.

Instructions

With the class divided into groups, answer the following.

- What factors should be considered in setting a standard for computer/labor hours?
- What alternatives for setting a standard for computer/labor hours might be used?
- What standard for computer/labor hours would you select? Justify your answer.
- Determine the standard materials cost associated with the user manuals and computer forms for each application of the strategic planning model.

Managerial Analysis

***BYP25-2** Ana Carillo and Associates is a medium-sized company located near a large metropolitan area in the Midwest. The company manufactures cabinets of mahogany, oak, and other fine woods for use in expensive homes, restaurants, and hotels. Although some of the work is custom, many of the cabinets are a standard size.

One such non-custom model is called Luxury Base Frame. Normal production is 1,000 units. Each unit has a direct labor hour standard of 5 hours. Overhead is applied to production based on standard direct labor hours. During the most recent month, only 900 units were produced; 4,500 direct labor hours were allowed for standard production, but only 4,000 hours were used. Standard and actual overhead costs were as follows.

	<u>Standard (1,000 units)</u>	<u>Actual (900 units)</u>
Indirect materials	\$ 12,000	\$ 12,300
Indirect labor	43,000	51,000
(Fixed) Manufacturing supervisors salaries	22,500	22,000
(Fixed) Manufacturing office employees salaries	13,000	12,500
(Fixed) Engineering costs	27,000	25,000
Computer costs	10,000	10,000
Electricity	2,500	2,500
(Fixed) Manufacturing building depreciation	8,000	8,000
(Fixed) Machinery depreciation	3,000	3,000
(Fixed) Trucks and forklift depreciation	1,500	1,500
Small tools	700	1,400
(Fixed) Insurance	500	500
(Fixed) Property taxes	300	300
Total	<u>\$144,000</u>	<u>\$150,000</u>

Instructions

- Determine the overhead application rate.
- Determine how much overhead was applied to production.
- Calculate the total overhead variance, controllable variance, and volume variance.
- Decide which overhead variances should be investigated.
- Discuss causes of the overhead variances. What can management do to improve its performance next month?

Real-World Focus

BYP25-3 **Glassmaster Company** is organized as two divisions and one subsidiary. One division focuses on the manufacture of filaments such as fishing line and sewing thread; the other division manufactures antennas and specialty fiberglass products. Its subsidiary manufactures flexible steel wire controls and molded control panels.

The annual report of Glassmaster provides the following information.

GLASSMASTER COMPANY Management Discussion

Gross profit margins for the year improved to 20.9% of sales compared to last year's 18.5%. All operations reported improved margins due in large part to improved operating efficiencies as a result of cost reduction measures implemented during the second and third quarters of the fiscal year and increased manufacturing throughout due to higher unit volume sales. Contributing to the improved margins was a favorable materials price variance due to competitive pricing by suppliers as a result of soft demand for petrochemical-based products. This favorable variance is temporary and will begin to reverse itself as stronger worldwide demand for commodity products improves in tandem with the economy. Partially offsetting these positive effects on profit margins were competitive pressures on sales prices of certain product lines. The company responded with pricing strategies designed to maintain and/or increase market share.

Instructions

- Is it apparent from the information whether Glassmaster utilizes standard costs?
- Do you think the price variance experienced should lead to changes in standard costs for the next fiscal year?

BYP25-4 The **Balanced Scorecard Institute** (www.balancedscorecard.org) is a great resource for information about implementing the balanced scorecard. One item of interest provided at its website is an example of a balanced scorecard for a regional airline.

Address: http://www.balancedscorecard.org/portals/0/pdf/regional_airline.pdf, or go to www.wiley.com/college/weygandt

Instructions

Go to the address above and answer the following questions.

- What are the objectives identified for the airline for each perspective?
- What measures are used for the objectives in the customer perspective?
- What initiatives are planned to achieve the objective in the learning perspective?

BYP25-5 The December 22, 2009, edition of the *Wall Street Journal* has an article by Kevin Kelliker entitled "In Risky Move, GM to Run Plants Around Clock."

Instructions

Read the article and answer the following questions.

- According to the article, what is the normal industry standard for plants to be considered operating at full capacity?
- What ideal standard is the company hoping to achieve?
- What reasons are given in the article for why most companies do not operate a third shift? How does **GM** propose to overcome these issues?
- What are some potential drawbacks of the midnight shift? What implications does this have for variances from standards?
- What potential sales/marketing disadvantage does the third shift create?

CRITICAL THINKING

Communication Activity

BYP25-6 The setting of standards is critical to the effective use of standards in evaluating performance.

Instructions

Explain the following in a memo to your instructor.

- The comparative advantages and disadvantages of ideal versus normal standards.
- The factors that should be included in setting the price and quantity standards for direct materials, direct labor, and manufacturing overhead.

Ethics Case

BYP25-7 At Symond Company, production workers in the Painting Department are paid on the basis of productivity. The labor time standard for a unit of production is established through periodic time studies conducted by Douglas Management Consultants. In a time study, the actual time required to complete a specific task by a worker is observed. Allowances are then made for preparation time, rest periods, and cleanup time. Bill Carson is one of several veterans in the Painting Department.

Bill is informed by Douglas that he will be used in the time study for the painting of a new product. The findings will be the basis for establishing the labor time standard for the next 6 months. During the test, Bill deliberately slows his normal work pace in an effort to obtain a labor time standard that will be easy to meet. Because it is a new product, the Douglas representative who conducted the test is unaware that Bill did not give the test his best effort.

Instructions

- Who was benefited and who was harmed by Bill's actions?
- Was Bill ethical in the way he performed the time study test?
- What measure(s) might the company take to obtain valid data for setting the labor time standard?

All About You

BYP25-8 From the time you first entered school many years ago, instructors have been measuring and evaluating you by imposing standards. In addition, many of you will pursue professions that administer professional examinations to attain recognized certification. A federal commission presented proposals suggesting all public colleges and universities should require standardized tests to measure their students' learning.

Instructions

Read the article at www.signonsandiego.com/uniontrib/20060811/news_1n11colleges.html, and answer the following questions.

- What areas of concern did the panel's recommendations address?
- What are possible advantages of standard testing?
- What are possible disadvantages of standard testing?
- Would you be in favor of standardized tests?

Considering Your Costs and Benefits

BYP25-9 Do you think that standard costs are used only in making products like wheel bearings and hamburgers? Think again. Standards influence virtually every aspect of our lives. For example, the next time you call to schedule an appointment with your doctor, ask the receptionist how many minutes the appointment is scheduled for. Doctors are under increasing pressure to see more patients each day, which means the time spent with each patient is shorter. As insurance companies and employers push for reduced medical costs, every facet of medicine has been standardized and analyzed. Doctors, nurses, and other medical staff are evaluated in every part of their operations to ensure maximum efficiency. While keeping medical treatment affordable seems like a worthy goal, what are the potential implications for the quality of health care? Does a focus on the bottom line result in a reduction in the quality of health care?

A simmering debate has centered on a very basic question: To what extent should accountants, through financial measures, influence the type of medical care that you receive? Suppose that your local medical facility is in danger of closing because it has been losing money. Should the facility put in place incentives that provide bonuses to doctors if they meet certain standard-cost targets for the cost of treating specific ailments?

YES: If the facility is in danger of closing, then someone should take steps to change the medical practices to reduce costs. A closed medical facility is of no use to me, my family, or the community.

NO: I don't want an accountant deciding the right medical treatment for me. My family and I deserve the best medical care.

Instructions

Write a response indicating your position regarding this situation. Provide support for your view.

Planning for Capital Investments

CHAPTER PREVIEW Companies like **Holland America Line** (as discussed in the Feature Story below) must constantly determine how to invest their resources. Other examples: **Dell** announced plans to spend \$1 billion on data centers for cloud computing. **ExxonMobil** announced that two wells off the Brazilian coast, which it had spent hundreds of millions of dollars to drill, would produce no oil. **Renault** and **Nissan** spent over \$5 billion during a nearly 20-year period to develop electric cars, such as the Leaf.

The process of making such capital expenditure decisions is referred to as **capital budgeting**. Capital budgeting involves choosing among various capital projects to find those that will maximize a company's return on its financial investment. The purpose of this chapter is to discuss the various techniques used to make effective capital budgeting decisions.

FEATURE STORY

Floating Hotels

Do you own a boat? Maybe it's a nice boat, but how many swimming pools, movie theaters, shopping malls, or restaurants does it have on board? If you are in the cruise-line business, like **Holland America Line**, you need all of these amenities and more just to stay afloat. Holland America Line is considered by many to be the leader of the premium luxury-liner segment.

Carnival Corporation, which owns Holland America Line and other cruise lines, is one of the largest vacation companies in the world. During one recent three-year period, Carnival spent more than \$3 billion per year on capital expenditures. That's a big number, but keep in mind that Carnival estimates that at any given time there are 270,000 people (200,000 customers and 70,000 crew) on its 100 ships somewhere in the world.

The cruise industry is a tricky business. When times are good, customers are looking for ways to splurge. But when times

get tough, people are more inclined to take a trip in a minivan than a luxury yacht. So it's important to time your investment properly. For example, during one stretch of solid global economic growth, many cruise lines decided to add capacity. The industry built 14 new ships at a total price of \$4.7 billion. (That's an average price of about \$330 million.) But, it takes up to three years to build one of these giant vessels. Unfortunately, by the time the ships were completed, the economy was in a nose-dive.

To maintain passenger numbers, cruise prices had to be cut by up to 40%. While the lower prices attracted lots of customers, that wasn't enough to offset an overall decline in revenue of 10% in the middle of the recession. The industry had added capacity at just the wrong time.

LEARNING
OBJECTIVE

1

Describe capital budgeting inputs and apply the cash payback technique.

Many companies follow a carefully prescribed process in capital budgeting. At least once a year, top management requests proposals for projects from departments, plants, and authorized personnel. A capital budgeting committee screens the proposals and submits its findings to the officers of the company. The officers, in turn, select the projects they believe to be most worthy of funding. They submit this list of projects to the board of directors. Ultimately, the directors approve the capital expenditure budget for the year. Illustration 26-1 shows this process.

Illustration 26-1
Corporate capital budget
authorization process

The involvement of top management and the board of directors in the process demonstrates the importance of capital budgeting decisions. These decisions often have a significant impact on a company's future profitability. In fact, poor capital budgeting decisions can cost a lot of money. Such decisions have even led to the bankruptcy of some companies.

Cash Flow Information

In this chapter, we will look at several methods that help companies make effective capital budgeting decisions. Most of these methods employ **cash flow numbers**, rather than accrual accounting revenues and expenses. Remember from your financial accounting course that accrual accounting records **revenues** and **expenses**, rather than cash inflows and cash outflows. In fact, revenues and expenses measured during a period often differ significantly from their cash flow counterparts. Accrual accounting has advantages over cash accounting in many contexts. **For purposes of capital budgeting, though, estimated cash inflows and outflows are the preferred inputs.** Why? Because ultimately the value of all financial investments is determined by the value of cash flows received and paid.

Sometimes cash flow information is not available. In this case, companies can make adjustments to accrual accounting numbers to estimate cash flow. Often, they estimate net annual cash flow by adding back depreciation expense to net income. Depreciation expense is added back because it is an expense that does not require an outflow of cash. By adding depreciation expense back to net income, companies approximate net annual cash flow. Suppose, for example, that Reno Company's net income of \$13,000 includes a charge for depreciation expense of \$26,000. Its estimated net annual cash flow would be \$39,000 (\$13,000 + \$26,000).

Illustration 26-2 lists some typical cash outflows and inflows related to equipment purchase and replacement.

Cash Outflows

Initial investment
Repairs and maintenance
Increased operating costs
Overhaul of equipment

Cash Inflows

Sale of old equipment
Increased cash received from customers
Reduced cash outflows related to operating costs
Salvage value of equipment

Illustration 26-2

Typical cash flows relating to capital budgeting decisions

These cash flows are the inputs that are considered relevant in capital budgeting decisions.

The capital budgeting decision, under any technique, depends in part on a variety of considerations:

- **The availability of funds:** Does the company have unlimited funds, or will it have to ration capital investments?
- **Relationships among proposed projects:** Are proposed projects independent of each other, or does the acceptance or rejection of one depend on the acceptance or rejection of another?
- **The company's basic decision-making approach:** Does the company want to produce an accept-reject decision or a ranking of desirability among possible projects?
- **The risk associated with a particular project:** How certain are the projected returns? The certainty of estimates varies with such issues as market considerations or the length of time before returns are expected.

Illustrative Data

To compare the results of the various capital budgeting techniques, we will use a continuing example. Assume that Stewart Shipping Company is considering an investment of \$130,000 in new equipment. The new equipment is expected to last 10 years. It will have a zero salvage value at the end of its useful life. The annual cash inflows are \$200,000, and the annual cash outflows are \$176,000. Illustration 26-3 summarizes these data.

Initial investment	\$130,000
Estimated useful life	10 years
Estimated salvage value	-0-
Estimated annual cash flows	
Cash inflows from customers	\$200,000
Cash outflows for operating costs	<u>176,000</u>
Net annual cash flow	<u>\$ 24,000</u>

Illustration 26-3

Investment information for Stewart Shipping example

In the following two sections, we will examine two popular techniques for evaluating capital investments: cash payback and the net present value method.

Cash Payback

The **cash payback technique** identifies the time period required to recover the cost of the capital investment from the net annual cash flow produced by the

investment. Illustration 26-4 presents the formula for computing the cash payback period assuming equal annual cash flows.

Illustration 26-4
Cash payback formula

Cost of Capital Investment	÷	Net Annual Cash Flow	=	Cash Payback Period
-----------------------------------	---	-----------------------------	---	----------------------------

Helpful Hint

Net annual cash flow can also be approximated by “Net cash provided by operating activities” from the statement of cash flows.

The cash payback period in the Stewart Shipping example is 5.42 years, computed as follows.

$$\$130,000 \div \$24,000 = 5.42 \text{ years}$$

The evaluation of the payback period is often related to the expected useful life of the asset. For example, assume that at Stewart Shipping a project is unacceptable if the payback period is longer than 60% of the asset’s expected useful life. The 5.42-year payback period is 54.2% ($5.42 \div 10$) of the project’s expected useful life. Thus, the project is acceptable.

It follows that when the payback technique is used to decide among acceptable alternative projects, **the shorter the payback period, the more attractive the investment**. This is true for two reasons: First, the earlier the investment is recovered, the sooner the company can use the cash funds for other purposes. Second, the risk of loss from obsolescence and changed economic conditions is less in a shorter payback period.

The preceding computation of the cash payback period assumes **equal** net annual cash flows in each year of the investment’s life. In many cases, this assumption is not valid. In the case of **uneven** net annual cash flows, the company determines the cash payback period when the cumulative net cash flows from the investment equal the cost of the investment.

To illustrate, assume that Chen Company proposes an investment in a new website that is estimated to cost \$300,000. Illustration 26-5 shows the proposed investment cost, net annual cash flows, cumulative net cash flows, and the cash payback period.

Illustration 26-5
Computation of cash payback period—unequal cash flows

Year	Investment	Net Annual Cash Flow	Cumulative Net Cash Flow
0	\$300,000		
1		\$ 60,000	\$ 60,000
2		90,000	150,000
3		90,000	240,000
4		120,000	360,000
5		100,000	460,000

Cash payback period = 3.5 years

As Illustration 26-5 shows, at the end of year 3, cumulative net cash flow of \$240,000 is less than the investment cost of \$300,000, but at the end of year 4 the cumulative cash inflow of \$360,000 exceeds the investment cost. The cash flow needed in year 4 to equal the investment cost is \$60,000 ($\$300,000 - \$240,000$). Assuming the cash inflow occurred evenly during year 4, we then divide this amount by the net annual cash flow in year 4 ($\$120,000$) to determine the point during the year when the cash payback occurs. Thus, we get 0.50 ($\$60,000 / \$120,000$), or half of the year, and the cash payback period is 3.5 years.

The cash payback technique may be useful as an initial screening tool. It may be the most critical factor in the capital budgeting decision for a company that desires a fast turnaround of its investment because of a weak cash position. It also is relatively easy to compute and understand.

However, cash payback should not ordinarily be the only basis for the capital budgeting decision because it **ignores the expected profitability of the project**.

To illustrate, assume that Projects A and B have the same payback period, but Project A's useful life is double the useful life of Project B. Project A's earning power, therefore, is twice as long as Project B's. A further—and major—disadvantage of this technique is that it **ignores the time value of money**.

DO IT!**1****Cash Payback Period**

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Compute the cash payback period.

Solution

Estimated annual cash inflows	\$400,000
Estimated annual cash outflows	<u>190,000</u>
Net annual cash flow	<u>\$210,000</u>
Cash payback period = \$900,000/\$210,000 = 4.3 years.	

Related exercise material: **BE26-1 and DO IT! 26-1.**

Action Plan

- ✓ Annual cash inflows – Annual cash outflows = Net annual cash flow.
- ✓ Cash payback period = Cost of capital investment/ Net annual cash flow.

LEARNING OBJECTIVE**2****Use the net present value method.**

Recognition of the time value of money can make a significant difference in the long-term impact of the capital budgeting decision. For example, cash flows that occur early in the life of an investment are worth more than those that occur later—because of the time value of money. Therefore, it is useful to recognize the timing of cash flows when evaluating projects.

Capital budgeting techniques that take into account both the time value of money and the estimated net cash flows from an investment are called **discounted cash flow techniques**. They are generally recognized as the most informative and best conceptual approaches to making capital budgeting decisions. The expected net cash flow used in discounting cash flows consists of the annual net cash flows plus the estimated liquidation proceeds (salvage value) when the asset is sold for salvage at the end of its useful life.

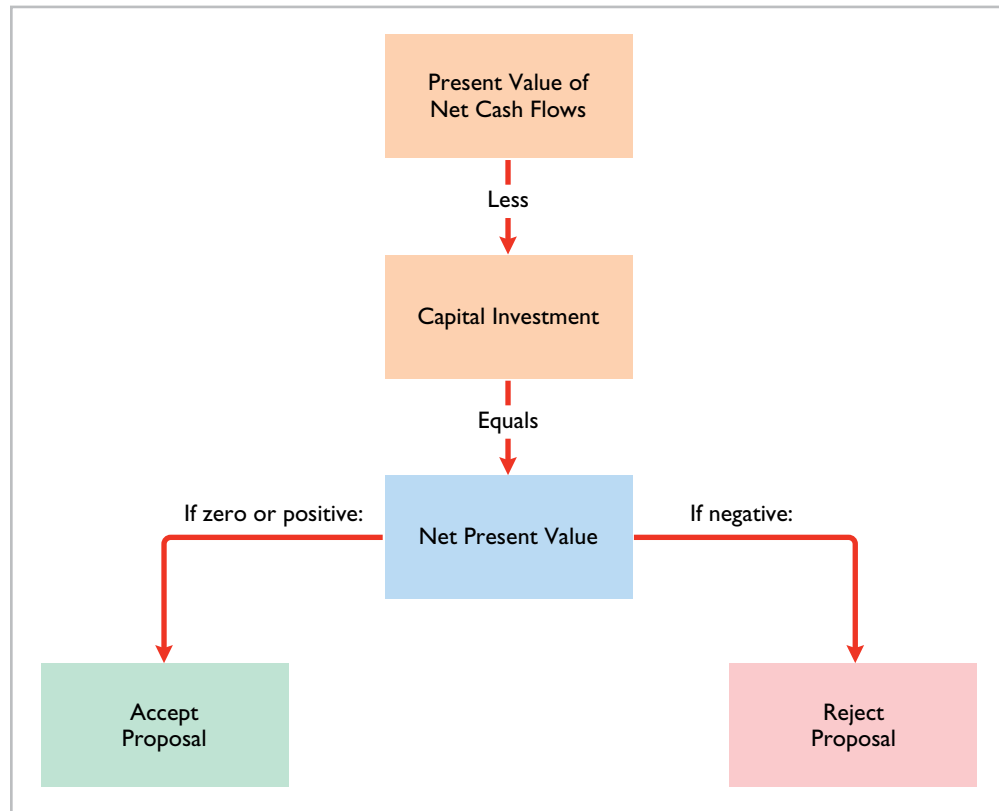

The primary discounted cash flow technique is the **net present value method**. A second method, discussed later in the chapter, is the **internal rate of return**. At this point, before you read on, **we recommend that you examine Appendix G** at the end of the book to review the time value of money concepts upon which these methods are based.

The **net present value (NPV) method** involves discounting net cash flows to their present value and then comparing that present value with the capital outlay required by the investment. The difference between these two amounts is referred to as **net present value (NPV)**. Company management determines what interest rate to use in discounting the future net cash flows. This rate, often referred to as the **discount rate** or **required rate of return**, is discussed in a later section.

The NPV decision rule is this: **A proposal is acceptable when net present value is zero or positive.** At either of those values, the rate of return on the

investment equals or exceeds the **required rate of return**. This is the rate of return management expects on investments, sometimes called the discount rate or cost of capital. When net present value is negative, the project is unacceptable. Illustration 26-6 shows the net present value decision criteria.

Illustration 26-6
Net present value decision criteria

When making a selection among acceptable proposals, **the higher the positive net present value, the more attractive the investment**. The application of this method to two cases is described in the next two sections. In each case, we assume that the investment has no salvage value at the end of its useful life.

Helpful Hint

The ABC Co. expects equal cash flows over an asset's 5-year useful life. The discount factor it should use in determining present values if management wants a 12% return is 3.60478 (using Table 4).

Equal Annual Cash Flows

In our Stewart Shipping Company example, the company's net annual cash flows are \$24,000. If we assume this amount **is uniform over the asset's useful life**, we can compute the present value of the net annual cash flows by using the present value of an annuity of 1 for 10 payments (from Table 4, Appendix G). Assuming a discount rate of 12%, the present value of net cash flows are as shown in Illustration 26-7 (rounded to the nearest dollar).

Illustration 26-7

Computation of present value of equal net annual cash flows

	Present Value at 12%
	<hr/>
Discount factor for 10 periods	5.65022
Present value of net cash flows:	<hr/>
$\$24,000 \times 5.65022$	<u><u>\$135,605</u></u>

The analysis of the proposal by the net present value method is as follows.

	<u>12%</u>
Present value of net cash flows	\$135,605
Less: Capital investment	<u>130,000</u>
Net present value	<u>\$ 5,605</u>

Illustration 26-8

Computation of net present value—equal net annual cash flows

The proposed capital expenditure is acceptable at a required rate of return of 12% because the net present value is positive.

Unequal Annual Cash Flows

When net annual cash flows are unequal, we cannot use annuity tables to calculate their present value. Instead, we use tables showing the **present value of a single future amount for each annual cash flow**.

To illustrate, assume that Stewart Shipping Company expects the same total net cash flows of \$240,000 over the life of the investment. But because of a declining market demand for the product over the life of the equipment, the net annual cash flows are higher in the early years and lower in the later years. The present value of the net annual cash flows is calculated as follows, using Table 3 in Appendix G.

Helpful Hint

Appendix G demonstrates the use of a financial calculator to solve time value of money problems.

Year	Assumed Net Annual Cash Flows	Discount Factor	Present Value
		12%	12%
	(1)	(2)	(1) × (2)
1	\$ 34,000	.89286	\$ 30,357
2	30,000	.79719	23,916
3	27,000	.71178	19,218
4	25,000	.63552	15,888
5	24,000	.56743	13,618
6	22,000	.50663	11,146
7	21,000	.45235	9,499
8	20,000	.40388	8,078
9	19,000	.36061	6,852
10	18,000	.32197	5,795
	<u>\$240,000</u>		<u>\$144,367</u>

Illustration 26-9

Computation of present value of unequal annual cash flows

Therefore, the analysis of the proposal by the net present value method is as follows.

	<u>12%</u>
Present value of net cash flows	\$144,367
Less: Capital investment	<u>130,000</u>
Net present value	<u>\$ 14,367</u>

Illustration 26-10

Computation of net present value—unequal annual cash flows

In this example, the present value of the net cash flows is greater than the \$130,000 capital investment. Thus, the project is acceptable at a 12% required rate of return. The difference between the present values using the 12% rate under equal cash flows (\$135,605) and unequal cash flows (\$144,367) is due to the pattern of the flows. Since more money is received sooner under this particular uneven cash flow scenario, its present value is greater.

Management Insight Verizon

Trevor Smith/iStockphoto

Can You Hear Me—Better?

What's better than 3G wireless service? 4G. But the question for wireless service providers is whether customers will be willing to pay extra for that improvement. Verizon has spent billions on upgrading its networks in the past few years, so it now offers 4G LTE service to 97% of the nation. Verizon is hoping that its investment in 4G works out better than its \$23 billion investment in its FIOS fiber-wired network for TV and ultrahigh-speed Internet. One analyst estimates

that the present value of each FIOS customer is \$800 less than the cost of the connection.

Sources: Martin Peers, "Investors: Beware Verizon's Generation GAP," *Wall Street Journal Online* (January 26, 2010); and Chad Fraser, "What Warren Buffett Sees in Verizon," *Investing Daily* (May 30, 2014).

If customers are slow to initially adopt 4G, how might the conclusions of a cash payback analysis of Verizon's 4G investment differ from a present value analysis? (Go to WileyPLUS for this answer and additional questions.)

Choosing a Discount Rate

Now that you understand how companies apply the net present value method, it is logical to ask a related question: How is a discount rate (required rate of return) determined in real capital budgeting decisions? In most instances, a company uses a required rate of return equal to its **cost of capital**—that is, the rate that it must pay to obtain funds from creditors and stockholders.

The cost of capital is a weighted average of the rates paid on borrowed funds as well as on funds provided by investors in the company's common stock and preferred stock. If management believes a project is riskier than the company's usual line of business, the discount rate should be increased. That is, the discount rate has two elements, a cost of capital element and a risk element. Often, companies assume the risk element is equal to zero.

Using an incorrect discount rate can lead to incorrect capital budgeting decisions. Consider again the Stewart Shipping example in Illustration 26-8, where we used a discount rate of 12%. Suppose that this rate does not take into account the fact that this project is riskier than most of the company's investments. A more appropriate discount rate, given the risk, might be 15%. Illustration 26-11 compares the net present values at the two rates. At the higher, more appropriate discount rate of 15%, the net present value is negative, and the company should reject the project (discount factors from Appendix G, Table 4).

Helpful Hint

Cost of capital is the rate that management expects to pay on all borrowed and equity funds. It does not relate to the cost of funding a *specific* project.

Illustration 26-11

Comparison of net present values at different discount rates

	Present Values at Different Discount Rates	
	12%	15%
Discount factor for 10 payments	5.65022	5.01877
Present value of net cash flows:		
\$24,000 × 5.65022	\$135,605	
\$24,000 × 5.01877		\$120,450
Less: Capital investment	130,000	130,000
Positive (negative) net present value	\$ 5,605	\$ (9,550)

The discount rate is often referred to by alternative names, including the **required rate of return**, the **hurdle rate**, and the **cutoff rate**. Determination of the cost of capital varies somewhat depending on whether the entity is a for-profit or not-for-profit business. Calculation of the cost of capital is discussed more fully in advanced accounting and finance courses.

Simplifying Assumptions

In our examples of the net present value method, we made a number of simplifying assumptions:

- **All cash flows come at the end of each year.** In reality, cash flows will come at uneven intervals throughout the year. However, it is far simpler to assume that all cash flows come at the end (or in some cases the beginning) of the year. In fact, this assumption is frequently made in practice.
- **All cash flows are immediately reinvested in another project that has a similar return.** In most capital budgeting situations, companies receive cash flows during each year of a project's life. In order to determine the return on the investment, some assumption must be made about how the cash flows are reinvested in the year that they are received. It is customary to assume that cash flows received are reinvested in some other project of similar return until the end of the project's life.
- **All cash flows can be predicted with certainty.** The outcomes of business investments are full of uncertainty, as the **Holland America Line** Feature Story shows. There is no way of knowing how popular a new product will be, how long a new machine will last, or what competitors' reactions might be to changes in a product. But, in order to make investment decisions, analysts must estimate future outcomes. In this chapter, we have assumed that future amounts are known with certainty.¹ In reality, little is known with certainty. More advanced capital budgeting techniques deal with uncertainty by considering the probability that various outcomes will occur.

Comprehensive Example

Best Taste Foods is considering investing in new equipment to produce fat-free snack foods. Management believes that although demand for fat-free foods has leveled off, fat-free foods are here to stay. The following estimated costs, cost of capital, and cash flows were determined in consultation with the marketing, production, and finance departments.

Initial investment	\$1,000,000
Cost of equipment overhaul in 5 years	\$200,000
Salvage value of equipment in 10 years	\$20,000
Cost of capital (discount rate)	15%
Estimated annual cash flows	
Cash inflows received from sales	\$500,000
Cash outflows for cost of goods sold	\$200,000
Maintenance costs	\$30,000
Other direct operating costs	\$40,000

Illustration 26-12
Investment information for
Best Taste Foods example

Remember that we are using cash flows in our analysis, not accrual revenues and expenses. Thus, for example, the direct operating costs would not include depreciation expense, since depreciation expense does not use cash. Illustration 26-13 presents the computation of the net annual cash flows of this project.

Cash inflows received from sales	\$ 500,000
Cash outflows for cost of goods sold	(200,000)
Maintenance costs	(30,000)
Other direct operating costs	(40,000)
Net annual cash flow	<u>\$230,000</u>

Illustration 26-13
Computation of net annual
cash flow

¹One exception is a brief discussion of sensitivity analysis later in the chapter.

Illustration 26-14 shows computation of the net present value for this proposed investment (discount factors from Appendix G, Tables 3 and 4).

Illustration 26-14

Computation of net present value for Best Taste Foods investment

Event	Time Period	Cash Flow	×	15% Discount Factor	=	Present Value
Net annual cash flow	1–10	\$ 230,000	×	5.01877	=	\$1,154,317
Salvage value	10	20,000		.24719		4,944
Less: Equipment purchase	0	1,000,000		1.00000		1,000,000
Less: Equipment overhaul	5	200,000		.49718		99,436
Net present value						\$ 59,825

Because the net present value of the project is positive, Best Taste should accept the project.

DO IT!**2****Net Present Value**

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Management has a required rate of return of 9%. Calculate the net present value on this project and discuss whether it should be accepted.

Solution**Action Plan**

- ✓ Estimated annual cash inflows – Estimated annual cash outflows = Net annual cash flow.
- ✓ Use the NPV technique to calculate the difference between net cash flows and the initial investment.
- ✓ Accept the project if the net present value is positive.

Estimated annual cash inflows	\$400,000		
Estimated annual cash outflows	190,000		
Net annual cash flow	<u>\$210,000</u>		
	Cash Flow	9% Discount Factor	Present Value
Present value of net annual cash flows	\$210,000	4.48592 ^a	\$942,043
Less: Capital investment			900,000
Net present value			<u>\$ 42,043</u>

^aTable 4, Appendix G, 9%, 6 years

Since the net present value is greater than zero, Watertown should accept the project.

Related exercise material: **BE26-2, BE26-3, E26-1, E26-2, E26-3, and DO IT! 26-2.**

LEARNING OBJECTIVE

3**Identify capital budgeting challenges and refinements.**

Now that you understand how the net present value method works, we can add some “additional wrinkles.” Specifically, these are the impact of intangible benefits, a way to compare mutually exclusive projects, refinements that take risk into account, and the need to conduct post-audits of investment projects.

Intangible Benefits

The NPV evaluation techniques employed thus far rely on tangible costs and benefits that can be relatively easily quantified. Some investment projects, especially high-tech projects, fail to make it through initial capital budget screens because

only the project's tangible benefits are considered. **Intangible benefits** might include increased quality, improved safety, or enhanced employee loyalty. By ignoring intangible benefits, capital budgeting techniques might incorrectly eliminate projects that could be financially beneficial to the company.

To avoid rejecting projects that actually should be accepted, analysts suggest two possible approaches:

1. Calculate net present value ignoring intangible benefits. Then, if the NPV is negative, ask whether the project offers any intangible benefits that are worth at least the amount of the negative NPV.
2. Project rough, conservative estimates of the value of the intangible benefits, and incorporate these values into the NPV calculation.

EXAMPLE

Assume that Berg Company is considering the purchase of a new mechanical robot to be used for soldering electrical connections. Illustration 26-15 shows the estimates related to this proposed purchase (discount factor from Appendix G, Table 4).

Initial investment					
					<u>\$200,000</u>
Annual cash inflows					\$ 50,000
Annual cash outflows					<u>20,000</u>
Net annual cash flow					<u>\$ 30,000</u>
Estimated life of equipment					10 years
Discount rate					12%
	Cash	×	12% Discount	=	Present
	Flows		Factor		Value
Present value of net annual cash flows	\$30,000	×	5.65022	=	\$169,507
Less: Initial investment					<u>200,000</u>
Net present value					<u>\$(30,493)</u>

Illustration 26-15

Investment information for Berg Company example

Based on the negative net present value of \$30,493, the proposed project is not acceptable. This calculation, however, ignores important information. First, the company's engineers believe that purchasing this machine will dramatically improve the quality of electrical connections in the company's products. As a result, future warranty costs will be reduced. Also, the company believes that this higher quality will translate into higher future sales. Finally, the new machine will be much safer than the previous one.

Berg can incorporate this new information into the capital budgeting decision in the two ways discussed earlier. First, management might simply ask whether the reduced warranty costs, increased sales, and improved safety benefits have an estimated total present value to the company of at least \$30,493. If yes, then the project is acceptable.

Alternatively, analysts can estimate the annual cash flows of these benefits. In our initial calculation, we assumed each of these benefits to have a value of zero. It seems likely that their actual values are much higher than zero. Given the difficulty of estimating these benefits, however, conservative values should be assigned to them. If, after using conservative estimates, the net present value is positive, Berg should accept the project.

To illustrate, assume that Berg estimates that improved sales will increase cash inflows by \$10,000 annually as a result of an increase in perceived quality. Berg also estimates that annual cost outflows would be reduced by \$5,000 as a result of lower warranty claims, reduced injury claims, and missed work. Consideration of the intangible benefits results in the following revised NPV calculation (discount factor from Appendix G, Table 4).

Illustration 26-16

Revised investment information for Berg Company example, including intangible benefits

Initial investment	\$200,000			
Annual cash inflows (revised)	\$ 60,000 (\$50,000 + \$10,000)			
Annual cash outflows (revised)	15,000 (\$20,000 – \$5,000)			
Net annual cash flow	\$ 45,000			
Estimated life of equipment	10 years			
Discount rate	12%			
	Cash Flows	×	12% Discount Factor	= Present Value
Present value of net annual cash flows	\$45,000	×	5.65022	= \$254,260
Less: Initial investment				200,000
Net present value				\$ 54,260

Using these conservative estimates of the value of the additional benefits, Berg should accept the project.

Ethics Insight

It Need Not Cost an Arm and a Leg

Most manufacturers say that employee safety matters above everything else. But how many back up this statement with investments that improve employee safety? Recently, a woodworking hobbyist, who also happens to be a patent attorney with a Ph.D. in physics, invented a mechanism that automatically shuts down a power saw when the saw blade comes in

contact with human flesh. The blade stops so quickly that only minor injuries result.

Power saws injure 40,000 Americans each year, and 4,000 of those injuries are bad enough to require amputation. Therefore, one might think that power-saw companies would be lined up to incorporate this mechanism into their saws. But, in the words of one power-tool company, "Safety doesn't sell." Since existing saw manufacturers were unwilling to incorporate the device into their saws, eventually the inventor started his own company to build the devices and sell them directly to businesses that use power saws.

Source: Melba Newsome, "An Edgy New Idea," *Time: Inside Business* (May 2006), p. A16.

In addition to the obvious humanitarian benefit of reducing serious injuries, how else might the manufacturer of this product convince potential customers of its worth? (Go to **WileyPLUS** for this answer and additional questions.)

Profitability Index for Mutually Exclusive Projects

In theory, companies should accept all projects with positive NPVs. However, companies rarely are able to adopt all positive-NPV proposals. First, proposals often are **mutually exclusive**. This means that if the company adopts one proposal, it would be impossible or impractical also to adopt the other proposal. For example, a company may be considering the purchase of a new packaging machine and is looking at various brands and models. It needs only one packaging machine. Once the company has determined which brand and model to purchase, the others will not be purchased—even though they also may have positive net present values.

Even in instances where projects are not mutually exclusive, managers often must choose between various positive-NPV projects because of **limited resources**. For example, the company might have ideas for two new lines of business, each of which has a projected positive NPV. However, both of these proposals require skilled personnel, and the company determines that it will not be able to find enough skilled personnel to staff both projects. Management will have to choose the project it thinks is a better option.

When choosing between alternative proposals, it is tempting simply to choose the project with the higher NPV. Consider the following example of two mutually exclusive projects. Each is assumed to have a 10-year life and a 12% discount rate (discount factors from Appendix G, Tables 3 and 4). Illustration 26-17 shows the estimates for each project and the computation of the present value of the net cash flows.

	<u>Project A</u>	<u>Project B</u>
Initial investment	\$40,000	\$ 90,000
Net annual cash inflow	10,000	19,000
Salvage value	5,000	10,000
Present value of net cash flows		
(\$10,000 × 5.65022) + (\$5,000 × .32197)	58,112	
(\$19,000 × 5.65022) + (\$10,000 × .32197)		110,574

Illustration 26-17

Investment information for mutually exclusive projects

Illustration 26-18 computes the net present values of Project A and Project B by subtracting the initial investment from the present value of the net cash flows.

	<u>Project A</u>	<u>Project B</u>
Present value of net cash flows	\$ 58,112	\$110,574
Less: Initial investment	40,000	90,000
Net present value	<u>\$18,112</u>	<u>\$ 20,574</u>

Illustration 26-18

Net present value computation

As Project B has the higher NPV, it would seem that the company should adopt it. However, Project B also requires more than twice the original investment of Project A. In choosing between the two projects, the company should also include in its calculations the amount of the original investment.

One relatively simple method of comparing alternative projects is the **profitability index**. This method takes into account both the size of the original investment and the discounted cash flows. The profitability index is calculated by dividing the present value of net cash flows that occur after the initial investment by the amount of the initial investment, as Illustration 26-19 shows.

Present Value of Net Cash Flows	÷	Initial Investment	=	Profitability Index
--	---	-------------------------------	---	--------------------------------

Illustration 26-19

Formula for profitability index

The profitability index allows comparison of the relative desirability of projects that require differing initial investments. Note that any project with a positive NPV will have a profitability index above 1. The profitability index for each of the mutually exclusive projects is calculated in Illustration 26-20.

Profitability Index =		<u>Present Value of Net Cash Flows</u>	
		<u>Initial Investment</u>	
		<u>Project A</u>	<u>Project B</u>
		\$58,112	\$110,574
		\$40,000	\$90,000
	=	1.45	1.23

Illustration 26-20

Calculation of profitability index

In this case, the profitability index of Project A exceeds that of Project B. Thus, Project A is more desirable. Again, if these were not mutually exclusive projects and if resources were not limited, then the company should invest in

both projects since both have positive NPVs. Additional considerations related to preference decisions are discussed in more advanced courses.

Risk Analysis

A simplifying assumption made by many financial analysts is that projected results are known with certainty. In reality, projected results are only estimates based upon the forecaster's belief as to the most probable outcome. One approach for dealing with such uncertainty is **sensitivity analysis**. Sensitivity analysis uses a number of outcome estimates to get a sense of the variability among potential returns. An example of sensitivity analysis was presented in Illustration 26-11 (page 1212), where we illustrated the impact on NPV of different discount rate assumptions. A higher-risk project would be evaluated using a higher discount rate.

Similarly, to take into account that more distant cash flows are often more uncertain, a higher discount rate can be used to discount more distant cash flows. Other techniques to address uncertainty are discussed in advanced courses.

Management Insight **Sharp**

Matjaz Boncina/iStockphoto

Wide-Screen Capacity

Building a new factory to produce 60-inch TV screens can cost \$4 billion. But for more than 10 years, manufacturers of these screens have

continued to build new plants. By building so many plants, they have expanded productive capacity at a rate that has exceeded the demand for big-screen TVs. In fact, during one recent year, the supply of big-screen TVs was estimated to exceed demand by 12%, rising to 16% in the future.

One state-of-the-art plant built by **Sharp** was estimated to be operating at only 50% of capacity. Experts say that the price of big-screen TVs will have to fall much further than they already have before demand may eventually catch up with productive capacity.

Source: James Simms, "Sharp's Payoff Delayed," *Wall Street Journal Online* (September 14, 2010).

What implications does the excess capacity have for the cash payback and net present value calculations of these investments? (Go to **WileyPLUS** for this answer and additional questions.)

Post-Audit of Investment Projects

Any well-run organization should perform an evaluation, called a **post-audit**, of its investment projects after their completion. A post-audit is a thorough evaluation of how well a project's actual performance matches the original projections. An example of a post-audit is seen in a situation that occurred at **Campbell Soup**. The company made the original decision to invest in the Intelligent Quisine line based on management's best estimates of future cash flows. During the development phase of the project, Campbell hired an outside consulting firm to evaluate the project's potential for success. Because actual results during the initial years were far below the estimated results and because the future also did not look promising, the project was terminated.

Performing a post-audit is important for a variety of reasons. First, if managers know that the company will compare their estimates to actual results, they will be more likely to submit reasonable and accurate data when they make investment proposals. This clearly is better for the company than for managers to submit overly optimistic estimates in an effort to get pet projects approved. Second, as seen with Campbell Soup, a post-audit provides a formal mechanism by which the company can determine whether existing projects should be supported or terminated. Third, post-audits improve future investment proposals because, by evaluating past successes and failures, managers improve their estimation techniques.

A post-audit involves the same evaluation techniques used in making the original capital budgeting decision—for example, use of the NPV method. The difference is that, in the post-audit, analysts insert actual figures, where known, and they revise estimates of future amounts based on new information. The managers responsible for the estimates used in the original proposal must explain the reasons for any significant differences between their estimates and actual results.

Post-audits are not foolproof. In the case of Campbell Soup, some observers suggested that the company was too quick to abandon the project. Industry analysts suggested that with more time and more advertising expenditures, the company might have enjoyed success.

DO IT!**3****Profitability Index**

Taz Corporation has decided to invest in renewable energy sources to meet part of its energy needs for production. It is considering solar power versus wind power. After considering cost savings as well as incremental revenues from selling excess electricity into the power grid, it has determined the following.

	<u>Solar</u>	<u>Wind</u>
Present value of annual cash flows	\$78,580	\$168,450
Initial investment	\$45,500	\$125,300

Determine the net present value and profitability index of each project. Which energy source should it choose?

Solution

	<u>Solar</u>	<u>Wind</u>
Present value of annual cash flows	\$78,580	\$168,450
Less: Initial investment	45,500	125,300
Net present value	<u>\$33,080</u>	<u>\$ 43,150</u>
Profitability index	1.73*	1.34**
* $\$78,580 \div \$45,500$		
** $168,450 \div 125,300$		

While the investment in wind power generates the higher net present value, it also requires a substantially higher initial investment. The profitability index favors solar power, which suggests that the additional net present value of wind is outweighed by the cost of the initial investment. The company should choose solar power.

Action Plan

- ✓ Determine the present value of annual cash flows of each mutually exclusive project.
- ✓ Determine profitability index by dividing the present value of annual cash flows by the amount of the initial investment.
- ✓ Choose project with highest profitability index.

Related exercise material: **BE26-5, E26-4, and DO IT! 26-3.**

LEARNING OBJECTIVE**4****Use the internal rate of return method.**

The **internal rate of return method** differs from the net present value method in that it finds the **interest yield of the potential investment**. The **internal rate of return (IRR)** is the interest rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows (that is, NPV equal to zero). Because it recognizes the time value of money, the internal rate of return method is (like the NPV method) a discounted cash flow technique.

How do we determine the internal rate of return? One way is to use a financial calculator (see Appendix G) or electronic spreadsheet to solve for this rate. Or, we can use a trial-and-error procedure.

To illustrate, assume that Stewart Shipping Company is considering the purchase of a new front-end loader at a cost of \$244,371. Net annual cash flows from this loader are estimated to be \$100,000 a year for three years. To determine the internal rate of return on this front-end loader, the company finds the discount rate that results in a net present value of zero. As Illustration 26-21 shows, at a rate of return of 10%, Stewart Shipping has a positive net present value of \$4,315. At a rate of return of 12%, it has a negative net present value of \$4,188. At an 11% rate, the net present value is zero. Therefore, 11% is the internal rate of return for this investment (discount factors from Appendix G, Table 3).

Illustration 26-21

Estimation of internal rate of return

Year	Net Annual Cash Flows	Discount Factor 10%	Present Value 10%	Discount Factor 11%	Present Value 11%	Discount Factor 12%	Present Value 12%
1	\$100,000	.90909	\$ 90,909	.90090	\$ 90,090	.89286	\$ 89,286
2	\$100,000	.82645	82,645	.81162	81,162	.79719	79,719
3	\$100,000	.75132	75,132	.73119	73,119	.71178	71,178
			248,686		244,371		240,183
Less: Initial investment			244,371		244,371		244,371
Net present value			\$ 4,315		\$ -0-		\$ (4,188)

An easier approach to solving for the internal rate of return can be used if the net annual cash flows are **equal**, as in the Stewart Shipping example. In this special case, we can find the internal rate of return using the following formula.

Illustration 26-22

Formula for internal rate of return—even cash flows

$$\text{Capital Investment} \div \text{Net Annual Cash Flows} = \text{Internal Rate of Return Factor}$$

Applying this formula to the Stewart Shipping example, we find:

$$\$244,371 \div 100,000 = 2.44371$$

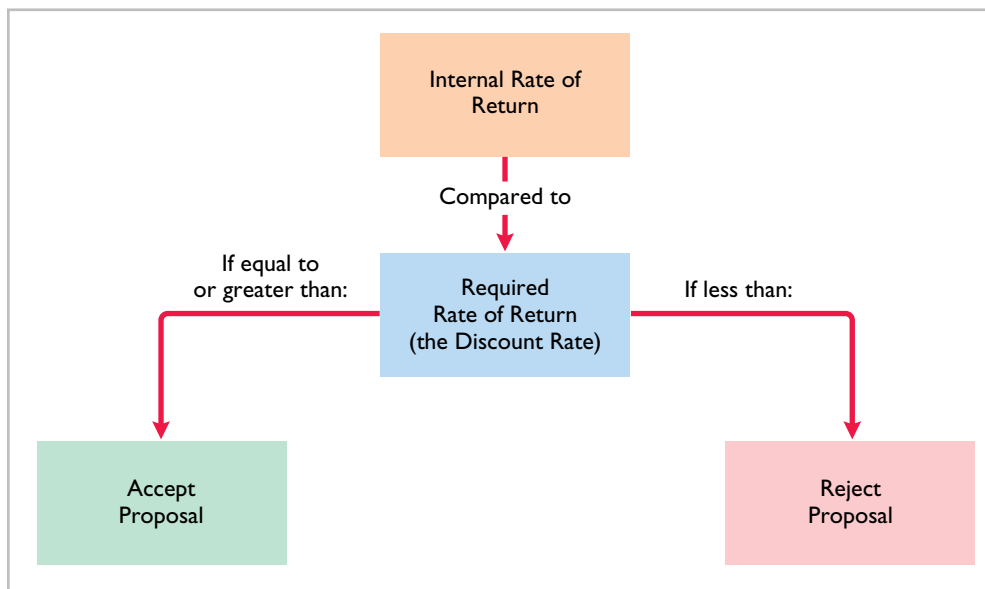

We then look up the factor 2.44371 in Table 4 of Appendix G in the three-payment row and find it under 11%. Row 3 is reproduced below for your convenience.

Table 4 Present Value of an Annuity of 1

(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
3	2.77509	2.72325	2.67301	2.62432	2.57710	2.53130	2.48685	2.44371	2.40183	2.28323

Recognize that if the cash flows are **uneven**, then a trial-and-error approach or a financial calculator or computerized spreadsheet must be used.

Once managers know the internal rate of return, they compare it to the company's required rate of return (the discount rate). The IRR decision rule is as follows: **Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.** Illustration 26-23 shows these relationships. The internal rate of return method is widely used in practice, largely because most managers find the internal rate of return easy to interpret.

**Illustration 26-23**

Internal rate of return decision criteria

Comparing Discounted Cash Flow Methods

Illustration 26-24 compares the two discounted cash flow methods—net present value and internal rate of return. When properly used, either method will provide management with relevant quantitative data for making capital budgeting decisions.

	<u>Net Present Value</u>	<u>Internal Rate of Return</u>
1. Objective	Compute net present value (a dollar amount).	Compute internal rate of return (a percentage).
2. Decision Rule	If net present value is zero or positive, accept the proposal. If net present value is negative, reject the proposal.	If internal rate of return is equal to or greater than the required rate of return, accept the proposal. If internal rate of return is less than the required rate of return, reject the proposal.

Illustration 26-24

Comparison of discounted cash flow methods

DO IT!

4

Internal Rate of Return

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Management has a required rate of return of 9%. Calculate the internal rate of return on this project and discuss whether it should be accepted.

Solution

Estimated annual cash inflows	\$400,000
Estimated annual cash outflows	<u>190,000</u>
Net annual cash flow	<u>\$210,000</u>

$\$900,000/\$210,000 = 4.285714$. Using Table 4 of Appendix G and the factors that correspond with the six-payment row, 4.285714 is between the factors for 10% and 11%. Since the project has an internal rate that is greater than 10% and the required rate of return is only 9%, the project should be accepted.

Action Plan

- ✓ Estimated annual cash inflows – Estimated annual cash outflows = Net annual cash flow.
- ✓ Capital investment/Net annual cash flows = Internal rate of return factor.
- ✓ Look up the factor in the present value of an annuity table to find the internal rate of return.
- ✓ Accept the project if the internal rate of return is equal to or greater than the required rate of return.

Related exercise material: **BE26-7, BE26-8, E26-5, E26-6, E26-7, and DO IT 26-4.**

LEARNING
OBJECTIVE

5

Use the annual rate of return method.

The final capital budgeting technique we will look at is the **annual rate of return method**. It is based directly on accrual accounting data rather than on cash flows. It indicates **the profitability of a capital expenditure** by dividing expected annual net income by the average investment. Illustration 26-25 shows the formula for computing annual rate of return.

Illustration 26-25
Annual rate of return formula

$$\frac{\text{Expected Annual Net Income}}{\text{Average Investment}} = \text{Annual Rate of Return}$$

Assume that Reno Company is considering an investment of \$130,000 in new equipment. The new equipment is expected to last five years and have zero salvage value at the end of its useful life. Reno uses the straight-line method of depreciation for accounting purposes. The expected annual revenues and costs of the new product that will be produced from the investment are as follows.

Illustration 26-26
Estimated annual net income from Reno Company's capital expenditure

Sales		\$200,000
Less: Costs and expenses		
Manufacturing costs (exclusive of depreciation)	\$132,000	
Depreciation expense (\$130,000 ÷ 5)	26,000	
Selling and administrative expenses	22,000	180,000
Income before income taxes		20,000
Income tax expense		7,000
Net income		<u>\$ 13,000</u>

Reno's expected annual net income is \$13,000. Average investment is derived from the formula shown below.

Illustration 26-27
Formula for computing average investment

$$\frac{\text{Original Investment} + \text{Value at End of Useful Life}}{2} = \text{Average Investment}$$

The value at the end of useful life is equal to the asset's salvage value, if any. For Reno, average investment is \$65,000 [(\$130,000 + \$0) ÷ 2]. The expected annual rate of return for Reno's investment in new equipment is therefore 20%, computed as follows.

$$\$13,000 \div \$65,000 = 20\%$$

Management then compares the annual rate of return with its **required rate of return** for investments of similar risk. The required rate of return is generally based on the company's cost of capital. The decision rule is: **A project is acceptable if its rate of return is greater than management's required rate of return. It is unacceptable when the reverse is true.** When companies use the rate of return technique in deciding among several acceptable projects, **the higher the rate of return for a given risk, the more attractive the investment.**

The principal advantages of this method are the simplicity of its calculation and management's familiarity with the accounting terms used in the computation. A major limitation of the annual rate of return method is that it does not consider the time value of money. For example, no consideration is given as to whether cash inflows will occur early or late in the life of the investment. As explained in Appendix G, recognition of the time value of money can make a significant difference between the future value and the discounted present value of an investment. A second disadvantage is that this method relies on accrual accounting numbers rather than expected cash flows.

Helpful Hint

A capital budgeting decision based on only one technique may be misleading. It is often wise to analyze an investment from a number of different perspectives.

DO IT!

5

Annual Rate of Return

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual revenues would increase by \$400,000 and that annual expenses excluding depreciation would increase by \$190,000. It uses the straight-line method to compute depreciation expense. Management has a required rate of return of 9%. Compute the annual rate of return.

Solution

Revenues		\$400,000
Less:		
Expenses (excluding depreciation)	\$190,000	
Depreciation (\$900,000/6 years)	<u>150,000</u>	<u>340,000</u>
Annual net income		<u>\$ 60,000</u>
Average investment = $(\$900,000 + \$0)/2 = \$450,000$.		
Annual rate of return = $\$60,000/\$450,000 = 13.3\%$.		

Since the annual rate of return (13.3%) is greater than Watertown's required rate of return (9%), the proposed project is acceptable.

Related exercise material: **BE26-9, E26-8, E26-9, E26-10, E26-11, and DO IT! 26-5.**

Action Plan

- ✓ Expected annual net income = Annual revenues – Annual expenses (including depreciation expense).
- ✓ Average investment = $(\text{Original investment} + \text{Value at end of useful life})/2$.
- ✓ Annual rate of return = $\text{Expected annual net income} / \text{Average investment}$.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Describe capital budgeting inputs and apply the cash payback technique.** Management gathers project proposals from each department; a capital budget committee screens the proposals and recommends worthy projects. Company officers decide which projects to fund, and the board of directors approves the capital budget. In capital budgeting, estimated cash inflows and outflows, rather than accrual-accounting numbers, are the preferred inputs.
The cash payback technique identifies the time period required to recover the cost of the investment. The formula when net annual cash flows are equal is $\text{Cost of capital investment} \div \text{Estimated net annual}$

cash flow = Cash payback period. The shorter the payback period, the more attractive the investment.

- 2 **Use the net present value method.** The net present value method compares the present value of future cash inflows with the capital investment to determine net present value. The NPV decision rule is: Accept the project if net present value is zero or positive. Reject the project if net present value is negative.
- 3 **Identify capital budgeting challenges and refinements.** Intangible benefits are difficult to quantify and thus are often ignored in capital budgeting decisions. This can result in incorrectly rejecting some

projects. One method for considering intangible benefits is to calculate the NPV, ignoring intangible benefits. If the resulting NPV is below zero, evaluate whether the benefits are worth at least the amount of the negative net present value. Alternatively, intangible benefits can be incorporated into the NPV calculation, using conservative estimates of their value.

The profitability index is a tool for comparing the relative merits of alternative capital investment opportunities. It is computed as Present value of net cash flows \div Initial investment. The higher the index, the more desirable the project.

A post-audit is an evaluation of a capital investment's actual performance. Post-audits create an incentive for managers to make accurate estimates. Post-audits also are useful for determining whether a company should continue, expand, or terminate a

project. Finally, post-audits provide feedback that is useful for improving estimation techniques.

- 4 **Use the internal rate of return method.** The objective of the internal rate of return method is to find the interest yield of the potential investment, which is expressed as a percentage rate. The IRR decision rule is: Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.
- 5 **Use the annual rate of return method.** The annual rate of return uses accrual accounting data to indicate the profitability of a capital investment. It is calculated as Expected annual net income \div Amount of the average investment. The higher the rate of return, the more attractive the investment.

GLOSSARY REVIEW

Annual rate of return method The determination of the profitability of a capital expenditure, computed by dividing expected annual net income by the average investment. (p. 1222).

Capital budgeting The process of making capital expenditure decisions in business. (p. 1204).

Cash payback technique A capital budgeting technique that identifies the time period required to recover the cost of a capital investment from the net annual cash flow produced by the investment. (p. 1207).

Cost of capital The weighted-average rate of return that the firm must pay to obtain funds from creditors and stockholders. (p. 1212).

Discounted cash flow technique A capital budgeting technique that considers both the estimated net cash flows from the investment and the time value of money. (p. 1209).

Discount rate The interest rate used in discounting the future net cash flows to determine present value. (p. 1209).

Internal rate of return (IRR) The interest rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows. (p. 1219).

Internal rate of return (IRR) method A method used in capital budgeting that results in finding the interest yield of the potential investment. (p. 1219).

Net present value (NPV) The difference that results when the original capital outlay is subtracted from the discounted net cash flows. (p. 1209).

Net present value (NPV) method A method used in capital budgeting in which net cash flows are discounted to their present value and then compared to the capital outlay required by the investment. (p. 1209).

Post-audit A thorough evaluation of how well a project's actual performance matches the original projections. (p. 1218).

Profitability index A method of comparing alternative projects that takes into account both the size of the investment and its discounted net cash flows. It is computed by dividing the present value of net cash flows by the initial investment. (p. 1217).

Required rate of return The rate of return management expects on investments, sometimes called the discount rate or cost of capital. (p. 1210).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Which of the following is **not** an example of a capital budgeting decision?
 - (a) Decision to build a new plant.
 - (b) Decision to renovate an existing facility.
 - (c) Decision to buy a piece of machinery.
 - (d) All of these are capital budgeting decisions.
2. What is the order of involvement of the following parties in the capital budgeting authorization process? (LO 1)
 - (a) Plant managers, officers, capital budget committee, board of directors.
 - (b) Board of directors, plant managers, officers, capital budget committee.

- (c) Plant managers, capital budget committee, officers, board of directors.
 (d) Officers, plant managers, capital budget committee, board of directors.
- (LO 1) 3. What is a weakness of the cash payback approach?
 (a) It uses accrual-based accounting numbers.
 (b) It ignores the time value of money.
 (c) It ignores the useful life of alternative projects.
 (d) Both (b) and (c) are true.
- (LO 1) 4. Siegel Industries is considering two capital budgeting projects. Project A requires an initial investment of \$48,000. It is expected to produce net annual cash flows of \$7,000. Project B requires an initial investment of \$75,000 and is expected to produce net annual cash flows of \$12,000. Using the cash payback technique to evaluate the two projects, Siegel should accept:
 (a) Project A because it has a shorter cash payback period.
 (b) Project B because it has a shorter cash payback period.
 (c) Project A because it requires a smaller initial investment.
 (d) Project B because it produces a larger net annual cash flow.
- (LO 2) 5. Which is a **true** statement regarding using a higher discount rate to calculate the net present value of a project?
 (a) It will make it less likely that the project will be accepted.
 (b) It will make it more likely that the project will be accepted.
 (c) It is appropriate to use a higher rate if the project is perceived as being less risky than other projects being considered.
 (d) It is appropriate to use a higher rate if the project will have a short useful life relative to other projects being considered.
- (LO 2) 6. A positive net present value means that the:
 (a) project's rate of return is less than the cutoff rate.
 (b) project's rate of return exceeds the required rate of return.
 (c) project's rate of return equals the required rate of return.
 (d) project is unacceptable.
- (LO 2) 7. Which of the following is **not** an alternative name for the discount rate?
 (a) Hurdle rate.
 (b) Required rate of return.
 (c) Cutoff rate.
 (d) All of these are alternative names for the discount rate.
- (LO 3) 8. If a project has intangible benefits whose value is hard to estimate, the best thing to do is:
 (a) ignore these benefits, since any estimate of their value will most likely be wrong.
 (b) include a conservative estimate of their value.
 (c) ignore their value in your initial net present value calculation, but then estimate whether their potential value is worth at least the amount of the net present value deficiency.
 (d) Either (b) or (c) is correct.
9. An example of an intangible benefit provided by a capital budgeting project is:
 (a) the salvage value of the capital investment.
 (b) a positive net present value.
 (c) a decrease in customer complaints due to poor quality.
 (d) an internal rate of return greater than zero.
10. The following information is available for a potential capital investment.
- | | |
|--|----------|
| Initial investment | \$80,000 |
| Salvage value | 10,000 |
| Net annual cash flow | 14,820 |
| Present value of net annual cash flows | 98,112 |
| Net present value | 18,112 |
| Useful life | 10 years |
- The potential investment's profitability index (rounded to two decimals) is:
 (a) 5.40. (c) 1.23.
 (b) 1.19. (d) 1.40.
11. A post-audit of an investment project should be performed:
 (a) on all significant capital expenditure projects.
 (b) on all projects that management feels might be financial failures.
 (c) on randomly selected projects.
 (d) only on projects that enjoy tremendous success.
12. A project should be accepted if its internal rate of return exceeds:
 (a) zero.
 (b) the rate of return on a government bond.
 (c) the company's required rate of return.
 (d) the rate the company pays on borrowed funds.
13. The following information is available for a potential capital investment.
- | | |
|----------------------|----------|
| Initial investment | \$60,000 |
| Net annual cash flow | 15,400 |
| Net present value | 3,143 |
| Useful life | 5 years |
- The potential investment's internal rate of return is approximately:
 (a) 5%. (c) 4%.
 (b) 10%. (d) 9%.
14. Which of the following is **incorrect** about the annual rate of return technique?
 (a) The calculation is simple.
 (b) The accounting terms used are familiar to management.
 (c) The timing of the cash inflows is not considered.
 (d) The time value of money is considered.
15. The following information is available for a potential capital investment.
- | | |
|----------------------|-----------|
| Initial investment | \$120,000 |
| Annual net income | 15,000 |
| Net annual cash flow | 27,500 |
| Salvage value | 20,000 |
| Useful life | 8 years |
- The potential investment's annual rate of return is approximately:
 (a) 21%. (c) 30%.
 (b) 15%. (d) 39%.

Solutions

1. **(d)** Choices (a), (b), and (c) are all examples of capital budgeting decisions, so choice (d) is the best answer.
2. **(c)** The process of authorizing capital budget expenditures starts with plant managers, moves on to the capital budgeting committee, goes next to the officers of the firm and finally is acted upon by the board of directors. The other choices are therefore incorrect.
3. **(d)** Choices (b) and (c) are both correct; therefore, choice (d) is the best answer. Choice (a) is incorrect as the use of accrual-based accounting numbers is not a weakness of the cash payback approach.
4. **(b)** Project B ($\$75,000 \div \$12,000$) has a shorter cash payback period than Project A ($\$48,000 \div \$7,000$). The other choices are therefore incorrect.
5. **(a)** If a higher discount rate is used in calculating the net present value of a project, the resulting net present value will be lower and the project will be less likely to be accepted. The other choices are therefore incorrect.
6. **(b)** A positive net present value means that the project's rate of return exceeds the required rate of return. The other choices are therefore incorrect.
7. **(d)** Choices (a), (b), and (c) are all alternative names for the discount rate; therefore, choice (d) is the best answer.
8. **(d)** Choices (b) and (c) are both reasonable approaches to including intangible benefits in the capital budgeting process; therefore, choice (d) is the best answer. Choice (a) is incorrect because even though these intangible benefits may be hard to quantify, they should not be ignored in the capital budgeting process.
9. **(c)** A decrease in customer complaints due to poor quality is one example of an intangible benefit provided by a capital budgeting project. The other choices are incorrect because (a) salvage value, (b) net present value, and (d) internal rate of return are all quantitative measures, i.e., tangible.
10. **(c)** $(\$18,112 + \$80,000) \div \$80,000 = 1.23$, not (a) 5.40, (b) 1.19, or (d) 1.40.
11. **(a)** A post-audit should be performed on all significant capital expenditure projects, not just on (b) financial failures, (c) randomly selected projects, or (d) tremendous successes, because the feedback gained will help to improve the process in the future and also will give managers an incentive to be more realistic in preparing capital expenditure proposals.
12. **(c)** A project should be accepted if its internal rate of return exceeds the company's required rate of return, not (a) zero, (b) the rate of return on a government bond, or (d) the rate the company pays on borrowed funds.
13. **(d)** $(\$60,000 \div \$15,400)$ equals 3.8961, which corresponds with approximately 9% in Table 4 of Appendix G, not (a) 5%, (b) 10%, or (c) 4%.
14. **(d)** The time value of money is not considered when applying the annual rate of return method. The other choices are correct statements.
15. **(a)** $\$15,000 \div [(\$120,000 + \$20,000) \div 2] = 21\%$, not (b) 15%, (c) 30%, or (d) 39%.

PRACTICE EXERCISES

Calculate payback period, internal rate of return, and apply decision rules.

(LO 1, 4)

1. BTMS Inc. wants to purchase a new machine for \$30,000, excluding \$1,500 of installation costs. The old machine was bought five years ago and had an expected economic life of 10 years without salvage value. This old machine now has a book value of \$2,000, and BTMS Inc. expects to sell it for that amount. The new machine would decrease operating costs by \$8,000 each year of its economic life. The straight-line depreciation method would be used for the new machine, for a five-year period with no salvage value.

Instructions

- (a) Determine the cash payback period.
- (b) Determine the approximate internal rate of return.
- (c) Assuming the company has a required rate of return of 10%, state your conclusion on whether the new machine should be purchased.

(CGA adapted)

Solution

1. (a) Total net investment = $\$30,000 + \$1,500 - \$2,000 = \$29,500$
 Annual net cash flow = \$8,000
 Payback period = $\$29,500 \div \$8,000 = 3.7$ years

- (b) Net present value approximates zero when discount rate is 11%.

<u>Item</u>	<u>Amount</u>	<u>Years</u>	<u>PV Factor</u>	<u>Present Value</u>
Net annual cash flows	\$8,000	1-5	3.69590	\$29,567
Less: Capital investment				29,500
Net present value				<u>\$ 67</u>

- (c) Because the approximate internal rate of return of 11% exceeds the required rate of return of 10%, the investment should be accepted.

2. MCA Corporation is reviewing an investment proposal. The initial cost and estimates of the book value of the investment at the end of each year, the net cash flows for each year, and the net income for each year are presented in the schedule below. All cash flows are assumed to take place at the end of the year. The salvage value of the investment at the end of each year is equal to its book value. There would be no salvage value at the end of the investment's life.

Calculate payback, annual rate of return, and net present value

(LO 1, 2, 5)

Investment Proposal			
Year	Initial Cost and Book Value	Annual Cash Flows	Annual Net Income
0	\$105,000		
1	70,000	\$45,000	\$16,000
2	42,000	40,000	18,000
3	21,000	35,000	20,000
4	7,000	30,000	22,000
5	0	25,000	24,000

MCA Corporation uses a 15% target rate of return for new investment proposals.

Instructions

- What is the cash payback period for this proposal?
- What is the annual rate of return for the investment?
- What is the net present value of the investment?

(CMA-Canada adapted)

Solution

2. (a)		Year	Amount	Balance	
	Initial investment	0	\$(105,000)	\$(105,000)	
	Less: Cash flow	1	45,000	(60,000)	
		2	40,000	(20,000)	
		3	35,000	15,000	
	Payback period = 2 + (\$20,000 ÷ \$35,000) = 2.57				
(b)	Average annual net income = (\$16,000 + \$18,000 + \$20,000 + \$22,000 + \$24,000) ÷ 5 = \$20,000				
	Average investment = (\$105,000 + \$0) ÷ 2 = \$52,500				
	Annual rate of return = \$20,000 ÷ \$52,500 = 38.10%				
(c)		Year	Discount Factor, 15%	Amount	Present Value
	Net cash flows	1	0.86957	\$45,000	\$ 39,131
		2	0.75614	40,000	30,246
		3	0.65752	35,000	23,013
		4	0.57175	30,000	17,153
		5	0.49718	25,000	12,430
	Present value of cash inflows				121,973
	Less: Initial investment				105,000
	Net present value				<u>\$ 16,973</u>

PRACTICE PROBLEM

Cornfield Company is considering a long-term capital investment project in laser equipment. This will require an investment of \$280,000, and it will have a useful life of 5 years. Annual net income is expected to be \$16,000 a year. Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 10%. (Hint: Assume cash flows can be computed by adding back depreciation expense.)

Compute annual rate of return, cash payback, and net present value.

(LO 1, 2, 5)

Instructions

(Round all computations to two decimal places unless directed otherwise.)

- Compute the cash payback period for the project.
- Compute the net present value for the project. (Round to nearest dollar.)
- Compute the annual rate of return for the project.
- Should the project be accepted? Why?

Solution

(a) $\$280,000 \div \$72,000 (\$16,000 + \$56,000) = 3.89$ years

(b)

	Present Value at 10%
Discount factor for 5 payments	<u>3.79079</u>
Present value of net cash flows: $\$72,000 \times 3.79079$	<u>\$272,937</u>
Less: Capital investment	<u>280,000</u>
Negative net present value	<u>\$ (7,063)</u>

(c) $\$16,000 \div \$140,000 (\$280,000 \div 2) = 11.4\%$

(d) The annual rate of return of 11.4% is good. However, the cash payback period is 78% of the project's useful life, and net present value is negative. The recommendation is to reject the project.

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

- Describe the process a company may use in screening and approving the capital expenditure budget.
- What are the advantages and disadvantages of the cash payback technique?
- Tom Wells claims the formula for the cash payback technique is the same as the formula for the annual rate of return technique. Is Tom correct? What is the formula for the cash payback technique?
- Two types of present value tables may be used with the discounted cash flow techniques. Identify the tables and the circumstance(s) when each table should be used.
- What is the decision rule under the net present value method?
- Discuss the factors that determine the appropriate discount rate to use when calculating the net present value.
- What simplifying assumptions were made in the chapter regarding calculation of net present value?
- What are some examples of potential intangible benefits of investment proposals? Why do these intangible benefits complicate the capital budgeting evaluation process? What might happen if intangible benefits are ignored in a capital budgeting decision?
- What steps can be taken to incorporate intangible benefits into the capital budget evaluation process?
- What advantages does the profitability index provide over direct comparison of net present value when comparing two projects?
- What is a post-audit? What are the potential benefits of a post-audit?
- Identify the steps required in using the internal rate of return method when the net annual cash flows are equal.
- El Cajon Company uses the internal rate of return method. What is the decision rule for this method?
- What are the strengths of the annual rate of return approach? What are its weaknesses?
- Your classmate, Mike Dawson, is confused about the factors that are included in the annual rate of return technique. What is the formula for this technique?
- Sveta Pace is trying to understand the term "cost of capital." Define the term and indicate its relevance to the decision rule under the internal rate of return technique.

BRIEF EXERCISES

- BE26-1** Rihanna Company is considering purchasing new equipment for \$450,000. It is expected that the equipment will produce net annual cash flows of \$60,000 over its 10-year useful life. Annual depreciation will be \$45,000. Compute the cash payback period.
- Compute the cash payback period for a capital investment.*
(LO 1)
- BE26-2** Hsung Company accumulates the following data concerning a proposed capital investment: cash cost \$215,000, net annual cash flows \$40,000, and present value factor of cash inflows for 10 years 5.65 (rounded). Determine the net present value, and indicate whether the investment should be made.
- Compute net present value of an investment.*
(LO 2)
- BE26-3** Thunder Corporation, an amusement park, is considering a capital investment in a new exhibit. The exhibit would cost \$136,000 and have an estimated useful life of 5 years. It will be sold for \$60,000 at that time. (Amusement parks need to rotate exhibits to keep people interested.) It is expected to increase net annual cash flows by \$25,000. The company's borrowing rate is 8%. Its cost of capital is 10%. Calculate the net present value of this project to the company.
- Compute net present value of an investment.*
(LO 2)
- BE26-4** Caine Bottling Corporation is considering the purchase of a new bottling machine. The machine would cost \$200,000 and has an estimated useful life of 8 years with zero salvage value. Management estimates that the new bottling machine will provide net annual cash flows of \$34,000. Management also believes that the new bottling machine will save the company money because it is expected to be more reliable than other machines, and thus will reduce downtime. How much would the reduction in downtime have to be worth in order for the project to be acceptable? Assume a discount rate of 9%. (*Hint: Calculate the net present value.*)
- Compute net present value of an investment and consider intangible benefits.*
(LO 2, 3)
- BE26-5** McKnight Company is considering two different, mutually exclusive capital expenditure proposals. Project A will cost \$400,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$70,000. Project B will cost \$310,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$55,000. A discount rate of 9% is appropriate for both projects. Compute the net present value and profitability index of each project. Which project should be accepted?
- Compute net present value and profitability index.*
(LO 2, 3)
- BE26-6** Quillen Company is performing a post-audit of a project completed one year ago. The initial estimates were that the project would cost \$250,000, would have a useful life of 9 years, zero salvage value, and would result in net annual cash flows of \$46,000 per year. Now that the investment has been in operation for 1 year, revised figures indicate that it actually cost \$260,000, will have a total useful life of 11 years, and will produce net annual cash flows of \$39,000 per year. Evaluate the success of the project. Assume a discount rate of 10%.
- Perform a post-audit.*
(LO 3)
- BE26-7** Kanye Company is evaluating the purchase of a rebuilt spot-welding machine to be used in the manufacture of a new product. The machine will cost \$176,000, has an estimated useful life of 7 years, a salvage value of zero, and will increase net annual cash flows by \$35,000. What is its approximate internal rate of return?
- Calculate internal rate of return.*
(LO 4)
- BE26-8** Viera Corporation is considering investing in a new facility. The estimated cost of the facility is \$2,045,000. It will be used for 12 years, then sold for \$716,000. The facility will generate annual cash inflows of \$400,000 and will need new annual cash outflows of \$150,000. The company has a required rate of return of 7%. Calculate the internal rate of return on this project, and discuss whether the project should be accepted.
- Calculate internal rate of return.*
(LO 4)
- BE26-9** Swift Oil Company is considering investing in a new oil well. It is expected that the oil well will increase annual revenues by \$130,000 and will increase annual expenses by \$70,000 including depreciation. The oil well will cost \$490,000 and will have a \$10,000 salvage value at the end of its 10-year useful life. Calculate the annual rate of return.
- Compute annual rate of return.*
(LO 5)

DO IT! Exercises

Compute the cash payback period for an investment.

(LO 1)

DO IT! 26-1 Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$140,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. Compute the cash payback period.

Calculate net present value of an investment.

(LO 2)

DO IT! 26-2 Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. The company's required rate of return is 12%. Calculate the net present value on this project and discuss whether it should be accepted.

Compute profitability index.

(LO 3)

DO IT! 26-3 Ranger Corporation has decided to invest in renewable energy sources to meet part of its energy needs for production. It is considering solar power versus wind power. After considering cost savings as well as incremental revenues from selling excess electricity into the power grid, it has determined the following.

	<u>Solar</u>	<u>Wind</u>
Present value of annual cash flows	\$52,580	\$128,450
Initial investment	\$39,500	\$105,300

Determine the net present value and profitability index of each project. Which energy source should it choose?

Calculate internal rate of return.

(LO 4)

DO IT! 26-4 Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual cash inflows would increase by \$80,000, and annual cash outflows would increase by \$40,000. The company's required rate of return is 12%. Calculate the internal rate of return on this project and discuss whether it should be accepted.

Calculate annual rate of return.

(LO 5)

DO IT! 26-5 Wayne Company is considering a long-term investment project called ZIP. ZIP will require an investment of \$120,000. It will have a useful life of 4 years and no salvage value. Annual revenues would increase by \$80,000, and annual expenses (excluding depreciation) would increase by \$41,000. Wayne uses the straight-line method to compute depreciation expense. The company's required rate of return is 12%. Compute the annual rate of return.

EXERCISES

Compute cash payback and net present value.

(LO 1, 2)

E26-1 Linkin Corporation is considering purchasing a new delivery truck. The truck has many advantages over the company's current truck (not the least of which is that it runs). The new truck would cost \$56,000. Because of the increased capacity, reduced maintenance costs, and increased fuel economy, the new truck is expected to generate cost savings of \$8,000. At the end of 8 years, the company will sell the truck for an estimated \$27,000. Traditionally the company has used a rule of thumb that a proposal should not be accepted unless it has a payback period that is less than 50% of the asset's estimated useful life. Larry Newton, a new manager, has suggested that the company should not rely solely on the payback approach, but should also employ the net present value method when evaluating new projects. The company's cost of capital is 8%.

Instructions

- Compute the cash payback period and net present value of the proposed investment.
- Does the project meet the company's cash payback criteria? Does it meet the net present value criteria for acceptance? Discuss your results.

E26-2 Doug's Custom Construction Company is considering three new projects, each requiring an equipment investment of \$22,000. Each project will last for 3 years and produce the following net annual cash flows.

<u>Year</u>	<u>AA</u>	<u>BB</u>	<u>CC</u>
1	\$ 7,000	\$10,000	\$13,000
2	9,000	10,000	12,000
3	12,000	10,000	11,000
Total	<u>\$28,000</u>	<u>\$30,000</u>	<u>\$36,000</u>

The equipment's salvage value is zero, and Doug uses straight-line depreciation. Doug will not accept any project with a cash payback period over 2 years. Doug's required rate of return is 12%.

Instructions

- Compute each project's payback period, indicating the most desirable project and the least desirable project using this method. (Round to two decimals and assume in your computations that cash flows occur evenly throughout the year.)
- Compute the net present value of each project. Does your evaluation change? (Round to nearest dollar.)

E26-3 Hillson Inc. manufactures snowsuits. Hillson is considering purchasing a new sewing machine at a cost of \$2.45 million. Its existing machine was purchased five years ago at a price of \$1.8 million; six months ago, Hillson spent \$55,000 to keep it operational. The existing sewing machine can be sold today for \$250,000. The new sewing machine would require a one-time, \$85,000 training cost. Operating costs would decrease by the following amounts for years 1 to 7:

Year 1	\$390,000
2	400,000
3	411,000
4	426,000
5	434,000
6	435,000
7	436,000

The new sewing machine would be depreciated according to the declining-balance method at a rate of 20%. The salvage value is expected to be \$400,000. This new equipment would require maintenance costs of \$100,000 at the end of the fifth year. The cost of capital is 9%.

Instructions

Use the net present value method to determine whether Hillson should purchase the new machine to replace the existing machine, and state the reason for your conclusion.

(CGA adapted)

E26-4 BAK Corp. is considering purchasing one of two new diagnostic machines. Either machine would make it possible for the company to bid on jobs that it currently isn't equipped to do. Estimates regarding each machine are provided below.

	<u>Machine A</u>	<u>Machine B</u>
Original cost	\$75,500	\$180,000
Estimated life	8 years	8 years
Salvage value	-0-	-0-
Estimated annual cash inflows	\$20,000	\$40,000
Estimated annual cash outflows	\$5,000	\$10,000

Instructions

Calculate the net present value and profitability index of each machine. Assume a 9% discount rate. Which machine should be purchased?

E26-5 Bruno Corporation is involved in the business of injection molding of plastics. It is considering the purchase of a new computer-aided design and manufacturing machine for \$430,000. The company believes that with this new machine it will improve productivity

Compute cash payback period and net present value.

(LO 1, 2)

Calculate net present value and apply decision rule.

(LO 2)

Compute net present value and profitability index.

(LO 2, 3)

Determine internal rate of return.

(LO 4)

and increase quality, resulting in an increase in net annual cash flows of \$101,000 for the next 6 years. Management requires a 10% rate of return on all new investments.

Instructions

Calculate the internal rate of return on this new machine. Should the investment be accepted?

Calculate cash payback period, internal rate of return, and apply decision rules.

(LO 1, 4)

E26-6 BSU Inc. wants to purchase a new machine for \$29,300, excluding \$1,500 of installation costs. The old machine was bought five years ago and had an expected economic life of 10 years without salvage value. This old machine now has a book value of \$2,000, and BSU Inc. expects to sell it for that amount. The new machine would decrease operating costs by \$7,000 each year of its economic life. The straight-line depreciation method would be used for the new machine, for a six-year period with no salvage value.

Instructions

- Determine the cash payback period.
- Determine the approximate internal rate of return.
- Assuming the company has a required rate of return of 10%, state your conclusion on whether the new machine should be purchased.

(CGA adapted)

Determine internal rate of return.

(LO 4)

E26-7 Iggy Company is considering three capital expenditure projects. Relevant data for the projects are as follows.

Project	Investment	Annual Income	Life of Project
22A	\$240,000	\$15,500	6 years
23A	270,000	20,600	9 years
24A	280,000	15,700	7 years

Annual income is constant over the life of the project. Each project is expected to have zero salvage value at the end of the project. Iggy Company uses the straight-line method of depreciation.

Instructions

- Determine the internal rate of return for each project. Round the internal rate of return factor to three decimals.
- If Iggy Company's required rate of return is 10%, which projects are acceptable?

Calculate annual rate of return.

(LO 5)

E26-8 Pierre's Hair Salon is considering opening a new location in French Lick, California. The cost of building a new salon is \$300,000. A new salon will normally generate annual revenues of \$70,000, with annual expenses (including depreciation) of \$41,500. At the end of 15 years the salon will have a salvage value of \$80,000.

Instructions

Calculate the annual rate of return on the project.

Compute cash payback period and annual rate of return.

(LO 1, 5)

E26-9 Legend Service Center just purchased an automobile hoist for \$32,400. The hoist has an 8-year life and an estimated salvage value of \$3,000. Installation costs and freight charges were \$3,300 and \$700, respectively. Legend uses straight-line depreciation.

The new hoist will be used to replace mufflers and tires on automobiles. Legend estimates that the new hoist will enable his mechanics to replace five extra mufflers per week. Each muffler sells for \$72 installed. The cost of a muffler is \$36, and the labor cost to install a muffler is \$16.

Instructions

- Compute the cash payback period for the new hoist.
- Compute the annual rate of return for the new hoist. (Round to one decimal.)

Compute annual rate of return, cash payback period, and net present value.

(LO 1, 2, 5)

E26-10 Vilas Company is considering a capital investment of \$190,000 in additional productive facilities. The new machinery is expected to have a useful life of 5 years with no salvage value. Depreciation is by the straight-line method. During the life of the investment, annual net income and net annual cash flows are expected to be \$12,000 and

\$50,000, respectively. Vilas has a 12% cost of capital rate, which is the required rate of return on the investment.

Instructions

(Round to two decimals.)

- Compute (1) the cash payback period and (2) the annual rate of return on the proposed capital expenditure.
- Using the discounted cash flow technique, compute the net present value.

E26-11 Drake Corporation is reviewing an investment proposal. The initial cost and estimates of the book value of the investment at the end of each year, the net cash flows for each year, and the net income for each year are presented in the schedule below. All cash flows are assumed to take place at the end of the year. The salvage value of the investment at the end of each year is equal to its book value. There would be no salvage value at the end of the investment's life.

Calculate payback, annual rate of return, and net present value.

(LO 1, 2, 5)

Investment Proposal			
Year	Initial Cost and Book Value	Annual Cash Flows	Annual Net Income
0	\$105,000		
1	70,000	\$45,000	\$10,000
2	42,000	40,000	12,000
3	21,000	35,000	14,000
4	7,000	30,000	16,000
5	0	25,000	18,000

Drake Corporation uses an 11% target rate of return for new investment proposals.

Instructions

- What is the cash payback period for this proposal?
- What is the annual rate of return for the investment?
- What is the net present value of the investment?

(CMA-Canada adapted)

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

P26-1A U3 Company is considering three long-term capital investment proposals. Each investment has a useful life of 5 years. Relevant data on each project are as follows.

Compute annual rate of return, cash payback, and net present value.

(LO 1, 2, 5)

	Project Bono	Project Edge	Project Clayton
Capital investment	\$160,000	\$175,000	\$200,000
Annual net income:			
Year 1	14,000	18,000	27,000
2	14,000	17,000	23,000
3	14,000	16,000	21,000
4	14,000	12,000	13,000
5	14,000	9,000	12,000
Total	<u>\$ 70,000</u>	<u>\$ 72,000</u>	<u>\$ 96,000</u>

Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 15%. (Assume that cash flows occur evenly throughout the year.)

Instructions

- Compute the cash payback period for each project. (Round to two decimals.)
- Compute the net present value for each project. (Round to nearest dollar.)

(b) E \$(7,312); C \$2,163

- (c) Compute the annual rate of return for each project. (Round to two decimals.) (*Hint:* Use average annual net income in your computation.)
- (d) Rank the projects on each of the foregoing bases. Which project do you recommend?

Compute annual rate of return, cash payback, and net present value.

(LO 1, 2, 5)

P26-2A Lon Timur is an accounting major at a midwestern state university located approximately 60 miles from a major city. Many of the students attending the university are from the metropolitan area and visit their homes regularly on the weekends. Lon, an entrepreneur at heart, realizes that few good commuting alternatives are available for students doing weekend travel. He believes that a weekend commuting service could be organized and run profitably from several suburban and downtown shopping mall locations. Lon has gathered the following investment information.

- Five used vans would cost a total of \$75,000 to purchase and would have a 3-year useful life with negligible salvage value. Lon plans to use straight-line depreciation.
- Ten drivers would have to be employed at a total payroll expense of \$48,000.
- Other annual out-of-pocket expenses associated with running the commuter service would include Gasoline \$16,000, Maintenance \$3,300, Repairs \$4,000, Insurance \$4,200, and Advertising \$2,500.
- Lon has visited several financial institutions to discuss funding. The best interest rate he has been able to negotiate is 15%. Use this rate for cost of capital.
- Lon expects each van to make ten round trips weekly and carry an average of six students each trip. The service is expected to operate 30 weeks each year, and each student will be charged \$12.00 for a round-trip ticket.

Instructions

- (a) (1) \$5,000
- (b) (1) 2.5 years
- (a) Determine the annual (1) net income and (2) net annual cash flows for the commuter service.
- (b) Compute (1) the cash payback period and (2) the annual rate of return. (Round to two decimals.)
- (c) Compute the net present value of the commuter service. (Round to the nearest dollar.)
- (d) What should Lon conclude from these computations?

Compute net present value, profitability index, and internal rate of return.

(LO 2, 3, 4)

P26-3A Brooks Clinic is considering investing in new heart-monitoring equipment. It has two options. Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 4 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the Option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were made of the cash flows. The company's cost of capital is 8%.

	Option A	Option B
Initial cost	\$160,000	\$227,000
Annual cash inflows	\$71,000	\$80,000
Annual cash outflows	\$30,000	\$31,000
Cost to rebuild (end of year 4)	\$50,000	\$0
Salvage value	\$0	\$8,000
Estimated useful life	7 years	7 years

Instructions

- (a) (1) NPV A \$16,709
(3) IRR B 12%
- (a) Compute the (1) net present value, (2) profitability index, and (3) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)
- (b) Which option should be accepted?

Compute net present value considering intangible benefits.

(LO 2, 3)

P26-4A Jane's Auto Care is considering the purchase of a new tow truck. The garage doesn't currently have a tow truck, and the \$60,000 price tag for a new truck would represent a major expenditure. Jane Austen, owner of the garage, has compiled the estimates shown below in trying to determine whether the tow truck should be purchased.

Initial cost	\$60,000
Estimated useful life	8 years
Net annual cash flows from towing	\$8,000
Overhaul costs (end of year 4)	\$6,000
Salvage value	\$12,000

Jane's good friend, Rick Ryan, stopped by. He is trying to convince Jane that the tow truck will have other benefits that Jane hasn't even considered. First, he says, cars that need towing need to be fixed. Thus, when Jane tows them to her facility, her repair revenues will increase. Second, he notes that the tow truck could have a plow mounted on it, thus saving Jane the cost of plowing her parking lot. (Rick will give her a used plow blade for free if Jane will plow Rick's driveway.) Third, he notes that the truck will generate goodwill; people who are rescued by Jane's tow truck will feel grateful and might be more inclined to use her service station in the future or buy gas there. Fourth, the tow truck will have "Jane's Auto Care" on its doors, hood, and back tailgate—a form of free advertising wherever the tow truck goes. Rick estimates that, at a minimum, these benefits would be worth the following.

Additional annual net cash flows from repair work	\$3,000
Annual savings from plowing	750
Additional annual net cash flows from customer "goodwill"	1,000
Additional annual net cash flows resulting from free advertising	750

The company's cost of capital is 9%.

Instructions

- (a) Calculate the net present value, ignoring the additional benefits described by Rick. Should the tow truck be purchased? (a) NPV \$(13,950)
- (b) Calculate the net present value, incorporating the additional benefits suggested by Rick. Should the tow truck be purchased? (b) NPV \$16,491
- (c) Suppose Rick has been overly optimistic in his assessment of the value of the additional benefits. At a minimum, how much would the additional benefits have to be worth in order for the project to be accepted?

P26-5A Coolplay Corp. is thinking about opening a soccer camp in southern California. To start the camp, Coolplay would need to purchase land and build four soccer fields and a sleeping and dining facility to house 150 soccer players. Each year, the camp would be run for 8 sessions of 1 week each. The company would hire college soccer players as coaches. The camp attendees would be male and female soccer players ages 12–18. Property values in southern California have enjoyed a steady increase in value. It is expected that after using the facility for 20 years, Coolplay can sell the property for more than it was originally purchased for. The following amounts have been estimated.

Cost of land	\$300,000
Cost to build soccer fields, dorm and dining facility	\$600,000
Annual cash inflows assuming 150 players and 8 weeks	\$920,000
Annual cash outflows	\$840,000
Estimated useful life	20 years
Salvage value	\$1,500,000
Discount rate	8%

Instructions

- (a) Calculate the net present value of the project. (a) NPV \$207,277
- (b) To gauge the sensitivity of the project to these estimates, assume that if only 125 players attend each week, annual cash inflows will be \$805,000 and annual cash outflows will be \$750,000. What is the net present value using these alternative estimates? Discuss your findings.
- (c) Assuming the original facts, what is the net present value if the project is actually riskier than first assumed and an 10% discount rate is more appropriate?
- (d) Assume that during the first 5 years, the annual net cash flows each year were only \$40,000. At the end of the fifth year, the company is running low on cash, so management decides to sell the property for \$1,332,000. What was the actual internal rate of return on the project? Explain how this return was possible given that the camp did not appear to be successful. (d) IRR 12%

Compute net present value and internal rate of return with sensitivity analysis.

(LO 2, 3, 4)

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

CONTINUING PROBLEMS**EXCEL
TUTORIAL****CURRENT DESIGNS**

CD26 A company that manufactures recreational pedal boats has approached Mike Cichanowski to ask if he would be interested in using **Current Designs'** rotomold expertise and equipment to produce some of the pedal boat components. Mike is intrigued by the idea and thinks it would be an interesting way of complementing the present product line.

One of Mike's hesitations about the proposal is that the pedal boats are a different shape than the kayaks that Current Designs produces. As a result, the company would need to buy an additional rotomold oven in order to produce the pedal boat components. This project clearly involves risks, and Mike wants to make sure that the returns justify the risks. In this case, since this is a new venture, Mike thinks that a 15% discount rate is appropriate to use to evaluate the project.

As an intern at Current Designs, Mike has asked you to prepare an initial evaluation of this proposal. To aid in your analysis, he has provided the following information and assumptions.

1. The new rotomold oven will have a cost of \$256,000, a salvage value of \$0, and an 8-year useful life. Straight-line depreciation will be used.
2. The projected revenues, costs, and results for each of the 8 years of this project are as follows.

Sales		\$220,000	
Less:			
Manufacturing costs	\$140,000		
Depreciation	32,000		
Shipping and administrative costs	22,000	194,000	
Income before income taxes		26,000	
Income tax expense		10,800	
Net income		<u>\$ 15,200</u>	

Instructions

- (a) Compute the annual rate of return. (Round to two decimal places.)
- (b) Compute the payback period. (Round to two decimal places.)
- (c) Compute the net present value using a discount rate of 9%. (Round to nearest dollar.) Should the proposal be accepted using this discount rate?
- (d) Compute the net present value using a discount rate of 15%. (Round to nearest dollar.) Should the proposal be accepted using this discount rate?

WATERWAYS

(Note: This is a continuation of the Waterways problem from Chapters 15–25.)

WP26 Waterways Corporation puts much emphasis on cash flow when it plans for capital investments. The company chose its discount rate of 8% based on the rate of return it must pay its owners and creditors. Using that rate, Waterways then uses different methods to determine the best decisions for making capital outlays. Waterways is considering buying five new backhoes to replace the backhoes it now has. This problem asks you to evaluate that decision, using various capital budgeting techniques.

Go to the book's companion website, www.wiley.com/college/wegandt, to find the remainder of this problem.

COMPREHENSIVE CASES

CC26-1 For this case, revisit the Greetings Inc. company presented in earlier chapters. The company is now searching for new opportunities for growth. This case will provide you with the opportunity to evaluate a proposal based on initial estimates as well as conduct sensitivity analysis. It also requires evaluation of the underlying assumptions used in the analysis.

CC26-2 Armstrong Helmet Company needs to determine the cost for a given product. For this case, you will have the opportunity to explore cost-volume-profit relationships and prepare a set of budgets.

Go to the book's companion website, at www.wiley.com/college/weygandt, for details and instructions for both cases.

BROADENING YOUR PERSPECTIVE

MANAGEMENT DECISION-MAKING

Decision-Making Across the Organization

BYP26-1 Luang Company is considering the purchase of a new machine. Its invoice price is \$122,000, freight charges are estimated to be \$3,000, and installation costs are expected to be \$5,000. Salvage value of the new machine is expected to be zero after a useful life of 4 years. Existing equipment could be retained and used for an additional 4 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would be scrapped. Luang's accountant, Lisa Hsung, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Luang can sell 10,000 units of product annually at a per unit selling price of \$100. If the new unit is purchased, the number of units produced and sold would increase by 25%, and the selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine the gross profit rate will be 28.5% of sales, whereas the rate will be 30% of sales with the new machine. (*Note:* These gross profit rates do not include depreciation on the machines. For purposes of determining net income, treat depreciation expense as a separate line item.)
3. Annual selling expenses are \$160,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be \$100,000 with the old machine, and \$112,000 with the new machine.
5. The current book value of the existing machine is \$40,000. Luang uses straight-line depreciation.
6. Luang's management has a required rate of return of 15% on its investment and a cash payback period of no more than 3 years.

Instructions

With the class divided into groups, answer the following. (Ignore income tax effects.)

- (a) Calculate the annual rate of return for the new machine. (Round to two decimals.)
- (b) Compute the cash payback period for the new machine. (Round to two decimals.)
- (c) Compute the net present value of the new machine. (Round to the nearest dollar.)
- (d) On the basis of the foregoing data, would you recommend that Luang buy the machine? Why?

Managerial Analysis

BYP26-2 Hawke Skateboards is considering building a new plant. Bob Skerritt, the company's marketing manager, is an enthusiastic supporter of the new plant. Lucy Liu, the company's chief financial officer, is not so sure that the plant is a good idea. Currently, the company purchases its skateboards from foreign manufacturers. The following figures were estimated regarding the construction of a new plant.

Cost of plant	\$4,000,000	Estimated useful life	15 years
Annual cash inflows	4,000,000	Salvage value	\$2,000,000
Annual cash outflows	3,540,000	Discount rate	11%

Bob Skerritt believes that these figures understate the true potential value of the plant. He suggests that by manufacturing its own skateboards the company will benefit from a "buy American" patriotism that he believes is common among skateboarders. He also notes that the firm has had numerous quality problems with the skateboards manufactured by its suppliers. He suggests that the inconsistent quality has resulted in lost sales, increased warranty claims, and some costly lawsuits. Overall, he believes sales will be \$200,000 higher than projected above, and that the savings from lower warranty costs and legal costs will be \$60,000 per year. He also believes that the project is not as risky as assumed above, and that a 9% discount rate is more reasonable.

Instructions

Answer each of the following.

- Compute the net present value of the project based on the original projections.
- Compute the net present value incorporating Bob's estimates of the value of the intangible benefits, but still using the 11% discount rate.
- Compute the net present value using the original estimates, but employing the 9% discount rate that Bob suggests is more appropriate.
- Comment on your findings.

Real-World Focus

BYP26-3 Tecumseh Products Company has its headquarters in Tecumseh, Michigan. It describes itself as "a global multinational corporation producing mechanical and electrical components essential to industries creating end-products for health, comfort, and convenience." The following was excerpted from the management discussion and analysis section of a recent annual report.

TECUMSEH PRODUCTS COMPANY
Management Discussion and Analysis

The company has invested approximately \$50 million in a scroll compressor manufacturing facility in Tecumseh, Michigan. After experiencing setbacks in developing a commercially acceptable scroll compressor, the Company is currently testing a new generation of scroll product. The Company is unable to predict when, or if, it will offer a scroll compressor for commercial sale, but it does anticipate that reaching volume production will require a significant additional investment. Given such additional investment and current market conditions, management is currently reviewing its options with respect to scroll product improvement, cost reductions, joint ventures and alternative new products.

Instructions

Discuss issues the company should consider and techniques the company should employ to determine whether to continue pursuing this project.

BYP26-4 Campbell Soup Company is an international provider of soup products. Management is very interested in continuing to grow the company in its core business, while "spinning off" those businesses that are not part of its core operation.

Address: www.campbellsoups.com, or go to www.wiley.com/college/weygandt

Steps

- Go to the home page of Campbell Soup Company at the address shown above.
- Choose the current annual report.

Instructions

Review the financial statements and management's discussion and analysis, and answer the following questions.

- What was the total amount of capital expenditures in the current year, and how does this amount compare with the previous year? In your response, note what year you are using.
- What interest rate did the company pay on new borrowings in the current year?
- Assume that this year's capital expenditures are expected to increase cash flows by \$50 million. What is the expected internal rate of return (IRR) for these capital expenditures? (Assume a 10-year period for the cash flows.)

CRITICAL THINKING**Communication Activity**

BYP26-5 Refer back to E26-9 to address the following.

Instructions

Prepare a memo to Maria Fierro, your supervisor. Show your calculations from E26-9 (a) and (b). In one or two paragraphs, discuss important nonfinancial considerations. Make any assumptions you believe to be necessary. Make a recommendation based on your analysis.

Ethics Case

BYP26-6 NuComp Company operates in a state where corporate taxes and workers' compensation insurance rates have recently doubled. NuComp's president has just assigned you the task of preparing an economic analysis and making a recommendation relative to moving the entire operation to Missouri. The president is slightly in favor of such a move because Missouri is his boyhood home and he also owns a fishing lodge there.

You have just completed building your dream house, moved in, and sodded the lawn. Your children are all doing well in school and sports and, along with your spouse, want no part of a move to Missouri. If the company does move, so will you because the town is a one-industry community and you and your spouse will have to move to have employment. Moving when everyone else does will cause you to take a big loss on the sale of your house. The same hardships will be suffered by your coworkers, and the town will be devastated.

In compiling the costs of moving versus not moving, you have latitude in the assumptions you make, the estimates you compute, and the discount rates and time periods you project. You are in a position to influence the decision singlehandedly.

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this situation?
- What would you do in this situation?

All About You

BYP26-7 Numerous articles have been written that identify early warning signs that you might be getting into trouble with your personal debt load. You can find many good articles on this topic on the Web.

Instructions

Find an article that identifies early warning signs of personal debt trouble. Write up a summary of the article and bring your summary and the article to class to share.

Considering Your Costs and Benefits

BYP26-8 The March 31, 2011, edition of the *Wall Street Journal* includes an article by Russell Gold entitled "Solar Gains Traction—Thanks to Subsidies."

Instructions

Read the article and answer the following questions.

- What was the total cost of the solar panels installed? What was the "out-of-pocket" cost to the couple?
- Using the total annual electricity bill of \$5,000 mentioned in the story, what is the cash payback of the project using the total cost? What is the cash payback based on the "out-of-pocket" cost?
- Solar panel manufacturers estimate that solar panels can last up to 40 years with only minor maintenance costs. Assuming no maintenance costs, a 6% rate of interest, a more conservative 20-year life, and zero salvage value, what is the net present value of the project based on the total cost? What is the net present value of the project based on the "out-of-pocket" cost?
- What was the wholesale price of panels per watt at the time the article was written? At what price per watt does the article say that subsidies no longer be needed? Does this price appear to be achievable?

Once each year, a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multicolored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is a product of the corporation's accounting system.

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, etc.), the following are the traditional financial portions of the annual report:

- Financial Highlights
- Letter to the Stockholders
- Management's Discussion and Analysis
- Financial Statements
- Notes to the Financial Statements
- Management's Responsibility for Financial Reporting
- Management's Report on Internal Control over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Selected Financial Data

The official SEC filing of the annual report is called a **Form 10-K**, which often omits the public relations pieces found in most standard annual reports. On the following pages, we present **Apple Inc.**'s financial statements taken from the company's 2013 Form 10-K. To access Apple's Form 10-K, including notes to the financial statements, follow these steps:

1. Go to **<http://investor.apple.com>**.
2. Select the Financial Information tab.
3. Select the 10-K annual report dated September 28, 2013.
4. The Notes to Consolidated Financial Statements begin on page 50.

CONSOLIDATED STATEMENTS OF OPERATIONS

(In millions, except number of shares which are reflected in thousands and per share amounts)

	Years ended		
	September 28, 2013	September 29, 2012	September 24, 2011
Net sales	\$ 170,910	\$ 156,508	\$ 108,249
Cost of sales	106,606	87,846	64,431
Gross margin	<u>64,304</u>	<u>68,662</u>	<u>43,818</u>
Operating expenses:			
Research and development	4,475	3,381	2,429

Appendix D

Specimen Financial Statements: Amazon.com, Inc.

Amazon.com, Inc. is the world's largest online retailer. It also produces consumer electronics—notably the Kindle e-book reader and the Kindle Fire Tablet computer—and is a major provider of cloud computing services. The following are Amazon's financial statements as presented in the company's 2013 annual report. To access Amazon's complete annual report, including notes to the financial statements, follow these steps:

1. Go to **www.amazon.com**.
2. Select the Investor Relations link at the bottom of the page and then select the 2013 Annual Report under Annual Reports and Proxies.
3. The Notes to Consolidated Financial Statements begin on page 40.

Appendix F

Specimen Financial Statements: Louis Vuitton

Louis Vuitton is a French company and is one of the leading international fashion houses in the world. Louis Vuitton has been named the world's most valuable luxury brand. Note that its financial statements are IFRS-based and are presented in euros (€). To access the company's complete financial statements, follow these steps:

1. Go to www.lvmh.com/investor-relations.
2. Select 2013 Annual report, and then select the Finance tab once the Intro has played.
3. Note that the comments (notes) to the financial statements are placed after each corresponding statement.

APPENDIX PREVIEW Would you rather receive \$1,000 today or a year from now? You should prefer to receive the \$1,000 today because you can invest the \$1,000 and then earn interest on it. As a result, you will have more than \$1,000 a year from now. What this example illustrates is the concept of the **time value of money**. Everyone prefers to receive money today rather than in the future because of the interest factor.

LEARNING OBJECTIVES

1 Compute interest and future values.

- Nature of interest
- Future value of a single amount
- Future value of an annuity

2 Compute present values.

- Present value variables
- Present value of a single amount
- Present value of an annuity
- Time periods and discounting
- Present value of a long-term note or bond

3 Compute the present value in capital budgeting situations.

- Using alternative discount rates

4 Use a financial calculator to solve time value of money problems.

- Present value of a single sum
- Present value of an annuity
- Useful financial calculator applications

LEARNING
OBJECTIVE

1

Compute interest and future values.

Nature of Interest

Interest is payment for the use of another person's money. It is the difference between the amount borrowed or invested (called the **principal**) and the amount repaid or collected. The amount of interest to be paid or collected is usually stated as a rate over a specific period of time. The rate of interest is generally stated as an annual rate.

The amount of interest involved in any financing transaction is based on three elements:

- 1. Principal (p):** The original amount borrowed or invested.
- 2. Interest Rate (i):** An annual percentage of the principal.
- 3. Time (n):** The number of periods that the principal is borrowed or invested.

SIMPLE INTEREST

Simple interest is computed on the principal amount only. It is the return on the principal for one period. Simple interest is usually expressed as shown in Illustration G-1.

Illustration G-1
Interest computation

$$\text{Interest} = \frac{\text{Principal}}{p} \times \frac{\text{Rate}}{i} \times \frac{\text{Time}}{n}$$

For example, if you borrowed \$5,000 for 2 years at a simple interest rate of 12% annually, you would pay \$1,200 in total interest, computed as follows.

$$\begin{aligned} \text{Interest} &= p \times i \times n \\ &= \$5,000 \times .12 \times 2 \\ &= \$1,200 \end{aligned}$$

COMPOUND INTEREST

Compound interest is computed on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on (or growth of) the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that you deposit \$1,000 in Bank Two, where it will earn simple interest of 9% per year, and you deposit another \$1,000 in Citizens Bank, where it will earn compound interest of 9% per year compounded annually. Also assume that in both cases you will not withdraw any cash until three years from the date of deposit. Illustration G-2 shows the computation of interest to be received and the accumulated year-end balances.

Illustration G-2
Simple versus compound interest

Bank Two			Citizens Bank		
Simple Interest Calculation	Simple Interest	Accumulated Year-End Balance	Compound Interest Calculation	Compound Interest	Accumulated Year-End Balance
Year 1 \$1,000.00 × 9%	\$ 90.00	\$1,090.00	Year 1 \$1,000.00 × 9%	\$ 90.00	\$1,090.00
Year 2 \$1,000.00 × 9%	90.00	\$1,180.00	Year 2 \$1,090.00 × 9%	98.10	\$1,188.10
Year 3 \$1,000.00 × 9%	90.00	\$1,270.00	Year 3 \$1,188.10 × 9%	106.93	\$1,295.03
	<u>\$ 270.00</u>			<u>\$ 295.03</u>	
					\$25.03 Difference

Note in Illustration G-2 that simple interest uses the initial principal of \$1,000 to compute the interest in all three years. Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year—which explains why your compound interest account is larger.

Obviously, if you had a choice between investing your money at simple interest or at compound interest, you would choose compound interest, all other things—especially risk—being equal. In the example, compounding provides \$25.03 of additional interest income. For practical purposes, compounding assumes that

unpaid interest earned becomes a part of the principal, and the accumulated balance at the end of each year becomes the new principal on which interest is earned during the next year.

Illustration G-2 indicates that you should invest your money at the bank that compounds interest. Most business situations use compound interest. Simple interest is generally applicable only to short-term situations of one year or less.

Future Value of a Single Amount

The **future value of a single amount** is the value at a future date of a given amount invested, assuming compound interest. For example, in Illustration G-2, \$1,295.03 is the future value of the \$1,000 investment earning 9% for three years. The \$1,295.03 is determined more easily by using the following formula.

$$FV = p \times (1 + i)^n$$

Illustration G-3
Formula for future value

where:

- FV = future value of a single amount
- p = principal (or present value; the value today)
- i = interest rate for one period
- n = number of periods

The \$1,295.03 is computed as follows.

$$\begin{aligned} FV &= p \times (1 + i)^n \\ &= \$1,000 \times (1 + .09)^3 \\ &= \$1,000 \times 1.29503 \\ &= \$1,295.03 \end{aligned}$$

The 1.29503 is computed by multiplying $(1.09 \times 1.09 \times 1.09)$. The amounts in this example can be depicted in the time diagram shown in Illustration G-4.

Illustration G-4
Time diagram

Another method used to compute the future value of a single amount involves a compound interest table. This table shows the future value of 1 for n periods. Table 1 (page G-4) is such a table.

In Table 1, n is the number of compounding periods, the percentages are the periodic interest rates, and the 5-digit decimal numbers in the respective columns are the future value of 1 factors. To use Table 1, you multiply the principal amount by the future value factor for the specified number of periods and interest rate. For example, the future value factor for two periods at 9% is 1.18810. Multiplying this factor by \$1,000 equals \$1,188.10—which is the accumulated balance at the end of year 2 in the Citizens Bank example in Illustration G-2. The \$1,295.03 accumulated

balance at the end of the third year is calculated from Table 1 by multiplying the future value factor for three periods (1.29503) by the \$1,000.

The demonstration problem in Illustration G-5 shows how to use Table 1.

TABLE 1 Future Value of 1

(n) Periods	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%

Illustration G-5

Demonstration problem—
Using Table 1 for FV of 1

John and Mary Rich invested \$20,000 in a savings account paying 6% interest at the time their son, Mike, was born. The money is to be used by Mike for his college education. On his 18th birthday, Mike withdraws the money from his savings account. How much did Mike withdraw from his account?

Answer: The future value factor from Table 1 is 2.85434 (18 periods at 6%). The future value of \$20,000 earning 6% per year for 18 years is **\$57,086.80** ($\$20,000 \times 2.85434$).

Future Value of an Annuity

The preceding discussion involved the accumulation of only a single principal sum. Individuals and businesses frequently encounter situations in which a

series of equal dollar amounts are to be paid or received at evenly spaced time intervals (periodically), such as loans or lease (rental) contracts. A series of payments or receipts of equal dollar amounts is referred to as an **annuity**.

The **future value of an annuity** is the sum of all the payments (receipts) plus the accumulated compound interest on them. In computing the future value of an annuity, it is necessary to know (1) the interest rate, (2) the number of payments (receipts), and (3) the amount of the periodic payments (receipts).

To illustrate the computation of the future value of an annuity, assume that you invest \$2,000 at the end of each year for three years at 5% interest compounded annually. This situation is depicted in the time diagram in Illustration G-6.

Illustration G-6

Time diagram for a three-year annuity

The \$2,000 invested at the end of year 1 will earn interest for two years (years 2 and 3), and the \$2,000 invested at the end of year 2 will earn interest for one year (year 3). However, the last \$2,000 investment (made at the end of year 3) will not earn any interest. Using the future value factors from Table 1, the future value of these periodic payments is computed as shown in Illustration G-7.

Invested at End of Year	Number of Compounding Periods	Amount Invested	×	Future Value of 1 Factor at 5%	=	Future Value
1	2	\$2,000		1.10250		\$ 2,205
2	1	2,000		1.05000		2,100
3	0	2,000		1.00000		2,000
				3.15250		\$6,305

Illustration G-7

Future value of periodic payment computation

The first \$2,000 investment is multiplied by the future value factor for two periods (1.1025) because two years' interest will accumulate on it (in years 2 and 3). The second \$2,000 investment will earn only one year's interest (in year 3) and therefore is multiplied by the future value factor for one year (1.0500). The final \$2,000 investment is made at the end of the third year and will not earn any interest. Thus, $n = 0$ and the future value factor is 1.00000. Consequently, the future value of the last \$2,000 invested is only \$2,000 since it does not accumulate any interest.

Calculating the future value of each individual cash flow is required when the periodic payments or receipts are not equal in each period. However, when the periodic payments (receipts) are **the same in each period**, the future value can be computed by using a future value of an annuity of 1 table. Table 2 (page G-6) is such a table.

TABLE 2 Future Value of an Annuity of 1

(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
1	1.00000	1.00000	1.00000	1.0000	1.00000	1.00000	1.00000	1.00000	1.00000	1.00000
2	2.04000	2.05000	2.06000	2.0700	2.08000	2.09000	2.10000	2.11000	2.12000	2.15000
3	3.12160	3.15250	3.18360	3.2149	3.24640	3.27810	3.31000	3.34210	3.37440	3.47250

14	18.29191	19.59863	21.01507	22.5505	24.21492	26.01919	27.97498	30.09492	32.39260	40.50471
15	20.02359	21.57856	23.27597	25.1290	27.15211	29.36092	31.77248	34.40536	37.27972	47.58041
16	21.82453	23.65749	25.67253	27.8881	30.32428	33.00340	35.94973	39.18995	42.75328	55.71747
17	23.69751	25.84037	28.21288	30.8402	33.75023	36.97351	40.54470	44.50084	48.88367	65.07509
18	25.64541	28.13238	30.90565	33.9990	37.45024	41.30134	45.59917	50.39593	55.74972	75.83636
19	27.67123	30.53900	33.75999	37.3790	41.44626	46.01846	51.15909	56.93949	63.43968	88.21181
20	29.77808	33.06595	36.78559	40.9955	45.76196	51.16012	57.27500	64.20283	72.05244	102.44358

Table 2 shows the future value of 1 to be received periodically for a given number of payments. It assumes that each payment is made at the **end** of each period. We can see from Table 2 that the future value of an annuity of 1 factor for three payments at 5% is 3.15250. The future value factor is the total of the three individual future value factors as shown in Illustration G-7. Multiplying this amount by the annual investment of \$2,000 produces a future value of \$6,305.

The demonstration problem in Illustration G-8 shows how to use Table 2.

Illustration G-8

Demonstration problem—
Using Table 2 for *FV* of an
annuity of 1

John and Char Lewis's daughter, Debra, has just started high school. They decide to start a college fund for her and will invest \$2,500 in a savings account at the end of each year she is in high school (4 payments total). The account will earn 6% interest compounded annually. How much will be in the college fund at the time Debra graduates from high school?

$i = 6\%$

Present Value \$2,500 \$2,500 \$2,500 Future Value = ?
\$2,500

0 1 2 3 4

$n = 4$ years

Answer: The future value factor from Table 2 is 4.37462 (4 payments at 6%). The future value of \$2,500 invested each year for 4 years at 6% interest is **\$10,936.55** ($\$2,500 \times 4.37462$).

LEARNING
OBJECTIVE

2

Compute present values.

Present Value Variables

The **present value** is the value now of a given amount to be paid or received in the future, assuming compound interest. The present value, like the future value, is based on three variables: (1) the dollar amount to be received (future amount), (2) the length of time until the amount is received (number of periods), and (3) the interest rate (the discount rate). The process of determining the present value is referred to as **discounting the future amount**.

Present value computations are used in measuring many items. For example, the present value of principal and interest payments is used to determine the market price of a bond. Determining the amount to be reported for notes payable and lease liabilities also involves present value computations. In addition, capital budgeting and other investment proposals are evaluated using present value computations. Finally, all rate of return and internal rate of return computations involve present value techniques.

Present Value of a Single Amount

To illustrate present value, assume that you want to invest a sum of money today that will provide \$1,000 at the end of one year. What amount would you need to invest today to have \$1,000 one year from now? If you want a 10% rate of return, the investment or present value is \$909.09 ($\$1,000 \div 1.10$). The formula for calculating present value is shown in Illustration G-9.

$$\text{Present Value (PV)} = \text{Future Value (FV)} \div (1 + i)^n$$

Illustration G-9

Formula for present value

The computation of \$1,000 discounted at 10% for one year is as follows.

$$\begin{aligned} PV &= FV \div (1 + i)^n \\ &= \$1,000 \div (1 + .10)^1 \\ &= \$1,000 \div 1.10 \\ &= \$909.09 \end{aligned}$$

The future amount (\$1,000), the discount rate (10%), and the number of periods (1) are known. The variables in this situation are depicted in the time diagram in Illustration G-10.

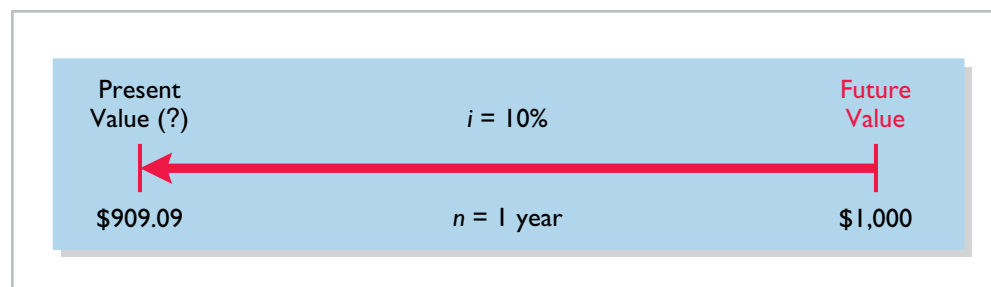

Illustration G-10

Finding present value if discounted for one period

If the single amount of \$1,000 is to be received **in two years** and discounted at 10% [$PV = \$1,000 \div (1 + .10)^2$], its present value is \$826.45 [$(\$1,000 \div 1.21)$], depicted in Illustration G-11 (page G-8).

Illustration G-11

Finding present value if discounted for two periods

The present value of 1 may also be determined through tables that show the present value of 1 for n periods. In Table 3 (see below), n is the number of discounting periods involved. The percentages are the periodic interest rates or discount rates, and the 5-digit decimal numbers in the respective columns are the present value of 1 factors.

When using Table 3, the future value is multiplied by the present value factor specified at the intersection of the number of periods and the discount rate.

TABLE 3 Present Value of 1

For example, the present value factor for one period at a discount rate of 10% is .90909, which equals the \$909.09 ($\$1,000 \times .90909$) computed in Illustration G-10. For two periods at a discount rate of 10%, the present value factor is .82645, which equals the \$826.45 ($\$1,000 \times .82645$) computed previously.

Note that a higher discount rate produces a smaller present value. For example, using a 15% discount rate, the present value of \$1,000 due one year from now is \$869.57, versus \$909.09 at 10%. Also note that the further removed from the present the future value is, the smaller the present value. For example, using the same discount rate of 10%, the present value of \$1,000 due in **five years** is \$620.92. The present value of \$1,000 due in **one year** is \$909.09, a difference of \$288.17.

The following two demonstration problems (Illustrations G-12 and G-13) illustrate how to use Table 3.

Suppose you have a winning lottery ticket and the state gives you the option of taking \$10,000 3 years from now or taking the present value of \$10,000 now. The state uses an 8% rate in discounting. How much will you receive if you accept your winnings now?

$PV = ?$ $i = 8\%$ $\$10,000$

Now 1 2 3 years

$n = 3$

Answer: The present value factor from Table 3 is .79383 (3 periods at 8%). The present value of \$10,000 to be received in 3 years discounted at 8% is **\$7,938.30** ($\$10,000 \times .79383$).

Illustration G-12
Demonstration problem—
Using Table 3 for PV of 1

Determine the amount you must deposit today in your super savings account, paying 9% interest, in order to accumulate \$5,000 for a down payment 4 years from now on a new car.

$PV = ?$ $i = 9\%$ $\$5,000$

Today 1 2 3 4 years

$n = 4$

Answer: The present value factor from Table 3 is .70843 (4 periods at 9%). The present value of \$5,000 to be received in 4 years discounted at 9% is **\$3,542.15** ($\$5,000 \times .70843$).

Illustration G-13
Demonstration problem—
Using Table 3 for PV of 1

Present Value of an Annuity

The preceding discussion involved the discounting of only a single future amount. Businesses and individuals frequently engage in transactions in which a series of equal dollar amounts are to be received or paid at evenly spaced time intervals (periodically). Examples of a series of periodic receipts or payments are loan agreements, installment sales, mortgage notes, lease (rental) contracts, and pension obligations. As discussed earlier, these periodic receipts or payments are **annuities**.

The **present value of an annuity** is the value now of a series of future receipts or payments, discounted assuming compound interest. In computing the present value of an annuity, it is necessary to know (1) the discount rate, (2) the number of payments (receipts), and (3) the amount of the periodic receipts or payments. To illustrate the computation of the present value of an annuity, assume that you

will receive \$1,000 cash annually for three years at a time when the discount rate is 10%. This situation is depicted in the time diagram in Illustration G-14. Illustration G-15 shows the computation of its present value in this situation.

Illustration G-14

Time diagram for a three-year annuity

Illustration G-15

Present value of a series of future amounts computation

Future Amount	×	Present Value of 1 Factor at 10%	=	Present Value
\$1,000 (1 year away)		.90909		\$ 909.09
1,000 (2 years away)		.82645		826.45
1,000 (3 years away)		.75132		751.32
		<u>2.48686</u>		<u>\$2,486.86</u>

This method of calculation is required when the periodic cash flows are not uniform in each period. However, when the future receipts are the same in each period, an annuity table can be used. As illustrated in Table 4 below, an annuity table shows the present value of 1 to be received periodically for a given number of payments. It assumes that each payment is made at the end of each period.

TABLE 4 Present Value of an Annuity of 1

(n) Payments	4%	5%	6%	7%	8%	9%	10%	11%	12%	15%
1	.96154	.95238	.94340	.93458	.92593	.91743	.90909	.90090	.89286	.86957

Table 4 shows that the present value of an annuity of 1 factor for three payments at 10% is 2.48685.¹ This present value factor is the total of the three individual present value factors, as shown in Illustration G-15. Applying this amount to the annual cash flow of \$1,000 produces a present value of \$2,486.85.

The following demonstration problem (Illustration G-16) illustrates how to use Table 4.

Kildare Company has just signed a capitalizable lease contract for equipment that requires rental payments of \$6,000 each, to be paid at the end of each of the next 5 years. The appropriate discount rate is 12%. What is the present value of the rental payments—that is, the amount used to capitalize the leased equipment?

$PV = ?$ \$6,000 \$6,000 \$6,000 \$6,000 \$6,000

Answer: The present value factor from Table 4 is 3.60478 (5 payments at 12%). The present value of 5 payments of \$6,000 each discounted at 12% is **\$21,628.68** ($\$6,000 \times 3.60478$).

Illustration G-16

Demonstration problem—
Using Table 4 for PV of an
annuity of 1

Time Periods and Discounting

In the preceding calculations, the discounting was done on an annual basis using an annual interest rate. Discounting may also be done over shorter periods of time such as monthly, quarterly, or semiannually.

When the time frame is less than one year, it is necessary to convert the annual interest rate to the applicable time frame. Assume, for example, that the investor in Illustration G-14 received \$500 **semiannually** for three years instead of \$1,000 annually. In this case, the number of periods becomes six (3×2), the discount rate is 5% ($10\% \div 2$), the present value factor from Table 4 is 5.07569 (6 periods at 5%), and the present value of the future cash flows is \$2,537.85 ($5.07569 \times \500). This amount is slightly higher than the \$2,486.86 computed in Illustration G-15 because interest is computed twice during the same year. That is, during the second half of the year, interest is earned on the first half-year's interest.

Present Value of a Long-Term Note or Bond

The present value (or market price) of a long-term note or bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the discount rate. Our example uses a five-year bond issue.

The first variable (dollars to be paid) is made up of two elements: (1) a series of interest payments (an annuity) and (2) the principal amount (a single sum). To

¹The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

compute the present value of the bond, both the interest payments and the principal amount must be discounted—two different computations. The time diagrams for a bond due in five years are shown in Illustration G-17.

Illustration G-17

Time diagrams for the present value of a bond

When the investor’s market interest rate is equal to the bond’s contractual interest rate, the present value of the bonds will equal the face value of the bonds. To illustrate, assume a bond issue of 10%, five-year bonds with a face value of \$100,000 with interest payable **semiannually** on January 1 and July 1. If the discount rate is the same as the contractual rate, the bonds will sell at face value. In this case, the investor will receive (1) \$100,000 at maturity and (2) a series of ten \$5,000 interest payments $[(\$100,000 \times 10\%) \div 2]$ over the term of the bonds. The length of time is expressed in terms of interest periods—in this case—10, and the discount rate per interest period, 5%. The following time diagram (Illustration G-18) depicts the variables involved in this discounting situation.

Illustration G-18

Time diagram for present value of a 10%, five-year bond paying interest semiannually

Illustration G-19 shows the computation of the present value of these bonds.

<u>10% Contractual Rate—10% Discount Rate</u>	
Present value of principal to be received at maturity	
$\$100,000 \times PV$ of 1 due in 10 periods at 5%	
$\$100,000 \times .61391$ (Table 3)	\$ 61,391
Present value of interest to be received periodically over the term of the bonds	
$\$5,000 \times PV$ of 1 due periodically for 10 periods at 5%	
$\$5,000 \times 7.72173$ (Table 4)	38,609*
Present value of bonds	<u><u>\$100,000</u></u>

*Rounded

Illustration G-19

Present value of principal and interest—face value

Now assume that the investor's required rate of return is 12%, not 10%. The future amounts are again \$100,000 and \$5,000, respectively, but now a discount rate of 6% ($12\% \div 2$) must be used. The present value of the bonds is \$92,639, as computed in Illustration G-20.

<u>10% Contractual Rate—12% Discount Rate</u>	
Present value of principal to be received at maturity	
$\$100,000 \times .55839$ (Table 3)	\$ 55,839
Present value of interest to be received periodically over the term of the bonds	
$\$5,000 \times 7.36009$ (Table 4)	36,800
Present value of bonds	<u><u>\$92,639</u></u>

Illustration G-20

Present value of principal and interest—discount

Conversely, if the discount rate is 8% and the contractual rate is 10%, the present value of the bonds is \$108,111, computed as shown in Illustration G-21.

<u>10% Contractual Rate—8% Discount Rate</u>	
Present value of principal to be received at maturity	
$\$100,000 \times .67556$ (Table 3)	\$ 67,556
Present value of interest to be received periodically over the term of the bonds	
$\$5,000 \times 8.11090$ (Table 4)	40,555
Present value of bonds	<u><u>\$108,111</u></u>

Illustration G-21

Present value of principal and interest—premium

The above discussion relied on present value tables in solving present value problems. Calculators may also be used to compute present values without the use of these tables. Many calculators, especially financial calculators, have present value (*PV*) functions that allow you to calculate present values by merely inputting the proper amount, discount rate, periods, and pressing the *PV* key. We discuss the use of financial calculators in a later section.

Compute the present value in capital budgeting situations.

The decision to make long-term capital investments is best evaluated using discounting techniques that recognize the time value of money. To do this, many companies calculate the present value of the cash flows involved in a capital investment.

To illustrate, Nagel-Siebert Trucking Company, a cross-country freight carrier in Montgomery, Illinois, is considering adding another truck to its fleet because of a purchasing opportunity. **Navistar Inc.**, Nagel-Siebert's primary supplier of overland rigs, is overstocked and offers to sell its biggest rig for \$154,000 cash payable upon delivery. Nagel-Siebert knows that the rig will produce a net cash flow per year of \$40,000 for five years (received at the end of each year), at which time it will be sold for an estimated salvage value of \$35,000. Nagel-Siebert's discount rate in evaluating capital expenditures is 10%. Should Nagel-Siebert commit to the purchase of this rig?

The cash flows that must be discounted to present value by Nagel-Siebert are as follows.

Cash payable on delivery (today): \$154,000.

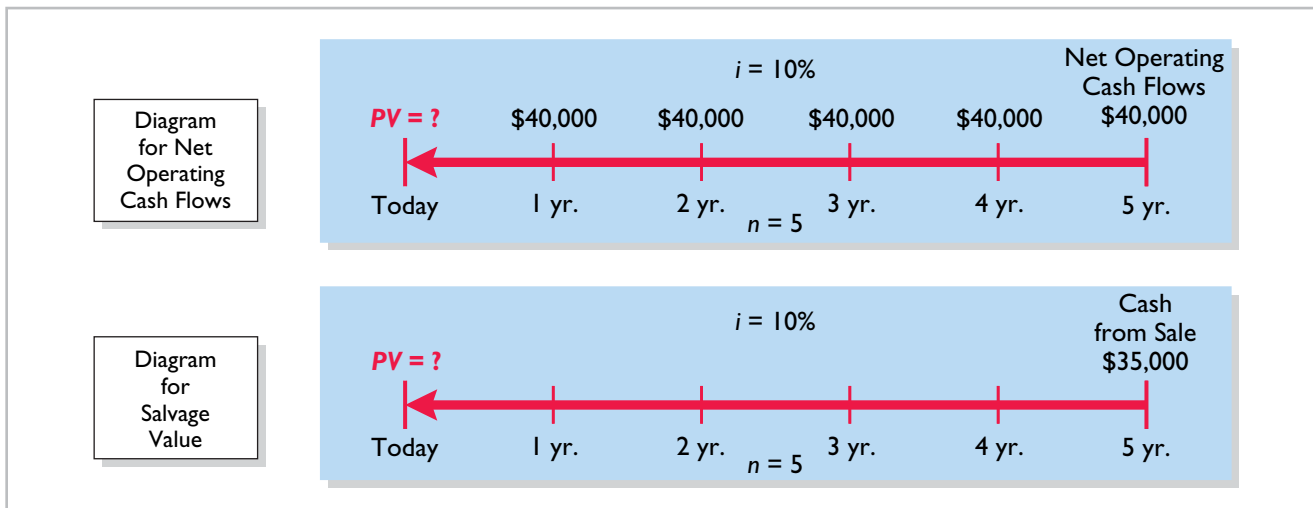

Net cash flow from operating the rig: \$40,000 for 5 years (at the end of each year).

Cash received from sale of rig at the end of 5 years: \$35,000.

The time diagrams for the latter two cash flows are shown in Illustration G-22.

Illustration G-22

Time diagrams for Nagel-Siebert Trucking Company

Notice from the diagrams that computing the present value of the net operating cash flows (\$40,000 at the end of each year) is **discounting an annuity** (Table 4), while computing the present value of the \$35,000 salvage value is **discounting a single sum** (Table 3). The computation of these present values is shown in Illustration G-23.

Present Values Using a 10% Discount Rate

Present value of net operating cash flows received annually over 5 years	
$\$40,000 \times \text{PV of 1 received annually for 5 years at 10\%}$	
$\$40,000 \times 3.79079$ (Table 4)	\$ 151,631.60
Present value of salvage value (cash) to be received in 5 years	
$\$35,000 \times \text{PV of 1 received in 5 years at 10\%}$	
$\$35,000 \times .62092$ (Table 3)	21,732.20
Present value of cash inflows	173,363.80
Present value of cash outflows (purchase price due today at 10%)	
$\$154,000 \times \text{PV of 1 due today}$	
$\$154,000 \times 1.00000$	(154,000.00)
Net present value	\$ 19,363.80

Illustration G-23

Present value computations at 10%

Because the present value of the cash receipts (inflows) of \$173,363.80 (\$151,631.60 + \$21,732.20) exceeds the present value of the cash payments (outflows) of \$154,000.00, the net present value of \$19,363.80 is positive, and **the decision to invest should be accepted.**

Now assume that Nagle-Siebert uses a discount rate of 15%, not 10%, because it wants a greater return on its investments in capital assets. The cash receipts and cash payments by Nagel-Siebert are the same. The present values of these receipts and cash payments discounted at 15% are shown in Illustration G-24.

Present Values Using a 15% Discount Rate

Present value of net operating cash flows received annually over 5 years at 15%	
$\$40,000 \times 3.35216$ (Table 4)	\$ 134,086.40
Present value of salvage value (cash) to be received in 5 years at 15%	
$\$35,000 \times .49718$ (Table 3)	17,401.30
Present value of cash inflows	151,487.70
Present value of cash outflows (purchase price due today at 15%)	
$\$154,000 \times 1.00000$	(154,000.00)
Net present value	\$ (2,512.30)

Illustration G-24

Present value computations at 15%

Because the present value of the cash payments (outflows) of \$154,000.00 exceeds the present value of the cash receipts (inflows) of \$151,487.70 (\$134,086.40 + \$17,401.30), the net present value of \$2,512.30 is negative, and **the investment should be rejected.**

The above discussion relied on present value tables in solving present value problems. As we show in the next section, calculators may also be used to compute present values without the use of these tables. Financial calculators have present value (PV) functions that allow you to calculate present values by merely identifying the proper amount, discount rate, periods, and pressing the PV key.

LEARNING
OBJECTIVE**4****Use a financial calculator to solve time value of money problems.**

Business professionals, once they have mastered the underlying time value of money concepts, often use a financial calculator to solve these types of problems. In most cases, they use calculators if interest rates or time periods do not correspond with the information provided in the compound interest tables.

To use financial calculators, you enter the time value of money variables into the calculator. Illustration G-25 shows the five most common keys used to solve time value of money problems.²

Illustration G-25
Financial calculator keys

where:

- N = number of periods
- I = interest rate per period (some calculators use I/YR or i)
- PV = present value (occurs at the beginning of the first period)
- PMT = payment (all payments are equal, and none are skipped)
- FV = future value (occurs at the end of the last period)

In solving time value of money problems in this appendix, you will generally be given three of four variables and will have to solve for the remaining variable. The fifth key (the key not used) is given a value of zero to ensure that this variable is not used in the computation.

Present Value of a Single Sum

To illustrate how to solve a present value problem using a financial calculator, assume that you want to know the present value of \$84,253 to be received in five years, discounted at 11% compounded annually. Illustration G-26 depicts this problem.

Illustration G-26
Calculator solution for present value of a single sum

Illustration G-26 shows you the information (inputs) to enter into the calculator: $N = 5$, $I = 11$, $PMT = 0$, and $FV = 84,253$. You then press PV for the answer: $-\$50,000$. As indicated, the PMT key was given a value of zero because a series of payments did not occur in this problem.

PLUS AND MINUS

The use of plus and minus signs in time value of money problems with a financial calculator can be confusing. Most financial calculators are programmed so that the positive and negative cash flows in any problem offset each other. In the present value problem above, we identified the \$84,253 future value initial investment as a positive (inflow); the answer $-\$50,000$ was shown as a negative amount, reflecting a cash outflow. If the 84,253 were entered as a negative, then the final answer would have been reported as a positive 50,000.

Hopefully, the sign convention will not cause confusion. If you understand what is required in a problem, you should be able to interpret a positive or negative amount in determining the solution to a problem.

²On many calculators, these keys are actual buttons on the face of the calculator; on others, they appear on the display after the user accesses a present value menu.

COMPOUNDING PERIODS

In the previous problem, we assumed that compounding occurs once a year. Some financial calculators have a default setting, which assumes that compounding occurs 12 times a year. You must determine what default period has been programmed into your calculator and change it as necessary to arrive at the proper compounding period.

ROUNDING

Most financial calculators store and calculate using 12 decimal places. As a result, because compound interest tables generally have factors only up to five decimal places, a slight difference in the final answer can result. In most time value of money problems, the final answer will not include more than two decimal places.

Present Value of an Annuity

To illustrate how to solve a present value of an annuity problem using a financial calculator, assume that you are asked to determine the present value of rental receipts of \$6,000 each to be received at the end of each of the next five years, when discounted at 12%, as pictured in Illustration G-27.

Inputs:	5	12	?	6,000	0
	N	I	PV	PMT	FV
Answer:			-21,628.66		

Illustration G-27

Calculator solution for present value of an annuity

In this case, you enter $N = 5$, $I = 12$, $PMT = 6,000$, $FV = 0$, and then press **PV** to arrive at the answer of $-\$21,628.66$.

Useful Applications of the Financial Calculator

With a financial calculator, you can solve for any interest rate or for any number of periods in a time value of money problem. Here are some examples of these applications.

AUTO LOAN

Assume you are financing the purchase of a used car with a three-year loan. The loan has a 9.5% stated annual interest rate, compounded monthly. The price of the car is \$6,000, and you want to determine the monthly payments, assuming that the payments start one month after the purchase. This problem is pictured in Illustration G-28.

Inputs:	36	9.5	6,000	?	0
	N	I	PV	PMT	FV
Answer:				-192.20	

Illustration G-28

Calculator solution for auto loan payments

To solve this problem, you enter $N = 36$ (12×3), $I = 9.5$, $PV = 6,000$, $FV = 0$, and then press **PMT**. You will find that the monthly payments will be \$192.20. Note that the payment key is usually programmed for 12 payments per year. Thus, you must change the default (compounding period) if the payments are other than monthly.

MORTGAGE LOAN AMOUNT

Say you are evaluating financing options for a loan on a house (a mortgage). You decide that the maximum mortgage payment you can afford is \$700 per month. The annual interest rate is 8.4%. If you get a mortgage that requires you to make monthly payments over a 15-year period, what is the maximum home loan you can afford? Illustration G-29 depicts this problem.

Illustration G-29
Calculator solution for mortgage amount

Inputs:	180	8.4	?	-700	0
	N	I	PV	PMT	FV
Answer:			71,509.81		

You enter $N = 180$ (12×15 years), $I = 8.4$, $PMT = -700$, $FV = 0$, and press PV. With the payments-per-year key set at 12, you find a present value of \$71,509.81—the maximum home loan you can afford, given that you want to keep your mortgage payments at \$700. Note that by changing any of the variables, you can quickly conduct “what-if” analyses for different situations.

REVIEW

LEARNING OBJECTIVES REVIEW

- 1 Compute interest and future values.** Simple interest is computed on the principal only, while compound interest is computed on the principal and any interest earned that has not been withdrawn.

To solve for future value of a single amount, prepare a time diagram of the problem. Identify the principal amount, the number of compounding periods, and the interest rate. Using the future value of 1 table, multiply the principal amount by the future value factor specified at the intersection of the number of periods and the interest rate.

To solve for future value of an annuity, prepare a time diagram of the problem. Identify the amount of the periodic payments (receipts), the number of payments (receipts), and the interest rate. Using the future value of an annuity of 1 table, multiply the amount of the payments by the future value factor specified at the intersection of the number of periods and the interest rate.

- 2 Compute present value.** The following three variables are fundamental to solving present value problems: (1) the future amount, (2) the number of periods, and (3) the interest rate (the discount rate).

To solve for present value of a single amount, prepare a time diagram of the problem. Identify the future amount, the number of discounting periods, and the discount (interest) rate. Using the present value of a single amount table, multiply the future

amount by the present value factor specified at the intersection of the number of periods and the discount rate.

To solve for present value of an annuity, prepare a time diagram of the problem. Identify the amount of future periodic receipts or payments (annuities), the number of payments (receipts), and the discount (interest) rate. Using the present value of an annuity of 1 table, multiply the amount of the annuity by the present value factor specified at the intersection of the number of payments and the interest rate.

To compute the present value of notes and bonds, determine the present value of the principal amount and the present value of the interest payments. Multiply the principal amount (a single future amount) by the present value factor (from the present value of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. To determine the present value of the series of interest payments, multiply the amount of the interest payment by the present value factor (from the present value of an annuity of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. Add the present value of the principal amount to the present value of the interest payments to arrive at the present value of the note or bond.

- 3 Compute the present value in capital budgeting situations.** Compute the present values of all cash

inflows and all cash outflows related to the capital budgeting proposal (an investment-type decision). If the **net** present value is positive, accept the proposal (make the investment). If the **net** present value is negative, reject the proposal (do not make the investment).

- 4 **Use a financial calculator to solve time value of money problems.** Financial calculators can be used to solve the same and additional problems as those

solved with time value of money tables. Enter into the financial calculator the amounts for all of the known elements of a time value of money problem (periods, interest rate, payments, future or present value), and it solves for the unknown element. Particularly useful situations involve interest rates and compounding periods not presented in the tables.

GLOSSARY REVIEW

Annuity A series of equal dollar amounts to be paid or received at evenly spaced time intervals (periodically). (p. G-5).

Compound interest The interest computed on the principal and any interest earned that has not been paid or withdrawn. (p. G-2).

Discounting the future amount(s) The process of determining present value. (p. G-7).

Future value of an annuity The sum of all the payments (receipts) plus the accumulated compound interest on them. (p. G-5).

Future value of a single amount The value at a future date of a given amount invested, assuming compound interest. (p. G-3).

Interest Payment for the use of another person's money. (p. G-1).

Present value The value now of a given amount to be paid or received in the future, assuming compound interest. (p. G-7).

Present value of an annuity The value now of a series of future receipts or payments, discounted assuming compound interest. (p. G-9).

Principal The amount borrowed or invested. (p. G-1).

Simple interest The interest computed on the principal only. (p. G-2).

Brief Exercises and many additional resources are available for practice in WileyPLUS

BRIEF EXERCISES

(Use tables to solve exercises BEG-1 to BEG-23.)

BEG-1 Jozy Altidore invested \$6,000 at 5% annual interest, and left the money invested without withdrawing any of the interest for 12 years. At the end of the 12 years, Jozy withdrew the accumulated amount of money. (a) What amount did Jozy withdraw, assuming the investment earns simple interest? (b) What amount did Jozy withdraw, assuming the investment earns interest compounded annually?

Compute the future value of a single amount.

(LO 1)

BEG-2 For each of the following cases, indicate (a) what interest rate columns and (b) what number of periods you would refer to in looking up the future value factor.

Use future value tables.

(LO 1)

(1) In Table 1 (future value of 1):

	<u>Annual Rate</u>	<u>Number of Years Invested</u>	<u>Compounded</u>
Case A	5%	3	Annually
Case B	12%	4	Semiannually

(2) In Table 2 (future value of an annuity of 1):

	<u>Annual Rate</u>	<u>Number of Years Invested</u>	<u>Compounded</u>
Case A	3%	8	Annually
Case B	8%	6	Semiannually

Compute the future value of a single amount.

(LO 1)

BEG-3 Liam Company signed a lease for an office building for a period of 12 years. Under the lease agreement, a security deposit of \$9,600 is made. The deposit will be returned at the expiration of the lease with interest compounded at 4% per year. What amount will Liam receive at the time the lease expires?

Compute the future value of an annuity.

(LO 1)

BEG-4 Bates Company issued \$1,000,000, 10-year bonds and agreed to make annual sinking fund deposits of \$78,000. The deposits are made at the end of each year into an account paying 6% annual interest. What amount will be in the sinking fund at the end of 10 years?

Compute the future value of a present amount and of an annuity.

(LO 1)

BEG-5 Andrew and Emma Garfield invested \$8,000 in a savings account paying 5% annual interest when their daughter, Angela, was born. They also deposited \$1,000 on each of her birthdays until she was 18 (including her 18th birthday). How much was in the savings account on her 18th birthday (after the last deposit)?

Compute the future value of a single amount.

(LO 1)

BEG-6 Hugh Curtin borrowed \$35,000 on July 1, 2017. This amount plus accrued interest at 8% compounded annually is to be repaid on July 1, 2022. How much will Hugh have to repay on July 1, 2022?

Use present value tables.

(LO 2)

BEG-7 For each of the following cases, indicate (a) what interest rate columns and (b) what number of periods you would refer to in looking up the discount rate.

(1) In Table 3 (present value of 1):

	<u>Annual Rate</u>	<u>Number of Years Involved</u>	<u>Discounts per Year</u>
Case A	12%	7	Annually
Case B	8%	11	Annually
Case C	10%	8	Semiannually

(2) In Table 4 (present value of an annuity of 1):

	<u>Annual Rate</u>	<u>Number of Years Involved</u>	<u>Number of Payments Involved</u>	<u>Frequency of Payments</u>
Case A	10%	20	20	Annually
Case B	10%	7	7	Annually
Case C	6%	5	10	Semiannually

Determine present values.

(LO 2)

BEG-8 (a) What is the present value of \$25,000 due 9 periods from now, discounted at 10%?
(b) What is the present value of \$25,000 to be received at the end of each of 6 periods, discounted at 9%?

Compute the present value of a single amount investment.

(LO 2)

BEG-9 Messi Company is considering an investment that will return a lump sum of \$900,000 6 years from now. What amount should Messi Company pay for this investment to earn an 8% return?

Compute the present value of a single amount investment.

(LO 2)

BEG-10 Lloyd Company earns 6% on an investment that will return \$450,000 8 years from now. What is the amount Lloyd should invest now to earn this rate of return?

Compute the present value of an annuity investment.

(LO 2)

BEG-11 Robben Company is considering investing in an annuity contract that will return \$40,000 annually at the end of each year for 15 years. What amount should Robben Company pay for this investment if it earns an 8% return?

Compute the present value of an annual investment.

(LO 2)

BEG-12 Kaehler Enterprises earns 5% on an investment that pays back \$80,000 at the end of each of the next 6 years. What is the amount Kaehler Enterprises invested to earn the 5% rate of return?

Compute the present value of bonds.

(LO 2)

BEG-13 Dempsey Railroad Co. is about to issue \$400,000 of 10-year bonds paying an 11% interest rate, with interest payable semiannually. The discount rate for such securities is 10%. How much can Dempsey expect to receive for the sale of these bonds?

- BEG-14** Assume the same information as BEG-13 except that the discount rate is 12% instead of 10%. In this case, how much can Dempsey expect to receive from the sale of these bonds? *Compute the present value of bonds.*
(LO 2)
- BEG-15** Neymar Taco Company receives a \$75,000, 6-year note bearing interest of 4% (paid annually) from a customer at a time when the discount rate is 6%. What is the present value of the note received by Neymar? *Compute the present value of a note.*
(LO 2)
- BEG-16** Gleason Enterprises issued 6%, 8-year, \$2,500,000 par value bonds that pay interest semiannually on October 1 and April 1. The bonds are dated April 1, 2017, and are issued on that date. The discount rate of interest for such bonds on April 1, 2017, is 8%. What cash proceeds did Gleason receive from issuance of the bonds? *Compute the present value of bonds.*
(LO 2)
- BEG-17** Frazier Company issues a 10%, 5-year mortgage note on January 1, 2017, to obtain financing for new equipment. Land is used as collateral for the note. The terms provide for semiannual installment payments of \$48,850. What are the cash proceeds received from the issuance of the note? *Compute the present value of a note.*
(LO 2)
- BEG-18** If Colleen Mooney invests \$4,765.50 now and she will receive \$12,000 at the end of 12 years, what annual rate of interest will Colleen earn on her investment? (*Hint: Use Table 3.*) *Compute the interest rate on a single amount.*
(LO 2)
- BEG-19** Tim Howard has been offered the opportunity of investing \$36,125 now. The investment will earn 11% per year and at the end of that time will return Tim \$75,000. How many years must Tim wait to receive \$75,000? (*Hint: Use Table 3.*) *Compute the number of periods of a single amount.*
(LO 2)
- BEG-20** Joanne Quick made an investment of \$10,271.38. From this investment, she will receive \$1,200 annually for the next 15 years starting one year from now. What rate of interest will Joanne's investment be earning for her? (*Hint: Use Table 4.*) *Compute the interest rate on an annuity.*
(LO 2)
- BEG-21** Kevin Morales invests \$7,793.83 now for a series of \$1,300 annual returns beginning one year from now. Kevin will earn a return of 9% on the initial investment. How many annual payments of \$1,300 will Kevin receive? (*Hint: Use Table 4.*) *Compute the number of periods of an annuity.*
(LO 2)
- BEG-22** Barney Googal owns a garage and is contemplating purchasing a tire retreading machine for \$12,820. After estimating costs and revenues, Barney projects a net cash inflow from the retreading machine of \$2,700 annually for 7 years. Barney hopes to earn a return of 9% on such investments. What is the present value of the retreading operation? Should Barney Googal purchase the retreading machine? *Compute the present value of a machine for purposes of making a purchase decision.*
(LO 3)
- BEG-23** Snyder Company is considering purchasing equipment. The equipment will produce the following cash inflows: Year 1, \$25,000; Year 2, \$30,000; and Year 3, \$40,000. Snyder requires a minimum rate of return of 11%. What is the maximum price Snyder should pay for this equipment? *Compute the maximum price to pay for a machine.*
(LO 3)
- BEG-24** Carly Simon wishes to invest \$18,000 on July 1, 2017, and have it accumulate to \$50,000 by July 1, 2027. Use a financial calculator to determine at what exact annual rate of interest Carly must invest the \$18,000. *Determine interest rate.*
(LO 4)
- BEG-25** On July 17, 2016, Keith Urban borrowed \$42,000 from his grandfather to open a clothing store. Starting July 17, 2017, Keith has to make 10 equal annual payments of \$6,500 each to repay the loan. Use a financial calculator to determine what interest rate Keith is paying. *Determine interest rate.*
(LO 4)
- BEG-26** As the purchaser of a new house, Carrie Underwood has signed a mortgage note to pay the Nashville National Bank and Trust Co. \$8,400 every 6 months for 20 years, at the end of which time she will own the house. At the date the mortgage is signed, the purchase price was \$198,000 and Underwood made a down payment of \$20,000. The first payment will be made 6 months after the date the mortgage is signed. Using a financial calculator, compute the exact rate of interest earned on the mortgage by the bank. *Determine interest rate.*
(LO 4)

Various time value of money situations.

(LO 4)

BEG-27 Using a financial calculator, solve for the unknowns in each of the following situations.

- (a) On June 1, 2016, Jennifer Lawrence purchases lakefront property from her neighbor, Josh Hutcherson, and agrees to pay the purchase price in seven payments of \$16,000 each, the first payment to be payable June 1, 2017. (Assume that interest compounded at an annual rate of 7.35% is implicit in the payments.) What is the purchase price of the property?
- (b) On January 1, 2016, Gerrard Corporation purchased 200 of the \$1,000 face value, 8% coupon, 10-year bonds of Sterling Inc. The bonds mature on January 1, 2026, and pay interest annually beginning January 1, 2017. Gerrard purchased the bonds to yield 10.65%. How much did Gerrard pay for the bonds?

Various time value of money situations.

(LO 4)

BEG-28 Using a financial calculator, provide a solution to each of the following situations.

- (a) Lynn Anglin owes a debt of \$42,000 from the purchase of her new sport utility vehicle. The debt bears annual interest of 7.8% compounded monthly. Lynn wishes to pay the debt and interest in equal monthly payments over 8 years, beginning one month hence. What equal monthly payments will pay off the debt and interest?
- (b) On January 1, 2017, Roger Molony offers to buy Dave Feeney's used snowmobile for \$8,000, payable in five equal annual installments, which are to include 7.25% interest on the unpaid balance and a portion of the principal. If the first payment is to be made on December 31, 2017, how much will each payment be?

LEARNING OBJECTIVES

- 1 Record the payroll for a pay period.
- 2 Record employer payroll taxes.
- 3 Discuss the objectives of internal control for payroll.

LEARNING
OBJECTIVE

1

Record the payroll for a pay period.

Payroll and related fringe benefits often make up a large percentage of current liabilities. Employee compensation is often the most significant expense that a company incurs. For example, **Costco** recently reported total employees of 103,000. Labor and fringe benefits costs approximated 70% of the company's total cost of operations.

Payroll accounting involves more than paying employees' wages. Companies are required by law to maintain payroll records for each employee, to file and pay payroll taxes, and to comply with state and federal tax laws related to employee compensation.

The term "payroll" **pertains to both salaries and wages of employees**. Managerial, administrative, and sales personnel are generally paid **salaries**. Salaries are often expressed in terms of a specified amount per month or per year rather than an hourly rate. Store clerks, factory employees, and manual laborers are normally paid **wages**. Wages are based on a rate per hour or on a piecework basis (such as per unit of product). Frequently, people use the terms "salaries" and "wages" interchangeably.

The term "payroll" **does not apply to payments made for services of professionals** such as certified public accountants, attorneys, and architects. Such professionals are independent contractors rather than salaried employees. Payments to them are called **fees**. This distinction is important because government regulations relating to the payment and reporting of payroll taxes apply only to employees.

Determining the Payroll

Determining the payroll involves computing three amounts: (1) gross earnings, (2) payroll deductions, and (3) net pay.

GROSS EARNINGS

Gross earnings is the total compensation earned by an employee. It consists of wages or salaries, plus any bonuses and commissions.

Companies determine total **wages** for an employee by multiplying the hours worked by the hourly rate of pay. In addition to the hourly pay rate, most companies are required by law to pay hourly workers a minimum of 1½ times the regular hourly rate for overtime work in excess of eight hours per day or 40 hours per week. In addition, many employers pay overtime rates for work done at night, on weekends, and on holidays.

For example, assume that Michael Jordan, an employee of Academy Company, worked 44 hours for the weekly pay period ending January 14. His regular wage is \$12 per hour. For any hours in excess of 40, the company pays at one-and-a-half times the regular rate. Academy computes Jordan’s gross earnings (total wages) as follows.

Illustration H-1
Computation of total wages

Type of Pay	Hours	×	Rate	=	Gross Earnings
Regular	40	×	\$12	=	\$480
Overtime	4	×	18	=	72
Total wages					\$552

This computation assumes that Jordan receives 1½ times his regular hourly rate (\$12 × 1.5) for his overtime hours. Union contracts often require that overtime rates be as much as twice the regular rates.

ETHICS NOTE

Bonuses often reward outstanding individual performance, but successful corporations also need considerable teamwork. A challenge is to motivate individuals while preventing an unethical employee from taking another’s idea for his or her own advantage.

An employee’s **salary** is generally based on a monthly or yearly rate. The company then prorates these rates to its payroll periods (e.g., biweekly or monthly). Most executive and administrative positions are salaried. Federal law does not require overtime pay for employees in such positions.

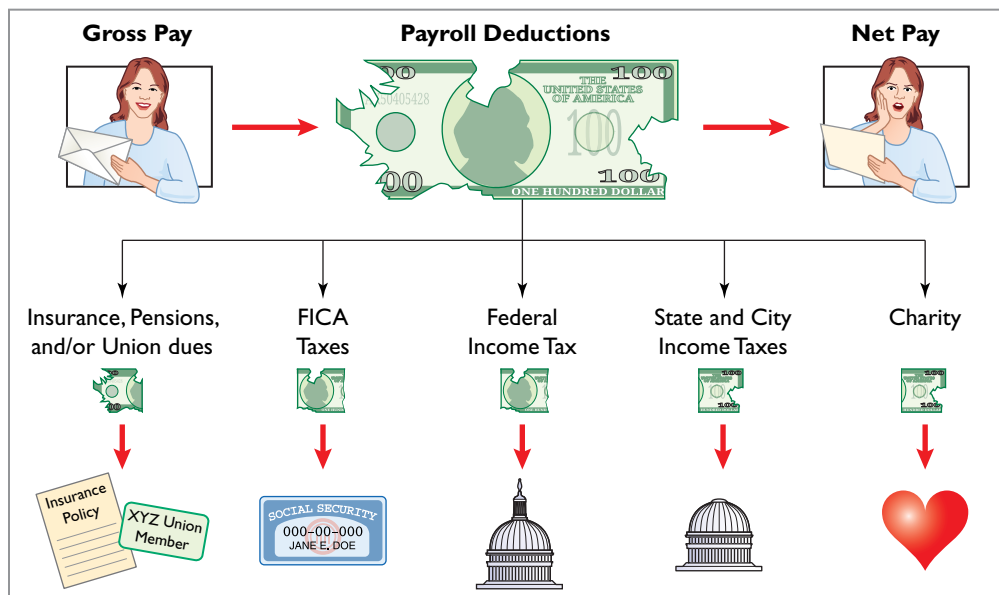

Many companies have **bonus** agreements for employees. One survey found that over 94% of the largest U.S. manufacturing companies offer annual bonuses to key executives. Bonus arrangements may be based on such factors as increased sales or net income. Companies may pay bonuses in cash and/or by granting employees the opportunity to acquire shares of company stock at favorable prices (called stock option plans).

PAYROLL DEDUCTIONS

As anyone who has received a paycheck knows, gross earnings are usually very different from the amount actually received. The difference is due to **payroll deductions**.

Payroll deductions may be mandatory or voluntary. **Mandatory deductions are required by law and consist of FICA taxes and income taxes.** Voluntary deductions are at the option of the employee. Illustration H-2 summarizes common types of payroll deductions. Such deductions do not result in payroll tax expense to

Illustration H-2
Payroll deductions

the employer. The employer is merely a collection agent, and subsequently transfers the deducted amounts to the government and designated recipients.

FICA TAXES In 1937, Congress enacted the Federal Insurance Contribution Act (FICA). **FICA taxes are designed to provide workers with supplemental retirement, employment disability, and medical benefits.** In 1965, Congress extended benefits to include Medicare for individuals over 65 years of age. The benefits are financed by a tax levied on employees' earnings.

FICA taxes consist of a Social Security tax and a Medicare tax. They are paid by both employee and employer. The FICA tax rate is 7.65% (6.2% Social Security tax up to \$117,000 plus 1.45% Medicare tax) of salary and wages for each employee.¹ In addition, the Medicare tax of 1.45% continues for an employee's salary and wages in excess of \$117,000. These tax rate and tax base requirements are shown in Illustration H-3.

Social Security taxes

Employee and employer **6.2%** on salary and wages up to **\$117,000**

Medicare taxes

Employee and employer **1.45%** on all salary and wages without limitation

Illustration H-3

FICA tax rate and tax base

To illustrate the computation of FICA taxes, assume that Mario Ruez has total wages for the year of \$100,000. In this case, Mario pays FICA taxes of \$7,650 ($\$100,000 \times 7.65\%$). If Mario has total wages of \$124,000, Mario pays FICA taxes of \$9,052, as shown in Illustration H-4.

Social Security tax	$(\$117,000 \times 6.2\%)$	\$ 7,254
Medicare tax	$(\$124,000 \times 1.45\%)$	1,798
Total FICA taxes		<u>\$9,052</u>

Illustration H-4

FICA tax computation

Mario's employer is also required to pay \$9,052.

INCOME TAXES Under the U.S. pay-as-you-go system of federal income taxes, employers are required to withhold income taxes from employees each pay period. Four variables determine the amount to be withheld: (1) the employee's gross earnings, (2) marital status, (3) the number of allowances claimed by the employee, and (4) the length of the pay period. The number of allowances claimed typically includes the employee, his or her spouse, and other dependents.

Withholding tables furnished by the Internal Revenue Service indicate the amount of income tax to be withheld. Withholding amounts are based on gross wages and the number of allowances claimed. Separate tables are provided for weekly, biweekly, semimonthly, and monthly pay periods. Illustration H-5 (page H-4) shows the withholding tax table for Michael Jordan (assuming he earns \$552 per week, is married, and claims two allowances). For a weekly salary of \$552 with two allowances, the income tax to be withheld is \$24 (highlighted in red).

In addition, most states (and some cities) require **employers** to withhold income taxes from employees' earnings. As a rule, the amounts withheld are a percentage (specified in the state revenue code) of the amount withheld for the federal income tax. Or they may be a specified percentage of the employee's earnings. For the sake of simplicity, we have assumed that Jordan's wages are subject to state income taxes of 2%, or \$11.04 ($2\% \times \552) per week.

There is no limit on the amount of gross earnings subject to income tax withholdings. In fact, under our progressive system of taxation, the higher the earnings, the higher the percentage of income withheld for taxes.

¹The \$117,000 limit is based upon 2014 guidelines set by the Social Security Administration.

Illustration H-5

620	630	52	41	31	23	16	8	1	0	0	0	0
630	640	53	42	32	24	17	9	2	0	0	0	0
640	650	55	44	33	25	18	10	3	0	0	0	0
650	660	56	45	34	26	19	11	4	0	0	0	0
660	670	58	47	35	27	20	12	5	0	0	0	0
670	680	59	48	37	28	21	13	6	0	0	0	0
680	690	61	50	38	29	22	14	7	0	0	0	0
690	700	62	51	40	30	23	15	8	0	0	0	0

OTHER DEDUCTIONS Employees may voluntarily authorize withholdings for charitable organizations, retirement, and other purposes. All voluntary deductions from gross earnings should be authorized in writing by the employee. The authorization(s) may be made individually or as part of a group plan. Deductions for charitable organizations, such as the **United Fund**, or for financial arrangements, such as U.S. savings bonds and repayment of loans from company credit unions, are made individually. Deductions for union dues, health and life insurance, and pension plans are often made on a group basis. We assume that Jordan has weekly voluntary deductions of \$10 for the United Fund and \$5 for union dues.

NET PAY

Alternative Terminology
Net pay is also called *take-home pay*.

Academy Company determines **net pay** by subtracting payroll deductions from gross earnings. Illustration H-6 shows the computation of Jordan's net pay for the pay period.

Illustration H-6
Computation of net pay

Gross earnings		\$ 552.00
Payroll deductions:		
FICA taxes	\$42.23	
Federal income taxes	24.00	
State income taxes	11.04	
United Fund	10.00	
Union dues	5.00	92.27
Net pay		\$459.73

Assuming that Michael Jordan's wages for each week during the year are \$552, total wages for the year are \$28,704 (52 × \$552). Thus, all of Jordan's wages are subject to FICA tax during the year. In comparison, let's assume that Jordan's department head earns \$3,000 per week, or \$156,000 for the year. Since only the first \$117,000 is subject to Social Security taxes, the maximum FICA withholdings on the department head's earnings would be \$9,516 [(\$117,000 × 6.20%) + (\$156,000 × 1.45%)].

Recording the Payroll

Recording the payroll involves maintaining payroll department records, recognizing payroll expenses and liabilities, and recording payment of the payroll.

MAINTAINING PAYROLL DEPARTMENT RECORDS

To comply with state and federal laws, an employer must keep a cumulative record of each employee's gross earnings, deductions, and net pay during the year. The record that provides this information is the **employee earnings record**. Illustration H-7 shows Michael Jordan's employee earnings record.

Illustration H-7
Employee earnings record

Companies keep a separate earnings record for each employee and update these records after each pay period. The employer uses the cumulative payroll data on the earnings record to (1) determine when an employee has earned the maximum earnings subject to FICA taxes, (2) file state and federal payroll tax returns (as explained later), and (3) provide each employee with a statement of gross earnings and tax withholdings for the year. Illustration H-11 (page H-10) shows this statement.

In addition to employee earnings records, many companies find it useful to prepare a **payroll register**. This record accumulates the gross earnings, deductions, and net pay by employee for each pay period. Illustration H-8 (page H-6) presents Academy Company's payroll register. It provides the documentation for preparing a paycheck for each employee. For example, it shows the data for Michael Jordan in the wages section. In this example, Academy's total weekly payroll is \$17,210, as shown in the salary and wages expense column (column N, row 31).

Note that this record is a listing of each employee's payroll data for the pay period. In some companies, a payroll register is a journal or book of original entry. Postings are made from it directly to ledger accounts. In other companies, the payroll register is a memorandum record that provides the data for a general journal entry and subsequent posting to the ledger accounts. Academy follows the latter procedure.

ACADEMY COMPANY														
Payroll Register														
For the Week Ending January 14, 2017

Illustration H-8
Payroll register

RECOGNIZING PAYROLL EXPENSES AND LIABILITIES

From the payroll register in Illustration H-8, Academy Company makes a journal entry to record the payroll. For the week ending January 14, the entry is as follows.

A	=	L	+	SE	
		-17,210.00 Exp			Jan. 14
		+1,316.57			Salaries and Wages Expense
		+3,490.00			FICA Taxes Payable
		+344.20			Federal Income Taxes Payable
		+421.50			State Income Taxes Payable
		+115.00			United Fund Payable
		+11,522.73			Union Dues Payable
					Salaries and Wages Payable
Cash Flows					(To record payroll for the week ending
no effect					January 14)
					17,210.00
					1,316.57
					3,490.00
					344.20
					421.50
					115.00
					11,522.73

The company credits specific liability accounts for the mandatory and voluntary deductions made during the pay period. In the example, Academy debits Salaries and Wages Expense for the gross earnings of its employees. The amount credited to Salaries and Wages Payable is the sum of the individual checks the employees will receive.

RECORDING PAYMENT OF THE PAYROLL

A company makes payments by check (or electronic funds transfer) either from its regular bank account or a payroll bank account. Each paycheck is usually accompanied by a detachable **statement of earnings** document. This shows the employee's gross earnings, payroll deductions, and net pay, both for the period and for the year-to-date. Academy Company uses its regular bank account for payroll checks. Illustration H-9 shows the paycheck and statement of earnings for Michael Jordan.

Paycheck and statement of earnings

Helpful Hint

None of the income tax liabilities result in payroll tax expense for the employer because the employer is acting only as a collection agent for the government.

Following payment of the payroll, the company enters the check numbers in the payroll register. Academy records payment of the payroll as follows.

Jan. 14	Salaries and Wages Payable	11,522.73	
	Cash		11,522.73
	(To record payment of payroll)		

A	=	L	+	SE
		-11,522.73		
		-11,522.73		
Cash Flows				
		-11,522.73		

Many medium- and large-size companies use a payroll processing center that performs payroll recordkeeping services. Companies send the center payroll information about employee pay rates and hours worked. The center maintains the payroll records and prepares the payroll checks. In most cases, it costs less to process the payroll through the center (outsource) than if the company did so internally.

LEARNING OBJECTIVE**2****Record employer payroll taxes.**

Payroll tax expense for businesses results from three taxes that governmental agencies levy **on employers**. These taxes are (1) FICA, (2) federal unemployment tax, and (3) state unemployment tax. These taxes plus such items as paid vacations and pensions are collectively referred to as **fringe benefits**. As indicated earlier, the cost of fringe benefits in many companies is substantial.

FICA Taxes

Each employee must pay FICA taxes. In addition, employers must match each employee's FICA contribution. This means the employer must remit to the federal government 12.4% of each employee's first \$117,000 of taxable earnings, plus 2.9% of each employee's earnings, regardless of amount. The matching contribution results in **payroll tax expense** to the employer. The employer's tax is subject

to the same rate and maximum earnings as the employee's. The company uses the same account, FICA Taxes Payable, to record both the employee's and the employer's FICA contributions. For the January 14 payroll, Academy Company's FICA tax contribution is \$1,316.57 ($\$17,210.00 \times 7.65\%$).

Federal Unemployment Taxes

The Federal Unemployment Tax Act (FUTA) is another feature of the federal Social Security program. **Federal unemployment taxes** provide benefits for a limited period of time to employees who lose their jobs through no fault of their own. The FUTA tax rate is currently 6.2% of taxable wages. The taxable wage base is the first \$7,000 of wages paid to each employee in a calendar year. Employers who pay the state unemployment tax on a timely basis will receive an offset credit of up to 5.4%. Therefore, the net federal tax rate is generally 0.8% ($6.2\% - 5.4\%$). This rate would equate to a maximum of \$56 of federal tax per employee per year ($0.8\% \times \$7,000$). State tax rates are based on state law.

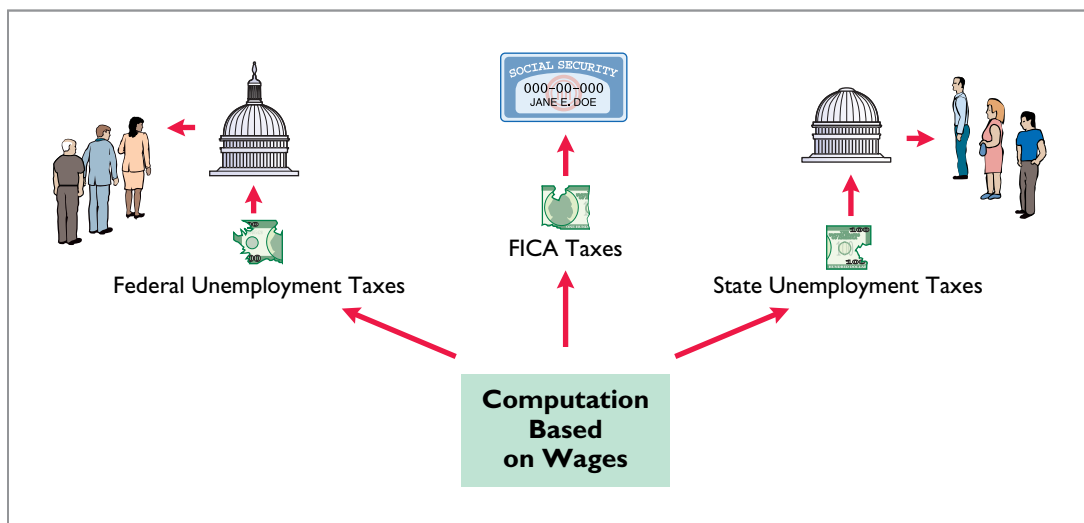

The **employer** bears the entire federal unemployment tax. There is no deduction or withholding from employees. Companies use the account Federal Unemployment Taxes Payable to recognize this liability. The federal unemployment tax for Academy Company for the January 14 payroll is \$137.68 ($\$17,210.00 \times 0.8\%$).

State Unemployment Taxes

All states have unemployment compensation programs under state unemployment tax acts (SUTA). Like federal unemployment taxes, **state unemployment taxes** provide benefits to employees who lose their jobs. These taxes are levied on employers.² The basic rate is usually 5.4% on the first \$7,000 of wages paid to an employee during the year. The state adjusts the basic rate according to the employer's experience rating. Companies with a history of stable employment may pay less than 5.4%. Companies with a history of unstable employment may pay more than the basic rate. Regardless of the rate paid, the company's credit on the federal unemployment tax is still 5.4%.

Companies use the account State Unemployment Taxes Payable for this liability. The state unemployment tax for Academy Company for the January 14 payroll is \$929.34 ($\$17,210.00 \times 5.4\%$). Illustration H-10 summarizes the types of employer payroll taxes.

Illustration H-10
Employer payroll taxes

²In a few states, the employee is also required to make a contribution. *In this appendix, including the homework, we will assume that the tax is only on the employer.*

Recording Employer Payroll Taxes

Companies usually record employer payroll taxes at the same time they record the payroll. The entire amount of gross pay (\$17,210.00) shown in the payroll register in Illustration H-8 is subject to each of the three taxes mentioned previously. Accordingly, Academy records the payroll tax expense associated with the January 14 payroll with the following entry.

Jan. 14	Payroll Tax Expense FICA Taxes Payable Federal Unemployment Taxes Payable State Unemployment Taxes Payable (To record employer's payroll taxes on January 14 payroll)	2,383.59 	1,316.57 137.68 929.34
---------	--	------------------------------	------------------------------

A	=	L	+	SE
		-2,383.59		Exp
				+1,316.57
				+137.68
				+929.34

Cash Flows
no effect

Note that Academy uses separate liability accounts instead of a single credit to Payroll Taxes Payable. Why? Because these liabilities are payable to different taxing authorities at different dates. Companies classify the liability accounts in the balance sheet as current liabilities since they will be paid within the next year. They classify Payroll Tax Expense on the income statement as an operating expense.

Filing and Remitting Payroll Taxes

Preparation of payroll tax returns is the responsibility of the payroll department. The treasurer's department makes the tax payment. Much of the information for the returns is obtained from employee earnings records.

For purposes of reporting and remitting to the IRS, the company combines the FICA taxes and federal income taxes that it withheld. **Companies must report the taxes quarterly**, no later than one month following the close of each quarter. The remitting requirements depend on the amount of taxes withheld and the length of the pay period. Companies remit funds through deposits in either a Federal Reserve bank or an authorized commercial bank.

Companies generally file and remit federal unemployment taxes **annually** on or before January 31 of the subsequent year. Earlier payments are required when the tax exceeds a specified amount. Companies usually must file and pay state unemployment taxes by the **end of the month following each quarter**. When payroll taxes are paid, companies debit payroll liability accounts, and credit Cash.

Employers also must provide each employee with a **Wage and Tax Statement (Form W-2)** by January 31 following the end of a calendar year. This statement shows gross earnings, FICA taxes withheld, and income taxes withheld for the year. The required W-2 form for Michael Jordan, using assumed annual data, is shown in Illustration H-11 (page H-10). The employer must send a copy of each employee's Wage and Tax Statement (Form W-2) to the Social Security Administration. This agency subsequently furnishes the Internal Revenue Service with the income data required.

LEARNING OBJECTIVE

3

Discuss the objectives of internal control for payroll.

Chapter 7 introduced internal control. As applied to payrolls, the objectives of internal control are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy and reliability of the accounting records pertaining to payrolls.

Irregularities often result if internal control is lax. Frauds involving payroll include overstating hours, using unauthorized pay rates, adding fictitious employees to the payroll, continuing terminated employees on the payroll, and distributing duplicate payroll checks. Moreover, inaccurate records will result in incorrect paychecks, financial statements, and payroll tax returns.

Payroll activities involve four functions: hiring employees, timekeeping, preparing the payroll, and paying the payroll. For effective internal control, companies should assign these four functions to different departments or individuals. Illustration H-12 highlights these functions and illustrates their internal control features.

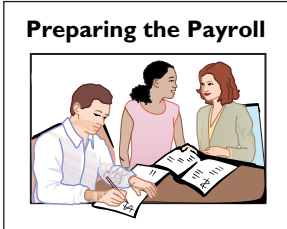

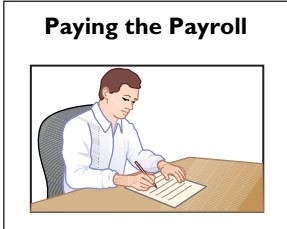

Payroll Function		Payroll Function	
<p>Hiring Employees</p> 	<p>Internal control feature: Human Resources department documents and authorizes employment.</p> <p>Fraud prevented: Fictitious employees are not added to payroll.</p>	<p>Preparing the Payroll</p> 	<p>Internal control feature: Two (or more) employees verify payroll amounts; supervisor approves.</p> <p>Fraud prevented: Payroll calculations are accurate and relevant.</p>
<p>Timekeeping</p> 	<p>Internal control feature: Supervisors monitor hours worked through time cards and time reports.</p> <p>Fraud prevented: Employee not paid for hours not worked.</p>	<p>Paying the Payroll</p> 	<p>Internal control feature: Treasurer signs and distributes prenumbered checks.</p> <p>Fraud prevented: Checks are not lost, misappropriated, or unavailable for proof of payment; endorsed check provides proof of payment.</p>

Illustration H-12
Internal control for payroll

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- Record the payroll for a pay period.** The computation of the payroll involves gross earnings, payroll deductions, and net pay. In recording the payroll, Salaries and Wages Expense is debited for gross earnings, individual tax and other liability accounts are credited for payroll deductions, and Salaries and Wages Payable is credited for net pay. When the payroll is paid, Salaries and Wages Payable is debited, and Cash is credited.
- Record employer payroll taxes.** Employer payroll taxes consist of FICA, federal unemployment taxes, and state unemployment taxes. The taxes are usually accrued at the time the payroll is recorded by debiting Payroll Tax Expense and crediting separate liability accounts for each type of tax.
- Discuss the objectives of internal control for payroll.** The objectives of internal control for payroll are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy and reliability of the accounting records pertaining to payrolls.

GLOSSARY REVIEW

- Bonus** Compensation to management personnel and other employees, based on factors such as increased sales or the amount of net income. (p. H-2).
- Employee earnings record** A cumulative record of each employee's gross earnings, deductions, and net pay during the year. (p. H-5).
- Federal unemployment taxes** Taxes imposed on the employer that provide benefits for a limited time period to employees who lose their jobs through no fault of their own. (p. H-8).
- Fees** Payments made for the services of professionals. (p. H-1).
- FICA taxes** Taxes designed to provide workers with supplemental retirement, employment disability, and medical benefits. (p. H-3).
- Gross earnings** Total compensation earned by an employee. (p. H-1).
- Net pay** Gross earnings less payroll deductions. (p. H-4).
- Payroll deductions** Deductions from gross earnings to determine the amount of a paycheck. (p. H-2).
- Payroll register** A payroll record that accumulates the gross earnings, deductions, and net pay by employee for each pay period. (p. H-5).

Salaries Specified amount per month or per year paid to managerial, administrative, and sales personnel. (p. H-1).

Statement of earnings A document attached to a paycheck that indicates the employee's gross earnings, payroll deductions, and net pay. (p. H-6).

State unemployment taxes Taxes imposed on the employer that provide benefits to employees who lose their jobs. (p. H-8).

Wage and Tax Statement (Form W-2) A form showing gross earnings, FICA taxes withheld, and income taxes withheld which is prepared annually by an employer for each employee. (p. H-9).

Wages Amounts paid to employees based on a rate per hour or on a piecework basis. (p. H-1).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. When recording payroll:
- gross earnings are recorded as salaries and wages payable.
 - net pay is recorded as salaries and wages expense.
 - payroll deductions are recorded as liabilities.
 - More than one of the above.
- (LO 2) 2. Employer payroll taxes do **not** include:
- federal unemployment taxes.
 - state unemployment taxes.
 - federal income taxes.
 - FICA taxes.
3. FICA Taxes Payable was credited for \$7,500 in the entry when Antonio Company recorded payroll. When Antonio Company records employer's payroll taxes, FICA Taxes Payable should be credited for:
- \$0.
 - \$7,500.
 - \$15,000.
 - Some other amount.
4. The department that should pay the payroll is the:
- timekeeping department.
 - human resources department.
 - payroll department.
 - treasurer's department.

Solutions

1. (c) When recording payroll, payroll deductions are recorded as liabilities. The other choices are incorrect because (a) gross earnings are recorded as salaries and wages expense, (b) net pay is recorded as salaries and wages payable, and (d) only one of the answer choices is true concerning payroll.
2. (c) Federal income taxes are a payroll deduction, not an employer payroll tax. The employer is merely a collection agent. The other choices are all included in employer payroll taxes.
3. (b) Each employee pays FICA taxes, but the employer must match each employee's FICA contribution. Because the employer's tax is subject to the same rate and maximum earnings as the employee's, FICA Taxes Payable would also be \$7,500. The other choices are therefore incorrect.
4. (d) The treasurer's department pays or distributes the payroll checks. The other choices are incorrect because (a) the timekeeping department monitors hours worked by employees, (b) the human resources department documents and authorizes employment, and (c) the payroll department prepares the payroll checks.

Brief Exercises, Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

- What is the difference between gross pay and net pay? Which amount should a company record as wages or salaries expense?
- Which payroll tax is levied on both employers and employees?
- Are the federal and state income taxes withheld from employee paychecks a payroll tax expense for the employer? Explain your answer.
- What do the following acronyms stand for: FICA, FUTA, and SUTA?
- What information is shown on a W-2 statement?
- Distinguish between the two types of payroll deductions and give examples of each.
- What are the primary uses of the employee earnings record?

8. (a) Identify the three types of employer payroll taxes.
 (b) How are tax liability accounts and Payroll Tax Expense classified in the financial statements?
9. You are a newly hired accountant with Nolasco Company. On your first day, the controller asks you to identify the main internal control objectives related to payroll accounting. How would you respond?
10. What are the four functions associated with payroll activities?

BRIEF EXERCISES

- BEH-1** Beth Corbin's regular hourly wage rate is \$16, and she receives an hourly rate of \$24 for work in excess of 40 hours. During a January pay period, Beth works 45 hours. Beth's federal income tax withholding is \$95, she has no voluntary deductions, and the FICA tax rate is 7.65%. Compute Beth Corbin's gross earnings and net pay for the pay period. *Compute gross earnings and net pay.* (LO 1)
- BEH-2** Data for Beth Corbin are presented in BEH-1. Prepare the journal entries to record (a) Beth's pay for the period and (b) the payment of Beth's wages. Use January 15 for the end of the pay period and the payment date. *Record a payroll and the payment of wages.* (LO 1)
- BEH-3** In January, gross earnings in Lugo Company totaled \$80,000. All earnings are subject to 7.65% FICA taxes, 5.4% state unemployment taxes, and 0.8% federal unemployment taxes. Prepare the entry to record January payroll tax expense. *Record employer payroll taxes.* (LO 2)
- BEH-4** Swenson Company has the following payroll procedures. *Identify payroll functions.* (LO 3)
- Supervisor approves overtime work.
 - The human resources department prepares hiring authorization forms for new hires.
 - A second payroll department employee verifies payroll calculations.
 - The treasurer's department pays employees.
- Identify the payroll function to which each procedure pertains.

EXERCISES

- EH-1** Maria Garza's regular hourly wage rate is \$16, and she receives a wage of 1½ times the regular hourly rate for work in excess of 40 hours. During a March weekly pay period, Maria worked 42 hours. Her gross earnings prior to the current week were \$6,000. Maria is married and claims three withholding allowances. Her only voluntary deduction is for group hospitalization insurance at \$25 per week. *Compute net pay and record pay for one employee.* (LO 1)

Instructions

- Compute the following amounts for Maria's wages for the current week.
 - Gross earnings.
 - FICA taxes. (Assume a 7.65% rate on maximum of \$117,000.)
 - Federal income taxes withheld. (Use the withholding table in Illustration H-5, page H-4.)
 - State income taxes withheld. (Assume a 2.0% rate.)
 - Net pay.
- Record Maria's pay.

- EH-2** Employee earnings records for Slaymaker Company reveal the following gross earnings for four employees through the pay period of December 15. *Compute maximum FICA deductions.* (LO 1)

J. Seligman	\$93,500	L. Marshall	\$115,100
R. Eby	\$113,600	T. Olson	\$120,000

For the pay period ending December 31, each employee's gross earnings is \$4,500. The FICA tax rate is 7.65% on gross earnings of \$117,000.

Instructions

Compute the FICA withholdings that should be made for each employee for the December 31 pay period. (Show computations.)

H-14 Appendix H Payroll Accounting

Prepare payroll register and record payroll and payroll tax expense.

(LO 1, 2)

EH-3 Ramirez Company has the following data for the weekly payroll ending January 31.

Employee	Hours						Hourly Rate	Federal	Health Insurance
	M	T	W	T	F	S		Income Tax Withholding	
L. Helton	8	8	9	8	10	3	\$12	\$34	\$10
R. Kenseth	8	8	8	8	8	2	14	37	25
D. Tavaras	9	10	8	8	9	0	15	58	25

Employees are paid 1½ times the regular hourly rate for all hours worked in excess of 40 hours per week. FICA taxes are 7.65% on the first \$117,000 of gross earnings. Ramirez Company is subject to 5.4% state unemployment taxes and 0.8% federal unemployment taxes on the first \$7,000 of gross earnings.

Instructions

- Prepare the payroll register for the weekly payroll.
- Prepare the journal entries to record the payroll and Ramirez's payroll tax expense.

Compute missing payroll amounts and record payroll.

(LO 1)

EH-4 Selected data from a February payroll register for Sutton Company are presented below. Some amounts are intentionally omitted.

Gross earnings:		State income taxes	\$ (3)
Regular	\$9,100	Union dues	100
Overtime	(1)	Total deductions	(4)
Total	(2)	Net pay	\$7,595
Deductions:		Account debited:	
FICA taxes	\$ 765	Salaries and wages expense	(5)
Federal income taxes	1,140		

FICA taxes are 7.65%. State income taxes are 4% of gross earnings.

Instructions

- Fill in the missing amounts.
- Journalize the February payroll and the payment of the payroll.

Determine employer's payroll taxes; record payroll tax expense.

(LO 2)

EH-5 According to a payroll register summary of Frederickson Company, the amount of employees' gross pay in December was \$850,000, of which \$80,000 was not subject to Social Security taxes of 6.2% and \$750,000 was not subject to state and federal unemployment taxes.

Instructions

- Determine the employer's payroll tax expense for the month, using the following rates: FICA 7.65%, state unemployment 5.4%, and federal unemployment 0.8%.
- Prepare the journal entry to record December payroll tax expense.

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

Prepare payroll register and payroll entries.

(LO 1, 2)

PH-1A Mann Hardware has four employees who are paid on an hourly basis plus time-and-a-half for all hours worked in excess of 40 a week. Payroll data for the week ended March 15, 2017, are presented on the next page.

<u>Employee</u>	<u>Hours Worked</u>	<u>Hourly Rate</u>	<u>Federal Income Tax Withholdings</u>	<u>United Fund</u>
Ben Abel	40	\$15.00	\$?	\$5.00
Rita Hager	42	16.00	?	5.00
Jack Never	44	13.00	60.00	8.00
Sue Perez	46	13.00	61.00	5.00

Abel and Hager are married. They claim 0 and 4 withholding allowances, respectively. The following tax rates are applicable: FICA 7.65%, state income taxes 3%, state unemployment taxes 5.4%, and federal unemployment 0.8%.

Instructions

- (a) Prepare a payroll register for the weekly payroll. (Use the wage-bracket withholding table in the text for federal income tax withholdings.) (a) Net pay \$2,039.30
- (b) Journalize the payroll on March 15, 2017, and the accrual of employer payroll taxes. (b) Payroll tax expense \$349.43
- (c) Journalize the payment of the payroll on March 16, 2017. (d) Cash paid \$578.02
- (d) Journalize the deposit in a Federal Reserve bank on March 31, 2017, of the FICA and federal income taxes payable to the government.

PH-2A The following payroll liability accounts are included in the ledger of Harmon Company on January 1, 2017.

FICA Taxes Payable	\$ 760.00
Federal Income Taxes Payable	1,204.60
State Income Taxes Payable	108.95
Federal Unemployment Taxes Payable	288.95
State Unemployment Taxes Payable	1,954.40
Union Dues Payable	870.00
U.S. Savings Bonds Payable	360.00

Journalize payroll transactions and adjusting entries.

(LO 1, 2)

In January, the following transactions occurred.

- Jan. 10 Sent check for \$870.00 to union treasurer for union dues.
- 12 Remitted check for \$1,964.60 to the Federal Reserve bank for FICA taxes and federal income taxes withheld.
- 15 Purchased U.S. Savings Bonds for employees by writing check for \$360.00.
- 17 Paid state income taxes withheld from employees.
- 20 Paid federal and state unemployment taxes.
- 31 Completed monthly payroll register, which shows salaries and wages \$58,000, FICA taxes withheld \$4,437, federal income taxes payable \$2,158, state income taxes payable \$454, union dues payable \$400, United Fund contributions payable \$1,888, and net pay \$48,663.
- 31 Prepared payroll checks for the net pay and distributed checks to employees.

At January 31, the company also makes the following accrued adjustments pertaining to employee compensation.

- Employer payroll taxes: FICA taxes 7.65%, federal unemployment taxes 0.8%, and state unemployment taxes 5.4%.
- Vacation pay: 6% of gross earnings. (Use Vacation Benefit Expense to record the transaction.)

Instructions

- (a) Journalize the January transactions. (b) Payroll tax expense \$8,033; Vacation benefits expense \$3,480
- (b) Journalize the adjustments pertaining to employee compensation at January 31.

PH-3A For the year ended December 31, 2017, Denkinger Electrical Repair Company reports the following summary payroll data.

Gross earnings:	
Administrative salaries	\$200,000
Electricians' wages	370,000
Total	<u>\$570,000</u>

Prepare entries for payroll and payroll taxes; prepare W-2 data.

(LO 1, 2)

Deductions:	
FICA taxes	\$ 38,645
Federal income taxes withheld	174,400
State income taxes withheld (3%)	17,100
United Fund contributions payable	27,500
Health insurance premiums	17,200
Total	<u>\$274,845</u>

Denkinger Company's payroll taxes are Social Security tax 6.2%, Medicare tax 1.45%, state unemployment 2.5% (due to a stable employment record), and 0.8% federal unemployment. Gross earnings subject to Social Security taxes of 6.2% total \$490,000, and gross earnings subject to unemployment taxes total \$135,000.

Instructions

- (a) Salaries and wages payable \$295,155
- (b) Payroll tax expense \$43,100
- (a) Prepare a summary journal entry at December 31 for the full year's payroll.
- (b) Journalize the adjusting entry at December 31 to record the employer's payroll taxes.
- (c) The W-2 Wage and Tax Statement requires the following dollar data.

<u>Wages, Tips, Other Compensation</u>	<u>Federal Income Tax Withheld</u>	<u>State Income Tax Withheld</u>	<u>FICA Wages</u>	<u>FICA Tax Withheld</u>
--	--	--------------------------------------	-----------------------	------------------------------

Complete the required data for the following employees.

<u>Employee</u>	<u>Gross Earnings</u>	<u>Federal Income Tax Withheld</u>
Maria Sandoval	\$59,000	\$28,500
Jennifer Mingenback	26,000	10,200

APPENDIX PREVIEW A reliable accounting information system is a necessity for any company. Whether companies use pen, pencil, or computers in maintaining accounting records, certain principles and procedures apply. The purpose of this chapter is to explain and illustrate two components of an accounting information system: subsidiary ledgers and special journals.

LEARNING OBJECTIVES

- 1 Describe the nature and purpose of a subsidiary ledger.
- 2 Record transactions in special journals.

LEARNING OBJECTIVE

1

Describe the nature and purpose of a subsidiary ledger.

Imagine a business that has several thousand charge (credit) customers and shows the transactions with these customers in only one general ledger account—Accounts Receivable. It would be nearly impossible to determine the balance owed by an individual customer at any specific time. Similarly, the amount payable to one creditor would be difficult to locate quickly from a single Accounts Payable account in the general ledger.

Instead, companies use subsidiary ledgers to keep track of individual balances. A **subsidiary ledger** is a group of accounts with a common characteristic (for example, all accounts receivable). It is an addition to, and an expansion of, the general ledger. The subsidiary ledger frees the general ledger from the details of individual balances.

Two common subsidiary ledgers are as follows.

1. The **accounts receivable** (or **customers'**) **subsidiary ledger**, which collects transaction data of individual customers.
2. The **accounts payable** (or **creditors'**) **subsidiary ledger**, which collects transaction data of individual creditors.

In each of these subsidiary ledgers, companies usually arrange individual accounts in alphabetical order.

A general ledger account summarizes the detailed data from a subsidiary ledger. For example, the detailed data from the accounts receivable subsidiary ledger are summarized in Accounts Receivable in the general ledger. The general ledger account that summarizes subsidiary ledger data is called a **control account**. Illustration I-1 (page I-2) presents an overview of the relationship of subsidiary ledgers to the general ledger. In Illustration I-1, the general ledger control

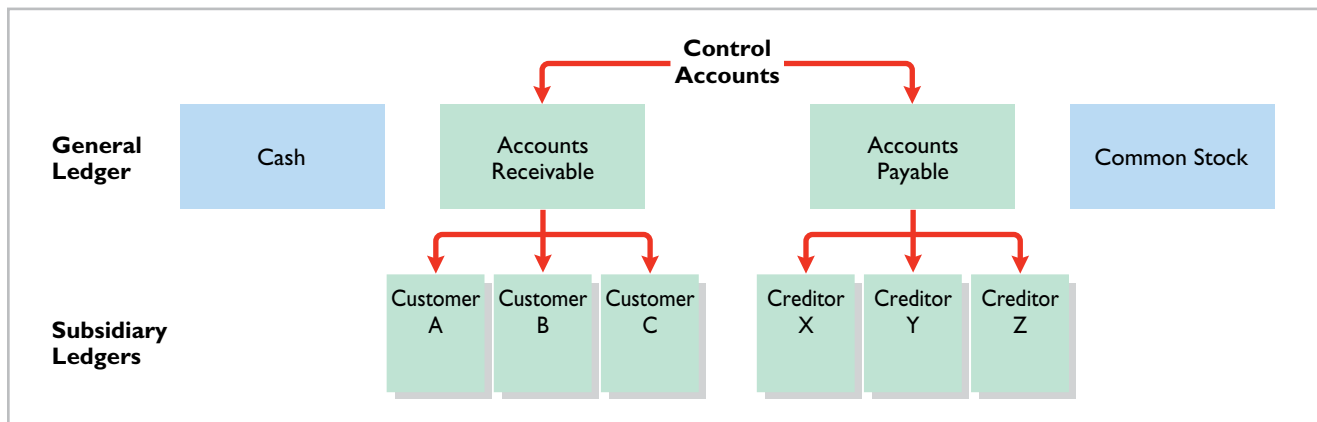

Illustration I-1
Relationship of general ledger
and subsidiary ledgers

accounts and subsidiary ledger accounts are in green. Note that Cash and Common Stock in this illustration are not control accounts because there are no subsidiary ledger accounts related to these accounts.

At the end of an accounting period, each general ledger control account balance must equal the composite balance of the individual accounts in the related subsidiary ledger. For example, the balance in Accounts Payable in Illustration I-1 must equal the total of the subsidiary balances of Creditors X + Y + Z.

Subsidiary Ledger Example

Illustration I-2 lists sales and collection transactions for Pujols Enterprises.

Illustration I-2
Sales and collection
transactions

Credit Sales			Collections on Account		
Jan. 10	Aaron Co.	\$ 6,000	Jan. 19	Aaron Co.	\$4,000
12	Branden Inc.	3,000	21	Branden Inc.	3,000
20	Caron Co.	3,000	29	Caron Co.	1,000
		<u>\$12,000</u>			<u>\$8,000</u>

Illustration I-3 provides an example of a control account and subsidiary ledger based on these transactions. (Due to space considerations, the explanation column in these accounts is not shown in this and subsequent illustrations.)

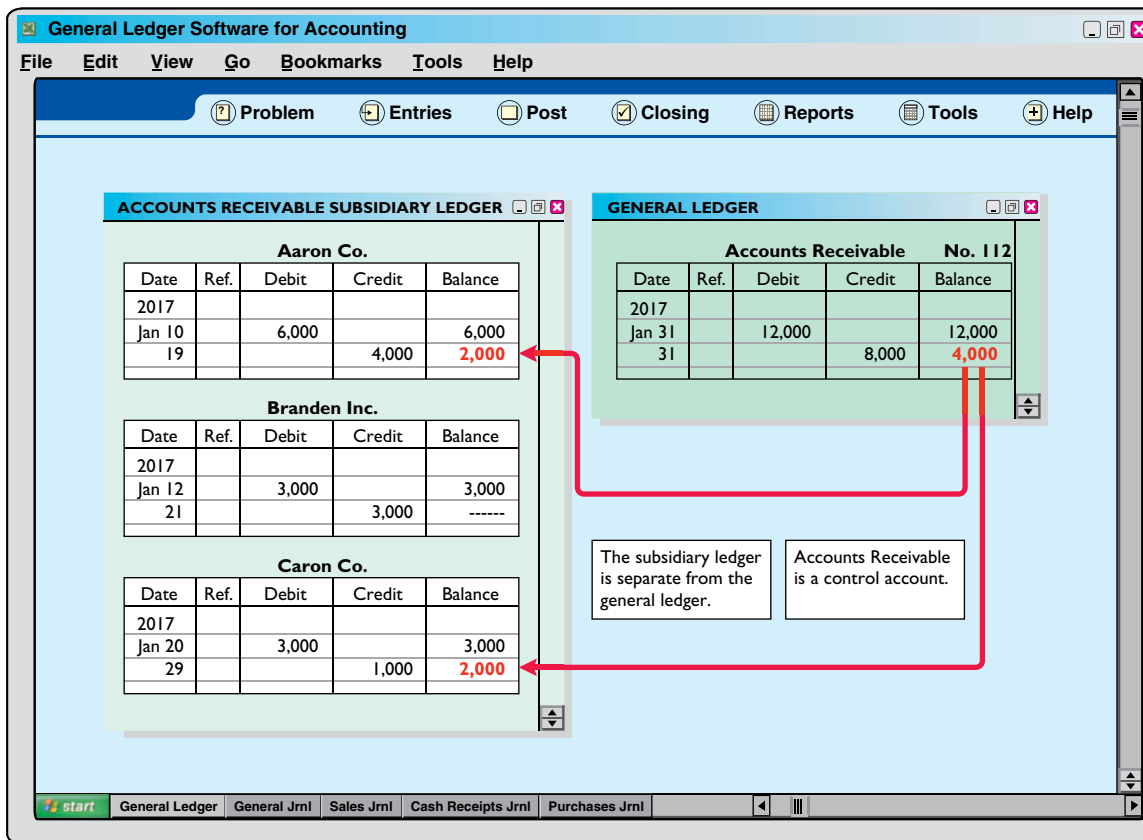

Pujols can reconcile the total debits (\$12,000) and credits (\$8,000) in Accounts Receivable in the general ledger to the detailed debits and credits in the subsidiary accounts. Also, the balance of \$4,000 in the control account agrees with the total of the balances in the individual accounts (Aaron Co. \$2,000 + Branden Inc. \$0 + Caron Co. \$2,000) in the subsidiary ledger.

As Illustration I-3 shows, companies make monthly postings to the control accounts in the general ledger. This practice allows them to prepare monthly financial statements. Companies post to the individual accounts in the subsidiary ledger daily. Daily posting ensures that account information is current. This enables the company to monitor credit limits, bill customers, and answer inquiries from customers about their account balances.

Advantages of Subsidiary Ledgers

Subsidiary ledgers have several advantages:

1. **They show in a single account transactions affecting one customer or one creditor**, thus providing up-to-date information on specific account balances.

2. **They free the general ledger of excessive details.** As a result, a trial balance of the general ledger does not contain vast numbers of individual account balances.
3. **They help locate errors in individual accounts** by reducing the number of accounts in one ledger and by using control accounts.
4. **They make possible a division of labor in posting.** One employee can post to the general ledger while someone else posts to the subsidiary ledgers.

Illustration I-3
Relationship between general and subsidiary ledgers

DO IT! 1 Subsidiary Ledgers

Presented below is information related to Sims Company for its first month of operations. Determine the balances that appear in the accounts payable subsidiary ledger. What Accounts Payable balance appears in the general ledger at the end of January?

Credit Purchases			Cash Paid		
Jan. 5	Devon Co.	\$11,000	Jan. 9	Devon Co.	\$7,000
11	Shelby Co.	7,000	14	Shelby Co.	2,000
22	Taylor Co.	14,000	27	Taylor Co.	9,000

Solution

Subsidiary ledger balances:
 Devon Co.: \$4,000 (\$11,000 – \$7,000)
 Shelby Co.: \$5,000 (\$7,000 – \$2,000)
 Taylor Co.: \$5,000 (\$14,000 – \$9,000)
 General ledger Accounts Payable balance: \$14,000 (\$4,000 + \$5,000 + \$5,000)

Related exercise material: **BEI-1, BEI-2, EI-1, EI-4, EI-5, and DO IT! I-1.**

Action Plan

- ✓ Subtract cash paid from credit purchases to determine the balances in the accounts payable subsidiary ledger.
- ✓ Sum the individual balances to determine the Accounts Payable balance.

Record transactions in special journals.

So far you have learned to journalize transactions in a two-column general journal and post each entry to the general ledger. This procedure is satisfactory in only very small companies. To expedite journalizing and posting, most companies use special journals **in addition to the general journal**.

Companies use **special journals** to record similar types of transactions. Examples are all sales of merchandise on account or all cash receipts. The types of transactions that occur frequently in a company determine what special journals the company uses. Most merchandising companies record daily transactions using the journals shown in Illustration I-4.

Illustration I-4

Use of special journals and the general journal

Sales Journal	Cash Receipts Journal	Purchases Journal	Cash Payments Journal	General Journal
Used for: All sales of merchandise on account	Used for: All cash received (including cash sales)	Used for: All purchases of merchandise on account	Used for: All cash paid (including cash purchases)	Used for: Transactions that cannot be entered in a special journal, including correcting, adjusting, and closing entries

If a transaction cannot be recorded in a special journal, the company records it in the general journal. For example, if a company had special journals for only the four types of transactions listed above, it would record purchase returns and allowances that do not affect cash in the general journal. Similarly, **correcting, adjusting, and closing entries are recorded in the general journal.** In some situations, companies might use special journals other than those listed above. For example, when sales returns and allowances that do not affect cash are frequent, a company might use a special journal to record these transactions.

Special journals **permit greater division of labor** because several people can record entries in different journals at the same time. For example, one employee may journalize all cash receipts, and another may journalize all credit sales. Also, the use of special journals **reduces the time needed to complete the posting process.** With special journals, companies may post some accounts monthly, instead of daily, as we will illustrate later in this appendix. On the following pages, we discuss the four special journals shown in Illustration I-4.

Sales Journal

In the **sales journal**, companies record **sales of merchandise on account**. Cash sales of merchandise go in the cash receipts journal. Credit sales of assets other than merchandise go in the general journal.

JOURNALIZING CREDIT SALES

To demonstrate use of a sales journal, we will use data for Karns Wholesale Supply, which uses a **perpetual inventory system**. Under this system, each entry in the

Helpful Hint

Postings are also made daily to individual ledger accounts in the inventory subsidiary ledger to maintain a perpetual inventory.

sales journal results in one entry **at selling price** and another entry **at cost**. The entry at selling price is a debit to Accounts Receivable (a control account) and a credit of equal amount to Sales Revenue. The entry at cost is a debit to Cost of Goods Sold and a credit of equal amount to Inventory (a control account). Using a sales journal with two amount columns, the company can show on only one line a sales transaction at both selling price and cost. Illustration I-5 shows this two-column sales journal of Karns Wholesale Supply, using assumed credit sales transactions (for sales invoices 101–107).

Illustration I-5
Journalizing the sales journal—
perpetual inventory system

Date	Account Debited	Invoice No.	Ref.	Accts. Receivable Dr. Sales Revenue Cr.	Cost of Goods Sold Dr. Inventory Cr.
2017					
May 3	Abbot Sisters	101		10,600	6,360
7	Babson Co.	102		11,350	7,370
14	Carson Bros.	103		7,800	5,070
19	Deli Co.	104		9,300	6,510
21	Abbot Sisters	105		15,400	10,780
24	Deli Co.	106		21,210	15,900
27	Babson Co.	107		14,570	10,200
				<u>90,230</u>	<u>62,190</u>

Note that, unlike the general journal, an explanation is not required for each entry in a special journal. Also, the use of prenumbered invoices ensures that all invoices are journalized. Finally, the reference (Ref.) column is not used in journalizing. It is used in posting the sales journal, as explained next.

POSTING THE SALES JOURNAL

Companies make daily postings from the sales journal **to the individual accounts receivable** in the subsidiary ledger. Posting **to the general ledger** is done **monthly**. Illustration I-6 (page I-6) shows both the daily and monthly postings.

A check mark (✓) is inserted in the reference posting column to indicate that the daily posting to the customer's account has been made. If the subsidiary ledger accounts were numbered, the account number would be entered in place of the check mark. At the end of the month, Karns posts the column totals of the sales journal to the general ledger. Here, the column totals are as follows. From the selling-price column, a debit of \$90,230 to Accounts Receivable (account No. 112), and a credit of \$90,230 to Sales Revenue (account No. 401). From the cost column, a debit of \$62,190 to Cost of Goods Sold (account No. 505), and a credit of \$62,190 to Inventory (account No. 120). Karns inserts the account numbers below the column totals to indicate that the postings have been made. In both the general ledger and subsidiary ledger accounts, the reference **S1** indicates that the posting came from page 1 of the sales journal.

The subsidiary ledger is separate from the general ledger.

Accounts Receivable is a control account.

¹The normal balance for Inventory is a debit. But, because of the sequence in which we have posted the special journals, with the sales journals first, the credits to Inventory are posted before the debits. This posting sequence explains the credit balance in Inventory, which exists only until the other journals are posted.

start General Ledger General Jnl Sales Jnl Cash Receipts Jnl Purchases Jnl

Illustration I-6
Posting the sales journal

PROVING THE LEDGERS

The next step is to “prove” the ledgers. To do so, Karns must determine two things: (1) The total of the general ledger debit balances must equal the total of the general ledger credit balances. (2) The sum of the subsidiary ledger balances must equal the balance in the control account. Illustration I-7 shows the proof of the postings from the sales journal to the general and subsidiary ledger.

Postings to General Ledger		Debit Postings to the Accounts Receivable Subsidiary Ledger

Cost of Goods Sold	62,190		
	<u>\$152,420</u>		

Illustration I-7
Proving the equality of the postings from the sales journal

ADVANTAGES OF THE SALES JOURNAL

Use of a special journal to record sales on account has several advantages. First, the one-line entry for each sales transaction saves time. In the sales journal, it is not necessary to write out the four account titles for each transaction. Second, only totals, rather than individual entries, are posted to the general ledger. This saves posting time and reduces the possibilities of posting errors. Finally, a division of labor results because one individual can take responsibility for the sales journal.

Cash Receipts Journal

In the **cash receipts journal**, companies record all receipts of cash. The most common types of cash receipts are cash sales of merchandise and collections of accounts receivable. Many other possibilities exist, such as receipt of money from bank loans and cash proceeds from disposal of equipment. A one- or two-column cash receipts journal would not have space enough for all possible cash receipt transactions. Therefore, companies use a multi-column cash receipts journal.

Generally, a cash receipts journal includes the following columns: debit columns for Cash and Sales Discounts, and credit columns for Accounts Receivable, Sales Revenue, and “Other Accounts.” Companies use the Other Accounts category when the cash receipt does not involve a cash sale or a collection of accounts receivable. Under a perpetual inventory system, each sales entry also is accompanied by an entry that debits Cost of Goods Sold and credits Inventory for the cost of the merchandise sold. Illustration I-8 (page I-8) shows a six-column cash receipts journal.

At the end of the accounting period, the company posts totals to the general ledger.

start General Ledger General Jnl Sales Jnl Cash Receipts Jnl Purchases Jnl

Companies may use additional credit columns if these columns significantly reduce postings to a specific account. For example, a loan company, such as **Household International**, receives thousands of cash collections from customers. Using separate credit columns for Loans Receivable and Interest Revenue, rather than the Other Accounts credit column, would reduce postings.

JOURNALIZING CASH RECEIPTS TRANSACTIONS

To illustrate the journalizing of cash receipts transactions, we will continue with the May transactions of Karns Wholesale Supply. Collections from customers relate to the entries recorded in the sales journal in Illustration I-5. The entries in the cash receipts journal are based on the following cash receipts.

- May 1 Stockholders invested \$5,000 in the business.
 7 Cash sales of merchandise total \$1,900 (cost, \$1,240).
 10 Received a check for \$10,388 from Abbot Sisters in payment of invoice No. 101 for \$10,600 less a 2% discount.
 12 Cash sales of merchandise total \$2,600 (cost, \$1,690).
 17 Received a check for \$11,123 from Babson Co. in payment of invoice No. 102 for \$11,350 less a 2% discount.
 22 Received cash by signing a note for \$6,000.
 23 Received a check for \$7,644 from Carson Bros. in full for invoice No. 103 for \$7,800 less a 2% discount.
 28 Received a check for \$9,114 from Deli Co. in full for invoice No. 104 for \$9,300 less a 2% discount.

Further information about the columns in the cash receipts journal is listed below.

Debit Columns:

- 1. Cash.** Karns enters in this column the amount of cash actually received in each transaction. The column total indicates the total cash receipts for the month.
- 2. Sales Discounts.** Karns includes a Sales Discounts column in its cash receipts journal. By doing so, it does not need to enter sales discount items in the general journal. As a result, the cash receipts journal shows on one line the collection of an account receivable within the discount period.

Credit Columns:

- 3. Accounts Receivable.** Karns uses the Accounts Receivable column to record cash collections on account. The amount entered here is the amount to be credited to the individual customer's account.
- 4. Sales Revenue.** The Sales Revenue column records all cash sales of merchandise. Cash sales of other assets (plant assets, for example) are not reported in this column.
- 5. Other Accounts.** Karns uses the Other Accounts column whenever the credit is other than to Accounts Receivable or Sales Revenue. For example, in the first entry, Karns enters \$5,000 as a credit to Common Stock. This column is often referred to as the sundry accounts column.

Debit and Credit Column:

- 6. Cost of Goods Sold and Inventory.** This column records debits to Cost of Goods Sold and credits to Inventory.

In a multi-column journal, generally only one line is needed for each entry. Debit and credit amounts for each line must be equal. When Karns journalizes the collection from Abbot Sisters on May 10, for example, three amounts are indicated. Note also that the Account Credited column identifies both general ledger and subsidiary ledger account titles. General ledger accounts are illustrated in the May 1

Helpful Hint

A subsidiary ledger account is entered when the entry involves a collection of accounts receivable. A general ledger account is entered when the account is not shown in a special column (and an amount must be entered in the Other Accounts column). Otherwise, no account is shown in the Account Credited column.

and May 22 entries. A subsidiary account is illustrated in the May 10 entry for the collection from Abbot Sisters.

When Karns has finished journalizing a multi-column journal, it totals the amount columns and compares the totals to prove the equality of debits and credits. Illustration I-9 shows the proof of the equality of Karns' cash receipts journal.

Illustration I-9

Proving the equality of the cash receipts journal

<u>Debits</u>		<u>Credits</u>	
Cash	\$53,769	Accounts Receivable	\$39,050
Sales Discounts	781	Sales Revenue	4,500
Cost of Goods Sold	2,930	Other Accounts	11,000
	<u>\$57,480</u>	Inventory	2,930
			<u>\$57,480</u>

Totaling the columns of a journal and proving the equality of the totals is called **footing** and **crossfooting** a journal.

POSTING THE CASH RECEIPTS JOURNAL

Posting a multi-column journal (Illustration I-8, page I-8) involves the following steps.

1. **At the end of the month**, the company posts all column totals, except for the Other Accounts total, to the account title(s) specified in the column heading (such as Cash or Accounts Receivable). The company then enters account numbers below the column totals to show that they have been posted. For example, Karns has posted cash to account No. 101, accounts receivable to account No. 112, inventory to account No. 120, sales revenue to account No. 401, sales discounts to account No. 414, and cost of goods sold to account No. 505.
2. The company **separately posts the individual amounts comprising the Other Accounts total** to the general ledger accounts specified in the Account Credited column. See, for example, the credit posting to Common Stock. The total amount of this column has not been posted. The symbol (X) is inserted below the total to this column to indicate that the amount has not been posted.
3. The individual amounts in a column, posted in total to a control account (Accounts Receivable, in this case), are posted **daily to the subsidiary ledger** account specified in the Account Credited column. See, for example, the credit posting of \$10,600 to Abbot Sisters.

The symbol **CR**, used in both the subsidiary and general ledgers, identifies postings from the cash receipts journal.

PROVING THE LEDGERS

After posting of the cash receipts journal is completed, Karns proves the ledgers. As shown in Illustration I-10, the general ledger totals agree. Also, the sum of the subsidiary ledger balances equals the control account balance.

Schedule of Accounts Receivable (from accounts receivable subsidiary ledger)		General Ledger	
Abbot Sisters	\$15,400	<u>Debits</u>	
Babson Co.	14,570	Cash	\$53,769
Deli Co.	21,210	Accounts Receivable	51,180
	<u>\$51,180</u>	Sales Discounts	781
		Cost of Goods Sold	65,120
			<u>\$170,850</u>
		<u>Credits</u>	
		Notes Payable	\$ 6,000
		Common Stock	5,000
		Sales Revenue	94,730
		Inventory	65,120
			<u>\$170,850</u>

Illustration I-10
Proving the ledgers after posting the sales and the cash receipts journals

Purchases Journal

In the **purchases journal**, companies record all purchases of merchandise on account. Each entry in this journal results in a debit to Inventory and a credit to Accounts Payable. For example, consider the following credit purchase transactions for Karns Wholesale Supply in Illustration I-11.

Date	Supplier	Amount
5/6	Jasper Manufacturing Inc.	\$11,000
5/10	Eaton and Howe Inc.	7,200
5/14	Fabor and Son	6,900
5/19	Jasper Manufacturing Inc.	17,500
5/26	Fabor and Son	8,700
5/29	Eaton and Howe Inc.	12,600

Illustration I-11
Credit purchases transactions

Illustration I-12 (page I-12) shows the purchases journal for Karns based on these transactions. When using a one-column purchases journal (as in Illustration I-12), a company cannot journalize other types of purchases on account or cash purchases in it. For example, using the purchases journal shown in Illustration I-12, Karns would have to record credit purchases of equipment or supplies in the general journal. Likewise, all cash purchases would be entered in the cash payments journal. As illustrated later, companies that make numerous credit purchases for items other than merchandise often expand the purchases journal to a multi-column format. (See Illustration I-14 on page I-13.)

JOURNALIZING CREDIT PURCHASES OF MERCHANDISE

The journalizing procedure is similar to that for a sales journal. Companies make entries in the purchases journal from purchase invoices. In contrast to the sales journal, the purchases journal may not have an invoice number column because invoices received from different suppliers will not be in numerical sequence. To ensure that they record all purchase invoices, some companies consecutively number each invoice upon receipt and then use an internal document number column in the purchases journal.

Journalizing and posting the purchases journal

POSTING THE PURCHASES JOURNAL

Helpful Hint
Postings to subsidiary ledger accounts are done daily because it is often necessary to know a current balance for the subsidiary accounts.

The procedures for posting the purchases journal are similar to those for the sales journal. In this case, Karns makes **daily** postings to the **accounts payable ledger**; it makes **monthly** postings to Inventory and Accounts Payable in the general ledger. In both ledgers, Karns uses **P1** in the reference column to show that the postings are from page 1 of the purchases journal.

Proof of the equality of the postings from the purchases journal to both ledgers is shown in Illustration I-13.

Postings to General Ledger		Credit Postings to Accounts Payable Ledger	
Inventory (debit)	<u>\$63,900</u>	Eaton and Howe Inc.	\$19,800
		Fabor and Son	15,600
		Jasper Manufacturing Inc.	<u>28,500</u>
Accounts Payable (credit)	<u>\$63,900</u>		<u>\$63,900</u>

Illustration I-13
Proving the equality of the purchases journal

EXPANDING THE PURCHASES JOURNAL

As noted earlier, some companies expand the purchases journal to include all types of purchases on account. Instead of one column for Inventory and Accounts Payable, they use a multi-column format. This format usually includes a credit column for Accounts Payable and debit columns for purchases of Inventory, Office Supplies, Store Supplies, and Other Accounts. Illustration I-14 shows a multi-column purchases journal for Hanover Co. The posting procedures are similar to those shown earlier for posting the cash receipts journal.

Helpful Hint
A single-column purchases journal needs only to be footed to prove the equality of debits and credits.

Illustration I-14
Multi-column purchases journal

The screenshot shows a software window titled "General Ledger Software for Accounting" with a menu bar (File, Edit, View, Go, Bookmarks, Tools, Help) and a toolbar (Problem, Entries, Post, Closing, Reports, Tools, Help). The main window displays a "PURCHASES JOURNAL" table with the following data:

Date	Account Credited	Ref.	Accounts Payable Cr.	Inventory Dr.	Office Supplies Dr.	Store Supplies Dr.	Other Accounts Dr.		
							Account	Ref.	Amount
2017

			<u>56,600</u>	<u>43,000</u>	<u>7,500</u>	<u>1,200</u>			<u>4,900</u>

Cash Payments Journal

In a **cash payments (cash disbursements) journal**, companies record all disbursements of cash. Entries are made from prenumbered checks. Because companies make cash payments for various purposes, the cash payments journal has multiple columns. Illustration I-15 (page I-14) shows a four-column journal.

JOURNALIZING CASH PAYMENTS TRANSACTIONS

The procedures for journalizing transactions in this journal are similar to those for the cash receipts journal. Karns records each transaction on one line, and for each line there must be equal debit and credit amounts. The entries in the cash

start General Ledger General Jnl Sales Jnl Cash Receipts Jnl Purchases Jnl

Illustration I-15
Journalizing and posting the cash payments journal

payments journal in Illustration I-15 are based on the following transactions for Karns Wholesale Supply.

- May 1 Issued check No. 101 for \$1,200 for the annual premium on a fire insurance policy.
 3 Issued check No. 102 for \$100 in payment of freight when terms were FOB shipping point.
 8 Issued check No. 103 for \$4,400 for the purchase of merchandise.
 10 Sent check No. 104 for \$10,780 to Jasper Manufacturing Inc. in payment of May 6 invoice for \$11,000 less a 2% discount.
 19 Mailed check No. 105 for \$6,984 to Eaton and Howe Inc. in payment of May 10 invoice for \$7,200 less a 3% discount.
 23 Sent check No. 106 for \$6,831 to Fabor and Son in payment of May 14 invoice for \$6,900 less a 1% discount.
 28 Sent check No. 107 for \$17,150 to Jasper Manufacturing Inc. in payment of May 19 invoice for \$17,500 less a 2% discount.
 30 Issued check No. 108 for \$500 to stockholders as a dividend.

Note that whenever Karns enters an amount in the Other Accounts column, it must identify a specific general ledger account in the Account Debited column. The entries for checks No. 101, 102, 103, and 108 illustrate this situation. Similarly, Karns must identify a subsidiary account in the Account Debited column whenever it enters an amount in the Accounts Payable column. See, for example, the entry for check No. 104.

After Karns journalizes the cash payments journal, it totals the columns. The totals are then balanced to prove the equality of debits and credits.

POSTING THE CASH PAYMENTS JOURNAL

The procedures for posting the cash payments journal are similar to those for the cash receipts journal. Karns posts the amounts recorded in the Accounts Payable column individually to the subsidiary ledger and in total to the control account. It posts Inventory and Cash only in total at the end of the month. Transactions in the Other Accounts column are posted individually to the appropriate account(s) affected. The company does not post totals for the Other Accounts column.

Illustration I-15 shows the posting of the cash payments journal. Note that Karns uses the symbol **CP** as the posting reference. After postings are completed, the company proves the equality of the debit and credit balances in the general ledger. In addition, the control account balances should agree with the subsidiary ledger total balance. Illustration I-16 shows the agreement of these balances.

Schedule of Accounts Payable (from accounts payable subsidiary ledger)		General Ledger	
Eaton and Howe Inc.	\$12,600	<u>Debits</u>	
Fabor and Son	8,700	Cash	\$ 5,824
	<u>\$21,300</u>	Accounts Receivable	51,180
		Inventory	2,425
		Prepaid Insurance	1,200
		Cash Dividends	500
		Sales Discounts	781
		Cost of Goods Sold	65,120
			<u>\$127,030</u>
		<u>Credits</u>	
		Notes Payable	\$ 6,000
		Accounts Payable	21,300
		Common Stock	5,000
		Sales Revenue	94,730
			<u>\$127,030</u>

Illustration I-16

Proving the ledgers after postings from the sales, cash receipts, purchases, and cash payments journals

Effects of Special Journals on the General Journal

Special journals for sales, purchases, and cash substantially reduce the number of entries that companies make in the general journal. **Only transactions that cannot be entered in a special journal are recorded in the general journal.** For example, a company may use the general journal to record such transactions as granting of credit to a customer for a sales return or allowance, granting of credit from a supplier for purchases returned, acceptance of a note receivable from a customer, and purchase of equipment by issuing a note payable. Also, **correcting, adjusting, and closing entries are made in the general journal.**

The general journal has columns for date, account title and explanation, reference, and debit and credit amounts. When control and subsidiary accounts are not involved, the procedures for journalizing and posting of transactions are the same as those described in earlier chapters. When control and subsidiary accounts *are* involved, companies make two changes from the earlier procedures:

1. In **journalizing**, they identify both the control and the subsidiary accounts.
2. In **posting**, there must be a **dual posting**: once to the control account and once to the subsidiary account.

To illustrate, assume that on May 31, Karns Wholesale Supply returns \$500 of merchandise for credit to Fabor and Son. Illustration I-17 shows the entry in the general journal and the posting of the entry. If Karns receives cash instead of credit on this return, then it would record the transaction in the cash receipts journal.

The general journal indicates two accounts (Accounts Payable, and Fabor and Son) for the debit, and two postings (“201/✓”) in the reference column. One debit is posted to the control account and another debit to the creditor’s account in the subsidiary ledger.

Illustration I-17

Journalizing and posting the general journal

The screenshot displays the 'General Ledger Software for Accounting' interface. It shows three windows: 'GENERAL JOURNAL', 'ACCOUNTS PAYABLE SUBSIDIARY LEDGER', and 'GENERAL LEDGER'. Red arrows illustrate the flow of data from the journal entry to the subsidiary ledger and then to the general ledger.

Cyber Security: A Final Comment

Have you ever been hacked? With the increasing use of cell phones, tablets, and other social media outlets, a real risk exists that your confidential information may be stolen and used illegally. Companies, individuals, and even nations have all been victims of **cybercrime**—a crime that involves the Internet, a computer system, or computer technology.

For companies, cybercrime is clearly a major threat as the hacking of employees' or customers' records related to cybercrime can cost millions of dollars. Unfortunately, the numbers of security breaches are increasing. A security breach at **Target**, for example, cost the company a minimum of \$20 million, the CEO lost his job, and sales plummeted.

Here are three reasons for the rise in the successful hacks of corporate computer records.

1. Companies and their employees continue to increase their activity on the Internet, primarily due to the use of mobile devices and cloud computing.
2. Companies today collect and store unprecedented amounts of personal data on customers and employees.
3. Companies often take measures to protect themselves from cyber security attacks but then fail to check if employees are carrying out the proper security guidelines.

Note that cyber security risks extend far beyond company operations and compliance. Many hackers target highly sensitive intellectual information or other strategic assets. Illustration I-18 highlights the type of hackers and their motives, targets and impacts.

Illustration I-18
Profiles of hackers

Malicious Actors	Motives	Targets	Impacts
Nation-state	<ul style="list-style-type: none"> • Economic, political, and/or military advantage 	<ul style="list-style-type: none"> • Trade secrets • Sensitive business information • Emerging technologies • Critical infrastructure 	<ul style="list-style-type: none"> • Loss of competitive advantage • Disruption to critical infrastructure
Organized crime	<ul style="list-style-type: none"> • Immediate financial gain • Collect information for future financial gains 	<ul style="list-style-type: none"> • Financial/payment systems • Personally identifiable information • Payment card information • Protected health information 	<ul style="list-style-type: none"> • Costly regulatory inquiries and penalties • Consumer and shareholder lawsuits • Loss of consumer confidence
Hactivists	<ul style="list-style-type: none"> • Influence political and/or social change • Pressure businesses to change their practices 	<ul style="list-style-type: none"> • Corporate secrets • Sensitive business information • Information related to key executives, employees, customers, and business partners 	<ul style="list-style-type: none"> • Disruption of business activities • Harm to brand and reputation • Loss of consumer confidence
Insiders	<ul style="list-style-type: none"> • Personal advantage, monetary gain • Professional revenge • Patriotism 	<ul style="list-style-type: none"> • Sales, deals, market strategies • Corporate secrets, intellectual property • Business operations • Personnel information 	<ul style="list-style-type: none"> • Trade secret disclosure • Operational disruption • Harm to brand and reputation • National security impact

Source: PriceWaterhouseCoopers, "Answering Your Cybersecurity Questions" (January 2014).

Companies now recognize that cyber security systems that protect confidential data must be implemented. It follows that companies (and nations and individuals) must continually verify that their cyber security defenses are sound and uncompromised.

DO IT!**2****Special Journals****Action Plan**

- ✓ Determine if the transaction involves the receipt of cash (cash receipts journal) or the payment of cash (cash payments journal).
- ✓ Determine if the transaction is a sale of merchandise on account (sales journal) or a purchase of merchandise on account (purchases journal).
- ✓ Understand that all other transactions are recorded in the general journal.

Swisher Company had the following transactions during March.

1. Collected cash on account from Oakland Company.
2. Purchased equipment by signing a note payable.
3. Sold merchandise on account.
4. Purchased merchandise on account.
5. Paid \$2,400 for a 2-year insurance policy.

Identify the journal in which each of the transactions above is recorded.

Solution

1. Collected cash on account from Oakland Company.	Cash receipts journal
2. Purchased equipment by signing a note payable.	General journal
3. Sold merchandise on account.	Sales journal
4. Purchased merchandise on account.	Purchases journal
5. Paid \$2,400 for a 2-year insurance policy.	Cash payments journal

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 **Describe the nature and purpose of a subsidiary ledger.** A subsidiary ledger is a group of accounts with a common characteristic. It facilitates the recording process by freeing the general ledger from details of individual balances.
- 2 **Record transactions in special journals.** Companies use special journals to group similar types of transactions. In a special journal, generally only one line is used to record a complete transaction.
In posting a multi-column journal:
 - (a) Companies post all column totals except for the Other Accounts column once at the end of the

- month to the account title specified in the column heading.
- (b) Companies do not post the total of the Other Accounts column. Instead, the individual amounts comprising the total are posted separately to the general ledger accounts specified in the Account Credited (Debited) column.
- (c) The individual amounts in a column posted in total to a control account are posted daily to the subsidiary ledger accounts specified in the Account Credited (Debited) column.

GLOSSARY REVIEW

Accounts payable (creditors') subsidiary ledger A subsidiary ledger that collects transaction data of individual creditors. (p. I-1).

Accounts receivable (customers') subsidiary ledger A subsidiary ledger that collects transaction data of individual customers. (p. I-1).

Cash payments (cash disbursements) journal A special journal that records all cash paid. (p. I-13).

Cash receipts journal A special journal that records all cash received. (p. I-7).

Control account An account in the general ledger that summarizes subsidiary ledger data. (p. I-1).

Cybercrime A crime that involves the Internet, a computer system, or computer technology. (p. I-17).

Purchases journal A special journal that records all purchases of merchandise on account. (p. I-11).

Sales journal A special journal that records all sales of merchandise on account. (p. I-4).

Special journals Journals that record similar types of transactions, such as all credit sales. (p. I-4).

Subsidiary ledger A group of accounts with a common characteristic. (p. I-1).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. Which of the following is **incorrect** concerning subsidiary ledgers?
- The purchases ledger is a common subsidiary ledger for creditor accounts.
 - The accounts receivable ledger is a subsidiary ledger.
 - A subsidiary ledger is a group of accounts with a common characteristic.
 - An advantage of the subsidiary ledger is that it permits a division of labor in posting.
- (LO 1) 2. Two common subsidiary ledgers are:
- accounts receivable and cash receipts.
 - accounts payable and cash payments.
 - accounts receivable and accounts payable.
 - sales and cost of goods sold.
- (LO 1) 3. At the beginning of the month, the accounts receivable subsidiary ledger showed balances for Apple Company \$5,000 and Berry Company \$7,000. During the month, credit sales were made to Apple \$6,000, Berry \$4,500, and Cantaloupe \$8,500. Cash was collected on account from Berry \$11,500 and Cantaloupe \$3,000. At the end of the month, the control account Accounts Receivable in the general ledger should have a balance of:
- \$11,000.
 - \$12,000.
 - \$16,500.
 - \$31,000.
- (LO 2) 4. A sales journal will be used for:
- | | <u>Credit Sales</u> | <u>Cash Sales</u> | <u>Sales Discounts</u> |
|-----|---------------------|-------------------|------------------------|
| (a) | no | yes | yes |
| (b) | yes | no | yes |
| (c) | yes | no | no |
| (d) | yes | yes | no |
- (LO 2) 5. A purchase of equipment on account is recorded in the:
- cash receipts journal.
 - purchases journal.
 - cash payments journal.
 - general journal.
- (LO 2) 6. A purchase of equipment using cash is recorded in the:
- cash receipts journal.
 - purchases journal.
 - cash payments journal.
 - general journal.
- (LO 2) 7. Which of the following statements is **correct**?
- The sales discount column is included in the cash receipts journal.
 - The purchases journal records all purchases of merchandise whether for cash or on account.
 - The cash receipts journal records sales on account.
 - Merchandise returned by the buyer is recorded by the seller in the purchases journal.
- (LO 2) 8. Dotel Company's cash receipts journal includes an Accounts Receivable column and an Other Accounts column. At the end of the month, these columns are posted to the general ledger as:
- | | <u>Accounts Receivable</u> | <u>Other Accounts</u> |
|-----|----------------------------|-----------------------|
| (a) | a column total | a column total |
| (b) | individual amounts | a column total |
| (c) | individual amounts | individual amounts |
| (d) | a column total | individual amounts |
9. Which of the following is **incorrect** concerning the posting of the cash receipts journal? (LO 2)
- The total of the Other Accounts column is not posted.
 - All column totals except the total for the Other Accounts column are posted once at the end of the month to the account title(s) specified in the column heading.
 - The totals of all columns are posted daily to the accounts specified in the column heading.
 - The individual amounts in a column posted in total to a control account are posted daily to the subsidiary ledger account specified in the Account Credited column.
10. Postings from the purchases journal to the subsidiary ledger are generally made: (LO 2)
- yearly.
 - monthly.
 - weekly.
 - daily.
11. Which statement is **incorrect** regarding the general journal? (LO 2)
- Only transactions that cannot be entered in a special journal are recorded in the general journal.
 - Dual postings are always required in the general journal.
 - The general journal may be used to record acceptance of a note receivable in payment of an account receivable.
 - Correcting, adjusting, and closing entries are made in the general journal.
12. When companies use special journals: (LO 2)
- they record all purchase transactions in the purchases journal.
 - they record all cash received, except from cash sales, in the cash receipts journal.
 - they record all cash disbursements in the cash payments journal.
 - a general journal is not necessary.
13. If a customer returns goods for credit, the selling company normally makes an entry in the: (LO 2)
- cash payments journal.
 - sales journal.
 - general journal.
 - cash receipts journal.

Solutions

1. **(a)** The accounts payable ledger, not the purchases ledger, is a common subsidiary ledger for creditor accounts. The other choices are true statements.
2. **(c)** Accounts receivable and accounts payable are two common subsidiary ledgers. The other choices are incorrect because (a) cash receipts, (b) cash payments, and (d) sales and cost of goods sold are not subsidiary ledgers.
3. **(c)** The accounts receivable subsidiary ledger balances are the following: Apple Company \$11,000 (beginning balance \$5,000 + credit sales \$6,000), Berry Company \$0 (beginning balance \$7,000 + credit sales \$4,500 – cash collected on account \$11,500), and Cantaloupe \$5,500 (credit sales \$8,500 – cash collected on account \$3,000). The Accounts Receivable control account in the general ledger therefore has a balance of \$16,500 (\$11,000 + \$0 + \$5,500), not (a) \$11,000, (b) \$12,000, or (d) \$31,000.
4. **(c)** The sales journal is used for credit sales. The cash receipts journal is used for cash sales and sales discounts. Therefore, choices (a), (b), and (d) are incorrect.
5. **(d)** Unless the company uses a multi-column purchases journal, the general journal is used to record the purchase of equipment **on account**. The other choices are incorrect because (a) the cash receipts journal would be used only if cash is received, (b) a one-column purchases journal cannot be used to record a purchase of equipment on account, and (c) the cash payments journal would be used only if this is a cash purchase.
6. **(c)** The cash payments journal includes all cash paid, including all **cash** purchases. The other choices are incorrect because (a) the cash receipts journal includes all cash received, including cash sales, not cash purchases; (b) the purchases journal includes only purchases of inventory on account, not cash purchases; and (d) the general journal is only used if a transaction cannot be entered in a special journal. In this case, this transaction can be entered into the cash payments journal.
7. **(a)** The sales discount column is included in the cash receipts journal. The other choices are incorrect because (b) the purchases journal only records purchases of inventory on account, not for cash; (c) the sales journal, not the cash receipts journal, records sales on account; and (d) when merchandise is returned by a buyer, the seller records this sales return in the general journal.
8. **(d)** The Accounts Receivable column would be posted to the general ledger as a column total, and the Other Accounts column would be posted as individual amounts. Therefore, the other choices are incorrect.
9. **(c)** The totals of all columns are not posted daily to the accounts specified in the column heading. Instead, all column totals except the total for the Other Accounts column (which is never posted) are posted once at the end of the month to the account title(s) specified in the column heading. The other choices are true statements.
10. **(d)** Postings from the purchases journal to the subsidiary ledger are usually made daily, not (a) yearly, (b) monthly, or (c) weekly.
11. **(b)** Dual postings are not always required in the general journal. Only when control and subsidiary accounts are involved are companies required to dual post: once to the control account and once to the subsidiary account. The other choices are true statements.
12. **(c)** When special journals are used, companies record all cash disbursements in the cash payments journal. The other choices are incorrect because when special journals are used, (a) companies record only purchases of inventory on account in the purchases journal; (b) companies record all cash receipts, including cash sales, in the cash receipts journal; and (d) a general journal is still needed.
13. **(c)** When a customer returns goods for **credit** (i.e., no cash is involved), the selling company records the transaction in the general journal, not the (a) cash payments journal, (b) sales journal, or (d) cash receipts journal.

PRACTICE EXERCISE

Post various journals to control and subsidiary accounts.

(LO 1, 2)

On June 1, the balance of the Accounts Receivable control account in the general ledger of Rath Company was \$13,620. The customers' subsidiary ledger contained account balances as follows: Wilson \$2,000, Sanchez \$3,140, Roberts \$2,560, and Marks \$5,920. At the end of June, the various journals contained the following information.

Sales journal: Sales to Roberts \$900, to Wilson \$1,400, to Hardy \$1,500, and to Marks \$1,200.

Cash receipts journal: Cash received from Roberts \$1,610, from Marks \$2,600, from Hardy \$580, from Sanchez \$2,100, and from Wilson \$1,540.

General journal: An allowance is granted to Marks \$325.

Instructions

- (a) Set up control and subsidiary accounts and enter the beginning balances. Do not construct the journals.
- (b) Post the various journals. Post the items as individual items or as totals, whichever would be the appropriate procedure. (No sales discounts given.)
- (c) Prepare a schedule of accounts receivable and prove the agreement of the control account with the subsidiary ledger at June 30, 2017.

Cash receipts transactions for the month of July 2017 are as follows.

- July 3 Cash sales total \$5,800 (cost, \$3,480).
 5 Received a check for \$6,370 from Jeltz Company in payment of an invoice dated June 26 for \$6,500, terms 2/10, n/30.
 9 Stockholders made an additional investment of \$5,000 in cash in exchange for common stock.
 10 Cash sales total \$12,519 (cost, \$7,511).
 12 Received a check for \$7,275 from R. Eliot & Co. in payment of a \$7,500 invoice dated July 3, terms 3/10, n/30.
 15 Received a customer advance of \$700 cash for future sales.
 20 Cash sales total \$15,472 (cost, \$9,283).
 22 Received a check for \$5,880 from Beck Company in payment of \$6,000 invoice dated July 13, terms 2/10, n/30.
 29 Cash sales total \$17,660 (cost, \$10,596).
 31 Received cash of \$200 on interest earned for July.

Instructions

- (a) Journalize the transactions in the cash receipts journal.
 (b) Contrast the posting of the Accounts Receivable and Other Accounts columns.

Solution

(a)

CASSANDRA WILSON COMPANY								CR1
Cash Receipts Journal								
Date	Account Credited	Ref.	Cash Dr.	Sales Discounts Dr.	Accounts Receivable Cr.	Sales Revenue Cr.	Other Accounts Cr.	Cost of Goods Sold Dr. Inventory Cr.
2017								
7/3			5,800			5,800		3,480
5	Jeltz Company		6,370	130	6,500			
9	Common Stock		5,000				5,000	
10			12,519			12,519		7,511
12	R. Eliot & Co.		7,275	225	7,500			
15	Unearned Service Revenue		700				700	
20			15,472			15,472		9,283
22	Beck Company		5,880	120	6,000			
29			17,660			17,660		10,596
31	Interest Revenue		200				200	
			76,876	475	20,000	51,451	5,900	30,870

- (b) The Accounts Receivable column total is posted as a credit to Accounts Receivable. The individual amounts are credited to the customers' accounts identified in the Account Credited column, which are maintained in the accounts receivable subsidiary ledger.

The amounts in the Other Accounts column are posted individually. They are credited to the account titles identified in the Account Credited column.

WileyPLUS

Brief Exercises, Exercises, **DO IT!** Exercises, and Problems and many additional resources are available for practice in WileyPLUS

QUESTIONS

- What are the advantages of using subsidiary ledgers?
- (a) When do companies normally post to (1) the subsidiary accounts and (2) the general ledger control accounts? (b) Describe the relationship between a control account and a subsidiary ledger.
- Identify and explain the four special journals discussed in this appendix. List an advantage of using each of these journals rather than using only a general journal.
- Burguet Company uses special journals. It recorded in a sales journal a sale made on account to P. Starch

for \$435. A few days later, P. Starch returns \$70 worth of merchandise for credit. Where should Burguet Company record the sales return? Why?

5. A \$500 purchase of merchandise on account from Liu Company was properly recorded in the purchases journal. When posted, however, the amount recorded in the subsidiary ledger was \$50. How might this error be discovered?
6. Why would special journals used in different businesses not be identical in format? What type of business would maintain a cash receipts journal but not include a column for accounts receivable?
7. The cash and the accounts receivable columns in the cash receipts journal were mistakenly over-added by \$4,000 at the end of the month. (a) Will the customers' ledger agree with the Accounts Receivable control account? (b) Assuming no other errors, will the trial balance totals be equal?
8. One column total of a special journal is posted at month-end to only two general ledger accounts. One of these two accounts is Accounts Receivable. What is the name of this special journal? What is the other general ledger account to which that same month-end total is posted?
9. In what journal would the following transactions be recorded? (Assume that a two-column sales journal and a single-column purchases journal are used.)
 - (a) Recording of depreciation expense for the year.
 - (b) Credit given to a customer for merchandise purchased on credit and returned.
 - (c) Sales of merchandise for cash.
 - (d) Sales of merchandise on account.
 - (e) Collection of cash on account from a customer.
 - (f) Purchase of office supplies on account.
10. In what journal would the following transactions be recorded? (Assume that a two-column sales journal and a single-column purchases journal are used.)
 - (a) Cash received from signing a note payable.
 - (b) Investment of cash by stockholders.
 - (c) Closing of the expense accounts at the end of the year.
 - (d) Purchase of merchandise on account.
 - (e) Credit received for merchandise purchased and returned to supplier.
 - (f) Payment of cash on account due a supplier.
11. What transactions might be included in a multi-column purchases journal that would not be included in a single-column purchases journal?
12. Give an example of a transaction in the general journal that causes an entry to be posted twice (i.e., to two accounts), one in the general ledger, the other in the subsidiary ledger. Does this affect the debit/credit equality of the general ledger?
13. Give some examples of appropriate general journal transactions for an organization using special journals.

BRIEF EXERCISES

BEI-1 Presented below is information related to Cortes Company for its first month of operations. Identify the balances that appear in the accounts receivable subsidiary ledger and the accounts receivable balance that appears in the general ledger at the end of January.

Identify subsidiary ledger balances.

(LO 1)

Credit Sales				Cash Collections			
Jan. 7	Adcock Co.	\$10,000	Jan. 17	Adcock Co.	\$7,000		
15	Cruz Co.	7,000	24	Cruz Co.	6,000		
23	Morissy Co.	9,000	29	Morissy Co.	9,000		

BEI-2 Identify in what ledger (general or subsidiary) each of the following accounts is shown.

Identify subsidiary ledger accounts.

(LO 1)

- | | |
|---------------------------------|-----------------------------|
| (a) Rent Expense. | (c) Notes Payable. |
| (b) Accounts Receivable—Molina. | (d) Accounts Payable—Unruh. |

BEI-3 Identify the journal in which each of the following transactions is recorded.

Identify special journals.

(LO 2)

- | | |
|--------------------------------|---|
| (a) Cash sales. | (d) Credit sales. |
| (b) Payment of cash dividends. | (e) Purchase of merchandise on account. |
| (c) Cash purchase of land. | (f) Receipt of cash for services performed. |

BEI-4 Indicate whether each of the following debits and credits is included in the cash receipts journal. (Use "Yes" or "No" to answer this question.)

Identify entries to cash receipts journal.

(LO 2)

- | | |
|-----------------------------|------------------------------------|
| (a) Debit to Sales Revenue. | (c) Credit to Accounts Receivable. |
| (b) Credit to Inventory. | (d) Debit to Accounts Payable. |

BEI-5 Kiner Co. uses special journals and a general journal. Identify the journal in which each of the following transactions is recorded.

Identify transactions for special journals.

(LO 2)

- | | |
|---------------------------------------|-----------------------------------|
| (a) Purchased equipment on account. | (c) Paid utility expense in cash. |
| (b) Purchased merchandise on account. | (d) Sold merchandise on account. |

I-24 Appendix I Subsidiary Ledgers and Special Journals

Identify transactions for special journals.

(LO 2)

BEI-6 Identify the special journal(s) in which the following column headings appear:

- | | |
|-----------------------------|-----------------------|
| (a) Sales Discounts Dr. | (d) Sales Revenue Cr. |
| (b) Accounts Receivable Cr. | (e) Inventory Dr. |
| (c) Cash Dr. | |

Indicate postings to cash receipts journal.

(LO 2)

BEI-7 Merando Computer Components Inc. uses a multi-column cash receipts journal. Indicate which column(s) is/are posted only in total, only daily, or both in total and daily.

- | | |
|--------------------------|---------------------|
| (a) Accounts Receivable. | (c) Cash. |
| (b) Sales Discounts. | (d) Other Accounts. |

DO IT! Review

Determine subsidiary and general ledger balances.

(LO 1)

DO IT! I-1 Presented below is information related to Koniar Company for its first month of operations. Determine the balances that appear in the accounts payable subsidiary ledger. What Accounts Payable balance appears in the general ledger at the end of January?

Credit Purchases			Cash Paid		
Jan. 6	Haley Company	\$ 9,000	Jan. 11	Haley Company	\$ 5,700
Jan. 10	Nolen Company	12,000	Jan. 16	Nolen Company	12,000
Jan. 23	Shen Company	10,000	Jan. 29	Shen Company	7,700

Identify special journals.

(LO 2)

DO IT! I-2 Morlan Company had the following transactions during April.

- Sold merchandise on account.
- Purchased merchandise on account.
- Collected cash from a sale to Estes Company.
- Recorded accrued interest on a note payable.
- Paid \$2,000 for supplies.

Identify the journal in which each of the transactions above is recorded.

EXERCISES

Determine control account balances, and explain posting of special journals.

(LO 1, 2)

EI-1 Lanley Company uses both special journals and a general journal as described in this appendix. On June 30, after all monthly postings had been completed, the Accounts Receivable control account in the general ledger had a debit balance of \$314,000; the Accounts Payable control account had a credit balance of \$77,000.

The July transactions recorded in the special journals are summarized below. No entries affecting accounts receivable and accounts payable were recorded in the general journal for July.

Sales journal	Total sales \$161,400
Purchases journal	Total purchases \$54,100
Cash receipts journal	Accounts receivable column total \$131,000
Cash payments journal	Accounts payable column total \$47,500

Instructions

- What is the balance of the Accounts Receivable control account after the monthly postings on July 31?
- What is the balance of the Accounts Payable control account after the monthly postings on July 31?
- To what account(s) is the column total of \$161,400 in the sales journal posted?
- To what account(s) is the accounts receivable column total of \$131,000 in the cash receipts journal posted?

EI-2 Presented below is the subsidiary Accounts Receivable account of Martha Nott.

Explain postings to subsidiary ledger.

(LO 1)

Date	Ref.	Debit	Credit	Balance
2017				
Sept. 2	S31	61,000		61,000
9	G4		14,000	47,000
27	CR8		47,000	—

Instructions

 Write a memo to Erica Grier, chief financial officer, that explains each transaction.

EI-3 On September 1, the balance of the Accounts Receivable control account in the general ledger of Stark Company was \$10,960. The customers' subsidiary ledger contained account balances as follows: Zeyen \$1,440, Milo \$2,640, Baez \$2,060, and Dey \$4,820. At the end of September, the various journals contained the following information.

Post various journals to control and subsidiary accounts.

(LO 1, 2)

Sales journal: Sales to Dey \$800; to Zeyen \$1,260; to Guy \$1,330; to Baez \$1,260.

Cash receipts journal: Cash received from Baez \$1,310; from Dey \$2,300; from Guy \$380; from Milo \$1,800; from Zeyen \$1,240.

General journal: An allowance is granted to Dey \$185.

Instructions

- Set up control and subsidiary accounts and enter the beginning balances. Do not construct the journals.
- Post the various journals. Post the items as individual items or as totals, whichever would be the appropriate procedure. (No sales discounts given.)
- Prepare a schedule of accounts receivable and prove the agreement of the controlling account with the subsidiary ledger at September 30, 2017.

EI-4 Bill Porter Company has a balance in its Accounts Receivable control account of \$10,200 on January 1, 2017. The subsidiary ledger contains three accounts: Connor Company, balance \$4,000; Uhlig Company, balance \$2,500; and Matson Company. During January, the following receivable-related transactions occurred.

Determine control and subsidiary ledger balances for accounts receivable.

(LO 1, 2)

	<u>Credit Sales</u>	<u>Collections</u>	<u>Returns</u>
Connor Company	\$9,000	\$8,000	\$-0-
Uhlig Company	7,000	2,500	3,000
Matson Company	8,300	9,000	-0-

Instructions

- What is the January 1 balance in the Matson Company subsidiary account?
- What is the January 31 balance in the control account?
- Compute the balances in the subsidiary accounts at the end of the month.
- Which January transaction would not be recorded in a special journal?

EI-5 Gonzalez Company has a balance in its Accounts Payable control account of \$8,250 on January 1, 2017. The subsidiary ledger contains three accounts: Rye Company, balance \$3,000; Keyes Company, balance \$1,875; and Colaw Company. During January, the following receivable-related transactions occurred.

Determine control and subsidiary ledger balances for accounts payable.

(LO 1, 2)

	<u>Purchases</u>	<u>Payments</u>	<u>Returns</u>
Rye Company	\$6,750	\$6,000	\$-0-
Keyes Company	5,250	1,900	2,300
Colaw Company	6,375	6,750	-0-

Instructions

- What is the January 1 balance in the Colaw Company subsidiary account?
- What is the January 31 balance in the control account?
- Compute the balances in the subsidiary accounts at the end of the month.
- Which January transaction would not be recorded in a special journal?

Record transactions in sales and purchases journal.

(LO 2)

EI-6 Norren Company uses special journals and a general journal. The following transactions occurred during September 2017.

- Sept. 2 Sold merchandise on account to J. Yancey, invoice no. 101, \$780, terms n/30. The cost of the merchandise sold was \$420.
 10 Purchased merchandise on account from H. Heerey \$600, terms 2/10, n/30.
 12 Purchased office equipment on account from Y. Kojima \$6,500.
 21 Sold merchandise on account to K. Pricer, invoice no. 102 for \$800, terms 2/10, n/30. The cost of the merchandise sold was \$480.
 25 Purchased merchandise on account from G. Jeanik \$835, terms n/30.
 27 Sold merchandise to D. Schaff for \$700 cash. The cost of the merchandise sold was \$400.

Instructions

- (a) Prepare a sales journal (see Illustration I-6) and a single-column purchases journal (see Illustration I-12). (Use page 1 for each journal.)
 (b) Record the transaction(s) for September that should be journalized in the sales journal and the purchases journal.

Record transactions in cash receipts and cash payments journal.

(LO 2)

EI-7 Milner Co. uses special journals and a general journal. The following transactions occurred during May 2017.

- May 1 M. Milner invested \$48,000 cash in the business in exchange for common stock.
 2 Sold merchandise to A. Belton for \$6,340 cash. The cost of the merchandise sold was \$4,200.
 3 Purchased merchandise for \$7,200 from E. Stein using check no. 101.
 14 Paid salary to M. Hunt \$700 by issuing check no. 102.
 16 Sold merchandise on account to S. Spies for \$900, terms n/30. The cost of the merchandise sold was \$630.
 22 A check of \$9,000 is received from N. Feeney in full for invoice 101; no discount given.

Instructions

- (a) Prepare a multi-column cash receipts journal (see Illustration I-8) and a multi-column cash payments journal (see Illustration I-15). (Use page 1 for each journal.)
 (b) Record the transaction(s) for May that should be journalized in the cash receipts journal and cash payments journal.

Explain journalizing in cash journals.

(LO 2)

EI-8 Eaton Company uses the columnar cash journals illustrated in the textbook. In April, the following selected cash transactions occurred.

1. Made a cash refund to a customer for the return of damaged goods.
2. Received collection from customer within the 3% discount period.
3. Purchased merchandise for cash.
4. Paid a creditor within the 3% discount period.
5. Received collection from customer after the 3% discount period had expired.
6. Paid freight on merchandise purchased.
7. Paid cash for office equipment.
8. Received cash refund from supplier for merchandise returned.
9. Paid cash dividend to stockholders.
10. Made cash sales.

Instructions

Indicate (a) the journal and (b) the columns in the journal that should be used in recording each transaction.

Journalize transactions in general journal and post.

(LO 1, 2)

EI-9 Nolasco Company has the following selected transactions during March.

- Mar. 2 Purchased equipment costing \$9,400 from Brantly Company on account.
 5 Received credit of \$410 from Dumont Company for merchandise damaged in shipment to Nolasco.
 7 Issued credit of \$390 to Horst Company for merchandise the customer returned. The returned merchandise had a cost of \$240.

Nolasco Company uses a one-column purchases journal, a sales journal, the columnar cash journals used in the text, and a general journal.

Instructions

- (a) Journalize the transactions in the general journal.
- (b)  In a brief memo to the president of Nolasco Company, explain the postings to the control and subsidiary accounts from each type of journal.

EI-10 Below are some typical transactions incurred by Barone Company.

1. Payment of creditors on account.
2. Return of merchandise sold for credit.
3. Collection on account from customers.
4. Sale of land for cash.
5. Sale of merchandise on account.
6. Sale of merchandise for cash.
7. Received credit for merchandise purchased on credit.
8. Sales discount taken on goods sold.
9. Payment of employee wages.
10. Payment of cash dividend to stockholders.
11. Depreciation on building.
12. Purchase of office supplies for cash.
13. Purchase of merchandise on account.

Indicate journalizing in special journals.

(LO 2)

Instructions

For each transaction, indicate whether it would normally be recorded in a cash receipts journal, cash payments journal, sales journal, single-column purchases journal, or general journal.

EI-11 The general ledger of Raysom Company contained the following Accounts Payable control account (in T-account form). Also shown is the related subsidiary ledger.

Explain posting to control account and subsidiary ledger.

(LO 1)

GENERAL LEDGER					
Accounts Payable					
Feb. 15	General journal	1,400	Feb. 1	Balance	26,025
28	?	?	5	General journal	195
			11	General journal	550
			28	Purchases	13,400
			Feb. 28	Balance	9,800

ACCOUNTS PAYABLE LEDGER					
Keyser			Robillard		
	Feb. 28	Bal. 4,600		Feb. 28	Bal. ?
Stine					
	Feb. 28	Bal. 2,100			

Instructions

- (a) Indicate the missing posting reference and amount in the control account, and the missing ending balance in the subsidiary ledger.
- (b) Indicate the amounts in the control account that were dual-posted (i.e., posted to the control account and the subsidiary accounts).

I-28 **Appendix I** Subsidiary Ledgers and Special Journals

Prepare purchases and general journals.

(LO 1, 2)

EI-12 Selected accounts from the ledgers of Ramos Company at July 31 showed the following.

GENERAL LEDGER

Equipment						No. 153	Inventory						No. 120
Date	Explanation	Ref.	Debit	Credit	Balance		Date	Explanation	Ref.	Debit	Credit	Balance	
July 1		G1	3,900		3,900		July 15		G1	600		600

18		G1	380		1,020						
29		P1		1,600	2,620						

Instructions

From the data prepare:

- (a) The single-column purchases journal for July.
- (b) The general journal entries for July.

Determine correct posting amount to control account.

(LO 1, 2)

EI-13 Castro Products uses both special journals and a general journal as described in this appendix. Castro also posts customers' accounts in the accounts receivable subsidiary ledger. The postings for the most recent month are included in the subsidiary T-accounts below.

Dingel			Lopez		
Bal.	340	250	Bal.	150	150
	280			240	

Epping			Rivera		
Bal.	-0-	145	Bal.	120	120
	145			190	
				130	

Instructions

Determine the correct amount of the end-of-month posting from the sales journal to the Accounts Receivable control account.

EI-14 Selected account balances for Ramano Company at January 1, 2017, are presented below.

Accounts Payable	\$19,000
Accounts Receivable	22,000
Cash	17,000
Inventory	13,500

Compute balances in various accounts.

(LO 2)

Ramano's sales journal for January shows a total of \$100,000 in the selling price column, and its one-column purchases journal for January shows a total of \$72,000.

The column totals in Ramano's cash receipts journal are Cash Dr. \$64,000; Sales Discounts Dr. \$1,100; Accounts Receivable Cr. \$48,000; Sales Revenue Cr. \$6,000; and Other Accounts Cr. \$11,100.

The column totals in Ramano's cash payments journal for January are Cash Cr. \$55,000; Inventory Cr. \$1,000; Accounts Payable Dr. \$46,000; and Other Accounts Dr. \$10,000. Ramano's total cost of goods sold for January is \$63,600.

Accounts Payable, Accounts Receivable, Cash, Inventory, and Sales Revenue are not involved in the "Other Accounts" column in either the cash receipts or cash payments journal, and are not involved in any general journal entries.

Instructions

Compute the January 31 balance for Ramano in the following accounts.

- | | |
|--------------------------|--------------------|
| (a) Accounts Payable. | (d) Inventory. |
| (b) Accounts Receivable. | (e) Sales Revenue. |
| (c) Cash. | |

- Apr. 1 Stockholders invested \$7,200 additional cash in the business, in exchange for common stock.
- 4 Received check for payment of account from Afzal less 2% cash discount.
- 5 Received check for \$990 in payment of invoice no. 307 from Hurt Co.
- 8 Made cash sales of merchandise totaling \$7,845. The cost of the merchandise sold was \$4,347.
- 10 Received check for \$600 in payment of invoice no. 309 from Park.
- 11 Received cash refund from a supplier for damaged merchandise \$680.
- 23 Received check for \$1,500 in payment of invoice no. 310 from Hurt Co.
- 29 Received check for payment of account from Kolten.

Instructions

- (a) Journalize the preceding transactions in a six-column cash receipts journal with columns for Cash Dr., Sales Discounts Dr., Accounts Receivable Cr., Sales Revenue Cr., Other Accounts Cr., and Cost of Goods Sold Dr./Inventory Cr. Foot and crossfoot the journal.
- (b) Insert the beginning balances in the Accounts Receivable control and subsidiary accounts, and post the April transactions to these accounts.
- (c) Prove the agreement of the control account and subsidiary account balances.

(a) Balancing totals \$21,815

(c) Accounts Receivable \$1,360

Journalize transactions in cash payments journal; post to control account and subsidiary ledgers.

(LO 1, 2)

PI-2A Venson Company's chart of accounts includes the following selected accounts.

101 Cash	201 Accounts Payable
120 Inventory	332 Cash Dividends
130 Prepaid Insurance	505 Cost of Goods Sold
157 Equipment	

On October 1, the accounts payable ledger of Venson Company showed the following balances: Coulsen Company \$2,700, Flynn Co. \$2,500, Noy Co. \$2,100, and Trent Company \$3,700. The October transactions involving the payment of cash were as follows.

- Oct. 1 Purchased merchandise, check no. 63, \$300.
 3 Purchased equipment, check no. 64, \$1,200.
 5 Paid Coulsen Company balance due of \$2,700, less 2% discount, check no. 65, \$2,646.
 10 Purchased merchandise, check no. 66, \$2,250.
 15 Paid Noy Co. balance due of \$2,100, check no. 67.
 16 Paid cash dividend of \$400, check no. 68.
 19 Paid Flynn Co. in full for invoice no. 610, \$1,800 less 2% cash discount, check no. 69, \$1,764.
 29 Paid Trent Company in full for invoice no. 264, \$2,500, check no. 70.

Instructions

(a) Balancing totals \$13,250

- (a) Journalize the transactions above in a four-column cash payments journal with columns for Other Accounts Dr., Accounts Payable Dr., Inventory Cr., and Cash Cr. Foot and crossfoot the journal.
 (b) Insert the beginning balances in the Accounts Payable control and subsidiary accounts, and post the October transactions to these accounts.
 (c) Prove the agreement of the control account and the subsidiary account balances.

(c) Accounts Payable \$1,900

Journalize transactions in multi-column purchases journal; post to the general and subsidiary ledgers.

(LO 1, 2)

PI-3A The chart of accounts of Beldona Company includes the following selected accounts.

112 Accounts Receivable	401 Sales Revenue
120 Inventory	412 Sales Returns and Allowances
126 Supplies	505 Cost of Goods Sold
157 Equipment	610 Advertising Expense
201 Accounts Payable	

In July, the following selected transactions were completed. All purchases and sales were on account. The cost of all merchandise sold was 70% of the sales price.

- July 1 Purchased merchandise from Dent Company \$7,600.
 2 Received freight bill from Rensing Shipping on Dent purchase \$400.
 3 Made sales to Dayley Company \$1,300 and to Orsen Bros. \$2,000.
 5 Purchased merchandise from Langer Company \$3,200.
 8 Received credit on merchandise returned to Langer Company \$300.
 13 Purchased store supplies from Abel Supply \$910.
 15 Purchased merchandise from Dent Company \$3,600 and from Goran Company \$3,300.
 16 Made sales to Gentry Company \$3,450 and to Orsen Bros. \$1,570.
 18 Received bill for advertising from Wei Advertisements \$600.

			<u>9,100</u>	<u>29,900</u>	<u>234</u>	<u>38,766</u>

In addition, the following transactions have not been journalized for July. The cost of all merchandise sold was 65% of the sales price.

- July 1 A. Ramirez invested \$80,000 in cash in exchange for common stock.
 6 Sold merchandise on account to Edwards Co. \$6,600 terms 1/10, n/30.
 7 Made cash sales totaling \$6,300.
 8 Sold merchandise on account to Carmoni \$3,600, terms 1/10, n/30.
 10 Sold merchandise on account to L. Nunez \$4,900, terms 1/10, n/30.
 13 Received payment in full from Carmoni.
 16 Received payment in full from L. Nunez.
 20 Received payment in full from Edwards Co.
 21 Sold merchandise on account to M. Putzi \$5,000, terms 1/10, n/30.
 29 Returned damaged goods to T. Donley and received cash refund of \$450.

Instructions

(a) Open the following accounts in the general ledger.

101 Cash	332 Cash Dividends
112 Accounts Receivable	401 Sales Revenue
120 Inventory	414 Sales Discounts
127 Supplies	505 Cost of Goods Sold
131 Prepaid Rent	631 Supplies Expense
201 Accounts Payable	729 Rent Expense
311 Common Stock	

(b) Sales journal total \$20,100
 Cash receipts journal
 balancing totals \$101,850

(e) Totals \$120,220
 (f) Accounts Receivable \$5,000
 Accounts Payable \$13,820

(h) Totals \$120,220

- (b) Journalize the transactions that have not been journalized in the sales journal, the cash receipts journal (see Illustration I-8), and the general journal.
 (c) Post to the accounts receivable and accounts payable subsidiary ledgers. Follow the sequence of transactions as shown in the problem.
 (d) Post the individual entries and totals to the general ledger.
 (e) Prepare a trial balance at July 31, 2017.
 (f) Determine whether the subsidiary ledgers agree with the control accounts in the general ledger.
 (g) The following adjustments at the end of July are necessary.
 (1) A count of supplies indicates that \$170 is still on hand.
 (2) Recognize rent expense for July, \$500.
 Prepare the necessary entries in the general journal. Post the entries to the general ledger.
 (h) Prepare an adjusted trial balance at July 31, 2017.

PI-6A The post-closing trial balance for Bensen Co. is as follows.

BENSEN CO.
Post-Closing Trial Balance
December 31, 2016

	Debit	Credit
Cash	\$ 41,500	
Accounts Receivable	15,000	
Notes Receivable	45,000	
Inventory	20,000	
Equipment	7,500	
Accumulated Depreciation—Equipment		\$ 1,500
Accounts Payable		43,000
Common Stock		84,500
	\$129,000	\$129,000

Journalize in special journals; post; prepare a trial balance.

(LO 1, 2)

The subsidiary ledgers contain the following information: (1) accounts receivable—M. Cedeno \$2,500, J. Deitz \$7,500, and E. Divine \$5,000; (2) accounts payable—B. Forrest \$10,000, L. Gold \$18,000, and A. Pele \$15,000. The cost of all merchandise sold was 60% of the sales price.

The transactions for January 2017 are as follows.

- Jan. 3 Sell merchandise to T. Raynor \$4,600, terms 2/10, n/30.
 5 Purchase merchandise from P. Weng \$2,800, terms 2/10, n/30.
 7 Receive a check from E. Divine \$3,500.
 11 Pay freight on merchandise purchased \$300.
 12 Pay rent of \$1,000 for January.
 13 Receive payment in full from T. Raynor.
 14 Post all entries to the subsidiary ledgers. Issued credit of \$300 to M. Cedeno for returned merchandise.
 15 Send A. Pele a check for \$14,850 in full payment of account, discount \$150.
 17 Purchase merchandise from E. Nanco \$1,600, terms 2/10, n/30.
 18 Pay sales salaries of \$2,500 and office salaries \$2,000.
 20 Give L. Gold a 60-day note for \$18,000 in full payment of account payable.
 23 Total cash sales amount to \$9,100.
 24 Post all entries to the subsidiary ledgers. Sell merchandise on account to J. Deitz \$7,400, terms 1/10, n/30.
 27 Send P. Weng a check for \$950.
 29 Receive payment on a note of \$37,000 from W. Lague.
 30 Post all entries to the subsidiary ledgers. Return merchandise of \$300 to E. Nanco for credit.

Instructions

(a) Open general and subsidiary ledger accounts for the following.

101 Cash	311 Common Stock
112 Accounts Receivable	401 Sales Revenue
115 Notes Receivable	412 Sales Returns and Allowances
120 Inventory	414 Sales Discounts
157 Equipment	505 Cost of Goods Sold
158 Accumulated Depreciation—Equipment	726 Salaries and Wages Expense
200 Notes Payable	729 Rent Expense
201 Accounts Payable	

(b) Record the January transactions in a sales journal, a single-column purchases journal, a cash receipts journal (see Illustration I-8), a cash payments journal (see Illustration I-15), and a general journal.

(c) Post the appropriate amounts to the general ledger.

(d) Prepare a trial balance at January 31, 2017.

(e) Determine whether the subsidiary ledgers agree with controlling accounts in the general ledger.

(b) Sales journal \$12,000
 Purchases journal \$4,400
 Cash receipts journal (balancing) \$54,200
 Cash payments journal (balancing) \$21,750

(d) Totals \$138,250

(e) Accounts Receivable \$18,600

Accounts Payable \$13,150

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

COMPREHENSIVE PROBLEM

CPI-1 Zweifel Company has the following opening account balances in its general and subsidiary ledgers on January 1 and uses the periodic inventory system. All accounts have normal debit and credit balances.

General Ledger

Account Number	Account Title	January 1 Opening Balance
101	Cash	\$32,750
112	Accounts Receivable	13,000
115	Notes Receivable	42,000
120	Inventory	20,000
125	Supplies	1,000
130	Prepaid Insurance	2,000
157	Equipment	6,450
158	Accumulated Depreciation—Equip.	1,500
201	Accounts Payable	35,000
311	Common Stock	70,000
320	Retained Earnings	10,700

Schedule of Accounts Receivable

(from accounts receivable subsidiary ledger)

Customer	January 1 Opening Balance
G. Dukes	\$1,800
M. Hall	7,200
L. Longhini	4,000

Schedule of Accounts Payable

(from accounts payable subsidiary ledger)

Creditor	January 1 Opening Balance
O. Kitson	\$ 9,000
D. Markoff	15,000
L. Quinn	11,000

In addition, the following transactions have not been journalized for January 2017.

- Jan. 3 Sell merchandise on account to W. Rayms \$3,600, invoice no. 510, and M. Fischer \$1,800, invoice no. 511.
- 5 Purchase merchandise on account from K. Zapfel \$3,000 and J. Liotta \$2,400.
- 7 Receive checks for \$4,000 from L. Longhini and \$2,000 from M. Hall.
- 8 Pay freight on merchandise purchased \$180.
- 9 Send checks to O. Kitson for \$9,000 and L. Quinn for \$11,000.
- 9 Issue credit of \$240 to M. Fischer for merchandise returned.
- 10 Cash sales total \$15,500 from January 1 to January 10. Make one journal entry for these sales.
- 11 Sell merchandise on account to G. Dukes for \$1,900, invoice no. 512, and to L. Longhini \$900, invoice no. 513.
- 12 Pay rent of \$1,000 for January.
- 13 Receive payment in full from W. Rayms and M. Fischer.
- 15 Pay cash dividend of \$650.
- 16 Purchase merchandise on account from L. Quinn for \$15,000, from O. Kitson for \$13,900, and from K. Zapfel for \$1,500.
- 17 Pay \$400 cash for office supplies.
- 18 Return \$200 of merchandise to O. Kitson and receive credit.
- 20 Cash sales total \$17,750 from January 11 to January 20. Make one journal entry for these sales.
- 21 Issue \$15,000 note to D. Markoff in payment of balance due.
- 21 Receive payment in full from L. Longhini.

- 22 Sell merchandise on account to W. Rayms for \$3,700, invoice no. 514, and to G. Dukes for \$800, invoice no. 515.
- 23 Send checks to L. Quinn and O. Kitson in full payment.
- 25 Sell merchandise on account to M. Hall for \$3,500, invoice no. 516, and to M. Fischer for \$6,100, invoice no. 517.
- 27 Purchase merchandise on account from L. Quinn for \$12,500, from J. Liotta \$1,200, and from K. Zapfel for \$2,800.
- 28 Pay \$200 cash for office supplies.
- 31 Cash sales total \$22,920 from January 21 to January 31. Make one journal entry for these sales.
- 31 Pay sales salaries of \$4,300 and office salaries of \$3,100.

Instructions

- (a) Record the January transactions in the appropriate journal—sales, purchases, cash receipts, cash payments, and general.
- (b) Post the journals to the general and subsidiary ledgers. Add and number new accounts in an orderly fashion as needed.
- (c) Prepare a trial balance at January 31, 2017, using a worksheet. Complete the worksheet using the following additional information.
 - (1) Office supplies at January 31 total \$580.
 - (2) Insurance coverage expires on October 31, 2017.
 - (3) Annual depreciation on the equipment is \$1,500.
 - (4) Interest of \$30 has accrued on the note payable.
 - (5) Inventory at January 31 is \$12,600.
- (d) Prepare a multiple-step income statement and a retained earnings statement for January and a classified balance sheet at the end of January.
- (e) Prepare and post the adjusting and closing entries.
- (f) Prepare a post-closing trial balance, and determine whether the subsidiary ledgers agree with the control accounts in the general ledger.

(c) Trial balance totals
\$199,270
Adj. T/B totals \$199,425

(d) Net income \$8,775
Total assets \$127,255

(f) Post-closing T/B totals
\$128,880

FINANCIAL REPORTING AND ANALYSIS

Financial Reporting Problem—Mini Practice Set

BYPI-1 (You can use the working papers that accompany this textbook to complete this mini practice set.)

Bryant Co. uses a perpetual inventory system and both an accounts receivable and an accounts payable subsidiary ledger. Balances related to both the general ledger and the subsidiary ledger for Bryant are indicated in the working papers. Presented below are a series of transactions for Bryant Co. for the month of January. Credit sales terms are 2/10, n/30. The cost of all merchandise sold was 60% of the sales price.

- Jan. 3 Sell merchandise on account to K. Rai \$2,200, invoice no. 510, and to J. Fieber \$1,800, invoice no. 511.
- 5 Purchase merchandise from D. Vang \$5,000 and W. Lachey \$2,700, terms n/30.
- 7 Receive checks from A. Nakar \$4,000 and S. Grady \$2,000 after discount period has lapsed.
- 8 Pay freight on merchandise purchased \$310.
- 9 Send checks to T. Joosten for \$9,000 less 2% cash discount, and to I. Maida for \$11,000 less 1% cash discount.
- 9 Issue credit of \$400 to J. Fieber for merchandise returned.
- 10 Summary daily cash sales total \$15,500.
- 11 Sell merchandise on account to C. Dunlap \$1,600, invoice no. 512, and to A. Nakar \$900, invoice no. 513.
- 12 Pay rent of \$850 for January.
- 13 Receive payment in full from K. Rai and J. Fieber less cash discounts.
- 14 Pay an \$800 cash dividend.
- 15 Post all entries to the subsidiary ledgers.

- 16 Purchase merchandise from I. Maida \$18,000, terms 3/10, n/30; T. Joosten \$14,200, terms 2/10, n/30; and D. Vang \$1,500, terms n/30.
- 17 Pay \$400 cash for office supplies.
- 18 Return \$200 of merchandise to T. Joosten and receive credit.
- 20 Summary daily cash sales total \$20,100.
- 21 Issue \$15,000 note, maturing in 90 days, to A. Mangrich in payment of balance due.
- 21 Receive payment in full from A. Nakar less cash discount.
- 22 Sell merchandise on account to K. Rai \$2,700, invoice no. 514, and to C. Dunlap \$1,300, invoice no. 515.
- 22 Post all entries to the subsidiary ledgers.
- 23 Send checks to I. Maida and T. Joosten in full payment less cash discounts.
- 25 Sell merchandise on account to S. Grady \$3,500, invoice no. 516, and to J. Fieber \$6,100, invoice no. 517.
- 27 Purchase merchandise from I. Maida \$14,500, terms 1/10, n/30; W. Lachey \$1,200, terms n/30; and D. Vang \$5,400, terms n/30.
- 27 Post all entries to the subsidiary ledgers.
- 28 Pay \$200 cash for office supplies.
- 31 Summary daily cash sales total \$19,600.
- 31 Pay sales salaries \$4,300 and office salaries \$3,200.

Instructions

- (a) Record the January transactions in a sales journal, a single-column purchases journal, a cash receipts journal as shown on page I-8, a cash payments journal as shown on page I-14, and a two-column general journal.
- (b) Post the journals to the general ledger.
- (c) Prepare a trial balance at January 31, 2017, in the trial balance columns of the worksheet. Complete the worksheet using the following additional information.
 - (1) Office supplies at January 31 total \$900.
 - (2) Insurance coverage expires on August 31, 2017.
 - (3) Annual depreciation on the equipment is \$1,500.
 - (4) Interest of \$50 has accrued on the note payable.
- (d) Prepare a multiple-step income statement and a retained earnings statement for January and a classified balance sheet at the end of January.
- (e) Prepare and post adjusting and closing entries.
- (f) Prepare a post-closing trial balance, and determine whether the subsidiary ledgers agree with the control accounts in the general ledger.

CRITICAL THINKING**Decision-Making Across the Organization**

BYPI-3 Garin & Clark is a wholesaler of small appliances and parts. Garin & Clark is operated by two owners, Hank Garin and Julie Clark. In addition, the company has one employee, a repair specialist, who is on a fixed salary. Revenues are earned through the sale of appliances to retailers (approximately 75% of total revenues), appliance parts to do-it-yourselfers (10%), and the repair of appliances brought to the store (15%). Appliance sales are made on both a credit and cash basis. Customers are billed on prenumbered sales invoices. Credit terms are always net/30 days. All parts sales and repair work are cash only.

Merchandise is purchased on account from the manufacturers of both the appliances and the parts. Practically all suppliers offer cash discounts for prompt payments, and it is company policy to take all discounts. Most cash payments are made by check. Checks are most frequently issued to suppliers, to trucking companies for freight on merchandise purchases, and to newspapers, radio,

and TV stations for advertising. All advertising bills are paid as received. Hank and Julie each make a monthly drawing in cash for personal living expenses. The salaried repairman is paid twice monthly. Garin & Clark currently has a manual accounting system.

Instructions

With the class divided into groups, answer the following.

- Identify the special journals that Garin & Clark should have in its manual system. List the column headings appropriate for each of the special journals.
- What control and subsidiary accounts should be included in Garin & Clark's manual system? Why?

Communication Activity

BYPI-4 Kate Upshaw, a classmate, has a part-time bookkeeping job. She is concerned about the inefficiencies in journalizing and posting transactions. Peter Gogan is the owner of the company where Kate works. In response to numerous complaints from Kate and others, Peter hired two additional bookkeepers a month ago. However, the inefficiencies have continued at an even higher rate. The accounting information system for the company has only a general journal and a general ledger. Peter refuses to install an electronic accounting system.

Instructions

Now that Kate is an expert in manual accounting information systems, she decides to send a letter to Peter Gogan explaining (1) why the additional personnel did not help and (2) what changes should be made to improve the efficiency of the accounting department. Write the letter that you think Kate should send.

Ethics Case

BYPI-5 Stanton Products Company operates three divisions, each with its own manufacturing plant and marketing/sales force. The corporate headquarters and central accounting office are in Stanton, and the plants are in Freeport, Rockport, and Bayport, all within 50 miles of Stanton. Corporate management treats each division as an independent profit center and encourages competition among them. They each have similar but different product lines. As a competitive incentive, bonuses are awarded each year to the employees of the fastest growing and most profitable division.

Orlando Cepeda is the manager of Stanton's centralized computer accounting operation that enters the sales transactions and maintains the accounts receivable for all three divisions. Orlando came up in the accounting ranks from the Bayport division where his wife, several relatives, and many friends still work.

As sales documents are entered into the computer, the originating division is identified by code. Most sales documents (95%) are coded, but some (5%) are not coded or are coded incorrectly. As the manager, Orlando has instructed the data-entry personnel to assign the Bayport code to all uncoded and incorrectly coded sales documents. This is done he says, "in order to expedite processing and to keep the computer files current since they are updated daily." All receivables and cash collections for all three divisions are handled by Stanton as one subsidiary accounts receivable ledger.

Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this case?
- How might the system be improved to prevent this situation?

APPENDIX PREVIEW In addition to the current and long-term liabilities discussed in Chapter 10, several more types of liabilities may exist that could have a significant impact on a company's financial position and future cash flows. These other significant liabilities will be discussed in this appendix. They are (a) contingent liabilities, (b) lease liabilities, and (c) additional liabilities for employee fringe benefits (paid absences and postretirement benefits).

LEARNING OBJECTIVES

- 1 Describe the accounting and disclosure requirements for contingent liabilities.
- 2 Discuss the accounting for lease liabilities and off-balance-sheet financing.
- 3 Discuss additional fringe benefits associated with employee compensation.

LEARNING
OBJECTIVE

1

Describe the accounting and disclosure requirements for contingent liabilities.

With notes payable, interest payable, accounts payable, and sales taxes payable, we know that an obligation to make a payment exists. But, suppose that your company is involved in a dispute with the Internal Revenue Service (IRS) over the amount of its income tax liability. Should you report the disputed amount as a liability on the balance sheet? Or, suppose your company is involved in a lawsuit which, if you lose, might result in bankruptcy. How should you report this major contingency? The answers to these questions are difficult because these liabilities are dependent—contingent—upon some future event. In other words, a **contingent liability** is a potential liability that may become an actual liability in the future.

How should companies report contingent liabilities? They use the following guidelines:

1. If the contingency is **probable** (if it is *likely* to occur) **and** the amount can be **reasonably estimated**, the liability should be recorded in the accounts.
2. If the contingency is only **reasonably possible** (if it *could* happen), then it needs to be disclosed only in the notes that accompany the financial statements.
3. If the contingency is **remote** (if it is *unlikely* to occur), it need not be recorded or disclosed.

Recording a Contingent Liability

Product warranties are an example of a contingent liability that companies should record in the accounts. Warranty contracts result in future costs that companies may incur in replacing defective units or repairing malfunctioning units. Generally, a manufacturer, such as **Stanley Black & Decker**, knows that it will incur some warranty costs. From prior experience with the product, the company usually can reasonably estimate the anticipated cost of servicing (honoring) the warranty.

The accounting for warranty costs is based on the expense recognition principle. **The estimated cost of honoring product warranty contracts should be recognized as an expense in the period in which the sale occurs.** To illustrate, assume that in 2017 Denson Manufacturing Company sells 10,000 washers and dryers at an average price of \$600 each. The selling price includes a one-year warranty on parts. Denson expects that 500 units (5%) will be defective and that warranty repair costs will average \$80 per unit. In 2017, the company honors warranty contracts on 300 units, at a total cost of \$24,000.

At December 31, it is necessary to accrue the estimated warranty costs on the 2017 sales. Denson computes the estimated warranty liability as follows.

Illustration J-1
Computation of estimated product warranty liability

Number of units sold	10,000
Estimated rate of defective units	× 5%
Total estimated defective units	500
Average warranty repair cost	× \$80
Estimated product warranty liability	<u>\$40,000</u>

A	=	L	+	SE
		-40,000 Exp		
		+40,000		

Cash Flows
no effect

The company makes the following adjusting entry.

Dec. 31	Warranty Expense	40,000	
	Warranty Liability		40,000
	(To accrue estimated warranty costs)		

Denson records those repair costs incurred in 2017 to honor warranty contracts on 2017 sales, as shown below.

A	=	L	+	SE
		-24,000		
		-24,000		

Cash Flows
no effect

Jan. 1– Dec. 31	Warranty Liability	24,000	
	Repair Parts		24,000
	(To record honoring of 300 warranty contracts on 2017 sales)		

The company reports warranty expense of \$40,000 under selling expenses in the income statement. It classifies estimated warranty liability of \$16,000 (\$40,000 – \$24,000) as a current liability on the balance sheet assuming the warranty is honored in the next year.

In the following year, Denson should debit to Warranty Liability all expenses incurred in honoring warranty contracts on 2017 sales. To illustrate, assume that the company replaces 20 defective units in January 2018, at an average cost of \$80 in parts and labor. The summary entry for the month of January 2018 is as follows.

A	=	L	+	SE
		-1,600		
		-1,600		

Cash Flows
no effect

Jan. 31	Warranty Liability	1,600	
	Repair Parts		1,600
	(To record honoring of 20 warranty contracts on 2017 sales)		

Disclosure of Contingent Liabilities

When it is probable that a company will incur a contingent liability but it cannot reasonably estimate the amount, or when the contingent liability is only reasonably possible, only disclosure of the contingency is required. Examples of contingencies that may require disclosure are pending or threatened lawsuits and assessment of additional income taxes pending an IRS audit of the tax return.

The disclosure should identify the nature of the item and, if known, the amount of the contingency and the expected outcome of the future event. Disclosure is usually accomplished through a note to the financial statements, as illustrated by the following.

YAHOO! INC. Notes to the Financial Statement

Contingencies. From time to time, third parties assert patent infringement claims against the company. Currently the company is engaged in several lawsuits regarding patent issues and has been notified of a number of other potential patent disputes. In addition, from time to time the company is subject to other legal proceedings and claims in the ordinary course of business, including claims for infringement of trademarks, copyrights and other intellectual property rights. . . . The company does not believe, based on current knowledge, that any of the foregoing legal proceedings or claims are likely to have a material adverse effect on the financial position, results of operations or cash flows.

Illustration J-2
Disclosure of contingent liability

The required disclosure for contingencies is a good example of the use of the full disclosure principle. The **full disclosure principle** requires that companies disclose all circumstances and events that would make a difference to financial statement users. Some important financial information, such as contingencies, is not easily reported in the financial statements. Reporting information on contingencies in the notes to the financial statements will help investors be aware of events that can affect the financial health of a company.

LEARNING
OBJECTIVE

2

Discuss the accounting for lease liabilities and off-balance-sheet financing.

A **lease** is a contractual arrangement between a lessor (owner of a property) and a lessee (renter of the property). It grants the right to use specific property for a period of time in return for cash payments. Leasing is big business. The global leasing market has recently been between \$600 to \$700 billion for capital equipment. This represents approximately one-third of equipment financed in a year. The two most common types of leases are operating leases and capital leases.

Operating Leases

The renting of an apartment and the rental of a car at an airport are examples of **operating leases**. In an **operating lease**, the intent is temporary use of the property by the lessee, while the lessor continues to own the property.

In an operating lease, the lessee records the lease (or rental) payments as an expense. The lessor records the payments as revenue. For example, assume that a sales representative for Western Inc. leases a car from **Hertz Car Rental** at the

A	=	L	+	SE
-275				-275 Exp
Cash Flows				
-275				

Los Angeles airport and that Hertz charges a total of \$275. Western, the lessee, records the rental as follows.

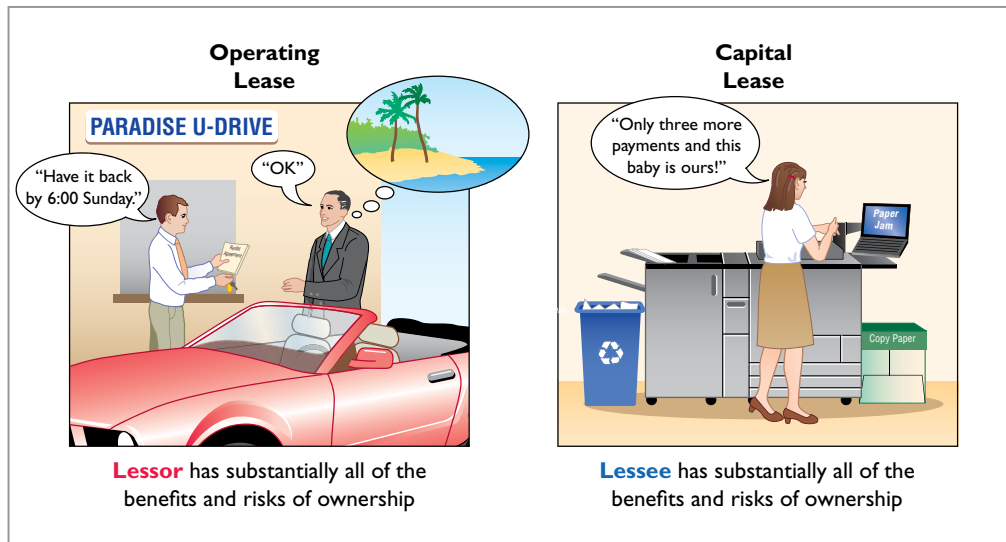

Rent Expense	275	
Cash		275
(To record payment of lease rental charge)		

The lessee may incur other costs during the lease period. For example, in the case above, Western will generally incur costs for gas. Western would report these costs as an expense.

Capital Leases

In most lease contracts, the lessee makes a periodic payment and records that payment in the income statement as rent expense. In some cases, however, the lease contract transfers to the lessee substantially all the benefits and risks of ownership. Such a lease is in effect a purchase of the property. This type of lease is a **capital lease**. Its name comes from the fact that the company capitalizes the present value of the cash payments for the lease and records that amount as an asset. Illustration J-3 indicates the major difference between operating and capital leases.

Illustration J-3
Types of leases

Helpful Hint

A capital lease situation is one that, although legally a rental case, is *in substance* an installment purchase by the lessee. Accounting standards require that substance over form be used in such a situation.

If **any one** of the following conditions exists, the lessee must record a lease **as an asset**—that is, as a capital lease:

- The lease transfers ownership of the property to the lessee.** *Rationale:* If during the lease term the lessee receives ownership of the asset, the lessee should report the leased asset as an asset on its books.
- The lease contains a bargain purchase option.** *Rationale:* If during the term of the lease the lessee can purchase the asset at a price substantially below its fair value, the lessee will exercise this option. Thus, the lessee should report the lease as a leased asset on its books.
- The lease term is equal to 75% or more of the economic life of the leased property.** *Rationale:* If the lease term is for much of the asset’s useful life, the lessee should report the asset as a leased asset on its books.
- The present value of the lease payments equals or exceeds 90% of the fair value of the leased property.** *Rationale:* If the present value of the lease payments is equal to or almost equal to the fair value of the asset, the lessee has essentially purchased the asset. As a result, the lessee should report the leased asset as an asset on its books.

To illustrate, assume that Gonzalez Company decides to lease new equipment. The lease period is four years; the economic life of the leased equipment is estimated to be five years. The present value of the lease payments is \$190,000, which is equal to the fair value of the equipment. There is no transfer of ownership during the lease term, nor is there any bargain purchase option.

In this example, Gonzalez has essentially purchased the equipment. Conditions 3 and 4 have been met. First, the lease term is 75% or more of the economic life of the asset. Second, the present value of cash payments is equal to the equipment's fair value. Gonzalez records the transaction as follows.

Leased Asset—Equipment		190,000			
Lease Liability				190,000	
(To record leased asset and lease liability)					

A	=	L	+	SE
+190,000				+190,000
Cash Flows				
no effect				

The lessee reports a leased asset on the balance sheet under plant assets. It reports the lease liability on the balance sheet as a liability. **The portion of the lease liability expected to be paid in the next year is a current liability. The remainder is classified as a long-term liability.**

Most lessees do not like to report leases on their balance sheets. Why? Because the lease liability increases the company's total liabilities. This, in turn, may make it more difficult for the company to obtain needed funds from lenders. As a result, companies attempt to keep leased assets and lease liabilities off the balance sheet by structuring leases so as not to meet any of the four conditions mentioned on page J-4. The practice of keeping liabilities off the balance sheet is referred to as **off-balance-sheet financing**.

ETHICS NOTE

Accounting standard-setters are attempting to rewrite rules on lease accounting because of concerns that abuse of the current standards is reducing the usefulness of financial statements.

LEARNING OBJECTIVE

3

Discuss additional fringe benefits associated with employee compensation.

In addition to the traditional payroll-tax fringe benefits (Social Security taxes, Medicare taxes, and state and federal unemployment taxes), employers incur other substantial fringe benefit costs. Two of the most important are paid absences and postretirement benefits.

Paid Absences

Employees often are given rights to receive compensation for absences when they meet certain conditions of employment. The compensation may be for paid vacations, sick pay benefits, and paid holidays. When the payment for such absences is **probable** and the amount can be **reasonably estimated**, the company should accrue a liability for paid future absences. When the amount cannot be reasonably estimated, the company should instead disclose the potential liability. Ordinarily, vacation pay is the only paid absence that is accrued. The other types of paid absences are only disclosed.

To illustrate, assume that Academy Company employees are entitled to one day's vacation for each month worked. If 30 employees earn an average of \$110 per day in a given month, the accrual for vacation benefits in one month is \$3,300. Academy records the liability at the end of the month by the following adjusting entry.

Jan. 31	Vacation Benefits Expense		3,300		
	Vacation Benefits Payable			3,300	
(To accrue vacation benefits expense)					

A	=	L	+	SE
				-3,300 Exp +3,300
Cash Flows				
no effect				

This accrual is required by the expense recognition principle. Academy would report Vacation Benefits Expense as an operating expense in the income statement, and Vacation Benefits Payable as a current liability in the balance sheet.

Later, when Academy pays vacation benefits, it debits Vacation Benefits Payable and credits Cash. For example, if employees take 10 days of vacation in July, the entry is as follows.

July 31	Vacation Benefits Payable	1,100	
	Cash		1,100
	(To record payment of vacation benefits)		

The magnitude of unpaid absences has gained employers’ attention. Consider the case of an assistant superintendent of schools who worked for 20 years and rarely took a vacation or sick day. A month or so before she retired, the school district discovered that she was due nearly \$30,000 in accrued benefits. Yet the school district had never accrued the liability.

Postretirement Benefits

Postretirement benefits are benefits that employers provide to retired employees for (1) pensions and (2) healthcare and life insurance. Companies account for both types of postretirement benefits on the accrual basis. The cost of postretirement benefits is getting steep. For example, states and localities must deal with a \$1 trillion deficit in public employees’ retirement benefit funds. This shortfall amounts to more than \$8,800 for every household in the nation.

Average Americans have debt of approximately \$10,000 (not counting the mortgage on their home) and little in the way of savings. What will happen at retirement for these people? The picture is not pretty—people are living longer, the future of Social Security is unclear, and companies are cutting back on postretirement benefits. This situation may lead to one of the great social and moral dilemmas this country faces in the next 40 years. The more you know about postretirement benefits, the better you will understand the issues involved in this dilemma.

POSTRETIREMENT HEALTHCARE AND LIFE INSURANCE BENEFITS

Providing medical and related healthcare benefits for retirees was at one time an inexpensive and highly effective way of generating employee goodwill. This practice has now turned into one of corporate America’s most worrisome financial problems. Runaway medical costs, early retirement, and increased longevity are sending the liability for retiree health plans through the roof.

Companies estimate and expense postretirement costs during the working years of the employee because the company benefits from the employee’s services during this period. However, the company rarely sets up funds to meet the cost of the future benefits. It follows a pay-as-you-go basis for these costs. The major reason is that the company does not receive a tax deduction until it actually pays the medical bill.

PENSION PLANS

A **pension plan** is an agreement whereby an employer provides benefits (payments) to employees after they retire. The need for good accounting for pension plans becomes apparent when we consider the size of existing pension funds. Over 50 million workers currently participate in pension plans in the United States. Most pension plans are subject to the provisions of ERISA (Employee Retirement Income Security Act), a law enacted to curb abuses in the administration and funding of such plans.

Three parties are generally involved in a pension plan. The **employer** (company) sponsors the pension plan. The **plan administrator** receives the contributions from the employer, invests the pension assets, and makes the benefit payments to the **pension recipients** (retired employees). Illustration J-4 indicates the flow of cash among the three parties involved in a pension plan.

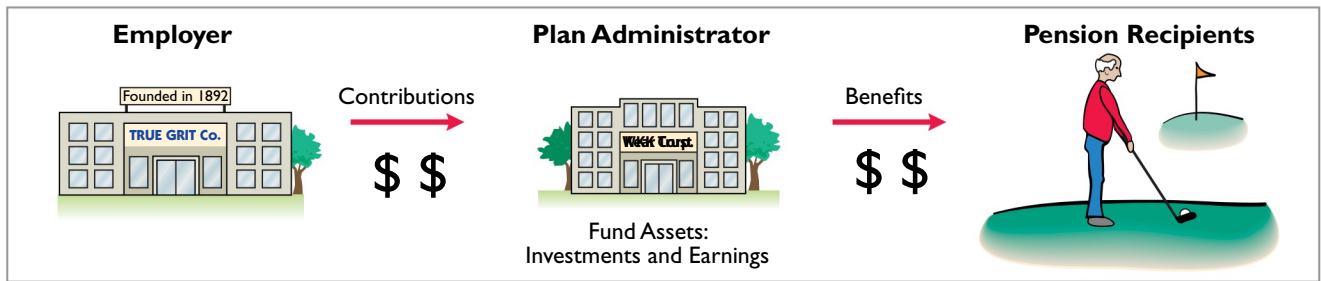

Illustration J-4
Parties in a pension plan

An employer-financed pension is part of the employees' compensation. ERISA establishes the minimum contribution that a company must make each year toward employee pensions. The most popular type of pension plan used is the 401(k) plan. A 401(k) plan works as follows. As an employee, you can contribute up to a certain percentage of your pay into a 401(k) plan, and your employer will match a percentage of your contribution. These contributions are then generally invested in stocks and bonds through mutual funds. These funds will grow without being taxed and can be withdrawn beginning at age 59-1/2. If you must access the funds earlier, you may be able to do so, but a penalty usually occurs along with a payment of tax on the proceeds. Any time you have the opportunity to be involved in a 401(k) plan, you should avail yourself of this benefit!

Companies record pension costs as an expense while the employees are working because that is when the company receives benefits from the employees' services. Generally, the pension expense is reported as an operating expense in the company's income statement. Frequently, the amount contributed by the company to the pension plan is different from the amount of the pension expense. A **liability** is recognized when the pension expense to date is **more than** the company's contributions to date. An **asset** is recognized when the pension expense to date is **less than** the company's contributions to date. Further consideration of the accounting for pension plans is left for more advanced courses.

The two most common types of pension arrangements for providing benefits to employees after they retire are defined-contribution plans and defined-benefit plans.

DEFINED-CONTRIBUTION PLAN In a **defined-contribution plan**, the plan defines the employer's contribution but not the benefit that the employee will receive at retirement. That is, the employer agrees to contribute a certain sum each period based on a formula. A 401(k) plan is typically a defined-contribution plan.

The accounting for a defined-contribution plan is straightforward. The employer simply makes a contribution each year based on the formula established in the plan. As a result, the employer's obligation is easily determined. It follows that the company reports **the amount of the contribution required each period as pension expense. The employer reports a liability only if it has not made the contribution in full.**

To illustrate, assume that Alba Office Interiors has a defined-contribution plan in which it contributes \$200,000 each year to the pension fund for its employees. The entry to record this transaction is as follows.

Pension Expense	200,000	
Cash		200,000
(To record pension expense and contribution to pension fund)		

A	=	L	+	SE	
					-200,000
					-200,000
Cash Flows					
					-200,000

To the extent that Alba did not contribute the \$200,000 defined contribution, it would record a liability. Pension payments to retired employees are made from the pension fund by the plan administrator.

DEFINED-BENEFIT PLAN In a **defined-benefit plan**, the **benefits** that the employee will receive at the time of retirement are defined by the terms of the plan.

Benefits are typically calculated using a formula that considers an employee's compensation level when he or she nears retirement and the employee's years of service. Because the benefits in this plan are defined in terms of uncertain future variables, an appropriate funding pattern is established to ensure that enough funds are available at retirement to meet the benefits promised. This funding level depends on a number of factors such as employee turnover, length of service, mortality, compensation levels, and investment earnings. **The proper accounting for these plans is complex and is considered in more advanced accounting courses.**

POSTRETIREMENT BENEFITS AS LONG-TERM LIABILITIES

While part of the liability associated with (1) postretirement healthcare and life insurance benefits and (2) pension plans is generally a current liability, the greater portion of these liabilities extends many years into the future. Therefore, many companies are required to report significant amounts as long-term liabilities for postretirement benefits.

REVIEW AND PRACTICE

LEARNING OBJECTIVES REVIEW

- 1 Describe the accounting and disclosure requirements for contingent liabilities.** If it is probable that the contingency will happen (if it is likely to occur) and the amount can be reasonably estimated, the liability should be recorded in the accounts. If the contingency is only reasonably possible (it could occur), then it should be disclosed only in the notes to the financial statements. If the possibility that the contingency will happen is remote (unlikely to occur), it need not be recorded or disclosed.
- 2 Discuss the accounting for lease liabilities and off-balance-sheet financing.** For an operating lease, lease (or rental) payments are recorded as an expense by the lessee (renter). For a capital lease, the lessee records the asset and related obligation at the present value of the future lease payments.
- 3 Discuss additional fringe benefits associated with employee compensation.** Additional fringe benefits associated with wages are paid absences (paid vacations, sick pay benefits, and paid holidays), postretirement healthcare and life insurance, and pensions. The two most common types of pension arrangements are a defined-contribution plan and a defined-benefit plan.

GLOSSARY REVIEW

- Capital lease** A contractual arrangement that transfers substantially all the benefits and risks of ownership to the lessee so that the lease is in effect a purchase of the property. (p. J-4).
- Contingent liability** A potential liability that may become an actual liability in the future. (p. J-1).
- Defined-benefit plan** A pension plan in which the benefits that the employee will receive at retirement are defined by the terms of the plan. (p. J-7).
- Defined-contribution plan** A pension plan in which the employer's contribution to the plan is defined by the terms of the plan. (p. J-7).
- Lease** A contractual arrangement between a lessor (owner of a property) and a lessee (renter of the property). (p. J-3).
- Operating lease** A contractual arrangement giving the lessee temporary use of the property, with continued ownership of the property by the lessor. (p. J-3).
- Pension plan** An agreement whereby an employer provides benefits to employees after they retire. (p. J-6).
- Postretirement benefits** Payments by employers to retired employees for healthcare, life insurance, and pensions. (p. J-6).

PRACTICE MULTIPLE-CHOICE QUESTIONS

- (LO 1) 1. A contingency should be recorded in the accounts when:
- it is probable the contingency will happen but the amount cannot be reasonably estimated.
 - it is reasonably possible the contingency will happen and the amount can be reasonably estimated.
 - it is reasonably possible the contingency will happen but the amount cannot be reasonably estimated.
 - it is probable the contingency will happen and the amount can be reasonably estimated.
- (LO 1) 2. At December 31, Anthony Company prepares an adjusting entry for a product warranty contract. Which of the following accounts are included in the entry?
- Warranty Expense.
 - Miscellaneous Expense.
 - Salaries and Wages Payable.
 - Repair Parts.
3. Lease A does not contain a bargain purchase option, but the lease term is equal to 90% of the estimated economic life of the leased property. Lease B does not transfer ownership of the property to the lessee by the end of the lease term, but the lease term is equal to 75% of the estimated economic life of the lease property. How should the lessee classify these leases?
- | Lease A | Lease B |
|---------------------|-----------------|
| (a) Operating lease | Capital lease |
| (b) Operating lease | Operating lease |
| (c) Capital lease | Capital lease |
| (d) Capital lease | Operating lease |
4. Which of the following is **not** an additional fringe benefit?
- Salaries.
 - Paid absences.
 - Paid vacations.
 - Postretirement pensions.

Solutions

- (d)** A contingent liability is recorded when the amount can be reasonably estimated and the likelihood of the contingency is probable. The other choices are therefore incorrect.
- (a)** The adjusting entry for product warranties includes a debit to Warranty Expense, not (b) Miscellaneous Expense, (c) Salaries and Wages Payable, or (d) Repair Parts.
- (c)** Both leases should be classified as capital leases because both lease terms are greater than or equal to 75% of the economic life of the respective assets. The other choices are therefore incorrect.
- (a)** Salaries are not an additional fringe benefit. The other choices are fringe benefits.

WileyPLUS

Brief Exercises, Exercises, and Problems, and many additional resources are available for practice in WileyPLUS

QUESTIONS

- What is a contingent liability? Give an example of a contingent liability that is usually recorded in the accounts.
- Under what circumstances is a contingent liability disclosed only in the notes to the financial statements? Under what circumstances is a contingent liability not recorded in the accounts nor disclosed in the notes to the financial statements?
- (a) What is a lease agreement? (b) What are the two most common types of leases? (c) Distinguish between the two types of leases.
- Kuchin Company rents a warehouse on a month-to-month basis for the storage of its excess inventory. The company periodically must rent space when its production greatly exceeds actual sales. What is the nature of this type of lease agreement, and what accounting treatment should be accorded it?
- Stever Company entered into an agreement to lease 12 computers from Wendt Electronics Inc. The present value of the lease payments is \$186,300. Assuming that this is a capital lease, what entry would Stever Company make on the date of the lease agreement?
- Identify three additional types of fringe benefits associated with employees' compensation.
- Often during job interviews, the candidate asks the potential employer about the firm's paid absences policy. What are paid absences? How are they accounted for?
- What are the two types of postretirement benefits? During what years does the FASB advocate expensing the employer's costs of these postretirement benefits?
- Identify the three parties in a pension plan. What role does each party have in the plan?
- Henry Krantz and Peter Judd are reviewing pension plans. They ask your help in distinguishing between a defined-contribution plan and a defined-benefit plan. Explain the principal difference to Henry and Peter.

BRIEF EXERCISES

Prepare adjusting entry for warranty costs.

(LO 1)

BEJ-1 On December 1, Grand Company introduces a new product that includes a 1-year warranty on parts. In December, 1,000 units are sold. Management believes that 4% of the units will be defective and that the average warranty costs will be \$70 per unit. Prepare the adjusting entry at December 31 to accrue the estimated warranty cost.

Prepare entries for operating and capital leases.

(LO 2)

BEJ-2 Prepare the journal entries that the lessee should make to record the following transactions.

- The lessee makes a lease payment of \$68,000 to the lessor in an operating lease transaction.
- Norlan Company leases a new building from Trager Construction, Inc. The present value of the lease payments is \$900,000. The lease qualifies as a capital lease.

Record estimated vacation benefits.

(LO 3)

BEJ-3 In Ramirez Company, employees are entitled to 1 day's vacation for each month worked. In January, 35 employees worked the full month. Record the vacation pay liability for January assuming the average daily pay for each employee is \$120.

EXERCISES

Record estimated liability and expense for warranties.

(LO 1)

EJ-1 Ortega Company sells automatic can openers under a 75-day warranty for defective merchandise. Based on past experience, Ortega Company estimates that 3% of the units sold will become defective during the warranty period. Management estimates that the average cost of replacing or repairing a defective unit is \$15. The units sold and units defective that occurred during the last 2 months of 2017 are as follows.

Month	Units Sold	Units Defective
		Prior to December 31
November	28,000	600
December	32,000	500

Instructions

- Determine the estimated warranty liability at December 31 for the units sold in November and December.
- Prepare the journal entries to record the estimated liability for warranties and the costs (assume actual costs of \$16,500) incurred in honoring 1,100 warranty claims.
- Give the entry to record the honoring of 500 warranty contracts in January at an average cost of \$15.

Prepare the current liabilities section of the balance sheet.

(LO 1)

EJ-2 Harvey Online Company has the following liability accounts after posting adjusting entries: Accounts Payable \$63,000, Unearned Ticket Revenue \$21,000, Warranty Liability \$18,000, Interest Payable \$8,000, Mortgage Payable \$120,000, Notes Payable \$80,000, and Sales Taxes Payable \$10,000. Assume the company's operating cycle is less than 1 year, ticket revenue will be earned within 1 year, warranty costs are expected to be incurred within 1 year, and the notes mature in 3 years.

Instructions

- Prepare the current liabilities section of the balance sheet, assuming \$40,000 of the mortgage is payable next year.
- Comment on Harvey Online Company's liquidity, assuming total current assets are \$300,000.

Prepare journal entries for operating lease and capital lease.

(LO 2)

EJ-3 Presented below are two independent situations.

- Speedy Car Rental leased a car to Penner Company for 1 year. Terms of the operating lease agreement call for monthly payments of \$720.
- On January 1, 2017, Eaton Inc. entered into an agreement to lease 20 computers from Adler Electronics. The terms of the lease agreement require three annual rental payments of \$40,000 (including 10% interest) beginning December 31, 2017. The present value of the three rental payments is \$99,474. Eaton considers this a capital lease.

Instructions

- Prepare the appropriate journal entry to be made by Penner Company for the first lease payment.
- Prepare the journal entry to record the lease agreement on the books of Eaton Inc. on January 1, 2017.

EJ-4 Rondelli Company has two fringe benefit plans for its employees:

- It grants employees 2 days' vacation for each month worked. Ten employees worked the entire month of March at an average daily wage of \$96 per employee.
- It has a defined-contribution pension plan in which the company contributes 8% of gross earnings. Gross earnings in March were \$30,000. The payment to the pension fund has not been made.

Prepare adjusting entries for fringe benefits.

(LO 3)

**Instructions**

Prepare the adjusting entries at March 31.

EXERCISES: SET B AND CHALLENGE EXERCISES

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Exercises: Set B and Challenge Exercises.

PROBLEMS: SET A

PJ-1A On January 1, 2017, the ledger of Winston Software Company contains the following liability accounts.

Accounts Payable	\$42,500
Sales Taxes Payable	5,800
Unearned Service Revenue	15,000

Prepare current liability entries, adjusting entries, and current liabilities section.

(LO 1)

During January, the following selected transactions occurred.

- Jan. 1 Borrowed \$15,000 in cash from Landmark Bank on a 4-month, 8%, \$15,000 note.
 5 Sold merchandise for cash totaling \$9,540, which includes 6% sales taxes.
 12 Performed services for customers who had made advance payments of \$9,000. (Credit Service Revenue.)
 14 Paid state treasurer's department for sales taxes collected in December 2016 (\$5,800).
 20 Sold 700 units of a new product on credit at \$52 per unit, plus 6% sales tax. This new product is subject to a 1-year warranty.
 25 Sold merchandise for cash totaling \$13,144, which includes 6% sales taxes.

Instructions

- Journalize the January transactions, assuming a periodic inventory.
- Journalize the adjusting entries at January 31 for (1) the outstanding notes payable, and (2) estimated warranty liability, assuming warranty costs are expected to equal 5% of sales of the new product.
- Prepare the current liabilities section of the balance sheet at January 31, 2017. Assume no change in accounts payable.

(c) Total current liabilities
\$68,888

PJ-2A Presented below are three different lease transactions in which Carson Enterprises engaged in 2017. Assume that all lease transactions start on January 1, 2017. In no case does Carson receive title to the properties leased during or at the end of the lease term.

Analyze three different lease situations and prepare journal entries.

(LO 2)

	Lessor		
	Schell Inc.	Logan Co.	Porter Inc.
Type of property	Bulldozer	Truck	Furniture
Bargain purchase option	None	None	None
Lease term	4 years	6 years	3 years
Estimated economic life	8 years	7 years	5 years
Yearly rental	\$13,000	\$15,000	\$4,800
Fair value of leased asset	\$80,000	\$72,000	\$27,500
Present value of the lease rental payments	\$48,000	\$62,000	\$12,000

Instructions

- Identify the leases as operating or capital leases. Explain.
- How should the lease transaction with Logan Co. be recorded on January 1, 2017?
- How should the lease transactions for Porter Inc. be recorded in 2017?

PROBLEMS: SET B AND SET C

Visit the book's companion website, at www.wiley.com/college/weygandt, and choose the Student Companion site to access Problems: Set B and Set C.

BROADENING YOUR PERSPECTIVE**FINANCIAL REPORTING AND ANALYSIS****Financial Reporting Problems: Apple Inc.**

BYPJ-1 Refer to the financial statements of **Apple Inc.** in Appendix A. Instructions for accessing and using the company's complete annual report, including the notes to the financial statements, are also provided in Appendix A.

Instructions

- What were Apple's total long-term liabilities at September 28, 2013? What was the increase/decrease in total long-term liabilities from the prior year?
- Determine whether Apple redeemed (bought back) any long-term liabilities during the fiscal year ended September 28, 2013.

BYPJ-2 Presented below is the lease portion of the lease notes to the financial statements of Rondo Industries, Inc.

RONDO INDUSTRIES, INC.**Notes to the Financial Statements**

Leases The present value of future minimum capital lease payments and the future minimum lease payments under noncancelable operating leases at December 31, 2017, are as follows.

	(in millions)	
	Capital Lease Payments	Operating Lease Payments
2018	\$ 7,733	\$33.2
2019	6,791	27.2
2020	6,730	11.4
2021	6,788	7.3
2022	6,785	4.5
Thereafter	13,441	11.3
Future minimum lease payments	48,268	\$94.9
Less: Equivalent interest	11,391	
Present value	36,877	
Less: Current portion	5,570	
	<u>\$31,307</u>	

Rent expense for operating leases was \$38.1 million for the current year and \$31.2 million for the preceding year.

Instructions

What type of leases does Rondo Industries, Inc. use? What is the amount of the current portion of the capital lease obligation?

CRITICAL THINKING

Decision-Making Across the Organization

BYPJ-3 Presented below is the condensed balance sheet for Stephens, Inc. as of December 31, 2017.

STEPHENS, INC.
Balance Sheet
December 31, 2017

Current assets	\$ 800,000	Current liabilities	\$1,200,000
Plant assets	1,600,000	Long-term liabilities	700,000
		Common stock	400,000
		Retained earnings	100,000
Total	\$2,400,000	Total	\$2,400,000

Stephens has decided that it needs to purchase a new crane for its operations. The new crane costs \$900,000 and has a useful life of 15 years. However, Stephens' bank has refused to provide any help in financing the purchase of the new equipment, even though Stephens is willing to pay an above-market interest rate for the financing.

The chief financial officer for Stephens, Alexis Long, has discussed with the manufacturer of the crane the possibility of a lease agreement. After some negotiation, the crane manufacturer agrees to lease the crane to Stephens under the following terms: length of the lease 7 years; payments \$100,000 per year. The present value of the lease payments is \$548,732.

The board of directors at Stephens is delighted with this new lease. They have the use of the crane for the next 7 years, and this type of financing will keep debt off the balance sheet.

Instructions

With the class divided into groups, answer the following.

- (a) Why do you think the bank decided not to lend money to Stephens, Inc.?
- (b) How should this lease transaction be reported in the financial statements?
- (c) What did Alexis Long mean when she said "leasing will keep debt off the balance sheet"?

APPENDIX PREVIEW Management accountants have an obligation to the organizations they serve, their profession, the public, and themselves to maintain the highest standards of ethical conduct. In recognition of this obligation, the **Institute of Management Accountants** has published and promoted the following standards of ethical conduct for management accountants.

IMA Statement of Ethical Professional Practice

Members of IMA shall behave ethically. A commitment to ethical professional practice includes: overarching principles that express our values, and standards that guide our conduct.

Principles

IMA's overarching ethical principles include: Honesty, Fairness, Objectivity, and Responsibility. Members shall act in accordance with these principles and shall encourage others within their organizations to adhere to them.

Standards

A member's failure to comply with the following standards may result in disciplinary action.

I. COMPETENCE

Each member has a responsibility to:

1. Maintain an appropriate level of professional expertise by continually developing knowledge and skills.
2. Perform professional duties in accordance with relevant laws, regulations, and technical standards.
3. Provide decision support information and recommendations that are accurate, clear, concise, and timely.
4. Recognize and communicate professional limitations or other constraints that would preclude responsible judgment or successful performance of an activity.

II. CONFIDENTIALITY

Each member has a responsibility to:

1. Keep information confidential except when disclosure is authorized or legally required.
2. Inform all relevant parties regarding appropriate use of confidential information. Monitor subordinates' activities to ensure compliance.
3. Refrain from using confidential information for unethical or illegal advantage.

III. INTEGRITY

Each member has a responsibility to:

1. Mitigate actual conflicts of interest, regularly communicate with business associates to avoid apparent conflicts of interest. Advise all parties of any potential conflicts.
2. Refrain from engaging in any conduct that would prejudice carrying out duties ethically.
3. Abstain from engaging in or supporting any activity that might discredit the profession.

IV. CREDIBILITY

Each member has a responsibility to:

1. Communicate information fairly and objectively.
2. Disclose all relevant information that could reasonably be expected to influence an intended user's understanding of the reports, analyses, or recommendations.
3. Disclose delays or deficiencies in information, timeliness, processing, or internal controls in conformance with organization policy and/or applicable law.

Resolution of Ethical Conflict

In applying the Standards of Ethical Professional Practice, you may encounter problems identifying unethical behavior or resolving an ethical conflict. When faced with ethical issues, you should follow your organization's established policies on the resolution of such conflict. If these policies do not resolve the ethical conflict, you should consider the following courses of action:

1. Discuss the issue with your immediate supervisor except when it appears that the supervisor is involved. In that case, present the issue to the next level. If you cannot achieve a satisfactory resolution, submit the issue to the next management level. If your immediate superior is the chief executive officer or equivalent, the acceptable reviewing authority may be a group such as the audit committee, executive committee, board of directors, board of trustees, or owners. Contact with levels above the immediate superior should be initiated only with your superior's knowledge, assuming he or she is not involved. Communication of such problems to authorities or individuals not employed or engaged by the organization is not considered appropriate, unless you believe there is a clear violation of the law.
2. Clarify relevant ethical issues by initiating a confidential discussion with an IMA Ethics Counselor or other impartial advisor to obtain a better understanding of possible courses of action.
3. Consult your own attorney as to legal obligations and rights concerning the ethical conflict.

RAPID REVIEW

Chapter Content

BASIC ACCOUNTING EQUATION (Chapter 2)

Basic Equation	Assets		=	Liabilities		+	Stockholders' Equity									
Expanded Equation	Assets		=	Liabilities		+	Common Stock	+	Retained Earnings	-	Dividends	+	Revenues	-	Expenses	
Debit/Credit Effects	Dr. +	Cr. -		Dr. -	Cr. +		Dr. -	Cr. +	Dr. -	Cr. +	Dr. +	Cr. -	Dr. -	Cr. +	Dr. +	Cr. -

ADJUSTING ENTRIES (Chapter 3)

Type	Adjusting Entry			
Deferrals	1. Prepaid expenses	Dr. Expenses	Cr. Assets	
	2. Unearned revenues	Dr. Liabilities	Cr. Revenues	
Accruals	1. Accrued revenues	Dr. Assets	Cr. Revenues	
	2. Accrued expenses	Dr. Expenses	Cr. Liabilities	

Note: Each adjusting entry will affect one or more income statement accounts and one or more balance sheet accounts.

Interest Computation

Interest = Face value of note × Annual interest rate × Time in terms of one year

CLOSING ENTRIES (Chapter 4)

Purpose: (1) Update the Retained Earnings account in the ledger by transferring net income (loss) and dividends to retained earnings. (2) Prepare the temporary accounts (revenue, expense, dividends) for the next period's postings by reducing their balances to zero.

Process

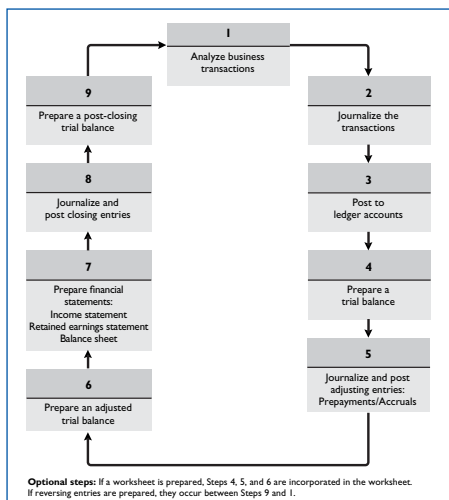

- Debit each revenue account for its balance (assuming normal balances) and credit Income Summary for total revenues.
- Debit Income Summary for total expenses and credit each expense account for its balance (assuming normal balances).

STOP AND CHECK: Does the balance in your Income Summary account equal the net income (loss) reported in the income statement?

- Debit (credit) Income Summary and credit (debit) Retained Earnings for the amount of net income (loss).
- Debit Retained Earnings for the balance in the Dividends account and credit Dividends for the same amount.

STOP AND CHECK: Does the balance in your Retained Earnings account equal the ending balance reported in the balance sheet and the retained earnings statement? Are all of your temporary account balances zero?

ACCOUNTING CYCLE (Chapter 4)

INVENTORY (Chapters 5 and 6)

Ownership

Freight Terms	Ownership of goods on public carrier resides with:	Who pays freight costs:
FOB shipping point	Buyer	Buyer
FOB destination	Seller	Seller

Perpetual vs. Periodic Journal Entries

Event	Perpetual	Periodic
Purchase of goods	Inventory Cash (A/P)	Purchases Cash (A/P)
Freight (shipping point)	Inventory Cash	Freight-In Cash
Return of goods	Cash (or A/P) Inventory	Cash (or A/P) Purchase Returns and Allowances
Sale of goods	Cash (or A/R) Sales Revenue Cost of Goods Sold Inventory	Cash (or A/R) Sales Revenue No entry
End of period	No entry	Closing or adjusting entry required

Cost Flow Methods

- Specific identification
- First-in, first-out (FIFO)
- Weighted-average
- Last-in, first-out (LIFO)

FRAUD, INTERNAL CONTROL, AND CASH (Chapter 7)

The Fraud Triangle

Principles of Internal Control Activities

- Establishment of responsibility
- Segregation of duties
- Documentation procedures
- Physical controls
- Independent internal verification
- Human resource controls

Bank Reconciliation

Bank	Books
Balance per bank statement	Balance per books
Add: Deposits in transit	Add: Unrecorded credit memoranda from bank statement
Deduct: Outstanding checks	Deduct: Unrecorded debit memoranda from bank statement
Adjusted cash balance	Adjusted cash balance

Note: 1. Errors should be offset (added or deducted) on the side that made the error.
2. Adjusting journal entries should only be made on the books.

STOP AND CHECK: Does the adjusted cash balance in the Cash account equal the reconciled balance?

RECEIVABLES (Chapter 8)

Methods to Account for Uncollectible Accounts

Direct write-off method	Record bad debt expense when the company determines a particular account to be uncollectible.
Allowance methods: Percentage-of-sales	At the end of each period, estimate the amount of credit sales uncollectible. Debit Bad Debt Expense and credit Allowance for Doubtful Accounts for this amount. As specific accounts become uncollectible, debit Allowance for Doubtful Accounts and credit Accounts Receivable.
Percentage-of-receivables	At the end of each period, estimate the amount of uncollectible receivables. Debit Bad Debt Expense and credit Allowance for Doubtful Accounts in an amount that results in a balance in the allowance account equal to the estimate of uncollectibles. As specific accounts become uncollectible, debit Allowance for Doubtful Accounts and credit Accounts Receivable.

RAPID REVIEW

Chapter Content

PLANT ASSETS (Chapter 9)

Presentation

Tangible Assets	Intangible Assets
Property, plant, and equipment	Intangible assets (patents, copyrights, trademarks, franchises, goodwill)
Natural resources	

Computation of Annual Depreciation Expense

Straight-line	$\frac{\text{Cost} - \text{Salvage value}}{\text{Useful life (in years)}}$
Units-of-activity	$\frac{\text{Depreciable cost}}{\text{Useful life (in units)}} \times \text{Units of activity during year}$
Declining-balance	Book value at beginning of year \times Declining-balance rate* *Declining-balance rate = $1 \div \text{Useful life (in years)}$

Note: If depreciation is calculated for partial periods, the straight-line and declining-balance methods must be adjusted for the relevant proportion of the year. Multiply the annual depreciation expense by the number of months expired in the year divided by 12 months.

BONDS (Chapter 10)

Premium	Market interest rate < Contractual interest rate
Face value	Market interest rate = Contractual interest rate
Discount	Market interest rate > Contractual interest rate

Computation of Annual Bond Interest Expense

Interest expense = Interest paid (payable) + Amortization of discount
(OR – Amortization of premium)

Straight-line amortization	$\frac{\text{Bond discount (premium)}}{\text{Number of interest periods}}$	
Effective-interest amortization (preferred method)	Bond interest expense	Bond interest paid
	Carrying value of bonds at beginning of period \times Effective-interest rate	Face amount of bonds \times Contractual interest rate

STOCKHOLDERS' EQUITY (Chapter 11)

No-Par Value vs. Par Value Stock Journal Entries

No-Par Value	Par Value
Cash Common Stock	Cash Common Stock (par value) Paid-in Capital in Excess of Par

Comparison of Dividend Effects

	Cash	Common Stock	Retained Earnings
Cash dividend	↓	No effect	↓
Stock dividend	No effect	↑	↓
Stock split	No effect	No effect	No effect

Debits and Credits to Retained Earnings

Retained Earnings	
Debits (Decreases)	Credits (Increases)
1. Net loss 2. Prior period adjustments for overstatement of net income 3. Cash dividends and stock dividends 4. Some disposals of treasury stock	1. Net income 2. Prior period adjustments for understatement of net income

INVESTMENTS (Chapter 12)

Comparison of Long-Term Bond Investment and Liability Journal Entries

Event	Investor	Investee
Purchase / issue of bonds	Debt Investments Cash	Cash Bonds Payable
Interest receipt / payment	Cash Interest Revenue	Interest Expense Cash

Comparison of Cost and Equity Methods of Accounting for Long-Term Stock Investments

Event	Cost	Equity
Acquisition	Stock Investments Cash	Stock Investments Cash
Investee reports earnings	No entry	Stock Investments Revenue from Stock Investments
Investee pays dividends	Cash Dividend Revenue	Cash Stock Investments

Trading and Available-for-Sale Securities

Trading	Report at fair value with changes reported in net income.
Available-for-sale	Report at fair value with changes reported in the stockholders' equity section.

STATEMENT OF CASH FLOWS (Chapter 13)

Cash flows from operating activities (indirect method)

Net income		
Add:	Losses on disposals of assets	\$ X
	Amortization and depreciation	X
	Decreases in noncash current assets	X
	Increases in current liabilities	X
Deduct:	Gains on disposals of assets	(X)
	Increases in noncash current assets	(X)
	Decreases in current liabilities	(X)
Net cash provided (used) by operating activities		\$ X

Cash flows from operating activities (direct method)

Cash receipts		
(Examples: from sales of goods and services to customers, from receipts of interest and dividends on loans and investments)		\$ X
Cash payments		
(Examples: to suppliers, for operating expenses, for interest, for taxes)	(X)	
Net cash provided (used) by operating activities		\$ X

PRESENTATION OF NON-TYPICAL ITEMS (Chapter 14)

Prior period adjustments (Chapter 11)	Retained earnings statement (adjustment of beginning retained earnings)
Discontinued operations	Income statement (presented separately after "Income from continuing operations")
Changes in accounting principle	In most instances, use the new method in current period and restate previous years' results using new method. For changes in depreciation and amortization methods, use the new method in the current period but do not restate previous periods.

RAPID REVIEW

Chapter Content

MANAGERIAL ACCOUNTING (Chapter 15)

Characteristics of Managerial Accounting

Primary users	Internal users
Reports	Internal reports issued as needed
Purpose	Special purpose for a particular user
Content	Pertains to subunits, may be detailed, use of relevant data
Verification	No independent audits

Types of Manufacturing Costs

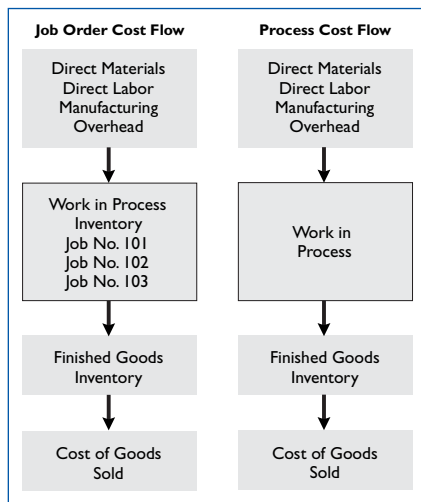

Direct materials	Raw materials directly associated with finished product
Direct labor	Work of employees directly associated with turning raw materials into finished product
Manufacturing overhead	Costs indirectly associated with manufacture of finished product

JOB ORDER AND PROCESS COSTING (Chapters 16 and 17)

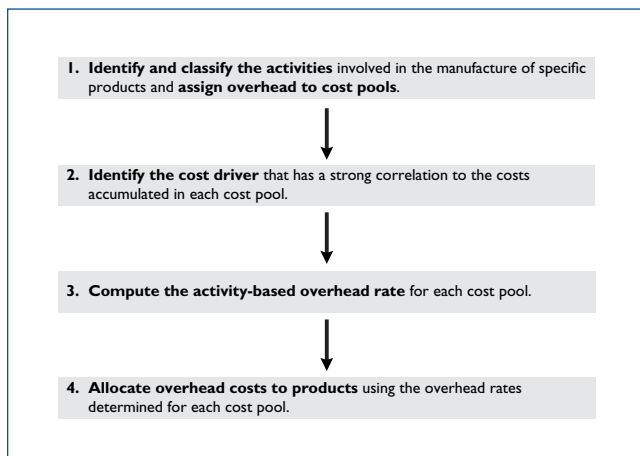

Types of Accounting Systems

Job order	Costs are assigned to each unit or each batch of goods
Process cost	Costs are applied to similar products that are mass-produced in a continuous fashion

Job Order and Process Cost Flow

ACTIVITY-BASED COSTING (Chapter 18)

COST-VOLUME-PROFIT (Chapters 19 and 20)

Types of Costs

Variable costs	Vary in total directly and proportionately with changes in activity level
Fixed costs	Remain the same in total regardless of change in activity level
Mixed costs	Contain both a fixed and a variable element

CVP Income Statement Format

	Total	Per Unit
Sales	\$xx	\$xx
Variable costs	xx	xx
Contribution margin	xx	\$xx
Fixed costs	xx	
Net income	\$xx	

$$\text{Unit contribution margin} = \text{Unit selling price} - \text{Unit variable costs}$$

$$\text{Break-even point in units} = \frac{\text{Fixed costs}}{\text{Unit contribution margin}^*}$$

$$\text{Break-even point in dollars} = \frac{\text{Fixed costs}}{\text{Contribution margin ratio}^*}$$

$$\text{Required sales in units for target net income} = \frac{\text{Fixed costs} + \text{Target net income}}{\text{Unit contribution margin}}$$

$$\text{Degree of operating leverage} = \frac{\text{Contribution margin}}{\text{Net income}}$$

*For multiple products, use weighted-average.

INCREMENTAL ANALYSIS (Chapter 21)

1. Identify the relevant costs associated with each alternative. **Relevant costs** are those costs and revenues that differ across alternatives. Choose the alternative that maximizes net income.
2. **Opportunity costs** are those benefits that are given up when one alternative is chosen instead of another one. Opportunity costs are relevant costs.
3. **Sunk costs** have already been incurred and will not be changed or avoided by any future decision. Sunk costs are not relevant costs.

PRICING (Chapter 22)

External Pricing

$$\text{Markup percentage} = \frac{\text{Desired ROI per unit}}{\text{Total unit cost}}$$

$$\text{Target selling price per unit} = \text{Total unit cost} + \left(\frac{\text{Total unit cost} \times \text{Markup percentage}}{\text{unit cost}} \right)$$

Transfer Pricing

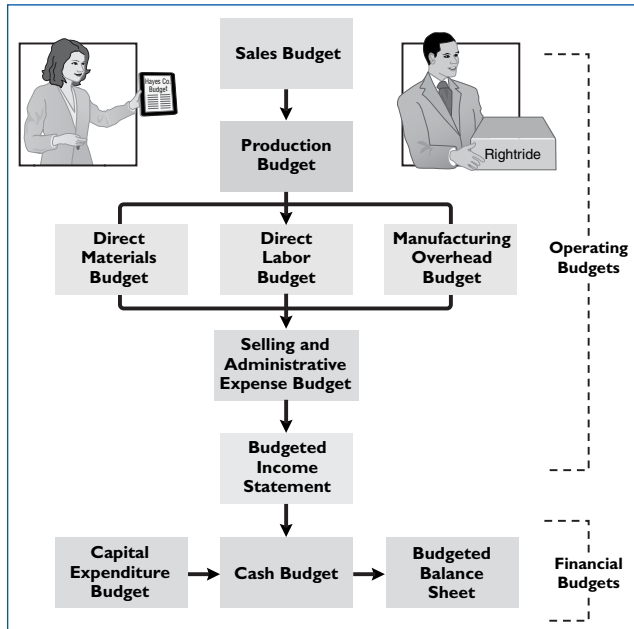

$$\text{Minimum transfer price} = \text{Variable cost} + \text{Opportunity cost}$$

RAPID REVIEW

Chapter Content

BUDGETS (Chapter 23)

Components of the Master Budget

$$\text{Materials price variance} = \text{AQ} \times \text{AP} - \text{AQ} \times \text{SP}$$

$$\text{Materials quantity variance} = \text{AQ} \times \text{SP} - \text{SQ} \times \text{SP}$$

$$\text{Labor price variance} = \text{AH} \times \text{AR} - \text{AH} \times \text{SR}$$

$$\text{Labor quantity variance} = \text{AH} \times \text{SR} - \text{SH} \times \text{SR}$$

$$* \text{Overhead controllable variance} = \text{Actual overhead} - \text{Overhead budgeted}$$

$$* \text{Overhead volume variance} = \text{Fixed overhead rate} \times \text{Normal capacity hours} - \text{Standard hours allowed}$$

*Appendix coverage

CAPITAL BUDGETING (Chapter 26)

Annual Rate of Return

$$\text{Annual rate of return} = \frac{\text{Expected annual net income}}{\text{Average investment}}$$

Cash Payback

$$\text{Cash payback period} = \frac{\text{Cost of capital investment}}{\text{Net annual cash flow}}$$

Discounted Cash Flow Approaches

Net Present Value	Internal Rate of Return
Compute net present value (a dollar amount). If net present value is zero or positive, accept the proposal. If net present value is negative, reject the proposal.	Compute internal rate of return (a percentage). If internal rate of return is equal to or greater than the minimum required rate of return, accept the proposal. If internal rate of return is less than the minimum rate, reject the proposal.

RESPONSIBILITY ACCOUNTING (Chapter 24)

Types of Responsibility Centers

Cost	Profit	Investment
Expenses only	Expenses and Revenues	Expenses and Revenues and ROI

Return on Investment

$$\text{Return on investment (ROI)} = \frac{\text{Investment center controllable margin}}{\text{Average investment center operating assets}}$$

STANDARD COSTS (Chapter 25)

Standard Cost Variances

$$\text{Total materials variance} = \text{Materials price variance} + \text{Materials quantity variance}$$

$$\text{Total labor variance} = \text{Labor price variance} + \text{Labor quantity variance}$$

$$\text{Total overhead variance} = \text{Overhead controllable variance} + \text{Overhead volume variance}$$

Balanced Scorecard

RAPID REVIEW

Financial Statements

Order of Preparation

Statement Type	Date
1. Income statement	For the period ended
2. Retained earnings statement	For the period ended
3. Balance sheet	As of the end of the period
4. Statement of cash flows	For the period ended

Income Statement (perpetual inventory system)

NAME OF COMPANY Income Statement For the Period Ended			
Sales			
Sales revenue	\$ X		
Less: Sales returns and allowances	X		
Sales discounts	X		
Net sales		\$ X	
Cost of goods sold		X	
Gross profit		X	
Operating expenses			
(Examples: salaries and wages, advertising, rent, depreciation, utilities, insurance)		X	
Income from operations		X	
Other revenues and gains			
(Examples: interest, gains)	X		
Other expenses and losses			
(Examples: interest, losses)	X	X	
Income before income taxes		X	
Income tax expense		X	
Net income		\$ X	

Income Statement (periodic inventory system)

NAME OF COMPANY Income Statement For the Period Ended			
Sales			
Sales revenue	\$ X		
Less: Sales returns and allowances	X		
Sales discounts	X		
Net sales		\$ X	
Cost of goods sold			
Beginning inventory		X	
Purchases	\$ X		
Less: Purchase returns and allowances	X		
Net purchases	X		
Add: Freight-in	X		
Cost of goods purchased		X	
Cost of goods available for sale		X	
Less: Ending inventory		X	
Cost of goods sold		X	
Gross profit		X	
Operating expenses			
(Examples: salaries and wages, advertising, rent, depreciation, utilities, insurance)		X	
Income from operations		X	
Other revenues and gains			
(Examples: interest, gains)	X		
Other expenses and losses			
(Examples: interest, losses)	X	X	
Income before income taxes		X	
Income tax expense		X	
Net income		\$ X	

Retained Earnings Statement

NAME OF COMPANY Retained Earnings Statement For the Period Ended	
Retained earnings, beginning of period	\$ X
Add: Net income (or deduct net loss)	X
	X
Deduct: Dividends	X
Retained earnings, end of period	\$ X

STOP AND CHECK: Net income (loss) presented on the retained earnings statement must equal the net income (loss) presented on the income statement.

Balance Sheet

NAME OF COMPANY Balance Sheet As of the End of the Period			
Assets			
Current assets			
(Examples: cash, short-term investments, accounts receivable, inventory, prepaid expenses)			\$ X
Long-term investments			X
(Examples: investments in bonds, investments in stocks)			
Property, plant, and equipment			
Land		\$ X	\$ X
Buildings and equipment	\$ X		
Less: Accumulated depreciation	X	X	X
Intangible assets			X
Total assets			\$ X
Liabilities and Stockholders' Equity			
Liabilities			
Current liabilities			
(Examples: notes payable, accounts payable, accruals, unearned revenues, current portion of notes payable)			\$ X
Long-term liabilities			
(Examples: notes payable, bonds payable)			X
Total liabilities			X
Stockholders' equity			
Common stock			X
Retained earnings			X
Total liabilities and stockholders' equity			\$ X

STOP AND CHECK: Total assets on the balance sheet must equal total liabilities and stockholders' equity, and ending retained earnings on the balance sheet must equal ending retained earnings on the retained earnings statement.

Statement of Cash Flows

NAME OF COMPANY Statement of Cash Flows For the Period Ended	
Cash flows from operating activities	
(Note: May be prepared using the direct or indirect method)	
Net cash provided (used) by operating activities	\$ X
Cash flows from investing activities	
(Examples: purchase/sale of long-term assets)	
Net cash provided (used) by investing activities	X
Cash flows from financing activities	
(Examples: issue/repayment of long-term liabilities, issue of stock, payment of dividends)	
Net cash provided (used) by financing activities	X
Net increase (decrease) in cash	X
Cash, beginning of the period	X
Cash, end of the period	\$ X

STOP AND CHECK: Cash, end of the period, on the statement of cash flows must equal cash presented on the balance sheet.

RAPID REVIEW

Using the Information in the Financial Statements

Ratio	Formula	Purpose or Use
Liquidity Ratios		
1. Current ratio	$\frac{\text{Current assets}}{\text{Current liabilities}}$	Measures short-term debt-paying ability.
2. Acid-test (quick) ratio	$\frac{\text{Cash} + \text{Short-term investments} + \text{Accounts receivable (net)}}{\text{Current liabilities}}$	Measures immediate short-term liquidity.
3. Accounts receivables turnover	$\frac{\text{Net credit sales}}{\text{Average net accounts receivable}}$	Measures liquidity of receivables.
4. Inventory turnover	$\frac{\text{Cost of goods sold}}{\text{Average inventory}}$	Measures liquidity of inventory.
Profitability Ratios		
5. Profit margin	$\frac{\text{Net income}}{\text{Net sales}}$	Measures net income generated by each dollar of sales.
6. Asset turnover	$\frac{\text{Net sales}}{\text{Average total assets}}$	Measures how efficiently assets are used to generate sales.
7. Return on assets	$\frac{\text{Net income}}{\text{Average total assets}}$	Measures overall profitability of assets.
8. Return on common stockholders' equity	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$	Measures profitability of stockholders' investment.
9. Earnings per share (EPS)	$\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$	Measures net income earned on each share of common stock.
10. Price-earnings (P-E) ratio	$\frac{\text{Market price per share of stock}}{\text{Earnings per share}}$	Measures the ratio of the market price per share to earnings per share.
11. Payout ratio	$\frac{\text{Cash dividends declared on common stock}}{\text{Net income}}$	Measures percentage of earnings distributed in the form of cash dividends.
Solvency Ratios		
12. Debt to assets ratio	$\frac{\text{Total liabilities}}{\text{Total assets}}$	Measures percentage of total assets provided by creditors.
13. Times interest earned	$\frac{\text{Net income} + \text{Interest expense} + \text{Income tax expense}}{\text{Interest expense}}$	Measures ability to meet interest payments as they come due.
14. Free cash flow	$\text{Net cash provided by operating activities} - \text{Capital expenditures} - \text{Cash dividends}$	Measures the amount of cash generated during the current year that is available for the payment of additional dividends or for expansion.
